"As stated, I have spent fifteen years in the service, and during that time have had the privilege of coming in personal contact with all of our people in all branches of the service, so speak with personal knowledge.

"Regarding our president, with whom we have all had the privilege of becoming personally acquainted, it is hardly necessary for me to refer to his ability; the fact that the talking machine business is in existence to-day is because of him and his faith in its great possibilities when there was no business and few if any believers, and no financial interest ready to develop this line of work. And the great company whose twenty-fifth anniversary we celebrate to-night, as well as other companies engaged in the manufacture of talking machines, stand ready to-day as his enduring monuments.

"It is, however, more directly to his personality I would speak to-night, his untiring energy and ability to overcome every obstacle, knowing no such thing as failure. His high ideals and his pure personal interest in the welfare of every employee, from the highest officer to the humblest employee, are traits which stamp him as a man among thousands, and fortunate indeed are we all in the opportunity of being so closely associated with him so many years, and our sincere hope is that he may be spared to us for many years to come.

"Our board of directors and finance committee are not only composed of successful men of high standing in their different walks of life, but men whose interest in our company is so great that they give to us freely of their time and advice, and from my personal knowledge I am prepared to say to-night that no company is more favored than ours in this respect, and no board of directors of any industrial enterprise has a greater personal knowledge of the affairs of the company which they are directing than our board.

"As for the service at large, I am not going to take your time to-night to mention names or departments, but want to summarize that, as officers, laboratory men, factory employees, managers, salesmen, and employees from the highest to the lowest in our service, both men and women, it would be impossible to find a more able, enthusiastic, loyal force, knowing no interest in other enterprises. This has been shown in days of prosperity, and even more clearly in days of threatened adversity; and with such an organization, is it to be wondered that the company grows and recognizes no limit to its possibilities?

"Now, a word of welcome to our esteemed guest. Mr. Edward Lyman Bill, editor and proprietor of The Talking Machine World, our trade paper. He needs no introduction; we all know him, and fortunate has the whole industry been that years ago he saw the possibility of establishing such an organ,

and more fortunate still that in his willingness to put his time and money into such enterprise, he gave us a trade paper conducted on the highest possible plane, and not such a trade paper as some industries are cursed with. His keen interest in the industry, his co-operation in every branch of the work, his willingness to spend liberally his time and money on plans intended to advance the interest of the industry are recognized by us all, and with all of his work he has never failed to give the Columbia Co. the benefit of his advice and counsel and publicity through the columns of his valued paper. I have been fortunate in being thrown personally into intimate relations with him, and his unfailing courtesy and good will have been greatly appreciated, and I have not hesitated to call upon him for counsel frequently in many matters relating to the welfare of the business in its entirety.

"We have with us to-night our factory manager, Mr. Horace Sheble, who leaves us in a day or two now to take up new lines of work. His

Senator Wm. M. Johnson.

leaving will mean a great loss to us in every way and a keen personal loss to me, for in the few years in which we have been so intimately associated I have learned to respect not only his ability, but love his personality and friendship, and I am sure we all join in wishing him every possible success in life and look forward to the time when we may have the pleasure of having him associated with us again, for I know that we have made clear to him that the door is open for his return at any time.

"I want also to extend to Mr. C. E. Woods, our next factory manager, who is with us this evening a word of welcome. I am sure he is going to be able to help us and that he will prove to be the right man in the right place, and so we count him for to-night as one of us.

"Now a few personal words. I am certainly proud of our company and its progress; but above and beyond this I realize to-night that happy indeed has my lot been associated with all the friends making up our organization, whose friendship and regard I esteem higher than any commercial success we might achieve. The fifteen years I have spent with the company have been pleasant ones; I have found friends on every hand, kindness extended in time of bereavement and congratulations extended in times of success, and I trust it is not necessary to express my appreciation of the same or desire to want a continuance of it in the years to come. My hope is that in the conduct of the work which falls to my lot I may be able to so conduct myself as to merit the approval and esteem of all; and more than this, the friendship which I desire above and beyond anything else."

The toastmaster then called upon Senator Wm. M. Johnson, of New Jersey, spoke in a jocular vein at the beginning of his address and then pro-

ceeded to deal at length upon the business side of the talking machine situation.

The next speaker was Edward Lyman Bill, editor of The Talking Machine World.

Edward Lyman Bill Congratulates Officials.

Edward Lyman Bill, editor of The Talking Machine World, when called upon for some remarks, after congratulating the officers of the Columbia Phonograph Co. upon the attainment of their twenty-fifth business birthday, said: "For more than a century previous to the foundation of your company scientists of Europe had been seeking for some means by which to reproduce the sound of the human voice. Crude and unsatisfactory devices were produced; but along in the early '80s the attention of a bright, blue-eyed young man, who had won a high position as a Government stenographer at Washington, was called to the device of Bell and Tainter. He examined this invention, tested it in his own profession, and became convinced that it possessed a wonderful future. His first step was to organize a company for the manufacture of these products.

"That man was Edward D. Easton, the founder of the American Graphophone Co. in 1887. From modest beginnings and a payroll of \$300 a week, he has seen that business develop to a point of colossal magnitude. He has seen its influence extend to all lands, for the Columbia banners encircle the earth. Mr. Easton has been a business builder in the truest sense, for where no blades of trade grass grew before his time there are to-day rich fields of it.

"Through his energy and aggressiveness, through his business foresight and management, many millions of dollars have been distributed throughout the various trade channels. He has been a trade creator in the broadest sense, and to him we are indebted for many great accomplishments. Such a gathering as this, surrounded as he is by the loyal members of his staff who have worked with him in the accomplishment of his desires there must come great pleasure, and I question whether there have been many moments in his business life charged with more happiness than is afforded by this assemblage. It represents the officers and members of the Columbia staff who have labored side by side for many years, actuated by splendid motives, in building a trade edifice upon a stable and enduring foundation.

"The Columbia business reflects credit upon the men who have reared the substantial business structure, and I believe that the talking machine business to-day is only in its infancy so far as development is concerned. When we figure the marvelous advances which have been made from the crude instruments of days gone by to the magnificent developed types of the present day, it must be admitted that we have been making talking machine history in a striking manner. But the end is not yet. The talking machine to-day is playing a more important part in the life of the nation and of the world than ever before. It is being used as an entertainer, as an educator, and as an adjunct to business. Who, therefore, can say that we have reached the high tide of development? Surely no one who is posted upon past history, for there are points still higher up to be won, and with such men as I see here to-night—men whose loyalty, whose ambition, and whose admitted ability is bent upon the accomplishment of a particular purpose—there is no point from which further advance cannot be made.

"On the Columbia staff are ambitious men, and the result of their concentrated efforts must be further and greater advance. You are all inspired by the example of your chief, whom I trust may be spared many years to guide the destinies of your business.

Edward Lyman Bill.

"I have been associated with the talking machine business for a number of years. I believed years ago in its wonderful possibilities, and a close contact with the men who have made history in this trade has not caused me to lose any of the enthusiasm which I possessed in the years gone by. On the contrary, I believe in the talking machine more than ever. The surface is hardly scratched. Go in any town in the United States of any size and find out the number of people who do not own a talking machine. Surely, such investigations will only prove what I say, that the work is only begun. I cannot agree with anyone who says that we have reached the highest point in talking machine development. Nor do I believe that anyone here to-night will see that point, because the talking machine will become so thoroughly interwoven with the affairs of men—it will become such an important and growing part in our daily lives—that the output must be constantly augmented.

"Mr. Easton has shown his marvelous ability in his selection of the men who compose his staff, and I believe that for such men united for a common purpose there is a brilliant future. It will require work—plenty of work. It does in any trade or profession to accomplish the best results, and I believe that you are splendidly fitted to accomplish higher points in business building."

The toastmaster then called upon Marian Dorian as a member of the "Old Guard." Mr. Dorian responded as follows:

Marian Dorian's Reminiscences.

"Twenty-five years ago to-day—May 28—I was undoubtedly as happy as normal man may aspire to be.

"I had every assurance of having successfully

Marian Dorian.

and creditably passed an examination which had consumed the entire day, and which was designed to test my fitness to receive a degree from the university at which I had been enrolled for two years as a student of law.

"The examination had been a tiring and exacting one, and I reached my home weary but confident and content.

"When I entered the house about dusk there was a stillness and hush about it quite unusual. No signs of preparation of the evening meal, and no one to greet me or ask me of my success or failure.

"I hurried upstairs and found the explanation there. Nestled close to his mother's side, red, wrinkled, safe, and sound asleep, was this boy here by my side to-night.

"Result of the examination, evening repast, and every other thing of ordinary import was forgotten—swallowed up in the joy of that arrival.

"That's one big, substantial reason why this anniversary celebration gives me unfeigned pleasure and why I am pleased and proud to be present and to be accorded the privilege of addressing

(Continued on page 16.)

TWENTY-FIFTH COLUMBIA ANNIVERSARY—(Continued from page 15).

you. I hope I may be pardoned for stating that reason first.

"I have another reason for rejoicing.

"Ten years after the events just referred to I attached myself to the Columbia, and there I have stuck for fifteen years, all efforts to shake me off or make me let go having proven absolutely abortive up to the hour of going to press.

"For fifteen years—60 per cent. of the lifetime of this great corporation—I have been an active and, I trust, a useful member of the Columbia family. Years of its greatest development, hardest trials and most pronounced success. Years in which its contribution to the art have been most momentous.

"At the time I joined the company it was already well known for a unique characteristic which has clung to it ever since. Its officers and employees were notable for their esprit de corps. If a man did not manifest that whole-hearted devotion to the company and its business on entering its service it did not require a very lengthy service to inspire the sentiment in him. If he remained with the company for any length of time he came under its influence and it remained with him.

"I know that this spirit has proved a potent, irresistible element in the past successes of our company, and that admiration for that animating spirit, which pervaded the organization from top to bottom, inspired more than one good man to make sacrifices in order to unite with us.

"Those of you seated about me who remember the old days will agree that I do not overstate the case.

"In those earlier years the organization was smaller and more congruous, and perhaps for that reason the characteristic was more pronounced than it may appear to be now that the organization has expanded to such immense proportions. Perhaps some of us do not attach as much importance to it as we did in the old days. Perhaps we have been too busy to analyze our own feelings on the subject.

"That old-time spirit was a valuable asset, an important factor in those old days, and it is just as valuable, just as effective to-day. If it is dormant or loafing on the job we must rouse it and put it to work. With that old-time animating spirit urging us to do our little best all the time for the company and its interests, we can face the future without a shadow of doubt of our ability to wrest success from it.

"The strong organization we now have, individually and collectively, and the business conditions you have heard so eloquently described are added reasons why we can regard the future with confidence and optimism.

"With a quarter of a century of honorable achievement behind us, a quarter of a century in which we gave to the world a new and fascinating art, and contributed wealth, genius and untiring energy to its development and perfection, and with confidence and zeal as bucklers for the future it is fitting and proper that we should celebrate.

"Prior to the discovery of the art to which we have been such devotees for so many years, good music in the homes of all but the rich was a thing unattainable. Even to the fairly prosperous, grand opera rendered by great artists was a luxury rarely indulged in. To the poor good music well rendered was a thing apart, to be longed for, perhaps, but out of reach.

"In that quarter of a century which we celebrate to-night we have changed all that. We have made it possible for the working man who cannot afford a piano or the expense of having his children taught the art of playing upon it, to own an instrument which amuses, instructs and educates his children while fostering in them a love and appreciation of good music.

"In the palace, the mansion, and the cottage we have made it possible to hear the voices of the great in music, and all this in the brief space of twenty-five years. It is this we are celebrating to-night.

"By our art alone, of all mechanical arts, is it possible to reproduce voice, artistic rendering of the art, and all those beauties of a selection which

the trained and capable artists can impart to even the simplest melody.

"In the creation and development of that wonderful, mysterious and enchanting art our company has played its honorable, conspicuous part during all those twenty-five years. Truly a just cause for celebration and congratulation.

"This wonderful art has already added largely to the world's knowledge and happiness, and is capable of still further enhancing both.

"Judge by the achievement of the first twenty-five years of its existence, by its contribution of an epoch marking character to that art, and by its sturdiness, vigor and vitality to-day, who can for a moment harbor a doubt that in the development of the future the Columbia Phonograph Co. will be as conspicuous and as successful as in the years of its youth. It is entering now upon its ripe years, its fruitful years. The harvest will be an abundant one."

The toastmaster then called upon the representative of the legal department of the business, Mr. Cameron.

The Legal Department Heard From.

S. T. Cameron said: "The gentlemen of the legal department, whose mouthpiece I am this evening, take a commendable pride in the fact that

S. T. Cameron.

their labors and their efforts lay at the very foundation of the magnificent commercial organization into which the American Graphophone Co. has developed. We do not appear very often in the limelight, and are not conspicuous in the administration of the commercial affairs of the company. We are rather like the stokers of our great ocean-going steamers, and we realize to the fullest extent the responsibility resting upon us, and that if we fail to perform our part wisely and efficiently the great machinery of the company sooner or later is liable to come to a standstill. While this condition of affairs is one that causes us to indulge in a certain self-complacency, nevertheless it carries with it also very grave responsibilities. You can hardly realize how many times the courage, as well as the professional ability, of the legal department has been tested during the twenty-five years that have transpired since the organization of this company, and during all of which time the legal affairs of the company, particularly those relating to patents and patent matters, have been entrusted to our office. Think for a moment what it would have meant to this company if the tremendous onslaught that was made on the Jones patent, covering the method of making disc records, had not been successfully met. Think what it would have meant if the fundamental Bell and Tainter patent, which lies at the foundation of the commercial talking machine art, had not been sustained. When we allow ourselves to stop and think that the success of this fine business organization represented by you gentlemen may be jeopardized by failure on our part to do our full duty, the weight of the re-

sponsibility is sometimes appalling. But while the duties of a patent lawyer have their grave and oft-times oppressive responsibilities, they have, on the other hand, their great compensations. We come almost daily into contact with the brightest minds in science and mechanical arts—minds that are pushing forward on to the very frontiers of each of the practical arts and devoting themselves to the lessening of the labor of mankind and the adding to his enjoyments and his comforts. In the office which I represent the Bell Telephone patent had its birth. In that office the Bell and Tainter talking machine patent application was prepared, and that application rests in the archives of the Patent Office to-day, in the handwriting of Philip Mauro, who through so many years successfully and brilliantly conducted the patent litigation of this company. In that office the first patents on the automatic sewing machine—the Wilcox & Gibbs—were taken out.

"Think for a moment what the telephone, the talking machine and the automatic sewing machine have done for the world in contributing to its comfort, to its pleasures, and to its business enterprises. Can you wonder that any man should feel proud that he was in at the birth of these great inventions, and that he personally knew the men who gave these inventions to the world? It is an epoch in any man's life to have known Alexander Graham Bell, a man whose personal, genial character is as attractive as his inventive ability is great. It was a great privilege to have known Sumner Tainter and Chichester A. Bell, and to have worked with the originators of the great automatic sewing machine industry. And it is a source of pride to me this evening to stand as the mouthpiece of the office that has officiated at the birth of these great enterprises and that has been in personal touch with these great men.

"The American Graphophone Co. was founded on a great invention, and much is due to Alexander Graham Bell, Sumner Tainter and Chichester A. Bell for producing that invention, but I am not betraying any secret or announcing any new fact when I tell you that the commercial success of any great invention depends as much upon the business ability of the men who establish the commercial enterprise founded thereon, as on the inventive ability of the men whose efforts originated the invention. It is the universal experience that no matter how meritorious an invention may be, it will never develop into one of great use to the world unless it is backed by the brains and indomitable energy and persistence of the man of affairs. Fortunately for the talking machine art the affairs of the American Graphophone Co. almost at its birth fell into the hands of such a man. When I entered our office, some sixteen years ago, the first thing that struck me was that the business of the Graphophone Co. had the right of way. The graphophone was the first all the time. Later, when I became more intimately acquainted with the gentlemen who were pushing the commercial side of the enterprise, I found that this was not a peculiar characteristic of the legal department, but that with every man connected with the organization the success of the Graphophone Co. was placed over and above and before everything else. And still later I found that that was a spirit which was injected into the great organization by its leader. And when I found that out I found the secret of the success of the great company.

"I spoke a moment ago of the privilege it was for the patent lawyer to come into contact with great inventive minds. It has been the privilege of the members of the legal department to come into contact not only with great inventive minds, but by reason of their personal relations with the management of this company, to come into contact with men who were not only great as inventors but also with men who were masters of the commercial side of the enterprise as well. And during a long association with these gentlemen we have learned not only to admire their ability as business men and inventors, but have become profoundly

(Continued on page 18.)

Photograph of the banquet given at the Waldorf-Astoria, celebrating the twenty-fifth anniversary of the founding of the Columbia business.

TWENTY-FIFTH COLUMBIA ANNIVERSARY—(Continued from page 16).

attached to them as friends. It was a great privilege to have known and worked with Andrew Devine, to have been associated with and loved by R. F. Cromelin, and it was an inspiration to have known Thomas H. Macdonald, than whom—bar none—no greater inventor in the talking machine art has ever lived.

"All countries have their great, their grand old men. Every organization has its grand, its conspicuous leader. And every corporation has its grand man on whose shoulders the burdens incident to the success of the company ultimately rests. England had her grand old man in Gladstone. America has her grand man (but possibly politics are out of place here). The American Graphophone Co. has its grand leader, and I ask you to fill your glasses and join with me in drinking to the wish that the close of another twenty-five years may find in that man the grand old man of the talking machine art—Edward D. Easton."

Elisha K. Camp's Remarks.

During the course of the evening Elisha K. Camp, attorney for the company, called attention to certain facts which, in his opinion, furnished abundant evidence for the phenomenal success which has attended Mr. Easton's efforts in developing the talking machine industry to its present-day proportions.

Mr. Camp showed that the American Graphophone Co. was organized in 1887 "for the purpose of acquiring and exercising the exclusive right to manufacture, use and sell the patented invention known as the graphophone and its parts and appliances within the United States and Canada."

Two years later Mr. Easton acquired certain sole and exclusive rights in regard to the phonograph and graphophone for the States of Maryland and Delaware and the District of Columbia. These sole and exclusive rights he transferred to the Columbia Phonograph Co.

Five years after that Mr. Easton organized the Columbia Phonograph Co. (General), sole and exclusive selling agent for the American Graphophone Co.

Mr. Easton, as the president of all of these three companies, then immediately began to give his sole and exclusive time and attention to the development of these sole and exclusive rights. He has been doing it ever since. So has Mr. Lyle. Their example has been contagious. It has spread throughout the service from top to bottom, and if you should search throughout the length and breadth of this great country of ours you would not find the officers and men of any other corporation devoting their sole and exclusive time and attention to the business in which they are engaged to any greater extent than those of these great companies. They have suffered nothing to come between them and their ambition to make the talking machine truly one of the marvels of the world and one of its greatest industries.

Victor H. Emerson's Witty Recital.

Victor H. Emerson was the next man to entertain the diners.

Mr. Emerson's speech took unto itself the form of a valuable contribution to talking machine history. True, every other sentence dug up a whirlwind of laughter, but it was some serious history without a doubt.

Speaking about the real birth of the musical record business, Mr. Emerson said that that really took place in New Jersey. Said he:

"The promoters of the enterprise in those early days believed that the real commercial value of the phonograph or graphophone lay in its commercial features. I know I was hired by a concern to take charge of the dictaphones they had out at that time, and I was asked by Mr. Charles Cheaver to make a report upon the subject and take a week to it, and not to be afraid to tell the truth about the situation. I thought with a week's practise I would be able to tell the truth about it, and made my report to Ernest Lippincott and Cheaver. It was an adverse one, and I know that I lost my job the next day. I then went to work for the New Jersey Phonograph Co. and with my

Victor H. Emerson.

fair experience with the dictaphone I thought that to keep my \$15 a week coming in I had better try to get them started on the musical features. I was very busy jollying capitalists for about a week, and figured out that it would cost about \$15 to try the stunt.

"The board of directors consisted of Nicholas Murray Butler, now president of Columbia College; S. S. Batten, president of the First National Bank in Newark, and George Frelinghuysen. They held a directors' meeting and concluded that the \$15 risk was too great. I told them that I would pay the \$15 if we lost. They asked me to put up the \$15. I didn't have \$15, and told them they could take it out of my pay if the thing went wrong. That was a sure bet, because if it went wrong I'm sure I would have lost my job and I would have been in \$15 anyway. They finally consented, and I set up ten machines on Market street beside the Prudential building, which they were about to tear down at that time. Just as I had finished setting up the machines I heard the most lovely music playing out in the street. The tune was "Boulanger's Patrol." It was being played by a mud-gutter band of four pieces. I asked the orchestra leader to come up into the office, as I wanted to talk business with him. He evidently had never talked with a real business man before, and was very much embarrassed, but he finally said that he did not want to do that kind of business, as he was making money in the legitimate field and he didn't think it would be worth his while. But I told him that we were sports, and he could play sitting down on chairs instead of kicking the bouquets on the street. And he finally said that he would play for \$3.50 a day for four men.

"All phonograph men are economists—if they were not they would not be in this business—and so I jewed him down fifty cents and closed the contract. He played all day, and we made about 2,000 records. These cost us nothing, because we got the blanks on credit from the Edison works and we never paid our bills—neither did anybody else—it was merely a habit at that time. I'm sure the people that bought them from me never paid for them.

"To my knowledge, there never was a musical record sold before this time, and so we held many confabs and figured out what profits we had to make on those 2,000 records, considering the large investment of \$3. As I said, they were about to tear down the Prudential building, and a man came over and said it would be a good scheme if I could exhibit a phonograph over in the Prudential place. He was sure I could make some money out of it. I told him it was an expensive thing to do, and he acknowledged it. But finally we rented the place at a cost of about \$60. "Now," he said, "what about records?" I told him we had some John Philip Sousa band records here

that we had made at very large expense, and we would sell them for \$2, meaning \$2 a dozen. And he said, "All right, here is \$24 for twelve." Well, we sold all those records at practically \$2, and now the great question that concerned us was how to stock them.

"I got the manager to consent to give me \$5 of that \$24 and let me buy a cabinet. I went to a junk store and bought a second hand kitchen closet. It had a nice, large, fat pork chop in it, which quite substantially increased the assets of the company and at the same time gave us something to eat if the worst came to the worst. The only other expense was ten cents for chloride of lime, and we stocked those records. I thought it was fun to have grand concert up in the office, and when the stock got low I said to Mr. Smith we had better make some more. He asked, 'How many have you got left?' and I said six. He said, 'Well, gracious me, wait till we sell them all!'

"The next great artist we had was George W. Johnson, the composer of the 'Whistling Coon' and the 'Laughing Song,' and I think that the phonograph companies have made more money on those two records than on any other two records in their catalog. I contracted with him to sing at twenty-five cents a song, and kept him busy all day and all night. But the price of whiskey went up about that time, as you all remember, and it was the same problem then as now. You must give a man sufficient money so that he can live and have the necessities of life. So George struck, and I had to bow to the yoke.

"Our next artist was J. Gaskin. He was the leader of the Manhansett Quartet. He very fortunately broke his contract just as we were perfecting our duplicating machine. I want to say, by way of diversion, that this duplicating machine was originally invented by Frank Capps. He used to go into a slop parlor in Chicago, borrow a record, take it home and duplicate it, and would return the other record, but in another color. That looked suspicious to us, and we traced him up and found him climbing telegraph poles somewhere near Peoria, Ill. We bought him out and started him manufacturing duplicating machines for us. But what I want to say about Gaskin is that he told me one day that he had a new quartet now and that he was going to put it on the market and bust our business. Says

George P. Metzger.

he, 'The very name will do it.' And I asked, 'What's the name?' And he said, 'We call it the Mozart Quartet. Mozart, you know,' he added, 'was a great musical moke.'

"Well, gentlemen, from that beginning we ran into a business of probably 500,000 records per year in a short time, and I would have done a large and profitable business were it not for the

TWENTY-FIFTH COLUMBIA ANNIVERSARY—(Continued from page 18).

fact that Mr. Easton started in about that time and used to buy records from me and scooped up all my new customers with my own records. The only thing that kept us alive was the fact that the Columbia Co. actually did pay its bills, and at that time it was about the only company that did."

Geo. P. Metzger's Optimistic Views.

The toastmaster then introduced Geo. P. Metzger as "our great advertising man," who said:

"I believe we have just begun!

"Most of the time during my five years with the Columbia Phonograph Co. I have been on the inside, looking out. And I have felt most of the time that we were on the right track.

"I have just this hour returned from the advertising convention at Dallas by way of some of our wholesale branches. And from the outside, looking in, it has become clear to me that our confidence in the correctness of the Columbia policies and the certainty of a continuous increase of prosperity is well justified. I have never felt so sure of the soundness of our merchandising program as I do right now.

"Naturally, the relation of our advertising policy to our increasing success is peculiarly interesting to me.

"It may be that our officers have never especially prided themselves on possessing an excess of imagination. I have had occasion to notice that *facts and figures* seem to appeal to them. Yet the agreeable tabulations of facts and figures laid on our president's desk every day are due to the liveliest sort of imagination, coupled with a far-sighted courage.

"It required a high degree of *imagination* to build one of the world's greatest educational and amusement business-appliance enterprises on the foundation of a crudely demonstrated principle in physics. And it required a similar degree of *courage* to inaugurate a policy of broadly *extended* advertising during a panic year when the business tendency nearly everywhere was to climb a tree.

"Gentlemen, I want to join you in congratulating the company on its *history*. And I want to join you in congratulating the company on its sure and splendid future, and at the same time remind you that *the company deserves it!*"

Among the other speakers of the evening who were heard with a great deal of interest were T. D.

T. D. Merwin.

Merwin, one of the old and respected directors of the company; Horace Sheble, retiring factory manager, and Clinton E. Woods, the new manager of the factory at Bridgeport, Conn., also spoke.

The evening was a notable one in many ways for the reminiscent remarks of the men who have been associated with the talking machine industry since its inception down to the present time, and were interesting and more than ordinarily entertaining.

As the evening wore on the affair, through its informality, seemed to take on the character of a family reunion rather than a formal celebration.

The Columbia officers are to be congratulated upon the organization which they have built up and which carries with it world-wide influence. They have a great business organization, composed of men who are working harmoniously together in every department of the business.

Before the entertainment was over Mr. Easton, in a few well chosen words, proposed a silent toast to the memory of the Columbia men who had long been identified with the association and who have passed on to the Great Beyond.

The guests arose and the toast was drunk standing.

The affair was a notable event in Columbia history, not merely because the talking machine industry had passed a few years beyond voting age, but because it was the coming together in a most delightful way of the officials and staff members who have labored long and loyally together, and who renewed their enthusiasm as to the possibilities of further accomplishments to be won.

Among those present were: Edward A. Easton, Geo. W. Lyle, E. N. Burns, T. D. Merwin, C. A. L. Massie, Hon. W. M. Johnson, C. W. Cox, H. A. Bishop, H. A. Yerkes, C. E. Woods, H. L. Willson, F. Van Eppe, W. Van Brunt, T. Stevenson, E. V. Sloan, R. L. Scott, B. C. Root, H. B. Ray, W. P. Phillips, N. Osborne, T. E. Novakoski, J. Meyer, H. McClaskey, J. Keiser, J. Hoffay, H. C. Grove, A. G. Farquharson, V. H. Emerson, O. C. Dorian, F. A. Dennison, J. A. B. Cromelin, H. Cleveland, F. L. Capps, E. K. Camp, J. C. Button, H. A. Budlong, J. P. Bradt, C. Alessandrini, R. F. Bolton, J. I. Wright, Edward Lyman Bill, M. Dorian and C. Morison.

MUSIC AS A MILK PRODUCER.

Some Remarkable Conclusions Set Forth in the Reports Presented to Si Perkins as to How Sweet Music Will Increase the Milk Supply.

That ever "reliable," versatile and "always truthful" correspondent of the New York papers in Cedar Grove, N. J., writing one of his customary effusions last Sunday, states that "the Cedar Grove Board of Poultry Trade has tested the theory advanced by Joseph Grant, of Wisconsin, that sweet music will increase the milk supply. Seven separate tests were made by seven individual members of the board and seven reports were handed in to Si Perkins, chairman of the board. Mr. Perkins summarizes the results as follows, to wit:

"Bill Bogan says that Grant is a liar, net. Bill played a fife into his barn while his hired man, Olaf Sniggerwich, milked two Jerseys, and Olaf ain't come out o' the hospital yet. Loss, 42 quarts of milk.

"Wally Dobbs hired the Singac Drum Corps at \$2 a day to play into his barn for the evening milking, and what little milk was milked the drum corps drank. Loss, 64 quarts of milk.

"Lem Polly moved his old organ into the barn and put his sister Sue to work on it. Lem's prize bull Black Spot wrecked the organ. Loss, one organ, one dress and 92 quarts of milk.

"Adonirab Pfutter tried a French horn, but it wasn't a go. The cows got wild, and in the excitement Adonirab swallowed his new lowers. Loss, half a set of teeth and 56 quarts of milk.

"Hugo Pebbles played a harmonica into his barn, and his cows ain't back yet. Loss ain't stated.

"Frank Rue whistled a waltz onto his fingers an' was gored by his favorite cow, Buttercup. Loss, 32 quarts of milk and doctor's bill \$2.75.

"Abe Slem played the fiddle into his barn and three of his cattle went plumb crazy. Loss ain't estimated.

"There ain't no doubt into the minds o' the Cedar Grove Board of Poultry Trade but what that Wisconsin man is a horrible liar, and we'll send him afferdavids to that effect."

You should know as well whether each clerk is a paying investment as whether each line of goods produces a profit.

Waste no time worrying over the success of other men. It will not reduce their chances and it eliminates your own.

Columbia Co.'s Offices Decorated.

One of the pleasing features of the celebration of the twenty-fifth anniversary of the founding of the Columbia business was the decorations of the offices of the company in the Tribune Building, New York. Potted plants and cut flowers were used in profusion as well as the national colors, the whole forming a most beautiful decorative effect, which is impossible to set forth in the photograph shown above.

If you wish to reach the talking machine trade in Latin America do not fail to send in at once your order for space in La Máquina Parlante Mundo.

The first edition of TWENTY-FIVE THOUSAND COPIES will go forth within the near future to the lands which lie south of us.

They will be mailed to talking machine jobbers and dealers and to business men who are live prospects for future talking machine business.

They will also be forwarded in bulk to large distributors there.

La Máquina Parlante Mundo will be a splendid medium to reach talking machine men in all lines in the countries south of us.

No matter in what land you may be manufacturing talking machines or accessories this Spanish publication will bring you in close touch with interested parties.

CONDITIONS IN SAN FRANCISCO.

Great Campaign of Advertising Now Being Carried on Bearing Fruit—Columbia Phonograph Co.'s Active Battle for Trade—Recitals Effective in Developing Business—Sales of Edison Business Phonographs by Bacigalupi—Talking Machine Men Much Interested in Baseball and Many Clubs Which Will Be Heard from This Season Have Been Organized.

(Special to The Talking Machine World.)

San Francisco, June 5, 1912.

Local talking machine dealers note some improvement over the previous month, but it is generally admitted that the sale of machines is a little slow. The record business, however, is extremely active, both in the local retail trade and for outside distribution, and the total volume is helped out materially by the increasing attention given to high class machines.

Some Effective Advertising Work.

The general advertising work which is being carried on by the talking machine manufacturers, has been of great and easily traceable benefit to the dealers on the Coast. The Victor advertising has aroused more comment than anything else, owing to the coupling of the Victor with the names of dealers in the leading coast dailies. The Wiley B. Allen Co., in this connection, scored a hit locally, as arrangements were made some time before the advertisements appeared by which this company has all the extra space in the Victor ads in all the San Francisco papers. The effect, according to Geo. R. Hughes, of this company, has been most satisfactory, bringing in many inquiries which could not have been expected otherwise. In Portland, Ore., this company also secured space in one of the leading dailies, the other being taken by Sherman, Clay & Co., coast agents, for the Victor line. In Los Angeles the Victor page is shared with a number of different firms, including the Wiley B. Allen Co., Geo. J. Birkel Co., Holmes Music Co., Eilers Music House and J. B. Brown.

Feature "Spring Maid" Records.

Simultaneous with the production of the "Spring Maid" opera in San Francisco, Sherman, Clay & Co. made a striking window display, showing a scene from the play. Similar displays were made at several of the company's stores, attending the opera company down the coast, and at each place a heavy demand for "Spring Maid" records was reported. According to Andrew G. McCarthy of this firm, not only are records moving well, but sales of machines are larger than for May of last year, the gain being most notable in the higher-priced Victrolas.

Keeping in Touch With Branches.

James Black, talking machine manager for the Wiley B. Allen Co., is spending the week at outside branches. The department in the local store is undergoing further improvements, the office being rearranged. The increased attention given by this company to the talking machine department has given highly satisfactory results, and it now ranks as one of the foremost talking machine firms of the city. One innovation just started is a new system of keeping check of the records, this work being in charge of Arthur Foley. By this means it is expected to avoid all confusion and delay in the handling of records.

Columbia Men Active.

W. S. Gray, coast manager for the Columbia Phonograph Co., made another trip to Los Angeles about the middle of the month, just too late for the Shriners' convention in that city. He met E. D. Easton, president of the company, in the southern city, and accompanied him as far north as San Francisco. Among the Columbia retailers who visited the city this week were A. McDowell of Petaluma and Mr. Metzger of Smith's Pharmacy, St. Helena, Cal.

Much Interest Shown in Baseball.

The talking machine men of San Francisco and Oakland are keeping up their interest in amateur baseball, though if things continue as they have been going, the San Francisco contingent will lose interest. A game was played at Recreation Park, May 30, resulting in an easy victory for Oakland.

Handling Increased Line.

E. W. Scott, who operates the talking machine store in the Kohler & Chase building, is handling a more varied line than before, having Victor as well as Columbia goods. He says he has seen business much better and much worse than for the last month, machine sales being below the average, though he has disposed of large numbers of records.

Manager Transferred.

J. Bergman, who formerly had charge of the talking machine department of the Hauschildt Music Co.'s store in Oakland, has been transferred to San Francisco.

Good Sales of Business Phonographs.

Peter Bacigalupi & Sons say that the talking machine business has been a little quiet all this season, but they are making up for it with large sales of the Edison Business Phonograph, to which they are devoting more attention than ever. Several important local firms have recently placed large orders for these machines, and the number now in use affords a good regular business in supplies.

Getting Results from Recitals.

Herman Beck, who handles the talking machine business of Byron Mauzy, is gaining ground steadily, and has brought in a great deal of new business in the few months he has had charge. The recitals continue to show good results, and further improvements are being made in the rooms every week.

A. R. Pommer Recovering Health.

A. R. Pommer, of the Pacific Phonograph Co., has been on a vacation for the last month, and may not return before the end of June, the business meanwhile being in charge of J. E. McCracken, a well known traveler for the house. Mr. Pommer has practically recovered from the poor health that has kept him away from the business so much during the last year, and hopes to be in the office most of the time after his return. Mr. McCracken notes considerable improvement in all lines, the sale of records being especially active, while the higher-priced Edison machines are also in very good demand with the trade through the country.

Some News Brieflets.

J. C. Van Horn, formerly of New York, recently joined the talking machine force of Sherman, Clay & Co. in this city.

The Short Music Co., Pomona, Cal., has overhauled its talking machine department, putting in

several well equipped soundproof demonstration rooms.

S. E. Babson, who has been in charge of Babson Bros.' San Francisco establishment, returned to Chicago early this month, and will be away for some time.

To Continue Recitals in the Fall.

The Wiley B. Allen Co.'s Los Angeles store has been giving Friday evening talking machine recitals during the spring with great success. With the arrival of the vacation season these recitals will be interrupted, the last having been held May 31. The recitals will be resumed early in the fall, and preparations are being made to introduce some unique features at that time.

Demonstration Record Makes Good.

The Columbia Phonograph Co.'s advertising of its demonstration double-disc records, which are on distribution at the local wholesale headquarters, has met with a strong response, and good results are noted by several Columbia dealers, who anticipate still larger returns in the near future.

INITIATIVE THAT COUNTS.

Prizes in Business Go to the Man Who Thinks for Himself and Originates Instead of Following the Well Worn Track.

The prizes in business to-day go to the men who keep profitably busy as a result of their own initiative. There are too many men who do passably well what they are told to do. And when they finish they inquire helplessly, "Have you anything else for me to do?" Such a question from a man in a live organization reminds one of a day laborer. You tell him to dig a certain ditch, so deep, so wide, from here to there. He does it, and forthwith you have him at your door. "Is there anything else for me to do?" You expect such a question from such a man, but never from a man holding a real job.

Don't be like a trail-car, following always, depending ever upon the man ahead for your power, says Edward S. Babcox. Be your own generator; get up your own speed. Accustom yourself to keep tasks ahead; have a place where you keep a record (memorandum) of things done. Don't run out of things to do. Remember the world is too full now of people who, like Micawber, are "waiting for something to turn up." Don't add your name to the list of waiters. It is too long now! Turn something up yourself. Make something happen; create something; be something besides a mere dependent upon the creative ability of others.

ORGANIZE AND SELECT OFFICERS.

The Southern California Talking Machine Men's Association Adopts Constitution and By-Laws and Selects Officers for the Ensuing Year—Elaborate Dinner a Feature of the Festivities—Much Interested in Association.

(Special to The Talking Machine World.)

Los Angeles, Cal., June 4, 1912.

A very sumptuous dinner was given at the Hol-

lenbeck and entertaining program was arranged by the committee on entertainment. The constitution and by-laws were drawn up, then the officers for the ensuing year were elected as follows: Wm. Hobbs Richardson, manager of talking machine department of the Southern California Music Co., president; A. Graham Cook, manager talking machine department of the Geo.-J. Birkel Co., vice-president; and H. B. Hinmann, manager of talking machine department of the J. B. Brown Music Co., secretary and treasurer. A great deal of inter-

Los Angeles Talking Machine Men at Banquet.

lenbeck Hotel on the evening of May 15 by the Southern California Talking Machine Men's Association. After this elaborate spread a very at-

est is being taken by all talking machine men of the city in the association, which is purely a social club for entertaining.

Announcement

Sesco
TRADE MARK

Here is an electric stop, that does not injure or jar the delicate sound box or affect the most expensive record in its operation. It is so simple that a child can operate it—in fact it is fool proof in every particular, and above all does not detract from the appearance of the machine.

The New Live Wire Electric Stop

When the last note of the selection is played the turn-table stops, and there are no additional flourishes in the way of unnecessary scraping and scratching.

The Standard Electric Stop stretches out a firm, unyielding finger of steel—tells the record with its last note to cease—and insists on it by stopping the turn-table.

For All Disc Talking Machines

Every talking machine should be equipped with the Standard Electric Stop. The reasons why are many. The small additional cost is an investment to any owner—not an expense. It saves records, steps, and temper.

See Our Exhibit and Demonstration at the Convention at Chalfonte Hotel, Atlantic City, July 1st & 2nd.

STANDARD ELECTRIC STOP COMPANY

EMPIRE BUILDING, WALNUT AT 13th STREET, PHILADELPHIA

RUSHING VICTOR CO. BUILDINGS TO COMPLETION.

New Pressing Plant Being Built Which Will Increase Victor Record Pressing Capacity by One Million Records Per Month—Also Building an Extension Addition to the Cabinet Factory—These Two Plants Will Help to Prevent Delays in the Shipment of Stock Next Fall.

An excellent indication of the demand for Victor records is the efforts being made by the Victor Talking Machine Co. to rush to completion the large new extension to the pressing plant, which, when completed, will increase the record pressing

Co. to practically triple its output of cabinets, the actual size of the addition may be in part appreciated. Delays in shipping machine orders in the past have been due, in most cases, to the inability of the cabinet factory to meet the demand, and the

Site of New Extension to Victor Co.'s Cabinet Factory.

capacity by 1,000,000 records per month. According to those in authority the increased output is badly needed to take care of the present volume of orders. The accompanying illustration shows the beginning of the work of construction on the addition, and the building has already reached the fourth story, bidding fair to bear out the promises of the contractors that it will be ready for occupancy by August 15. The company has placed orders for all the machinery and equipment needed in the new structure, and that will be ready for installation as soon as the contractors formally turn over the building to the Victor Co. The expert knowledge and care given to the problem of choosing selections for recording, the perfection of the recording itself, and the up-to-date and improved methods for cataloging, have all done their share toward bringing about the rapid increase in the demand for Victor records.

Another pleasing indication of Victor progress is the erection of the new extension to the cabinet factory, the site of which is shown in the accompanying photograph. The new addition will adjoin the present cabinet factory and dry kilns on one side, and on the other the big office building, and no effort is being spared to have the structure finished with the least possible delay. Although the site for the addition was cleared only a short time ago, the foundations have been laid and the steel pillars are in place ready for further operations, which the contractors believe will be completed by September 15 or October 1 at the latest. The view of the site offers some idea of the ground plan of the new building, and when it is stated that, when in operation, it will permit the Victor

prospects of having the new addition equipped and turning out cabinets in time for the coming holiday demand should prove pleasing to manufacturers, jobbers and dealers alike.

HOLDING TO THE PRICE.

Little Tendency to Demand the Lowering of a Price Looked Upon as Set.

When you buy a postage stamp you pay two cents for it; of course you don't ask Uncle Sam why he can't let you have it for a cent and a half. You don't accuse him of charging more than the red ink and the mucilage cost him.

You pay the regular price for your railroad

railroads have successfully sidestepped bankruptcy. The telephone companies have lived through a hard winter and kept the wolf from the door. Fairly prosperous institutions, all of them. They don't have to throw a sop to their customers to live.

There's a pretty good rule to go by. What's the matter with following suit? You have as good a right to an arbitrary price as anybody.

If you've ever tampered with prices under the delusion that you had to, change your mind about it now. "Pike's Peak or bust—the full price or nothing"—make that your motto.

There is nothing that so quickly shatters the confidence of a customer as an apparent willingness to shave the price on an article under one pretext or another, for it indicates that the full price has been paid by someone who did not take the trouble to haggle over the amount or that some person, more shrewd, has secured a still lower price. In either case it is almost impossible for the customer to feel contented in the matter, and such a condition does not make for business growth.

TALKING MACHINE EXPORTS.

The Figures for April Presented—Reports Show Falling Off for the Month.

(Special to The Talking Machine World.)

Washington, D. C., June 9, 1912.

In the summary of exports and imports of the commerce of the United States for the month of April (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for April, 1912, amounted to \$193,-

The Pressing Plant Extension to the Victor Co.'s Plant.

ticket. You don't think of asking the agent to trim the price to Louisville, or give you an "inside figure" to Buffalo.

It costs you a nickel to use the telephone. Why not threaten to withdraw your patronage if the company won't let you use the 'phone for four cents a throw?

Uncle Sam has managed to worry along without shading prices on postage stamps. Most of the

093, as compared with \$231,160 for the same month of the previous year. The ten months' exportation of talking machines, records and supplies amounted to \$2,212,966.

Bear in mind that the proposition which looks good to you with the "tungstens" all turned on may present a very different aspect in the daylight of the next morning.

THE Pooley Cabinets

Announcement last month of Cabinets retailing at

\$18.00 AND \$25.00

has met with the approval of the entire trade as shown by the number of orders received.

Our manufacturing capacity is being taxed to the utmost, orders will be filled according to dates received, not in proportionate shipments.

If you desire prompt delivery after July first, place your order at once with your Jobber.

NO LULL IN ST. LOUIS.

Jobbers Especially Enthusiastic Over the Business for May—Carrying on Special Campaigns for Summer Sales—Coming Jobbers' Conventions Arouse Interest—Politics and the Association Discussed—New Houses in the Local Field—Stocks Being Kept Up in Good Shape—What the Various Managers Are Doing—Some of the Big Sellers Among the Machines and Records—General Summary of the Month's News.

(Special to The Talking Machine World.)

St. Louis, Mo., June 7, 1912.

The jobbers are more enthusiastic over the May business than the retail men, but both assert that the showing for the month is better than a year ago. The retail business was perhaps saved by a spurt the last week that was so noticeable that all the prominent dealers spoke of it and none attempted to explain. It just came and it depleted stocks wonderfully for the first of the month statement.

This month-end rush included both machines and records. A part of it could, perhaps, be ascribed to the preparations of a good many persons to depart for their summer homes. The Victor dealers are anticipating a good run of business on the low-priced Victrolas for summer purposes, and some of them made this point in the June 1 letters, calling attention to the fact that the tiny, low-priced machines can be packed into a trunk and will be available for canoes, to use for boat ride serenades, etc. The Columbia dealers are also pushing the Lyric for the same purpose and are working with a view of profiting by the general advertising campaign the company is to undertake on this machine this month.

Too Busy to Go Out for Lunch.

Harry Levy, manager of the Aeolian talking machine department, was found the first of the month eating lunch at his desk, and he declared that such had been his program for several days in order to keep ahead of the work. He was congratulating himself that the ability to get machines and records from the factory had simplified matters for him so that after the hard work results were very satisfactory. "We are going ahead nicely and are profiting on improved crop prospects," he said, "and we have a number of new accounts that are going to help a good deal. The floods have not hit us as seriously as we expected." He reported that the retail department was enjoying good business, especially on a run of records.

Interested in Coming Convention.

The Atlantic City convention is arousing a good deal of interest among the local jobbers. E. C. Rauth, of the Koerber-Brenner Music Co., and Harry Levy, of the Aeolian Co., are sure they are going, and Mr. Levy hopes to be accompanied by Manager Alfring, of Aeolian Hall, who is becoming much interested in talking machines. Mark Silverstone, of the Silverstone Talking Machine Co., is not sure that he will make the trip, declaring that he is a man of peace, and he does not care to go that far to get into war. Mr. Silverstone and Mr. Rauth are both outspoken against the proxy requests and both have declined to give them so far.

Mr. Rauth said: "We want all jobbers in our association, because we want to work to the end of benefiting the talking machine business. Besides, I want to be a part of the convention when I get there, not merely an onlooker, watching others do as they please."

Wants Politics Eliminated.

Mr. Silverstone was greatly amused over a post card that he had received from O. K. Houck, who is in the East. It was written from Atlantic City and said, "Be sure and come; the Edison Band will meet you at 'Roush's Steal Peer.'" As to the proxy business, Mr. Silverstone answered the president's letter, saying: "Last year the proxies we had given were like a dash of cold water on all of us. It practically put us out of the convention and there was nothing for us to do but stand and watch others do as they pleased. The whole affair is not my idea of what proxies are for, and if I

give one for this convention it will be to some person who has no wholesale designs, but who I think will act as I would act if I were there. The political side has practically rent the association. There is still a chance to bring it back to a position of usefulness, but it must be seized at once. No association can possibly be prosperous that does not work for the good of the trade. If the Victor and Edison companies want to fight this battle, let them fight; there is no sense in merchants all over the country dragging themselves into a fight that is for the benefit of a few.

Victor Traveler for Missouri.

C. B. Snow, who has been traveling in the Carolinas for the Victor Co., has been transferred to the Missouri territory, in which there has not been a Victor traveler for some time.

Factory Service Improved.

E. C. Rauth, of the Koerber-Brenner Music Co., Victor jobbers, says he is much pleased with the improved mercantile conditions. The city trade has held up well and the country trade is improving with crop prospects. "But what pleases me most is the facility with which we are filling orders, since the factory is able to get out the goods. The other day I got a fine order from a house that we had been working on for a long time and we filled it 100 per cent., which, of course, please us and the customer. We are averaging 95 per cent. now of orders and the complaints that were so much of a bother a few months back have dropped to almost nothing, which, of course, gives us more time for getting new business. The local department stores are doing a very nice business with the cheap machines for summer homes, I find."

Elaborate New Department Opened.

The Zeigheim Furniture Co., of East St. Louis, finally has pulled off that long-delayed opening of their talking machine department, and there were no disappointments despite the fact that some lavish promises had been made. Victor machines will be handled and the opening stock was a large one and the parlors handsomely equipped. This store intends to show the folk on the East Side of the river a talking machine store that will equal anything on his side and keep at home considerable trade that has been coming over the bridge because of impressive surroundings.

The Silverstone Incorporation.

The Silverstone Talking Machine Co. has been incorporated during the past month, but no changes will be made in the manner of conducting business. "Most persons thought we were incorporated," said Mr. Silverstone, who is president of the new company, "but it has been purely a personal business. I thought that we had grown to a point where we ought to look out for the unexpected, and as an incorporated company there would be less likelihood of interruption. Miss M. L. Sutter, who is secretary, has been my office assistant for a number of years and will continue in that position. Other employees will be allowed to take an interest in the business, and the wish to give them this interest was one of the strong reasons for incorporating." For a long time Mr. Silverstone has advertised his business as the Silverstone Talking Machine Co. and that is the name under the incorporation.

Manager Ramsdell a Poultry Fancier.

Manager Ramsdell, of the Columbia store, was found on a Saturday noon as he was taking advantage of the first half-holiday of the summer to hurry home to look after the chickens, for he is a poultry fancier and devotes his attention to feathers and eggs out of business hours. "Our wholesale trade is coming nicely," he said. "Conditions look to improve and I do not anticipate an unusual summer slump because there is a campaign on. The business in the South is picking up nicely."

Mr. Ramsdell then introduced W. S. Byrd, south Missouri traveler for the Columbia line. "When I left western Kentucky a few days ago," said Mr. Byrd, "everybody was in fine humor. The flooded fields had been set for tobacco and the weather was ideal to get the plants started and that is half of the battle. Business looks to be pretty good in our lines all along the river, despite the handicap."

Princess Machine Sells Well.

Retail Manager Byars says the local business

is successfully following the general advertising and a very satisfactory trade has resulted for the Princess machine. "Quality of the trade is much higher than it has been with us," he said. "The record business is going nicely and we are selling some good stocks of lighter music for summer homes."

H. L. Willson, of the general manager's office, was a recent caller at the Columbia store.

H. T. Boxley, salesman for the Columbia Co., departed the first of the month for a two weeks vacation. Fishing in Wisconsin was his intention.

To Captain Baseball Team.

Manager Robinson, of the Thiebes Piano Co. talking machine department, was elected captain of the Thiebes baseball team in the Piano Baseball League. Mr. Robinson formerly was considerable of a player and a few practice games showed that he had not forgotten all that he knew nor the ability to deliver the goods. But baseball had not drawn his attention from business. "We have been doing a remarkable business in records for several days past," he said. "It is one of the unexpected spurts and it carried several machines with it. The cheap machines are meeting the summer demand very well and we anticipate a better summer business because of them."

Grafonola on Race Special.

Retail Manager Byars placed an electric Grafonola favorite at the service of the special train of automobile enthusiasts who went from this city to Indianapolis on Decoration day to see the auto races. The machine was placed in the dining car and was busy all the time. It was connected with the electric motor in use for the cars and the music drew many favorable comments from the wealthy folk on board.

Franklin Meyer, of Carlinville, an Edison dealer, was a recent caller at the Silverstone Talking Machine Co.

The Gift Machine and the Record.

A peculiar incident occurred at the Piano Exchange the other day, which has a counterpart at the Detmer Piano store. A youth applied to Manager Currens to know what he would give for a certain make machine, saying that he never had used it. It had been a gift to him without records and he said that he never had bought a record. Recently Manager Horras, of the Detmer store, took in one of the most expensive of machines, made two years ago, and there was not a record with it. The owner told Mr. Horras that he had drawn the machine at a church fair and never had heard a record on it. The moral would seem that if dealers expect to profit from gift machines that they should see to it that at least a few records go with the machine, for as one local salesman put it, "a machine that does not make a record customer is only half a sale."

The talking machine business is quietly purging holiday to mean new business. Saturday afternoon is a splendid collection day with them and they all leave a few persons on guard to take any and all money offered and to sell to those who come to buy but no effort is made to get business after the half holiday closing hour.

COLUMBIA NUMERICAL CATALOG.

The Columbia Phonograph Co., General, New York, has mailed to the trade a copy of its latest issue of the numerical catalog of double and single disc records. It is convenient for the dealers, as it serves as means of ready reference for the use of salesmen and in ordering stock. It includes all Columbia disc records listed up to and including the June, 1912, supplement. The records in this catalog are indexed by series, beginning with A, being arranged in consecutive numerical order. In the center of the book are several blank pages left for the purpose of pasting in lists, numerically arranged, covering monthly additions to the catalog, which will be issued quarterly.

Manager R. F. Bolton, of the Columbia store at 87 Chambers street, New York, in a brief chat with The World, said that the month of May had been a satisfactory one from every standpoint. Results showed that it was well ahead of the corresponding month of 1911.

Not one of the two million buyers of this week's Saturday Evening Post can miss the significance of the double page Columbia advertisement. You've seen it. Did you read the last paragraph in that advertisement?

Columbia Phonograph Co., Gen'l
Tribune Building, New York

A GOOD INSTALMENT LETTER.

Some Important Pointers Set Forth Which Should Be Helpful to Talking Machine Dealers Desirous of Building Up Instalment Business—The Letter Is a Model One in Every Respect, Forceful, Argumentative and Convincing.

A very effective argument in favor of the easy payment plan is to be found in the following circular letter sent out by the Talking Machine Co., of Chicago, which forms a very good model for an instalment house to imitate, and which is used with the concern's consent. Some of the largest businesses in the world have been built up through the instalment plan, and although some consider this form of trade as one confined to the very poor, the fact stands that everybody buys on instalment, although, of course, everybody don't have to buy everything on instalment.

The letter is so argumentative and forcefully written that we take pleasure in reproducing it. The address used, of course, is fictitious:

June 1, 1912.

Mr. John Smith,

care Smith, Brown & So., St. Louis, Mo.

My dear Mr. Smith—I am glad we have run up against the wall of Easy Payment Plan. It is something I have been expecting in negotiating the sale of Victor goods to Smith, Brown & Co.

It is *not* insurmountable—it is true, it has its difficulties.

The Easy Payment Plan is a demonstrated success. It is founded on sound business principles.

The Singer Sewing Machine Co. built up its 10,000 branch offices and millions of assets through easy payments of \$1 per week.

The largest department stores in the United States do a tremendous business, and are making enormous profits on the instalment plan.

Two great life insurance companies—the Prudential and the Metropolitan—who insure the poor at 5, 10 and 25 cents a week, have, through this weekly payment plan, amassed between them more than \$150,000,000.

When a man buys a \$50,000 mansion, paying \$5,000 down and giving his notes for the balance, he is simply buying on the instalment plan. He is glad to buy it that way, and the seller is glad to sell.

Entire railway systems are bought, and the national debts of all the great nations of the world are paid on the instalment plan. There is no dif-

ference in the system—only in the size of the transaction. It is a universal idea—a proven success.

Human nature is the reason.

The great majority of the buying public of the United States are wage earners, or hold clerical positions at moderate salaries. As a rule, whether their salaries are large or small, they prefer to pay on instalments. The vast majority want all the comforts and enjoyments they are able to pay for—and want them right now. They are healthfully ambitious, and they are *honest*. They may not have the cash in hand, but they have their positions and their salaries, and in a reasonable time they can pay, and they *do*. Even where they have the cash they often prefer easy payments.

They pay for the time accommodation. They pay more than the interest on the money, pay a bigger profit than the smaller, wealthier class pays, and are *safer* pay.

Statistics prove that the percentage of loss through dishonest instalment purchases is too small to reckon. It isn't one-tenth the loss by straight credit.

Almost the entire piano industry of \$60,000,000 a year rests on the instalment plan.

Bankers are glad to take as security for loans the contracts for instalments on pianos. Yet think how much harder it is to pay for a piano than it is for a Victor. *The Victor is the best of all goods for an instalment business.* There are many reasons for this fact.

The Victor makes a universal appeal—everybody wants it—everybody can enjoy it.

There is a Victor at every price—everybody can pay for it.

The Victor gives lasting pleasure—the possessor never gets tired of the Victor—he enjoys it all the time.

He never feels that he is paying for a "dead horse." He would rather have a Victor than the money.

The Victor does all its own work—it plays itself. The purchaser doesn't have to learn to play it, as he does with any other instrument.

NEW RECORDS.

There is always something besides the payments to look forward to. New pleasure comes to the buyer with every record, and fresh business for YOU. This works both ways. The new monthly records bring people to pay their instalments. This makes the instalment Victor its own collection agent, and those who come solely to pay their instalment end by buying new records. And this is

all cash business. That's one great point about Victor instalment business—it is an entering wedge for a large cash business.

The Easy Payment Plan is the most economical way to obtain business. The extra cost of making collections and keeping accounts, and the interest on your money, is offset by the far greater ease of getting business.

The same advertising that sells the Victor for cash would sell at least ten on the instalment plan. The cost of advertising chargeable to each sale would only be about one-tenth as great. And, as we know, total net profit is what counts.

You have every advantage over the mail order concerns—less expense, less risk, better goods and wider variety.

You are "on the ground," backed by your own and the Victor Co.'s strong business policies.

The Victor Co. do a large proportion of your advertising for you. The national, magazine and daily newspaper advertising reach a vast number of people locally.

They furnish you with the best written and most attractive advertising matter in the business world for your own local use—window cards, newspaper advertisements, and electrotypes free of charge; folders, car signs, booklets and other good advertising matter at the bare cost of printing.

You are able to know your customers locally a good deal better than the mail order man can know his. You know whom to trust and how far to trust them. You can easily have their honesty guaranteed, and the Victor you sell on instalments is always within your reach.

You have only about one-tenth the risk of bad debts that a mail order house has.

You can sell the best instrument of its kind that can be sold by anybody. You have the lowest priced good instrument, and the finest instrument at any price. You have a Victor to suit every purse.

You can demonstrate to possible customers. This is an immense advantage over a mail order concern. You can meet your customers, talk to them face to face, find out their ideas, select the most appropriate instrument and make the most appropriate terms to suit every individual.

No one can cut your prices or obtain any unfair advantage over you on Victor goods.

The writer knows of one order the Victor Co. turned down of over \$250,000 from one mail order house. They are continuously on the alert to stamp out unfair competition amongst Victor dealers.

You will have none of the disadvantages of lack of capital, and if you are going to take up the Victor line, by all means embrace the instalment and of the business. Very truly yours,

THE TALKING MACHINE Co.,
Per A. D. Geissler, Manager.

ORDERS FROM NEW ZEALAND.

(Special to The Review.)

Minneapolis, Minn., June 9, 1912.

The Talking Machine Co. received a large order for Victor Red Seal records from New Zealand, which were shipped last week via express and boat. Even the Far West knows of Matheis.

The Talking Machine Trade in New England

NOW HANDLING THE VICTOR LINE.

F. W. Peabody Installs Victor Machines and Records in Gloucester Store.

F. W. Peabody, who is one of those hustling merchants who is able to successfully conduct three large stores, one at Gloucester, one at Amesbury and a third at Newburyport, Mass., has just installed Victor outfits in the store in the first-named city. Mr. Peabody's Gloucester place has a wide reputation as a piano and music house, and now that he has the Victor goods on sale he is looking for even a wider popularity than ever before.

VOICES OF OLD RESIDENTS.

Wentworth's Clever Idea of Handing Down to Posterity the Sayings of Middleboro's Old-Timers.

(Special to The Talking Machine World.)

Middleboro, Mass., June 8, 1912.

H. B. Wentworth, an Edison dealer, is planning a very unique stunt. He is going to record the voices of quite a number of prominent old residents of the town. These persons are going to make records of the history and growth of the community and Mr. Wentworth proposes presenting these records of the history and growth of the community to the local authorities, same as any written records might be preserved. Those of the town who have learned of Mr. Wentworth's purpose have been most enthusiastic over the idea.

WARDELL IN NEW QUARTERS.

"Tom" Wardell, of Lowell, Mass., is about to move into his new store, and he has had built three elegant booths, which his customers will heartily appreciate. He is going to carry a full line of both the Victor and Edison goods.

REYNOLDS DOING WELL WITH "TALKER."

M. J. Reynolds, the well-known music dealer of Milford, Mass., is one of the aggressive men of the business in his town, and the talking machine business is one of the important items in his daily affairs. Mr. Reynolds has been able to interest a great many people in the possession of expensive outfits.

VICTOR LINE WITH DIMOND & SONS.

Another Providence, R. I., store to take the Victor line is L. Dimond & Sons, one of the large department stores of that enterprising city. The concern has just placed its application for a contract with the Eastern Talking Machine Co. of Boston. This is one of those enterprising concerns that, having examined into the talking machine proposition, has been quick to see the value of such a department from the purely commercial, not to say the artistic, side of the proposition.

AN ENTHUSIASTIC EDISON DEALER.

Mansfield A. O'Brien, of Kingston, Mass., down on the south shore of Massachusetts, is one of the enthusiastic Edison dealers. Mr. O'Brien is very familiar with that district and during this summer especially he expects to be able to dispose of a great many outfits among the summer guests, that district being a very popular resort during the warm months.

SCHEUER TO INCREASE FACILITIES.

F. J. Scheuer, proprietor of the Melrose Willow Furniture Co., of Melrose, Mass., reports that the Edison business looks so encouraging that he already is making plans for increasing the facilities of his establishment. He has a very attractive place and business with him is constantly growing.

EDISON ACTIVITY IN NANTUCKET.

It was fortunate for the people of Nantucket, Mass., that C. W. Austin, the Edison dealer, had a good supply of machines on hand during the past long cold winter, for they helped to make the season bearable. So many machines were sold that Mr. Austin has had to lay in a complete new line to meet the demands of summer visitors, for the season at this popular resort promises to be a big one.

REPORT AN EXCELLENT BUSINESS.

L. F. Monahan, of East Dedham, has a fine report to make of the talking machine business for the past few months. Lately he has been able to dispose of a number of the \$90 outfits.

CLEVER NEEDLE PUBLICITY.

(Special to The Talking Machine World.)

Lowell, Mass., June 10, 1912.

What is claimed to be the first booklet ever published devoted entirely to talking machine needles has been issued by W. H. Bashaw, of this city. This is for general distribution and copies will be sent to dealers and jobbers upon request. Typographically, the Bagshaw booklet is pleasing; the cover is of light-blue stock and is printed with blue ink, the inside pages being of buff color with the printing done in brown ink.

Primarily this booklet was published for the purpose of telling the story of Duplexetone needles, the talking machine needles with two tones, but in addition is a vast amount of live reading covering the general business of Mr. Bagshaw. Under the general business comes the service offered to jobbers whereby they can have their own advertisement on the packages of needles without extra charge.

For a specialty that has won instant favor the Duplexetone needles have been very successful. To secure a loud tone and a soft tone with the same needles appeared at first as an impossibility to some of the skeptical, but upon receiving their generous package of samples (which will be sent to any dealer or jobber upon request), and giving the Duplexetone needles a good, forcible test, even the skeptical were convinced of the wonderful merit of this needle. Mr. Bagshaw is spending considerable money educating the trade to the value of the Duplexetone needle and naturally he is pleased at the reciprocation of the trade.

THE PHONOGRAPH IS EFFECTIVE

(Special to The Talking Machine World.)

Great Barrington, Mass., June 8, 1912.

From boyhood George Day, now twenty-one years old, has been deaf. He could not hear even the report of a gun.

The most skilled experts have pronounced his ear drums perfect and there was no apparent reason why he could not hear. They could only suggest as a theory that the nerves of the ear had become unresponsive through lack of exercise.

But a few days ago he began to hear under certain conditions. His hearing is now being developed by means of the phonograph.

Frank A. Minkler, of Great Barrington, conceived the idea that Day might be made to hear loud records played on the talking machine and he secured an extra loud cornet solo record and fitted to the talking machine and ran a long rubber tube from it to Day's ears. The talking machine was started and immediately over the face of the listener there stole an expression of wonder, followed by one of delight. For the first time in twenty years George Day could hear. No ordinary ear could stand the shrill, sharp notes. Now, twice a week the young man is trying the experiment of curing his deafness with the talking machine.

PLACE BIG COLUMBIA ORDER.

Goodman & Derby, of Peterboro, N. H., placed an order for sixty machines with the Columbia Phonograph Co.'s Boston quarters lately. This shows what a hustling firm can do in a comparatively small place, for Peterboro is a comparatively small place, numbering 2,527 people. Goodman & Derby are widely known, for they successfully conduct ten stores in different places. In acknowledging the order, Manager Erisman, of the Columbia, congratulated the house on its enterprise.

Charles W. Persons, of 79 Main street, Maynard, Mass., whose piano house is a well-known rendezvous for the music lovers of that town, has installed a large line of high-priced Victor goods, and some well equipped booths are being greatly appreciated by Mr. Persons' customers.

A wise dealer's Resolution for a "Profit-Convention" all the time!

Resolved, that I will write today to The Pardee-Ellenberger Co. at Boston, Mass., or New Haven, Conn., for full particulars about the profits of the Edison Home Kinetoscope.

BECAUSE this machine retails for \$65 to \$88, which is the right figure for the most sales, and

BECAUSE it allows me a good profit, not only upon the machines but upon the films and coupon books for films, and

BECAUSE the investment is so small that it makes the proposition doubly attractive.

BECAUSE it will increase the sale of talking machines and records.

(Signed) "A LIVE DEALER."

The Pardee-Ellenberger Co. are Distributing the Edison Kinetoscope in New England. Offices at Boston, Mass., and New Haven, Conn.

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., June 7, 1912.

Business has been making such a notable advance at the Columbia Phonograph Co.'s local headquarters in Tremont street that additional space has had to be taken by Manager Arthur Erisman. A year or so ago the rear part of the second floor of 174 Tremont street was taken and rearranged for the uses of the large clerical force of the establishment; now the front half of the same floor has been leased and it will be completely transformed into a salon arrangement and will be approached from the ground floor both by an easy stairway and elevator. It is Manager Erisman's plan to have one-half of the length of the apartment divided into individual rooms, each one furnished distinctively, that is to say, one will

be furnished in mahogany with a handsome Grafonola to match; another apartment will be finished in oak and perhaps a third in mission style, and in this way it will be apparent to the purchaser or even the casual observer that a machine can be supplied to match any style of furnishings. The other half of the large area will contain a line of high-priced machines, and along the Tremont street front, from which a splendid view of Boston Common may be had, there will be an attractive display of Columbia goods which will show up well from across the street. In the center of the broad expanse of windows is an artistic bow window with each pane opening in, so that the place always will be cool and comfortable. The new quarters of the Columbia should be all ready in the course of a few weeks.

Manager Erisman reports that while there has been somewhat of a let-up in business, the month of May showed up considerably in advance of the same month last season. Just now Mr. Erisman's busy staff is profitably prospecting for summer business.

Chester J. Sylvester Married.

One of the events of the month in local talking machine circles has been the wedding of Chester J. Sylvester, manager of the talking machine department of the C. E. Osgood Co., which took place at Worcester on the evening of Wednesday, June 5, the bride being Miss Mae Morrill, daughter of Mrs. Hannah Morrill. The ceremony was performed by Rev. Clifton H. Mix, of the Pilgrim Congregational Church, and the bride was given in marriage by her mother. The house was attractively decorated and there were guests present for the reception from Boston and Worcester and many distant points. Mr. and Mrs. Sylvester were the recipients of many gifts. On their return from an extended wedding trip they will start housekeeping in one of the suburbs of Boston.

Promotion for J. W. Widener.

J. W. Widener, who formerly was attached to the Boston Talking Machine Co., and was associated with the Columbia Co., has been made vice-president of the F. C. Henderson Co. and is in charge of the talking machine department of the Shepard-Norwell Co., whose department devoted to several lines of talking machines has been a great success from the start. Mr. Widener has had a wide experience in this line of work and Mr. Henderson has been quick to realize the wisdom of attaching Mr. Widener to his staff.

Summer Outing of Eastern Associates.

At the last meeting of the Eastern Talking Machine Associates, held in the hall of the Eastern Talking Machine Co., the members extended a vote of thanks to President E. F. Taft, of the Associates, who is secretary and general manager of the company. In turn Mr. Taft thanked the employes for their unfailing loyalty and support given him in every case throughout the year. It was the last meeting of the season, the next one to be held in September. All the boys eagerly discussed the summer outing which is to be held at Crescent Park, Rhode Island on June 17, and which promises to be the banner occasion of the Associates. There will be thirty going down from Boston, some by train, others by automobile. A baseball squad has been formed and their game will be one of the events of the day. The Boston contingent will be joined at Providence by F. L. O'Neil, who is the manager of the talking machine department of the John Shepard Co., of Providence, and others who will be in the party will be members of the Victor Co.'s New England staff, J. L. Gately, L. H. Ripley and T. W. Duncan. Everybody is looking for a good time.

Looking After Kinetograph Sales.

Bernard M. Corbett, of the kinetograph sales department of Thomas A. Edison, Inc., has been in Boston for a short time calling on the local trade. He will leave here about June 24 and will go to Peoria, Ill., and other Western places. Mr. Corbett says he always likes to get to Boston, which means he knows a good city.

Business Active with Eastern Co.

The Eastern Talking Machine Co. has just fitted up a new room on the second floor which will be used for a stock room, although just now it can most advantageously be used for demonstration purposes. The room is carpeted, there are attractive pictures on the walls, and there is quite an air of homelikeness to the place. Business with the Eastern Co. has been very good throughout all of May and the first week of June showed up surprisingly well also, considering the period.

Skelton Enjoying Vacation.

H. R. Skelton, of the phonograph sales department (Continued on page 30.)

How Many of these Duplexetone Booklets Do You Want?

Duplexetone

The Talking Machine Needle
With Two Tones

W. H. BAGSHAW
LOWELL, MASS.

This Booklet
Tells All About

Needles; Their
Production,
Merits and
Profits.

It is written so it can be given to your retail trade, which will treble your needle profits. With Duplexetone Needles you can secure two tones at one price. A distinct novelty and a big seller wherever introduced. Samples free upon receipt of your jobber's name.

Send your request for Booklets to-day! Remember that the Edition is limited and the first requests get the first attention.

W. H. BAGSHAW,

SOLE MANUFACTURER OF
DUPLEXETONE NEEDLES

Lowell, Mass.

You can afford to spend a little time investigating Columbia instruments, which are the most attractive, yet the cheapest on the market; and Columbia records which we guarantee musically superior to all others.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

FROM OUR BOSTON HEADQUARTERS.
(Continued on page 29.)

ment of the Thomas A. Edison, Inc., who is one of the popular traveling men in the New England field, is taking a much-needed vacation, and is spending most of his time at his comfortable home in Roslindale.

Normal Conditions Again in Lawrence.

John E. O'Neil, who has a large establishment at Lawrence, was a recent visitor to Boston, and he reports that his city has again resumed its normal condition, following the textile strike, and that business has picked up considerably. Mr. O'Neil is one of the enthusiastic Edison dealers and he has been making some excellent sales lately.

Demand for New Seal.

A neat little double-disc seal has been put out by the Columbia Co., and Manager Erisman has had calls literally for thousands of them since the company's dealers learned that they were ready for the trade. As an advertising medium they are bound to play their part.

Place Order for Edison Business Phonograph.

The Office Specialty Co., of Boston, which are dealers for the Edison business phonograph, has recently sold to the New England Telephone Co. a large number of commercial machines, which have been installed in the company's executive offices. Roy R. Fiske, the company's manager, says that business has been increasing considerably of late.

Early Closing During the Summer.

Both the Eastern Talking Machine Co. and the Columbia Phonograph Co., whose establishments are quite close together in Tremont street, have agreed to close early during the summer, announcement of which has been most gratefully received by the faithful employees of the two companies. Beginning on June 22 the two stores will close each afternoon at 5.30 instead of six, and on Saturdays at one o'clock, this schedule to remain in effect until September 15. This favor of a Saturday half-holiday is one that each season is greatly appreciated by the companies' employees.

Add Many Dealers to Its List.

The Pardee-Ellenberger Co., Inc., has been adding a number of strong dealers to its list lately, and some of the new Edison enthusiasts who are dealing with the company are located in Worcester, Mass.; Concord, N. H.; Lawrence and Lowell, Mass.; New Haven, Conn.; Eastport, Me.; Portsmouth, N. H.; Brockton, Mass.; Woonsocket, R. I.; Fitchburg and Quincy, Mass.; Belfast, Me., and other places. Manager Silliman, of the Boston office, says these all constitute a strong working force for the Edison output. He also reports local business to have been splendid the past month, with a number of sales of the \$125 Amberolas to the company's credit.

President W. O. Pardee, of the Pardee-Ellenberger Co., Inc., was in Boston for a few days lately, and expressed himself well satisfied with the business done from the Boston end.

Geo. W. and Mrs. Lyle Visitors.

George W. Lyle, general manager of the Columbia Phonograph Co., and Mrs. Lyle were visitors to Boston lately, the guests of Manager Erisman. Mr. and Mrs. Lyle had a daughter studying

at the Sargent Gymnasium School, which has been the reason for their several visits here this past season.

Columbia in School Exercises.

Manager Erisman is proudly exhibiting several pictures taken in the Parmenter School, South Boston, where a number of Columbia outfits lately have been installed. The pictures show groups of little tots going through their gymnastic exercises to the music of a Columbia Grafonola.

Ditson Trade Shows Increase.

Henry Winkelman reports a good Ditson trade all through May, and at the end of the month it was found that the business had made a marked increase over the same month last year. Mr. Winkelman, when your correspondent dropped in on him the other day, was engaged in the process of adjusting vacations, so that all his working staff may be satisfied and with as little inconvenience to the business as possible.

Sales of High Priced Victor Outfits.

Charles Lincoln Parker's Victor department has made some sales of high-priced outfits in the past few weeks. Mr. Parker has a number of good prospects in view. This well-known dealer, with his family, is going to spend the summer at a comfortable place on Narragansett Bay.

Find Department Profitable.

The R. H. White Co. is finding out it made no mistake when it installed a talking machine department last month. Mr. Krunschied, the manager, has made the department a success from the start.

Business Is Excellent.

Manager Herbert L. Royer, of the Arch street Victor headquarters of the M. Steinert & Sons Co., made a quick trip to some of the Connecticut cities a few days ago. Mr. Royer reports business as excellent.

An Attractive Victor Display.

A well arranged Victor display in the large show windows of the Henry F. Miller & Sons Piano Co. is a magnet for much fine business lately at this house. Manager Urquhart and his able staff have been able to interest a number of prominent people in the Victor line, and the outfits are for special service at the summer homes of the purchasers.

AN ADVERTISING NOVELTY.

The Columbia Phonograph Co., General, under date of June 5, is sending to its dealers and distributors a sample of a new advertising specialty, the Columbia double-disc "Seal," with a letter of instructions as to how to use them to further promote the publicity of Columbia double-disc records. The "Seal" is attractively designed and printed and embossed in black and gold. In the center is the familiar Columbia musical note, and around it the words, "Columbia Double-Disc Records." The background is black, with a border of gold. The seal is round and of the proper size for use on envelopes or any other mail matter. The seals are to be supplied free, and shipments have already begun. The seals properly distributed will bring about the result desired by all dealers, and that is to have all people think of the Columbia when they see the musical note.

OUR FOREIGN CUSTOMERS.

**Amount and Value of Talking Machines
Shipped Abroad from the Port of New York
for the Past Four Weeks.**

(Special to The Talking Machine World.)

Washington, D. C., June 8, 1912.

NEW VICTOR DEALER IN HUDSON, MASS.

The Durkee Furniture Co., of Hudson, Mass., recently installed a good-sized stock of Victor goods. This store has a very central location in the center of the town, and it is able to exhibit and to demonstrate machines under the best possible conditions.

Things don't come your way till you get after them.

OFFICERS OF EDISON CO. WILL NOT ATTEND CONVENTION.

Reasons Set Forth in Communication to Secretary Roush Charging That His Activity for Proxies Is Inconsistent with Association Usefulness—Mr Roush's Letter in Which He Says His Act Was a Personal One.

Talking machine jobbers throughout the country have received a communication from C. H. Wilson, general manager of Thos. A. Edison, Inc., to the effect that he, as well as Mr. Edison, Mr. Dyer and the other officials of the corporation have officially declined the invitations to attend the annual convention of the National Association of Talking Machine Jobbers at Atlantic City on July 1 and 2. The reasons leading up to this decision are to be found in the following letter addressed to J. C. Roush, under date of June 4:

ORANGE, N. J., June 4, 1912.

Mr. J. C. ROUSH, Secretary, National Association of Talking Machine Jobbers, Pittsburgh, Pa.

Dear Sir:—With reference to the invitations extended to Messrs. Edison and Dyer and other officials of this company to attend the annual convention of Talking Machine Jobbers, at Atlantic City, on July 1 and 2, let us say that we cannot consistently accept such invitations and they are therefore declined.

It has come to our knowledge that you have been conducting a campaign for proxies and that you have invoked support for the alleged reason that this company, to quote your language, "purposes using every effort to elect an entire Edison ticket * * * a ticket that would be wholly prejudiced in favor of the Edison line."

You state in your letter to jobbers on this subject that you understand this "on mighty good authority." We challenge you to cite that authority. We also challenge you to name the source and character of any information you may have which tends to support your statement concerning the attitude of this company in this matter.

It is untrue that we have used or proposed to use, or ever had any intention of using any effort whatever to influence the nomination or election of any candidate for any office within the gift of the association.

Your aforesaid letter also contains the following statement:

"As our interest (meaning the interest of yourself and those to whom your letter was addressed) are 95 per cent. Victor, it would be—to say the least—very foolish for us to allow the Edison faction to secure control of the association, etc."

Are we to understand that your conception of the National Talking Machine Jobbers' Association is that it must be the tool of one of the talking machine manufacturers, and that your duty as secretary is to make the association the tool of the manufacturer, with whom, as you say, 95 per cent. of your interests lie? If such is your conception of your duty, and if such ideas are shared by a majority of the association members, we feel that the usefulness of the association to its members is at an end.

We hope that the National Association of Talking Machine Jobbers will not become subservient to any manufacturer, and that it will continue to serve and promote the interests of its members in an impartial and intelligent manner. However, if your methods are to be endorsed by the association, we do not feel that any good purpose would be served by the continuance of past relations between that association and this company.

We understand that the ticket for which you have been seeking proxies was announced by you as having been selected by the Executive Committee of the association. We have seen a letter from a prominent member of the Executive Committee in which he states that the committee has not to his knowledge suggested the names of any candidates to be elected at the annual convention.

We trust that the foregoing letter makes our position plain and with that belief are sending a copy of it to each member of the association. Very truly yours,

(Signed) C. H. WILSON, General Manager.

In addition to the foregoing Mr. Wilson sent the following letter to the entire jobbing trade, so that they may more fully understand the position of his company:

June 4, 1912.

Gentlemen—You may perhaps be interested to learn that we have decided not to attend the annual convention of the National Association of Talking Machine Jobbers at Atlantic City, next month.

Our reasons for this decision are set forth in our letter of to-day to Mr. J. C. Roush, secretary of such association. A copy of that letter is enclosed herewith. We also enclose copy of a letter set out by Mr. Roush to various jobbers seeking their proxies in behalf of a ticket purporting to have been selected by the Executive Committee.

In support of this ticket Mr. Roush asserts that this company will seek the election of what he calls an "Edison ticket." We have never had any intention of making any effort whatever to influence the nomination or election of any person to any office in the association.

Our letter to Mr. Roush states our conviction in the matter, and it is probably not necessary to make any additional comment.

Our attitude toward the jobbing trade and its individual members will, of course, remain unaffected by the position we have felt it necessary to take in regard to Mr. Roush's methods of conducting the affairs of the association.

Very truly yours,

(Signed) C. H. WILSON, General Manager.

The letter written by Mr. Roush and referred

to by Mr. Wilson in the foregoing communication to jobbers is as follows:

May 24, 1912.

Dear Sir:—For just about three minutes I want your undivided attention about a matter that is vitally personal to both you and me.

On mighty good authority I understand that the Edison Company propose using every effort to elect an entire Edison ticket at our coming convention—a ticket that would be wholly prejudiced in favor of the Edison line.

You will recall that for the last two or more years we have had absolutely NO Edison concessions granted our association, every concession in all that time coming from the Victor Company.

As our interests are 95 per cent. Victor, it would be—to say the least—very foolish for us to allow the Edison faction to secure control of the association and the movement should be nipped in the bud!

Therefore, even though you intend being at the convention I want you to sign and send to me at once the ENCLOSED PROXY FOR THE ELECTION OF OFFICERS AND EXECUTIVE COMMITTEE only.

Leave the rest to me.

This is of the utmost importance.

Don't lay this down and forget it.

Sign it NOW and drop it in the mail NOW!

With thanks and warmest regards, yours sincerely,

(Signed) J. C. ROUSH, of Pittsburgh.

A LETTER FROM J. C. ROUSH.

J. C. Roush, secretary of the National Association of Talking Machine Jobbers, explains his attitude in the following communication sent to Carl H. Wilson, general manager of Thos. A. Edison, Inc.

PITTSBURGH, Pa., June 11, 1912.

Mr. Carl H. Wilson, General Manager, Thos. A. Edison, Inc., Orange, N. J.:

Dear Sir—The writer regrets that his personal political activity has prompted you and your associates to decline the invitation of the National Association of Talking Machine Jobbers to attend their sixth annual convention.

The letter which you refer to as having suggested the necessity of taking this step, you will, I believe, upon further consideration, grant was a personal act, and not an official one, clearly indicated by the fact that same was transmitted on my own personal stationery, unattended by any official signature, and was addressed only to such distributors whose interests, as stated, were 95 per cent. Victor, or close to same.

The writer, in accepting the office of secretary of the National Association of Talking Machine Jobbers, had no intention of relinquishing his rights as an individual, nor sacrifice those interests with which his past and what he believes his future success lies.

Even had I, as secretary of this organization, endeavored to secure representation favorable to the company with whose interests my own interests and those of the majority of the members of the association are allied, I believe I should not have committed an indiscretion by such an act, as the company who has, in the most instances, acted favorably upon the suggestions of the association, and who are at the present time supporting the industry, are certainly entitled to our greatest consideration.

Regarding the interest evinced by the members of your company and your challenge that I present proofs to substantiate my statement, I must, with the same grace that you have declined the invitation of the National Association, refuse to betray the confidence of those from whom this information was secured. I can only repeat that this information was received from what I believe was an authentic source, and acting upon this belief, I believe it will be granted by you my right to assist in the election of such officers in whose fairness and integrity I feel the greatest confidence, and whom I believe will maintain friendly relations with the manufacturer to whose support I must look for my business success.

The entire association has been maintained, as far as my knowledge of its workings are concerned, to the benefit of all its members. While seeking, diplomatically, such concessions as we believe for the best interests of the industry, it has never become subservient to the manufacturers, nor does it intend doing so.

The writer, as an individual, shall not attempt to force upon you an invitation which is apparently undesirable, but the secretary of the association, I can assure you and the members of your company a most cordial reception at our convention.

The paragraph pertaining to the act of the executive committee in suggesting a ticket for nomination at the next election, has no bearing on the matter under discussion, but for your information I beg to advise you that the above mentioned ticket had and has the approval of the majority of the present executive committee.

Yours very truly,

J. C. ROUSH, Secretary.

No placard is needed on the Washington Monument to call attention to the fact that it's tall. Waste no time on the obvious.

NEW START AND STOP DEVICE

For Disc Talking Machines Just Placed on the Market by a New York Concern—The Invention of Thos. W. Kirkman, a Clever Young Mechanical Engineer—Some of the Interesting and Valuable Features of the New Device and Its Many Advantages.

A new and practical combined starting and stopping device for disc talking machines which has just been put on the market by the Standard Gramophone Appliance Co. of New York, offers many new features for the consideration of the talking machine enthusiast and is expected to fill a substantial demand in that quarter.

The new device, known as the "Simplex," is the invention of Thomas W. Kirkman, a clever young mechanical engineer, who spent over a year in its development before the device was placed on the market as a finished product. The device, which is entirely automatic in its operations, does not inter-

Thos. W. Kirkman.

fere in any way with any part of the machine, but is permanently attached to the cabinet midway between the tone arm bracket and the turntable; by means of this attachment the necessity of the regulation brake is eliminated.

The "Simplex" device itself and a sketch of the attachment placed in position is shown in the advertisement of the Standard Gramophone Appliance Co. on another page of this month's World. Among the advantages claimed for the "Simplex" is that it is simple but positive in its action; does not interfere with any part of the talking machine; does not jar the sound box, and in stopping permits of several revolutions of the record. By the latter means there is no danger of the record being scratched through a sudden thump, and therefore remains uninjured. The "Simplex" at present on the market is intended solely for use on Victor machines, but Mr. Kirkman is at present working on a model for use on all other makes of this machine which will be ready at an early date.

The Standard Gramophone Appliance Co., manufacturers of the "Simplex," was but recently organized, with Richard P. Hart as president and treasurer, and Mr. Kirkman, the inventor, as secretary and general manager. The company intends to engage in the manufacture of numerous other novelties, and Mr. Kirkman has already perfected a new automatic lighter which uses the ordinary type of safety match, permits its being lighted and insures its staying lighted in any breeze.

The Talking Machine Supply Co., 563 Fifth avenue, New York, is the sole sales agent for the "Simplex" start and stop device, and inquiries regarding same should be forwarded to that company.

RIGHT TO THE POINT.

Push gets a bridge built, while Patience waits for winter, planning to cross on the ice.

Beginning of a Good for Columbia Dealers

June 15, 1912

THE SATURDAY EVENING POST

for all outdoors

he will deliver it, with 12 selections
on approval,

month

cept the time
entation.

more dealers can make money exclusive selling rights

Gen'l, Tribune Building, New York

(we want you to read)

make money and wherever we are not actively represented, we are prepared to consider the granting of exclusive selling rights

Note also that the album mentioned in the advertisement brings an extra profit, and that the six records will leave six pockets in that album empty—which means that in practically every sale you can call the attention of the buyer to those empty pockets and sell several more records just as well as not.

Columbia advertising this season marks an epoch in the history of the talking machine industry.

This advertisement, like all other Columbia advertisements, calls particular attention to the dealer. Thousands of talking machine dealers, among them the leaders in their particular territory, have become enthusiastic Columbia boosters. And there is an enormously large field for all live dealers to profit by the advertising to come. This is only the beginning of our summer advertising.

Don't keep guessing at what we are going to do or what we have to offer. *Get in touch with us.*

DOINGS OF THE MILWAUKEE TRADE.

Talking Machine Men Making Preparations for a Lively Summer Business—Special Efforts Made to Interest Vacationists—Good Crop Outlook Helps Trade—Lawrence McGreal on Annual Trade Boosting Trip—Gas Company's Advertisement Displeases Victor Dealers—Victor Line for Edmund Gram Music House—Planning to Attract Jobbers' Convention—New Stores and Departments Opened Recently Handling "Talkers."

(Special to The Talking Machine World.)

Milwaukee, Wis., June 10, 1912.

While the talking machine business during the month of May was hampered somewhat by the excessive rains which were received all over Wisconsin, dealers say that the reaction which is now being experienced more than offsets the delay. In Milwaukee the total rainfall during May amounted to 8.15 inches, the heaviest for the same month that had been experienced since May, 1876, when the total fall amounted to 8.54 inches. Despite the bad behavior of Jupiter Pluvius, local dealers say that trade during May might have been a great deal worse. They expect much better results during June, however, and, judging from the manner in which the month has opened up, they will not be disappointed.

Just as soon as the schools have closed the summer resort season all over Wisconsin will open with a rush and dealers will enter upon a busy period. Business from this source has started earlier than usual this year, and some good sales to Milwaukeeans, who have purchased new machines, records and supplies to take to their summer homes, are reported. Most of the local dealers are following the scheme outlined by J. H. Becker, Jr., manager of The Talking Machine Co., 1120 Walnut street, of selling smaller machines to owners of

the large Victrolas, in order that they might with greater ease move the smaller machines and enjoy the records intended for the larger Victrolas.

Considerable improvement has taken place during the past month in the Milwaukee iron, steel and heavy machinery field, and this is reacting favorably upon general business conditions. When the heavy machinery business of this city is satisfactory it means better things in all lines. Several of the local plants have increased their output and enlarged their working forces during the past four weeks, and talking machine men are hopeful that the improvement has come to stay.

Crop Outlook Helping Business.

Decidedly favorable crop reports are arriving from all over Wisconsin. The first report of the season, issued by Secretary MacKenzie of the Wisconsin State Board of Agriculture, shows that the condition of crops is equal to if not above the average, while the acreage of spring sowed grain is considerably larger than that of a year ago. The acreage of corn will show a decided increase, due to the steady growth of the hog raising and dairying interests, and to the fact that an unusually large acreage of land in northern Wisconsin was opened to cultivation last year. Good crops mean increased confidence and more money in all lines of activity, and talking machine men believe that they have every reason to be optimistic.

On Annual Trade Junket.

Lawrence McGreal, president of the National Association of Talking Machine Jobbers and Edison jobber for Milwaukee and Wisconsin, is a member of the party of business men who are enjoying the annual trade junket of the Merchants and Manufacturers' Association. The party, made up of representatives of almost every line of industry, will visit all the leading cities and towns in southern, central and northern Wisconsin, as well as two points in northern Michigan, and will not re-

turn to Milwaukee until about June 10. Mr. McGreal, as usual, took along several machines and a big supply of records, so he will probably make himself one of the most popular members of the party. Accompanying the party were Joseph Gannon, representing the Wisconsin Talking Machine Co., jobber in Milwaukee and Wisconsin for the Victor line, and William P. Hope, Wisconsin and upper Michigan representative of the Thomas A. Edison Co., Inc. Both Mr. Gannon and Mr. Hope took along a consignment of machines and records and aided Mr. McGreal in providing entertainment en route.

Advertisement That Displeases Trade.

Considerable adverse comment has been caused in Milwaukee talking machine circles by the advertisements which the Milwaukee Gas Light Co. has been running in the local papers of late. Headed by a drawing which shows a young man listening to a Victrola, while another young gentleman is carrying a teakettle upstairs, the advertisement reads in part as follows:

"You will invest in a \$200 Victrola and then lug a teakettle of hot water upstairs for a bath. Have you forgotten—now that your furnace is out—that a gas water heater will give you plenty of hot water in a few minutes and at a small cost?"

It would seem that it is decidedly poor taste, to say the least, to "knock" the talking machine business in such an utterly uncalled for type of advertising.

Interested in Van Eweyk's Songs.

Milwaukeeans are decidedly interested in the fact that the June list of Victor records contains six songs by Arthur Van Eweyk, the famous Milwaukee baritone, who is now making his home in Berlin, and whose annual visits to America are among the events of the musical season. Mr. Van Eweyk was born and educated in Milwaukee, and his return visits are hailed with delight by his friends and music lovers in general.

Talking Machine as Entertainer.

There is one Milwaukee industrial concern which has come to realize the value of the talking machine as a means of recreation and education for its employes, and that is the Cream City Laundry Co. The company only recently completed the erection of a large addition to its Broadway plant, fitted out with handsome rest rooms for the young women employes. The next step was to purchase a big Victrola and an extensive list of records, so that the young women could entertain themselves during the noon hour and the forenoon and afternoon intermissions. The company is generous enough to furnish tables and hot coffee to its employes, so while the Victrola is playing the girls can eat a warm lunch without leaving the building. After lunch is over the young women make good use of the Victrola by dancing to its music.

Edmund Gram to Handle Victor Trade.

The Edmund Gram Music House, representative of the Steinway and other leading pianos, has made arrangements for carrying the complete line of Victor machines just as soon as it is located in its recently purchased building at 414-416 Milwaukee street, now being remodeled into one of the handsomest piano establishments in the Northwest. Mr. Gram will be located in a favorable portion of the city, and his trade is high class in nature; so he feels that he ought to meet with success in the Victor line. Special Victrola parlors are being fitted out on the first floor and in the basement of the new building, and no expense will be spared in fitting up quarters which will be entirely in keeping with the Victor line. It is understood that Miss Julia Wolfe, who is also manager of the player roll library at the Gram establishment, will have charge of the new talking machine department. The order for Victor stock will be placed with the Wisconsin Talking Machine Co.

Victor Concerts Attract Crowds.

The Talking Machine Co., 1120 Walnut street, J. H. Becker, Jr., manager, inaugurated a series of Victor concerts on May 29, which it intends to follow up for the remainder of the summer. Mr. Becker had made special announcement of the concert in the daily papers, following up the advertisements with 1,000 circular letters, so the attendance was large. Just at the present time Mr. Becker's

HOW DO YOU ORDER DINNER?

You don't order part of your meal in one Restaurant, because they serve that portion to suit you, and the balance in another.

YOU EAT YOUR ENTIRE MEAL IN ONE PLACE,

You select a Restaurant that will serve your entire meal to your taste and satisfaction. It is there you give your entire order.

BLACKMAN DOES NOT RUN A RESTAURANT

No; but BLACKMAN fills orders for the particular Dealers and serves them with EDISON and VICTOR goods as they want the order assorted, and the service is the best.

HOW DO YOU ORDER EDISON AND VICTOR GOODS?

Are you ordering EDISON from one jobber and VICTOR from another, waiting for TWO shipments and paying TWO expressages? Stop it.

BE ECONOMICAL—ORDER FROM BLACKMAN

BLACKMAN keeps a FULL LINE of all EDISON and VICTOR goods, therefore SAVES YOU MONEY, for you need only make out ONE order, pay ONE expressage. Send in a trial order NOW and let BLACKMAN take care of your holiday requirements.

There is no worry on BLACKMAN'S part about "MAKING GOOD," and there will be none on your part after a trial, for "Satisfaction at Blackman's costs no more than dissatisfaction elsewhere."

THE PLACE TO GET THE GOODS—EDISON AND VICTOR

Blackman
TALKING
MACHINE CO.
97 CHAMBERS ST. NEW YORK
EVERYTHING FOR EDISON OR VICTOR WHOLESALE OR RETAIL

store is the only exclusive Victor establishment in the city, and this has been a good talking point for Mr. Becker.

Return from European Trip.

Miss Gertrude Gannon, head of the Wisconsin Talking Machine Co., jobber for the Victor line, has returned from a three months' trip abroad. Miss Gannon, accompanied by a party of Milwaukee friends, visited the Holy Land, traveled up the Nile into Egypt, and on the return trip visited England, Ireland and Wales.

Pleased with Business Outlook.

E. F. O'Neil, assistant sales manager of the Victor Talking Machine Co., spent a few days in Milwaukee on business recently. Mr. O'Neil expressed himself as well pleased with the Victor business which has been secured in Milwaukee during the past year.

Immense Gain in Victor Trade.

L. C. Parker, advertising manager of the talking machine department of Gimbel Bros.' store, has resumed the daily Victor concerts in the Victor concert hall. Mr. Parker offers two concerts daily—one for the benefit of the people enjoying their lunch hour from 11:30 to 1 o'clock, and one from 2 to 4 o'clock, for the benefit of shoppers. These concerts have been decidedly successful in bringing new business, and Mr. Parker intends to keep them up. During February, March, April and May, the first four months of the Gimbel fiscal year, the talking machine department made a gain of 88.20 per cent. over the same period a year ago. Mr. Parker believes that for the entire year his department will register a gain of at least 50 per cent. Six people are now connected with the Gimbel department, and the business keeps them busy every minute.

Manager Parker, of the Gimbel talker department, will enjoy his first vacation in eight years when, with his family, he will spend from June 15 to July 8 visiting relatives and fishing at Rhine-lander, Wis.

Laurence Lucker a Visitor.

Laurence Lucker, head of the Minneapolis Phonograph Co., of Minneapolis, Minn., was a recent Milwaukee visitor. Mr. Lucker reports that the prospects in the Northwest are unusually bright at this time, with the crop situation favorable and money plentiful.

To Install Talking Machine Department.

The Espenhain Dry Goods Co., operating one of Milwaukee's largest department stores at the corner of Grand avenue and Fourth street, is preparing to install its first talking machine department. The entire Victor line of machines, records and supplies will be carried, and the initial order will be placed with the Wisconsin Talking Machine Co. The manager for the new department has not been announced as yet.

To Attend Convention.

Lawrence McGreal will attend the Democratic National Convention at Baltimore as Clark delegate. Mr. McGreal will also attend the Jobbers' National Convention at Atlantic City. Miss Gertrude Gannon, of the Wisconsin Talking Machine Co., the only woman member of the jobbers' organization, accompanied by her friend, Miss McCarthy, will also attend the Atlantic City gathering.

Victor Line in Manitowoc.

Emil O. Schmidt, Milwaukee's one-price piano dealer, 310 Grand avenue, who also carries the Victor line, has opened a new Victor branch at his store in Manitowoc, Wis. Mr. Schmidt has been securing a fine piano business in and about Manitowoc, and he believes that the field is favorable for the Victor. The initial order was placed with the Wisconsin Talking Machine Co.

DALLAS TALKING MACHINE CHANGES.

(Special to The Talking Machine World.)

Dallas, Tex., June 9, 1912.

Sanger Bros. have taken the Victor distributing agency and will be jobbers in this territory.

The Will A. Watkin Co. has taken the agency for the U-S phonograph, which they will sell in addition to the Columbia line.

The Automatic Music Co. has given up the Columbia agency.

RECORDS BY THE ELLERY BAND.

Some Recent Efforts of This Organization for the Columbia Have Excited Much Praise.

The accompanying illustration shows Channing Ellery, proprietor, and Taddeo Di Girolamo, leader, of the famous Ellery Band, seated in easy chairs at the store of the Columbia Phonograph Co., General, at 1109 Chestnut street, Philadelphia, listening to the reproduction of their own rendition of the sextet from "Lucia de Lammermoor."

The number was produced on a Columbia Gramophone, and both musicians were greatly impressed with the manner in which the machine reproduced the piece. The conductor, who lead the band when the piece was being recorded, said that it seemed as if he were actually leading the band at that moment. They both declared that the essentially dramatic elements which accompany the play-

Listening to Ellery Band Records.

ing of the organization of musicians were recorded most tellingly on the instrument.

The Ellery band is a distinctly first-class organization, as the music lovers of Philadelphia will testify. Their rendering of the classic as well as the lighter style of music is beyond criticism. They are under contract with the Columbia Co. to make records for them exclusively.

ELEVEN DICTAPHONES FOR KNAPP CO.

O. Brushaber, local manager for the Dictaphone department of the Columbia Phonograph Co., General, announces the sale of eleven Dictaphones to the Knapp Co., 19th street and Fourth avenue, New York. Mr. Brushaber says that Dictaphone sales are steadily increasing regardless of the approach of hot weather. Many notable sales in and around New York recently have helped materially to establish the substantial gains registered during the past few months. Mr. Brushaber left Monday for a trip among the agents throughout the State.

If you get tired of your work and want to loaf, get a good book and you will forget your restlessness.

BABY'S FIRST CRY RECORDED.

Young Lady in Tennessee May, When She Is Grown, Enjoy Listening to the Reproduction of Her Voice When She Was Twenty-Six Hours Old.

(Special to The Talking Machine World.)

Knoxville, Tenn., June 8, 1912.

When little four-year-old Helen Virginia Orndoff, daughter of Mr. and Mrs. Dan Orndoff, 139 Leonard place, is married she will be presented with one of the most unique wedding presents ever given a bride. It is a phonographic record of her voice when she was but twenty-six hours old. Mr. Orndoff is a dealer in phonographic supplies and musical instruments and is an expert in phonography. When his first child, little Helen, was born he planned to obtain a record of the first sounds of her voice, and a phonograph was prepared for that purpose and set beside the bed of the newly arrived.

Her cries were too weak to be recorded until she was twenty-six hours old. Then the phonograph was set in motion and the voice of Baby Helen was recorded. Mr. Orndoff is preserving the record and he and Mrs. Orndoff prize it as one of their most valuable possessions, and when the little girl is married she will in all probability be presented with it, as a priceless memento of her babyhood.

RETURNS FROM EUROPEAN TRIP.

Edward N. Burns Reports Gratifying Conditions in Europe as Far as Columbia Export Trade Is Concerned.

Edward N. Burns, manager of the export department of the Columbia Phonograph Co., General, returned recently from a three months' trip in Europe. While away Mr. Burns visited Italy, Switzerland, France, England and Germany. From a business standpoint Mr. Burns stated that his trip was highly successful. Conditions of Columbia business on the Continent are excellent, and all signs point to a record year, with interest in the company's products on the increase.

BLACKMAN TALKING MACHINE CO.'S ANNUAL OUTING.

Most Delightful Time Enjoyed at Coney Island on June 8—J. Newcomb Blackman's Practical Talk—Twelve Employees Share in Profits—Mr. Caldwell Speaks for the Employees—Evening Spent at New Brighton Theatre—All Expenses Connected with Outing Met by the Company—A Policy Which Is Appreciated and Produces Results.

One of the bright spots of the year for the Blackman Talking Machine Co., the occasion of the annual outing given by the company to all its employees, occurred on Saturday, June 8, with Coney Island being selected as the pleasure ground for the day. There were twenty-nine in the party, which included all the employees, both male and female, as well as the wives of the former, and it was more like a big and happy family than the members of a business organization on pleasure bent.

The day was ideal for an outing, and after an enjoyable sail to Coney the party made the first stop at Luna Park, where several hours were spent

deal for others as well as himself, he is possessed of a feeling of contentment and there is nothing that so ensures constant and unalloyed happiness as a contented mind. The trouble with many people is that they live for their neighbors and friends, instead of for themselves. They worry and make themselves unhappy in an effort to keep up appearances. When such people secure a little more of the world's goods they at once change their mode of living to correspond with the increased income, and the result is that they never get ahead of the game, but are continually discontented and unhappy. The man with the run-about is not satisfied with it, but wants a touring

Dinner of Blackman Forces in the Jefferson Hotel, Coney Island.

in taking in the various new and old amusements offered in that popular resort, the scenic railways and the shoot-the-chutes appearing to be the favorites of the majority. From Luna Park the party went to Steeplechase Park, where all the various slides and other laugh-provoking specialties attracted the undivided attention of the majority until the time arrived for the dinner.

The excellent dinner was served at the Jefferson, one of the most popular of the hotels at the island, where special arrangements were made for the entertainment of the party. The favors consisted of tiny talking machines of paper maché with the Victor dog peering into the horn and wagging his head in comical fashion. The menu also came in for much favorable comment, it being printed on a dainty and handsomely decorated miniature Japanese screen that made an attractive souvenir of the occasion.

At the close of the dinner J. Newcomb Blackman, founder and president of the company, addressed the members of the party and offered them some advice upon business conduct that was concise and to the point. He emphasized the importance of team work, the important part it had played in making the business successful during the past ten years and how it was necessary if the success was to continue during the coming years, for which great plans were being made. "One of the chief things in business," said Mr. Blackman, "is to decide upon the right thing to do and then to stick to that decision through thick and thin. When a policy is decided upon and is believed to be right, the best way is to drop those who declare themselves against that policy and not swerve from the straight path, for that makes for shaken confidence and subsequently possible failure. When conditions reach such a point that the policy proves to be really wrong, that is the time to change it for something better and then stick to the new program.

"When one decides upon a policy that is in keeping with the Golden Rule and means a square

car. When he gets the touring car he wants a racer or a steam yacht and is therefore never settled or contented with what he has."

At the close of his talk, which was generally along the same vein, Mr. Blackman called attention to the profit-sharing policy of the company inaugurated three years ago, and which was adopted on the theory that if the business showed a substantial profit at the end of the year the employees were largely responsible and must have

put forth the proper amount of effort to accomplish that end, so are entitled to a proportion of the profits. The profit-sharing policy was adopted by the company entirely voluntarily, and is based on three things: The length of the employee's service, the position held and the effort put forth. Only the employees who have been in the employ of the company for a year or more are eligible to participate in the profit sharing, and the fact that an employee doesn't last a year unless he or she displays the requisite amount of energy makes the third section of the profit-sharing rules unnecessary.

This year there were twelve employees to share in the profits of the business, they being headed by Frank Roberts, "the veteran," who joined forces with Mr. Blackman when the business was first established ten years ago. Others to participate were R. G. Caldwell, vice-president of the company; Messrs. Spillane, Reilly, Ashby, Cambarino, Reinhardt, Lansdell and Bishop and Misses May, Peters and Ward.

Following the distribution of the bonuses Mr. Caldwell replied to Mr. Blackman's speech in behalf of the employees and thanked the latter for the generous treatment accorded them. In this connection it is to be considered that every cent of expense connected with the outing, even to the carfares, is met by the company, everyone participating, regardless of the period of service, and the married men being free to include their wives.

After three cheers had been proposed and given for the head of the company, the party adjourned to the New Brighton Theater, where they enjoyed an excellent vaudeville performance as a fitting close to a most enjoyable day. In every way the Blackman outing for 1912 was a huge success and a fitting celebration of both the annual profit sharing and tenth anniversary of the founding of the business. It strongly emphasized the fact that those connected with the company are constantly working in harmony and for the mutual interests of the business, the success of which means their success.

A. G. Farquharson, special representative of the Columbia Phonograph Co., Los Angeles, Cal., who has been passing a few days in the East, reports a very pleasing condition existing in the talking machine trade in that part of the country where he operates.

He is very much gratified to learn of the position taken by the talking machine men at Los Angeles regarding the agreement entered into to charge and collect interest at the rate of 7 per cent. on installment or time sales of talking machines.

GUILTY

of having the best line from the **dealer's standpoint** of Disc Record Cabinets and Table Cabinets on the western hemisphere. The verdict handed us in the shape of orders from jobbers and retailers in the four corners of the country makes

The Udell Line

your one best buy.

The Guarantee as to Workmanship and Finish will be a wonderful help to you in making a sale.

Mr. Daniel G. Williams, the "grand old man" of the Talking Machine accessories salesman, will see you at the Convention in Atlantic City.

He has some new ones that in price and pattern are just what **you** want.

A New Catalog that tells the whole story and that will sell Cabinets for **you** and at a splendid margin, will be mailed to those jobbers and dealers addressing.

THE UDELL WORKS
CATALOG DEPT INDIANAPOLIS, IND.

That Columbia double-spread in this week's Saturday Evening Post will arouse public interest in talking instruments—Columbia instruments. It will prove the best kind of stimulant for sluggish summer business.

FIRE DAMAGES HOME OF F. J. HEPPE.

Handsome Residence of Philadelphia Talking Machine Man Wrecked—Loss \$40,000—Warerooms Force Turn Firefighters and Rush to Blaze in Auto Trucks—Exciting Events Come Thick and Fast—Heroic Rescues Made by Volunteers.

(Special to The Talking Machine World.)

Philadelphia, Pa., June 6, 1912.

A fire last week at the residence of F. J. Heppe in Pelham, Germantown, considerably damaged his handsome suburban home, the amount of loss having been placed at more than \$40,000. Instantly the fire started the fire companies of the neighborhood were notified and a 'phone message was sent to the Heppe store. There was naturally great excitement and almost the entire Heppe force turned out as fire fighters, going to Germantown as rapidly as possible on the auto trucks of the company. They took all the available fire apparatus with them, and also that which is not so designed, in the excitement.

This paraphernalia consisted of fire buckets, hose, axes, from this on down to a Victor horn and a tuning fork. Upon reaching the fire—having covered the distance in about 12 minutes—with several automobile cops on their trail, they at once turned in to do their best. A housemaid was entrapped on the second floor, but Manager Hangen thought it more advisable to get the case of wine to safety first, and the fire company had to take care of the maid, much to Hangen's disgust when he saw how pretty she was.

When Mr. Heppe later came to look for his wine it was disposed of, and the question is unsettled whether by the cops or the Heppe fire fighters. Joe Hammond made a thrilling rescue of a darky cook, and Stults walked out behind him in a deliberate way carrying a dish of re-

FOR SALE.

5,000 Zon-o-phone 10-inch records, 15 cents each; 5,000 Edison 2-minute records, 10 cents each. DENINGER, 335 North St., Rochester, N. Y.

FOR SALE OR TRADE.

Six thousand Edison Standard Records and two thousand Edison Amberol Records. Will exchange for Victor goods. Address "Exchange," care of Talking Machine World, 373 Fourth avenue, New York City.

MUSIC STORE FOR SALE.

Only music store in city of 11,000; fine business, started 1904; best location in city; Victor and Edison agencies, sheet music, small goods etc.; clean stock; invoice \$3,700. Full information furnished on request, will stand strictest investigation. A. E. WADE MUSIC CO., Hoquiam, Wash.

FIRST CLASS LOCATION OPEN.

First-class location for graphophone department in music store. For particulars address W. S. Gray, 334 Sutter street, San Francisco, Cal.

MAX LANDAY AND FRIENDS VISIT L. J. GERSON'S FARM.

The World had the opportunity recently of "snapping" a group of well-known talking machine men who visited L. J. Gerson's farm at Brookdale, up in Rockland county. At the wheel Max Landay will be recognized, with B. Feinberg at his left. Mr. Gerson is on the running board, while Edwin G. Schloss and Mr. Kocker are in the rear.

cently prepared prunes and an ice pick. Hillebrand was the coolest man in the bunch, and with the flames floating all around him he deliberately walked to the player-piano, and carefully and tastefully encased it in three leather covers to keep the water and smoke from penetrating. Gaskill—the intrepid Gaskill—was the hero, however, of the entire occasion. He had secured a peculiar shaped helmet—no one knew from where, for he has a habit of having about everything concealed for any emergency—and he mounted the front truck to the fire and stood in an attitude with his Van Dyke in perfect shape, his countenance beaming, and looked not unlike the pictures of Nero at the burning of Rome.

His first thought was to grab up a bunch of Heppe circulars, which he distributed along the route. He had sufficient left when he reached the fire to distribute them among all the crowd that had assembled, and then he turned in to giving directions and to taking charge of both the city and the firm's forces. He looked particularly to the saving of Mr. Heppe's wardrobe, brushing and folding the clothes carefully before carrying them to safety, and finally emerged from the house with a red coat and the Heppe famous golf stick, which had won so many victims, which was the climax of the fire, and the Heppe force took again to the automobiles and returned to the store to tell the few that had been left behind how they had saved the day.

UDELL AMBASSADOR IN NEW YORK.

A recent visitor to The World sanctum was Daniel G. Williams, the popular representative of the Udell Works, Indianapolis, Ind., whose talking machine cabinets are so widely known and esteemed throughout the trade. Mr. Williams was returning home from an extended trip which embraced the Piano Merchants' convention at Atlantic City, and reported the factory as very busy in its efforts to catch up with orders.

Don't forget the Jobbers' Convention, July 2-3.

HALTS BAGGAGE RATE RISE.

Commerce Commission Holds Up Proposed Excess Regulations.

(Special to The Talking Machine World.)

Washington, D. C., June 9, 1912.

New regulations for the transportation of baggage, which were proposed by nearly every railroad in the United States, and in effect would advance the rates on "excess," were suspended today by the Interstate Commerce Commission. The suspension becomes effective July 1, and continues in force 120 days, pending investigation. The proposed regulations, which will interest piano travelers and others, read:

"On and after July 1, 1912, for any piece of baggage (except immigrant baggage checked at port of landing), the greatest dimensions of which exceeds 45 inches, there will be an additional charge for each additional inch equal to the charge for 10 pounds of excess weight.

"On and after July 1, 1912, no piece of baggage, the greatest dimensions of which exceeds 70 inches, (excepting immigrant baggage checked at port of landing), will be transported in baggage cars."

The commission holds that the fixing by the roads of the dimensions of baggage will work an unnecessary hardship on travelers.

"COLOR HEARING."

Some persons associate particular colors with particular sounds. In a recent presentation of this subject to the French Academy of Sciences it was pointed out that there are two forms of this phenomenon.

In one case the person has a sensation as if a transparent colored film, like a rainbow, appeared before his eyes when certain vowel or musical sounds strike his ears. In the other case letters or written words, representing the sounds heard, appear in colored tints. The tints are very definite and characteristic and do not vary with lapse of time, but two persons seldom associate the same colors with the same sounds.

All roads lead to Atlantic City.

The National Association of Talking Machine Jobbers will hold its convention there on July 1 and 2.

The Association headquarters will be at the Chalfonte.

July 1 there will be a business session in the morning and one in the afternoon.

July 2 the closing session will be held in the afternoon.

Good things are planned to make this an enjoyable occasion.

The officers of the Association are:

Lawrence McGreal, president, Milwaukee;

Wis., Lawrence McGreal Co.; E. F. Taft, vice-president, Boston, Mass., Eastern Talking Machine Co.; J. C. Roush, secretary, Standard Talking Machine Co., Pittsburgh, Pa.; J. B. Miller, treasurer, Penn Phonograph Co., Philadelphia, Pa. Executive Committee—J. F. Bowers, Lyon & Healy, Chicago, Ill.; C. A. Grinnell, Grinnell Bros., Detroit, Mich.; Geo. Mickel, Nebraska Cycle Co., Omaha, Neb.; Perry B. Whitsit, Perry B. Whitsit Co., Columbus, O.; Rudolph Wuritzer, Rudolph Wuritzer Co., Cincinnati, O. Keep the time and place in mind.

VALUE OF DICTATING MACHINE.

Descanted on by Mayor Weissenborn of the City of Halberstadt—Pays Great Compliment to the Edison Business Phonograph in a Book Recently Written by Him on the Management and Administration of Large Cities—Machine Proves More Effective Than a Stenographer in More Ways Than One Besides Saving Expense.

The following is an extract, translated from the German, from a book written by Mayor Weissenborn, of the city of Halberstadt, on "The Management and Administration of Large Cities." Mayor Weissenborn is an enthusiastic user of the Edison dictating machine, as his recommendation of it for its efficiency and economy proves. He says:

"On the other hand, the dictating machine seems to have been too little known and used, although by its assistance the difficulties and inconveniences which are associated with the services of a stenographer and dictation to the typewriter, and which are necessarily associated therewith, have been obviated in the happiest kind of manner. For almost a year past I have been making use of an Edison dictating machine at the Town Hall, while later I procured one for my own personal uses. Before that I used to have the office apparatus brought to my house, as that is quite feasible.

"The principal advantages may be summed up as follows: In the first place, as compared with the employment of a stenographer and typewriter, a by no means inconsiderable saving in expense is assured. It will be accepted as a fact that a stenographer needs a half hour to write out on the typewriter what requires dictation of a quarter of an hour's duration. A third of the total requisite time is therefore necessary for dictation, so that one-third of the efficiency of the typewriter and stenographer is saved. Thus an amount of at least 300 marks per year is also saved. Running expenses, shaving and wear on

the records are very small, and if a shaving apparatus be procured, still smaller, in proportion to increased use of the apparatus. Furthermore, I dictate in the morning. A visitor is announced whom I cannot let wait, so I am obliged to dismiss the stenographer. If I should want him again within a half hour, in all probability he is engaged with some other official. It is different when I have a dictating apparatus. A pressure of the finger, the motor is brought to a stop and waits patiently until the visitor has gone. I am then always out of touch with the subject, but a reversal of the speaker and a pressure with the finger are sufficient to get the apparatus to repeat, as slowly and as often as may be desired, the concluding portion of what I had dictated. After ten minutes a new visitor may come in. He may go in five minutes or he may take twenty minutes. Meanwhile, the stenographer does not know whether he be at liberty to report to another official. The apparatus does not neglect anything and is at all times at your disposal. Then I may have to attend a meeting, and how long it may last I cannot tell. Afterwards I should like to dictate further. Am I to cause the stenographer to wait an hour or two, to send him away at the end of that time because it is too late; or because I am too much unstrung? Moreover, how often and for how long and for what inconvenient hours shall I make an appointment with the stenographer? Should I be ready to claim his service at 9 or 10 in the evening, even though that be my best working time? Or shall I ask him to call at 7 o'clock on a summer morning? But all days are the same to the apparatus.

"When I further state that it is very easy, according to my experience, to acquaint oneself with the operation of the machine, and that after a few days I run the press buttons and the lever quite automatically, I am quite in a position where I can most urgently recommend its use. A guarantee is given, but repairs have not hitherto been necessary.

"Respectfully,

(Signed) "MAYOR WEISSENBORN,
"Halberstadt."

LEADING JOBBERS WELL PLEASED

With Talking Machine Trade These Days—The New York Talking Machine Co. the Blackman Talking Machine Co. and the Columbia Phonograph Co. Report Excellent Pre-Summer Business.

The trade on Chambers street, namely, the New York Talking Machine Co., Victor distributors, the Blackman Talking Machine Co., Victor and Edison jobbers and distributors, and the Columbia Phonograph Co., General, retail store, each and every one announce a fair volume of summer business. The same steady demand for the Victor product is apparent with all the attending conditions of the past brisk spring season. The demand for Victor Victrolas still exceeds the supply. The call for records is particularly sharp, with a preference for the high-grade predominating. At the Columbia store conditions are much the same. Manager Bolton announces excellent sales and lays much stress on the success of the new Grafonola, "Princess." Taken all in all the trade on Chambers street is optimistic and contented.

NEW ADVERTISING SPECIALTY.

The Columbia Phonograph Co., General, under date of June 5, is sending to its dealers and distributors a sample of a new advertising specialty, the Columbia double-disc "Seal," with a letter of instructions as to how to use them to further promote the publicity of Columbia double-disc records. The seals are to be supplied free and shipments have already begun. The "Seal" is attractively designed and printed and embossed in black and gold. In the center is the familiar Columbia musical note and around it the words "Columbia Double-Disc Records." The background is black, with a border of gold. The seal is round and of the proper size for use on envelopes, or any other mail matter.

Hanover Cabinet Quality is like the Sterling mark on Silver—it represents The Highest Standard

D 26.—Mahogany and Golden Oak. Top and all four sides polished to match machines. Width of top 23 in. Depth 19 in. Suitable for all machines except Victrola X. Capacity 230 (12 in.) disc records.

The two disc record cabinets shown in this announcement illustrate this fact. They represent values, estimated from any viewpoint, that should interest the purchasing public.

A sample order will show you the exceptional construction and splendid finish of these cabinets.

D 33, with No. 9 Victor Machine.—Mahogany and Golden Oak. Top and all four sides polished to match machines. Width of top 21½ in. Depth 18 in. Moulding loose or attached. Can be supplied to fit Victrolas VIII or IX. Capacity 210 (12 in.) disc records.

HANDSOME TALKING MACHINE DEPARTMENT.

An Interesting Feature of the Beautiful New Building Occupied by W. J. Dyer & Bro., St. Paul, Minn., Is the Commodious Recital Hall, and Attractively Laid Out and Furnished Quarters Devoted to Talking Machines and Records and Other Specialties.

(Special to The Talking Machine World.)

St. Paul, Minn., June 7, 1912.

An event of peculiar interest in the musical world of this city was the formal opening recently of the handsome and commodious recital hall in

may spend an hour, if one likes, listening to all the operatic favorites, or stage pets, for the attendants are there to look after the comfort and pleasure of the visitor.

At the other end of the corridor is the recital hall, a model of its kind, which holds over two hundred people, and is an ideal little auditorium for talking machine concerts, or indeed, any musical affair of the more intimate type.

Large windows furnish light during the day and good ventilation at all times; for evening use there has been installed the ultra-modern system of indirect lighting, a system whereby the farthest corner of the hall is sufficiently illuminated for the perusal of books

Hall Showing Entrance to W. J. Dyer & Bros. Talking Machine Department.

connection with the large talking machine department in the new building of W. J. Dyer & Bro. Invitations to the opening recital were limited, but so great was the demand from the better class of people of the city that it was necessary to repeat the recital later in the same week.

In the new building nothing has been neglected that would place the talking machine in sympathetic and attractive surroundings, and arrangements have been made whereby an audience of one or many, as the case might be, is made as comfortable and happy as possible. The talking machine department is located on the second floor of the building and the general scheme of decoration reminds one of an attractive country house. The plastered walls are tinted in two shades of buff, deep below and lighter above. On either side are fascinating, small-paned windows, the sash, like the rest of the woodwork, painted white.

At the forward end, facing Fifth street, are two large rooms done in green and white, with practically entire glass fronts. The smaller of the two has a writing table for the convenience of shoppers, as well as plenty of comfortable chairs. All about the larger one are placed talking machines in all the most up-to-date styles and finishes. Here one

One of Dyer's Talking Machine Parlors.

W. J. Dyer & Bros.' Recital Hall.

wood to match any apartment. Some of these rooms are in yellow and white, some in green and white, and all are well lighted, with every facility for studying and choosing either machines or records. In one of them, indeed, there is a telephone, so that patrons unable to leave home may hear

Record Booths, Recital Hall and Corridor.

new records over the wire. Thus do the departments of modern science serve each other.

From the walls of the small as well as the large rooms there smile down the faces of the notables whose words and songs are being perpetuated in those familiar and yet mysterious discs and cylinders that have become a necessary adjunct to so many households—Gadski, Schumann-Heink, Farfar, Caruso, Scotti, Martin and a score of others.

Guests of an investigative turn of mind will find

interest in the room where records are kept, much after the manner of a well-regulated library, for there is constant sorting, cataloging and "weeding out" necessary to maintain an up-to-date stock.

It is all there—comfort, sunshine, music and intelligent service; all arranged to bring the public and one of the greatest delights of modern civilization into intimate touch with each other by means of the talking machine.

ASSOCIATION GAINING GROUND.

New Members Being Taken in at a Rapid Rate and Numerous Matters of Trade Interest Being Considered.

(Special to The Talking Machine World.)

Philadelphia, Pa., June 8, 1912.

The Talking Machine Retail Dealers' Association of Philadelphia continues to grow and gain strength rapidly and is at present considering many questions with a view to aiding and protecting the business of the individual dealer. At the last meeting of the association six dealers were taken into membership and eight more have signified their intention of joining at the next meeting.

The association is keeping in close touch with the big companies and a large committee representing the organization plans to visit the factory of Thomas A. Edison, Inc., with a view of discussing several matters of mutual interest.

M. Goodstein, the secretary of the association, is doing some strong missionary work for the purpose of interesting the local dealers in the organization. The meetings of the association are held on the second Wednesday of every month, the last being held June 12 in the reception room of the Parkway building, 119 North Broad street.

and programs, and yet which never brings the eye into direct contact with the direct rays so trying to the sight. Pale brown in two tones is the color chosen for the walls, and the whole effect is a very tasteful one.

And now those little windows. Each one looks into a small room—there are nine of these—which is a complete little exhibition hall itself, and contains various types of talking machines, from the smaller, inexpensive ones, to the handsome affairs encased in

Every month there is less substituting of other products when Columbia is asked for. It will be clearly impossible to sell a substitute for the Columbia "Lyric" instrument and the six double-disc records at \$28.90 which we are advertising this month. And why should any dealer try it?

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

BETTER SPIRIT IN QUAKER CITY.

Talking Machine Business Shows Good Increase Over Other Lines—Estey Co. Featuring the Columbia Line—Wilkes-Barre Department Store Takes on Talkers—Buehn Makes Excellent Report Regarding Conditions in Pittsburgh and Philadelphia—The News of the Month.

(Special to The Talking Machine World.)

Philadelphia, Pa., June 5, 1912.

The talking machine business in May in Philadelphia was generally gratifying. It was considerably larger than last year, and if it did not show the comparative increase of the other months of 1912 over the corresponding months of last year, it must be due to the general business depression that has been felt in all lines. It would be hard to find any business in Philadelphia—probably in any other city—that has shown a better general spirit than the talking machine business. It is most healthy, and the dealers seem to have no cause for complaint, either with the amount of business they have been doing with the purchasing public and with the manufacturers.

Talkers More Than Holding Their Own.

The manufacturers have been getting out the goods with the required promptness and have been sending new things to the market which will help materially in the future. The lists of records for the Victor, the Columbia and the Edison for June are most enticing, and already many of the big dealers are planning to place their fall orders with the manufacturers in order that they may not be handicapped more than possible. While the Victor has been considerably more than holding its own, I find an increased interest and an increased enthusiasm in Philadelphia over the Edison, and there are Philadelphia dealers who will tell you that they are going to give the Edison a very much squarer deal in the future than they have done in the past.

Columbia Department for Estey Co.

Manager T. K. Henderson, of the Estey house is making preparations to open his Columbia talking machine department in the course of a very few days. He has selected Walter G. Linton, who is at present connected with the Columbia house, and who was previous to that a Victor salesman, to manage the Estey talking machine business. They expect to make the department one of the "classiest" of that in any house in the United States, and for the present at least will handle only Columbia machines. They will confine the department to no special part of the store, but will distribute it throughout the building, and they will have sufficient salesmen to handle the work. Mr. Linton will assume charge on June 15.

Busy Times at Columbia Co. Branch.

The Columbia Phonograph Co. reports that it pretty nearly doubled the April business in May, and that May ran at least sixty per cent. ahead of last year. On Decoration Day the employees of the Columbia had a picnic in Fairmount Park, which was a success in every way. It was held at Belmont Mansion, and baseball, racing and various other sports were indulged in. O. C. Dorian, the present acting manager of the Philadelphia

store, was over to New York last week to attend the 25th anniversary banquet of the American Graphophone Co.

New Ellery Band Records Please.

The new Ellery Band records of the Columbia are very fine and have been enjoying an enormous sale. They also have just received some new records by Zenatello and Emmy Destinn which they expect to sell readily, as well as the exclusive records they have made of the voice of Georgette Leblanc Maeterlinck. The firm is gradually eliminating the doors on all hornless machines, and is submitting in their stead the tone shutters which seem to be an innovation which is thoroughly appreciated by the buyers of the Columbia. These shutters are much more sightly, more convenient and permit a great ease in modulating the tone.

Newspaper Reporting Via Dictaphone.

Nils Victorin, a Danish newspaper man was in Philadelphia the past week and used the Columbia entirely for making his records. He has been sent to this country to write articles from the various sections for the "Dagblat" and dictate his articles to the Dictaphone, and then ship his records home to be transcribed there. The articles are headed "Dictaphone Letters from the United States."

Opens New Department.

J. Ounsworth, who conducts a piano store at Fairhill and Lehigh avenue, has opened an exclusive Columbia department at this store.

Among the out-of-town buyers here the past week were William S. Hollenbach, of Reading and Gwyllim Evans, of Wilkes-Barre.

New Departure in Wilkes-Barre.

The Standard Department Store, of Wilkes-Barre, are at present having booths erected and will put in a complete line of talking machines. They have an exclusive foreign trade and are going to prepare to cater to the American trade as well.

What the Department Stores Are Doing.

Business has been very good with the talking machine department at the Lit store in May. Manager Hovey has certainly made that department a winner, at least as far as appearance goes, and he has been exerting all his energy to get it into the shape that it will compare favorably with any other department in Philadelphia. He has unique ideas in arranging stock which are very effective, and while he has not yet had turned over to him a space sufficiently large to give him the scope of his competitors in the department store business, yet he has taken every advantage of what he has at his disposal.

The sales in May in the talking machine department at the Wanamaker store almost doubled those of May a year ago. The department is particularly well supplied with all styles of Victrolas, and they are very much encouraged in that line of their business. Between this and fall, their will no doubt be radical changes in the arrangement of the department. For some reason it is the only part of the new Wanamaker building which does not seem to conform, and it is expected that they will remove the large Louis XIV show room and in its place build a row of rooms to correspond with those at the rear, although only half the num-

ber, but double the size, and following a uniform idea.

Praise for Amberola 3d.

Everywhere I hear praise of the new Amberola 3d, the latest production of Thomas A. Edison, Inc., which is sold at \$125. It is a very fine instrument and some dealers who heretofore have not been over enthusiastic Edison workers, take to this No. 3 with splendid grace and they believe that they are going to have an excellent business on these machines the coming fall season.

Reports Improved Business.

Manager Doerr, of the talking machine department of H. A. Weymann & Son, is one of the Edison Amberola 3ds enthusiasts. He says they have already had a big sale on this instrument. The May business of the Weymann department was very large. It was considerably better than last year. They have quite an excellent stock of Victor machines on hand and are now in a position to take care, in one shipment, of all the records that a dealer may order.

Louis Buehn a Busy Man.

Louis Buehn reports that while May was a satisfactory month, it showed a drop off in comparison with the previous months this year, but their May business was considerable in excess of the corresponding month of last year, so consequently they have no complaint coming. Louis Buehn has been in Pittsburgh three times during May on account of the illness of his brother, who has charge of the Pittsburgh store of Louis Buehn & Bro. Mr. Buehn was quite seriously ill for a short time, but is back again attending to business. Mr. Buehn speaks highly of the Edison Amberola and believes that there is going to be a very good business on this new \$125 machine.

Among recent visitors to the trade here were Elmer E. Nagle, of Pottsville and Frank Stanton, of Thomas A. Edison, Inc.

Manager Stewart, of the Gimbel talking machine department reports that business is very fine. It is so far ahead of last year that they have not taken the bother to calculate. Among the visitors to the department this week was Mr. Folgrum, of the Victor Talking Machine Co.

MUSIC ON THE TRAINS.

Concerts on the Grafonola Now a Feature of a Trip on the Washington Sunset Route.

The Columbia product is getting some magnificent publicity in the West by installation of the Grafonola "Favorite" on the trains of the Washington-Sunset Route. The following is a copy of a circular sent to the ticket agents by the railroad authorities:

"Grafonola Recitals.—Beginning Friday, February 9, and until April 5 (maybe indefinitely), each Friday tourist sleeping car will carry a Grafonola for the entertainment of the passengers. This instrument is one of the most popular designs produced by the Columbia Phonograph Co., and will be under the charge of the excursion agent of the Washington-Sunset Route. Recitals will be given in the tourist car during the day and in the observation car during the evening. We hope that this innovation will add much to the pleasure of our passengers en route to California."

How Talking Machine Trade May Be Best Cultivated in the Summer Months—Some Suggestions Worth Considering—The Business Phonograph as a Side Line—Recitals Most Effective as Business Developers—Some of the Many Uses to Which the Talking Machine Is Successfully Adapted—Something of the Good Work Done by Lyon & Healy in Developing Interest in the Talking Machine—The New Display Rooms of the Rudolph Wurlitzer Co. Are Most Attractively Designed and Furnished—Miss Berlin Makes Columbia Sales Record—Interesting Review of the Month's Happenings.

(Special to The Talking Machine World.)

Chicago, Ill., June 7, 1912.

Although the proverbial "dull" season, when musical goods generally are not so much in demand, is now on, talking machine dealers are not feeling it nearly so strongly as dealers in other lines. Of course, naturally there is, in fact, a great falling off from the amount of business done in the winter months, but while this is true, the talking machine dealer is not helpless, for there are many ways in which he can stimulate a summer trade that may prove highly profitable.

While the temporary dull season is admitted, dealers everywhere and almost without exception say their business this year shows an increase of from 20 to 50 per cent. over the corresponding dull period last year. That in itself is encouraging, for it certainly shows the increase to be something more than a natural growth of business that would come to any one house because of its being newly established or of already having a strong foothold and loyal patronage. It is not the growth of any particular house or any group of houses in any certain community; but is a growth of the business in general—the talking machine business.

Now, there is no discouraging outlook for the future of the talking machine business. On the contrary the outlook is extremely promising. The fact that it increases each dull season as well as each busy season over the same period for the year before, shows that it is developing rapidly, which proves there is a desire for these instruments. Of course, in the winter, when severe weather keeps people indoors, they naturally want amusement and the talking machine is one way to supply it. But the business is not limited to the winter trade. Certainly there are difficulties for dealers to overcome, such as warm weather and numerous counter attractions, but still the amount of summer business increases gradually in the face of this condition.

Summing up these rambling remarks, the dealer has the goods and there is an increasing desire for them, regardless of season. Then it is up to the dealer to specialize his business so as to meet the general desire and to organize it in the dull season so as to crystallize that desire into a special demand.

Talking machine products vary but little. There are a limited number of styles and designs. The same is also true in the piano line. Unlike the clothier the music dealer has no summer style and winter style. The clothier continues to push his business just the same in summer as in winter, but the piano and talking machine dealers, it seems, have to lay down in the summer because they have nothing especially seasonable to offer the patron. Yet the very fact that talking machine business increases even in the dull season shows that if the dealer had some instrument to push at that time he would soon create the same sort of seasonable demand that the clothier has.

Now, what is it?

There may be many things. We suggest but

one. Cultivate the summer vacation business. It seems that only a few of the larger firms have undertaken this. They get the business and the little fellow waits until winter, when trade is good without stimulation, and he then stands a chance to get the overflow or surplus that the big dealers miss. Let the small merchant push his summer line just as vigorously and as energetically as he does his winter line.

There are hundreds of people leaving this city and other cities in the summer for a month or longer in the woods or at summer homes. If they own expensive machines they do not care to risk them in shipment, usually. Yet they feel they would like music and other entertainment that the talking machine will provide. Some of them even buy or rent second-hand pianos which they can leave permanently in their summer homes. Now, that desire for music should be taken advantage of by the talking machine dealer, and it can be, for the bigger houses are doing it, as witness the photographs of "vacation windows" reprinted in this paper. Let the dealer impress upon the vacationer that the talking machine is as indispensable to his outing as the camera, gun and fishing tackle. Not only will he find those who have machines in their homes wanting one for their vacation, also, but the small machine put out for vacation may be the means of selling a better and more expensive one for the home use when vacations are only memories.

Another suggestion: There are numbers of cottages in the summer resort regions owned probably by hotelkeepers which are rented a dozen or so times through the season to as many different families. Now, what is the matter with some progressive dealer getting in on that? Why not equip these houses with talking machines under a contract with the landlord, either in outright sales or on rental. Say a dozen machines to one man—not a bad order in itself—but the chief value would be in the missionary and preparatory work it would do. Every family that is thus entertained in vacation time will be a prospect, and a good one, after the return to winter home. This plan will also admit of selling the vacationer records to take to his cottage which is already equipped with a talking machine.

Advertising is one way of getting in touch with the man who is going to spend his summer in the wilds. Another means which, by the way, is being used by one of the large Chicago dealers is the telephone and personal contact by which the salesman can get his information and explain his proposition all at the same time.

Recognized and Appreciated.

The business phonograph as a side line for stationers and office appliances is recommended by the June number of Office Appliances, published in Chicago. Following is an excerpt of paragraphs from the article:

"Briefly stated, the business phonograph, which can be used by any business man who dictates, unless he has some very marked impediment in his speech, is an economy in the conduct of office work. It saves the time of the operator and enables her to use odds and ends of time that she would otherwise employ in taking dictation or in waiting for the employer to get ready to dictate. The phonograph draws no salary. It waits beside the desk until someone is ready to use it. It is not an item of overhead expense while it is awaiting the convenience of someone else any more than an unused desk or an unoccupied chair. It is instantly ready to receive dictation the moment the dictator is ready to give it, and furthermore, the cylinders can be preserved indefinitely and transcribed by the operator at any time when it is necessary to transcribe them. Dictation is so arranged by a little forethought that the operator is kept constantly in transcription work.

"The writer hereof visited a gentleman in Day-
(Continued on page 44.)

The Wade Fibre Needle Cutter is a product which has become one of the staples of the Talking Machine jobbers' trade. It has been tried out under almost every conceivable condition and without doubt has proved to be the most popular fibre needle cutter on the market.

A heavy advertising campaign has made it known to hundreds of talking machine owners, and to dealers everywhere.

Mr. Dealer: There will be a demand for this cutter in your community. Have you a supply on hand now? Order the Wade. It's fine. Ask your jobber.

WADE & WADE

1227 East 46th Street, CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 43).

ton, O., some two or three years ago who dictated all his letters on a business phonograph. During our conversation he brought up a point which is not usually thought of in connection with the dictating machine. He said that letters which one gives to the dictating machine are fresher, more spontaneous, more to the point and more responsive to the letters which they answer than are letters which are written with the pen, or which are dictated to the stenographer. He could not assure the writer positively just why this was the case, but he had a theory that the dictator being alone and having his attention concentrated upon the subject matter of his correspondence, was able more clearly to approximate the attitude of a man talking to another man across the table. The use, he said, of the business phonograph favored the concentration of the mind upon the subject in hand, and since the machine could be stopped at any moment it did not prevent the looking up of data and references for the completion of any matter that required to be dictated."

Utility of Recitals.

It is a revelation of the popularity of the talking machine to step into the complimentary concerts at Lyon & Healy's talking machine department at any hour of the day between 10 o'clock in the morning and 5 in the afternoon and see the crowds which gather there to hear the Edison and Victor concerts and recitals.

A few visits there at the same hour of day each time will acquaint one with the regular attendants, and just from his own observations and superficial knowledge of the success of these recitals he may conclude that a large part of the audience are simply seat warmers. While in one sense of the word that is true, for many come day after day, yet most of them have a purpose in view and it is not simply to pass the time away. There is one regular attendant, a man, who may be seen among the crowd on most any day when a number of grand opera selections are on the program. One might think he came alone for entertainment, but as a matter of fact he is studying singing and comes to get from the famous Victor and Edison performers what points he can on execution, phrasing and method. To him the recitals take the place of studio observation, and he says he has received real instruction from attending them. Doubtless there are others, perhaps in other lines of study, who regard the recitals in the same light.

As a feeder for talking machine retail business, Jos. Vasey, manager of Lyon & Healy's retail machine department, says the recitals are a great success. Interest in the instruments is created there which develops into sales.

Another feature of the recitals, too, is that they are educative. It was observed when the concert hall was first established, that the crowds did not take kindly to grand opera. They seemed to prefer ragtime, minstrels, dialogues and that class of entertainment, and would tire or leave the hall when the grand operas were reproduced. Now, however, all that has changed, and, in fact, a large percentage of those who drop in for an hour or so come for the purpose of hearing these selections. That, of course, is a great factor in teaching the appreciation of grand opera, and no doubt it has been felt in the city.

Following are two programs, one morning and the other afternoon. The programs are planned a week ahead and repeated each day, a different program being given for each hour. The morning concerts are given on Edison machines and those of the afternoon on Victrolas. Hundreds of people are in attendance each day. Here are a couple of the programs:

Edison Program II, 10 to 10.50 a. m.:

- 1.— 953 Waldemere March (Losey)...N. Y. Mil. Band
- 2.— 28016 Old Folks at Home (Foster)...Margaret Keys
- 3.— 28015 Coppelia Entr'acte and Valse (Delibes)...Hungarian Orchestra
- 4.— 1001 That Hypnotizing Man...Premier Quartet
- 5.— 28011 Hymn to the Emperor (Haydn)...Olive Mead Quartet
- 6.— 849 Calm as the Night (Bohm)...Elizabeth Spencer and Harrison
- 7.— 812 Song of Harvard...Knickerbocker Quartet
- 8.— 28010 Meditation from "Thais"...Albert Spaulding
- 9.— 1002 Alexander's Ragtime Band (Banjo Medley)...Van Epps
- 10.— 992 Take Me Back to the Garden of Love...Reed Miller

- 11.— 1003 Cujus Animas, "Stabat Mater"...Chas. Harrison
- 12.— 1011 Happy Days (Strelezki)...Venetian Instrumental Trio

Victrola Program IV, 1 to 1.50 p. m.:

- 1.— 31859 Gems from "Tales of Hoffman" Victor Opera Co.
- 2.— 33197 Georgia Minstrels...Victor Minstrel Co.
- 3.— 74240 No. Pagliacci, non son, "Pagliacci"...Zerola
- 4.— 74280 Sicilienne and Minuet (Zimbalist)...Zimbalist
- 5.— 88113 Un bel di vedremo "Madame Butterfly"...Farrar
- 6.— 17065 A Rural Argument...Porter and Harlan
- 7.— 88320 Monologue, "Rigoletto"...Sammacco
- 8.— 17033 Lobster's Promenade (Humoresque)...Sammacco
- 9.— 83095 Prison Scene, "Phopete"...Schumann-Heink
- 10.— 88355 La Danza (Neapolitan Tarantella)...Caruso
- 11.— 17067 That College Rag...American Quartet
- 12.— 89057 Dost Thou Remember, "Suzanne's Secret" (Wolf-Ferrari)...Farrar and Amato

Latest About Time by Phone.

It is estimated that about 30,000 persons in Chicago daily ask the telephone company for the correct time. Perhaps only a small portion of the number know that the voice which answers them is not the operator's but comes from a talking machine. In order to save wear and tear on the operator's voice a phonographic apparatus was installed and does the work just as promptly and as accurately as an operator could. The plan has proven so successful that the company is now arranging to report baseball games by the same means. By calling No. 12 a voice tells the names of the playing teams and the score at that point in the progress of the game. There will no doubt appear other uses for the phonograph in connection with the telephone.

Incorporation of Talking Machine Shops.

The Talking Machine Shops, Davidson Bros., proprietors, in the Steger building, has been incorporated. The incorporators are George and Cecil Davidson, under whose name the business has been conducted all along, and F. M. Yessley, cashier of the company. Cecil Davidson is president; George Davidson, secretary-treasurer, and F. M. Yessley, a director. No changes will be made in the personnel of the organization and the business will be carried on as in the past.

Lookin' Pleasant.

Under the head "Tips to Dealers" the Edison Phonograph Monthly for June suggests that dealers get busy with photographers and sell them talking machines with which to divert the attention of the poser while his picture is being taken. Anyone who has ever undergone the experiences of life in a "fotograf gallery,"—especially in the small city or town where patrons want photographs only on "state" occasions such as birthday parties or wedding anniversaries, would appreciate the value of this suggestion. Sitting for a photograph is more or less a task even for the experienced sitter, but for the uninitiated it is nothing short of an ordeal. Naturally the "man behind the gun" would be expected to welcome any invention or innovation that would enable him to keep the mind of his subject in a peaceful state long enough to give him time to manipulate the shutter before the "victim" got an attack of swallowing or staring eyes, or decided to change the position of his hands.

And the baby, it is a real jinx for the camera man. Ten chances to one just as he gets ready to "fire" the youngster will develop a frown and a serious expression that means calamity to the finished picture unless the infant's mind can be diverted, and here especially would the talking machine come in good place.

Portraits are usually stiff because of the self-consciousness of the person sitting, and there is no doubt that a lively plantation melody from a phonograph would do much to bring him or her back to a natural composure and appearance and enable the photographer to secure a negative showing the sitter as he or she really is. This is a tip for dealers who are wise enough to take advantage of their opportunities.

An Attractive Window.

The photograph reproduced on this page shows a unique window display made by W. W. Warner, of Madison, Wis., one who deserves mention as one of the most progressive talking machine dealers in the country. It shows a boat passing through a silvery stream with a Victrola on board. It was taken at night and the details of the photograph do not come up, but the realistic effect of the whole may be judged from the lifelike posi-

**An Artistic Victrola Window.**

tion of the dummy of a man seated in the boat. This kind of publicity is of the very highest type and is creative because it is thoroughly and pleasantly suggestive and serves to center the attention of the passing eye on the advantage of having a talking machine—especially one of the new portable type—with him when he goes to the wilds.

Ready-Made Inspiration.

A. W. Lincoln, the well-known Chicago portrait painter and artist, has developed a rather unique use for the talking machine. Mr. Lincoln, who like most artists, has considerable sensitiveness of environment, and naturally his work, which has reached a high standard of excellence, is done largely under influence of subjective mood. Recently he conceived the idea of installing a disc talking machine in his studio. He is delighted with the results. It works not only subjectively but objectively. He is a student of music and by adopting the class of selections to the mood he wants to produce in the model, never fails to get exactly the right physical pose and facial expression. Moreover, he finds he can produce at will the mood he most desires in order to work on a certain subject by a correct selection of records. Mr. Lincoln is very enthusiastic over the use of the talking machine in this way and believes that it is only a short time when many other artists will adopt the same method.

Mr. Lincoln bought his Victrola of H. P. Carleton, when the latter was a member of the sales force of one of the largest talking machine companies in the city. Since then Mr. Carleton has become the Western representative for the Condon Auto Stop Co. He dropped in to Mr. Lincoln's studio the other day and found the latter delighted with his purchase. The only objection he had to make was that it sometimes broke the mood if he was compelled to stop his work to readjust the machine. The Condon auto stop fixed the matter up very nicely.

The Wade Fibre Needle Cutter.

Wade & Wade, manufacturers of the well-known Wade fibre needle cutter, are having a splendid business with jobbers, and also pursuing a vigorous advertising campaign with dealers. This cutter has filled a distinct want in the trade in as much as it is particularly simple in construction and natural and easy of operation. All the dealers are being told about the cutter, and jobbers generally will profit by stocking up well for future demand that will come as a result of the vigorous campaign that is being waged upon it.

Talking Machine Co. Business.

The Talking Machine Co. had an unusually large month during May. In fact it was better than April. They recently established some good dealers' accounts running up into most creditable figures. This enterprising company is having good success as ever with its "cabinets-that-match," which are being handled by dealers all over the country.

Interesting Tendency.

A number of high-class department stores in the smaller cities are putting in talking machines and pushing them in a vigorous manner. This is particularly true in the Central West.

Big May for L. & H.

Lyon & Healy had the biggest May in the history of the company.

137 N. Wabash Avenue :: :: :: Chicago, Illinois

FROM OUR CHICAGO HEADQUARTERS— (Continued from page 44).

tory of the talking machine department. It was considerably ahead of May last year, which was the first May to succeed the record-breaking month in 1907. Consequently Mr. Wiswell and everybody about the house are highly pleased, and they look for a summer business rather above the normal.

Visitors and Personals.

R. J. Keith, sales manager of the Talking Machine Co., was in Indianapolis Monday and Tuesday of last week, and called upon the trade there.

H. M. Whitcomb, manager of the Whitcomb Music Co. of Medford, Ore., was a recent visitor in Chicago.

Albert J. Caldwell, of the Kirby-Caldwell Co. of Redfield, Cal., was a Chicago visitor this week.

Dan Creed, credit manager for the Talking Machine Co., is spending his vacation at French Lick Springs.

New Stores.

E. H. Jackson has resigned as retail manager of the Chase-Hackley Piano Co., Muskegon, Mich., and is opening the Victrola shop at Rockford, Ill. Victor goods will be handled exclusively, and the store will be fitted up in classy arts and crafts style.

The Western Michigan Music Co. has opened up a store at Luddington, Mich., handling pianos, small goods, sheet music and Victor talking machines. The proprietor is F. M. Butters, a son of Mr. Butters, of the Butters Lumber Co. of that city. Mr. Peterson, who is associated with him, was formerly with the Cable Company in Luddington.

The Detmer Piano Co., piano manufacturers, of Chicago, have opened a Victor department at the salesrooms at the factory, at 1534 North Clairmont avenue, this city. They are putting in a handsome booth and making arrangements for a vigorous campaign.

L. & H. Specialties.

Lyon & Healy are having a particularly good success of their fibre needle cutter, and on their cabinet specialties, including the knock-down filing table, on which the machine can be put while the shelf underneath furnishes abundant opportunity for their special cabinet files on the letter file order.

Salter Company Busy.

The Salter Manufacturing Co. of this city, manufacturers of talking machine record cabinets, is exceedingly busy. Its new cabinets, illustrated elsewhere in this issue, are having fine success. The company also is having a good trade on music roll cabinets.

Nifty Window Display.

Lyon & Healy have a novel window display in just now. It shows a summer resort scene. The wife is operating a Victrola on the veranda of the cottage, while the husband is seated in the yard, gun in hand, listening to the musical strains. The traditional small boy is fishing, and has just landed a finny denizen, which is kept continually flopping about on a moss covered log by a cleverly concealed mechanism. A full-sized rowboat adds realism to the scene.

Says Business Is Holding Up Well.

L. A. Becker, vice-president of the Bishop-Babcock-Becker Co., and C. J. Lillienthal, sales manager of the company, were in Chicago last week from Cleveland. Mr. Lillienthal returned Friday night, Mr. Becker staying over until Sunday night. Mr. Becker reports that business in the U-S phonograph line is holding up well for the summer season.

Makes Good Record.

The honor of having the largest number of sales in the record department of the Columbia Co. this month falls to Miss S. Berlin. This is the first time Miss Berlin's name has headed the list, and naturally the honor will be an incentive to better efforts that she may hold the coveted position next month. There is a great deal of friendly rivalry among the sales force for the place as head of the honor roll, and the contest for it grows livelier and more interesting each month.

Fuhri in East.

W. C. Fuhri, Western manager of the Columbia Co., will return from the East Monday, having

been away from Chicago about a week. Mr. Fuhri left for the purpose of visiting the Columbia factory to be present at the festivities incident to the twenty-fifth anniversary of the company, but was a little too late for the banquet.

R. Wurlitzer Co.'s New Display Rooms.

The accompanying pictures, taken in the Victrola display rooms of the Rudolph Wurlitzer Co. Chicago store, show to a certain extent the beauty of this establishment. It is, without a doubt, one of the most artistically arranged in the country.

The retail Victor and Edison department is located on the first floor of the establishment and occupies practically the entire space. Arrangements

R. Wurlitzer Co.'s Victrola Display Rooms.

are now being made to increase the size of the department 50 per cent., which will make the Wurlitzer retail department one of the largest in the world.

The photographs show the corner of the Victrola 16 display room, where the different finishes

Corner of R. Wurlitzer Co.'s Victrola Room.

of this style Victrola are on exhibition. The demonstration rooms for these Victrolas are situated just at the rear of the display room. They are comfortably furnished and handsomely equipped.

The Wurlitzer Co.'s talking machine department is one of the most successfully conducted in the country. The volume of business has shown a wonderful increase from year to year. Alterations

are hardly completed to take care of the increased business when it is necessary to plan other changes, so swiftly does this department grow.

CHICAGO DEALERS MEET.

Chicago Talking Machine Dealers' Association Transacts Much Business of Importance at Its Semi-Annual Meeting on June 10.

(Special to The Talking Machine World.)

Chicago, Ill., June 10, 1912.

The semi-annual meeting of the Chicago Talking Machine Dealers' Association was held in this city to-day, and was unusually well attended, with

President Van De Mark and Secretary Reynolds in their usual places. Much business of importance was transacted. Resolutions were passed instructing the president to take up the matter of asking certain manufacturers to exert their influence to have old discontinued records now being sold at cut prices by a local department store withdrawn from the market if possible.

Several instances of alleged cut-rat-ing by dealers were reported, and the matter will be taken up with the several manufacturers interested

in preventing these practices at the proper time.

The officers of the association are most desirous of emphasizing that any report that the association is antagonistic to any company or companies is absolutely unfounded. The policy is to take up and remedy, if possible, all abuses impartially, no

matter what company is involved, and the object is to help, not only in the maintenance of good conditions but to adopt an attitude of friendliness toward all manufacturers.

Resolutions were also passed requesting each member to write his Congressman asking him to exert his influence against pending patent legislation which would have the effect of preventing manufacturers from fixing retail prices of their products. It was voted that the secretary notify members of the

submission of an amendment to the by-laws at the next meeting changing the time of meeting to the first Monday of each month. The next meeting will take place on July 8 at a place to be announced later.

The man who thinks he knows it all often finds that he not only has much to learn, but also much to unlearn.

THE LYON & HEALY FIBRE NEEDLE-CUTTER

SIMPLE
AND
EASY
TO
OPERATE

CORRECT
LEVERAGE
FOR A
PERFECT
CUT

FINEST TOOL STEEL

GUIDE
WHICH
SAVES
ALL
WASTE

The L. & H. Needle-Cutter or Fibre Repointer we now offer to the user of Fibre Needles is the result of four years' exhaustive experiments and, we feel safe to assert, NONE BETTER CAN BE MADE.

The lover of GOOD music will find this cutter invaluable. The upper blade being pivoted above and back of cutting edge insures perfect contact with lower blade. Both of these blades are made from finest tool steel and properly tempered and with ordinary usage will last for years, without sharpening or renewal.

The cutter has a self-acting stop, which prevents cutting away more than enough, thus a pin can be played twelve or fifteen times before becoming too short.

We give our absolute guarantee with every cutter sold.

LOOKS LIKE BIGGEST YEAR.

Baltimore Trade Enthusiastic Over the Outlook—Droop Expansion—Eisenbrandt Sons Inc., Become Victor Dealers—Preparing for Jobbers' Convention.

(Special to The Talking Machine World.)

Baltimore, Md., June 7, 1912.

From all viewpoints it would seem that 1912 is going to be one of the biggest years that the talking machine dealers have ever experienced. This impression is gained by the excellent reports concerning trade which are made at all of the stores and which seem to be spontaneous. At each of the stores where the talking machine representative called he was told that business during May beat that of any previous May, and in some instances went ahead of April of this year, which is considered an unusual achievement. This is attributed to the increased sales and to the fact that many new dealers have been enrolled by the branch stores both in Baltimore and throughout the State.

Manager F. A. Denison, of the local branch of the Columbia Phonograph Co., is back on the job again after having enjoyed a most delightful time at the 25th anniversary of the organization of the Columbia Phonograph Co., which was observed by a big banquet at the Waldorf-Astoria in New York City. Mr. Denison said that his boys have been going some during May, with the result that sales during May were more than two and one-half times greater than last May, that they went far ahead of April, and they are preparing for a big June showing. Mr. Denison stated that he had established the Columbia line with the Caulfield Piano Co. on North Charles street.

Some idea of the Victor business in Baltimore this year may be gained from the statement of Manager William C. Roberts, of E. F. Droop & Sons Co., who said that for the first five months of the present year he has purchased 300 per cent. more stock than any previous year, and that it is not his custom to lay in a large stock unless the demand warrants it, so that those who care to can draw their own conclusions as to the business done. Mr. Roberts is also manager for the Washington store of E. F. Droop & Sons Co., and he stated that in this respect Washington even went ahead of Baltimore, or, to be exact, records show that the purchases for the Capital City store were 320 per cent. larger than any previous year. Mr. Roberts has just returned from a trip to the Victor factory, and is now preparing to attend the talking machine dealers' convention to be held in Atlantic City, July 1 and 2. Mr. Roberts also speaks well of the May business, saying that it beat 1911, which was also a good month and which was far ahead of 1910.

William Knabe & Co., who are handling the Columbia line, are attracting many purchasers by the varied window displays which they have every month. This month's attraction is one of the most novel seen for some time and deserves mention. It is a realistic camp scene and every detail has been worked out to perfection by Walter Butler, who concocted the idea. Everything necessary in the way of equipment for ideal camp life

STRIKING WINDOW DISPLAY BY R. WURLITZER CO., CHICAGO

The Victrola window recently installed by the Wurlitzer Co. has incited considerable attention on the street. The idea was originated by L. K. Cameron, retail talking machine manager of the Chicago branch. It was intended to be as near as possible an exact reproduction of a camp in the woods of northern Minnesota, where Mr. Cameron spent four weeks a year or so ago. On the left is a spring of running water, which comes out of a rock and runs down to a little

pool to the right of the camp. Live wild birds fly about in the window, squirrels and rabbits make the place their playground. The Victrola is playing. The deer, hearing music, sticks his head through the banister, the better to see where these playing sounds come from.

Quail and snipe hesitate and look about them to see where this human voice comes from, but fail to solve the problem. The title of the window, "Music Hath Charms," is well carried out in the

is shown, only Mr. Butler goes further by suggesting that an absolutely camp life, especially after dark, would be perfected by the addition of a Columbia phonograph and record, and he has every reason to believe that those Baltimoreans who have seen his reproduction of a camp and who contemplate spending some time in camp this summer, will get wise and adopt his very practical suggestion.

H. R. Eisenbrandt Sons, Inc., have signed up two new Victor dealers during the month through Manager Charles E. Strahn. One of these is in Baltimore, while the other is in Frostburg, Md. Mr. Strahn will attend the talking machine jobbers' convention, after which he will be on hand to supervise a number of improvements which the Eisenbrandt firm will make to the talking machine section of their store.

Thomas Gordon, manager for the talking machine department of the Kranz-Smith Piano Co., which handles Victors and Columbias, will likely be seen at the convention next month. Joseph Fink, who is also connected with the talking machine department of this firm, has developed into a hefty athlete and can be seen daily doing difficult stunts of the parallel and horizontal bars, pitching indoor baseball and lifting heavy weights in the gymnasium of the Central Young Men's Christian Association in this city. Mr. Fink says that the strenuous life has made a new man of him and he feels as though he could give some valuable pointers to Jack Johnson, Jim Jeffries and other heavyweight notables in the fistic art.

Manager M. Silverstein, of Cohen & Hughes, announces that his firm has been right in the swim in a business way with the Victor line during May. Mr. Silverstein has been kept on the jump to attend to the demands of the rush of customers. He says that May beat April of this year and went ahead of the May for 1911, and that he is going to keep up the good work during June. And from all indications it would seem that he will more than carry out this program to a successful conclusion.

Sanders & Stayman have had a creditable month with the Columbias and Victors, according to Manager Albert Bowden. The Rosenstein Piano Co. and the Hub Piano Co., newcomers in the local field, also give out encouraging statements regarding their Columbia business for May. The

arrangement of the camp and animals. It has attracted thousands and has been the means of selling quite a few small machines, as a Victrola 4 is seen on the stump of a tree, a bunch of records by the side of it, three or four records leaning against the trunk of the tree as if left there after the selection had been made. The packing box, with the Victrola shipping stamp on it, serves as a wash stand for the camper. The Wurlitzer Co. has been complimented highly on this window.

Kunkel Piano Co. makes similar claims for the Victor line, which it handles.

OPPOSITION TO OLDFIELD BILL.

Protests Against the Proposed Changes in Patent Law Are Numerous—Legislation Seems Improbable.

Reports from Washington indicate that much opposition has arisen against the bill introduced by Representative Oldfield, revising the patent laws to meet the recent decision of the United States Supreme Court. So many laws have been pointed out in the bill that there seems to be little prospect of its passage during the present session of Congress, at least without radical amendment.

The Oldfield bill has been condemned by the Merchants' Association of New York upon the report made by the association's committee on protection of industrial property, which carefully examined all the bills offered for the amendment of the present law.

The committee made a full report upon the Oldfield bill, pointing out the disturbance to business and the injury to the public which would follow the enactment of the provisions requiring compulsory license under Letters-Patent and forbidding a patentee to sell his patented machine with any restriction as to place, manner or time of use, or with any condition regarding the use or purchase of any other article.

After considering the report of the committee the Merchants' Association has recommended that no radical change be made in the present patent law without previous thorough investigation by a commission of experts of the many and complex interests involved. It also urges that any contract restrictions be made not more stringent than the present provision of the British patent law relating to the subject.

I'd rather be a Could Be,
If I could not be an Are;
For a Could Be is a May Be,
With a chance of touching par.
I'd rather be a Has Been
Than a Might Have Been, by far;
For a Might Have Been has never been,
But a Has was once an Are.

(Special to The Talking Machine World.)

London, E. C., June 5, 1912.

As a commercial nation we are experiencing a process of evolution far beyond the most liberal predictions of modern-day philosophers. It may be the dawn of a new era in the history of labor, but the present uprising of the working classes is decidedly damaging to the commercial interests of old England. Education and the paid agitator are responsible for the present unsettled state of things, and although it may all come right eventually, the constant and repeated labor strikes in which this country is involved gives ground for serious reflection. It is not, however, my province to enter upon the political aspect of the situation; rather should I, perhaps, in a journal of this character confine my remarks to the effect of these unfortunate trade disturbing elements, at which the foregoing indicates. We are now in the throes of another gigantic strike, which has already considerably affected British exports, aside from causing a depression in the home market. This time the business of London is seriously hampered by the transport men ceasing work at a moment's notice. Steps are being taken to reach an early settlement, but the dispute has resulted in considerable annoyance to talking machine traders, whose export consignments are held up at the docks. Opinion now prevails in trade circles that plans for developing a good summer trade will have to be curtailed to some extent, having regard to the fact that dealers are experiencing serious difficulty in maintaining their weekly sales average. The fact of the whole matter is, money is fairly tight with the public, and what surplus it has available is not so freely dispensed as formerly. Interviews with prominent traders indicate very clearly that business returns these last few weeks have been, and are expected to remain for some time to come, much below the corresponding period last year.

Columbia Co. to Rebuild.

The information that the Columbia Co. has recommenced delivery of machines and records will be heartily welcomed by the whole trade. As the result of the disastrous fire which practically consumed the whole of the working part of the factory, together with valuable machinery and stock, it is the company's intention to rebuild the factory entirely, provision being made for the more modern requirements in the manufacture of records. The whole scheme is already planned out and building operations will shortly commence in accordance therewith. It will probably be some four or five months before the new premises are ready.

Subject to Royalty.

It is as well to remind foreign and colonial buyers that on and after July 1 next all records of newly copyrighted music and songs will be subject to the royalty tax of 2½ per cent. (minimum one halfpenny) on each selection or part of, as prescribed under the Copyright Act. The dealer's stock of records, no matter how large a quantity, may be on hand prior to July 1; when the act operates, will be quite unaffected.

As between shipper and buyer the question arises

who will be responsible for this extra cost? It must be remembered that the royalty computation is based upon the actual ordinary retail selling price, and on all records therefore at the popular price of 2s. 6d. carrying two selections, one penny royalty tax is due. The shipper already sells to the buyer at a minimum cut price and he must therefore do one of two things: Either the extra cost will be equally divided, or the wholesale buyer must be charged separately for the royalty stamps affixed to his purchase and in turn pass on at any rate a share of the burden to the retailer. The latter plan is rather favored in shipping circles, but in some quarters I learn that an equal division of the royalty charges is contemplated, although as one prominent shipper admitted, "It is difficult to say at the moment exactly what plan we will adopt . . . it is intimated that some of the manufacturers may feel disposed to adjust their rates . . . but when the time comes we will make suitable arrangements to meet the new conditions as fairly and impartially as possible, having regard to the various interests involved."

An Interesting Little Work.

From the Era offices, Tavistock street, London, comes an interesting brochure entitled "The Copyright Act, 1911, so far as it affects Dramatic and Musical Copyright," by Albert A. Strong, LL.B., solicitor, published at 1s.

Columbia Move Against Price-Cutters.

In these columns I have frequently referred to the inactivity of record manufacturers on the question of price-cutting. It is therefore a matter of satisfaction to observe that at least one of the companies has given recent evidence in a practical manner of its determination to enlist legal aid against the "cutter." In a recent case the court clearly emphasized the point that where a patent is in question any deviation from the stipulated selling price of a record constitutes an infringement of the patentee's rights, and is good cause for action at law. That such a definite ruling should have been made at this time, when wholesale price-cutting is apparently indulged in with impunity will awaken an echo of great satisfaction among legitimate and straightforward dealers who had reached a state of mind bordering upon distraction. In their action against a well-known delinquent the Columbia Co. has set the ball rolling and where possible it is hoped that other manufacturers will take up the cudgels in the interests of fair trading. The unfortunate fact, however, is that few records are covered by patents, and it is difficult to see what steps can be taken to suppress the action of those who, rightly or wrongly, consider themselves free to sell at what price they like. Nevertheless, one clear line of action is open to manufacturers, and that is co-operation. But of this there seems no prospect at present.

The action referred to justifiably gives cause for serious consideration on the part of dealers. That there shall be no mistake as to their future policy the Columbia Co. has issued a clear warning that in all cases brought to light where a dealer is selling Columbia records below the authorized price they will take legal action.

Dealers' Protective Association Meets.

A further meeting of the Gramophone and Phonograph Dealers' Protective Association was held May 2, when several instances of flagrant price-cutting were given. It was unanimously decided to investigate all complaints, and with this object an investigation committee was appointed. A proposal to invite the co-operation of manufacturers was the subject of keen discussion, but it was eventually deemed inexpedient to pursue the suggestion at that stage.

A Trader's View.

Presiding over the fifteenth annual general meeting of A. W. Gamage, Ltd., Mr. Gamage is reported to have said: "A difficulty that tradesmen had got to deal with to a larger extent every year

was the restriction of selling prices. The company had fought many actions on the matter, and with success. This restriction of prices would hit the consumer very hard in the future, because it did away with all competition. They wanted some organization to deal with the matter, which was one of the questions that the newspapers should take up. They needed a kind of consumers' protection league for defense against extortionate prices."

Mr. Gamage very conveniently ignores the fact that were his proposal to prevail there would be little profit for dealers, because competitive interests would always compel them to offer goods at a less price than the other fellow. But the fact of the matter is, Mr. Gamage wants to be in the happy position of being the only one privileged to cut prices. It can't be done!

A Timely Reminder.

The Gramophone Co., Ltd., has issued a timely reminder to dealers that the monthly approval records are sent for the sole purpose of enabling the dealer to replenish his stock and select such records as in his opinion will prove the most likely "sellers" in his particular district. It has become necessary to emphasize this fact, having regard to the practice of some dealers in utilizing these approval records for demonstration purposes. This is against the spirit of the arrangement and The Gramophone Co. very properly warns dealers that returned records blemished in this way will only be credited at the worn-out or spoiled record rate.

Phonograph as Peacemaker.

Speaking on Southern Nigeria before the Royal Geological Society, A. E. Kitson said that during the mineral survey of the colony most of the important districts and areas were visited. Numerous phonographic records of native songs, musical selections, etc., were taken as far as the exigencies of survey work permitted and opportunities arose. In many places a judicious use of the phonograph proved of great assistance to the party by winning over truculent or unfriendly people, and thus inducing them to supply the food and shelter refused by them but a few minutes before.

"The Glamour of the East."

During past few days, pedestrians in passing the shop windows of 4 Donegal square, W., have become transfixed whilst admiring some delightful specimens of rare inlaid furniture, etc., from Damascus and Jerusalem, also some Venetian goods therein exhibited. The importer is Mr. T. Edens Osborne, the well-known talking machine factor

of Belfast, who has adopted this ingenious method of attracting passersby, with much success.

Famous Entertainer Dead.

The well-known entertainer and raconteur, G. H. Swazelle, I regret to say, passed away recently after ten months' painful illness. He made three tours around the world and performed before practically all the crowned heads of Europe. "How Bill Adams Won the Battle of Waterloo," and "The Whistling Stammerer," are two of his best mirth-provoking records, and these are obtainable from the Edison Bell Co.

Some Striking Records Issued.

We learn that that fascinating waltz, "the Passing of Salome," has been issued in record form by The Gramophone Co., Ltd. It was made by the composer, Archibald Joyce, the English waltz king, as he is sometimes called, and his famous orchestra, and is described as the only official record. In addition to the foregoing the current issues of "His Master's Voice" records include two more exceptionally artistic renderings by the New Symphony Orchestra, and a host of other equally charming numbers. The full list is as follows: "Marche Hongroise" (Berlioz), "Merry Wives of Windsor" Overture (Nicolai), New Symphony Orchestra; "I'll Dance Till de Sun Breaks Through" (Joyce); "When the Birds Begin to Sing," waltz (Joyce), "When the Birds began to Sing" (Joyce), Joyce's Orchestra; "Si j'étais Roi" Overture (Adam), band of H. M. Coldstream Guards; "The Irish Emigrant" (Barker), Mr. John McCormack; "Answer" (Robyn), Mr. Evan Williams; "Jan's Courtship," Mr. Charles Tree; "Maire, My Girl" (Aitken), Mr. Herbert Heyner; "Ave Maria" (Gounod), Miss Perseval Allen; "The Adventurer" (Godfrey), Mr. Harry Dearth; "O Star of Eve" ("Tannhäuser") (Wagner) ('Cello), Mr. W. H. Squire; "E Major Gavotte" (Bach) (Violin), Fritz Kreisler; "Jenny MacGregor" (James O. Tate), Miss Clarice Mayne; "The Blarney Stone" (Lauder), Mr. Harry

Lauder, *Celebrity Records*—"Love is Mine" (Gartner), Caruso; "Lombardi"—"Qual Volutta" (with sacred joy) (Verdi), trio from Act III, Caruso, Frances Alda and Journet, and "Speech on Mercy to Animals," by the Hon. Stephen Coleridge.

Speaking Films and the Future.

"In the near future it will, I think, be possible, by means of Film parlants, to produce the whole act of a play without break, and when that comes the present animated picture show will be revolutionized."

This opinion was expressed to the Daily Graphic by the chief London representative of M. Leon Gaumont, who was absent in Paris in connection with his latest invention, Film parlants, or speaking films.

M. Gaumont, it is interesting to record, opened the first continuous picture theatre in England, establishing it at Bishopsgate street, London, where it still is.

So far back as 1901 he succeeded in producing talking pictures in an imperfect form. Then the record of the song was first taken, and when reproduced in the talking machine or gramophone the artiste rehearsed. When actions and words synchronized pictures were taken, and subsequently the two were simultaneously produced. It did not, however, always happen that the artist kept time with the record while the film was being made, and when that happened the result was not altogether satisfactory.

The difficulty, M. Gaumont's manager explained, was to take the record and film at the same time.

"Of course, you know," he added, "that when a talking machine record is secured the artist or artists sit around and close up to a huge trumpet. Hitherto that meant including in the picture film 'behind the scene' details which spoiled the whole illusion.

"To obviate this a method had to be devised by means of which a record could be taken at a distance sufficiently remote to prevent disillusionizing

data from getting into the picture. M. Gaumont had years ago solved the problem of synchronizing for reproduction; now he has perfected the more difficult task of recording the voice and action simultaneously.

"Just how perfect is the invention was recently demonstrated at the Royal Institution, when the record of a cock crowing was given. Now you might take pictures of the bird crowing, but you cannot compel the bird to crow again in order to take a record which will synchronize with the film. So the Film parlant of the cock crowing was an absolute proof that the record and the film were taken at the same time."

"And the possibilities of this wonderful invention?" the interviewer inquired.

"Unlimited," came the reply. "What interests M. Gaumont more than anything else is its educational possibilities. Think of the advantages and varied utility of, say, the lectures of an eminent professor being given in hundreds of lecture rooms and colleges at the same time. Yet to accomplish such an undertaking the professor need not leave his own house. The man, his voice, his words, his gestures would all be reproduced for the benefit of the schools and students.

"As to plays and operas, the present difficulty is that the longest record does not extend beyond eight minutes' duration. That would be fatal to the reproduction of an act. M. Gaumont is confident that he will soon be able to extend that period to forty or fifty minutes, and when that happens it will be possible to produce the whole of a play or grand opera, allowing the usual intervals between the acts.

"That Film parlants will revolutionize the present animated picture shows I have no doubt, although the silent pictures will always appeal to many, and will, no doubt, invariably occupy a portion of the programs. A considerable time, for instance, must elapse before such a big scene as the naval review

will be produced in its entirety, with the big guns booming and the boatswains' whistles piping. But even these things are bound to come now. The possibilities are boundless. Really, if I may so put it, it is now merely a matter of coercing the talking machine into recording every sound that can be possibly heard."

Exchange Scheme Interests.

The public exchange scheme, the first of its kind, inaugurated by the Edison Co., has occasioned much satisfaction among its dealers, but it has been pointed out that the recent labor strikes have undoubtedly militated somewhat against the scheme, and on this account the public exchange arrangements will be continued to the end of this year.

Liability by Drawer of Check.

Liability by a drawer of a check to honor it, although he may have a good claim against the person to whom it was made payable, was the salient point in an action at Westminster. A ordered certain work to be done by B, and gave B a post-dated check for his services. B handed the check to his wife, who went to C and purchased ironmongery from him, paying him with the check. In the meantime A found that B had not done the work bargained for, and stopped payment of the check, which was not met, therefore, when presented by C, who now sued A for the value of the check, £10. A pleaded that he had not had value for his check from B. Judge Woodfall said the drawer of the check might have had a remedy against the person to whom he made it payable, but it was his check, and he must meet it. Judgment for C, with costs.

A Gramophone Clock.

The newest timepiece, which is shortly to be placed on the market, actually calls out the hours, half hours, and quarters, day and night, unless shut off, and will tell you the time to the minute any hour of the night if you press a little button at your bedside. The works of this remarkable clock actuate a stout belt which runs over a roll connected with a sounding box. Upon the belt, or rather film, the hours, which have been recorded by a phonograph, are impressed by galvanization on a copper plate. The mechanism which moves the hands is connected with the speaking device, and with this is a funnel which reinforces the sound and projects it outward through a finely grated opening attached to the narrow side of the clock. At night a touch on a lever reduces the clock to silence. But if one wakes and wishes to know the time without striking a light, an easily-found button is pressed and the clock immediately states the time. The speech film is practically indestructible and occupies very little space, since, because of its elasticity, it may be wound upon a very small roller.

Offerings in Edison Records.

Always something new to offer its patrons, the Edison Co. includes in its July list two acquisitions in the persons of Miss Irene Armstrong (soprano) and Miss Christine Miller (contralto), whose initial records are announced in the advance July list to hand. Miss Armstrong, by the way, is a native of Illinois, and her progress in the vocal art under some of the best American teachers was such as to justify her removal to London, Paris and Italian cities, where she was able to complete her studies under the guidance of such famous professors as Jean de Reszke, Juliana and others. Miss Armstrong has since given many successful recitals, including those at

Chicago, Pittsburgh, New York and other American cities. She is the possessor of an unusually fine voice and her first Edison record (Amberol) is No. 1055, "My Laddie," a typically fine example of a Scotch love song.

Although of Scotch birth, Miss Christine Miller can also claim to have been associated with America, she having lived in Pittsburgh since early childhood. According to the Chicago Tribune, "her singing is distinguished by refined, infallible taste and by genuineness and justness of sentiment and feeling," and this expression of opinion is amply justified by her phenomenal success as leading contralto at several of the principal festivals as soloist with the Thomas, New York Symphony and other noted orchestras; in oratorio work with the New York, Boston, Philadelphia and Toronto societies. Miss Miller has already filled over one hundred engagements this season in Canada and America. Her initial record is concert Amberol No. 28020, "Annie Laurie." In addition to the foregoing there are some splendid selling titles in the July list under review, the complete issues being as follows: Amberol concert records—"A Song of Thanksgiving" (F. Allitsen), Charles Hackett, and "Simplicius Waltz" (Johann Strauss), Armand Vecsey and his Hungarian orchestra. Amberol records—"A Collier's Child" (Will Geddes), Stanley Kirkby; "Regimental Marches No. 2," National Military Band; "We Must Have a Song About the Isle of Man" (C. W. Murphy), Miss Florrie Forde; selection from "Der Liebe Augustin," "Princess Caprice" (Leo Fall), Alhambra Orchestra; "Seaside Swank" (David and Lee), Bobbie Naish; "The Rosary" (Nevin) (cornet solo accompanied by National Military Band), Sergeant C. Leggett; "Let's Make a Night of It To-night" (Glover Kind), Jack Charman; "You Never Know" (Harry Castling), Glandon Roberts; "Tell Them You're a Londoner" (Godfrey and Williams), Bill Williams; "Unter den Linden," march (Crosse), concertina solo, Alex. Prince; "By the Saskatchewan" ("The Pink Lady") (I. Caryll), Frederick Weld and chorus; "Everybody's Doing It Now" (I. Berlin), Premier Quartet; "Long, Long Ago," with variations (flute solo), Julius Spindler; "Dreams of Galilee" (C. P. Morrison), Edison Mixed Quartet; "The Ameer," selection (V. Herbert), Victor Herbert's Orchestra; "Carmena," vocal waltz (H. Lane Wilson), Frank Croxton Quartet; "Jimmy Valentine" (Gus Edwards), Peerless Quartet; "Souvenir," mandolin solo (Drdla), Demetrius C. Dounis; "Absent" (J. W. Metcalf), Miss Elizabeth Spencer and Chas. W. Harrison; "Serenade," instrumental (C. M. Widor), the Tollefsen Trio; and "Cavatina" from "Faust," "All Hail! Thou Dwelling Lowly" (Gounod), Charles W. Harrison. Edison Standard records—"The Policeman's Holiday," two-step (Montague Ewing), National Military Band; "Yesterday, To-day and To-morrow" (Laurence Wright), Albert Crawley; "Bom, Bom, Bom-bay" (Staunton and Flynn), Miss Florrie Forde; "Our Band March" (C. C. Sweeley), New York Military Band; and "Good-Night, Mr. Moon" (Von Tilzer), Campbell and Gillette.

Adjustment of Edison Reproducers.

A form letter has been dispatched to dealers for distribution among their customers. It says (in part): "To Edison Phonograph Users.—Do you realize that the pleasure you derive from your pho-

nograph depends upon the tone of the reproducer? The best of records will not produce good results if your reproducer is out of order, and the majority of complaints we receive about the unsatisfactory reproduction of records is due to the reproducer being out of adjustment or needing some slight repair. With a view to enabling our patrons to obtain the best results we have completed arrangements which will enable us to make repairs on reproducers very promptly at a nominal cost of 1s. 6d., including return postage, providing the sapphire or other important part is not missing.

Zonophone Record List.

Certainly one of the most comprehensive and pleasing lists yet issued by the British Zonophone Co. is that for July. Big name artists there are galore, and the company has secured all the best obtainable of the July selections; the following examples come to hand: 10-inch records—"Free Lance March" (Sousa), and "For King and Kingdom" (Collins), Black Diamonds Band; "Chevalier Patrol" and "Chevalier Selections," Black Diamonds Band; "Patricia" and "My Rachel's Eyes," Harry Fay; "Building a Chicken House," Part I and Part II, Will Evans; "Johnny Morgan's Sister" and "At Nine O'clock He Got the Sack," Maidie Scott; "The Rosary" and "She Is Far from the Land," Ernest Pike.

Display Attracts Attention.

At the Royal Ulster Agricultural Show at Balmoral, Edens Osborne's stand was one of the most attractive. It inspired many editorials in the local press, one interesting account being as follows:

"The contrast between the crude gramophone introduced to Belfast by this exhibitor in the autumn of 1898 and the delightful present-day instrument is quite as remarkable as that between the old 'bone-shaker' ridden in the early seventies and the 'Raleigh' or 'Rover' bicycle of 1912. The same contrast applies to the early type of Edison phonograph purchased by Mr. Osborne while in New York in 1893 and the latest models of Mr. Edison now on the market. Truly the evolution of the talking machine has been quite phenomenal. Many thousands of workers are now employed in both English and foreign factories manufacturing these marvelous entertainers, which during recent years have found their way into the homes of all civilized communities. The suitability of these human-like instruments for all fresco amusement was clearly demonstrated at Mr. Osborne's exhibit, the reproduction of songs by celebrated artists (Melba, Tetrassini, Clara Butt, Kirkby Lunn, Caruso, McCormack, Harrison, Williams, Harry Lauder and other vocalists) being clearly and distinctly heard 'in the open' for a considerable distance. A large crowd of visitors was always in attendance opposite the stand, apparently very appreciative of the 'musical feast' provided for their enjoyment. With commendable consideration Mr. Osborne has erected a large filter, 'The Filtre Rapide,' which yields a copious supply of aqua pura to those who eschew aught stronger!"

Records by Russian Symphony Orchestra.

The success of the "New World Symphony" record by the Russian Symphony Orchestra on Columbia-Rena has been such that a further series of records has been secured from this famous organization, including a double record of a classic fantasia by the Russian composer, Glinka, which has never yet been recorded and which promises to create a sensation.

TRADE NOTES FROM CINCINNATI.

Krolage Music Co. Getting Its Talking Machine Department Into Shape—Columbia Business Shows Steady Advance—Big Wurlitzer Trade the Past Month—The High Priced Victors and the Edison Amberola in Favor—The Aeolian Co.'s Active Campaign for Trade.

(Special to The Talking Machine World.)

Cincinnati, O., June 4, 1912.

A change in the plans of the Krolage Music Co. relative to getting separate quarters for its talking machine department has taken place. If these do not mature then the old idea of a store in the Arcade will be taken up.

At this time a deal is pending whereby the Krolage Co., in conjunction with the American Music Stores Co., may take over all or a part of the Milner Musical Co. on Sixth avenue, near Vine. There are good reasons for believing that the owners of the lease have decided to use it to better advantage and have practically concluded to close down the Milner Musical Co. Manager Richard Stodler, of the latter company, will be cared for by the R. Wurlitzer Co. It is known that the Krolage people have been gradually laying in a big supply of talking machine goods in order to have a good stock for the new store, wherever this may be opened.

The Columbia Phonograph Co. reports business conditions as being unusually steady for May, Manager R. J. Whelen stating: "It is indeed a real satisfaction to realize the appreciation of the purchasing public of our latest model Grafonolas and our new records, and this appreciation is expressed not in talk but in bona fide orders. Nearly all types of Grafonolas are now being furnished in different wood finishes to suit the customer, early English, fumed oak and mahogany being the leaders. The Saturday Evening Post ad in May covering the 'Princess,' spoke to the public in a tone they recognized at once, and the large volume of orders and inquiries from this ad has established the new 'Princess' Grafonola as a popular favorite. Another gratifying feature is the great interest shown by the public schools in Cincinnati for the Grafonola in connection with their music departments, gymnasiums and social work. We have been very successful in placing a number of Grafonolas in the schools, and wherever placed they are considered indispensable. We are looking forward with interest to the arrival of the new Slezak and Destinn records to be placed on sale at once, as from the samples we have received these records are superb."

The Dictaphone department is doing its usual large volume of business, several large installations being placed during May and the orders signed up. Geo. D. Smith, of New York City, the head of the special railroad Dictaphone department, spent sev-

eral days in Cincinnati, going over the situation in this city.

Frank Dorian, manager of the Dictaphone, New York City, spent several days in the Cincinnati office, giving the latest news from the different branches all over the United States.

The R. Wurlitzer Co. reports a very heavy trade in talking machines during the month of May. The sales show a big increase over May, 1911, and June already shows every promise of being a record breaker also. With the exception of one or two styles, Victrolas have been very plentiful and both retail and wholesale have benefited accordingly. The sale of small Victrolas for summer camps was not as heavy as the April trade would indicate. As usual the public responded more to efforts made on the Victor No. 9. As the trade has been stimulated by the Victor Co. campaign in advertising their best selling numbers, and with an active demand for records, machine trade is sure to show a petty increase.

The Edison Co.'s new product, the \$125 Amebrola, has been on display at Wurlitzer's for some days. It has made a splendid impression and received all of the admiration which it justly deserved. It is a foregone conclusion that it will be a big seller, as it fills a demand that has been felt for some time.

John Arnold, the Elm street dealer, is still keeping secret some changes he has in mind. In speaking of these yesterday he was positive in his assurance that the present location would be retained. Business with him was a little dull during the early part of May, but revived in a satisfactory manner before the end of the month.

J. E. Poorman, of Main street, found things a little dull in the talking machine end during May, but was kept busy with his bicycle trade.

The talking machine and record business with the Aeolian Co. was very satisfactory last month, particularly the trade for the Victrola XVI. The company's record business is gradually increasing as its patrons realize the excellent service offered, and in the early fall five more record rooms will be added to the already commodious quarters. The new system of circulating records will be installed in all the company's branch stores in the early fall and is expected to clean up additional business. "With our advertising campaign pushed to the limit," said Manager Ahaus, "Victrola owners, prospective buyers will know we are on earth and the one place to buy and get the most for their money. With the splendid lot of June records we look for an excellent month's business."

In learning to swim it isn't wise to commence at the bottom.

Look at an idea to see if you can use it, not to see if you can get along without it.

GIVEN FAREWELL DINNER.

Horace Sheble, Who Recently Resigned as Factory Manager of the American Graphophone Co., on June 1 Was Entertained by Heads of the Departments of the Company and Their Assistants at Farewell Dinner—C. E. Woods, Succeeds as Manager of the Plant.

On Saturday evening, May 25, the heads of departments of the American Graphophone Co. and their immediate assistants tendered Horace Sheble, factory manager, a farewell dinner.

Mr. Sheble left the American Graphophone Co. June 1, after a three years' residence in Bridgeport as head of the factory, where he made many friends during his business and social life there.

After the dinner H. A. Budlong, executive officer, who acted as toastmaster, presented Mr. Sheble, in behalf of those present, with a very handsome and valuable gold watch, suitably engraved. Mr. Budlong made a short but effective speech, outlining Mr. Sheble's accomplishments as factory manager, and complimented him upon his rare possession of drawing to him by ties of friendship his subordinates, at the same time obtaining their maximum co-operation. This has been one of the strong features of the Sheble management.

Mr. Sheble was visibly surprised on receiving the gift, and replied in a very clever speech, in which he showed much feeling for the kindness shown him and sincere regret at leaving his friends in the company.

Before embarking in the business of an industrial engineer, Mr. and Mrs. Sheble will take an extended trip West, where Mr. Sheble has interests.

C. E. Woods has succeeded Mr. Sheble as manager of the plant.

H. A. YERKES ON BUSINESS.

Manager of the Wholesale Department of the Columbia Phonograph Co. Well Pleased with the Increasing Appreciation of the Columbia Products as Manifested by the Growing List of Representative Agents.

H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., General, New York, is one of the decidedly optimistic talking machine men of the present day. In a brief chat with The Review, Monday, Mr. Yerkes said: "Business is good and it is my impression that it will continue good right through the summer. Of course, local conditions in some different sections of the country are responsible for some slight fluctuations; they are of such minor nature, however, as to be hardly noticeable. Just so long as the present healthy demand continues there is not room or time for fault finding. The list of Columbia dealers is growing rapidly, and it is particularly gratifying to note the high class of the department stores and piano dealers who have recently joined forces with the Columbia Co. We feel justly proud of the number and standing of the many piano dealers now representing the Columbia."

NEW ELECTRIC STOP.

For Disc Talking Machines Being Placed on the Market by the Standard Electric Stop Co. with Offices in the Empire Building, Philadelphia—To Make Display at the Chalfonte Hotel During the Convention of the N. A. T. M. J.

Philadelphia, Pa., June 9, 1912.

The Standard Electric Stop Co. (Sesco), is introducing a new electric stop for disc talking machines, which has won a great deal of favorable comment among the jobbers who have seen it.

J. H. Potsdamer, formerly advertising manager of the Black Diamond Coal Co., of Philadelphia, has been secured as manager and has opened offices in the Empire building, 13th and Walnut streets, this city.

The Standard Electric Stop Co. has its own manufacturing plant and is prepared to supply orders promptly at this time.

Mr. Potsdamer will have headquarters at the Chalfonte Hotel, Atlantic City, during the convention of the N. A. T. M. J., July 1 and 2, where he will be pleased to demonstrate this latest improvement in automatic stops.

The Bloomingdale-Weiler Advertising Agency, of Philadelphia, is preparing copy at this time for a comprehensive national campaign which will begin upon the return of Mr. Potsdamer from his extensive business tour.

SPECIALTIES THAT INTEREST

A Line of Record Albums and Record Carrying Cases That Are Greatly in Demand.

The announcement of the Schafford Album Co., of New York, which appears elsewhere in The World, should interest members of the trade desirous of handling specialties that appeal to the purchasing public. There is no mistake but that record albums to match cabinets in golden oak, Mission, mahogany, bird's-eye maple and Circasian walnut should prove quick and profitable sellers. These albums are admirably constructed and very handsomely finished, and better still, are sold at a price that cannot fail to win consideration. Each record album has gold-plated ring on the backs, so as to match the metal finish of all machines. The albums are made to fit all Victrolas and Columbia machines. The company will be ready to fill orders for these albums after June 15.

Another novelty offered by the Schafford Co. is a complete line of record carrying cases, which are of the same high quality as the Schafford record albums. The carrying cases are made of the very best of imported Viennese imitation leather, artistic and durable, and made of material to match the wood cabinets so much used by large manufacturers. They are made to hold 24 to 50 ten-inch and twelve-inch records. They are partitioned and contain drop fronts with index attached, so that records can be selected with celerity. These specialties are now ready for the trade and the manufacturers invite immediate consideration.

T. C. Schafuss, head of the Schafford Album Co., 26-28 Lispenard street, New York, in a chat with The World this week, stated that his business was exceedingly active and that he is having a tremendous demand for record albums and carrying cases from the talking machine trade in all parts of the country. The Schafford Co. has just moved into a factory double its old capacity, directly opposite the old address. This step became necessary in order to meet the demands of the business.

GOES IN FOR MOTOR BOATS.

J. Newcomb Blackman, president of the Blackman Talking Machine Co., who has long been an enthusiastic automobilist, has decided to go in for motor boating this season and has purchased a speedy 35-foot motor boat which he will use extensively while staying at his summer home at Brightwaters, Long Island. If Mr. Blackman has the hair-raising experiences with the new boat that he has had with his automobiles, there are

GRAFONOLA FOR PEARY.

The Famous Arctic Explorer Buys a Grafonola "Princess" with a Full Complement of Records Through the Columbia Store at Portland, Me., for His Summer Home.

A letter from the Columbia Phonograph Co. store at Portland, Me., to headquarters, New York, announces the fact that Rear Admiral Peary, the famous Arctic explorer, recently purchased a Grafonola Princess and a full complement of records. The management of the Portland store attribute the sale to the power of their window display, which first attracted the Admiral's attention. Admiral Peary has expressed himself as much pleased with the machine and particularly with the new tone shutter, which is an exclusive Columbia feature. The machine was delivered to the Admiral's summer home at Eagle Island, Me.

VICTOR TRADE PUBLICITY.

Under date of May 20 the Victor Talking Machine Co., Camden, N. J., sent to their dealers a letter and the supplements containing the list of new Victor records for June. The letter in a general way takes up the manner in which the Victor Co. is handling the present season's aggressive advertising campaign and urges the dealers to join their forces and utilize the local mediums, thereby creating a demand which is only possible by co-operation.

A special hanger advertising the new Champ Clark records is a recent creation for the dealers. Champ Clark is discussing the great questions of the day by the medium of Victor records. These records should prove popular, considering the interest manifested in the present political campaign.

A company is known by the men it keeps.
The best employers were once the best employees.
Do you know how much business each clerk has done?

AN ENGINEER OF REPUTATION.

Clinton E. Woods, New Manager of the Factory of the American Graphophone Co., Enjoys a High and Recognized Position in His Chosen Field.

Clinton E. Woods, who has succeeded Horace Sheble as manager of the factory of the American Graphophone Co. at Bridgeport, Conn., has behind him a splendid record in varied lines of effort. After graduating from school in 1884 he immediately entered into electrical engineering work as a construction engineer for the Westinghouse Electric Co., and later became consulting electrician of the National Electrical Manufacturing Co., of Eau Claire, Wis., being made subsequently consulting electrician and designer for the Standard Electric Co. of Chicago. In 1895 he went into business for himself as a general mechanical and electrical engineer, making a specialty of designs for electrical machinery and motors. Naturally the question of having his designs manufactured brought Mr. Woods in close contact with manufacturing, accounting and other industrial problems, and he became so interested and met with so much success in dealing directly with the industrial problems that he adopted as his profession that of industrial engineer, which work he has been engaged in for some 12 years, during which time he has reorganized, revised and straightened out the affairs of more than 100 different factories and has written and had published some fifteen books on industrial organization, systematization and accounting, and is considered to-day to be one of the foremost authorities on such questions. His writings have been quoted very largely on both continents and in very many text books, and it has been his constant endeavor not only to do an honest work in a practical engineering field, but at the same time to pass his accomplishments along for the benefit of others.

"I have taken up the work of managing the factory of the American Graphophone Co. with an unusually keen interest," said Mr. Woods, "as perhaps nothing has appealed to me in connection with it so much as the highly specialized industry in itself, and that probably there is no industry in the country that represents an acquisition of such a variety of different experiences as are required in the conduct of this business when one considers in conjunction with the manufacturing problems the various laboratories used for the continued development of new ideas and the various talents that are required as a surrounding element to the manufacture.

"Further, I am keenly interested for the simple reason that I believe there is no limit to be put upon the magnitude that the business may ultimately develop into. In other words, it has seemed to me to be the offering of an opportunity where all the previous experiences that I have had in the industrial world could be brought into play with full force and effect.

"I think this answers, in a large measure, why I have been willing to consider the proposition for

Clinton E. Woods.

giving up my professional work and confining myself to the management of talking machine manufacturing problems."

IT IS A MUSICAL INSTRUMENT.

Momentous Question Decided by the Chairman of the Railway Commission in Canada.

A much discussed question as far as talking machine and railroad people are concerned was decided last week by D. Arce Scott, assistant chairman of the Railway Commission when he issued an order declaring that the gramophone is a musical instrument. An application on the part of the Berliner Gramophone Co. of Montreal, Ltd., brought the matter to a head and provoked the judgment which it is hoped will forever settle the question which has exercised such a disturbing influence ever since the first talking-machine gave utterance to human speech. The order says: "It is ordered that in Canadian freight classification the following articles be transferred from their present position and that they also be included in second class freighting applicable to musical instruments, namely, gramophones, graphophones, phonographs and records."

AN IMPORTANT ANNOUNCEMENT.

Under date of May 14 the Columbia Phonograph Co., General, New York, sent to the trade letters announcing the discontinuance of the sale of indestructible cylinder records. To assist their dealers in disposing of any stock they may have on hand the company has reduced the retail price to a point where dealers can offer their customers exceptional bargains in these records. The prices quoted are twenty-one cents each for the two-minute records, or five for one dollar, and twenty-

six cents each for the four-minute records, or four for one dollar. The Columbia Co. feels confident that these reductions will move the entire stock in a comparatively short time. Suitable advertising in publications best adapted will be carried out, and with the dealers' conjunction and the cut in prices a quick demand should be easily stimulated.

VICTOR RECORDS BY CHAMP CLARK.

The Democratic Candidate for the Presidency Makes Five 12-Inch Double and One 12-Inch Single Faced Records—Announcement by the Victor Co. Means a Lively Demand Will Follow.

The Victor Talking Machine Co. last week announced the issuance of five twelve-inch double-faced records and one twelve-inch single-faced record by Champ Clark, who is now conspicuously in the public eye as a candidate for the Presidency of the United States on the Democratic ticket.

Sunday recently Mr. Clark made a special trip to the Victor laboratory to make his records, and at that time reminded the manager that as the nomination campaign is now at its height, there is an immediate demand for the record in very many sections of the country, and urged upon the Victor Co. the importance of placing them on sale at the earliest possible moment—hence the special announcement.

The titles of the records made by Mr. Clark are as follows:

(1) Payne-Aldrich Bill a Humbug; (2) Clark Opposed to Automobiles at Public Expense. President Taft's Lost Opportunity.

Champ Clark at Jackson Day Banquet in Washington, January 12, 1912 (Part I.).

Champ Clark at Jackson Day Banquet in Washington, January 12, 1912 (Part II.).

Champ Clark at Jackson Day Banquet in Washington, January 12, 1912 (Part III.).

(1) Last Part of Jackson Day Banquet Speech; (2) Champ Clark on Peace.

Speaker Clark on Russia.

(1) Champ Clark on Good Roads, Rivers and Harbors; (2) Hours of Labor of Railroad Employees; (3) Contract Labor.

American Citizenship.

Speaker Champ Clark's Speech of Acceptance.

12-Inch Single-Faced—(1) All Public Plunderers Look Alike to Me; (2) Democracy, the Friend of Legitimate Industry.

It goes without saying that these records will form a very interesting feature of the dealer's trade during the next couple of months.

Volubility in salesmanship, or in an advertisement, takes up valuable time in its production and confuses the mind of the prospective customer.

Plenty of men have succeeded in business and reached the top through their ability to take advice and absorb ideas from others.

A New Schafford Product—Record Albums to Match Cabinets in Golden Oak, Mission, Mahogany, Bird's-eye Maple and Circassian Walnut.

It is now possible to sell a talking machine and a record album to match; something never before possible. Each Record Album has a gold plated ring in the back to match the metal finish of all machines.

For both sizes Victor and Columbia machines. Holds 16 Records.

In every sense an art product.

Distributors report that they are now taking the brown cloth albums out of cabinets and are substituting "the album with the wooden grain."

Do this and you'll increase your business 50%.

Write for full details, prices, etc., to

THE SCHAFFORD ALBUM CO.
26-28 Lispenard St., New York

A Better Line of Record Carrying Cases—Created by Schafford—and Possessing Quality, Durability and Artistic Beauty.

Made to match the cabinets—Bird's-eye Maple, Circassian Walnut, Mahogany, Flemish Mission and Golden Oak.

Material of "Viennese Imitation Leather" enriched by nicked hinges, joints, corners, handles and fasteners.

The cases made to hold 24 Records in 10-in x 12-in. have drop fronts with index attached, each fitted with heavy board partitions, pages 1 to 24.

The cases to hold 50 Records made in same materials and fittings. Very strong and durable.

The above is one of the greatest propositions ever offered to the trade.

Send for complete information, telling more about this fast selling specialty.

THE SCHAFFORD ALBUM CO.
26-28 Lispenard St., New York

That's a great record catalog of ours—it's a salesman: use it as a salesman. It presents just such a good list that musical people who don't yet own any talking machine at all will be made to want one for the sake of the records.

Tribune Building, New York**

VICTROLA FOR HOOSIER POET.

Purchases Instrument from Aeolian Co. in Indianapolis—Some of the Records That Are Selling Well—Wulschner-Stewart Co. Rearranging Stock—Feature Weber and Fields Records—General Items of Interest Worth Recording.

(Special to The Talking Machine World.)

Indianapolis, Ind., June 4, 1912.

The talking machine business is quietly pursuing its way in the Hoosier State these days. Every now and then one or other of the dealers makes a neat little sale and altogether the talking machine men are not in a position to grumble, considering the time of the year.

James Whitcomb Riley, the poet, is enjoying a Victrola XVI, which he bought several days ago at the talking machine department of the Aeolian Co. in North Pennsylvania street. The poet reports that he is much pleased with the instrument, and the strains of fine operas can be heard as one passes down the quiet Lockerbie street, where the poet lives.

The Aeolian Co. has experienced a phenomenal sale of the Gluck-Homer duet record "Whispering Hope." All the June records put out by the Victor company have been pleasing to the Aeolian patrons and the sale of the records has been very good.

W. S. Barringer, of the talking machine department of the Wulschner-Stewart Music Co., in

North Pennsylvania street, says the retail city business has been very satisfactory and that the entire spring and early summer business has been better than ever before. The Wulschner-Stewart Co. has been putting in a number of new record racks in its warerooms and also has relabeled the stock. The Wulschner-Stewart Co.'s talking machine stock room is perhaps as thoroughly equipped as any in this part of the Middlewest. The company boasts that it is always ready to supply any record desired by a patron. The company has had a good sale of Victor records in the last month.

The Kipp-Link Co., which handles the Edison machine, reports that business is keeping up even though the weather has become of that variety which tempts one to lie under the trees and gaze skyward.

Weber and Fields visited here on the night of June 8 and the Columbia Phonograph Co. profited much by the visit. A special display of the Weber and Fields records was made. These records have proved to be big sellers in the past few months and the coming of the great comedians in person will not tend to diminish these sales. The more the people hear of them the more they want to hear.

The Columbia Co. is profiting by the opening of the airdomes throughout Indianapolis and other cities and towns in Indiana. The managers of these show places are investing in the Twentieth Century B. C. machine, and the local company has

made a number of sales in the last few weeks. The B. C. machine is taking the place of the child singers. Opposition to the putting of children on the airdome stage became so strong that the airdome owner would rather deal with a machine than with those who are interested in the welfare of the child. And the result is that everybody is pleased.

C. P. Herdman, assistant manager of the local branch, is making a campaign among the schools and lodges of the city, urging the buying of the Columbia talking machine. The campaign thus far has resulted in a gratifying number of sales.

L. A. Moler, manager of the Columbia store at Terre Haute, spent a day at Indianapolis a few days ago. He reports conditions good in the southeast part of the State.

NEW STUNT IN VAUDEVILLE.

Henry Tyrrell, the well-known writer and critic, called Gean Smith the "Velasquez of the American Turf." He is one of the few really great animal painters of to-day. Gean Smith, who is now appearing in vaudeville, has as an assistant in his act a Columbia graphophone. The title of the act is "How Salvator Won," and Mr. Smith reproduces this picture on the stage in three minutes and a few odd seconds. He used to paint it in his home for the amusement of friends, telling the story as he painted. Now, as he paints it on the stage, a Columbia graphophone tells the story.

INCREASING INTEREST MANIFESTED IN THE VICTOR IN THE SCHOOLS.

The widespread campaign of the Victor Talking Machine Co., carried on with a view of placing talking machines in the schools of the country, is meeting with continued success as the dealers in the various sections begin to take a personal interest in the movement and those in charge of the schools are impressed with the arguments advanced by and the demonstrations given under the auspices of the educational department of the company. In Chicago, Milwaukee, Denver, Minneapolis, Los Angeles, Boston and practically all the larger cities and towns to the number of 350 have purchased large numbers of Victors for the schools. In Chicago alone 150 machines have been purchased for that purpose, in Los Angeles over 60, and so on. The excellent use to which a talking machine may be put in a school is indicated in the accompanying illustration of a group of pupils on the roof of Public School No. 59, New York, engaged in folk dances to the music of a Victor.

NEW HOUSE IN DETROIT.

Another Prominent Piano House Takes on Victor Talking Machines—The Farrand Co. Will Feature These Products in Its New Warerooms—Max Strasburg Co. Enlarging Floor Space to Meet Trade Demands—The Goldberg Phonograph Co. Is Also Expanding—The Question of Interest on Installment Sales a Live Topic—Business Conditions Discussed—Other Items of News.

(Special to The Talking Machine World.)

Detroit, Mich., June 8, 1912.

By the time this is circulating on Broadway there will be another new and first-class talking machine establishment in Detroit. The Farrand Co. will devote a large part of the first floor of its new piano house on Woodward avenue to the Victor line. It also will have a large representation in the show windows of the big institution. It will be practically the only sales business conducted on the first floor, as the piano salesrooms will be on the upper floors. E. K. Andrew, son of E. P. Andrew, will have charge of the records. The business will be conducted on a large scale. Everything in the American catalog will be carried in stock, as will also a complete line of Victors and Victrolas of all prices.

The Max Strasburg Co. finally put through the deal which will double its floor space, but cannot get possession before the latter part of the summer. It is likely that the opening of the new store will be made an anniversary celebration. The first year of the company's existence will be marked up September 1. It will be just about that time that the new store will be ready to receive customers. "When we started in here nine months ago," said Mr. Strasburg, "we thought the space we had would do us for a number of years; in fact, we made our lease for ten years. But in less than four months we found need for larger quarters. If it keeps on this way even our doubled capacity will not be sufficient for next winter's trade." Extensive alterations and improvements will be made in the added store before the Strasburg Co. takes possession.

The activities of the talking machine trade here are reflected in enlargements and improvements in another big retail house, the Goldberg Phonograph Co., whose phenomenal rise from a single display machine to one of the largest talking machine retail houses in the city was related in The World last month. When the alterations are completed the Goldberg store will be almost as large as the Columbia jobbing and retail branch, and will be similarly laid out, with a large parlor at the entrance, in which the best machines will be displayed and demonstrated and a number of smaller demonstrating rooms at the rear, with the offices opposite them.

S. E. Lind, assistant manager of the Columbia branch, whose dozen or more years in the business have taught him just what is needed, planned the architectural features for Mr. Goldberg. He says that the store will be the prettiest in the city, which is "going some," for all downtown talking machine stores in Detroit are swell affairs.

Mr. Lind is still acting manager of the Columbia branch, Manager K. M. Johns not having finished his tour of outside duty for the company. He is at the Chicago headquarters this month. A couple of weeks ago he came to Detroit to have an operation for tonsillitis performed, but left again as soon as he recovered.

The Columbia business throughout Michigan has been stimulated by the introduction of a number of new finishes. Formerly all Columbias were in mahogany, which was good, but not furnishing that variety which is said to be the spice of life. The golden oak, fumed oak and walnut are making quite a hit.

Mr. Lind was just completing a rather good sale when the typewriter jammer called. On the floor was a "B. T." machine of the old hand organ architecture, listed at \$200, and which had been in stock six years, mainly because it was kept as a display piece when it was a leader of style and later as a first-class demonstrator, for it was a swell machine in quality. Mr. Lind disposed of it

for full price, nearly all spot cash. This latter feature is in itself unusual, for almost all machines, no matter what the price, are sold on time, without interest.

That is something that the Detroit men will try to have altered at the coming convention of talking machine jobbers at Atlantic City. It takes an enormous amount of capital to carry contracts under the present ironclad one-price system, and the retailers have to stand practically all of it, for the manufacturers get their money thirty days from date of shipment. If the dealers were permitted to charge interest on contracts they would not lose money on their investment, and many more cash sales would result. As it is there is every incentive to induce a customer to purchase on time. He has the use of the machine and of the money for nothing. Detroit dealers favor a change permitting them to charge ten per cent. additional for machines sold on time. It would not make much actual difference in the prices of the machines, a \$200 one selling for \$220, and a \$100 one for \$110, and so on, but it would be enough to induce the buyers to write their checks for the full amount.

Some of the large houses here sell several thousand dollars worth of machines in a week, and at the end of a few months such a business amounts to a very large investment.

"I am heartily and aggressively in favor of such a change," said Max Strasburg. "It would be a big benefit to the trade as a whole. Dealers would have a great deal more cash to do business with, therefore they would have resources to buy more machines and to sell more machines. The talking machine manufacturers would benefit in this way and the dealers in their increased profits."

Harry Rupp, manager of the talking machine department of Grinnell Bros., talked in the same vein.

The annual summer lull in the business is noticeable, but not markedly so. In all of the houses the business for May was less than for April, but from two to three times as large as that for May of last year, showing the actual growth to be phenomenal. Grinnell Bros. report that all but two or three of their twenty-five branch stores up State are making lots of money in the phonograph end of the business. Over in Canada also the Grinnell stores are waking up the natives. Of course, Grinnells cannot ship across the river into a foreign land, but they are doing much through Canadian houses.

Business in records and sundries continues unabated. People who have talking machines make as much or more use of them in the summer as they do in the winter, and then, hereabouts at least, the demand for both machines and records for use on boats of all sizes is a large factor. The high-priced machines are still in greatest demand.

TO ORGANIZE IN CANADA.

Distributors and Dealers in Victor Talking Machines to Gather in Toronto on June 19 for Purpose of Forming Association.

(Special to The Talking Machine World.)

Toronto, Ont., June 10, 1912.

Plans are now under way for the formation of a permanent organization of the Victor talking machine distributors and dealers throughout the Dominion, along the line of similar associations of talking machine jobbers and dealers in the United States. The first meeting of the talking machine men, at which it is hoped the organization will be perfected, it is scheduled to be held in this city on June 19 and the prospects are that the attendance will be large and consists of men of many provinces, owing to the number of subjects of importance to the trade, to be discussed and the interesting papers on live subjects to be read. The meetings, which will occupy two days, will be held in the premises of His Master's Voice Gramophone Co., 208 Adelaide street, West.

The esthetic nerve is in the breeches pocket. Your customer will take in the good points of the line, once he is made to realize that it means profit for his pocket.

When it comes to speedy delivery

we are right there with the goods.

Every order shipped the same day it is received.

Great team work! The kind of team work that every wideawake dealer will applaud; that always gives you what you want when you want it.

Everything in Victors, Victor-Victrolas, Victor Records, record cabinets, horns, needles, fiber cases, repair parts, and accessories, is under our roof ready for you to draw upon. It's just like going into your own storeroom and bringing the goods into your store.

Try us out on your next order and let us show you what we can do in actual practice.

At any rate write today for our latest catalog and our booklet "The Cabinet That Matches."

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., June 7, 1912.

AUTOMOBILE HORN. Charles Raymond Heilmann, Reading, Pa. Patent No. 1,023,016.

The object of this invention is to provide means for producing certain given sounds through a horn.

The invention is particularly adapted for use on automobiles or other vehicles in sounding an alarm.

In the accompanying drawings Fig. 1 is a side view of the improved device illustrated in connection with an automobile horn; Fig. 2 is a plan view; Fig. 3 is a sectional view on the line 3-3, Fig. 2, and Fig. 4 is a perspective view of a portion of the device.

The invention can be used in connection with any sound reproducing mechanism, and in the drawings is illustrated a graphophone construction using a cylinder upon which are the indentations for producing given sounds. This device is preferably placed in close proximity to the seat of the automobile driver, so that he can operate the lever in place of the air bulb, although the device can be placed at any point and the lever actuated through operating mechanism without departing from the essential features of the invention. The horn can be placed at any convenient point and connected with the instrument by any flexible tubing.

A is the base upon which the graphophone is mounted. B is the base plate of the graphophone and B¹-B² are the vertical supports for the mechanism. C is the drum on which the tubular record c is mounted. D is the feed screw for traversing the carrier E. ATTACHMENT FOR PHONOGRAPHIC AND LIKE MACHINES. John D. Barter, New York, assignor of one-half to Mary Barter, same place. Patent No. 1,023,544.

This invention relates to an attachment adapted to be used in connection with a phonograph or other similar sound reproducing machine, and has for its object to produce an instrument that will amplify the sounds reproduced from the record and which shall accomplish this without impairing the timbre and tone qualities of the record being translated, a defect that is common to amplifying horns such as are usually employed in connection with sound reproducing machines; and which often renders their use, especially in parlors and small apartments, objectionable.

Fig. 1 is a side view of an instrument embodying the invention applied to a sound reproducing or talking machine of a well-known type. Fig. 2 is a rear elevation of the attachment; Fig. 3 is a front elevation of the same, the front wall of the casing being removed; Fig. 4 is a similar view to Fig. 3, with the sounding board removed and parts being in section; Fig. 5 is a longitudinal sectional view through the complete attachment; Fig. 6 is an elevation of the sounding board detached; Fig. 7 is an edge view of the sounding board drawn to a larger scale; Figs. 8 and 9 are detached views of the support for the attachment.

In the accompanying drawings A designates the casing of a talking machine, provided with mechanism for supporting and revolving a record B, with which engages the stylus C, connected with the sound box D. These parts may be of any usual or approved construction, as they form no part of my invention, which is adapted to be used in connection with talking machines of a wide variety of styles.

PHONOGRAPH. Cyrus C. Shigley, Grand Rapids, Mich., assignor of one-half to Patrick McLaughlin, same place. Patent No. 1,024,034.

The main objects of this invention are: First, to provide in a phonograph an improved control mechanism for the various coating parts. Second, to provide in a phonograph an improved carriage control. Third, to provide in a phonograph an improved record driving mechanism. Fourth, to provide in a phonograph an improved record magazine. Fifth, to provide in a phonograph an improved magazine lock and adjusting mechanism therefor. Sixth, to provide an improved magazine phonograph, which is simple and compact in structure and easily operated, and, further, one which is not likely to be broken by an unskilled operator or to get out of repair in use.

The structure described constitutes one effective embodiment of the invention. Other embodiments would be readily devised by those skilled in the art.

A structure constituting an effective and preferred embodiment of the features of this invention is clearly illustrated in the accompanying drawing, forming a part of this specification, in which:

Fig. 1 is a detail front elevation of a structure embodying the features of the invention, the operating parts on the outside of the casing only being shown; Fig. II is a rear elevation of the maga-

zine and operating mechanism of the improved phonograph; Fig. III is a horizontal section, taken on a line corresponding to line 3-3 of Fig. II, the control lever being omitted; Fig. IV is a detail

vertical section, taken on a line corresponding to line 4-4 of Fig. III, showing details of the sound-box carriage; Fig. V is a detail vertical section, taken on a line corresponding to line 5-5 of Fig. III; Fig. VI is a detail vertical section, taken on a line corresponding to line 6-6 of Fig. V, showing details of the control mechanism; Fig. VII is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

HORN FOR TALKING MACHINES. Thomas H. Towell, Cleveland, O., assignor to the U-S Phonograph Co., same place. Patent No. 1,024,108.

The present invention relating, as indicated, to horns for talking machines, has as its object the

provision of a horn suitable for use on such machines whether of the disc or cylinder type, and one that will be readily adjustable to the various requirements encountered in operating either such type of machine.

In said annexed drawings Fig. 1 is a side elevation of one typical form of cylinder talking machine, with a horn shown in connection therewith embodying the present improvements; Fig. 2 is a side elevation similar to that of Fig. 1, but showing the horn as applied to a talking machine of the disc type; Fig. 3 is a horizontal sectional detail of such horn; Fig. 4 is a vertical section of a de-

tail vertical section, taken on a line corresponding to line 4-4 of Fig. III, showing details of the sound-box carriage; Fig. V is a detail vertical section, taken on a line corresponding to line 5-5 of Fig. III; Fig. VI is a detail vertical section, taken on a line corresponding to line 6-6 of Fig. V, showing details of the control mechanism; Fig. VII is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

Fig. 1 is a side elevation of one typical form of cylinder talking machine, with a horn shown in connection therewith embodying the present improvements; Fig. 2 is a side elevation similar to that of Fig. 1, but showing the horn as applied to a talking machine of the disc type; Fig. 3 is a horizontal sectional detail of such horn; Fig. 4 is a vertical section of a de-

tail vertical section, taken on a line corresponding to line 4-4 of Fig. III, showing details of the sound-box carriage; Fig. V is a detail vertical section, taken on a line corresponding to line 5-5 of Fig. III; Fig. VI is a detail vertical section, taken on a line corresponding to line 6-6 of Fig. V, showing details of the control mechanism; Fig. VII is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

Fig. 2 is a side elevation similar to that of Fig. 1, but showing the horn as applied to a talking machine of the disc type; Fig. 3 is a horizontal sectional detail of such horn; Fig. 4 is a vertical section of a de-

tail vertical section, taken on a line corresponding to line 4-4 of Fig. III, showing details of the sound-box carriage; Fig. V is a detail vertical section, taken on a line corresponding to line 5-5 of Fig. III; Fig. VI is a detail vertical section, taken on a line corresponding to line 6-6 of Fig. V, showing details of the control mechanism; Fig. VII is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

zine and operating mechanism of the improved phonograph; Fig. III is a horizontal section, taken on a line corresponding to line 3-3 of Fig. II, the control lever being omitted; Fig. IV is a detail

vertical section, taken on a line corresponding to line 4-4 of Fig. III, showing details of the sound-box carriage; Fig. V is a detail vertical section, taken on a line corresponding to line 5-5 of Fig. III; Fig. VI is a detail vertical section, taken on a line corresponding to line 6-6 of Fig. V, showing details of the control mechanism; Fig. VII is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

tail vertical section, taken on a line corresponding to line 4-4 of Fig. III, showing details of the sound-box carriage; Fig. V is a detail vertical section, taken on a line corresponding to line 5-5 of Fig. III; Fig. VI is a detail vertical section, taken on a line corresponding to line 6-6 of Fig. V, showing details of the control mechanism; Fig. VII is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

Fig. 5 is a detail vertical section, taken on a line corresponding to line 5-5 of Fig. III; Fig. VI is a detail vertical section, taken on a line corresponding to line 6-6 of Fig. V, showing details of the control mechanism; Fig. VII is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

Fig. 6 is a detail vertical section, taken on a line corresponding to line 6-6 of Fig. V, showing details of the control mechanism; Fig. VII is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

Fig. 7 is a detail section, taken on a line corresponding to line 7-7 of Fig. VI; Fig. VIII is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

Fig. 8 is a detail view partially in section, showing structural details of the carriage 6; Fig. IX is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

Fig. 9 is an enlarged detail section, taken on a line corresponding to line 9-9 of Fig. I, showing details of the index.

tail of the jointed elbow connecting the tone arm with the amplifier proper; Fig. 5 is similarly a vertical section of the forward end of said tone arm, the pitch of the coiled interlocking strip composing such tone arm being exaggerated in order to render the construction of the latter clear, and Figs. 6 and 7 show the adaptation of the horn to two types of cabinets.

APPARATUS FOR MAKING DUPLICATE PHONOGRAPH RECORDS. Jonas W. Aylesworth, East Orange, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,027,793.

This invention relates to improved apparatus for making duplicate phonograph records, and the object is to provide apparatus for the purpose by which duplicate phonograph records may be produced at low cost, of superior quality, and where-by the percentage of imperfect records or "discards" obtained in actual manufacture will be very largely reduced.

In the present development of the phonographic art, it is possible to make matrices or molds which for all practical purposes are mathematically exact negative copies of the original master records, and several processes have been suggested and commercially used for obtaining duplicates from these matrices or molds. In a practical duplicating process, it is important that the temperatures used should not be too high, since the material from which the records are made contains considerable quantities of free stearic acid, which in the presence of a high temperature attacks and roughens the surface of the mold, even when the latter is protected by a non-oxidizing film of gold or nickel. These molds are very expensive and the slightest roughening is manifested in the reproduction from a record obtained from the same. Hence, it is important that the temperature should be kept in the neighborhood of the melting point of the material, or at best, only a few degrees above the same, in order that the life of the molds may be prolonged as much as possible. In working with the material at relatively low temperatures another difficulty is encountered, namely, the formation of air and gas bubbles, which appear on the surface of the record. These bubbles are sometimes caused by the trapping of air in the mold, even when great care is taken to avoid the difficulty, and some are caused by the decomposition of the material, in its original manufacture, or when scrap material is remelted. The low temperature at which the material is worked makes it more or less viscid, and hence the bubbles do not have the opportunity of freely escaping, but move sluggishly through the mass.

By the present invention the inventor is enabled to produce duplicate records in a highly efficient and economical manner, the material being maintained in a molten state at not necessarily less than a few degrees above the melting point, so as to prevent it from attacking and corroding the mold, while at the same time, the operation is such that air and gas bubbles are effectively prevented from appearing on the record surface. To this end the invention consists in the provision of apparatus for making duplicate records by centrifugal force, the mold being rotated at a sufficiently high speed and the molten material being introduced therein, so as to be forced outwardly and distributed evenly around the entire bore of the mold, the mold being heated to about the temperature of the molten material, so that when the molten material is introduced therein, it will not chill on the mold, but will retain its fluid state, thereby permitting its complete and uniform distribution to be effected and allowing all bubbles to be displaced and forced into or through the body of material. This forcing of the bubbles inwardly away from the surface of the record can be effected rapidly and perfectly, since the tendency of the material to displace the bubbles, (provided the speed of rotation is high enough) may be made very much more decided than if the bubbles are allowed merely to float to the surface as at the present time. Consequently, by using centrifugal force, bubbles may be effectively forced back from the record surface even when such bubbles are so minute that their tendency to rise to the surface of the material is not sufficient to overcome the natural viscosity of the

material. Yet, these very minute bubbles which are due to decomposition within the material are prominent enough to seriously affect the character of the reproduction. Having introduced the molten material in the rapidly turning mold, so as to uniformly distribute the material over the bore of the mold, it is of course important that the mold should continue to rotate until the material becomes hard enough to retain its shape, but obviously the speed of rotation can be gradually reduced as the material becomes gradually hardened.

It will of course be understood, that the general principles of the invention can be carried out in many different ways, and in many different forms of apparatus. Preferably, however, the apparatus is one in which a practically continuous process can be carried on, a succession of molds being at

all times undergoing treatment, so that when, for example, the step of introducing the molten material into one of the molds, is being carried out, the record will be practically finished in a previously introduced mold in which the several operations have been performed.

In the accompanying drawings, forming part of this specification, is illustrated a convenient appa-

ratus for the purpose, said apparatus being simple in construction and capable of effective operation by comparatively unskilled labor.

In these drawings Figure 1 is a side elevation, partly in section, Fig. 2 a cross sectional view on the line 2-2 of Fig. 1, Fig. 3 a similar view on the line 3-3 of Fig. 1, Fig. 4 a horizontal sectional view on the line 4-4 of Fig. 1, Fig. 5 a longitudinal sectional view of the mold showing the end plates in position, and Fig. 6 an end view of the same illustrating the removable end plate.

PHONOGRAPH RECORD MOLD. Albert F. Wurth, Orange, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,027,788.

This invention relates to phonograph record molds or matrices of tubular form, and has for its object the provision of a removable end piece therefor, improved locking means being provided for preventing the removal of said end piece, said means being capable of being readily unlocked whenever it is desired to remove the end piece from the mold.

Figure 1 is an end view of a tubular mold having an end piece constructed in accordance with the invention and locked thereto; Fig. 2 is a similar view showing the manner in which the end piece is unlocked from the mold; Fig. 3 is a section on line 3-3 of Fig. 2, and Fig. 4 is a detail view showing the key or instrument for unlocking the end piece and the ball which forms a part of the lock.

TALKING MACHINE. Hans Mikorey, Berlin, Germany, assignor to Lettrophones, Ltd., London, Eng. Patent No. 1,027,350.

This invention relates to talking machines and more especially to a guide for the sound-box holders thereof.

The machine is adapted for use as a recorder as well as a reproducer. The guide can be fitted to any machine as well as to apparatus especially constructed.

The novel features of the machine according to this invention consist broadly in the employment of a guide-bridge spanning the record tablet and capable of being thrown back about an axis parallel with its length, while it can also be lifted bodily together with a diaphragm-holder, a direct driving mechanism and a screw gear for traversing the diaphragm-holder for which it acts as a guide in its movement over the record; and in a construction and arrangement of the parts such that when the bridge is lifted the traversing gear is immediately disengaged from the driving motor, while conversely the bridge when lowered at any position of the traversing gear as promptly puts the latter into operation again by clutching with the said driving motor without the need of careful centering. It is preferred in such a mechanism that the bridge should have the diaphragm-traversing-guide in one half, and the screw or other traversing gear in the other half with a dividing box, wherein a direct gear drive, screw, or the like is contained. In addition to the two movements

which may be given to the bridge, the diaphragm-holder may itself be swung back about a pivot formed by one of the guide-bars of the bridge, and when so moved, takes the traversing nut out of engagement with the traversing screw.

A further feature is a device on the guide by means of which the sound-box is lifted from the record disc when the spindle is made to run idly.

Figure 1 is a plan showing only the bridge and its pertinent gear and omitting the base table and record tablet

of the machine; Fig. 2 is a side elevation with parts of the machine broken away; Fig. 3 is an end view of Fig. 2 showing one mode of mounting the bridge; Fig. 4 illustrates a somewhat different construction, and particularly an alternative mode of mounting the bridge; Fig. 4a shows a plan of Fig. 4; Figs. 5, 6 and 7 are detail views relating to the device of Fig. 4, and Fig. 8 is a perspective view of a detail usable on either form of machine as illustrated.

PHONOGRAPHIC RECORDING-STYLUS.

Thos. A. Edison, Llewellyn Park, Orange, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,024,839.

This invention relates to an improved phono-

(Continued on page 60.)

graphic recording stylus, and the object is to provide a device for the purpose in which a very perfect curved cutting edge can be formed of very small diameter.

At the present time the available path on the blank for the accommodation of the record is one one-hundredth of an inch (.01"), since this is the standard pitch originally proposed by me and now adopted universally by talking machine manufacturers. The recorders at present used present a substantially circular cutting edge the diameter of which is about four one-hundredths of an inch (.04"). It is proposed to make phonograph records with a pitch of two hundred threads per inch, the advantages of which are explained in an application for letters-patent filed on even date herewith.

In order to form a record in a path one-half as wide as that now presented, and of the same depth as that now formed, the recording stylus should not, as might be supposed, be one-half the diameter, but it is necessary that it should be substantially one-fourth the diameter of that now employed, namely, about one one-hundredth of an inch. Even in the manufacture of a recording stylus four one-hundredths of an inch in diameter the operation is a difficult one, requiring labor of the highest skill, machines of great delicacy of adjustment and construction, and most of the operations have to be performed under the microscope. Yet with these precautions there is very considerable loss by breakage, since the material used, sapphire, although extremely hard, is very brittle and of little bodily strength, so that it chips and cracks readily. To attempt to form a recording stylus only one one-hundredth of an inch in diameter of this material by present processes and machines, and of the present type or form, might be possible as a mechanical phenomenon, but is not believed it can ever be done in a commercially practical way. The inventor has sought to modify the shape of the recording stylus whereby it may be readily made with a cutting edge of smaller diameter and at the same time its shape will be such that the production of sharp angles is avoided, and sufficient material always presented to reduce cracking or chipping to a minimum.

This improved recording stylus comprises a shank on the end of which is formed a circular or parti-circular head somewhat like the head of a pin, whose periphery presents in cross section the proper curve for the cutting edge, and the head is cut away or notched to result in the production of a cutting edge somewhat similar to that employed on an enormously larger scale in a shape tool. The stylus is obtained is mounted in a suitable socket so that the cutting edge will be properly presented to the blank, and is carried by or affixed to the diaphragm in any suitable way.

a perspective view of the improved stylus enlarged to one-fourth the scale of Fig. 1; Fig. 3, a front view of the same on the same scale as Fig. 2, and showing the stylus engaging a blank; Fig. 4, an end view of the stylus on a smaller scale, showing the same mounted on a diaphragm; Fig. 5, a front view of the same, and Fig. 6 a plan view of the same.

PHONOGRAPH REPRODUCER. Alexander N. Pierman, Newark, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,024,697.

This invention relates to phonograph reproducers of the pneumatic type, or, generally speaking, of the type in which undulations corresponding to sound waves are impressed upon a current of any

suitable moving fluid by the operation of a suitable valve through which the fluid is allowed or caused to pass, the valve being operated in accordance with the sound waves as by connection with a reproducing stylus tracking a record groove. There is filed in the United States Patent Office an application Serial No. 493,281 on May 1, 1909, in which is disclosed and claimed broadly a phonograph reproducer of this general type in which the valve or vibratory member or members were of minimum mass, whereby defects due to inertia and momentum of parts are largely avoided. In the application referred to, thin, reed-like members are interposed in the path of the moving fluid current and are vibrated in accordance with sound vibrations to be reproduced to set up corresponding undulations in the moving fluid current passing through the sound box. Specifically, in the application referred to a port plate is provided having one or more slit-like ports therein upon which are seated the thin, reed-like members which are placed under tension and secured rigidly to the port plate at both ends. These members are joined together and flexed by connection with the stylus to vary the extent of opening of the ports to a greater or less extent.

Figure 1 is a side elevation, partly in section, of a sound reproducer embodying the invention. Fig. 2 is a plan view of the port plate with the valve members secured thereto. Fig. 3 is an enlarged cross section on line 3-3 of Fig. 1.

SOUND REPRODUCER. Alexander N. Pierman, Newark, N. J., assignor by mesne assignments, to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,024,696.

This invention relates to phonograph reproducers of the pneumatic type, or, generally speaking, of the type in which undulations corresponding to sound waves are impressed upon a current of any suitable moving fluid by the operation of a suitable valve through which the fluid is allowed or caused to pass, the valve being operated in accordance with the sound-waves as by connection with a reproducing stylus tracking a record groove.

The improvements covered by the present application reside chiefly in the construction of the valve through which the air or other moving fluid is caused to pass in setting up the undulations corresponding to the sound-waves.

The chief object of this invention is the production of a sound reproducer having a vibratory member which serves to set up vibrations corresponding to sound waves in the well known manner when the device is operated under atmospheric pressure, that is to say, when a moving fluid is not progressed therethrough, the vibratory member or diaphragm being so formed as to act as a valve under abnormal or forced fluid pressure, that is to say, when a current of air or other fluid passes through the reproducer, the valve, which is then formed by the vibratory member, serving to set up undulations in the current of fluid passing therethrough in accordance with the sound-waves to be reproduced.

Other objects of the invention include the production of a diaphragm so formed as to be capable of vibration in accordance with sound vibrations under atmospheric pressure and capable of opening more or less in accordance with sound vibrations to form a port for the passage of fluid therethrough under forced fluid pressure, and the construction and combinations of parts suitable for the production of the objects above enumerated.

Figure 1 is a side elevation, partly in section, of a sound reproducer embodying a form of the in-

vention; Fig. 2 is a bottom plan view of the diaphragm or vibratory member employed in the same; Fig. 3 is a side elevation, partly in section,

of a reproducer embodying a second form of this device, Fig. 4 representing a top plan view of the vibratory member employed in the same; and Figs. 5 and 6 represent respectively a side elevation, partly in section, of a reproducer embodying a third form of this device, and a bottom plan view of the vibratory member employed in the same.

SUPPORT AND SOUND-DUCT FOR SOUND-BOXES. Thomas H. MacDonald, Bridgeport, Conn., assignor to American Graphophone Co., same place. Patent No. 1,024,640.

This invention relates to talking machines, particularly the so-called tone arm for use with graphophones or other talking machines, and is especially adapted for use with the so-called Grafonola or graphophone enclosed within a cabinet which conceals its horn, though of course it can be used with other types.

Figure 1 is a side view, partly in vertical section, of a tone-arm embodying this invention and applied to a Grafonola; Fig. 2 is a top view of the same, partly in horizontal section; and Fig. 3 is a transverse section, viewed from the right, through lines 3-3 of Fig. 1.

VALUE OF DETERMINATION.

The Only Quality That Will Down the Obstacles to a Successful Business Career.

Determination has quite as much as means or opportunity to do with giving one success. If a man is determined to do, he will be likely to do whether things favor or oppose him. If a man makes up his mind that, as things are, he cannot do what he ought to do, or would like to do, he will not be likely to accomplish anything, however circumstances combine to help him. "Only Omnipotence can hinder a determined man," and Omnipotence will not oppose a determined man who is set in the right direction. It is not the opportunity that a man has, or the tools that are available to him, but it is the determination with which he pushes on against unfavorable circumstances, and with which he uses such tools as are available, that settles the question of how much he amounts to and what he accomplishes in life.—The Caxton.

FIGHTING THE OLDFIELD BILL.

The Correspondence of J. C. Roush, Secretary of the National Association of Talking Machine Jobbers, with Senator Smoot on the Price Maintenance Question.

The National Association of Talking Machine Jobbers has been very active, through Secretary J. C. Roush, in opposing the Oldfield bill, which proposes a change in the patent law bearing upon price maintenance. In response to a letter of protest sent to Senator Reed Smoot, Mr. Roush received the following letter, under date of May 15:

"Dear Sir—I desire to acknowledge the receipt of your letter of May 6, 1912, urging me to oppose any change in the present patent laws that may affect price maintenance, and calling my attention to the millions of capital invested in the talking machine business, and stating that any change in the patent laws that would prevent the manufacturer of a patented article from prescribing the retail price of his patented goods would be a serious blow to all dealers in your line of business. While I was chairman of the Committee on Patents of the Senate this question was considered, and at that time I was opposed to the measure. Unless there are some good reasons given why a change should be made, I would still be inclined to my former view. I shall give this matter my most careful attention.

"Yours very truly,

"REED SMOOT."

On May 25 Secretary J. C. Roush again wrote Senator Smoot as follows:

"Dear Sir—I thank you very much for your courteous and interesting letter of May 15 in reply to mine of the 6th, and while I have no doubt that you have been flooded with many letters on this subject, I feel that in fairness to the interests I represent, as secretary of the National Association of Talking Machine Jobbers, I should again write you on this subject.

"Without going into the technical end of the discussion, or without using many of the now hackneyed arguments as to the extensive real rights of the owners of patents, there are a few points that I will merely touch upon.

"It may be that our patent laws require some modification, but it is my firm conviction that there is no real hardship worked upon the public itself by leaving with the patentees the right to distribute their merchandise and their products as they may see fit.

"If a man does not wish to eat the patented breakfast foods, he certainly can revert to the old-fashioned oatmeal mush, which is probably the best and most wholesome of them all; if he does not wish to drink or pay the price of the various patented medicines, in all probability it may be for his good if he is thereby forced to revert to goose grease, quinine and calomel.

"It would seem to me that between getting few, if any patents at all, in consequence of removing the emoluments which flow to the patentees, or being in receipt of an abundance of valuable patents in consequence of the monopoly which follows their possession, the latter condition is by far the more desirable, especially when the situation, in the great majority of cases, is made a perfectly

agreeable and comfortable one to the purchasing public by the reasonable prices fixed by patent owners, and this has no doubt been suggested by thousands of letters which have flowed into the Congress of the United States opposing any unreasonable or damaging alteration of our patent law.

"Patented articles, which are manufactured in quantities in an economical manner, and distributed most largely by an economical distribution, are not those which the public are complaining regarding the prices of (and their common sense would make them do so if that same common sense did not tell them that they were reasonably priced), but rather the necessities of life, food products—hay, corn, heat and all those articles not protected by a patent law, but rather assisted in the economic production of by protective and economically operated patented machinery.

"I hope that the President's suggestion for the appointment of a commission to study and suggest modification, if necessary, of our patent laws will meet with your endorsement.

"Again thanking you for your kind consideration, I beg to remain,

"Yours most respectfully,

"J. C. ROUSH, Secretary."

DRAWING POWER OF A SMILE

Often as Important in Building Up Trade as Quality of Goods and Prices—Smiling Is Contagious.

A successful merchant in speaking of the many characteristics that help men along the road to success spoke emphatically of the drawing power of the smile:

"A customer frequently does not stop to think why he prefers to patronize one store rather than another, but if you analyze the reason you will often find that, other things being equal, it is a friendly smile that attracts him, and makes him feel at home in your place. A wholesome smile breeds confidence, makes a man feel that you are his friend and that you will receive fair treatment at his hands.

"How much easier it is to transact business with a man when you have greeted him with a pleasant smile! Like pouring the proverbial oil on the troubled waters, it immediately eliminates friction. A smile requires so little effort and the results are so far-reaching it is surprising that it is not more assiduously cultivated.

"You may not always feel like extending this pleasant welcome, but when you realize how handsomely it pays—and how inexpensive it is—it will gradually become easier for you to overcome your personal feelings. The peculiar part about it is that it reacts beneficially on yourself, often dissolving the frown which you have allowed to possess you.

"Smiling is contagious, and if you cultivate the habit of smiling, those about you will presently assume this attitude."

The man who coincides with the judgment of every acquaintance is a mere mirror, simply reflecting the characteristics of others, lacking in strength—a human chameleon, changing his colors as he changes his surroundings.

Victor-Victrola

Salesrooms of the Talking Machine Co., Philadelphia

The one musical instrument that dominates the entire musical world today is the Victor-Victrola.

Its bigness as a commercial success and its artistic triumph stand as testimony to what supreme merit can accomplish in even a few years.

The success of the Victor-Victrola has been so far-reaching that it has brought about a wonderful uplift in the entire music trade, and has transformed what were once perhaps small and unattractive stores into modern and luxurious salesrooms; many handling the Victor line exclusively, and in some instances paying rentals of from twenty thousand to thirty thousand dollars a year.

And while Victor dealers are enjoying this era of prosperity, the introduction of the modestly priced Victor-Victrolas at \$15, \$25, and \$40 with their wider appeal to the people, gives added impetus and insures continued prosperity that will mount even higher in years to come.

SECURING SUMMER BUSINESS.

B. P. Woodward, Manager of Talking Machine Department of Emahizer-Spielman Co., Topeka, Kans., Discusses Development of Business During Summer Months—A Great Believer of Going After People Instead of Waiting for Them to Come to Him.

(Special to The Talking Machine World.)

Topeka, Kan., July 6, 1912.

B. P. Woodward, manager of the talking machine department of the Emahizer-Spielman Furniture Co., who handle Victor and Edison talking machines in addition to a large line of pianos, headed by the Chickering, is quite an originator and developer of ideas, as applied to the expansion of business. In a talk with The World he said:

"I have recently decided upon a new plan for getting summer business for the Victor. In a radius of about one hundred miles north and west of our city is a very rich farming country—and I hold that no one needs a Victor more than a farmer. To reach these prospects I take either a wagon and load it up with Victrolas and drive from one ranch to the other, or ship the Victrolas to the nearest town and have them handled from that point. In these small towns will be found a great number of retired ranchmen who own large tracts of land and have moved to town for a little enjoyment. These are the kind of people who will buy Victrolas.

"The talking machine business, as I find it, always makes money nine months in the year, with a falling off or loss for the remaining three months. Something that will stimulate business for these three months is what we need, and as the farmer never takes a vacation he will buy a Victrola just as readily in the summer as the city people will in the winter, and more so, because he never has an opportunity to go to shows, nor is it possible for him to hear the great artists of the world in any other way than through the talking machine.

"I recently had a very odd experience with record No. 88108, Nevin's 'Rosary,' sung by Mme. Schumann-Heink. One night a man and his wife came in to look at a Victrola, or rather, I should say, it was the wife, for the man seemed to be very antagonistic in regard to talking machines. While I was playing the various records that the lady called for, he absolutely would not listen to them and tried to keep her from doing so—in fact, he was constantly desirous of leaving. After I became provoked and had given up the prospects of a sale, I asked the lady to hear a record of 'The Rosary,' and for the first time her husband seemed to display attention. When the record was finished he asked for another record sung by Schumann-Heink, and the result in short was that I sold them a Victrola XVI and \$50 worth of records. So you see it pays to be patient. Moreover it demonstrates that the tastes of people differ. It was clear that the wife wanted popular music while the husband preferred something classical, at least high-class musical numbers. It also points out that it is well not to leave all the requests for records in the hands of the visitors, but to ask their indulgence to listen to such numbers as the salesman may consider would appeal to his callers.

"In our business, which covers so many interests besides talking machines, we have about six thousand accounts on our books, of which about eight hundred are paid up piano accounts. I have found it most profitable to take these names and send them circulars, or call upon them in person and interest them in the Victrola, to the end that they may give it a trial in their homes, just to prove its merits in the parlor. This I have found most profitable, because once a Victrola goes into the home it stays there.

No placard is needed on the Washington Monument to call attention to the fact that it's tall. Waste no time on the obvious.

BECKER WITH ESPENHAIN CO.

The Talking Machine Co. Retires from the Milwaukee Field and Mr. Becker Becomes Manager of New Talking Machine Department Opened by Espenhain Dry Goods Co.

(Special to The Talking Machine World.)

Milwaukee, Wis., July 8, 1912.

The Talking Machine Co., the retail exclusive Victor store opened at 1120 Walnut street some months ago with J. H. Becker, Jr., in charge, has been closed and Mr. Becker has accepted the management of the new Victor department opened by the Espenhain Dry Goods Co., one of the large Milwaukee department stores. Quarters have been opened on the second floor of the Espenhain store and several soundproof demonstration parlors have been installed. Mr. Becker's former patrons are his customers at the new department.

One of the features of the annual picnic of the Espenhain Dry Goods Co., held recently, was the

Espenhain Co.'s "Talker" Staff.

entertainment furnished by Mr. Becker and the employees of his new talking machine department. Believing that the employees of the store should become acquainted with the new talking machine department, Mr. Becker took along a Victor V and nearly 100 records to furnish entertainment and incidentally to advertise his department. The venture was a success from both standpoints and the 800 or more employees present at the outing went home well pleased with the Victor line and its manager at the store. The picture shows Mr. Becker reclining in front of the Victor sign, surrounded by the employees of his new department. The lady standing at the left of the Victor is Mrs. Becker, a capable talking machine saleslady.

TALKING MACHINE MEN IN COLLISION.

Not content with the excitement caused by the introduction of the new Edison line of disc phonographs and records, spending two days hearing and seeing them at the Edison building, New York, some of the Boston talking machine fraternity had to add to it by returning home on the Ss. Bunker Hill, one of the boats plying between Boston and New York on what is known as "the outside line." The Ss. Bunker Hill had about fifty feet torn away from her side by a collision with the U. S. S. Massachusetts, and no one was injured, which was a remarkable thing about the incident.

The talking machine men "participating in the event" were F. H. Silliman, manager of the Pardee-Ellenberger Co., Inc.; E. F. Taft, general manager of the Eastern Talking Machine Co.; Mr. Carpel, of the Herzog Art Furniture Co.; Mr. Francis, of the Iver Johnson Co., and J. G. Widener, of the F. C. Henderson Co.

Poverty is uncomfortable, as I can testify; but nine times out of ten the best thing that can happen to a young man is to be tossed overboard and compelled to sink or swim for himself.—James A. Garfield.

Push gets a bridge built, while Patience waits for winter, planning to cross on the ice.

TALKING MACHINE EXPORTS.

The Figures for May Presented—Reports Show Strong Gain in All Departments of Industry.

(Special to The Talking Machine World.)

Washington, D. C., July 8, 1912.

In the summary of exports and imports of the commerce of the United States for the month of May (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for May, 1912, amounted to \$163,156, as compared with \$246,023 for the same month of the previous year. The eleven months' exportation of talking machines, records and supplies amounted to \$2,376,122.

AN OPERATIC CONCERT.

"La Boheme" Given by E. E. Forbes Co. at Jackson, Miss., by Means of the Victrola and the Victor Records—Attracts Large Audience

Enterprising talking machine dealers throughout the country are profiting from the "Book of the Operas" issued under the auspices of the Victor Co., Camden, N. J., for during the month we have come across a number of special Victrola performances in which the complete operas form a chief attraction through invitation concerts.

One in particular which has come in for most favorable mention was that given by the E. E. Forbes Piano Co., at Jackson, Miss., on the evening of June 21, with M. E. Taylor, manager of the talking machine department, in charge. This operatic recital was given at the store, and the program contained the history of the opera, as well as the libretto or story of each act of "La Boheme," while on the opposite page appeared the various numbers sung by the leading grand opera artists heard through the means of Victor records.

The entire affair was most successful and delighted a large and fashionable audience, many of whom had really no comprehension of the tremendous advance made in the perfection of the talking machine record, as well as the talking machine itself.

Work of this kind is to be commended because it elevates the prestige of the talking machine business and enables the talking machine to occupy that artistic position to which it is entitled by reason of its remarkable advance both musically and artistically within recent years.

TALKING MACHINE ENDORSED

By Austrian Government as an Aid in Educational Work—Teachers Have Obtained Good Results from Using Records as Examples.

The Austrian government has officially indorsed the value of mechanical sound-reproducing machines for educational purposes. The "Ministerium für Kultus und Unterricht" in Vienna has contributed funds for the publication of a "Neue Gesangsschule mit praktischen Biespielen auf dem Grammophon," by Prof. Eugen Fischer, and the Allgemeine Musik-Zeitung speaks highly of the value of the new method. It consists in providing records reproducing exercises and songs as sung by prominent artists. The pupil first listens to these attentively, then sings along, and finally tries to sing the music alone, as nearly as possible with the same tone-color and phrasing as the original. A number of teachers have attained surprisingly gratifying results by this method.

The moment that everyone thinks you are right, you are probably wrong. Popularity is by no means an indication of strength. Individuality is positive. It has a distinct form—it is unique—it departs from precedent.

MCGREAL IN NEW QUARTERS.

Destruction of the Four-Story McGreal Building by Fire Compels the Wisconsin Talking Machine Co. and Miss Gertrude Gannon as Well as Mr. McGreal to Secure Quarters on Grand Avenue—Losses Satisfactorily Adjusted by Insurance Companies.

(Special to The Talking Machine World.)

Milwaukee, Wis., July 3, 1912.

Losses sustained in the disastrous fire which destroyed the four-story McGreal building at 172-176 Third street on June 13 have finally been adjusted. Lawrence McGreal, Edison jobber, experienced a total loss of \$40,000, while Miss Gertrude Gannon, owner of the McGreal retail store and head of the Wisconsin Talking Machine Co., Victor jobber, sustained a loss of \$37,000, including stock and fixtures. The insurance carried

The McGreal Building After the Fire.

amounted to practically 90 per cent. and the companies have settled in a very satisfactory manner. The loss was practically total, with little or no salvage. The building, valued at about \$30,000, will have to be rebuilt, so the total loss sustained as a result of the conflagration approximates \$107,000.

Mr. McGreal, the Wisconsin Talking Machine Co. and Miss Gannon's retail store are now located at 213 Grand avenue in the Merrill building. New fixtures have been installed, new stock has arrived and all companies are settled satisfactorily.

The building destroyed had been remodeled by Mr. McGreal into one of the finest talking machine establishments in the United States. All of the first and most of the third and fourth floors were in use for talking machine purposes. The fire proved that the only unsatisfactory feature of the building

McGreal Office in Burned Building.

was the big open elevator shaft at the rear of the structure, as it was this which allowed the blaze, originating in the basement, to spread with remarkable rapidity to all four floors. Practically every floor was ablaze when the fire department arrived on the scene. The building was located in the heart of the downtown district and surrounding property was endangered, while the fire was one of the most spectacular that Milwaukee has experienced in some time.

Miss Gertrude Gannon discovered the blaze, and, although she is decidedly modest about it, she really saved the lives of most of the employees on the fourth floor by rushing up the smoke-driven stairways and alarming the workers. Her brother, Joseph Gannon, assistant manager of the Wisconsin Talking Machine Co., was badly cut by falling glass while endeavoring to locate his sister. Hardly had the employees of Mr. McGreal, whose offices and warerooms were located on the fourth floor, reached the street before the floor was a mass of flames. The roof later fell in, carrying with it a portion of the fourth floor.

The fire came at a most inopportune time for

Present Condition of Record Department.

Mr. McGreal, as he had just completed arrangements of his affairs preparatory to leaving for Baltimore, where he attended as a Clark delegate from the Sixth Wisconsin district. He hardly had time to secure new quarters and make a few arrangements for the settlement of losses before he was forced to leave for the East.

As a result of the conflagration Miss Gannon

was prevented from attending the Baltimore convention and the later convention of the National Association of Talking Machine Jobbers at Atlantic City. Because of Mr. McGreal's absence it was necessary for her to remain in Milwaukee and

View of Display Rooms on Fourth Floor.

superintend the remodeling of the new quarters in the Merrill building, look after the adjustment of the heavy losses, and see to the various other matters that came up as a result of the fire. Miss

Another View of Talking Machine Department.

Gannon is the only woman member of the National Association of Talking Machine Jobbers, and it was the first convention that she has ever missed.

CLEVER TALKING MACHINE PUBLICITY.

George Francis Rowe, one of Seattle's well-known advertising writers, who has recently become connected with the Eilers Music House of that city, has started a campaign of advertising in the local papers bearing upon the talking machines handled by the Eilers house, in which the merits of these instruments are presented in a strikingly original manner, the unique drawings which head the advertisements being especially clever. One in particular, which appeared above the caption, "The Minstrel Jumps Right Out of the Machine"—a Columbia, by the way—is an inspiration and makes an attractive feature of a mighty cleverly designed advertisement. Mr. Rowe's work is worth watching.

During the Summer Months We Are Active

Preparing for the Fall and Winter rush. Receiving and storing machines, records and supplies to admit of our making prompt deliveries when the rush is on.

Remember This Next Fall

when excuses are offered for non-delivery of your orders by your jobber and get acquainted with *Eastern Service*. It's different from others. Exclusiveness is the reason.

For Eighteen Years Talking Machines Exclusively

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

The biggest free advertisement ever offered talking machine dealers

These are the labels of the Columbia Demonstration record—the only article of merchandise ever sold that literally tells its own story; the only “talking catalog” in the world; the record that not only gives the owner a full 65 cents’ worth of music for 10 cents, but three minutes of argument and demonstration, with samples of Columbia music, and gives it better than most salesmen can do it in person. That record has never yet gone into the hands of a record buyer without creating Columbia Double-Disc record business. We are hearing from it all over.

A Columbia dealer wrote: “We, ourselves, were not wholly prepared for the phenomenal results obtained from this method of advertising. As a matter of fact, the actual benefits which we derived from the use of the Columbia Demonstration record far exceeds our expectation.”

Another Columbia dealer wrote: “Within two weeks over a thousand new names of record buyers were added to our mailing list.”

Every day we are hearing from more dealers who are just beginning to use it, and they take the trouble to tell us that owners of other talking machines than Columbia are borrowing this record from these dealers’ regular customers and taking it home to let their folks hear it; also that much to the dealers’ surprise the average family admits that the “Kentucky Babe” side of the record is not only worth any man’s sixty-five cents instead of ten cents—but that they unanimously insist on playing the *advertisement* side over and over again.

That’s a significant thing, too. Because there is one thing sure—every owner of a *not* Columbia talking machine, who hears our Demonstration record, is sure to know all about Columbia double-disc records, and he is sure to put some of his record money into them right along.

If you haven’t heard that Demonstration Record you’ve missed something.

(See our Demonstration Record page in this week’s Saturday Evening Post.)

Columbia Phonograph Co., Gen’l

Tribune Building, New York

The Columbia business has multiplied so fast during the past year that there's no need of telling you—except to say to you, over our signature, that it is **just getting started.** You will remember this with pleasure about next February if you act on it now.

(Reprinted from last year's convention number. It's now July and running 60 per cent. better than last year. A good many of you *did* remember it last February!)

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

CONDITIONS IN CINCINNATI.

Something of the Milner Co.'s Plans—Columbia Co. Report Immense Improvement—L. C. Penn Now Traveling for This Company—Wurlitzer Co.'s Trade in Machines and Records Away Ahead of Last Year—Joseph Dittrich Attends Convention—Other News.

(Special to The Talking Machine World.)

Cincinnati, O., July 9, 1912.

The Krolage Music Co.'s plans have not yet developed and it appears that this firm is waiting to see what the Milner Musical Co., Sixth avenue, will do under its new method of giving talking machine instruments more attention.

There is reason to believe that the sheet music lines of both houses are factors in the existing situation. Both have their bearing upon the future plans of these two houses. The Krolage concern wants to start a separate house wherein the talking machine trade will be given exclusive attention. In order to do this the house wants to strengthen its sheet line and then oust the machines to a home of its own. The Milner folks have ideal plans for improvements, and when these are completed it will unquestionably have one of the best talking machine systems in the city.

Manager R. J. Whelen, of the Columbia Phonograph Co., stated: "We are well pleased over June business and July has started out with a real Fourth of July boom. June business was greatly stimulated by the splendid Saturday Evening Post ad (supplemented by local newspaper advertising) featuring the Lyric and six 10-inch double-disc records at \$28.90, which proved to be a winner with both the retail and wholesale trade. We received a number of inquiries from these ads from towns where we had exclusive dealers, and it gave us pleasure to turn the sales over to these exclusive Columbia men. This is what we call the 'Columbia policy of co-operation.' The arrival of the new Grafonola De Luxe was welcomed by us, and it is beyond doubt one of the handsomest instruments we have ever had the pleasure of seeing, and its tone quality is marvelous. The 'Ellery Band' records are beautiful and we are glad to offer them to our trade."

The Columbia Phonograph Co. was successful in placing one of its BII \$50 graphophones in "Inwood Park" of Cincinnati, for use on the children's playground. This sale was made after a keen competitive trial, and the children are all more than proud of their "Columbia."

L. C. Penn, one of the best known talking machine men in Ohio, having some twenty years' experience in the business, is now traveling for the Columbia Phonograph Co. in Ohio, and is signing up many new representatives. He works chiefly with the piano and music trade and says the talking machine business is better to-day than in all previous years in his twenty years' experience. Mr. Penn spent several days in the Cincinnati store and was highly elated over the new models, especially the \$200 Grafonola De Luxe and the \$75 Princess. He has some big deals under way which he expects to close within sixty days.

Miss N. E. Minton, for six years chief clerk of the Columbia Phonograph Co., leaves for the mountains of Kentucky about the middle of this month on an extended vacation, expecting to spend most of the time on the Cumberland river in camp. She says she will have her "Columbia" Grafonola with her and it will be one of the most important features of the camp all summer.

Recent visitors to the Columbia headquarters here were Miss Glass, in charge of the Grafonola department of C. F. Brower & Co., of Lexington, Ky., who selected new goods, and Miss Nellie B. Hockwaldt, head of the Grafonola department of J. C. Martin & Co., Dayton, O., who was arranging for a Grafonola recital and selected special records and machines for this purpose.

Adolph Fleischman, one of the bookkeepers of the Columbia Phonograph Co.'s store, surprised his many friends by announcing his marriage to Miss Melva Wolff on June 19 in this city. They both have the best wishes of their friends for a

long life of happiness and prosperity.

The Rudolph Wurlitzer Co. announces the close of a very successful month for June. Sales on talking machines and records were far over those of last June. This increase is attributed to the special attention paid to campers' outfits. Several of the Wurlitzer salesmen have devoted their time entirely to this line with very good success.

Joseph Dittrich, manager of the Wurlitzer talking machine department, has just started on an extensive trip through the East. He attended the talking machine convention at Atlantic City and other points of interest. The Wurlitzer Co. had two particularly good Victor windows during the past month. In one was represented an entire camping outfit with the Victor machine in evidence, the other being a garden representing "The Moonlight, the Rose and You."

"If you must blow your own horn, don't use too much hot air."

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools
Box 918, Scranton, Pa.

The only thing that has so far barred you from your legitimate profits in such demand-filling trade leaders as the Columbia Grafonola "Regents," for instance, and the Columbia records by Destinn, Fremstad, Nordica, Garden, Slezak, Zenatello, Nielsen, Pasquali, Bispham and the rest, has been the manufacturer's inability to meet that sort of competition. Meantime *you* are losing the money.

BOOM TIMES IN CLEVELAND.

Trade Unusually Good and Dealers Looking Forward to a Still Larger Business in the Fall—Trade Much Interested in the New Edison Disc Machines—Geo. M. Nisbett Speaks in Optimistic Vein of Conditions with the U-S Phonograph Co.—The Months News.

(Special to The Talking Machine World.)

Cleveland, O., July 10, 1912.

The volume of trade during June, which was very gratifying, and which has continued well into July, is pleasing to the dealers generally, and all express themselves pleased with conditions. This situation prevails in the various industries and different lines of trade. A local agent of the department of Commerce and Labor reports that, so far from being disturbed by political uncertainties, the demand for labor in Cleveland is now so steady and strong that there is work for all who want it, skilled or unskilled.

This desirable situation inures to the benefit of the talking machine dealers, perhaps more largely than to most other branches of trade.

While all the principal dealers are now doing more than a normal amount of business, they are looking forward and preparing for a still greater volume as the season advances. As time passes it is more and more in evidence that the more ornate and costly machines and the better class of records are in demand, and the talking machine business is continually advancing to a higher plane.

Frank Dorian, general manager of the dictaphone, and J. D. Westervelt, of the executive office, paid the Columbia store and G. F. Probeck, local manager of the dictaphone, a recent visit. Mr. Dorian spent a day and Mr. Westervelt a week in the city. They expressed themselves highly pleased with conditions in this branch of the company's business.

"Business is moving along very satisfactorily," said Mr. Peterson, manager of the Edison distributing house. "The volume of trade in June showed a marked increase over May. Our sales cover about the entire list of machines and records, but demand is especially good for the Opera and the Amberola No. 3, and the new Amberola Concert records, productions of the highest class, and which sell at popular prices. With the many Edison dealers I am pleased with the information that the new Edison disc machine will be in the market for the fall trade. It will unquestionably prove a most desirable acquisition in our trade."

"We have just fairly got settled in our new quarters here—in fair working order," said F. B. Guyon, manager of the talking machine department of the B. Dreher's Sons Co. piano store. "Business is fine. We are having good sales of the various types of Victor machines every day, principally of the higher grade, while our record sales are good and daily increasing. We are delighted with our new store and the surroundings, and the prospects for future business are of the most encouraging character."

Geo. M. Nisbett, manager of the sales department of the U-S Phonograph Co., who recently returned from an extended trip South, West and

East, said he found business in the U-S line in a most prosperous condition, and that the prospects were exceptionally fine in every place he visited. Business at the factory is in the most flourishing state. He stated they were running to the limit with a large force to meet the continued increasing demand for both machines and records, and that the prospects were very bright. Mr. Nisbett attended the convention.

Geo. R. Madson, manager of the Columbia store, reports a very substantial increase in business over last year, especially in the wholesale department. Sales in both departments, wholesale and retail, he stated, were unusually good for the season and constantly increasing. The store is being refurnished and refitted preparatory for the fall season, adding largely to its attractiveness.

The W. H. Buescher & Sons Co. is furnishing and fitting up the new store at 1016 Euclid avenue. The entire force are busy arranging the fixtures and goods preparatory to a grand opening about July 15. Mr. Roberts said business had continued good all through the upheaval and they had managed to take good care of the customers.

The Eclipse Musical Co., always busy, was unusually so during June, especially in the wholesale department. Mr. Towell stated orders had been coming in with great regularity and that the company was rushed with trade covering the entire line of Victor goods. In the retail department business was said to be normal for the season. Sales of machines of the different kinds are good and the record trade is large and constantly increasing. T. H. Towell, president of the company, attended the convention at Atlantic City, and returning visited the Victor Co. at Camden and the metropolis.

The H. M. Brainard Piano Co., handling the Columbia line of goods, states that trade in both machines and records is very satisfactory, and that the business is improving every month.

Mr. Friedlander, of the Bailey Co.'s store, said: "Our sales of Victors and Victrolas and the Edison Opera Amberola No. 3, and the other cheaper styles daily aggregate large numbers. The demand for cabinets is also good. Our June sales were larger than for the same month last year."

The talking machine business of the Collister & Sayle Co. is being largely side-tracked these days for the sporting goods trade, still sales of machines and records are said to be about normal. Miss Bessie M. Grabler, in charge of the department, said: "Business is fairly good—it is not as brisk as it has been or as it will be later, but it is very satisfactory in both the wholesale and retail departments. We are making some sales of the Victrolas of the various types, but the demand is largely for Victors, and especially for Victor IV."

The Hart Piano Co., 33-35 The Arcade, which recently purchased the stock of the Talking Machine Store, has taken on a full line of Edison and Victor goods. F. A. Krauss, in charge of the department, said that there had been a good, steadily increasing trade during June in all branches of the Victor and Edison lines.

Chas. I. Davis, who controls a chain of stores in a number of the principal cities, has just returned from his Pittsburgh branch, where he made

arrangements to remodel his store in that city, devoting larger quarters to the talking machine department. Mr. Davis had installed the Edison and Victor lines in his Pittsburgh store about a year ago, and he says it is more than surprising the business that has been built up in so short a time. It is his intention to install eight or ten booths. He also designs installing talking machines in all of his fifteen stores the coming fall. In addition to the very satisfactory talking machine trade, Mr. Davis is doing a phenomenal music publishing and jobbing business.

The West Side agency of the Columbia Phonograph Co., under the energetic management of R. Svehla, is having a steady increase in business.

G. M. Ott & Bro., proprietor of the large piano house at Akron, O., have just added a complete line of Columbia goods and are making preparations to push the business vigorously.

H. C. Jason, of Lodi, O., and Max Greenfield, of Akron, have recently put in the Columbia line and are having a fine trade.

Henry Matern, of Sandusky, O., reports his Columbia business is extraordinarily good, especially with the Favorite Grafonola.

The Witt Music Co., Lorain, O., states its business is prosperous and that June was the record month for the sale of Columbia Grafonolas.

IMPRESSED BY THE VOICE.

How Col. Harding Conquered the Hostility of African Native Tribes Through Use of the Talking Machine.

The well-known advertisement picture "His Master's Voice" has been as it were humanized in the heart of Africa. Colonel Harding, in his intended—and ultimately successful—attempts to ascertain the sources of the Zambesi, feared the hostility of the native tribes on the way. So he induced Lewanika, the native king of Barotzeland, to issue appropriate orders to the chieftains subject to him. He spoke these orders into a talking machine and Colonel Harding took the records and an instrument along with him. When they came across a chieftain they made him listen to the spoken order. These local potentates were decidedly more impressed than if their master had appeared in person, for here was his disembodied voice, and they stayed spellbound, expecting him to step out of the instrument.

THE INVENTION OF A PHILADELPHIAN.

In The Talking Machine World for May an interesting illustrated article appeared bearing upon the photographic phonograph, the invention of which was credited to a Frenchman. E. Leschbrandt, of Philadelphia, Pa., however, maintains that he is the inventor, and not the Parisian, of this novel method of reproducing sound, and which consists in forcing a current of air through an air-impervious sound record. In this connection Mr. Leschbrandt says: "If you will look at U. S. patent No. 908,683 you will see that this principle is my invention and dates back six years or more. I enclose a piece of a record such as I used at that time."

The Edison

The Opera

This type has a powerful double spring motor, geared to body. It plays Amberol Records only, and is equipped with the new style Model L reproducer which is stationary, the mandrel feeding the record past. Furnished in mahogany or oak with self supporting wood cygnet, horn to match.

All Edisons have

The right home tone.

The sapphire reproducing point.

The long playing, smooth running motor.

NEW YORK, JULY 15, 1912.

A COMPLETE report of the Convention of the National Association of Talking Machine Jobbers at Atlantic City will be found elsewhere in this issue.

More than ordinary interest was manifested in the talking machine meet this year because it was expected that on account of pre-Convention agitation considerable bitterness might be injected into the various gatherings on account of the feeling engendered by the canvass for votes previous to the gathering of the forces at Atlantic City.

However, the association gathering passed off quietly in direct contrast to the two great political conventions which have recently been held in Chicago and Baltimore.

It only shows that while business men may have differences regarding men and methods, when they get together for serious consideration they can carry on convention work without resorting to personal abuse and bitter invectives.

IN his address, Lawrence McGreal, the retiring president, said that there had been but one meeting of the executive committee during the year and that this fact indicated a most satisfactory condition between the factory and the jobber, and he felt that the less agitation created on matters except those of vital importance, the better it was for all concerned.

He emphasized the point that it was easy to start agitation on things of minor importance which might lead simultaneously to misunderstanding and clashes between manufacturer and jobber. He urged that the members of the association should discard all personal interests and forget all personal likes and dislikes and to stand together for harmony, and he urged united association.

IN Secretary Roush's report he said that at the meeting of the executive committee a number of important matters were discussed, and one was the question of charging interest on instalment accounts.

The vote of charging interest on talking machines sold on time was 38 for and five against. The vote for increasing the initial order from three to five machines and from 100 to 150 records was 39 for and nine against.

The report of the traffic committee appears elsewhere and should be carefully perused as well as other matters in relation to the association work.

Resolutions against the Oldfield Bill were passed at the business session.

One of the most interesting addresses made at the open meet was by Mrs. Frances E. Clark, who has charge of the Educational Department of the Victor Talking Machine Co. Mrs. Clark outlined the object of the educational campaign and showed the great progress which had been made.

One point which she emphasized particularly was the necessity of the dealers' co-operation in this campaign if the best results were to be obtained—the necessity of keeping in close touch with the work done in their local fields. The address of Mrs. Clark is reprinted elsewhere in this publication, and it is worthy of the closest perusal.

THERE were two tickets in the field and there was considerable speculation as to who would come out the victor. Naturally, every effort was made to change the views of delegates, and the contest was a very warm one, resulting in J. Newcomb Blackman being elected president for the year 1912-1913.

Mr. Blackman, in his address at the banquet at the Marlborough-Blenheim, pledged his earnest support to all trade movements conducted along progressive lines having for their object the best interests of the industry.

He agitated warm and hearty co-operation in all matters and said that it should be his aim to cultivate the most cordial relations between the factories and the distributors.

THE closing event of the Convention was the entertainment given by the Victor Talking Machine Co. to the visiting delegates.

The delegates left Atlantic City in two special cars provided by their hosts and upon arrival at Philadelphia enjoyed a buffet luncheon at the Bellevue-Stratford and then were placed in about thirty automobiles, visiting many of the historic spots in Philadelphia, after which a run to Valley Forge was made; here some time was spent in going over the ground made sacred by the suffering of Revolutionary heroes, and later a splendid banquet was served at Fort Side Inn. In the dining-room a special stage had been erected and vaudeville talent of the highest order was provided.

After the banquet the guests repaired to the lawn, which had been specially decorated by myriads of electric lights, where the vaudeville entertainment was continued.

The report of this, which appears elsewhere, will show that the officers of the Victor Co. lived well up to their established reputation as royal entertainers in this finale of the Convention meet of 1912.

THE address delivered to Louis F. Geissler at the banquet at the Marlborough-Blenheim is deserving of the closest reading by the talking machine men everywhere, and through the mediumship of The World his splendid essay is carried to many thousands of men in all parts of the earth.

His optimistic views should inspire every talking machine man whether in America or in foreign lands.

It shows how a great company perfectly organized is moving ahead at enormous strides and yet at all times is considering the welfare of its business constituency.

Mr. Geissler figures that politics will have less effect upon commercial affairs than ever before, and he does not anticipate the slightest interference with prosperity by reason of the coming Presidential election.

In other words, with bumper crops practically insured, industries active, labor well employed, he rightly figures that men can go ahead and do business with a reasonable certainty—that they are on safe ground.

INSTEAD of slowing up in advertising and publicity, the Victor Co. will spend more money than ever this year.

Mr. Geissler said, regarding advertising: "The year 1912 was again launched with the largest advertising appropriation in the history of the company. I hope that our enlarged newspaper campaign is appreciated and that it will prove effective. In connection with this increased advertising a man said to me: 'Geissler, you are foolish. You're now always advertising goods before you

can furnish them. Isn't your factory rushed to death? Are you not selling all the goods you can manufacture? Doesn't everybody know the Victor? That little dog is the best known and most valuable advertisement in the world. Why don't you save a half million this year instead of spending it? It will make a difference of a million dollars in profits to your company.'

"Our reply was that 'we were spending nearly a million dollars extra this year in extensions to our plant. We are trying to sell the output of that factory *two years hence* and *not to-day*,' and I believe we will do it, and *then some*."

"The daily newspaper advertising which the Victor name is receiving I have had carefully estimated by our advertising managers, and find that that effort alone is costing \$600,000 per annum."

"Our appropriations for advertising in the magazines, weeklies, agricultural, school and trade papers, export and foreign publications have through this year's increase, reached a stupendous sum, but I assure you that we are not appalled thereby, and it would not be at all like us if we did not soon increase it again."

MOST readers of The World are familiar with the fact that in various countries of the world the voices of some of the greatest men of the present age are being preserved through the mediumship of talking machine records which are filed away for the instruction of those who follow in days to come. The languages of Indian tribes and the dialects of the people in different parts of the earth are preserved in this manner, and now comes California with the preservation idea as applied to moving pictures.

At a "millionaire wedding" in California a series of moving pictures are to be taken of the ceremony. The films are to be preserved as parts of the family record. Thus in private as in public life the "movies" are beginning to take an established place from

which they will rival the portrait gallery and perhaps supersede it.

Some years ago it was the vogue to keep a book of autographs in which friends were invited to write answers to various questions tending to show temperament and taste. One of these questions was, "What historic event would you most like to have seen?" The question was, of course, more amusing than useful, but to future generations it may be quite reasonable with regard to any event that happens from this time on.

As for the family records of moving-picture films, they, too, are likely to have a large development. At present a portrait painted of some obscure squire by Joshua Reynolds for £50 could be sold for \$50,000. So it will be with family movies. Entertaining to-day, they will be valuable assets for great-grandchildren. The Californian innovation is bound to become the fashion.

THE latest is the Magnaphone, which brings you into immediate contact with the world of news and the world of music. Sweet songs and orchestrations, says the owner, will float into your room simply by moving a little switch. This service is maintained through a central station and the sound is transmitted over wires similar to telephone wires.

Every week you are furnished with a time schedule of musical numbers showing you the approximate time at which each solo or orchestral selection will be given.

The Magnaphone is along the lines of Dr. Cahill's invention, but it is a very simple instrument compared with the Cahill invention. A franchise has been recently granted by the City of New York to the New York Magnaphone & Music Co., for the purpose of enabling the latter to install its service throughout the city. It is said that there is ample capital behind this new enterprise, so that it will not languish for lack of necessary funds.

TALKING MACHINE POPULARITY.

Pianos More Affected by Automobile Competition Than Talking Machines, Says a Piano Merchant Who Talks Most Interestingly.

A piano merchant, in a chat the other day, gave it as his opinion that the automobile is a real rival of his product. This information was the outcome of a question respecting the greater popularity of talking machines, the low-priced kind in particular, in the rural districts, in villages and small towns. Said this gentleman:

"The talking machine hasn't done nearly so much harm to the piano business as has the automobile. It is true that plain country folks set great store by a talking machine. For instance, I spent part of my vacation fishing a stream miles from a town in a section where the houses were widely separated. Within a radius of ten miles there were perhaps ten or a dozen residents. Four of these had pianos and four had talking machines, and by all odds the latter carried off the honors. By invitation neighbors of each of the talking machine quartet would drive miles to spend an evening listening to the sort of varied program usually associated with the talking machine in rural places. Campers along the lake were included in these invitations sometimes and usually they accepted."

"I found that the records in each case were about evenly divided among popular vocal and instrumental selections and humorous recitations and jests of the vaudeville order."

"I never heard of a gathering of the neighbors to listen to piano playing. This was up in New York State, and in some of the Western rural communities the proportion of pianos to talking machines is less. Nevertheless this doesn't indicate as much of a slump in the piano market as might be imagined, for the reason that forty-nine out of fifty of the talking machine owners wouldn't buy a piano anyway. Perhaps there is no one in their family who can play a piano or who cares to learn to play. As matter of fact the sale of pianos in villages and small towns is quite as brisk now as it ever was, that is, of the less expensive grades. The talking machine has hindered the growth a little, but not much."

As a general thing, the self-made man makes a lot of hay first.

TO DISSOLVE THE COMPANY.

Business of the Universal Talking Machine Mfg. Co. to Be Liquidated—The Formal Notification to This Effect Just Issued.

The Universal Talking Machine Mfg. Co., manufacturers of Zonophone disc machines and records, Fourth and Race streets., Philadelphia, Pa., has sent out the following letter under date of June 28 to its customers, which explains itself:

"Gentlemen—At a special meeting of the stockholders of the Universal Talking Machine Mfg. Co., held on June 17, 1912, it was decided to dissolve the company and liquidate its affairs."

"In the meantime if you wish to order any records

in our catalog, supplies or parts of either new style or old style machines, or any type machine, according to our catalog, we will be in a position to take care of your wants. If you find yourself in need of any of the goods above mentioned, we would advise you to place your order as early as possible, as we do not expect the stock we have on hand will last long. We will not issue any new records, the July list being the last. Very respectfully,

"UNIVERSAL TALKING MACHINE CO."

I think I could succeed as well now as in the past. It seems to me that the conditions of to-day are even more favorable to success than when I was a boy.—John Wanamaker.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

OLIVER DITSON CO., Boston, Mass.

The Columbia sales-policy is that of the open shop for the dealer. He can make his own business decisions—and we will boost both his demand and his supply.

(Reprinted from last year's convention issue. That boosted demand is what is making it necessary for us to provide a 50 per cent. increased factory output six weeks from now.)

GOING AFTER SUMMER TRADE.

The Dealers of St. Louis Are Carrying on a Lively Battle and Securing Results in the Sales of Talking Machines and Records Despite the Hot Weather—How Recitals Help Business—Silverstone Interested in the New Edison Disc Machines—Other Items of Interest from the Saintly City.

(Special to The Talking Machine World.)

St. Louis, Mo., July 10, 1912.

The jobbing business appears to have an edge on the retail business for June, but at that the retailers are not complaining. Trade has held up well and the summer vacations are proving as much a boon as they are a handicap. Neither are the record departments complaining, and Mark Silverstone declares that the Democratic convention at Baltimore has boomed the Bryan talking records more than the "Houn' Dawg" song. "We have several good records by Bryan," said Mr. Silverstone, "and they are fairly good sellers. His talk on 'Immortality' has been a steady seller, and some of the old political bits have come into demand again. We also have the Taft records, but they are not selling and never have."

W. C. Reece, of Elvina, Mo., a Columbia dealer, was a recent caller.

Manager D. S. Ramsdall, manager of the Columbia store, returned the first day of the month from a short trip through northern Missouri, calling upon dealers. It was sort of a departure for Mr. Ramsdall to get out with the trade, but results were sufficient to encourage the belief that he will carry out his proposal to make such trips frequently.

The Columbia Co. is going to feature the demonstration record again this month to boom sales in the record department, and Retail Manager C. L. Byars has great hopes of results. "Last year," said Mr. Byars, "we sold 130 of the ten-cent records in one day and very few of them went without taking other records with them, and we know positively that we found many new customers through this record. It is a bargain and it attracts and brings excellent business with it and opens the way for more new business." The recent record trade at the Columbia store is reported to have been very good.

A. E. Robinson, manager of the Victrola department for the Stix, Baer & Fuller Dry Goods Co., is of the opinion that recitals help the talking machine business, especially for a department store department. Some may say that Mr. Robinson has an exceptional opportunity for display, as the piano department for that store is a new one and the recitals there gathered quite a large crowd. The conditions under which the machine was used were a bit unusual, as the piano department was making a special effort to introduce the Cable Inner-Player and the machine was used in connection with this instrument.

"We put on a lot of heavy stuff, such as the 'Lucia' sextet and quartets of that nature," said Mr. Robinson, "and we made quite an impression on the musical folk assembled there. Of course there are a good many happenings at a department store recital, and some of these were not so musi-

cal and were perfectly amazed at the tone quality. They were under the impression that a talking machine was mechanical and sounded well merely because there was no comparison. When they heard some of our machine music and a real, first-rate, real voice number next following, they realized that the quality was there. These were the folk we reached through recitals, and we also had some sales of machines and records to the musical folk. Of course we put on some lighter numbers."

Another department store feature that Mr. Robinson has found profitable has been the playing of a machine in front of his department merely to catch whoever passes. The store playground is next door to his department and a lot of persons go there to see or to permit their children to rest during shopping, and these listen and often ask, and then a sale is possible.

"And you cannot tell what is best to play. One day," said Mr. Robinson, "I was at a loss to know what record to put on my display machine, and as a last resort struck on a Sousa march. Now it proved that one of the men who came up to the garden supply department that day was a former professional drummer and that Sousa march was his favorite selection. He listened, was charmed, and came in and bought a machine especially to play that record, but incidentally, of course, he took other records."

Mark Silverstone, president of the Silverstone Talking Machine Co., departed for New York the first of July in high spirits over anticipation of a treat in looking over the new disc machines and Indestructible records and hearing the new business outline of the Edison Co. "At last we are going to have the long-talked-of disc machine," said Mr. Silverstone, "and I am a good deal like the small boy anticipating a new toy. I want to see it at work and get a good look inside of it (for it must be remembered that Mr. Silverstone is an expert mechanic and divides his admiration of machines between the mechanism and the tone). I expect these machines to become a big factor in the market."

This trip came as a good deal of a surprise to Mr. Silverstone, who had just given up his proposed trip to Atlantic City because he did not like the conduct of arrangement of affairs for the convention, and to miss the trip after anticipating it was something of a disappointment. But the later trip more than fulfilled his plans for the first one.

"June was one of the very best months we have had," said Manager Robinson, of the Thiebes talking machine department. "Rather strange to say there has been little feature to the trade, but everything is moving with equal success—by that I mean all classes of machines and records."

Special Representative O'Neil, of the Victor Co., was in the city recently and freely praised the newly-decorated parlors of the Thiebes Piano Co. "They are the handsomest I have seen on this trip, which has included most of the cities of the South and West," he remarked. In addition to being newly decorated, the parlors have been rearranged.

The Columbia Co. sold a machine through the local Indian supply agency for use at the government schools on the Sac and Fox reservation at Stroud, Okla. With the machine went five dozen

records for use in the schools, being chiefly patriotic and popular music.

Mark Silverstone is receiving congratulations on the sale of a \$200 Amberola to Thomas Noble, a prominent East St. Louis resident. The demand was that the machine must be fitted so that a member of the Noble family who is very deaf could hear it. Mr. Silverstone made a tube connection with the reproducer and tried it on the person who is to use it. The result was very satisfactory and did not appear to affect the tone, but for fear that it would Mr. Silverstone inserted a cut-off that could be used to close the opening so made when not in use. A report of the sale by Mr. Silverstone to the company brought the felicitations of the advertising department to him. He had tried similar experiments with other machines, but this was his first effort on an Amberola or a machine of like value.

The Columbia Co. reports excellent business following the general advertising campaign of that company.

The Silverstone Talking Machine Co. reports the sale of several dictating machines to the legal department of East St. Louis municipal government.

The talking machine boys are making their influence felt in the piano baseball league. Four talking machine houses are in the league and from four to five of each team representing those houses are drawn from the talking machine departments. A. J. Robinson, manager of the Thiebes talking machine department, is captain of that house's team. The other teams which have a good representation of talking machine players are the Aeolian, Val Reis and the Bollmans.

E. C. Rauth, secretary of the Koerber-Brenner Music Co., and Harry Levy, manager of the talking machine department of the Aeolian Co., were convention visitors from St. Louis.

SERVICE.

One of the Most Important Things a Merchant Has to Offer His Customers.

Two things you have for sale and two things only—material and service. The reason people go to your competitor rather than to you is not often because they find better material there—but because they find better service there.

The reason the employer gives the preferred place to another rather than to you is probably not due so much to the other's superior ability as to his greater willingness to serve.

There is no success without service, says Glen Buck in Ford Times. There is no getting without giving. Your bread turns to poison when you do not digest it. And the more you give the more you have to give. Service means growth. Its opposite is stagnation. Marshall Field learned how to serve—first his employer, then the people.

Material we have everywhere—in plenty. But real service is a rarity. And it is in big demand.

Have you mapped out your line of campaign for the holidays, or are you going to "take things as they come"? Being prepared to meet the situation is nine points of the game.

Think How Easy
it is to Sell with
these Selling Points

NO "needles" to change. Sapphire Reproducing Points never wear a record—last forever and are a feature of U-S PHONOGRAPHS.

U-S EVERLASTING RECORDS can be handled by children—cannot be broken by careless handling even in the delicate sound grooves.

U-S EVERLASTING RECORDS never wear out, but preserve their tone values forever.

The most powerful, even-running, and long-running motor ever made for a phonograph.

Plays four-minute and two-minute records. A turn of a thumb-screw to left instantly engages four-minute gear, and to the right engages two-minute gear.

A Phonograph so superbly equipped that it reproduces whispering harmonies of music usually lost in the sound volume. Absolutely true to original rendition.

The everlasting enjoyment of the best talent that the musical, theatrical, and vaudeville world affords, becomes his who accepts this most remarkable offer, which is for a short time only.

EDISON TELLS OF HIS SCHOOL DAYS.

Letter from the Inventor the Subject of Essays by Children in the Closing School Examinations Throughout New Jersey—Pays Graceful Tribute to His Mother Who Was His Teacher and Who Always Encouraged Him.

Part of the examinations of the Eighth Grade pupils of the schools of West Orange, N. J., during the closing exercises was to write an essay on a letter to New Jersey school pupils written by Thomas A. Edison. The same examination is to be given to all the pupils of the grade throughout the State in compliance with a new law. The letter is a message of encouragement and good willing part of his remarkable life. Mr. Edison writes as follows:

"Dear Young Friends: I have been asked to write a letter to the boys and girls in the grammar schools in New Jersey, telling something of my

own school days. Such a letter as that would be very short, for I really never had any school days as you understand them.

"I was rather delicate when a small boy, and instead of sending me to school my mother, who had been a high school teacher, educated me herself at home. She had only the one pupil, which was fortunate for me, as I received thoroughly sound teaching. My mother also taught me how to read good books quickly and correctly, and as this opened up a great world in literature, I have always been very thankful for this early and valuable training.

"I was fond of experimenting, so, when I was 12 years old I got work as a train newsboy in order to earn my own pocket money to buy chemicals and apparatus with which to experiment. My train ran from Port Huron to Detroit, and this gave me opportunity to go to the library in the latter city and read books that could not be found in Port Huron, where I lived.

"I always kept busy and had lots of adventures in trying to add to my store of knowledge, but to

tell you the whole story would make my letter too long.

"School days are very different from what they were when I was a boy, fifty years ago. You now have beautiful school buildings, with modern conveniences and apparatus, and your studies include many interesting subjects relating to the arts and sciences. It seems to me that the boys and girls of the present time ought to be very happy in having these fine opportunities of preparing to do big things in the world. Sincerely your friend,

"THOMAS A. EDISON."

Friends of Edison who are well primed as to the great man's history smile at the paragraph in his letter in which he alludes to his "lots of adventures." They recall the story told about him to the effect that he kept an experimenting laboratory in the baggage car, by courtesy of a good-natured trainman. One day one of his experiments resulted, as experiments sometimes do, in an unexpected explosion, and the cars and its contents were destroyed. Needless to say, Tommy was forbidden to reconstruct his laboratory in the car.

At the Jobbers' Convention at Atlantic City, the most complete and up-to-date line of Record Cabinets was displayed by The Geo. A. Long Cabinet Co., and was greatly admired by the jobbers. Several new patterns have been added to the line.

D 33, with No. 9 Victor Machine.—Mahogany and Golden Oak. Top and all four sides polished to match machines. Width of top 21½ in. Depth 18 in. Moulding loose or attached. Can be supplied to fit Victrolas VIII or IX. Capacity 210 (12 in.) disc records.

The Talking Machine Trade in New England

EDISON HOME KINETOSCOPE

Being Placed with Great Success by the Pardee-Ellenberger Co.

F. H. Silliman, manager of the Boston headquarters of the Pardee-Ellenberger Co., Inc., was in New York recently, and commenting upon the volume of business that the company had created in New England for the Edison home kinetoscope, showed some figures that were of startling size. Mr. Silliman has been doing a whole lot of work in connection with the introduction and exploitation of the Edison home kinetoscope, not only through personal work but in a general way. The first kinetoscope advertising to appear in The Talking Machine World came from the Pardee-Ellenberger Co. and it is still appearing. The officers of this company are aggressive people; they are business builders, and it is only natural that success should follow hustling qualities plus "first water" ability.

LARGE SHIPMENTS OF NEEDLES

Being Made by John M. Dean from His Factory at Putnam, Conn.

(Special to The Talking Machine World.)

Putnam, Conn., July 9, 1912.

That the talking machine industry is in an excellent condition is best attested by the large shipments of needles that are constantly going all over the country from the factory of John M. Dean, of this city. The Dean plant is one of the best-equipped and modern factories of its type in the country, and it is the aim of the Dean organization to have its output consistent in every manner.

The line of Puritone needles, which is the one that Mr. Dean concentrates upon, is held to be an exceptional needle in style and finish. Most of the trade prefer to handle these under the Puritone brand as made and packed by Mr. Dean, but to those who do not wish this, Mr. Dean will gladly put them up in envelopes bearing special printing and advertising. The price for either service is about the same.

Samples of these needles—Puritone brand—or of the other types of needles made by John M. Dean will be sent upon request to the jobbers.

OLD JIGGER—MAN HANDLER.

The Story of a Man Who Insisted on Being the Boss or Nothing.

Happen to know "Old Jigger?"

One of the Has-Beens. Regular Rose of Yesterday. Hits one selling force, then another. Gets a job. Don't do anything. Sponges off all the boys. Talks their joints loose telling what a big guy he used to be. Gets fired—goes on his way, looking for the next easy mark.

Old Jigger tied up with a big insurance works, a while back. Supposed to solicit. But, no, sir! Not for Old Jigger! Wanted to boss things. If he couldn't be boss, he wasn't going to bust himself, not he. Every morning he'd stick his ratty old plug hat and grizzled Burnsides into the private office, and give the General Agent a calling down.

"Why don't you give me a decent job?" he'd sputter. "Why don't you make me a branch manager, 'stead of some little squirt of a kid like the one you sent up to Milwaukee—what does he know about handlin' men?"

Could hear his observations all over the place, "Used to have charge of the hull Pacific division! I'd ought to be handling men!"

"By jinks, you'll get what you're after!" the General Agent said one day. "I know the place for you. I'll write you a letter. You'll land it! They're aching for somebody like you, who can take hold and handle men."

Grabbed a pen and started to write, the General Agent did. Old Jigger's eyes bulged out. Thought he'd made a ten-strike this time. Saw himself getting to be president of a trust.

Maybe he didn't cave when he read the letter, though! It was to the boss of a Turkish bath house. Said, "Don't you need a good rubber? Bearer's a whirlwind at 'handling men'!"

FACTS ABOUT BAGSHAW NEEDLES.

(Special to The Talking Machine World.)

Lowell Mass., July 8, 1912.

On page 2 of the new booklet issued by W. H. Bagshaw, the needle manufacturer of this city, are the following paragraphs which are of more than passing interest to talking machine men:

"As a vivid illustration of the marvelous growth of the Bagshaw needle business, take a ten-day period during which time 63,020,300 needles go out. This is over six million needles a day, and every needle is of the highest possible quality.

"Quality" has been the diaphragm of this achievement, in conjunction with the immense quantity, and it is the quality feature of the Bagshaw needles that created their universal reputation. Outside of the United States, for instance, the quality of Bagshaw American-made needles is demanded by the better class of foreign talking machine men, although they could buy inferior needles right at their homes. This statement should be remembered when anyone in this country attempts to 'palm off' 'imported' needles at any price on you.

"Bagshaw American-made needles are acknowledged by experts to be the standard talking machine needles of the world."

TRAVELERS GETTING TOGETHER.

Rapid Growth of the National Association of Traveling Men Betokens Wide Interest—Some of the Objects of the Organization.

In the general movement toward co-operation throughout the industries, professions and trades, it is interesting to note the rapidity with which a new organization, the National Association of Traveling Men, with headquarters in Chicago, is bringing together the commercial traveler of the country, a class of men who perhaps more than any other require the prestige of a strong and well organized society and yet who through the necessity of long absences from their home cities are to a considerable degree handicapped in the matter of organizing.

The National Association of Traveling Men, which came into existence last fall, will complete its first year of life in September, and while the aims and ambitions of the organization have been set unusually high there seems every likelihood that the association will actually have enrolled 5,000 members during its first twelve months. Of course, in the case of an organization of this sort the first consideration must be membership, for to secure legislative recognition of the needs of the traveling men the association which seeks to attain this aim must have the prestige of numbers. In this respect the National Association of Traveling Men may be said already to be a success, and as the organization has prepared a plan for its legislative committee to submit to the lawmakers of the various States, there seems every probability that its members and the traveling public in general will be materially benefited through the operations of the association.

NEVER PAYS TO DELAY.

"There is a good idea," said a clerk as he picked up a bright trade paper and read suggestions it contained, and which would be especially helpful to his department of the store. "I'll just file that away, until I get a little time, and then I'll make the few changes necessary in order to enable me to apply that idea in our store." That is just where this young man fell down. He filed it away instead of going at it at once to put "the bright idea" into execution.

If your advertisement is given a position where it is hard to find, make up your mind the results will be hard to find, too.

Don't waste rain coats on ducks—or sympathy on the man who enjoys his hard luck so much that he's all the time talking about it.

Yes, "Bud," some people are so high and mighty that it makes them dizzy to look down on the rest of us. Great and good old world, "Bud," just the same, for those "highups" sometimes take a tumble.

A Summer Cottage in Your Vicinity?

Every summer cottage is a prospect for the Edison Home Kinetoscope; the cost is small and the pleasures great. Away from the city, the cottagers are only too eager to see the "movies" right in their own home.

Now you, Mr. Dealer, are the one who should get these sales. The machines retail from \$65 to \$88, and the films sell at a corresponding low price. The profits are right.

We'll back your efforts with hints and suggestions, thus reinforcing every chance you get to make your profits. Take this week off for the "summer cottage sales"—it means more business.

If you don't happen to be a Kinetoscope dealer, better write to-day for full details. A postal will do provided you mail it to-day.

The Pardee-Ellenberger Company

EDISON KINETOSCOPE DISTRIBUTORS

NEW HAVEN

BOSTON

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., July 9, 1912.

The June business with the Columbia Phonograph Co. has quite exceeded the anticipations of Manager Arthur Erisman, and when comparisons were made it was found that it was about double the business of June a year ago. Meantime Manager Erisman and all his office force are rejoicing over the victory just won, as the Boston office won the prize offered by headquarters for having had the largest cash receipts in proportion to accounts receivable for a period of several months. For some time it was neck and neck with the New York office, but the Boston quarters finally won out and everybody is much delighted. For this good showing much credit is due Jack Shaughnessy, of the bookkeeping department, who kept a close watch of things.

An Artistic Victor Window.

The window in the Henry F. Miller Co. on Boylston street, which is always given over to Victor displays, has a very catchy arrangement just now which is a direct appeal to the summer vacationist. Across the rear of the window is a placard with the words "For the Camp or Canoe," and on each side is a colored drawing of a canoe trip on the one side and a suggestion of camp life on the other. In the foreground are stacks of low-priced machines such as are especially adaptable for vacation resorts. Ubert Urquhart, the manager of the Victor department, is anticipating a trip to Maine with his family, and F. T. White, who is taking his vacation early in July, will spend it at home, for having lately moved to Brookline, he finds that that neighboring town is not such a bad place after all in which to spend a vacation.

A Visitor from Atlanta.

Westervelt Terhune, manager of the Atlanta, Ga., offices of the Columbia Phonograph Co., was a visitor in Boston lately. He came North on purpose to visit the New York headquarters of the company, and as he is contemplating making extensive changes in his Atlanta store, the New York officers suggested he come over to Boston to see what Manager Erisman is doing here, as Mr. Erisman, as mentioned last month, has extensive plans already under way for utilizing the front of the second floor of the Tremont street quarters, which probably will be ready for occupancy in a few weeks.

Outing of Eastern Talking Machine Associates.

The June 17 outing of the Eastern Talking Machine Associates held at Crescent Park, down the Providence river, was a success in every particular. Twenty-eight members and guests took the trip and the start was made from Boston at nine o'clock. Arriving at Providence there was a short trolley trip along the shore to Crescent Park. The great event of the day was the ball game between the Victor and the Edison teams, the Victor nine being captained by J. M. Price and the Edison by Mark Read. There was little left to the imagination when the final score was declared, but it would be a shame to tell how the teams stood. Following the regular game there was another by the stout gentlemen, in which "Chief" Wilkinson, of the Eastern Co. played a conspicuous part, and it was one of the funniest stunts of the day to see the "Chief" run to first base. Following the dinner, which was thoroughly enjoyed by all, Mr. Chamberlain gave an impromptu address, speaking enthusiastically of the association. Then the company scattered to enjoy themselves in their own way and the return trip to Boston was made during the cool of the evening. Among the guests who went down with the Eastern boys were Billy Veale, manager of the talking machine department of the McWhire Co. at Fall River, and John Taylor, of Boston. The outing was voted one of the most successful ever undertaken by these Associates.

Joins Dictaphone Department.

H. A. J. Niven, formerly with the Eliot Fisher Co., has been added to the dictaphone department of the Columbia talking machine department, which department, by the bye, is going through a thorough process of systematizing with an eye to improving its capacity for the growing business that has been facing the department for some time.

Attended Jobbers' Convention.

Henry A. Winkeiman, manager of the Victor department of the Oliver Ditson Co., and Herbert L. Royer, manager of the Victor's Arch street department of the M. Steinert & Sons Co., attended the Atlantic City convention. E. F. Taft, manager of the Eastern Talking Machine Co., also was at the convention.

Ditson's Good Victor Business.

The Oliver Ditson Co.'s Victor department has had a splendid June business and a great many machines and outfits have been sold to summer camps. The business this year of this character has shown a tremendous growth over last summer.

An Attractive Vacation Window.

In the establishment of the Columbia Phonograph Co. there is the best possible suggestion for summer recreation in the window and in the store itself. In one of the large show windows is a miniature pond on which floats a canoe with two little figures and a tiny representation of a phonograph. At the rear is an Indian tepee, and the entire window accessories tell of a delightful summer reverie through the medium of Columbia outfits. Inside in the store there is a full-sized canoe filled with cushions, and at one end a machine. The two together are a fine advertisement and the doorway is filled all the time with interested spectators who are attracted by the novel sight.

Victor Records for Class Gift.

One of the interesting features of the graduating
(Continued on page 18.)

An Interesting Question at the Atlantic City Convention was — "Where do You Buy Your Needles" ?

The jobbers who got together and
compared notes found that they
secured the best values

from Bagshaw, of course

To those who haven't seen the latest Bagshaw product—The DUPLEXETONE Needle—we'll mail a generous package free of charge.

The Duplexetone Needle is the wonderful Needle with TWO TONES, permitting both SOFT and LOUD with the same needle. Write us today.

W. H. BAGSHAW, LOWELL, MASS.

A limited edition of a booklet covering Duplexetone Needles and the other Bagshaw products has been published. Jobbers can have sufficient copies for their trade upon request.

Can you imagine anyone saying there would be no demand for Fremstad records? Or Nordica records? Or Mary Garden records? Or Nielsen records? And can you imagine any Smart Aleck trying to offer you a substitute for them?

(Reprinted from last year's convention number. Since then the dealer who doesn't handle the Columbia line has also had to turn aside from the demand for records by Destinn, Slezak, Zenatello, Weber and Fields—and it hurts.)

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

FROM OUR BOSTON HEADQUARTERS.
(Continued from page 17.)

exercises of the Lawrence school in Brookline was the presentation of the class gift, which was of an unusual character, being no less than a solid mahogany case for talking machine records. It will be recalled that the Lawrence school has been interested in Victor machines for some time, and W. J. Fitzgerald, of the Eastern Talking Machine Co., has kept in close touch with the school and has given several demonstrations out there. The purchase of the cabinet for records was made through him, and he also helped to make a choice selection of the records, \$100 worth of which were presented to the school at the same time.

Inspected New Edison Products.

Manager Silliman, of the Pardee-Ellenberger Co., of Batterymarch street, went over to New York last week for the exhibition of the Edison Co. in Fifth avenue, to which a number of the jobbers went. Mr. Silliman was accompanied by Frank Boyd, of the Iver-Johnson Co., whose establishment at the corner of Washington street and Cornhill is quite a popular headquarters for outfits. Mr. Silliman reports that the Edison business was very good during June, and this was especially true of the kinoscope outfits, which have been selling rapidly ever since they were put on the market. A recent visitor to the Pardee-Ellenberger Co.'s Boston office was Mr. Phillips, the credit manager of the Thomas Edison Co.

Miss Davis Married.

Miss A. J. Davis, the popular attache of the Eastern Talking Machine Co., was married on Wednesday, July 3, to C. L. Hammond, a well-known Boston man. The ceremony took place at the Church of the Immaculate Conception at Revere and several of the bride's associates in the Eastern Co. attended the ceremony. The bride was pleasantly remembered by them with a handsome silver service.

Successful Talking Machine Exchange.

A. Rosen, whose successful talking machine exchange in Bromfield street is one of the especially popular rendezvous for the public interested in machines, lately came into possession of a large number of odds and ends which his patrons were not slow to take advantage of. One of these was 108 folding Edison machines. Mr. Rosen has lately enlarged his quarters at 3 School street, and he now has a part of the floor above which he uses largely for his surplus stock. Mr. Rosen lately successfully conducted a concert at the Young Men's Hebrew Association, using a Victrola No. 16. He is planning a trip to New York, after which he will go to Buffalo for a short time, visiting the trade there.

Returns from Honeymoon Trip.

Chester J. Sylvester and his bride have returned from their honeymoon and now are pleasantly located in Dorchester. Mr. Sylvester has been making a pronounced success of his talking machine department at the C. E. Osgood Co. and June showed up as a record month.

Manager Erisman has lately completed contracts with the Burt Fur Co. as Columbia dealers for South Attleboro. Another deal has been closed by him with Almy, Bigelow & Washburn, who will

handle Columbias for Salem and Beverly, where this concern is widely known.

Concerts Greatly Interest.

R. L. Perrett, the instalment manager of the Columbia Phonograph Co., has been giving some highly successful concerts lately. One that comprised a mixed program was given at the Elks quarters in Somerset street, Boston, and was attended by a large company. Another given in Henry M. Moore Hall, Y. M. C. A. building, at Somerville, was styled a Gounod's "Faust" recital, and all the prominent numbers through the four acts were given, followed by much applause. This recital was given on a Columbia Grafonola Mignonette.

Visited Eastern Co.'s Store.

Alice Lloyd, the star of the musical comedy "Little Miss Fix It," playing a highly successful engagement at the Tremont Theater, was a visitor to the Eastern Talking Machine Co. the other day. She was accompanied by her husband, Tom McNaughton, who also is widely known in musical comedy.

Play Ball!

The talking machine boys are looking forward interestedly to another baseball game to be played at Franklin Field soon by the nine of the Eastern Talking Machine Co. and the fellows from the Victor department of M. Steinert & Sons Co.

Good Sales of Victor Machines.

George Lincoln Parker's Victor department has made a number of good sales lately, and there has been quite a lively demand for the July records. The department is making good headway in the hands of Mr. Davis.

A Timely Publication.

"How and Where to Sell Columbia Grafonolas, Graphophones and Records" is the title of a booklet which Manager Erisman has just got out. The text tells of the adaptability of machines to settlement work, children's playgrounds, State prisons, religious institutions, factories and even doctors' and dentists' offices; and is really quite ingenious.

DEPARTED VOICES LAID AWAY

In the Paris Opera House, and the Day of Resurrection Is Set by the French Government One Hundred Years Hence.

A strange ceremony was held recently at the Opera House in Paris, where phonographic records of singers were consigned to a hermetically sealed tomb under the building where they are to repose for a century, when they will be opened to allow those of another century to hear the songs and voices that delight the audiences of to-day.

The first series of such records was made by the opera in 1907, when the voices of Caruso, Tamagno, Melba and others were duly buried under the seal of the State Secretary of Fine Arts.

Take the trouble—it will pay you. One of the secrets of the success of this business is the general willingness to "take the trouble"; to do each detail in the best possible manner.

Don't expect others to do for you what you are not willing to do for yourself.

RIVAL OF THE VICTOR DOG.

Something of the Seven-Year-Old German Setter for Whom Remarkable Claims Are Made as a Talking Dog—The Fox Terrier Who Is So Alert to Hear "His Master's Voice" Is Not Jealous or Despondent, Thank You?

Dogs have made a noise in the world before to-day, but the noisiest of them never startled the public ear with such vocalizations as have been attributed to "Don," the seven-year-old German setter of Gardelagen. Here is a canine whose reputation has literally gone out to the ends of the earth. Scientists from world-famous universities have investigated him. The contour of his teeth are known and his trachea has yielded up all its secrets. The exact mechanism of his wonderful mouthings is enshrined in numerous phonographic records and scientific monographs. He has been photographed and motion-pictured times out of number. There is a book about him, written by the learned professor of a psychological institute in collaboration with a teacher of anatomy and a doctor of philosophy.

For several years past Don has been known as "the talking dog." Numerous observers reported that he had a vocabulary of eight words, which he could utter if food were offered and certain questions propounded. Thus he could call himself "Don," say he was "hungry," express his preference for "cakes," tell of the "rest" for which he longed, reply "Yes" or "No," according to circumstances, and correctly state who wrote the first article about him in the newspaper. But Don has just been put through his vocal paces by Oskar Pfungst of Berlin, with a result that makes psychological mincemeat of the famous canine wonderkind of Gardelagen. It is admitted that Don has a "high tenor voice, ranging from F on the bass clef to the octave above middle C." But along with this gracious admission goes a flat denial that the dog really utters any of the words attributed to him. All Don does is to respond to his training by making certain sounds in regular order after other sounds which he hears. The rest is the work of enthusiastic listeners, who, expecting given answers, unconsciously distort "meaningless noises" into intelligible forms of speech, just as a well-known bird's "Piff-ah-rih" is converted by the imagination-aided senses into "Whip-poor-will."

Now all this would seem trivial were it not that on Don's alleged power of speech turns a question of great importance for science—nothing less than the claim frequently made that extremely complicated processes analogous to our own go on in the lower animals, and that therefore the difference between them and man is merely one of degree, not at all one of kind. The downfall of Don from his high estate as a "talking dog" is expected to put an end to all further attempts to dispute the intellectual primacy of the human biped over the sagacious four-footed companion of his daily walks. And that favorite saying of the ladies will still remain true of all canines: "He does everything but speak."

Thousands of men have failed in business because they lacked the moral courage to say No.

Victor

1898

The greatest in the world

Greater than the Metropolitan Opera House; greater than Covent Garden, where the royalty of England is entertained; greater than La Scala at Milan, the Grand Opera House of Paris, and the Royal Opera of Berlin; greater in fact than all the opera houses and places of entertainment in the world, is the seventh floor of Building No. 5—the center of a city in itself formed by the modern structures of steel and concrete that house the giant industry of the Victor and Victor-Victrola.

To this building in the city of Camden, just across the historic Delaware River from the city of Philadelphia, comes a never-ending procession of the

very greatest artists in the whole world. To-morrow it may be M. Amato, and to-morrow it may be M. Amato, or Farrar; or it may be several of them. It may be a masterpiece like the "Sextette from Lucia," or it may be a masterpiece like the "Sextette from Lucia." It may be a masterpiece like the "Sextette from Lucia," or it may be a masterpiece like the "Sextette from Lucia."

But whoever it is or whatever the organ, the four walls of this building is head, and

This advertisement is one of the double-center pages which we use right along in the *Saturday Evening Post*.

The cost of this space is \$8,000 for a single insertion, and yet this amount is insignificant when compared with the hundreds of thousands of dollars

musical center of the world

ld. To-day it may be Caruso or

Herbert and his orchestra.
organization, rest assured that within
, day in and day out, year in and

year out, music in all its forms such as no other place on earth has ever heard.

And unlike music that is heard in any other place, which is only a momentary pleasure ending with its rendition, Victor music lives forever. From its beginning in Building No. 5, it goes through the various processes necessary to its perpetuation and eventually leaves the shipping department (Buildings Nos. 9 and 10) to be heard again and again in hundreds of thousands of homes, just as it is heard in the sacred precincts of the recording room on the seventh floor of Building No. 5.

expended every year for Victor publicity. Magazines, newspapers, farm papers, are used month after month sending Victor business to Victor dealers in every part of the country, and making the Victor plant grow larger and larger all the time.

The mark of quality

The famous Victor trademark, "His Master's Voice," is a guarantee of quality. It stands for all that is best in music, and is on every Victor, every Victor-Victrola, and every Victor Record.

The best-known trademark in the world

"The Victor talking machine's design, 'His Master's Voice,' has become a household word, and the quaint little fox terrier at attention before the horn is familiar to more Americans than any of the world's great masterpieces."—*Collier's Weekly*.

Victor

Good product, sold *to* the dealer and *by* the dealer strictly on its merits, co-operation always, and protection a matter of course—that's *business*, Columbia style.

(Reprinted from last year's convention number because we couldn't say it better.)

50 PER CENT. COLUMBIA INCREASE.

Many Additional Buildings Going Up at the Columbia Phonograph Company's Factory at Bridgeport—Many More Hands to Be Employed—Columbia Force Enthusiastic Over Present and Prospective Business.

The largest increase in production ever made by any talking machine manufacturers at one time in the history of the industry will be consummated September 1 by the Columbia Phonograph Co. at their factory in Bridgeport. This increase includes both instruments and records.

In the meantime the big plant is working two full

sible this increase in our factory output.

"Things are certainly going ahead in great shape with us. Never busier, trade booming, and the prospects ahead are multiplying every minute. This reorganization and extension of our factory has been one of the first big tasks undertaken by Mr. Woods, our new factory manager. Our national advertising campaign, reinforced by remarkable co-operation on the part of our dealers, is producing a vast increase in business throughout the country. The first half of 1912 has already proved to be by far the greatest in the history of the Columbia Co., and four months and a half still to come before the beginning of the great Christmas rush."

"THE VICTOR BOOK OF THE OPERA"

Has Proven a Great Success, the Entire First Edition Having Been Sold—Honored by the United States Government.

After sending two copies of "The Victor Book of the Opera" to the Librarian of Congress to be copyrighted, one of the members of our Legal Department visited the Congressional Library to investigate some matters, and incidentally asked for "The Victor Book of the Opera." One of the librarians on looking the matter up informed him that "The Victor Book of the Opera" was indexed in the Music Section, under books of instruction.

This, when you take into consideration that records are listed therein in catalog form, is certainly a very high compliment, and one whose significance every Victor Dealer should appreciate.

However, this is actually what "The Victor Book of the Opera" is—a book of instruction—and we believe if presented to every Victor owner with this line of argument, not only will nearly every one of them buy a copy, but all those who do will rapidly develop into much more regular customers of these beautiful operatic records.

Furthermore, it is one of the best aids every salesman in your store could possibly have. If they will read it they will certainly find themselves possessed of a wonderful store of knowledge that is bound to prove very valuable to them in selling the Victor line.

If you haven't a copy you should ask your distributor to send you a few at once.—The Voice of the Victor.

WILL REORGANIZE COMPANY.

Geo. E. Brightson has purchased the assets of the Sonora Phonograph Co., 78 Reade street, New York, and is now arranging to have the company reorganized.

CONGRATULATIONS.

The genial H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., General, is wearing a broad, happy smile. The reason is a son and heir, who will hereafter make his home in the Yerkes household. Mr. Yerkes insists that the boy has already commenced making "records."

TWIN CITY SUMMER TRADE.

Excellent Reports from Talking Machine Houses Regarding the Demands of Vacationists—Foster & Waldo's Handsome Victor Department—Much Interest in New Amberolas.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, July 9, 1912.

Summer homes at lake and river resorts are making long drafts on the talking machine houses of the Twin Cities. Minnesota and northern Wisconsin is pre-eminently the summer home district of the Mississippi valley. St. Louis, Kansas City, St. Joseph, Omaha and numerous other cities of the Middle West are represented by large club houses all through the lake region. Many thousands, probably a full hundred thousand, from outside States spend the hot season in Minnesota. And, of course, every Minnesotan with means has a lake cottage. A certain proportion of these want talking machines, and those who have machines want better ones, and all want records. Hence, good business for the talking machine men.

Foster & Waldo, who put in a Victor department, after having existed as an exclusive piano house for more than twenty years, are more than satisfied with the experiment. Their location and their wide acquaintance naturally enabled them to get into the business on a lucrative scale at once.

A highly satisfactory tale is related by Jay Wheeler, manager of the Columbia Phonograph Co.'s stores in the Twin Cities. We did not see him personally, but the well-trained staff said trade was fine.

Much interest has been displayed in the Amberola No. 3, according to President Lawrence Lucker, of the Minnesota Phonograph Co. These instruments are going rapidly, he says. He also predicts a great demand for the Edison disc machines when they appear early in the fall and is preparing for what he believes will be a rush.

The Metropolitan Music Co. and W. J. Dyer & Bro. find that talking machines are a greater element in the world of music than they had suspected when they introduced them some years ago, and both are doing nice business in these lines.

DAY OF CERTIFIED ADS COMING

Is the Prediction Made by A. W. McCann in a Recent Address Upon "Publicity and Public Welfare."

"We have certified milk and certified checks. The day of the certified 'ad' is at hand," said Alfred W. McCann, of New York in discussing "Publicity and Public Welfare," the principal topic for consideration at a recent session of the Sagamore Sociological Conference at Sagamore Beach, Mass. Mr. McCann scored dishonest advertisements and said:

"Advertising to attain its noblest possibilities must begin with a conscience. Happily, advertising men are beginning to realize the abuses to which their profession has been subjected, and are beginning the reform from the inside, but the reform will be successful only to the extent to which the manufacturer lends his co-operation."

George W. Lyle.

shifts—day and night—in order to cope with the demand for instruments and records which is now coming to the company from all parts of the country.

This unprecedented increase of production not only indicates the extraordinary prosperity of the talking machine trade in general, but particularly emphasizes the well-recognized fact that the great campaign which has been so brilliantly conducted by the Columbia Phonograph Co. is bearing gratifying results.

Discussing the Columbia program of expansion in the company's general offices, George W. Lyle, general manager, stated to the Talking Machine World representative:

"Yes, by September 1 we plan to have increased the producing capacity of our factory 50 per cent. in all departments—machines and records. And we will use every bit of it. We are celebrating our twenty-fifth anniversary in the best way we know how—by making it our banner year. As a matter of fact, that is exactly what we had planned to do, but the way the Columbia demand has grown and is growing, and is so unquestionably going to keep on growing, has already exceeded our calculations. And that is why we found it necessary to bring into effect just as quickly as pos-

PHILADELPHIA, PA.

Sixth Annual Convention of the National Association of Talking Machine Jobbers Atlantic City, N. J., July 1 and 2, 1912

(Special to The Talking Machine World.)

Atlantic City, N. J., July 5, 1912.

The sixth annual convention of the National Association of Talking Machine Jobbers, in which there was probably more live interest shown on the part of the members and the trade at large than any previous gathering in the history of the organization, is now a thing of the past, and the association has now started on a new career as a body reunited in spirit and strengthened in many particulars.

There were, of course, differences of opinions—there must be in any gathering of more than two people—but the compromise route was found to be the safe and sane path, and its adoption served to place matters on a perfectly satisfactory and pleasing basis, much to the relief of the majority of the members.

The first session of the convention was called to order on Monday morning at the Hotel Chalfonte, with President Lawrence McGreal in the chair and with about sixty members present. After the formal roll call Mr. McGreal proceeded to deliver his annual address, which constituted a careful summing up of the conditions facing the association for some time before the convention, a summary of the threatened dangers and a warning regarding the future conduct of the affairs of that body if its strength and value to the trade were to be preserved. Mr. McGreal said:

President McGreal's Address.

Since our annual meeting a year ago, or rather since the present officers assumed their respective duties, matters of moment to the association have not presented themselves with sufficient force to call forth any special action on the part of the executive committee, with the exception of those things that brought about the meeting last January in Chicago. The secretary's report, when read, will acquaint you with our action at that meeting.

The fact that only one meeting of the executive committee during the year was necessary is by no means a sign of coma, nor does it indicate any lack of interest in association affairs by either your committee or its membership. On the other hand, it indicates a pacific condition as between the factory and the jobber; a condition, I trust, that will continue indefinitely, for I feel that the less agitation created on matters, except those of very paramount importance, the better it will be for all concerned.

It is the easiest thing in the world to start trouble in an association such as ours, and agitation on things of minor importance leads too often to serious misunderstanding and unnecessary clashes between manufacturer and jobber and dulls the weapon necessary to be used when serious and consequential matters arise.

What the Association Means.

This association, if left to itself and directed in policies by its members as a body in annual meetings and carried through the interval by a wise, carefully selected body of executive officers, means much to the jobbers and dealers. No one man, nor set of men, should consider himself or themselves bigger than the association, and the power that official position gives them should not be used to promote their own interests, lead them to attempt to divide the association into factions, nor license them to attempt to elevate their friend and crush their enemy or business competitor.

The members of this association should discard all personal interests and forget all personal likes

or dislikes, and stand shoulder to shoulder and fight as one man for anything and everything that benefits the whole.

We have witnessed a spectacle during the last few months, and which came to its climax at Chicago only a few days ago, that should be a warning to this and all other associations of its character.

We see a historic political party about to crumble, after fifty or more years of almost continual and uninterrupted unity and power, through the egotism and personal ambition of one man. Many admire that man and believe him great, an opinion I'll not gainsay, but can anyone deny that his personal ambition and greed for power will not destroy in a great measure the usefulness of a party greater than any one man?

During the proceedings of this convention I may again touch upon and speak further upon this par-

the new president will see fit to call a special meeting in conformity with the present constitution to make changes and adopt amendments that will hereafter rid this body, first, of the very obnoxious proxy stunt and in some way deprive those holding office in the association of the power of perpetuating themselves and those who are equally desirous of controlling and dictating matters that should be approved and adopted by the membership.

In conclusion, let me say that if this association is to live and carry out the objects and purposes for which it was brought into existence, we must now steer the ship into dry dock, as it were, and scrape off the barnacles that hinder our progress, and after this is done, with a good man at the wheel, steer into the bay of harmony, and see to it that all commissioned officers and the entire crew work shoulder to shoulder for the commercial safety of all on board. Let the fox terrier protect the home

Newly Elected Officers—Left to Right—Louis Buehn, Secretary; John B. Miller, Treasurer; Geo. E. Mickel, Vice-President; J. Newcomb Blackman, President.

ticular matter, but deem it sufficient at this time to caution the association members against and warn them to crush, if possible, any move that has been made or may be made here by any member to divide this house against itself by putting Victor interests against Edison interests, and vice versa.

The framers of our present constitution and by-laws constructed what, in their best judgment, was a safe, strong yet elastic constitution, but developments of certain abuses during the past year or two leads me to think that changes and amendments are vitally necessary, and while it is not my purpose or inclination to prompt or dictate any action for the incoming administration, I hope

of the old people and the old couple shelter and treat the terrier with humane kindness and consideration. Let there be no Orange nor Camden, but one united association.

Next in the regular order of business came the report of the secretary, J. C. Roush, as follows:

The Secretary's Annual Report.

"In deference to the many important matters which are scheduled to come before the association and the curtailing of the official meet to two days instead of four, your secretary will endeavor to limit his annual report, as nearly as possible, to a resume of happenings, as are.

(Continued on page 26.)

The increasing Columbia business you are missing ought to make you nervous.

(Reprinted from last year's convention number. That increase has multiplied since. Our dealers are doing 60 per cent. more business this year, and by the same token that nervousness of yours can hardly be improving much.)

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 25).

"It also behooves him to be brief and not usurp time from the many special attractions arranged this year, in addition to the wealth of amusement, recreation and pleasure of this city by the sea.

"It has taken us long enough to get this long-distance connection with each other and the distracting or disturbing factor of a long report might complicate matters as were at a certain 'phone booth one day, when a tall and aggressive one said, 'Excuse me, but I'm in a hurry! You've had that 'phone 20 minutes and not said a word!' The short, meek man answered, 'Sir, I'm talking to my wife!' In spite of your secretary's views and beliefs there might be those here who would take exceptions to anything but a brief report and express those exceptions as clearly as did a certain man who hotly discussed the merits of a certain book with its author. The author finally replied: 'No, Jim, you can't appreciate it. You never wrote a book yourself.' 'No,' retorted Jim, 'and never laid an egg, but I'm a better judge of an omelet than any hen in the State.'

"It follows, in an association like ours, that during the period of a year there should have been some change in the personnel. We have both lost and gained members, the net result being a total of 9 having withdrawn their membership and 10 being added to the fold. This shows a distracting mortality rate and should act as an incentive to each and every member of the association to exercise during the coming year an unusual effort to recoup and enlarge our membership.

"Members having been lost to the association for various reasons: 8 having discontinued the jobbing of talking machines; 8 being suspended for non-payment of dues, and the balance for various reasons.

"The new members admitted were: Sol Bloom, Inc., New York City; O. K. Houck Piano Co., Little Rock, Ark.; O. K. Houck Piano Co., Nashville, Tenn.; Frederick Loeser & Co., Brooklyn, N. Y.; A. Hospé Co., Omaha, Neb.; Florida Talking Machine Co., Jacksonville, Fla.; W. F. Frederick Co., Altoona, Pa.; Oliver Ditson Co., Boston, Mass.

"Since the last convention the secretary has collected and turned over to the old and new treasurer \$2,580.51 for current dues and last year's banquet receipts. This leaves still outstanding dues from delinquent members amounting to \$42.50.

"During the past year there has been one special executive meeting, which was held at the Chicago Athletic Club, Chicago, Ill., January 25, 1912, at which were present the following members: J. F. Bowers, Lawrence McGreal, Geo. Mickel, J. B. Miller, Perry Whitsit, Rudolph Wurlitzer and J. C. Roush.

"At this meeting a number of very important matters were discussed, among which was the advisability of asking the Victor factory to compel the jobber and dealer to charge interest on instalment accounts, and the advisability of increasing the initial qualifying purchase from three to five machines and from 100 to 150 records.

"Your secretary was instructed to write each

jobber, asking for his vote on the subject, and the matter was to be thoroughly discussed at the convention and then put up to the company in the form of a resolution requesting it to make this a part of its contract.

"The vote on the charging of interest on all time and instalment accounts was 38 for and 5 against.

"The vote on the increasing of the initial order was 39 for and 9 against.

"Another important matter taken up at the last executive meeting was the new Victor cut-out exchange. At this meeting a resolution was passed asking the Victor Co. to grant the jobber and dealer a larger cut-out list, and upon taking this matter up with the Victor Co. it very promptly and courteously granted an increase, and listed 205 more numbers to its cut-out list than was on same before our request.

"Our president, Lawrence McGreal, was instructed to appoint a legislative committee to consist of three members, and named L. H. Clement, chairman; J. F. Bowers and H. H. Blish members.

"Mr. Taft, of Boston, was appointed to serve on the transportation committee.

"A resolution was passed at the 1911 convention, requesting the Thos. A. Edison, Inc., to modify its present exchange and grant the jobbers the privilege of returning 15 per cent. instead of 10 per cent. of their record purchases.

"The secretary mailed this resolution to the Thos. A. Edison, Inc., and received a reply from Frank Dyer, president of the Thos. A. Edison, Inc.

"The secretary took prompt action when advised of the proposed adverse legislation on patent laws, and mailed a letter on the subject to every United

States Senator and Congressman at Washington and received many replies promising support against said change.

"Both factories are working strongly on this matter and it is now believed that the right to name the price on patented articles will not be affected.

"The matter of a transfer bureau for the exchange of Edison records among members was taken up with the Edison Co., but no satisfactory plan has been suggested as yet. I herewith read you Carl H. Wilson's letter on this subject.

"As a matter of record the secretary reports that the Thos. A. Edison, Inc., in a letter dated June 4 declined the association's invitation to our 1912 convention, giving as its reason a personal letter sent out by J. C. Roush.

"J. C. ROUSH, Secretary."

The Treasurer's Report.

The treasurer, J. B. Miller, next made his report for the year, showing receipts of \$1,705.15; expenditures of \$776.60, and balance on hand of \$928.55.

Report of Resolutions Committee.

Perry B. Whitsit, chairman of the resolutions committee, presented his report at the afternoon session, in which he stated there was practically no work for the committee; the only matter brought to their attention which required any action on their part being the threatened change of the patent laws, which would have quite a bad effect upon the talking machine business. He said: "The committee has prepared a resolution on these lines which will be presented to the association for its adoption or rejection at the proper time."

(Continued on page 27.)

Standing, Left to Right: James F. Bowers, Ruby Spaulding, Perry B. Whitsit, Geo. E. Mickel.
Sitting: J. C. Roush, Lawrence McGreal, E. F. Taft, John B. Miller.

Officers, Members and Friends of the National Association of Talking Machine Jobbers, Hotel Chalfonte, Atlantic City, July 1 and 2, 1912.

Report of Membership Committee.

The membership committee of the association, through Geo. E. Mickel, the chairman, then reported.

"During the year we have secured the following members: Sol Bloom, Inc., New York City; Houck Piano Co., Nashville and Little Rock; Frederick Loeser Co., Brooklyn; A. Hospe, Omaha, Neb.; Florida Talking Machine Co., Jacksonville, Fla.; Frederick Piano Co., Altoona, Pa.; Oliver Ditson Co., Boston, Mass.; E. E. Forbes Piano Co., Birmingham, Ala., and Greenhut-Siegel-Cooper Co., New York, making a total membership of 100. During the year letters have been written to all jobbers who are not members of the association, urging them to come in with us.

"There are now about 30 jobbers who are handling Edison and Victor goods that are not yet members of the association, and a strong effort should be made to secure them, and I would suggest that the membership committee of the association for the coming year be arranged at the earliest date possible during this convention and that they be gotten together while here and be given the names of the firms that they are expected to interest in the association. By a careful selection of the committee it could be so arranged that many of the jobbers who are not now members could be personally seen, and there is not a doubt but what our membership could be very greatly increased by a plan of this kind."

Report of Special Traffic Committee.

One of the interesting reports made at the morning session was that of the special traffic committee, L. C. Wiswell, chairman, which follows:

"Your committee has been confronted during the past year with two very important questions, namely, the proposed increase in freight rates on talking machines enclosed in cabinets from first class to double first class, by the Western Classification Committee, and a uniform change in classification on phonographs and talking machines enclosed in cabinets and without cabinets, crated or boxed, LCL shipments first class, CL, or carload, third class, by the Official Classification Committee.

"The proposed change in classification by the Western Classification Committee, if adopted by it, would have meant an extra expense of thousands of dollars to distributors and dealers each year; in fact, it would have been prohibitory for a large number of distributors and dealers in the far Western territory to continue handling the Victor line on account of the fact that their profits would be practically wiped out by the increased cost in transportation.

"Your committee, reinforced by W. F. Fulghum, representing the Victor Talking Machine Co.; J. C. Rodgers, representing the Thomas A. Edison, Inc., and W. C. Fuhri, representing the Columbia Phonograph Co., appeared before the Western Classification Committee, who were in session at Milwaukee during the month of July, 1911, presenting arguments as to why the proposed change in classification should not be acted upon favorably by them.

"Your committee is pleased to report that the arguments presented were favorably considered by the Classification Committee, the result and effect being that the proposed change in classification was not made.

"A circular letter, dated September 7, 1911, was sent by your committee to all Victor, Edison and Columbia jobbers apprising them of the action taken by the Western Classification Committee.

"During the early months of this year, 1912, the Victor Talking Machine Co. experienced considerable trouble with the freight inspectors of the Pennsylvania railroad at Philadelphia, they (the inspectors) changing the classification on Victrolas from first class to one and one-half first class.

"W. F. Fulghum, of the Victor Talking Machine Co., took the matter up with the proper authorities and succeeded in having included in Docket No. 10 of the Official Classification Committee a specification reading as follows: 'Phonographs or talking machines mounted in cabinets or without cabinets, in crates or boxes (CL minimum weight

(Continued on page 28.)

Columbia dealers are holding a mid-summer convention of their own—all over the country—largely attended by customers with money to spend.

(Reprinted from last year's convention number. That convention is still in session, and the attendance is greater than ever before in the history of the talking machine business).

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS— (Continued from page 27).

24,000 pounds) (subject to ruling 27) LCL first class, CL, third class."

"A meeting of the Official Classification Committee was held at 143 Liberty street, New York, beginning April 23, 1912, for consideration of the subjects enumerated within the docket.

"Your committee, by its chairman, together with

Mr. and Mrs. C. N. Andrews Watching Bathers.

W. F. Fulghum, of the Victor Talking Machine Co., and J. C. Rodgers, of the Thomas A. Edison, Inc., appeared at this meeting and presented arguments before the committee in support of the proposed change in classification.

"Should this uniform classification be adopted by the Classification Committee, and we have every reason to believe that it has already been adopted (no information can be obtained on this subject, for the reason that the new classification docket has not as yet been issued), it will mean the elimination of further controversies pertaining to the classification on talking machines enclosed in cabinets, for the reason that the classification covers a uniform ruling, and phonographs or talking ma-

Notice Louis Buehn's Nifty Little Cap—Why?

chines, whether mounted in cabinets or without cabinets, will only be subjected to first class rating on LCL shipments and third class on CL shipments, minimum weight 24,000 pounds.

"So important is the question of transportation—freight costs on talking machines, records, sundries, etc.—to the members of this association, as well as those jobbers who are not members of the association, and you and their dealers, that this association should have a standing traffic committee, whose duty it would be to look after all questions pertaining to same. Therefore, your committee begs to recommend that at this meeting you create and maintain a traffic and transportation committee. Respectfully submitted,

"L. C. WISWELL,
"Chairman Traffic Committee."

Arrangement Committee Report.

The Arrangement Committee also made a report of their work in connection with the making of preparations for the present convention.

Protest Against Oldfield Bill.

At the afternoon session the following resolution protesting against the passage of the Oldfield bill was offered by Mr. Whitsit and unanimously adopted:

Resolution Against Oldfield Bill.

"Whereas, Unless prompt action is taken by the holders of the patents and those interested in protecting patented articles, Congress is likely to nullify the recent decision of the Supreme Court in the Dick-Henry case, every plant owner, every patentee and every person interested should wire their Senators and House members at once, as well as other members of Congress with whom they have personal or political relations, protesting against the passage of the bills now pending; and

"Whereas, The assault on the patent system has practically been centralized in House Bill No. 23417, introduced by Mr. Oldfield, chairman of House Committee on Patents, on April 17. The companion bill in the Senate is No. 6273. The measure is intended to affect a complete revision and codification of the patent statutes. It makes many radical changes in the method of taking out patents, the terms of the patents and scope of protection afforded by them. The most drastic sections are 17 and 32, providing, respectively, for compulsory licenses, as under the English system,

and with a further provision that the owner of any improvement may compel the owner of a basic patent to grant him a license. Section 32 and other sections of the bill absolutely prohibit any restriction whatsoever accompanying the sale of a patented machine, whether in fixing the price, the mode or terms of use, or the materials with which the machine shall be used. This bill completely nullifies the recent decision of the Supreme Court in the Dick-Henry case. There is danger that the bill will pass in the House unless there is determined opposition; therefore, be it

"Resolved, That the National Association of Talking Machine Jobbers unanimously opposes this assault on the patent system of the United States, and that a copy of this resolution be sent to each

Fun on the Beach.

of our several representatives in Congress and the Senate of the United States."

The Election of Officers.

A special matter of interest in association circles and a matter that served to attract many of the members to the association in person was the question of proxy voting, which had served to stir up wide discussion and considerable feeling during the past year or so and promised to become a live issue at this year's meeting. The example of the two great political parties in their conventions in Chicago and Baltimore seemed to have a decided effect upon association politics, for there was talk of bolting the convention, disbaring delegates and

(Continued on page 29.)

Some of the Early Arrivals in the Convention City.

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 28).

forming a third party along lines that have become quite familiar during the past month or so.

There were two tickets in the field and the electioneering was fast and furious, the most convincing arguments being offered in favor of the various candidates. Before the afternoon meeting and the election both sides stood firm and threatened deadlock, but after the matter had been talked over calmly in the convention it was decided that a compromise would not be such a bad arrangement after all, especially after the president had been decided upon. In the selection of the president the "harmony ticket" drew first blood after a strong contest and elected J. Newcomb Blackman to the highest office in the gift of the association, with a vote of 44 to 42. As a matter of fact it was proxies that really decided the matter, those favoring Mr. Blackman having taken the precaution to salt a few of those valuable documents away for safe-keeping and possible use, which move, for their interests, was a very wise precaution. The manner in which the proxies made for the balance of power is well illustrated in the figures, there being seventeen proxies voted for the winning ticket and fifteen for the ticket headed by Mr. Taft. The closeness of the vote might be taken as a tribute to both candidates and to the high esteem in which both were held by the members of the association. Following the election of the president the balance of the ticket was divided between men of both sides and neutrals, as follows:

OFFICERS 1912-1913.

President, J. Newcomb Blackman,
New York.

Vice-President, George E. Mickel,
Omaha.

Secretary, Louis Buehn, Philadelphia.
Treasurer, John B. Miller, Philadelphia.

Executive Committee:

H. H. Blish, Des Moines, Ia.
O. K. Houck, Memphis, Tenn.
J. F. Bowers, Chicago.
C. A. Grinnell, Detroit.
W. D. Andrews, Buffalo.

President Blackman's Appreciative Remarks.

Following the announcement of his election as president Mr. Blackman said:

"I suppose a few remarks from me at this time would be in order, but I will be very brief. I appreciate most highly the honor you have conferred upon me, and more particularly the confidence which I hope is expressed by your action.

"There are always those who doubt the sincerity of candidates for office, but I want to assure you that it will be my aim to serve the interests of every member without regard to my own, except in common with all members.

"Should I ever be unable to assume an impartial attitude and give a 'square deal to all,' you will have my resignation. It is a great responsibility to take office at this particular moment, owing to conditions with which you are familiar, but I believe in harmony, in the organization, will work for it, give you the best there is in me, and I ask your support to that end. I have nothing further to say at this time, except to thank you with a sincerity that comes from the heart."

Lawrence McGreal's Closing Words.

Immediately after the election of officers, when the smoke of battle had cleared away and general harmony was the rule, President McGreal made the following remarks regarding the position taken by him in the controversy preceding the election, and his statement was deeply appreciated both by those who had been against him and those who had been with him. The manly action of the retiring president made a deep impression. He said:

"I desire at this time to say a word or two in defense of the position I have taken in matters pertaining to the instance just ended. My fight, while seemingly personal, was not intended to be so. I fought for principle and not against the personnel of the opposition. I jumped into the ring

with my hat on my head and with a somewhat overheated brain under my hat, after I saw the proxy our secretary had mailed to distributors and above which he wrote that your executive committee had indorsed the ticket he set forth. Knowing this statement to be contrary to facts I assailed him for his attempt to mislead and deceive the membership, and although knocked against the ropes and on

An Early Morning Stroll on the Boardwalk. Get L. C. Wiswell's Debonair Expression.

and although knocked against the ropes and on

my knees only an hour ago, I am glad now to find that nobody turned off the gas and that little or no china was smashed in the crockery department. I am ashamed of myself and apologize to every member for the bad and most undignified letters I have written during the last month or more. I ask Mr. Roush to forgive me for all I have written or said and consider all as coming from an overwrought brain and not from the heart that throbs only in most kindly feelings for every man on his ticket. Fat, good-natured Taft and myself have been friends for years, and I love that good-natured fellow. We peddled wax records and Edison phonographs together years ago, and personally there is no man in the association whom I would rather help to honor than Elton F. Taft. Let us all forget and forgive and begin anew the work of uplift, and in harmony stand shoulder to shoulder for the promotion of all that is for the best of our association."

The meeting then adjourned until Tuesday.

OPEN SESSION OF ASSOCIATION ON TUESDAY.

The Most Notable Event of This Interesting Meeting Was the Paper Read by Mrs. Frances E. Clark, in Charge of the Educational Department of the Victor Talking Machine Co.—Remarkable Document in Many Ways—Other Speakers Included M. A. Carpell, of the Herzog Furniture Co., Daniel G. Williams, of the Udell Works, Henry C. Brown and Walter G. Fulghum, of the Victor Co.—Invitations Received for Next Year's Convention.

(Special to The Talking Machine World.)

Atlantic City, N. J., July 5, 1912.

On Tuesday afternoon was held the open session of the convention, to which were invited the various representatives of the Victor Co., and the several supply men in attendance, and on which occasion interesting addresses of special character were made.

The first business to come before the open session was the hearing and consideration of the invitations extended by those cities desiring next year's convention and Niagara Falls, Richmond, Va., and Atlantic City all made eloquent appeals for the honor. James F. Bowers, who stood for Atlantic City, said: "I don't care which city you choose for next year's convention so long as it is Atlantic City," and there were many of the same opinion, despite the fact that Col. W. F. Dabney, business manager of the Chamber of Commerce of Richmond, Va., made an eloquent address in favor of that city and promised an abundance of Smithfield ham and real mint juleps to the visitors. After a short argument the choice of next year's meeting place was left to the Executive Committee of the association, which will ascertain the desires of the members through the medium of a mail vote and decide accordingly.

The event of the open meeting was the reading of a highly interesting and valuable paper on the progress made by the educational department of the Victor Talking Machine Co., and the plans for the future in that direction, by Mrs. Frances E. Clark. The paper made a distinct impression upon the jobbers assembled and was as follows:

MRS. FRANCES E. CLARK'S ADDRESS.

To present a matter of such vital interest as our educational work to every distributor needs no apology. While the department, as such, is still in its swaddling clothes, the idea is not new, and from the nature of the subject matter must inevitably become one of the vital developments of the Victor business.

Music is at once the oldest and the youngest of the arts—the very first to be used as an expression of man's needs and the last to be developed into a practical science. A writer has truly said: "Music is the fourth great elemental need of man—first, food; second, clothing; third, shelter; fourth, music." Certain it is that beyond the bare necessities of life there is no one thing so universally loved—none so universally used in one way or another.

Because of this innate craving of the human soul for music the success of reproducing instruments has been assured.

The principal purpose of all music is to give pleasure. The degree in which it fulfills its mission depends both on the content of the music itself and upon the tastes (natural or acquired) of the hearer. For centuries of the world's history music played an important part in ceremonials and in inciting to activity, arousing the passions of love, courage, hate, vengeance; worship and adoration. Because of its rare power men finally began to study its laws, and developed its wonderful possibilities into the greatest of the arts.

The Evolution of the Talking Machine.

The history of the talking machine has been, in some sense, an epitome of the history of music—first, it inspired a feeling of awe at the marvel of it; then it was a curiosity, a luxury of the idle rich, then a toy for tickling the risibilities of the

Mrs. Frances E. Clark.

uncultured, then its largest field of usefulness, catering to the amusement of a large portion of the populace, who, financially unable to attend concerts, recitals and opera, still paid tribute to the power of the art by becoming patrons of the little soundbox that made for them many hours of pleasure and enjoyment.

Then came the era of the development of grand opera and the opera star and the marvelous reproduction of the gems from all the great operas. The artists became friends to the machines that made possible their welcome into the homes of the cultured and prosperous, and sent hundreds of thousands to hear the original voice by way of the box office. The primary purpose of amusement took on a more serious aspect and the desire to learn to appreciate a better class of music prevailed.

Now comes the latest phase of the metamorphosis of the mechanical talking machine from a toy with which to while away a tedious hour or enter-

(Continued on page 30.)

That's a great record catalogue of ours—it's a salesman—use it as such. It presents just such a good list that musical people without Columbias will want the records. It's a stimulant and an attraction.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 29).

tain one's friends, to a high class musical instrument to be used intelligently and purposefully, as a legitimate part of the intimate atmosphere of the home and an indispensable adjunct in the equipment of the modern school. What was once a luxury has become a necessity. A writer has said, "If you wish to establish a national policy put it in your school system."

Now with an invention so wonderful as the Victor, and records of all the great artists, all the great composers, showing all epochs, schools, forms and nationalities made possible for everybody—the great love of every human soul for music of some sort, the general awakening of our people to the development of music, in all its forms—choral, opera, orchestra, etc.—it is obvious that such a medium should be made a national policy.

General Manager Geissler Saw Ahead.

Our astute, wise and far-seeing general manager realized this years ago, and began looking to the schools as the means of making the use of the Victor machine stable and universal. About the same time others from the inside of the schools began utilizing the Victor as an educational factor in practical school work—not as an amusement, not as a fad, not even as an entertainment, but hailing it as the panacea of all the ills of the age in music study; a solution of the problem of pure tone production, a veritable godsend in helping to establish high standards, better tastes and a wider knowledge and higher appreciation of the best in the world's music.

So the educational department came to be and now, having completed its first year, is ready to give an account of what has been done and some outlook for the year to come.

Three years ago there were only a few sporadic cases of the Victor being used in studios and colleges, but, so far as known, none in a system of schools or as a regular part of public school work. A year and a half ago Victors had been installed in the schools of only four or five cities. To-day we find them being used in the schools, of 350 to 400 cities.

Within the year I have spoken on the programs of eleven State and National conventions, have lectured and demonstrated in forty-eight cities, in some of them several times, in twenty-two different States. Millions of copies of educational literature have been given out.

We have held demonstrations at eleven National and State conventions, and in that way reached hundreds of the leaders in educational work.

This convention work, doing personal demonstrating to such large numbers of leaders, is wonderful advertising, and of a sort that will surely bring us large returns.

Lectures in Summer Schools.

This is a busy season for the educational department. Conventions, summer schools, chatauquas must be reached during the summer term. I shall personally visit and give lectures in a number of these summer schools, speaking at the Silver-Burdett School at Evanston, Ill.; Valparaiso University, Valparaiso, Ind.; Purdue University,

at Lafayette, Ind.; DePauw University, at Greencastle; the Ohio State University, at Columbus; the State Normal School, at Ypsilanti, Mich.; Cornell University, at Ithaca, N. Y.; University of Virginia, at Charlottesville, and as many others as possible. Demonstrations were held during the session of the New York State Music Teachers' Association, and a full week of demonstrating will be held in connection with the National Educational Association in Chicago, July 6 to 12. This is the largest educational meeting in the world, and gives a splendid opportunity to reach large numbers of school people who attend this convention to get new ideas. We shall have a force of five workers there, and shall play from 7:30 each morning until 11 p. m. during the entire week.

This personal work will be supplemented by a very talented and efficient corps of helpers.

Miss May Harbin will give lectures in the State University at Athens, Ga.

Mrs. Maude Truitt, supervisor of music, Mobile, Ala., is using the Victor throughout the session at the University of Alabama.

I. G. Jones, superintendent of schools, Salada, Tex., is giving a series of ten lectures in the normal schools and universities of Texas.

Miss Ada Van Stone Harris will use the Victor throughout the session in her primary work at Chataqua, N. Y.

Miss Catherine Zisgen, supervisor of music Trenton, N. J., will use the Victor for her work at Cape May Point, N. J., in the summer school.

E. L. Coburn, supervisor of music, St. Louis, Mo., will give a series of at least ten lectures in the normals of Iowa.

Miss Celia Campbell, supervisor of music in Evanston, will give lectures at four normal schools of Illinois and four in Missouri.

Charles A. R. Stone, superintendent of schools at Coldwater, Mich., will give lectures at the State Music Teachers' Associations of Ohio at Columbus, of Indiana at Elkhart, and also a number of universities and normal schools in those States.

Miss Anne Shaw Faulkner will again use a Victrola in demonstration in the Ginn & Co. Summer School at Chicago.

Theo. E. Fitz will use the Victor in the Normal College of Colorado at Greeley, and give demonstrations in Denver and Boulder.

Frederick Chapman, supervisor of music, Portland, Ore., will give a series of ten half-hour lectures with the Victor in the regular course in the summer school of the University of California at Berkeley.

Miss Lucy Cole, supervisor of music at Seattle, Wash., will give a series of six lectures in the University of Washington at Seattle.

Mrs. Constance Barlow Smith will give a series of lecture-talks with the Victor in the University of Illinois at Champaign.

In addition to these, the Victor will be used by a great many directors of the music departments of summer schools everywhere. Miss Caroline Bourgard read a paper before the Music Section of the Kentucky State Association last week, and illustrated it by classes from the public schools, from

every grade, singing songs they had learned from the Victor records, and illustrating school work as done with the Victor.

Invitation That Could Not Be Accepted.

One of the saddest things I have been called upon to do was yesterday to file away about twenty-five letters from college and university presidents, inviting me, with most cordial welcome, to come to their summer schools and give lectures and demonstrations, in cities which it is impossible for me to reach before the term closes. These invitations have come from Maine, Massachusetts, New York, Dakota, Montana, Texas, Nevada, Washington, Alabama, Carolina, Tennessee, and from every part of the country. I have never so much wished for wings and the gift of omnipresence as at this time.

Never in all my experience of school work have I known any mechanical or commercial commodity to be welcomed into the schools, so sought for, as the Victor—our idea of "The Victor in the Schools" being placed on programs everywhere and given professional recognition. Not only have we succeeded in opening up the proposition by means of all our advertising, and making a market (as must be done with any article of commerce, which is oftentimes a difficult procedure); but the school people themselves are meeting us more than half way and are seeking diligently for more information and buying as fast as the matter can be properly presented to them.

What has been done is but the merest beginning. We are proud that we have done so much, but humble that we have not done more.

Our folk dance records have proven very attractive to the physical culture and recreation people and large numbers of them are being used this summer on the playgrounds.

Results of Recreation Congress.

One of the most delightful opportunities for exploiting the Victor came in connection with the Recreation Congress held in Cleveland, June 5 to 8. There were present nearly 400 delegates from all parts of the United States, Canada, England, China and Brazil.

Folk dancing was an important part of the discussions. On Thursday afternoon Mrs. James J. Storrow, of Boston, read a paper on folk dancing, which was followed by an hour or more of illustrative folk dancing by Mrs. Storrow, Miss Burchenal and about sixteen delegates called from the floor. This was carried out on the stage of the Chamber of Commerce before the entire congress. They danced seven of our dances. It was a decided success, every record being in perfect time, easily followed and went without a mistake.

The most fertile field for endeavor is in the high schools, of which there are 10,000 in the United States. High school music everywhere has suffered a great handicap always from the peculiar situation of affairs. The mentality of young people in high schools has been raised by their studies in literature, and the languages to a discriminating point, where, if the music is to stand comparison, it too must present opportunity for definite study

(Continued on page 31.)

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 30).

in a tangible, sensible form. The courses are crowded with electives, and the boy and girl are often put about to find time enough to cover the courses leading to graduation. When the music is credited pupils elect it very freely, but great difficulty is found on account of music not being accredited on entrance requirements in the colleges, only a few giving such recognition.

The college people say that chorus singing alone does not represent a sufficient amount of mental development to be recognized as equal with mathematics or the sciences. The high school supervisors have tried elective classes in harmony, theory, counterpoint, etc., the dry study of form and grammar, but they attract only the musical few and so there is at present a great turning toward music appreciation, learning the literature and history of music in an effort to earn the coveted entrance credits and to make the study more popular and useful to the general embryo citizen.

Music in the Schools.

High school music should appeal to every pupil, regardless of whether he can sing or not—should be aimed to interest, develop and educate every single boy and girl, not so much in the grammar and theory of the subject, as to make intelligent listeners, a nation of music lovers, knowing enough of the history of music, the development of different schools, ideas and national characteristics to take in the message of the composer, to understand the skill of the performer when heard. Just as an educated person takes pleasure in reading a book, enjoying the story, the literature, style, the wit, the descriptions, the subtle analysis, the underlying lesson or moral. No one would become an intelli-

A Trio of Convention Ladies—Mrs. L. J. Gerson, Mrs. Green and Mrs. E. P. Hamilton.

gent reader if he never had for reading anything but his grammar school essays or a few chapters from "Little Women" or "Robinson Crusoe," yet that is exactly the condition of the average high school pupil in music.

It has never been possible for them to hear music beyond their own ability to produce or that of the church choir or an occasional concert by mediocre talent, never the really great music. High school music has for ten years been the most vexing of the supervisor's problems, largely because of this state of affairs. It has been discussed at almost every State and national meeting, everybody trying to find some way to keep the subject interesting and at the same time be worthy of credit.

I have the pleasure of knowing personally almost all the supervisors in all our large cities and have been intimately connected with most of the movements for improvement in these years. It is because I know the conditions throughout the country so well that I saw the opportunity of getting out a course of study for high schools, supplying their crying need of a course at once of the greatest possible human interest and the highest cultural and mental development.

Teaching Music Appreciation.

It has been found exceedingly difficult to teach music appreciation without the real music to appreciate, and so the field is wide open for our new High School Course of Study. We have been planning this for a year and now have ready a "Prospectus" of the work, giving you some idea of its scope and its tremendous significance. The

James F. Bowers in Reflective Mood.

book has been written by Miss Anne Shaw Faulkner, of Chicago, under my direction, and presents a full four years' course of study, thirty lessons for each year, 120 lessons in all, covering the field of music history, instruments, opera, oratorio, illustrated at every point by our records. These records are each analyzed so that the story may be understood.

Without doubt this course will have a very marked effect on high school music everywhere, and, in turn, on the tastes of the people at large. It is unique and epoch-marking—there is nothing like it anywhere, and it will inevitably change completely the teaching of music in the high school.

If we are ever to become a really musical nation, if our composite civilization is ever to develop into a really American type, seeking to express itself in music, it will come as the result of a more widely disseminated knowledge of music in its higher and better forms among all the people everywhere.

As I see it, "The Victor in the Schools" is, under a wise Providence, to be the most efficient means yet discovered to bring about a complete revolution of those conditions and make high school music equal in value to any other subject in the curriculum.

Business Side of Educational Work.

Now, what of the business side of the educational work? It is to be a substantial and real basis of demand. It is not at all the small matter of selling a few instruments into a school here and

Louis Jay Gerson and John B. Miller with the Happy Feeling.

there, but a nation-wide movement that, filtering through the schools as the most democratic institution we have, shall go into the homes of the rich and poor alike, producing an intelligent knowledge and love of good music among all our people.

As we have said, the talking machine came to amuse, but it will remain to educate, which means a Victor in virtually every one of the 525,000 public schools, and the thousands of parochial schools and the academies, private schools, colleges and universities, and all those are the merest beginning.

For the first seven years of school life we learn to read; for the next seven, and ever thereafter, we read to learn. In the beginning music reaches our love, then if our love be of the head as well as of the heart, all the rest of life we love to reach out for more and better music.

Like the Biblical Rich Man, the Victor Co. are tearing down their barns to build greater, in order to make more Victors to sing to more people, who learn more music by buying more records, which brings more money to build more factories, etc., etc., ad infinitum.

There are, approximately, 25,000,000 children in the schools of the country. Every child that hears and learns to love the Victor in school means one of an enormous army of advertisers in the homes for immediate returns, and as they grow up, an ever increasing number of homes in which the Victor is a welcome and indispensable concomitant.

The plans for school work are only yet beginning. We shall keep an ear to the ground and meet and anticipate every movement in the school work which we can serve. All our efforts could fail without the earnest co-operation of our distributors. This we are sure we shall have, now that the scope and value of the idea is better understood. It will be of the utmost value to us if we can have prompt reports of machines sold into the schools and any and all items of interest, pictures, etc., of school work.

The distributors are to us like the sentinels on the wall, and we say, "Watchman, what of the night?" Keep us posted.

Why the Dealers Should Aid.

We often are absolutely in the dark as to what is being done in the different parts of the country, through the neglect of our dealers to inform us. Ofttimes we get reports of splendid selling being done through the supervisors, superintendents or some one of our traveling men. It is to your interest and ours that we are accurately informed as to the progress of the work.

Very many of our dealers are now employing special salesmen for the school work, someone who is capable of going into the schools and presenting the matter in an intelligent fashion.

Beginning with September there is absolutely sure to be a great season of interest on the part of the school people. The field is just opening. Hundreds of schools have promised to buy the Victor at the opening of the school year in September.

If you will send a special representative into the schools of your city to follow up the immense amount of advertising that we are doing during the summer by personal work and literature, and through our advertising in school papers, which we hope next year will reach every State in the Union, we cannot fail to have a perfectly astounding result; but all our advertising and all our efforts will fail unless those on the "firing line," as it were, go directly into the schools and make the personal appeal that is oftentimes necessary to close a sale. Ofttimes it is not practical to send an ordinary salesman. The school people are, of course, cultured, educated people, and to present a matter to them properly requires some knowledge, both of school conditions and of music in general. They need to be shown not only the beauties of our Read Seal records, but how to make practical use of our educational records as well, in all lines of work, so that they may give a reason to their patrons and boards of education for the expense incurred. It is not enough that we simply show that we can amuse and entertain the chil-

(Continued on page 32.)

We told you so!

That 1912 would be the Columbia year in the Talking Machine trade: The middle of 1912 is here—and we're right here with it, where we said we would be.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 31).

dren; they cannot afford to spend money for that purpose alone; but if they show them that it is an actual necessity in carrying out the school work in the marching, folk-dancing, calisthenics, penmanship, etc., in giving music lessons in tone quality, tone production, breathing, enunciation, etc., and all the phases of the music work, then it appeals as a necessity, even though a very delightful one, in the same sense as maps, globes, supplementary readers, etc.

A Big Undertaking.

This school matter is not at all a small undertaking, but is already reaching into every part of the United States, Alaska, Hawaii, the Philippines, Jamaica and Porto Rico. The initial sale of the Victor in the school is but the beginning, as through that one instrument attention is called to the value of the Victor in every home in the community. In no other possible way can we build up so strong, solid and substantial support for the Victor and Victor records.

May we not depend upon your most earnest and whole-hearted support, and together we shall be instruments in the great missionary plan of mak-

ing America the most musical nation on earth?

M. A. Carpell Gives Talk on Cabinets.

Following Mrs. Clark came M. A. Carpell, of the Herzog Furniture Co., who delivered an eloquent address upon talking machine cabinets in general and the advantages that accrue to the dealer through the handling of such a line. Mr. Carpell pointed out that the cabinet was the legitimate companion to the average talking machine; that it encouraged the owner to take care of his machine and to add to his library of records and that it added materially to the attractiveness of the entire proposition. He pointed out the advances that had been made in the art of making cabinets to match talking machines and the ease with which they were sold and in short impressed those present with the opportunity that in some instances lay neglected at their door. His talk was enthusiastically received, especially in view of the fact that Mr. Carpell is a prime favorite with the trade in general.

D. G. Williams Called Upon.

Daniel G. Williams, the veteran representative for the Udell Works, was also called upon to

speak and made a short address of general character, expressing his satisfaction over the development of the trade in general and the manner in which he had been received by the jobbers.

H. C. Brown on Advertising.

Henry C. Brown, advertising manager of the Victor Talking Machine Co., next addressed the jobbers and called their attention to the efforts being made by his company to satisfy the demand for its product through the erection of large additions to both the record pressing and cabinet factories, which will be ready for occupancy early in the fall. Mr. Brown also emphasized the fact that the Victor Co. has planned to spend a million and a half dollars in advertising this year, \$190,000 being spent in special displays in the Curtis publications, the Ladies' Home Journal and the Saturday Evening Post alone. Arrangements are also being made to advertise the educational campaign in the various prominent educational publications.

After a brief talk by Walter B. Fulghum, office manager of the sales department of the Victor Co., the meeting adjourned in order that the jobbers might prepare for the banquet in the evening.

NOTABLE SPEAKERS AT THE JOBBERS' BANQUET.

(Special to The Talking Machine World.)

Atlantic City, N. J., July 5, 1912.

The gala event of the convention, from a social standpoint, was the annual banquet, held at the Marlborough-Blenheim on Tuesday evening, July 2, and which was attended by practically every jobber who had been present at the sessions, as well as by a number of guests. The general good fellowship noted at all gatherings of talking machine men, after more serious business had been disposed of, was much in evidence on this occasion and all thought of strict formality was set aside as soon as Pierce's "Angel Chorus" got into action, which was early in the evening. It is hard to find a crowd which is always so willing, and in fact anxious, to join in song.

As has been the practice for a number of years, the retiring president, Lawrence McGreal, delegated James F. Bowers to act in the capacity of toastmaster, and with the general knowledge of Mr. Bowers' talents in that line, it need hardly be mentioned that he acquitted himself quite to the king's taste and that his introductory and side remarks were as much appreciated as the formal addresses of the regular speakers. Mr. Bowers has lost none of his wit nor his ability to get close to his hearers. He opened the after-dinner proceedings, following the discussion of an excellent menu, by reading a letter from Eldridge R. Johnson, president of the Victor Talking Machine Co., who said:

Eldridge R. Johnson's Letter.

"My Dear Mr. Roush—As anticipated, I shall be on my way to Europe at the time of the Talking

Machine Jobbers' convention. Relations between the Victor Co. and the Talking Machine Jobbers are, I feel, very satisfactory indeed. I feel that during the past ten years we have been gradually gaining confidence in the talking machine trade in this country. I also feel that the jobbers and dealers are gradually gaining confidence in us. I have nothing greater to hope for than that the present satisfactory conditions may continue, and I fully believe that they will. Certainly we shall do our part. I hope that the business of the association will progress satisfactorily, and that you will all have a merry time during your visit to Atlantic City. Yours very truly,

"ELDRIDGE R. JOHNSON."

The first guest called upon when the toastmaster assumed his duties was, in the natural course of events, Louis F. Geissler, general manager of the Victor Co., who, as the direct and able representative of Mr. Johnson, read a thoroughly enlightening and entertaining address, in which he said:

Louis F. Geissler's Address.

Mr. President, Toastmaster and Ladies and Gentlemen—It is just a year since we were gathered under similar circumstances, and while enjoying your hospitality it has become our custom to discuss the business interests in which we are all so wrapped up.

Another twelve months have been vouchsafed us, in which we might either add to or detract from our reputation, help to form a character and to add to or subtract from our physical assets.

Of course, no one now remembers anything which I was given the opportunity of saying at

our last convention, but I remember that I quite naturally touched upon the prosperity of the Victor interests for the year which preceded your convention in 1911, and I remember predictions that were made at that time.

A business talk must, in a great measure, be a report of what has been accomplished—followed by a forecast. I feel sure that my listeners will agree that our prophecies as made last year have been fulfilled.

It is again my pleasure to report (and when I report the Victor results I naturally give you only the reflection of our combined efforts) that the past year has again surpassed all previous ones in volume of business.

The agreeable surprise, however, is that while the last six months of 1911 were our largest fall six months up to that period the first six months of 1912 have surpassed by a large percentage those of the previous six months in dollars and cents, as well as in quantities and numbers of machines and records actually sold.

As to the future—I am always an optimist. There is small place in this magnificent country of ours for the pessimist. I am "bullish" on its prospects—as brokers say—for the long pull. In my opinion, a century more must elapse before we get through the cream into the skim milk of this country of ours, and then the bears may have the better chance.

Those of you who follow the physical and financial conditions of our country, as compared to others, must be impressed by the wonderfully prom-

(Continued on page 33.)

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 32)

ising fundamental conditions throughout our land. Figures are not exactly clear in my mind, nor have I consulted statistics recently, but my impression is that the customs house business of our country, i. e., the exports and imports, for the past fiscal year, at last reports, were in the neighborhood of \$3,800,000,000; about \$2,300,000,000, or the greater part, were exports and for the first time our exports were about equally divided between manufacturers and crops or raw material.

This is America's greatest record. The country is in a most promising condition, practically everywhere bumper crops—barring catastrophe—assured; prices of commodities such as we produce in many cases fairly well advanced, and most of them tending upwards; industries very well employed; labor scarce; labor troubles not above the normal, for we always have them, and the better the times the more labor trouble.

Political unrest is having far less effect upon commercial matters this campaign year than ever before, and I do not anticipate serious interruption of prosperity on that account.

The real wealth of the United States of America has climbed to a position almost incomprehensible—comparatively almost unbelievable. I have read but recently that the wealth of the United States is computed at one hundred and thirty billions of dollars, England's at eighty billions, France and Germany in the near neighborhood of sixty billions.

Is it any wonder that Mr. Edison should hope to see a phonograph in every home, or that the Victor Co. should preach in its most ambitious manner that the possibilities present opportunities for the sale of ten Victors to every one that is being sold?

As to our business prospects for the *immediate* future, we already have practically a splendidly prosperous fall business within our grasp, and feel that, with our country in the splendid receptive and expansive condition that it is, we may look forward to an uninterrupted era of prosperity, extending at least three or four years into the future. It is due; the cycle is upon us. We need not wait, for to close observers it will be noted that the country is already in the midst of an incipient boom, and we shall all profit by it to the extent of our capital, our ability to grasp the situation and our capacity for hard and intelligent work.

On the Subject of Patents.

I referred in my talk last year to the expiration of the Berliner patent, which would occur on Feb. 19, 1912.

You all can now look back over the past two or three years—that period during which so many ambitious new talking machine manufacturers were "getting ready" to take advantage of the wonderful new field that was to be thrown open at the expiration of the Berliner patent. I told you then what *would not* happen, and you have all been able to observe that that is just what *did not* happen; nothing dropped, nothing skidded, and there was no need for shock absorbers. The threatened and boastful new competition did not mature—there is small opening for it. Those who understood the situation worried little, if at all, about it.

Our distributors and dealers have profited as they will continue to profit by sticking by the Victor ship. It seems that we are all prone to worry the *most* about the troubles that *never* come.

There is a matter, however, before the country to-day—the matter of the patent legislation—that warrants our most serious attention, study and activity. I refer to the Oldfield bill, which is as yet in committee, not having been presented to the House of Representatives, and which is one of the most malicious and damaging attacks upon commercial interests and price control which has yet been conceived.

You will all remember the letter which our company sent to you on the subject a few weeks since, soliciting your active intercession with your Senators and Congressmen against this measure.

Our company has been one of the most active in the country in agitating against this bill, and we have been written by Senators that the oldest leg-

islator does not remember of any bill that ever met with such widespread opposition as has this Oldfield measure.

We sent out some 27,000 letters upon the subject, and while we solicited no replies we received over 700 communications and most intelligent responses from all sections of the United States. It was but natural, as the interests of every corner of the country are menaced by this bill. It is not like a tariff or other action, which may seem to affect only one section, but the fact is that every citizen of the United States would feel and observe the deterrent and damaging influences of this suggested law.

I will not dwell upon it longer, for you will receive, within a few days, an article which we will issue in book form, which emanates from the plain and powerful pen of our president, Mr. Johnston, which article will be accompanied by a letter addressed to the trade, and which we propose to send to every trade name on our own lists, to every

Louis F. Geissler.

newspaper, magazine and other periodical published in America, and to every other large company operating under the patent laws, in hopes of encouraging editorial agitation against this bill.

We must not cease our efforts, for while I have little fear of the measure being passed upon favorably by the Senate, and, above all, getting by our intelligent, judicial President, we can afford to take nothing for granted, and I beg you to study the question, and when your Senators and Congressmen return to their homes this summer to make it your business to call upon them personally and present the case to them as you understand it. You will be able to argue your side of it very well if you read the booklet that I refer to, as well as other articles which our company and others have issued.

Most people are diffident about approaching Senators and Congressmen on any subject. Please remember that they are your servants, they want your votes, and they wish to know how you feel about certain questions, and, above all, remember that there were presented at this session of Congress about 25,000 different bills. It would be quite a physical impossibility for the Congressman or Senator to study even 1,000 of them, so that *those bills* regarding which *their clients or voters* are *most insistent* will receive the *most attention*.

This is decidedly *your* business, and the most important commercial proposition with which you have ever had to do. We have had many representatives in Washington on this subject, and are actively represented there all the time, but, please,

upon receipt of this booklet on the subject, give it serious study.

Our Public School Educational Department.

I spoke last year to you regarding our then infant department—the public school educational department. The influence of that department has now been felt in every State in the Union. The innovation received immediate and serious attention on the part of the public school teachers. Its widespread and elevating influence has done, within one year, more for the prestige of the Victor Talking Machine Co. than any other effort that we have ever made has done in so short a period.

Thousands of Victors are to-day in use in the public schools throughout America, but the most encouraging features of the public school propagation are the thousands and thousands of letters and encomiums that we have received from the public school teachers, who appreciate the intelligent manner in which the Victor is being introduced into the public schools.

Our only regret has been that our dealers are, in the great majority of cases, not equal to the occasion; they do not and will not take the matter sufficiently serious to study the literature and instruction books that we have formulated for them. They have practically but to *read and learn to repeat* these to be *perfect* salesmen of the Victor to the public school interests, and to be thoroughly in touch with the thought and aims of the Victor Co. on this public school movement.

As has been the case with every other new idea, new patent or innovation that the Victor Co. has introduced, our competitors have profited somewhat thereby, but only to such a small percentage as to be hardly calculable in comparison to what we have done. They haven't the goods, they haven't the record, they haven't the talent, they haven't the "know how," and they will continue to but catch the crumbs that fall from the Victor table.

To give you some idea of what we have done in that department for you in the way of publicity, in order to send the public school people into the stores of our dealers in quest of information on the subject of "The Victor in the Public Schools," I would state that we have mailed during the past year, direct and personally addressed to the music and public school teachers of America, *over 7,000,000* separate and different pieces of literature. Imagine handling and sending out, by the Victor Co., with its own staff, that amount of matter concentrated upon a special subject like the "Victor in the public schools"—7,000,000 pieces—but there are 500,000 public schools in America to be reached.

The interest taken by the associations and conventions that are held throughout America in this subject is so great that a most unique situation is presented. You can all well imagine how the book companies, desk factories and other people interested in selling materials to the public schools of the country importune them at their conventions for privileges of showing their wares, and usually without success. They are ruled again, as I understand it, in almost all great gatherings of public school interests.

The Victor has been *invited* exclusively. Our Mrs. Clark, the manager of that department, is sought after, written to and telegraphed to from all sections of America, begging her presence to exhibit and illustrate the application of the Victor to public school work. During this summer season she has no less than six assistants visiting the various conventions, whereat numbers of teachers may be reached simultaneously, demonstrating our public school policy.

To this department I would direct your especial attention. The material is sent to you; the best brains in the country have compiled it; we have printed it and placed it in your hands. Each one of our dealers has but to study it to make himself the finest salesman in America of the Victor to the public schools, and *all this* for the sake of the *advertisement* that it is *in the family*; for the sake of securing each year hundreds of thousands of friends to praise the Victor in other circles.

(Continued on page 34.)

People want Destinn records. If you don't carry them you lose. The same with Fremstad records and Nordica and Garden and Nielsen and all the other Columbia exclusives.

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 33).

Advertising.

The year 1912 was again launched with the largest advertising appropriation in the history of the company. I hope that our enlarged newspaper campaign is appreciated and that it will prove effective. In connection with this increased advertising a man said to me: "Geissler, you are foolish. You're now always advertising goods before you can furnish them. Isn't your factory rushed to death? Are you not selling all the goods you can manufacture? Doesn't everybody know the Victor? That little dog is the best known and most valuable advertisement in the world. Why don't you save half a million this year instead of spending it? It will make a difference of a million dollars in profits to your company."

Our reply was that "we were spending nearly a million dollars extra this year in extensions to our plant. We are trying to sell the output of that factory *two years hence and not to-day*," and I believe we will do it, and *then some*.

The daily newspaper advertising which the Victor name is receiving I have had carefully estimated by our advertising managers, and find that that effort alone is costing \$600,000 per annum.

Our appropriations for advertising in the magazines, weeklies, agricultural, school and trade papers, export and foreign publications have, through this year's increase, reached a stupendous sum, but I assure you that we are not appalled thereby, and it would not be at all like us if we did not soon increase it again.

In closing I cannot refrain from extending the thanks of our company to your members and to our distributors and dealers for their loyalty in following the leadership of the Victor.

The Victor, the Victor-Victrola and the Victor disc record proposition has meant much; it has meant everything to our following and to ourselves, and even to some of our competitors.

Possibly no American industry has so thoroughly permeated the balance of the world with a knowledge of its particular merits, nor has been so favorably received as has the Victor disc talking machine, because of its educational and amusement features.

Manufacturers, the trade and the public throughout the world do admit that every important step in the advancement of the art has been first made by the Victor Co.

It has been our endeavor to present innovations as rapidly as you and the public could digest them. The public has been ever ready for our new or improved wares.

It is exceedingly difficult for us to regulate our affairs with you in such a manner as to bring out at the psychological moment a new article, but you will admit that we have done this for a great many years past with very great success; thus far few if any dealers have a justifiable complaint against the Victor Co. for the injudicious introduction of goods or for damages consequent upon old stocks.

There are some people in the trade who would have us never make changes, and would prefer old styles as long as *they* had *one* on their shelves.

I can only say that we have altogether too many narrow-minded people in our trade, as, no doubt,

there are in all other trades. Let them make a bonfire of a few of the old style machines and records if necessary; close up ventures to profit and loss and forget them; secure some fresh styles and start over again. These are the sort of houses that always lead, grow and make for "big business."

One of my last year's remarks to you was that we should gradually complete our line of Victrola types, and unquestionably in the end the line would be perfected and comprehensive. You all know how far that has been accomplished, and it now remains for us to proceed on our ever-advancing march of improvement by the advantageous modification of some of our present styles.

With the announcement that I am about to make, and which I am able to make so opportunely, our lines for this year will be practically completed, and in a manner which I trust and believe will meet with your unbounded satisfaction and admiration.

In the new styles that I am about to announce we have striven to give the public goods which would sell on sight, which would have a quality

ord rack, readily removable should the customer desire to substitute albums, and for which style we predict a phenomenal sale.

I present you the new Style XIV, at \$150, with proportions between the \$100 and the \$200 style, completely equipped with albums, and through which introduction the \$150 style will now take its place among our "best sellers."

Our magazine and other advertisements are timed to appear September 25. The public must be kept in ignorance of these styles until that date and until our dealers shall have had the opportunity of stocking them.

It seems too bad that so many of our directors are robbed of the pleasure of meeting you at these conventions, but their summer journeys—both in the line of duty at foreign points and vacations—must be arranged to secure their return by September, hence departures as early as possible are always necessary. I present their regrets, and the company extends, through me, their earnest wish for the continued success and co-operation of your association.

I take great pleasure in bidding you a cordial welcome to the Victor entertainment to-morrow, and the Victor people, myself included, look forward to a most agreeable day in your company.

Following Mr. Geissler's interesting and enlightening address, which was enthusiastically received, the toastmaster read the following letters from Emile Berliner and Chas. K. Haddon, vice-president and treasurer of the Victor Talking Machine Co.:

A Letter from Emile Berliner.

"Dear Mr. Roush: After the very successful business year which talking machine jobbers and dealers have enjoyed, it gives me great pleasure to send my congratulations to the president, the officers and the members of our association on the year's work done. It is a notable sign of the times that people want mental food and enjoyment, be it only baseball, even if they have to stint themselves on beefsteak and potatoes, all of which is more important for the well-being of humanity than expensive food, fashionable clothing and bric-a-brac of questionable artistic value.

"Talking machine people are the dispensers of endless cheer, of soul-inspiring art and harmony and I am sure often supplant the doctor by the undoubted hygienic effects which pure enjoyment carries with it. Hence I say, all hail to the talking machine business, whose mission is to stand in the front ranks of the benefactors of mankind. I hope the meeting will be a notable success. Very truly yours,

"EMILE BERLINER."

Mr. Haddon's Letter.

"My Dear Mr. Roush—The repeated invitations your association has so kindly given me to attend your annual conventions are very gratifying, particularly when it is considered that I have been forced by circumstances to decline so many. The last banquet I had the honor of attending was, I think, the one of 1910. That occasion was not only an enjoyable but a

(Continued on page 35.)

President Blackman in Unofficial Attire.

and tone, a line of architectural beauty and a finish and a general completeness that leaves little, if anything, to be desired.

I crave your indulgence for a few moments while the room is darkened to exhibit the new styles as best we can under the circumstances. (At this point the new styles of Victrolas were shown on a screen in actual color and proportion.)

I present you the new Style X, at \$75, a graceful acquisition, complete on its own legs and with a convenient shelf for albums or other accoutrements and of a convenient height to stand by and operate.

I present you this new Style XI at \$100, a perfect miniature cabinet Victrola, equipped with rec-

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 34)

profitable one also, and I am glad to know that your several annual meetings have been notable regarding the continued good fellowship and the closer working of your membership to the benefit of this great and important branch of trade. Regretting my inability to be present and again thus have the opportunity of meeting you, I am,

E. F. Taft and E. T. Towell Starting on a Ride Along the Boardwalk.

with best wishes for the continued success of your organization, yours very sincerely,

"C. K. HADDON."

Following the reading of the letters, the next speaker to be called upon was Edward Lyman Bill, editor of The Talking Machine World, who was introduced as the man who had accomplished as much as any other individual for the

advancement of the talking machine trade, through the medium of his publications and his personal influence. Mr. Bill said:

Address of Edward Lyman Bill.

"In responding to an invitation from your secretary to say a few words to my friends, the talking machine jobbers, at this banquet, I replied that it seemed I had been such a regular part of the annual show since the formation of the association that it might be well to keep me out of sight for the present year. He, however, would not accede to my wishes, and so I wrote him that I would put on a new record and start the motor as usual, provided he would permit me to use an autostop, so that the machine could be shut off at will. He assented, so here I am once more at the banqueting board of my good friends of the talking machine trade.

"It has been practically a year since we have met for a friendly discussion of business matters and a pleasant discussion of an enticing menu. A year—one whole year—that means much to the life of the nation and more to the life of an individual. Perhaps it has meant much to all of us who may be sitting here to-night. It may have meant substantial advance for some and the turning back of the wheels for others.

Edward Lyman Bill.

"We are all subject to the resistless law of change—

"The old world may turn upon its axis

And all humankind turn with it

Heads or tails, live and die make

Love and pay our taxes."

"And so it goes—changes everywhere, even the old political parties are undergoing radical changes amounting to disintegration almost; and, perhaps it is well that business men should change.

"The whole subject of merchandizing distribution needs a more careful and scientific analysis than many of us have seemed to think it necessary to make.

"Sales making in all branches of the industry is changing—methods of reaching the public are constantly changing, and no business man who expects to conduct a successful trade enterprise can be long indifferent to the radical changes which are steadily going on in every industry.

"If we remain indifferent to those changes and fail to accustom our own business plans to harmonize with them, then we must expect to suffer a certain defeat.

"As for methods—as for plans, there seems to be no fixed standard—no general trade recipe which a man may learn and apply afterward to his own field of distribution.

"That is not possible, but we can analyze them all—we can then determine what particular fragments or parts may fit in best in our own particular case.

"I question whether there ever will be in the history of merchandizing fixed or unchangeable plans which may be adopted by merchants in all lines as being specially applicable to broaden their own business enterprise.

"One man will naturally work out certain ideas and develop particular theories which he himself thinks will win him the best results in his own territory, and another man may work along entirely different lines in any section of the country, and yet both may win distinguished success.

"The principle of efficiency is well defined as meaning the relation between a determined standard and the actual performance now in production; but it is difficult to devise rules which will apply successfully to every business so that satisfactory results may be achieved; but men must have ideals, else I affirm they cannot do good work. Then let us work for an ideal in the distribution of merchandize that will stand for efficiency.

"While there may be a variety of ideas and theories as to the conduct of individual business enterprises, yet there is one standard which may be undeviatingly applied to the world of trade, and that is the standard of business honesty—a standard which insures to every purchaser a full equivalent for the money invested, and I believe that while methods may change and views of men may differ as to plans and theories, yet these fundamentals will exist as long as time endures.

"The average merchant—I mean by that the small dealer, has but a limited idea of his function in the great field of merchandizing.

Mrs. Louis Jay Gerson at Valley Forge.

"Search where you will, it will be found that the small merchant will say that there are too many competitors in the field and that it is always the other fellows that ought to get out—not himself.

"There are too many in almost any business field—no question about that; but you will find invariably that it is the unsuccessful man who rests in this belief and does not attempt to make his position a stronger one.

"One may sit down and argue that too many merchants in a local field means salaries, wages, insurance and all other expenses which must be charged up to each individual business.

"True, but one man does not want to quit to make it easier for his fellow-merchant—so there is where a careful analysis is necessary.

"Personally, I believe that many of these men must be ground out of existence because they lack the ability to size up the business situation correctly—to size up competition right, if you will, and to govern their acts accordingly.

"Too many merchants in every line, of course, there are—too much expense, surely. How can we help it?

"Can we form a great co-operative business society or company?

"Not yet; for the world is not ready for that move at the present time, and until we reach a time when ideals become realities we must struggle along as best we can, attempting to successfully solve the business problems which come to us one and all, for there will always be problems to solve between the creative, that is the manufacturers, and the distributing forces and the man who works out the best solution to the problem shows himself a bigger brained and a bigger force in the world than the man who sits supinely by, criticizes, and does nothing.

"The talking machine men of this country have reason to take pride in their accomplishments of the past and the great producing forces back of them are pushing them on with their own unconquerable energy to bigger and better things all the while."

Mr. Bill was followed by Col. W. F. Dabney, business manager of the Chamber of Commerce of Richmond, Va., who had extended a cordial and eloquent invitation to the jobbers to meet in his, the capital city of the Old Dominion, for their 1913 convention at the open meeting in the afternoon. Colonel Dabney is a fluent talker and delivered a clever address along general lines, in which humor and sentiment were mixed in just the right proportions to be attractive.

The next speaker introduced by the toastmaster was J. Newcomb Blackman, the newly elected president of the association, who made harmony in association ranks the keynote of his speech, saying:

Remarks of J. Newcomb Blackman.

"Mr. Chairman, Toastmaster, Friends, Fellow Members, Ladies and Gentlemen—It is rather embarrassing for me to attempt to hold your at-

CONVENTION OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS—(Continued from page 35).

tention or be interesting after such a flow of oratory, for I hold the distinctive position at this time of being the last speaker. You have already enjoyed the Colonel's (Kernel's), and I fear I will represent the husk. Then, again, I have not the benefit of age as compared to the former speakers, so you see you must make much allowance.

"There is a theme running through the remarks of the two preceding speakers which calls for harmony, and I will use that as the keynote of my remarks. Why should we not have harmony, when our business is supposed to produce it in unlimited quantity. Unfortunately, at times we hear discord, but if we are alert and take the proper course the discord is silenced, necessary repairs are made, and what we hear thereafter from the instrument of former discord becomes harmony again. It makes our patriotism sparkle, makes our blood flow quickly, and our heart beat fast to hear reference to former national strife, and the final harmony as related in the speech of the Colonel from Virginia.

"There is no North or South, East or West, to-day among truly patriotic Americans in times of trouble, and the past strife of our Civil War its cause, and everything is forgotten, or at least sufficiently so that we can work as a unit in the re-United States, and fight shoulder to shoulder against any outside influence that attempts to invade our present peaceful condition.

"I have always felt that the most serious strife is that which starts within our ranks, and that much of it could be avoided if we worked from the heart with the aid of the head. The problems of our country to-day cannot be solved permanently without this method. You will find most men are good at heart, but influence, which they seem to be unable to resist, cause them to use the head without the proper guidance of the heart, and when the latter does resume its proper function, it is hard to repair the damage. There are many creeds, causes, opinions and otherwise, but most men have a conscience, which, if followed would produce harmony among their fellow men.

"I feel deeply the responsibility that has been placed upon me as shown in the confidence of my fellow members in electing me president of this association, and I hope that my actions will fully justify it. While I am your youngest president, my experience dates back many years, for I cast my lot with this business at the age of 17, and let me say right now that I have never regretted it, and I consider by comparison, it is an industry of which we can be most proud.

"It has appeared to me that organizations, whether of the ordinary commercial kind, or otherwise, are inclined to be extreme. There is a tendency, according to my experience, to either attempt too much or do nothing. This reminds me of the first association of jobbers, which was known as the Talking Machine Jobbers' Association of the United States. There are probably not over two or three in a room who were members, but they will remember that our failure was

through attempting too much. The present association is the outgrowth of former ones, the consolidation of sectional jobbers' associations and the blending of them all. We have accomplished much because we have proceeded along fair lines. The jobbers of the United States should be a forceful body for good, and I think the few manufacturers we now have are justified in expecting support, and should be pledged to give theirs to the common cause, for the welfare of our industry. The reward is big enough for us all, and while we may have different opinions, affiliations, and are tempted to be guided accordingly, we should be broad and fairminded enough to recognize the rights and wishes of others.

"As jobbers, I feel that we should very reluctantly extend support to those who might invade the field beyond the present representation in the manufacture of competing goods, at least until they have proven that their policy will be one that will maintain or even improve the standard of the industry, as it is to-day. Is it not, therefore, better that we should be satisfied with a fair share of the prize, recognizing the rights of others to different opinions and decisions, and for the sake of harmony avoid strife within our own ranks; that we should all stand together in the common cause of all? Is this not the feeling we should show in regard to the 'Oldfield bill,' which threatens to tear down the 'one price system,' the foundation of our business? Let us forget the little differences of opinion when we must defend ourselves against such an enemy, and let us stand shoulder to shoulder in such a cause. There will be no strife or difference of opinion among us on this if we will all show the proper broad and fair spirit toward each other.

"I do not want to take more of your time, except to say that as president I will do everything within my power to carry out the prediction of the friend who placed me in nomination, and if I do not give you 'the best administration you ever had' it will be because the task is so difficult, and not through any lack of sincere effort on my part."

The banquet came to a close with the introduction of J. G. Corley, of the Corley Piano Co., Richmond, Va., and some interesting closing remarks on the part of the toastmaster, which he referred to as his "swan song."

Those Present.

Those in attendance included J. Newcomb Blackman, Blackman Talking Machine Co., New York; Max Landay and T. W. Eickley, Landay Bros., New York; Lawrence McGreal, Milwaukee; O. L. Neal, Neal, Clark & Neal, Buffalo; C. N. Andrews, of W. D. Andrews, Buffalo; Fred Seamon, Rudolph Wurlitzer Co., Chicago; H. P. Ruff, F. L. Frisbie, Grinnell Bros., Detroit, Mich.; E. A. S. Barklow, of Silas A. Pearsall, New York; I. Davega, New York; Burton J. Pierce, J. W. Jenkins' Sons Music Co., Kansas City, Mo.; G. A. Young, Finch & Hahn, Albany, N. Y.; Emanuel Blout, New York; T. H. Tow-

ell, Eclipse Musical Co., Cleveland, O.; R. H. Morris, American Talking Machine Co., Brooklyn, N. Y.; Carl A. Droop and W. C. Roperts, E. F. Droop & Sons Co., Washington, D. C.; Louis Buehn, L. Buehn & Bro., Philadelphia; H. H. Blish, of Harger & Blish, Des Moines, Ia.; G. A. Miers, W. J. Dyer & Bro., Cleveland; Perry B. Whitsit and W. B. Davisson, Perry B. Whitsit Co., Columbus; E. F. Taft and W. H. Beck, Eastern Talking Machine Co., Boston; Jas. F. Bowers and L. C. Wiswell, Lyon & Healy, Chicago; S. B. Davega, New York; A. W. Toennies, Eclipse Phonograph Co., Hoboken, N. J.; J. H. Dittrich, Rudolph Wurlitzer Co., Cincinnati, O.; H. W. Weymann, H. A. Weymann & Son, Philadelphia; W. H. Reynolds, Mobile, Ala.; Benjamin Switky, New York; J. C. Roush, Standard Talking Machine Co., Pittsburgh, Pa.; Geo. E. Michel, Nebraska Cycle Co., Omaha, Neb.; F. H. Putnam, Putnam-Page Co., Inc., Peoria, Ill.; H. B. Levy and Ruby Spaulding, Aeolian Co., New York; J. G. Corley and Fred Kesney, Corley Piano Co., Richmond, Va.; Henry F. Miller, J. B. Miller and G. W. Barnhill, Penn Phonograph Co., Philadelphia; A. A. Trossler, Schmelzer Arms Co., Kansas City, Mo.; S. P. Carmay and H. L. Royer, M. Steinert & Sons Co., Boston; E. C. Rauth, Koerber-Brenner Music Co., St. Louis; F. J. Heppe, C. J. Heppe & Sons Co., Philadelphia; J. Fisher, C. C. Mellor Co., Pittsburgh, Pa.; G. S. Marigold, Southern California Music Co., Los Angeles, Cal.; E. W. Guttenberg and O. K. Houck, O. K. Houck Piano Co., Memphis, Tenn.; L. J. Gerson and P. P. Cornell, John Wanamaker, Philadelphia and New York; J. M. Swanson, Houston Phonograph Co., Houston, Tex.; W. C. Ludlow and W. M. English, Wulschner-Stewart Music Co., Columbus, O.; R. C. Rogers, of Robt. C. Rogers Co., Washington, D. C.; A. Boden, L. Mazler, M. Silverstein and J. S. Cohen, of Cohen & Hughes, Baltimore; H. A. Ellis, Talking Machine Co., Philadelphia; H. T. Walz, W. G. Walz Co., El Paso, Tex.; H. G. Stanton, R. S. Williams & Sons Co., Toronto, Ont.; J. P. Werlein, Philip Werlein, Ltd., New Orleans; Milton Goldsmith, Sol Bloom, Inc., New York; O. K. Houck, O. K. Houck Piano Co., Little Rock, Ark.; Allen Wellbrun, O. K. Houck Piano Co., Nashville, Tenn.; E. P. Hamilton, Frederick Loeser & Co., Brooklyn, N. Y.; J. D. Moore, E. E. Forbes Piano Co., Birmingham, Ala.; Frank Nestor, W. F. Frederick Piano Co., Pittsburgh, Pa.; H. A. Winkelman, Oliver Ditson Co., Boston; N. Goldfinger, Greenhut-Siegel-Cooper Co., New York; S. W. Koehler, Koehler & Hinrichs, St. Paul, Minn.

Manager Walthall, of the Columbia Phonograph Co., Louisville, Ky., had a fine exhibit of graphophones, grafonolas and Columbia records at the Kentucky State Teachers' Association, which met in Louisville the week of June 25. There were over 3,000 teachers in attendance and we know of no better means of advertising than the course pursued by the local Columbia manager.

THE VICTOR CO.'S ELABORATE ENTERTAINMENT

A Busy and Thoroughly Interesting Day for the Jobbers Provided by the Victor Talking Machine Co.—Luncheon at the Bellevue-Stratford Followed by an Automobile Tour of Interesting Sections of Philadelphia and Suburbs, a Visit to Valley Forge and Dinner and Vaudeville Entertainment at Fort Side Inn—No Detail Overlooked That Would Make for Perfect Enjoyment of the Many In Attendance.

Philadelphia, Pa., July 5, 1912.

The annual convention of the National Association of Talking Machine Jobbers was brought to a fitting close Wednesday with the royal program

The Automobile Party at the Start.

of entertainment offered by the Victor Talking Machine Co., the officers of whom again proved themselves to be hosts par excellence. Special pains were taken to see that all those in attendance at the convention were duly apprised of the plans of the day and of the fact that their presence was

Entraining at Atlantic City.

greatly desired, and as a result few if any of the jobbers failed to take advantage of the opportunity to enjoy the Victor Co.'s hospitality.

The Victor people had several special parlor cars attached to the morning train to Philadelphia over

the Pennsylvania road, and upon arrival at Philadelphia the entire party adjourned to the Bellevue-Stratford Hotel, where a large section of the second floor was reserved for their use and a buffet luncheon was served in the Red Room. After a short period of rest and refreshment a string of touring cars appeared before the door of the hotel, and the jobbers and their wives started out on a long and thoroughly interesting trip through the historical sections of Philadelphia and its en-

over it, and did practically a week's work in an hour keeping things straight or tangling them up, whichever way they might put it.

Leaving the hotel the parade proceeded through Chestnut street to Independence Hall, where the building itself and the relics of Revolutionary days were inspected with interest by the visitors, and thence to Old Christ Church, wherein is Washington's pew; the Betsy Ross house, where the first American flag was made and to Benjamin Franklin's

On the Lawn at Fort Side Inn.

virons. There were twenty-two cars in all, each bearing a number prominently displayed and each being handsomely decorated with pennants bearing the word Victor in white on a blue ground with a clever replica of the Victor dog in applique. It made an imposing parade that must of necessity have added much to the prestige of the Victor Co. among the citizens of the Quaker City. As a matter of fact the proposition was so appalling to the traffic policemen that they got all fussed up

tomb. Leaving the heart of the city the cars made their way through the most beautiful sections of Fairmont Park and the suburbs of Philadelphia

Visiting the Betsy Ross House.

to Valley Forge, where Washington's headquarters were located during the winter of 1777. Here the old house itself and the Washington spring were visited, and the party again entered the cars for the last lap of the long trip to "Fort Side Inn," where a dinner and further entertainment were provided.

Just before the dinner was served the visitors were treated to a most welcome surprise in the form of an opportunity to view in the flesh, as it were, the three new styles of Victrolas, which were referred to by Mr. Geissler in his speech at the

(Continued on page 38.)

earlier in the day and they were exhibited one at a time and then collectively on a temporary stage cleverly arranged by Ellis Hansen, who was in

Washington's Headquarters at Short Range.

charge of the display. Mr. Geissler introduced the machines and each was played in order to give the jobbers an idea of its tonal qualities. The en-

Stealing a Glimpse of Franklin's Tomb.

thusiasm shown by the latter over the new machines was practically unbounded.

The old-fashioned chicken and waffle dinner

Disembarking at Valley Forge.

sional vaudeville entertainment, which was offered during the dinner in the popular cabaret style. There were nine clever vaudeville numbers offered, all of them of the "big time" quality and secured through the Keith circuit.

At the close of the exceptionally fine professional entertainment Mr. Geissler introduced in an eulogistic manner James F. Bowers as a representative of one of the largest houses in the West, and Edward Lyman Bill, editor of The Talking Machine World, both of whom made short addresses along general lines and in happy vein.

After the dinner the party retired to the lawn

PAYS TO ORDER EARLY.

Some Timely Words from the Victor Talking Machine Co. Regarding the Tremendous Demand for Victor Machines and Records and the Importance of Ordering All Goods at an Early Date.

The Victor Talking Machine Co. in the current number of "The Voice of the Victor" makes the following observations regarding trade, and appeals to dealers to place orders for fall trade with the jobbers at the earliest possible moment:

"Do you know that Victor sales during January were greater than any of the three big holiday months of 1911 (which, by the way, broke all previous records), and during February, March, April and May have mounted higher and higher with each succeeding month?"

"We are taxed to the very limit of our factory capacity to supply even this midsummer demand for Victors, Victrolas and records, and our distributors are coming down on us with orders practically double what they were at this time a year ago.

"Our contractors are working night and day, rushing to completion immense factory additions that will double the output of 1911—but all this has been anticipated by the wide-awake dealers and their distributors, and if you expect to get your share of the rich holiday profits, you must give your distributor your holiday order at once—NOW.

"The Victor has hit a new stride, and this fall more than ever before—it will simply be a question of how many you can obtain, rather than how many you can sell.

"Everybody wants a Victrola and pretty nearly everybody is going to try and buy one this fall or Christmas. At this minute it is right up to you to make sure you won't be short of stock when the actual Christmas buying commences.

The Jobbers Before Old Christ Church.

which had been splendidly illuminated with myriads of electric lights in colors for the occasion, for a brief period, after which they were taken

Entering Washington's Headquarters.

back to Philadelphia, where they arrived shortly after midnight, thoroughly tired, but very happy and appreciative of the success of the efforts of the Victor Co. to give them the best entertainment possible.

"If you expect your distributor to take proper care of your wants—then just put yourself in his place for a few minutes, and consider how necessary it is that he should have your order before he can intelligently make his requisition on the factory.

"Bear in mind there are very nearly 10,000 Victor dealers and every one will need more Victors, Victrolas and Victor records than ever before—and some are sure to be disappointed. Don't let it be you.

"Like last year, we must confess that we have not up to this date accumulated a surplus stock for holiday requirements, and in order to make extraordinary preparations to care for all, we must know as definitely as possible what is expected of us.

"We will do our best. Will you help us by sending your order for fall delivery to your distributor NOW?"

LEASE ANOTHER STORE.

Sol Bloom to Open Attractive Establishment in the Metropolitan Opera House Building.

Sol Bloom, the well-known talking machine man, has leased the store at the corner of Broadway and 40th street under the Metropolitan Opera House, which is now being equipped and which will be opened as a high-class talking machine establishment in the early fall. This is an exceedingly good center in a business way, as hundreds of thousands of musical people pass this point to the opera house during the musical season. Sol Bloom is to be congratulated on this selection.

Stand a little above the crowd; that is, don't be too free with everyone. You gain respect where it will count as a result.

Barnum to the contrary—the American public don't want to be, and won't stand being, humbugged.

PICKED UP ON THE BOARDWALK

(Special to The Talking Machine World.)

Atlantic City, N. J., July 5, 1912.

Although the proportion of ladies present at the convention was much smaller this year than on previous occasions and despite the fact that time officially allotted to the convention was limited, those in attendance did not neglect the social side and made up in strenuousness what was lacking in quantity and put every idle minute to advantage. A majority of the members arrived at the seashore on Saturday and Sunday and spent the time before the sessions strolling on the Boardwalk, riding in chairs, sailing and bathing. Tuesday morning saw a great number of jobbers in the ocean, the chance to "flirt with the briny"

The Convention Mascot, George Marigold, of Los Angeles.

offered the necessary foundation for an enjoyable time during the convention.

Oliver K. Jones, who had general charge of the Victor Co.'s entertainment, offered by the Victor Co. both at Atlantic City and in Philadelphia, and with Henry C. Brown, advertising manager, was very much in evidence and had little difficulty in gathering a crowd together for a session on the balcony in Old Vienna or at any other of the many places where good fellows meet—and what is more, he received all the courtesies.

One of the really amusing and thoroughly enjoyable features of the convention was the work of Burton J. Pierce and his "Angel Chorus," which took every opportunity to make itself heard. The favorite stunt was to pick out some prominent and popular member of the association and sing:

They say that John Smith he ain't got no style,
But he's style all the while, he's style all the while;
They say that John Smith he ain't got no style,
But he's style all the while, all the while. Amen.

The effect of that song rendered by thirty or forty voices with little or no training had better be imagined than heard.

Incidentally, it may be mentioned that Mr. Pierce brought all the way from Kansas City his well-known laugh, which he had packed carefully and which reached the seashore without a break. The Pierce laugh is of the volume and timbre that makes the hee-haw of the famous mule Maud sound like a girlish giggle. It can be heard for two miles on a clear day.

One of the younger members of the convention aggregation was George Marigold, son of G. S. Marigold, of the Southern California Music Co., Los Angeles, Cal. This was Master Marigold's first trip to the Atlantic and he saw much to wonder at, though he stated frankly that the water of the Pacific and Atlantic were much the same from the bather's point of view. George is a manly and self-possessed little chap and is thinking strongly of following in his father's footsteps

in the talking machine trade, so he can get to the annual conventions of the jobbers.

The Lone Star State was represented by two of her worthy sons, H. T. Walz, of the W. G. Walz Co., El Paso and J. M. Swanson of the Houston Phonograph Co., Houston. Mr. Walz was accompanied by his wife, a charming young lady, and combined an extended trip through the North with his visit to the convention. Both Texans were keenly alive to the perils arising out of the trouble in Mexico and felt that something should be done to protect Americans. Mr. Walz had a number of photographs showing the actual conditions over the border, and was of the opinion that the military should prevent further danger to the citizens of El Paso by mounting field guns back of the city and commanding Juarez by that means. Mr. Swanson, who is a member of that famous organization, the Texas Rangers, was keenly interested in the threat of the governor of that state to take matters in his own hands and clean out the "Greasers" without further parley. It is the opinion of the talking machine man that it would only take a couple of regiments of Texans to do the work.

Max Landay, of Landay Bros., the prominent distributors of New York, was early on the job with a Bangkok hat of wondrous shape and a human cane, the head of which he declared was made of the foot of a dwarf found petrified in a Buddhist temple in Thibet by the first expedition of British troops to enter that country some years ago. Whatever its origin, it was "some" cane and incidentally "some" hat. Max was also all there in other ways and at the Old Vienna persuaded Maurice Levi's orchestra to play what he termed the "Simplex Rag." While the fact that Mr. Landay is acting as sales agent for the Simplex start and stop device for talking machines and that the "rag" had a familiar sound seemed rather suspicious, he got away with the stunt in great shape.

The members of the large party which made the round of the prominent cafes on Monday night will not soon forget the "Keencutter Kid" from Cleveland, who, despite an over indulgence

Mr. and Mrs. Harry T. Walz.

in the brew, displayed a wit that brought him through with flying colors. More than one talking machine man tried to cross swords with him only to come out second best in the encounter of wits.

What would a jobber's convention be without Victor Rapke? Sure he was there—all there. Arrived with a supply of New York deputy sheriff's badges which he distributed to gentlemen and

ladies alike and some of which he never recovered. O. K. Houck looked so impressive with the gold badge on his coat that he got onto the Steeplechase pier for nothing, which is some stunt. J. M. Swanson also found a badge useful in carrying out his duties as doorkeeper of the meeting room.

Following out custom is all right in some cases, but it can be overdone. As has been the rule, newspaper men were excluded from the meetings of the association, but secured detailed information of what had occurred from the members after the meeting had ended. Why the mystery?

James F. Bowlers makes an ideal toastmaster. He is witty, clear spoken and has perfect control of himself, but he is so well read and quotes from so many passages during his talks that it takes his hearers hours to look up the quotations to which he refers. He might well adopt the practice of the churches in displaying book, chapter and verse number for the guidance of his audience.

Elsewhere appears a snapshot showing Louis Buehn, fully accoutered for a dip in the briny. Some of the visitors wanted to know if he was going to enter a bicycle race, judging from the cap. It isn't so. Of course, he wears a cap when bathing, but there's a reason.

Those who were assigned to car number thirteen on the Victor Co. outing, entered the vehicle with a bravado that was absolutely touching, but fate was against them. Number 13 was one of the first cars to get lost, and had to travel to Valley Forge all alone.

The talking machine men are getting an excellent reputation as spenders at Atlantic City, to judge from the interest shown in them by the various resort managers. As soon as the crowd entered a cafe the big mogul looked after them himself, and to judge from some of the checks, ordered that prices raised to meet the situation. The Old Vienna showed a proper regard for the importance of the convention by securing as an added attraction Maurice Levi and his band, who were more than obliging.

If L. C. Wiswell can sell talking machines with the facility with which he can dispose of banquet tickets his future income is assured. He was so successful in disposing of the tickets that he had to visit the treasurer at intervals and disgorge so that he could travel comfortably. Very few of the jobbers succeeded in getting away from him, once he got on their trail.

One feature of the jobbers' convention that is bound to impress the casual observer is the many sections of the country represented at the gathering. There are men from the Pacific Coast, from Texas, from the Rockies, from Chicago, from New

(Continued on page 42.)

Twenty-five Years the "Talking Machine"

Double shifts—night and day, right along—machines and records both.

And another 50 per cent. increase of factory output coming in September.

Demand is doing it. Our problem is not how market the increase but to do the best that can possibly be done to meet our dealers' requirements.

All of which would suggest something, even to a blind man.

A clean merchandising policy and a distinctive line.

Columbia business is already running 60% ahead of 1911: that's a good gait to travel with. "Come on along." The going's good.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

PICKED UP ON THE BOARDWALK—(Continued from page 39).

Orleans, from Florida, from New England and then in between. It is the sort of proposition that makes traveling pay a dividend.

The official buttons for the members of the association showed the typical houn' dawg in the center with "You Gotta Quit Kickin' My Dawg 'Aroun'" in the inner circle and the name of the

Harry B. Levy, Carl A. Droop and Wm. C. Roberts.

association on the outside. With the announcement of the nomination of Wilson for President on the Democratic ticket, some of the members began looking for the party responsible for the buttons, but he wasn't to be found.

The presence of O. K. Houck, of Little Rock, Ark., is sufficient in itself to ensure the success of the meeting for "O. K." has a keen wit and an unfailing good nature that is most efficient in preventing time from hanging heavy on the hands of those with whom he is consorting. Mr. Houck moreover didn't hesitate to put his O. K. on anything that pleased him, from the slides on the Steeplechase pier to Max Landay's hat.

One of those to make the trip from New York to the convention city via automobile was Max Landay, of Landay Bros., and the Talking Machine Supply Co., who had in the car with him Thomas W. Kirkman, inventor of the Simplex start and stop device. Owing to a prevalence of thunder storms during the day and an epidemic of blow-outs, it took the Landay party about ten hours to make the trip of about 133 miles.

Ben Feinberg, who was formerly connected with various concerns in the talking machine trade but subsequently reformed and entered another field, also journeyed down from New York in his motor for the purpose of meeting his old friends.

Feinberg is all there with his landaulet and has risen to the dignity of hiring a private chauffeur.

There were four distinct types of stopping devices for disc machines, one of them also starting the machine, shown at the convention, and there was some talk of forming a stop manufacturers' association. Each particular device had its merits and its talking and selling points and as a rule attracted much attention. The cabinets and needles were also shown in great numbers by the old standbys and the passage way leading from the hotel lobby to the meeting room of the Jobbers' Association, had the appearance of a general exhibition of talking machine appliances.

The harmony idea, which was much in evidence during the closing session of the association and at the banquet was cleverly emphasized in the menu card of the latter occasion when the Edison and Victor trademarks were artistically combined to form the design at the top of the card. The sketch showed the Victor dog seated on a table gazing with his well-known expression at the old couple who were looking at him with the same degree of pleasure with which they are supposed to listen to the Edison records. The combination received much favorable comment from the diners.

Just to prove that the talking machine jobbers are strictly up-to-date in everything from politics to business, arrangements were made to have the convention at Atlantic City reported in an entirely modern and novel manner by means of a shorthand typewriter. The clever machine, which is almost human in its action, is handled by the Ander-

Mr. and Mrs. E. Paul Hamilton.

son Shorthand Typewriter Co., of Philadelphia, Mr. Anderson, of the company, being the inventor. It has been thoroughly developed and perfected. The machine is so arranged that each finger and thumb controls a set of two keys, and the single pressure of the hands serves to print the actual word in full on a strip of paper, which latter moves along automatically, as in the case of an adding machine. The object in operating the machine with speed is to accustom each finger to do a cer-

tain thing with certain words, just as would be the case in striking chords on a piano. At all events there are no illegible shorthand notes to puzzle over and get wrong.

There was much interest manifested before the convention as to what action the jobbers would take, as an association, regarding the plan to have the manufacturers adopt two set prices for their instruments, one a cash price and another, somewhat higher, for instalment purchasers. The matter was discussed at great length in the meeting, but owing to the present agitation regarding the Oldfield bill it was thought best to leave the matter in the hands of the executive committee to take up with the companies at a proper time and after the pending legislation had been settled, for it was deemed unwise to bring up the set price question at this time. At the same time it was reported that the campaign for two prices carried on by both jobbers and dealers was continually gaining strength and appears almost certain of success, for the companies are willing to consider the matter when properly presented and shown to be the general desire of the trade.

James F. Bowers' report as chairman of the grievance committee was characteristic of the man. He said: "Not a wave of trouble arose to cross our peaceful breast." It might be mentioned, however, that Mr. Bowers was decidedly on the job in protecting the prerogatives of the executive committee on all occasions when there seemed danger of its privileges and rights being usurped.

Another important motion passed in the convention was that instructing the executive committee of the association to take up with the factories the question of increasing the size of initial orders from three to five machines and from one hundred to two hundred records, as a protection to the bona fide and established dealer.

One of the attractive convention souvenirs was the leather watch fob given to the jobbers by W. H. Bagshaw, the prominent needle manufacturer of Lowell, Mass., and who was represented at Atlantic City by Clement Beecroft. A small leather badge attached to the fob bore the name and address of the donor.

One of the Attractive Convention Souvenirs.

THE EXHIBITS AT THE JOBBERS' CONVENTION.

(Special to The Talking Machine World.)

Atlantic City, N. J., July 5, 1912.

The annual gathering of talking machine jobbers from all sections of the country under one roof, and the opportunity thus presented for the manufacturers and agents for appliances to display their wares with a minimum of effort and with a maximum of result, was fully appreciated by the members of the latter fraternity, and the short hall leading from the lobby of the hotel to the meeting room of the association was filled with samples of cabinets, automatic stops, needles, etc., and other things that add to the convenience and pleasure of the talking machine owner, and incidentally bring profit to jobber and the dealer.

Clement Beecroft a Busy Man.

One of those early on the ground with enough lines to keep him very busy was Clement Beecroft, who has a host of friends among the jobbers, having been connected with the trade for a number of years in various capacities, and who was displaying and representing the excellent line of needles made by W. H. Bagshaw, Lowell, Mass., which under the trade-marked name of "Duplexetone" have attained wide vogue among the trade and the public; the products of the George A. Long Cabinet Co., Hanover, Pa., with their several interesting features, Mr. Long being present to aid Mr. Beecroft. The Long cabinets have appealed to the trade owing to their salable qualities, their finish and general attractiveness proving a strong inducement to the talking machine owner. The cabinets are made to harmonize with the various styles of machines and the interiors are fitted up along approved lines for both disc and cylinder records. The cabinets alone took up the greater part of Mr. Beecroft's time. He was also displaying the new line of record envelopes of special form made by Wolf Bros., Philadelphia.

The Elaborate Display of Pooley Cabinets.

There were also shown in one of the suites at the Chalfonte the complete and elaborate line of cabinets made by the Pooley Furniture Co., Philadelphia, Pa., with the ever-popular and always versatile H. M. McMenimen, very much on the job to display their strong points and original features. The Pooley line has already found an excellent foothold in the trade and there were few jobbers who had not seen at least one of the styles. The automatic arrangement for picking out the record desired by simply pressing a small lever smacked of enchantment until the process was explained and its simplicity and general convenience demonstrated. What has been a prime factor in gaining fame for the Pooley cabinets is the finish that is applied to each piece. As an outsider remarked, "The Pooley Co. couldn't make a poorly finished cabinet if they wanted to, for their years of experience in furniture manufacturing has shown them what first-class work means." The Pooley line includes a variety of cabinets suited to practically every purpose and of a class that makes them fit in with the furnishings of most sumptuous apartments.

A Device That Starts as Well as Stops.

Of the four automatic stopping devices displayed the Simplex start and stop device, manufactured by the Standard Gramophone Appliance Co., for which the Talking Machine Supply Co., New York, is sole sales agent, was the only one that both started and stopped the machine, and a great many of the jobbers visited the exhibit of the device in operation in one of the upper rooms of the hotel. The Simplex bears out its name and is far from being complicated either in construction or operation. The Simplex brake is attached to the cabinet of the machine by two screws and does not interfere in any way with the permanent parts of the machine except when it is in actual operation and is stopping the turntable. Bringing the tone arm over

to the starting point of the record automatically starts it, while the tone arm striking the other side of the device releases the trigger operating the stopping brake. It is handsome in appearance and effective in operation. The exhibit was in charge of Max Landay and Thomas W. Kirkman, the inventor of the device.

The Condon-Autostop on Exhibition.

Another automatic stop, more generally known to the trade, was the Condon-Autostop, manufactured by the Condon-Autostop Co., New York. The Condon stop has been on the market for some time and has been tried out thoroughly by the trade and the public. A special room was secured for the display at the exhibition of the stop at the convention, and those in attendance were William A. Condon, treasurer of the company; E. T. Condon, vice-president; Harry P. Carlton, Chicago representative of the company, and Scott Sinclair, New York representative. The exhibit was visited by a great number of the jobbers, the majority of whom were familiar with the device, and in view of the character of the gathering an excellent volume of orders was booked. The Condon-Autostop is fitted to the pivot in the center of the turntable and over the record, and operated to stop the machine by tripping the needle at the last line and checking its progress.

Efficiency of the Alto Brake.

A new brake of original and clever design was that shown by the Alto Sales Co., San Francisco, the chief feature of which was that it need not be regulated to operate properly with the different sizes of records, but was made effective simply through placing the tracer at any desirable point of the record. When the tracer reaches the last line it is struck by the needle and releases a trigger which sets the brake in operation. In this instance the record is stopped through the pressure of a felt-covered foot which depends from the tone arm and strikes the surface of the record instead of the side of the turntable. The brake mechanism is fitted to the tone arm near the sound box and is so well balanced that it increases the pressure of the needle in the record to an extent that is practically incalculable. A scale weighing to the eighth of an ounce could not register the added pressure. The Alto brake exhibit was in charge of W. L. Weinmann and W. T. Ellis, both of San Francisco, in which city the brake has made a decided impression. A factory will be opened in New York and orders sent in by telegram to California will be paid by the company and repeated by wire to New York, thus saving time.

Electric Stop Attracts Attention.

The only automatic brake operated by electricity was the "Sesco" electric stop, manufactured by the Standard Electric Stop Co., of Philadelphia. A contact point is fastened to a special arm, which is set at the last line on the record. Another contact point is placed on the tone-arm, and when the two points touch as the needle reaches the last line a circuit is completed and an electro magnet releases the brake. The "Sesco" equipment is very attractive in appearance and the extra contact arm and the brake itself are all that show above the cabinet. The brake is operated by means of dry batteries, which are placed in the lower part of the cabinet itself. The "Sesco" brake exhibit attracted much more than passing interest from those in attendance at the convention, and was in charge of Joseph H. Potsdamer, who was, by the way, a clever demonstrator.

The Udell Veteran Proves Welcome.

A gentleman whose presence was heartily welcomed by the jobbers in both a personal and a business sense was Daniel G. Williams, the veteran representative of the Udell Works, Indianapolis, Ind., manufacturers of talking machine record and

piano player music roll cabinets of quality. Mr. Williams was probably taking orders for cabinets before many, perhaps the majority of the jobbers, had been weaned, for as a rule they are a youthful bunch, but nevertheless he has lost none of his vitality or salesmanship ability and is well able to uphold the Udell products against the field. Mr. Williams did not have a line on exhibition at the convention, but contented himself with the usual portfolio of photographs of the new and the older accepted styles of cabinets, feeling that there would be no question regarding the finish of general quality. Judging from the number of times the portfolio made its appearance and the interest apparently manifested, the Udell Works received some goodly orders in the early mails.

Cabinets from Saginaw.

A less familiar but to all appearances excellent line of record cabinets was that of the Opportunity Manufacturing Co., Saginaw, Mich., which was displayed by D. H. Moore, who has several styles placed in a passage off the lobby of the hotel and others in one of the rooms. The feature of the Opportunity cabinets was that they were shown in the rough in order that they might be finished to meet the individual requirements of the jobber and dealer.

M. A. Carpell and the Herzog Line.

Still another veteran line of cabinets was shown by M. A. Carpell, the prominent and popular Eastern sales manager of the Herzog Furniture Co., Saginaw, Mich., and the Saginaw Table & Cabinet Co. Mr. Carpell also considered the qualities of his line as being so well recognized that samples of the actual goods would prove superfluous, and consequently appeared on the ground armed only with a portfolio of photographs showing the styles with ample descriptions and an ample order book. The Herzog people have shown an excellent understanding of the needs of the talking machine trade and have built up their line of cabinets from the viewpoint of the man who has to sell them instead of following their own ideas exclusively. Mr. Carpell's personal understanding of the importance of the cabinet and what it must represent was well set forth in his address at the open meeting of the association on Tuesday afternoon.

Puritone Needles Make Many Friends.

Among the prominent line of needles represented were the "Puritone" needles manufactured by John M. Dean, Putnam, Conn., who was represented on the ground by J. T. Collins, a young man who has spent a number of years in the talking machine trade in various capacities and knows about what is required by the jobbers and dealers. The jobbers were not asked to take the statements made regarding the Puritone needles at their face value, but were presented with sample boxes containing a thousand of assorted styles for various tones.

A Novel Form of Needle.

Another novelty that attracted much attention was the new needle offered by the Bell-Hood Needle Co., of New Haven, Conn. This needle was particularly original in design and had fastened to it about half way from the point a tiny brass bell with the mouth of the bell pointed downward and toward the record. It was claimed for the Bell-Hood needles that they succeeded in capturing many of the tonal effects that were usually lost while close to the surface of the record and carried them to the soundbox through the needle itself.

While the jobbers were in session the representatives of the supply houses held little informal meetings among themselves on the outside, where they discussed various trade questions and general matters of interest. It was suggested that they form an association on their own account, but no one would volunteer to act as president.

Our national publicity campaign is producing the 1912 profits we promised last year. Profits for Columbia dealers.

Tribune Building, New York**

ECKHARDT GETS COLUMBIA BRANCH.

W. L. Eckhardt Will Take Over Columbia Business in Philadelphia Which He Will Conduct Under the Name of the Penn Talking Machine Co.

The many friends of Walter L. Eckhardt will be glad to know that he is going to re-enter active life in the talking machine industry in the immediate future.

The trade attraction has been too strong for Mr. Eckhardt, who put in about ten years of his

Walter L. Eckhardt.

life with the Columbia Phonograph Co. He has now announced that he has completed arrangements for the taking over of the Columbia distributing branch at 1109 Chestnut street, Philadelphia, which he will conduct under the name of the Penn Talking Machine Co.

He will have the exclusive distribution of the Columbia products in Philadelphia and adjacent territory.

While discussing the new move with The Talking Machine World Mr. Eckhardt said: "I have served ten years with the Columbia Phonograph Co., and while I have been four years separated from the talking machine business, I never have lost my interest in it.

"I have been watching the changes in products and the evolution of the merchandising policies, and now I realize more than ever the great possibilities for development in the industry. I am a firm believer, too, in the Columbia policies, particularly the exclusive territory arrangement. I have watched with the keenest interest the successful progress of the Columbia idea of exclusive territory for distributors, and have likewise

observed the discouragement and unfairness of the opposite program under which a jobber never knows when half of the legitimate field will be summarily seized and turned over to a new competitor—except that it is always imminent as his business increases in prosperity.

"I know that under the Columbia Phonograph Co.'s policy I can invest my money, my experience and all my energy advertising and building up a business connection without having to put in any of my time watching out for the establishment of a competing jobber in the same territory, to share a trade that is rightfully not the exclusive property of the manufacturer, but to an equal extent the property of the jobber who has devoted his efforts to constructive work for the manufacturer's product rather than for the manufacturer as a company, and the fruit of whose business industry should be his own.

"I know well enough that with the territory protection of the Columbia Phonograph Co. back of me and its business-getting campaign in front of me I am going to take that Philadelphia branch and build up what is now a going, fast-growing and profitable business into one of the most active and influential jobbing centers in the country."

When General Manager Lyle was seen in reference to the above statement he said: "Yes, we have arranged with Mr. Eckhardt for the exclusive Philadelphia representation. This is in line with the general policy we announced about three years ago, whereby our distributing branches from time to time may be turned over, with exclusive rights and full protection, to independent jobbing concerns, provided always we can assure to the dealer who must depend upon that jobbing center for his merchandise an adequate maintenance of Columbia rights and progress. The Penn Talking Machine Co. has every reason to count on a continued and steady multiplication of the Columbia prestige and demand in its territory."

PATHE FRERES CO. PLANS.

Brokers Interesting Public in \$1,000,000 of Its Preferred Stock—American Company Controls Pathe Name and Products.

The Pathé Frères Phonograph Co., whose incorporation was reported in these columns some months ago, and of which Jacques A. Berst is president, is placing on the market \$1,000,000 of its preferred 7 per cent. stock. The company's brokers in their letters to investors say:

"The American company has acquired for the phonograph business the exclusive control and right to use in this country the name of 'Pathé, together with their trade-marks, patents, improvements, master records, Auditoire, Pathephone, Pathegraph, Duplex-Pathephone, etc.—in fact, everything pertaining to the phonograph business owned and controlled by the Paris company. The company, therefore, will offer to the American public the various inventions and manufactures of 'Pathé' origin, which have become so famous in other countries.

"The Pathephone does not require changing of needles; its motor is instantaneous. Where electricity is available the electric Pathephone can be operated either by direct or alternating current, or strong batteries. The records are all double faced.

"The Pathegraph is a phonograph used for teaching languages, music, etc. The Duplex-Pathephone is a phonograph with a double machine for playing two discs; as one disc finishes another begins to play, so as to render a continuous operatic or theatrical production. The Auditoire establishments in Europe have been highly successful."

Emile Pathé will be the company's consulting engineer and honorary vice-president. J. A. Berst, the president, is vice-president of "Pathé Frères" (moving picture company).

DEALERS SEND COMMITTEE.

(Special to The Talking Machine World.)

Atlantic City, N. J., July 6, 1912.

Among those in attendance at the convention of the National Association of Talking Machine Jobbers this week were a committee representing the

R. Montalvo, Jr., David Switky and J. H. Dodin.

Eastern Talking Machine Dealers' Association, who desired to discuss with the jobbers a number of matters of mutual interest. Those comprising the dealers' committee were David Switky and J. H. Dodin, of New York, the former being the president of the association, and R. Montalvo, Jr., New Brunswick, N. J.

LOS ANGELES TRADE CHANGES.

(Special to The Talking Machine World.)

Los Angeles, Cal., July 7, 1912.

W. B. Kennedy, who has for several years represented the Burroughs Adding Machine Co. in Los Angeles, has been appointed sales manager for the Dictaphone. His territory includes Southern California and Arizona, with headquarters in the Winsted Building, 420-422 South Broadway, Los Angeles.

Edward A. Borgum, the well known western talking machine expert, has just recently associated himself with the Wood Manufacturing Co. of Los Angeles, who are the manufacturers of the new Wood filing cabinets for disc records. Mr. Borgum is particularly well fitted for this important position.

DEALERS' ASSOCIATION MEETS.

Eastern Talking Machine Dealers' Association Holds Quarterly Meeting and Devotes Much Time to Discussion of Progress of Two-Price Campaign—Six New Members Enrolled.

The regular quarterly meeting of the Eastern Talking Machine Dealers' Association was held at the Cafe Lion d'Or, New York, on July 10, with an excellent attendance considering the time of year and the condition of the weather. Following the usual routine of business the chief discussion centered in the campaign of the association to bring about the establishment of two prices for all kinds of machines, one the cash prices and another 10 per cent. higher for installment sales, which would provide a fair rate of interest for the accommodation offered by time payments. For the purpose of taking the matter up with a number of the jobbers, a committee from the Dealers' Association attended the convention of the Jobbers' Association at Atlantic City the first of the present month, and while there went into the matter with a number of the jobbers though not in a strictly formal manner.

Not long ago the association prepared a number of return postal cards asking for the indorsement of the dealers in the East and non-members of the organization. These cards were sent to eight jobbers in New York City for mailing to the dealers on their lists and five of the jobbers did send out the cards. The results were more than satisfactory to the association, for the dealers receiving the cards were quick to make favorable response. Two of the jobbers, while favoring the two prices, would not send out the cards at this time owing to the fact that the raising of the price question at this particular time might affect the fight now being made against the Oldfield bill and be used as an

argument for its passage. The campaign of the dealers, however, will be continued.

The membership of the Eastern States Talking Machine Dealers' Association is steadily on the increase, and at the last meeting six new names were added to the register.

COLUMBIA "LYRIC" FOR OUTDOORS

Some Interesting Illustrations of the Manner in Which That Popular Machine May Be Used for Entertainment During the Summer Time.

Columbia dealers are looking for a big summer business this year and the \$25 "Lyric" is going to have a good deal to do with it. The Columbia Phonograph Co. used the Saturday Evening Post double-page spread to announce a special \$28.90 cash or instalment offer for the "Lyric," with twelve selections on Columbia double-disc records. Using that as the keystone of its "Lyric" publicity campaign, the usual system has been followed of

providing dealers with material for local publicity to reinforce the national advertisement. Co-operation on the part of the dealers is bringing results.

As a means of graphically showing the possibilities of the instrument for summer vacation use the Columbia advertising department recently sent out a call for photos of the "Lyric" in action, and as a result scores of snapshots have come into its New York offices, some of them exceedingly pretty pictures, well taken and all telling in the plainest possible way the story of the outdoor "Lyric." The few that we reproduce here will serve to convey some idea of the wide range of possibilities in this little machine.

Apart from the continuous tone chamber, an exclusively Columbia feature in low-priced machines, the principal points that are being emphasized in the "Lyric" publicity are the absence of any horns, the portability of the instrument, and its very light weight, and every one of those points is well indicated in the photographs which we reproduce.

THE HOOSIER POET AND THE VICTOR.

James Whitcomb Riley to Make Records of Some of His Famous Poems for the Victor Co.—Will Have Wide Sale Everywhere.

(Special to The Talking Machine World.)

Indianapolis Ind., July 13, 1912.

Though the Victor Co. was not just ready for the public to know that that company had induced James Whitcomb Riley, the Hoosier poet, to put on records the most famous of his poems, that fact has leaked out, and now the story is being told everywhere. It probably will be some time before any of the records are put on the market for sale.

It was not very long ago that Mr. Riley bought a Victrola, and it was rumored then that he was to make a number of records for the Victor Co. But the whole thing became known a few days ago when Mr. Riley called in Booth Tarkington and Meredith Nicholson, the novelists, and several other friends, to hear the first "proofs."

Mr. Riley's voice is not exceptionally strong, but when one sits near the Victor and hears the poet reciting "Out to Old Aunt Mary's" it is hard to believe that it is not the poet himself boxed up instead of only his voice. When he says "I am as bald as you are gray" in the beginning of the poem, a feeling of pathos comes over the hearer. The voice is so full of feeling as the words of the grown-up child who remembers his visits to Aunt Mary's are read.

Among the poems chosen by Mr. Riley for the records are "Out to Old Aunt Mary's," "Good-bye, Jim," "The Happy Little Cripple," "When the

James Whitcomb Riley.

Frost Is on the Punkin,' "The Rain," "An Old Sweetheart of Mine," "The Raggedy Man," "On the Banks of Deer Creek."

The ordeal was at times tedious for the poet, who recently recovered from a serious illness. Mr. Riley, however soon learned to "throw his words." He said: "There is something wierd and eerie in hearing one's own voice with its very intonations and shadows coming out of a box."

COLUMBIA PUBLICITY.

In the Saturday Evening Post, issue of July 13, the Columbia Phonograph Co., General, devoted one page to further stimulate the public in its interest in the Columbia double-disc records. For this purpose it announced the fact that it has produced one double-disc record to serve as a sample—a demonstration record, in other words. Dealers will supply this record at ten cents. One side of the record contains a selection by the Columbia male quartet. The other side tells the story of the superior tone, surface and wearing qualities of Columbia records.

A letter and circulars descriptive of a new windows display, and how it can be used to advantage in conjunction with the demonstration records, was mailed to the trade June 24.

TO FEATURE \$15 VICTROLA.

The Victor Talking Machine Co. intend featuring in the daily papers during the week of July 15, the \$15 Victor Victrola, the merits of which are set forth in a manner to interest the public. This Victor display will be surrounded by the advertisements of the local Victor dealers wherever it appears. This change, however, is only for one week, after which the copy which heretofore appeared in the Victor daily paper advertising will be resumed.

Whatever your personal character may be in the matter of selfishness, or generosity, never let your store get a reputation for stinginess. No one likes to do business with a stingy store.

THE SOUND REPRODUCING MACHINE AS AN AID TO THE STUDY OF MUSIC.

Its Marvelous Possibilities for a Number of Pedagogic Purposes Set Forth Most Illuminatively by Dr. Julius Schiller—Written Especially for The Talking Machine World.

The sound-reproducing machine, besides being a means of pastime, has ever since it has reached its present stage of perfection also been employed for a number of pedagogic purposes, and among others, perhaps the most successful one, for the teaching of languages.

Stimulated by the success of the sound-reproducing machine in conveying to the learner that important part of language study, "pronunciation," which can only be acquired by careful observation, no amount of theoretical consideration being able to take the place of the ear, it occurred to me that a great deal of parallelism exists between some phases of music study and certain phases of language study.

Declensions, inflexions, syntax, vocabulary can be acquired by anybody who possesses the necessary diligence. Acquisition of "technic," in the broadest sense of that term, is the counterpart in music of the acquisition of grammar in language. But how many of those who know all the irregular verbs of a foreign language, who can translate fluently, can speak at all, and if they speak, how many can speak with anything like a native accent? I believe that it is safe to say that the proportion of those that can do that is as small as the proportion of music students who can play artistic. I shall confine my remarks and examples to the piano, but they apply to any other branch of music study or can be adapted with little change.

Music is an art, and requires as such a certain something which we call "talent." This term talent is broad and flexible, and in its general application it means that ability to acquire something which is, strictly speaking, not teachable and can only be acquired by the pupil if he possesses that faculty of imitation which we call "talent." We have

made great strides in the understanding of the underlying principles of our art. Every branch of music has been analyzed by able people. As far as the piano is concerned, Mathis Lussy has given us a great work on interpretation, Hugo Rieman wrote his "Musikalische Dynamik und Agogik," Breithaupt, Calan and Steinhausen have revolutionized our ideas of the nature of "technic," but, while the study of those excellent works will broaden the student intellectually, the practical, executing musicians will derive little help from them. There still remains something that can only be conveyed to a pupil by actual demonstration, and, providing the teacher of ability and the scholar has some "talent," the results are going to be good. But not all of the vast army of music students are fortunate enough to have artist teachers, nor have they the advantages of a musical atmosphere or of public performances of musical artists or organizations. This large class can derive much instruction from the careful observation of the productions of great artists as recorded on the discs of one of our modern sound-reproducing machines.

A record of such an instrument is an equivalent of a photograph. It represents the production of the artist in every respect. It reproduces tone color, pitch, tempo and rhythm perfectly true to the original, and since nearly every artist of note has had his work "recorded," all of these great artists become available as teachers. These records are even superior to personal instructions in at least one respect, they never get tired of repeating and they always remain the same.

That one can get acquainted with an endless number of compositions needs no special mention; but also the general musicianship can be improved

in many directions. They allow one to have at one's elbow a representative of every form of musical composition, to play them at will, analyze the thematic structure, to become acquainted with the name, timber and tone color of every instrument—a valuable aid to the student of harmony and composition. Take for instance the record of an orchestral composition like Schubert's "Rosamunde Overture" or Grieg's "Peer Gynt" suite; put it on your machine, and while the machine is reproducing it mark out on the piano score the names of the instruments playing the various themes. Compare your marked copy with the orchestra score and correct. Next take the score and follow your orchestra. I can't imagine any better way of learning score reading. Conducting an orchestra means more than simply beating time, but even beating time properly has to be learned. Diagrams of the movements of the arms in beating time can be found in any book on conducting; they can be practised with the sound-reproducing machine until they become perfectly automatic. Pocket editions of some scores can now be bought at a very nominal price.

Let us turn to piano playing. Many distinguished pianists have furnished us with records of their playing. In several instances the same composition has been played by more than one artist. This allows us to compare the interpretation, technic, etc., of one artist with that of any other and have the great rivals of the keyboard side by side. Such comparison will not only sharpen the critical ability of the student, but it will also soon convince him that there is no "standard" in art and the production of the beautiful in music is not governed by fixed rules, but, within certain limits, gives the performer a great deal of latitude. Possessing those records, we are in a position to carefully scrutinize the "technic" of those players.

To many musicians the term "technic" means the ability to produce tones in quick succession. They cannot dissociate the idea of speed from the term "technic." Speed is unfortunately a factor to which altogether too much attention is paid, and the vain efforts to imitate the tempo and bril-

WE insist on the upholding of prices—because we uphold values. Price-cutting is as detrimental to the dealer as to the customer. The former doesn't know where he'll get off on the profit side—the customer thinks he might have bought lower had he waited.

THE Standard Electric Stop not only insures a big profit to the dealer—but a satisfied customer as well! And a satisfied customer is a mighty big business asset. The dealer who displays a Sesco in his showroom takes a big step toward a large fall business.

Sesco, being the only electrical stop on the market, has met with instant and unqualified approval from the trade. It was the hit of the recent convention at Atlantic City

HERE is an electric stop, that does not injure or jar the delicate sound box or affect in its operation the most expensive record. It is so simple that a child can operate it—is fool proof in every particular—and does not detract from the appearance of the machine.

EVERY talking machine should be equipped with the Standard Electric Stop. The reasons why are many. While the small additional cost is an investment to any owner—not an expense. It saves records, steps, and temper.

A Mighty Interesting Booklet Is Yours For The Asking.

Standard Electric Stop Co.

Empire Building, Walnut at 13th St., Philadelphia

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

and the vain efforts to imitate the tempo and brilliancy of a few piano acrobats who sail under the color of musical artist should be discouraged and more attention be paid to the musical end of our studies.

A simple experiment will make the point which I make about technic a little clearer. Place a piano record on your machine and manipulate the speed mechanism until the record will reproduce at the pitch of your piano. It will now sound as though the artist was performing on your piano. Play the record several times, slowing your machine down a little each time. (We will for the present ignore the fact that this will change the key.) You will find that the beauty of the production does not suffer until the tempo reached is so slow that it is no longer covered by the conception of the term tempo inscribed at the beginning of the composition reproduced. This proves that the secret of an artistic technic and even the "brilliance" is in the tone quality, the perfect evenness, the rhythmic and dynamic qualities of one's playing, and not in the rapidity of the succession of tones.

Students who have at their disposal an appliance to make records of their own playing can make further experiments. Let them make a record of their own playing of a composition which they think they can play well. This will enable them to pass judgment upon their own playing, and they will perhaps realize their own shortcomings better. In listening to one's own playing one thing will certainly be very striking; it will be the fact that the record seems to reproduce much faster than the player will have intended it. It will also be noticed that minor irregularities (I do not mean false tones) which the player knows to have committed will not be as apparent as the guilty knowledge of the performer will lead him to think. This will be particularly true if some time has elapsed between recording and reproducing. This is easily explained. No performer is such an absolute master over all the small factors which enter into the successful performance of instrumental music. He is not always able to reproduce on his instrument an exact picture of his artistic idea. The audience does not know anything about this discrepancy between intent and result, and therefore receives a much better impression of the performance than performer himself. Recording one's own playing puts everyone in a position to watch his progress and put improving file where it is most needed. Such self examination is bound to increase self confidence, and consequently will lessen the number of failures of public performances, half of which are only failures on account of the lack of self-reliance.

In order to be a successful public player one must also possess something which I should like to call generalship of the platform or the routine of performing in public. Nothing but experience will bring this, but some valuable points can be gleaned from object lessons given by the sound-reproducing machine. The scope of this article does not allow me to go into too much detail, but a few hints will tell the reader what I am driving at. For instance, note carefully the short pauses which

experienced players make before big skips, how carefully they attack dangerous passages; note that what we often consider a fine "effect" is in reality the prudent self limitation of one who knows what he can do and what he cannot do.

The sound-reproducing machine can also be used to advantage in memorizing music. Playing from memory means the reproduction of a vital, or an auditory, or a tactile impression. Most musicians combine the three unconsciously. Now take the record of a piece which you have memorized (it does not matter by what method), and while your machine reproduces the same close your eyes. If you really have this piece in your memory you will see the printed music before your mental eye (visual), or you will be able to reproduce the

from N.Y. World

The Talking Machine in Cartoon.

harmonic structure, etc., mentally (auditory), or you will seem to feel the keys under your fingers' ends (tactile), according to the peculiarity of your memory. Reading music while the machine is playing is also a good exercise in memorizing. I would not advise you to slow the machine down for such practise, as slowing down makes the pitch lower, and it will disturb any musical ear to hear a number played in one key and at the same time be reading the music in a higher. In order to memorize it is best to tune the machine to the pitch of the instrument on which you are going to try out what you have accomplished in the line of memorizing.

Transposing the particular weak spot of even good musicians can be easily acquired by the aid of the sound-reproducer. Taking it for granted that the theoretical part—I mean the ability to read the different transposing clefs and signatures—have been mastered, take for instance a slow vocal number, perhaps a hymn, play it in the key in which it is written while the machine is also playing. After a little slow your machine down until it sounds exactly one tone lower; now read tenor clef instead of violin clef, alto clef instead of bass clef, add two flats to the original signature, etc.; most machines give a range of four or five

tones up and down. While practising transposing one may at the same time improve as an accompanist. It takes a great lot of experience to be a good accompanist, and who could imagine a more patient singer or violinist than the one the sound-reproducing machine furnishes? Artists are proverbially impatient with their accompanists, but conditions are reversed when you simply have to rewind your machine, and they must sing again until you are able to follow to your own satisfaction.

The possibilities of the sound-reproducing machine are by no means exhausted, but I shall only call attention to one more application of the same. A large number of pianists earn a living by playing with small orchestras. These musicians are often called upon to improvise accompaniments, play from bass, second violin or clarinet parts. Proficiency in these things can be acquired in the privacy of their own home by the aid of the sound-reproducing machine without being subjected to the more or less unpleasant commentaries of their more experienced fellow musicians.

LOWER TALKING MACHINE RATE.

(Special to The Talking Machine World.)

Toronto, Ont., July 6, 1912.

After July 15 next gramophones must be classified as musical instruments by all railway companies in Canada and carried at second-class rates. Hitherto they have been carried only at first-class rates. An order of the railway commission, issued last week, declares that gramophones are musical instruments and must come under the lower rates quoted in railway tolls for this class of goods.

WANTED:—A TALKING MACHINE MANAGER.

Loveman, Joseph & Loeb, Birmingham, Alabama, require the services at once of an experienced and capable manager for their Talking Machine Department. Agencies Victor and Columbia Machines. In replying state age, experience, salary expected and name references of past and former employers.

SALESMAN WANTED

One who understands the Victor business, wholesale and retail. Permanent position to right party. Apply by letter only, with detailed information as to ability, salary, etc., American Talking Machine Co., 368 Livingston St., Brooklyn.

EXHIBIT OF NEW EDISON DISC PHONOGRAPHS AND RECORDS.

Large Number of Talking Machine Jobbers and Dealers Visit Edison Headquarters in New York, July 5 and 6, and Express Themselves Well Pleased with the Latest Creations of the Edison House—Edison Disc Phonographs Shown in a Large Variety of Styles and New Edison Disc Records Prove Especially Interesting—New Styles of Amberolas as Well as Kinetscope Also Exhibited—Visiting Jobbers Entertained at Dinner and Theater Party.

No event in talking machine circle in many years caused such a large degree of interest as the exhibition of the new styles of Edison disc machines, as well as the number of new models of the cylinder type, which were placed on exhibition on Friday and Saturday of last week in the building of Thos. A. Edison, Inc., 10 Fifth avenue, New York. It was an event of prime importance in the history of the Edison phonograph and marked a new milestone in the progress of the Edison institution.

The Edison disc machine has long been promised and experiments have been carried on in connection with its production for several years; the fact, therefore, that the jobbers of the country were actually invited to see the new machines, complete, perfected and ready for the market had a deep significance not readily appreciated by those outside the trade.

150 Jobbers Inspect New Machines.

The importance which the jobbers gave to the exhibition is to be realized when it is stated that on the first day of the exhibition over 150 jobbers and their representatives called and inspected the new

invitations had been sent out to the trade at large and had met with cordial response, as the advent of the Edison disc has proven a matter of practically universal interest.

Time and time again there were announcements

able comment. The retail prices for the new disc line, which will be ready for the trade in October, range from \$60, the minimum, to \$450, with six distinct models represented.

More Music on the Record.

The composition used in the construction of the Edison discs is of special manufacture and is claimed to be unbreakable plus anti-wearing qualities. Owing to the method of reproduction, more can be recorded on these records, as they run at 80 revolutions with 150 threads to the inch. The label is pressed onto the record during the process of manufacture, as well as the number, which appears in white on several places on the edge, so that it can be easily seen when in stock.

The new cylinder Edison record is called the Blue Amberol, and is made of a tough composition that withstands all the hard knocks that a record is liable to receive during its life. You can toss this new Blue Amberol around as much as is necessary during an evening's entertainment.

How Price and Style Can Be Memorized.

An innovation in style numbering has been put into effect by Thos. A. Edison, Inc., in this new disc machine line, the number of style designating the price. For instance, Model A-375 means that the price is \$375, this being for a Louis XV type in mahogany—one of the artistic cases. Style 60, then, means that \$60 is the retail price; and so on. In other words, this new system does away with the necessity of remembering two sets of num-

Edison Disc Phonograph Model A-250 Mission

machines and records. They came from all over the country, from the far West and South, as well as the East. They came to criticize what might be considered in many ways a sample of a new product, and remained to enthuse over what they felt free to declare was a distinct forward step in the development of the phonograph.

They came to see some experimental work and witnessed the finished product ready to go out into the home, and felt that their journey to New York had proven well worth while. The attendance was not confined to jobbers exclusively, for

Edison Disc Phonograph Louis XVI, Circassian Walnut.

that Thomas A. Edison had perfected a disc machine. This was only partially true, as while he had created a disc product, he had not perfected it according to what his ideas of sound reproduction are. Mr. Edison experimented again and again on a reproducer, and it is claimed that it took 2,700 different reproducers before he secured the one that conformed to his ideas. In other words, the reproducer on the models of Edison disc machines now on the market represents the 2,700th reproducer that Mr. Edison made—the one that he considers perfect.

In fact, the long delay before this line of disc records and machines appeared was due to Mr. Edison's desire to have the machines and records brought to his point of perfection. In this reproducer a diamond point is used, the method of recording and reproducing being of the "hill and dale" cut instead of the lateral. It is necessary to use a diamond point, according to Mr. Edison, as no other material will stand the wear. The same reproducer is used in all the new disc machines.

The tone of the new Edison disc machines is full and round and of natural quality, with no perceptible scratch, and was highly satisfactory to the many critical visitors. The effects produced in the more elaborate and expensive models in the matter of case design also came in for much favor-

Edison Disc Phonograph Model A-250, Mission Oak.

bers, one for styles and one for prices, and its advantages will readily be appreciated by the trade.

Style 60 Encased in Metal.

Style 60 disc received more than its share of attention for the reason that the cabinet is of metal. The shape is peculiar, too, being wider at the front than at the back. Style 60 is a laboratory product more than anything else and is a special hobby of Mr. Edison. When put upon the market the metal cabinets will be finished in various imitations of woods, such as mahogany, oak, walnut and special finishes to order.

Care Taken in Constructing Diaphragm.

The diaphragm used in the new disc machines is constructed along individual lines, and as Mr. Edison could not find a wire material of efficiency to use as a sound wave conductor from the diamond

full, clear and mellow, with an entire absence of "scratch." The operation of the motor is absolutely noiseless. The appearance of the mechanism is handsome, while the cabinets show the work of experts. From \$250 to \$450 are the special cabinets, Sheraton, Louis XV and Louis XVI types in inlaid woods, Circassian walnut and other expensive woods. Elaborate hard carving strengthens the appearance of these art styles.

Other Novel Edison Exhibits.

One of the many advantages claimed for the Edison line is the ability to make home records, but the trouble in the past has been in the shaving of the record blanks, it being necessary to go to some dealer to do this. To overcome this feature the Edison Co. exhibited a new home recording outfit, consisting of a four-minute recorder, three blanks and a record-shaving machine. A remarkable success is predicted for this outfit.

The Edison school outfit is a new proposition and is rapidly becoming popular. This is practically an Opera style machine placed on a metal stand, the stand having four metal shelves and capable of holding four boxes of records. These records are on arithmetic, grammar, history, geography, and so on, and are for use in various

to the user and to the dealer and jobber. This end of the business is exceptionally busy.

Dolbeer's Order Book Filled.

F. K. Dolbeer, sales manager, had a big order book on his desk—one of the kind that makes several impressions of the order; one for the factory and one for the customer, leaving in the book a tissue carbon of it. This lengthy description of the Dolbeer order book is necessary as the preliminary detail to show that the many tissue copies left in the book by the closing of the Edison exhibit enjoyed even better results than the mere display of the new Edison goods. Those who have waited for the perfection of the Edison disc products expressed themselves as amply repaid by the elaborate and satisfactory line that they saw last week.

Banquet to Visiting Members of the Trade.

A banquet was tendered to the visiting members of the trade on Friday evening. More than one hundred persons attended, the affair being held at the Hotel Astor. It was more of an impromptu nature than anything else, the idea being for enjoyment. Little chats were made by various people on semi-humorous topics. Following the dinner the entire party went to the theater, enjoying the performance of "A Winsome Widow" at the Moulin Rouge, where, although the temperature was around 90 degrees, they saw real skating on real ice. The Edison guests after the performance returned to the Astor, where supper was served.

The entire gathering was a huge success from start to finish; the jobbers were enthusiastic over the new goods, and it was considered the biggest and best Edison boosting meeting ever held. Jobbers came from all over the country to attend, so the affair was of country-wide interest. Among the people who registered were the following:

Some of Those Present.

E. P. Ashton, American Phonograph Co., Detroit, Mich.; C. N. Andrews, W. D. Andrews, Buffalo, N. Y.; E. M. Atwood, Memphis, Tenn.; Louis Buehn, L. Buehn & Bro., Philadelphia, Pa.; E. E. Buehn, L. Buehn & Bro., Pittsburgh, Pa.; J. N. Blackman, Blackman Talking Machine Co., New York; H. H. Blish, Harger & Blish, Des Moines, Ia.; T. H. Barnhill, Penn Phonograph Co., Philadelphia, Pa.; E. L. Burrows, J. B. Varick Co., Manchester, N. H.; F. E. Bolway, Oswego, N. Y.; Mr. Bolway, Oswego, N. Y.; Mr. Boyd, Iver Johnson Sporting Goods Co., Boston,

Edison Disc Phonograph Model A-150, Golden Oak.

point, he created a cord of special construction, which was chemically treated. All known metals and wires failing to answer the sound requirements were supplanted by a cord, which shows that there are few limitations to invention.

Another machine that was admired was the concealed horn cylinder machine—the Amberola type. This phonograph will only take the four-minute Blue Amberol record. It has the diamond point reproducer, and the tone given forth is remarkably clear and true. The cabinets are most artistic.

Great Audiences Hear Demonstrations.

The demonstrating room of the Edison building was crowded with people during Friday and Saturday. Various styles of records were played, covering vocal and instrumental music, that are included in the average owner's repertoire of records. In demonstrating its records the company

Edison Disc Phonograph Model A-200, Mahogany.

grades. This will retail at a popular price and the machine practically does a teacher's work in conducting classes.

In the Edison business phonograph exhibit appeared two new features—the pneumatic speaking tube and the automatic correction device. The usual method of dictating to a business machine is to release the cylinder with the foot while talking into the flexible tube. With the improved Edison one talks into the tube as in the other, but instead of starting the cylinder with the foot, simply pushes a little button with the finger of the hand holding the tube, doing the entire operation with one hand.

The Edison Home Kinetoscope, which was displayed on the third floor of the Edison building, came in for its share of the attention. A number of new jobbers were closed on this. J. W. Farrell, manager of this end, was busy explaining the various features of the kinetoscope, both as applied

MAX STRASBURG CO. EXPANSION.

To Have Larger Quarters and Will Take on Pianos—Farrand Co.'s Handsome Victor Department—Columbia Co. Reports Active Business—Latest News from Detroit.

(Special to The Talking Machine World.)

Detroit, Mich., July 9, 1912.

The enlargement of the Max Strasburg Co., the Victrola Shop, announced in the Talking Machine World last month, has taken on a larger scope. Also it will inaugurate a new departure in merchandising, as far as Detroit is concerned, at least.

There are now a good many piano stores which handle talking machines. In this case that order will be reversed. The Max Strasburg Co. will still be "The Victrola Shop," with more Victrolas than ever, and an enlargement of the Columbia business, and the pianos will be the secondary line. This does not mean, either, that the pianos handled will be of a secondary variety. Negotiations now are in progress for the agency of one of the very best pianos in the world. Two or three of leading piano houses have been after it, but could not land it. The objections made to them by the manufacturers do not apply in the case of the Max Strasburg Co., however.

Mr. Strasburg's idea of adding a line of pianos came through an experience rather odd in the talking machine business. In a deal for a \$200 Victrola he took in a piano at a valuation of \$175 and sold it for \$300, which, with the \$25 cash he received, made some profit on the sale of one talking machine. Before the week ended he had taken in another piano and sold that also, demonstrating the possibilities of a quick turning over of money through such channels.

So straightway he began negotiations for the first floor of a new building which is to be erected adjacent to his present quarters, and for a line of the kind of piano necessary to make his business a success.

Up to the close of the first week in July the indications were that the customary fading of trade in talking machines during the summer hot spell would not be very noticeable this year. All of the talking machine dealers are hustling along at a rate which confirms the statement made in these letters several times that there is room for more first-class talking machine stores in the downtown district. The experience of the Farrand Co. is added testimony. Its talking machine department, added to the business with the opening of its new store, has opened up as though it had been doing business for years, instead of as a newcomer. Victors are the Farrand Co.'s line, but the business it gets does not seem to interfere with the older dealers any; it just seems to pick up a lot that was waiting for some firm in that particular locality to cater to. A \$200 Victrola has a constant place in the company's aristocratic show window, in company with a grand piano.

The Columbia Phonograph Co.'s branch, which experienced an easing up of the tremendous activity which has followed it since December, met a reaction about the middle of June, and is going again at the old forced draft rate. The Columbia de Luxe, the new model, is finding quick favor.

The Columbia Co. furnished the musical entertainment for the big passenger liners of the Detroit & Cleveland and the Detroit & Buffalo Navi-

gation companies. They took nine of the \$200 Grafonolas in their first order, and have been purchasing records steadily since. The navigation company has just put into commission the largest steamship on fresh water, the City of Detroit II. It excels even the magnificent Hudson River boats, and doubtless means the sale of more Grafonolas.

A SALESMAN.

When the train pulls in and you grab your grip,
And the hackman's there with his frayed-out whip,
And you call on your man and try to be gay,
And all you get is, "Nothing doing to-day";
Then you're a peddler,
By gad, you're a peddler!

When you get into town and call on your man,
"Can't you see any Bill?" "Why, sure, I can,"
You size up his stock—and make a rough count,
And "Bill" presently says, "Send the usual amount,"
Then you're an order taker,
By gad, you're an order taker!

When you travel along and everything's fine,
And you don't get up till half past nine;
When you see each concern and talk conditions,
And write it all home with many additions,
Then you're a traveling man,
By gad, you're a traveling man!

When you call on your trade and they talk "hard times,"
"Lower prices" and "decided decline,"
But you talk and you smile—make the world look bright,
And send in your orders every blessed night,
Then you're a salesman,
By gad, you're a salesman!

The Durkee Furniture Co., of Hudson, Mass., recently installed a good-sized stock of Victor goods. This store has a very excellent location in the center of the town, and it is able to exhibit and to demonstrate machines under the best possible conditions.

Talking Machine Dealers Pleasantly Disappointed at Non-Arrival of Dull Season—What Some of the Larger Concerns Report Anent Conditions—Talking Machine Co.'s List of Best Sellers—Tamaco Cabinets at Reduced Prices—News of the Trade Travelers—Arthur D. Geissler Pleased with Situation in Milwaukee—Permanent Jewel Needle Perfected—Salter Cabinets in Demand—The Fibre Needle Now a Fixture—Fibre Needle Cutters in Strong Demand—Wicked Talking Machine Aids Burglars—Instalment and Straight Credit Risks Compared—Trade News of the Month from the Middle West.

(Special to The Talking Machine World.)

Chicago, Ill., July 10, 1912.

Like the letter that never came, the "fearfully" dull season in the talking machine trade in Chicago is still being looked for.

The talking machine department of Wurlitzer's reports that business has been some above the normal for the time of year.

L. C. Wiswell, manager of Lyon & Healy's wholesale department, says they have enjoyed a good run this month, and especially so upon the higher-priced machines in the wholesale line. The medium and lower-priced instruments seem to be holding their own.

The Columbia Co. has also fared well. They led all other branches of the company in amount of business for May, and although the reports for June have not yet been received, prospects for keeping up the record of the previous month are good.

The Talking Machine Co. reports that this month was as good for them as last, and compared with a year ago shows up far better.

Most of the Chicago dealers have gone in vigorously after the summer "out-of-doors" trade and have reaped good results. The advertising has had an effective appeal and window displays have done their part in attracting buyers.

During the meeting of the National Educational Association in this city this week special bids are being made for the patronage of the pedagogues. The visiting teachers, especially the women among them, have shown a great deal of interest in the music houses along the Wabash which handle talking machines. The displays of the Victor and Edison companies at the Stratford Hotel, in the midst of the association's activities, have done a great deal to stimulate interest in the talkers, and hotel quarters of these companies are crowded from morning to night with visitors who are not only investigating the educational possibilities of the machines but are also glad to hear the musical and entertainment selections. The talking machine department of the Aeolian Co. has had many callers from the convention visitors, their prominent location on Michigan avenue near the headquarters and the hosteleries giving them an advantage in this respect.

Makes Record Selections Easy.

The Talking Machine Co., of this city, is now sending through the mails to dealers a list of 500 of the best selling Victor records, including 250 10-inch double-face; 50 12-inch double-face; 50 10-inch single-face; 50 12-inch single-face; 25 Purple Label and 75 Red Seal. This list is a selection made from accurate statistics, showing the most popular selling records. It includes additions from the April and May list.

Reduction on Cabinets.

The Talking Machine Co., this city, is having quite a run on the old Tamaco cabinets Nos. 10

and 11, which they are now offering at a price fully 15 per cent. below the cost, which brings the price down to a point approximately that of retail price of the record albums alone.

Visitors and Personals.

Geo. Cheattle, of the Talking Machine Co.'s force, is spending his vacation at Luddington, Mich., on a farm with his brother and sister.

S. A. Burrel, of the credit department of the Columbia Co., is spending his vacation this week at St. Louis.

Selling Condon-Auto Stops.

The Aeolian Co. has had quite a demand this month for the Condon-Autostop, and practically every machine going from the store was equipped with the handy little device.

Sells Records to Maintain Her Record.

For two months in succession Miss S. Berlin, of the Columbia Phonograph Co., this city, has had the honor of having the largest number of sales in the record department. The Chicago branch of the Columbia Co. stands highest in point of sales of any of the Columbia branches.

Arthur D. Geissler Visits Milwaukee.

Arthur D. Geissler, manager of the Talking Machine Co., of Chicago, has just returned from a trip to Milwaukee, during which he practically closed a deal with Edmund Gram, the well-known piano dealer, handling the Steinway and Aeolian, to put in a complete line of Victor goods. The only delay now is in arranging the fixtures of the department to match those of the remainder of the store, which is all decorated in attractive classical fashion, the lower floor being all of white with stucco wall finish. Mr. Gram's establishment has the distinction of having the only automatic elevator in Wisconsin.

Gimbel Brothers' Attractive Department.

Arthur D. Geissler, who has just returned from a journey to Milwaukee, says that the Victor department of Gimbel Brothers is one of the most attractive in the West. Mr. Parker, in charge of the department, has given special attention to making his displays as orderly and effective as possible. He has installed a vertical filing system for records which is not only economical in space but in time as well, and eliminates a great deal of confusion and delay in picking out records. He has an elegant concert room, and Mr. Geissler found it well filled despite the extremely hot weather.

Perfect Permanent Needle.

Samuel Levin, of Highland Park, Ill., announces that he has perfected his permanent jewel needle for disc talking machines from the viewpoint of practicability. The only difficulty with the permanent needle heretofore was that it was not altogether fool proof inasmuch as the user would not always adjust it properly. Now he is making the needle so that the shank has one flat side. Insert the shank in the needle arm so that the flat side of the shank is towards the needle screw, and as the screw is turned the needle will adjust itself into exactly the right position. This device is just the trifle that was necessary to make a practical proposition of the permanent needle, and Mr. Levin is to be congratulated upon its accomplishment.

Salter Busy.

Considering that we are now in the midst of the traditionally dull summer season the Salter Mfg. Co. are having a remarkably fine trade on the well-known Salter talking machine record cabinets which, by the way, contain many exclusive features that the few dealers who may not be familiar with the line would do well to investigate. The company also make a beautiful and very extensive line of music and player roll cabinets, on which they also issue a good illustrated catalog.

A Visitor from Indianapolis.

H. R. Jones, manager of the talking machine department of the Taylor Carpet Co., Indianapolis, (Continued on page 56.)

As long as fibre needles are used the **Wade Fibre Needle Cutter** will be an indispensable article to the talking machine owner.

The WADE is reliable, dependable, simple. It works like pliers—Fine.

Dealers should take advantage of its popularity. Every talking machine owner is a prospective buyer and every buyer a satisfied customer.

PRICE ONLY \$1.50 LIST

WADE & WADE
1227 East 46th Street, CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 55).

Ind., was a Chicago visitor this week, placing a stock order and getting ideas by visiting the various retail departments and stores. The Taylor Co. is one of the largest furniture establishments in Indiana, and opened a Victor department last November. The department occupies handsome quarters on the main floor of the establishment, and there are some good booths. They are doing a nice business and very enthusiastic over the line. The stock order placed by Mr. Jones was given to the Talking Machine Co., and amounted to \$3,000. It included records which will give them the complete Victor catalog.

Opens Victor Department.

The M. Conlon & Sons furniture house, at 2333 West Madison street, Chicago, has just recently opened up a Victor talking machine department.

The Wade Cutter.

Wade & Wade, this city, are having an excellent business on the Wade fibre needle cutter. This device is now handled by most of the jobbers of the country. Further particulars will be found in their advertisement elsewhere in this issue.

An Important Matter.

The Chicago Talking Machine Dealers' Association sent out postal cards to the local trade last week bearing the following message:

"If you have not already written to your Congressman and both Senators from Illinois in reference to proposed changes in Patent Laws, please do so at once. Do not fail to tell them the best interests of Consumer, Dealer, Wholesaler and Manufacturer are conserved by maintaining the 'one price system.'"

Lyon & Healy's New Fibre Cutter.

Lyon & Healy's new fibre needle cutter described and illustrated in their full page advertisement elsewhere in this issue is well worth investigating by dealers everywhere. The sale on this cutter has already reached immense proportions. L. & H. also manufacture other good talking machine auxiliaries and specialties, information regarding which can be obtained on application.

Fibre Needle Progress.

The fibre needle has become a staple in the talking machine field, and since the Victor Co. obtained control of it and placed its tremendous selling organization behind it it has advanced by leaps and bounds.

The early struggles of F. D. Hall, of Chicago, the inventor of the fibre needle, to gain general recognition for his invention, are well-known, but to-day the large number of music lovers all over the country, one might say the world, who use the fibre needle on their disc talking machines furnishes proof positive that the inventor's faith in his device was well founded.

It should be said that since the Victor Co. got hold of the fibre needle two years ago they have not been deprived of the hearty aid and co-operation of the inventor, but Mr. Hall has constantly been experimenting, and has from time to time submitted suggestions for improvement in machinery, processes, chemical treatment, etc., all of which have been speedily adopted with the most satisfactory results.

In talking with the World lately Mr. Hall said: "I have been particularly impressed with the progress made by the Victor Co. in the manufacture of their records. In the course of my experiments on the fibre needle I have had occasion to make various tests of the Victor records, and have noticed improvement in the last few years in the Victor record composition. The present record is much smoother than formerly and shows an increased tendency to durability as well as enhanced tonal quality. I also want to say that the adoption of the idea of printing a description of the fibre needle on the Victor record envelopes was an exceedingly good one, and no doubt has been one factor in the remarkable increase in sales of the needle."

Talking Machine in New Role.

When the talking machine has reached a position of prominence where it becomes a means of education in the teaching of languages and music; where its music is accredited with giving

the suggestion for self destruction (a case of which was recently reported in the World); and where its therapeutic value is recognized by physicians; then indeed, it would seem, has it become a factor in our national life. In its latest role the talking machine is the "burglar's friend." From Minneapolis, Minn., comes this story: "Strains of music from a talking machine early in the morning were taken advantage of by burglars to cover the noise made by their entrance into the home of P. H. Ware, 2116 Nicolet avenue. Loot valued at nearly \$100 was taken while occupants of the premises, all unconscious of what was going on, sat and listened to the songs that emanated from the machine.

"Members of the Ware family had been to a railroad station to meet a midnight train. When they returned to their home they set the talking machine going. Mrs. Ware said that twice while the songs were being played she heard scratching noises in other parts of the house, but thought nothing of it. Soon the family retired.

"Philip Ware, 4 years old, who had been asleep in the bedroom while the music was being played, missed part of his clothing. The garments were found under a window, where the burglars had placed them as a mat to prevent the leaving of tracks. Then Mrs. Ware missed two pocketbooks of alligator and seal, one worth \$18 and the other \$10. In one pocketbook there were \$10 in cash, a gold chain, a locket made of a fraternity pin, a checkbook and a photograph of Mr. Ware, taken when he was 4 years old. The burglars had entered through the window and taken the articles from a dresser in the room in which the little boy slept."

Edison Not Donor of \$2,500,000.

In denial of reports that gained circulation some time ago, Thomas A. Edison emphatically states that he is not the donor of the \$2,500,000 fund recently given to the Massachusetts Institute of Technology, Boston. "I have better uses for my money," said Mr. Edison. "I can use it to a thousand times better advantage than any college in the country. If I had a billion dollars I wouldn't make such a gift. Let Rockefeller and Frick and the others who have so much money that they don't know what to do with it give their millions to the colleges if they want to. I have better use for mine."

A Suggestion for Dealers.

The instalment plan, or easy payment plan of sales is just now occupying considerable attention of one of the large talking machine houses in the advertising literature being sent to dealers over the country, and one fact brought to light stands out in particularly bold outline. This statement covers it:

"Statistics prove that the percentage of loss through dishonest instalment purchases is too small to reckon. *It isn't one-tenth the loss by straight credit.*"

There is food for thought here to the talking machine dealer. Had you ever realized it? While you are anxious to do a credit business with the class of people you regard as "good risks" because they have visible means, you stand ten chances of losing on them against one on the wage-earner whose business you are not so particular about because he can only afford to buy on easy payments. It is worth consideration.

TALKING MACHINES EXHIBITED AT EDUCATIONAL CONVENTION.

Both Victor Talking Machine Co. and Thos. A. Edison, Inc., Exhibit Machines and Records and Give Demonstrations Before National Educational Association at Convention in Chicago—Singing of School Children Shows Efficiency of Talking Machine Training.

(Special to The Talking Machine World.)

Chicago, Ill., July 12, 1912.

At the meeting of the National Educational Association in Chicago this week teachers from all over the country were shown the most interesting educational exhibits of talking machines that possibly have ever been made. Both the Edison and Victor companies are now devoting considerable attention to the educational application of talking machines and have made remarkable strides in their adaptation to school room uses.

The Edison Co., besides its talking machine display, has in operation in its quarters at the Stratford Hotel one of the home kinetoscopes recently invented by Mr. Edison for use in the home, and in school room in teaching subjects of natural history, physical geography, etc., by moving pictures. This machine, a small, compact affair, requires only the candle power of an ordinary incandescent light for its operation. It is built upon the same principle as the standard moving picture machines and operates accordingly. It will throw a clear, clean picture about 8 x 8 feet in size a distance of thirty feet. It can also be adjusted for twelve feet distance. By its use realistic action pictures of many of the world's activities can be reproduced in the school room. The machine has been completed but a short time, however its practicability has already been fully demonstrated. The inventor intends that a central distributing point for a film service shall be maintained at the factory, and arrangement can then be made by each school which installs the machine with the local dealer to furnish whatever films they choose.

The apparatus sells for \$75 and up, depending upon the quality of lens used. It is attracting considerable attention among the teachers, who readily see its usefulness as an auxiliary to text books.

The Edison Co. has also on display its new style school phonograph, a cut of which is shown in this issue. The style has never before been shown, in fact, it is a very recent product, and has not been generally advertised. It is made in two styles, the metal stand and the wooden concealed horn pat-

tern. The latter is merely a higher priced and more ornamental machine. The metal style is upon casters to make it easily movable, has a number of metal record shelves to hold a supply of indestructible records. To go with this machine a repertoire of records has been made. These will include musical numbers suitable for use in the school room, such as dances, marches and patriotic airs; also a number of high class popular selections. The principal and most interesting point about the new school talking machine equipment, however, is the special records for teaching spelling and simple problems in arithmetic. The records have been tested out fully before a school room of pupils. They have proved a great help to teachers. By their use the teacher is no longer required to perform the very tiresome task of announcing words to spell or problems to solve. Aside from this advantage of the machine, another is that it will train the pupil to concentrate. He must learn that if he keeps up with the others in the class he must have his mind constantly upon the sound that comes from the machine. If he misses one word the machine will not be stopped for him to catch up. Sufficient time is given though for any normal child to perform the manual exercise indicated, and it is believed that when the child learns he cannot have the word or problem repeated at his command he will pay more attention and thus develop attention.

The Edison Co. has also on display its dictating machine. The exhibit is under the direction of W. H. Ives, manager of the educational department, from Orange, N. J. Associated with him are W. H. Maxwell, general sales manager; B. H. Stearn and W. C. Hope.

The Victor Co.'s exhibit is under the supervision of Mrs. Frances E. Clark, who has been associated with the company in its school work for several years. Not only is Mrs. Clark thoroughly conversant with the company's achievements in this line, but she has done for them some very valuable work in her department. Both Mrs. Clark and Mr. Ives from the Edison Co., spoke before

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 56).

the assembled teachers Thursday morning. They explained the merits of their individual machine and indicated what advancement could be made by use of the machines in the regular school work.

The use of the talking machine in the school has already become fairly quite general and although it proved practical it is still only in a great measure in its experimental stage and its future possibilities are wonderful.

The teachers who have never had occasion to observe the result of the Victor's use in the schools will be given an opportunity this afternoon in the regular program when a group of children from the Chicago city schools under the training of Miss Cramer, director of folk dancing, will perform a number of their dances to Victor Music. The fact alone that Mrs. Clark was enabled to have the Victor used in one of the regular numbers on the program is in itself quite a recognition for the Victor.

Mrs. Clark has presented to the association a plan of the Victor Talking Machine Co., by which a complete course of four years of study of high school music, both history and appreciation, will be taught by use of the Victor talking machine. The text book for this work is now being printed and a prospectus has been issued for distribution at this convention to enable the teachers to see what the possibilities of such a course are. It is proposed to give thirty lessons in each year, the group of first year studies to cover the principles of music; the second year the history of music; the third year, the orchestra and development of instrumental music; and the fourth year, the opera and oratorio. The course was arranged under the direction of Anne Shaw Faulkner, lecturer on music before schools, colleges, universities and clubs, and organizer and director of the program study course of the Theodore Thomas orchestra. Under this course a record from a great composition would be played, the pupils would be asked to catalog it under the several heads as to its different qualities, by whom composed, what, if anything it attempted to teach; and to analyze the combinations by which the composer got his effects. All this information is contained in the analysis of records included in the book. In other words this course would be an illustrated lecture on music. No doubt such an innovation as this will be welcomed by the music supervisors. The course is not intended to supplant any musical courses now in school curriculums, but merely intended to supplement them. The study course and selection of records is so broad and inclusive as to cover all the really great compositions, and also contains sufficient numbers from foreign languages to appeal to all nationalities of children.

There are approximately 150 talking machines in use in the Chicago schools. Many of the pupils who have no opportunity of hearing good music otherwise are thus enabled to become acquainted with the best things written. One of the features of the session Tuesday morning was a mass chorus of 1,400 voices of children from the Chicago schools singing a number of selections from the

Laurel Song Book. Their performance was little short of wonderful. Their rendition and evident familiarity with the sentiment of the numbers remarkable; and the final effect something very much out of the ordinary. The Victor company has records of more than sixty of the songs of the Laurel Song Book, from which the children sang. These form a part of the repertoire furnished the Chicago schools, and this performance of the children is regarded by the company's representatives as one of the best examples they could furnish of the success of teaching music by the Victor. The children harmonized and phrased exactly in imitation of the artists who sang for the Victor records and the result was almost perfect work.

Included in the music course will be a series of lessons upon orchestration. The company has arranged a group of records in which the composition of the orchestra is explained so simply that it will be easy for the child to get at the fundamental principles of orchestration. Selections are played on each individual instrument. First the string instruments are played separately, then in sections. Then the reed-wind instruments are taken separately, and in sections. Then the brass,

and so on. Finally in an ensemble the students hear the full organization and through previous familiarity with the instruments singly is able to appreciate each instrument as it performs its component function.

As can be seen this work is only in its beginning. The study course in music, though complete, was not ready in book form so it could be presented completely to the convention and the teachers for that reason could not be shown the entire possibilities of the course. Without exception those who have heard both the Edison and Victor machines in the musical and also in the teaching work are loud in their praise.

OUR FOREIGN CUSTOMERS.

**Amount and Value of Talking Machines
Shipped Abroad from the Port of New York
for the Past Four Weeks.**

(Special to The Talking Machine World.)

Washington, D. C., July 6, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

JUNE 12.

Berlin, 61 pkgs., \$795; Callao, 8 pkgs., \$1,400; Havana, 73 pkgs., \$1,848; London, 71 pkgs., \$2,201; Manila, 79 pkgs., \$5,824; Para, 13 pkgs., \$1,605; Trinidad, 13 pkgs., \$706; Algoa Bay, 16 pkgs., \$110; Berlin, 5 pkgs., \$136; Moscow, 1 pkg., \$125; Santos, 10 pkgs., \$648.

JUNE 19.

Colon, 13 pkgs., \$566; Havana, 15 pkgs., \$629; La Guayra, 14 pkgs., \$271; London, 89 pkgs., \$2,173; 28 pkgs., \$1,176; 4 pkgs., \$135; Montevideo, 2 pkgs., \$256; Santos, 17 pkgs., \$1,426; Trinidad, 7 pkgs., \$248; Valparaiso, 6 pkgs., \$430.

JUNE 26.

Berlin, 14 pkgs., \$371; 35 pkgs., \$1,414; Cape Town, 17 pkgs., \$284; Callao, 4 pkgs., \$284; Havana, 2 pkgs., \$112; Kingston, 4 pkgs., \$121; La Paz, 3 pkgs., \$150; Maracaibo, 13 pkgs., \$391; Milan, 15 pkgs., \$1,367; Para, 34 pkgs., \$1,881; Vienna, 6 pkgs., \$300.

JULY 2.

Berlin, 6 pkgs., \$107; Bremen, 2 pkgs., \$150; Callao, 2 pkgs., \$279; Colon, 7 pkgs., \$109; Havana, 39 pkgs., \$1,778; La Guayra, 6 pkgs., \$192; Liverpool, 6 pkgs., \$363; London, 91 pkgs., \$2,686; Manila, 42 pkgs., \$1,265; Mollendo, 3 pkgs., \$192; Puerto Cortez, 11 pkgs., \$533; Quito, 2 pkgs., \$110; Vera Cruz, 87 pkgs., \$2,655.

IMPORTANCE OF GETTING THE PRICE.

Getting the price is like "chinning the bar"—it takes grit, grip and "beesum," and gets easier with practice.

The salesman who's the last man out of the car may be the first man to land an order; more likely he won't.

The Edison School Phonograph.

PREPARING FOR A BUSY FALL.

The Talking Machine Men of Indianapolis Are "Cleaning House" So to Speak and Are Equipping Their Stores and Ordering Stock So as to Take Advantage of the Large Business Which They Expect to Materialize with the Coming of Cooler Weather—The News of the Month in Detail Worth Noting.

(Special to The Talking Machine World.)

Indianapolis, Ind., July 9, 1912.

A lull is on in the talking machine business here. Employees of the talking machine houses are finding time now to go over the stock and get things in readiness for the late summer and fall trade. Indiana had a rather bad spring, but of late the weather man has not been chary to turn on the heat.

Miss Lazarus with Aeolian Co.

Miss M. E. Lazarus, formerly of St. Louis, where she has a wide acquaintance in the talking machine business, is now in charge of the talking machine department of the Aeolian Co. in North Pennsylvania street. Miss Lazarus succeeds Miss Wiltse, who was recently married. Miss Wiltse intended to continue with the Aeolian Co. as manager of the Victor department, but she found that she could not manage a country home and a talking machine department at the same time. Miss Wiltse, or rather Mrs. Lamb, has a pretty country home four miles east of Indianapolis.

The Kipp-Link Co., which handles the Edison machine, is scoring a success in selling the Edison Kinetoscope, the moving picture machine adapted in price and size for the family and schoolroom. There is a demand for the machine wherever it is exhibited.

Thomas Devine, manager of the local branch of the Columbia Phonograph Co., took advantage of a recent visit of Weber and Fields, and acting in co-operation with the press agents of these famous comedians and their co-stars, produced an exhibit in the window of the store that attracted a great deal of attention. A large picture showed Lillian Russell and Fay Templeton holding a large hoop. Weber and Fields were shown with their heads sticking through the hoop, and the picture was so arranged as to give the effect of being a large Columbia record. The Weber and Fields records are still very popular.

The Columbia records that have been in demand locally are those by Emmy Destinn, the Berlin-Snyder latest hits, the "Herd Girl's Dream" and the Ellery band records.

Selling Many Dictaphones.

Through the efforts of C. P. Herdman, assistant manager of the local store, the company sold a dictaphone to the Henderson Motor Car Co. The sale of the dictaphone has been very satisfactory to the local branch in the last few months.

An organization of one of the local Catholic churches held a picnic recently, and among the prizes given was a Columbia Grafonola.

W. E. Ludlow, secretary of the Wulschner-Stewart Music Co., and William English, traveling representative for the talking machine department of the company, attended the talking machine jobbers' convention at Atlantic City.

SHOWS INCREASE FOR HALF YEAR.

The New York Talking Machine Co., which last week closed the first half of its fiscal year, has made a record which runs well ahead of the previous year. This emphasizes the increasing popularity of the Victor talking machines and records in the territory controlled by the New York Talking Machine Co. G. F. Williams, the manager of the company, looks forward to an exceedingly active fall trade, and is making preparations to meet all demands that will come his way.

"TALKERS" IN THE PARKS.

The members of the Park Board of Cincinnati, O., have approved of a suggestion made by Commissioner Krohn of installing talking machines in the city playgrounds both for amusement and entertainment.

BALTIMORE MEN AT CONVENTION.

Not the Democratic Fight, but Rather the Gathering of Talking Machine Jobbers at Atlantic City—June Business Makes Satisfactory Showing in the Talking Machine Field.

(Special to The Talking Machine World.)

Baltimore, Md., July 9, 1912.

By the time that the present week rolls around the talking machine men will have had enough of conventions to last them for some time. They were all a busy lot during last week when the Democratic National Convention was in full blast, furnishing a number of machines for the entertainment of delegates, while at nights they made trips to the Fifth Regiment Armory to enjoy the political oratory which preceded the balloting for the nomination for President. After such a busy week most of the dealers handling talking machines hastened to Atlantic City, where the sessions of the national convention of talking machine jobbers were held.

Among those who are enjoying the bathing and other sports to be had in that lively New Jersey City were Albert Bowden, manager for the talking machine section of Sanders & Stayman; W. C. Roberts, manager for the Baltimore and Washington stores of E. F. Droop & Sons Co.; F. A. Denison, manager for the local branch of the Columbia Phonograph Co.; Mr. Strahan, of H. R. Eisenbrandt Sons, and Morris Silverstein, of Cohen & Hughes.

Reports at the various stores for the month of June are that business was comparatively good and showed up better than the same month of 1911. However, June could not make quite the impression in a business way as did the months of April and May, which ranked among the best for many years. Most of the reports were that business slackened up somewhat during the month, and it is expected to run a bit slower than usual until the fall trade sets in, and, according to the various dealers, the prospects for the fall trade are very encouraging.

Manager Thomas Gordon, of the talking machine department of the Kranz-Smith Piano Co., was one of those who did not get to the convention. Mr. Gordon said that things were fairly good in June, but that the fall prospects are the most interesting feature of the Victor and Columbia trade at this time.

Hammann & Levin report a fair month with the Victors, while the other Victor and Columbia dealers make similar statements, all reporting summer business good.

A ROYAL NOISE MAKER.

Emperor William Has Exclusive Right to Use of New Auto Horn in Germany—But It Will Soon Be Here—American Tourists, Charmed by Its Melody, Have Besieged Dealers for Duplicates but It Is Hard to Get.

The parks and driveways of New York and other American cities where automobiles flourish are likely before the summer is over to resound to the echo of a novel motoring horn of the most aristocratic lineage. It will be none other than a duplicate of the musical signal now attached exclusively to the automobiles of the Kaiser, which it is claimed is constructed along talking machine lines.

It differs from any other signaling instrument in the world in that it consists of four or five distinct tones, blended into a harmonious whole, which produces more the effect of an operatic recitative than a prosaic blast warning persons of impending danger. It can be heard blocks away, and indicates that the Kaiser is coming long before his high-power car tears along.

Americans visiting in Berlin this season are completely captivated by the melody of the signal as the Kaiser flashes through Unter-den-Linden morning, noon or night, and they are besieging the local dealers in automobile accessories with a view to obtaining duplicates of it.

The horn is manufactured by a well-known firm of Saxon musical instrument makers, who had to pledge themselves not to produce its twin for use within the confines of the German Empire.

Several daring motorists who ventured to try a horn something like the Kaiser's have been sharply reproved and threatened with punishment if they repeated the misdemeanor.

"The Kaiser may blow his own horn in Germany," said a New Yorker, "but I'm going to take chances in blowing it along Riverside Drive."

ENLARGES VICTROLA DEPARTMENT.

The W. F. Frederick Piano Co., which recently opened its large Victrola department in its store in this city, has found the venture so successful that arrangements have been made for the erection of two new demonstrating booths, and for the giving of additional space for that department. The Frederick Co. is also doing a heavy business in music rolls and plans have been made whereby this concern will devote the entire second floor of its store to that line.

SIDE-LIGHTS ON SUMMER TRADE.

How to Hold the Interest of Patrons During the Summer Months—Also a Dealer's Tribute to a Clever Ad.

I found my friend, the dealer, in his den at the rear of the store, lounging in his favorite easy chair, feet placed in comfortable fashion among the correspondence upon his desk, and a good cigar, judging from the aroma it exhaled, hanging nonchalantly from his lips. He was, indeed, a picture of languorous ease, and at first sight one caught the impression that life held little charm for him, but a glance at his eyes dispelled this idea. They were fastened gloatingly upon a double spread in a popular magazine, and evidently appreciated to the utmost what they saw there.

"Rather absorbing, eh?" I inquired, casually, dropping into a chair at his side, and gazing over his shoulder at the advertisement.

"You're right!" he replied, enthusiastically. "If there is anything in this world that does my heart good, it is to read a real live-wire ad, and the Columbia people have surely invested their money wisely in this case." He handed me the copy of the Saturday Evening Post he had been perusing, and I thoroughly agreed with him when I glanced at the two pages of masterfully composed publicity which had won his admiration.

"At this season of the year it takes mighty nifty copy to create an impression," he continued, "but that clever piece of work there"—with his finger upon the ad in question—"proves that no matter how dull the season promises to become at the outset, a brainy ad man can relieve the situation through the medium of his fountain pen and brush."

"The caption, 'This is a Columbia for All Outdoors,' accompanied by the series of skilfully executed sketches illustrating the point, should set a million music lovers thinking, and that is the secret of successful advertising."

"My business does not fall off to any great extent during the summer," he went on impressively, "and the reason is just this: I keep the trade interested by following up all the big, thoroughly worth while ads which my manufacturers place in the leading periodicals, by sending out small supplements calling attention to them and adding certain suggestions of my own. For instance: if the advertisement I am supplementing deals with the outdoor life of the vacationist, I ask my patrons, in the brochure I mail them, what they anticipate doing this summer, and then endeavor to help them out by bringing before their eyes, in as clear and concise a manner as possible, what a hit the talking machine will make in whatever field of recreation they may decide to place it.

"The average American is keen for something new, and it is the original, with a dash of the unique by way of seasoning, that wins his instant and undivided attention. Therefore, it is up to the dealer who desires to make a real success of his summer campaign to keep after the people with new ideas. He must suggest, cajole and urge them to maintain the same strenuous activity along phonographic lines throughout the summer as at other seasons of the year. This is not at all diffi-

cult to accomplish when the talker man has such magnificent backing as the leading manufacturers give him through their colossal publicity campaigns.

"Everybody everywhere has a certain amount of admiration for the beautiful, and if you will gaze with me upon Miss Columbia exploring the pages of her very latest magazine, we shall find that her sense of the artistic will be equally as satisfied by the wonderful drawings accompanying the Columbia ad as those illustrating 'The Jingo,' the story of the day. She may not care for the talking machine, the ones she has heard being inferior through bad adjustment or commonplace records, but that ad captivates her, and after a pleasurable fifteen minutes spent in an absorption of it, she places a long-stemmed and fragrant rose between pages 32 and 33 as an appropriate reminder to the next deliver after the beautiful, into whose hands her magazine may fall, to follow her example. Thus an endless chain is forged among people, very likely, who are not in the least talker enthusiasts, but who are entranced by the charm of the advertisement; and, of course, after reading it, they decide that there must be something other than noise in the talking machine after all.

"The rest is easy sailing upon a calm sea. They

Gaze with Me on Miss Columbia.

go to see the dealer. He is courteous, obliging and interesting. He has a mighty fine business story to relate, and he spins the yarn well. He is (or should be) able to answer all their questions intelligently, awakening their regard for the world's best phonographic music from the slumber that has overpowered it since the days, now far in the past, when the talking machine was only an experiment, and eventually lead them on from a condition of idle curiosity to that of the same deep-seated and ever-expanding enthusiasm as he himself enjoys. He tells them that no matter where they go or what they do when they get there, the talker will help them do it. Tenting, boating, camping, barn dancing, picnicking, and all the other pastimes that go to make up a summer's fun are not quite complete without a talking machine. The dealer knows this to be true, and when one has a great truth to impart the telling is easy, and aside from that, it carries sufficient weight to demand attention and open wallets.

"Dealers who groan under the impression that talkerdom is a deserted village throughout the summer should take a pill for their liver's sake, and do some snappy advertising for their business' sake. There is just as much chance for the man of brains and brawn to make good in vacation time as at other seasons, but he must hustle. He must get next to the people and stay there; make an invasion of their homes, ask them pertinent questions about their recreation plans, aid them with their itineraries if they are disposed to accept his services in this regard, and into every niche where it will add to their pleasure and his financial betterment he should fit a talking machine.

"A very aristocratic young lady called upon the

A. Timely Suggestion for the Vacationist.

the other day, asking for the popular song 'I Love Music With My Meals,' and while playing the record for her I suddenly realized that she had unconsciously presented me with another string to my advertising bow. After the rendition of the record I asked her if she, too, loved music with her meals.

"Indeed I do," she replied most decidedly. "Whenever my friends dine with me I have a maid play selections upon my Amberola, which is situated in my dining room behind a screen of palms, and the result is most edifying. My guests are invariably enthusiastic in the extreme over my exquisite melodies.

"Included in my repertoire of last evening was a record of 'Coppelia'—entr'acte and waltz by Armand Vecsey and his Hungarian Orchestra, and when the opening strains of the enchanting number with its beautiful, graceful swing, perfectly executed by this talented organization of Hungarian artists, crept through the room, the lady at my right hand, who happened upon this particular occasion to be a famous New York violiniste, shrugged her ivory shoulders in sheer ecstasy, while she beamed upon her hostess most engagingly, assuring me as she did so that it was more than kind to accord her the pleasure of hearing her beloved Armand and his gallant band outside the precincts of the Ritz Carlton. Then, turning to the others gathered around the table, she raised her glass and proposed a toast to a tactful woman and a great musician. Rather a nice compliment, do you not think so?"

"Oh, yes, I love music with my meals, all right. Do you blame me? You would not if you realized as I do that my somewhat enviable position in the social life of New York's most exclusive set is due to my well-served dinners and the wonderful music which accompanies them."

"As she was leaving, she asked smilingly, 'Have I been talking business, I wonder?' I assured her that she most certainly had, and mighty good business at that.

"'Music and Meals' is the title of my latest brochure. It is still at the printer's, but if you desire a copy I will see to it that you are supplied immediately it comes off the press."

He glanced at his watch and smiled expectantly. "It's lunch time; let's stroll up to the Ritz and hear Armand. What say you?" I said "Yes," and closing my notebook, walked beside my entertaining and instructive friend out into New York's sunshine.

HOWARD TAYLOR MIDDLETON.

FEINBERG A MOTORIST.

Traveler for the American Piano Co. Indulges in a Classy Selden Car and Cuts Down Cigar Bills to Meet the Situation.

Ben Feinberg, traveler for the American Piano Co., has been so successful in selling Rythmodik rolls for his house that he recently plunged and purchased a high-powered Selden car for a few joy rides around New York and vicinity. Since buying the car Mr. Feinberg is sinking a large portion of his cigar money into tires and other necessary paraphernalia for the motorist. He also indulges in the luxury of a private chauffeur.

Ever hear of a man who sold his line by talking a LITTLE about it?

General Conditions as Far as They Affect the Talking Machine Trade Are Decidedly Dull—Summer Time and Strike Time Held Accountable—Export Trade, However, Shows Gratifying Increase and the English Manufacturers Look Forward to an Interesting Business in This Field—New Copyright Act Not Sufficiently Long in Force to Enable People to Get an Idea of Its Workings—Manufacturers Notifying Dealers of Increase in Price of Records, Owing to the Copyright—The Auxetophone Being Used in Public Parks—The Edison Advertising Campaign for the Summer Months—New Addition to the Paris Voice Museum—Latest Report Regarding the Russell Hunting Co. Now in Liquidation—Other Items of the Month.

(Special to The Talking Machine World.)

London, E. C., July 5, 1912.

Talking machine conditions on this side are decidedly dull at the moment, and many leading officials of the various companies have in view plans for a change of air, taking advantage of the most propitious time, perhaps, for that purpose. Summertime and strike time must be held responsible for much of the depression which exists in all trade sections of this industry. Business is not lacking for want of strenuous efforts from the manufacturers' end, and although some factors and the majority of dealers may be regarded as somewhat apathetic, under the exigencies of present-day conditions it is scarcely to be wondered at. In a word, the public is either economizing or it is finding enjoyment outside at the expense of home talking machine diversity. In any case your average dealer's experience is not to be envied. His rent, rate taxes, lighting and other incidentals in the way of expense continue with never-failing regularity, and he must be in attendance at the shop all day in anticipation of receiving a few customers who may put in an appearance.

Spurt in Export Trade.

In other directions the situation is more promising, an increase in export trade being especially noticeable. Alive perhaps to prospective extra charges under the Copyright Act on goods dispatched after July 1, foreign and colonial buyers have in many instances taken advantage of present prices to order as much stock as they can reasonably carry. Manufacturers are therefore busily engaged in handling these orders, and it has done much to neutralize existent slackness in home markets.

New Copyright Act in Force.

The Copyright Act is now in force here, but business men are disinclined to express opinions yet as to its working on the ground of insufficient experience. It is generally recognized, however, that the act is going to entail greater expense and labor than was at first anticipated. Manufacturers have to negotiate with the author, not the publisher, and it being often difficult to locate the former, recourse to advertising in the London Gazette is necessary. Such notices have already appeared. But all this occupies much time, with the result that record supplements have to be compiled some few months in advance of the date of issue, in order to be up to date, and with this will arise the difficulty of judiciously anticipating possible "hits," especially of the music hall type of song. Manufacturers will doubtless soon accustom themselves to the new conditions, but at the moment not a little vexation is apparent. Upon the question of allocating the royalty expense, while no definite information is yet available, I am in a position to report on very good authority that the leading record firms have practically decided to equally divide the cost as between themselves and the dealer. It will probably take the form of invoicing records to factors at sixpence extra per dozen, and this the factor will pass on to his retail customers. It is optional for dealers to

charge buyers perhaps one penny extra, but in these competitive days it can scarcely be expected that he will adopt such a plan unless really enforced by manufacturers, for while freedom exists in that respect one dealer will cut against the other.

To Make Public Pay Half of Royalty.

J. E. Hough, Ltd., manufacturers of the Edison-Bell and Velvet Face disc records, has communicated with its dealers to the following effect:

"On and after July 1 next all Bell discs and Velvet Face records will be increased in price to dealers one halfpenny over their present prices, charged either direct or through our factors. Dealers are recommended on and from that date to charge at least one penny more than their previous price to the public. Thus the act will benefit them, the burden will be borne equally by the manufacturers and the public. There is no reason why this legal impost should not be made the occasion of raising prices if dealers co-operate with each other."

A somewhat similar announcement has been issued by the Winner Record Co.

Copyright Stamps Free of Charge.

A further circular from the Edison-Bell Works reads as follows: "We desire that all Velvet Face, Edison-Bell and Winner disc records shall bear the stamp of copyright authority on the 1st July next. This will be of material assistance in dealing with the public after June 30, as suggested in our recent circular. If dealers will let us know (either direct or through their factors) how many of the above records they have in stock we will forward stamps for all. These stamps are not available for, and must not be attached to, any other records. Dealers are earnestly requested to make early application, for their own advantage, and to secure uniformity and order in Edison Bell issues."

Live Edison Summer Advertising Campaign.

Apart from the usual publicity schemes, the Edison Co.'s summer campaign is a particularly attractive one. The fountain source of demand is reached by the practical offer to execute cures of all reproducers requiring the attention of an expert doctor, and by this means it is anticipated that the public will be induced to maintain more interest in their machines than is often the case this time of year. It is good for dealers, too, because of the better sales prospects associated therewith. Another commendable plan is the decision to extend arrangements for the public exchange of records until the termination of this year. The advantage to dealers is obvious, and if they don't make the most of it they deserve to become acquainted with the gentleman who must eventually inquire into the commercial affairs of all unenterprising traders.

Dealers' Protective Association Growing.

In conversation with the chairman (W. E. S. Wilcox) of the Gramophone and Phonograph Dealers' Protective Association, I learned that its membership is being augmented especially by dealers who desire to maintain prices, but are sometimes found to deviate somewhat owing to local competition. The association favors a fixed retailer's profit of 33 1-3 per cent. and will actively work to that end. Mr. Wilcox recognizes that plenty of spade work is necessary, but is optimistic as to the ultimate success of the association, to which sentiments I heartily subscribe.

No Slack Season for Zonophone Co.

Unlike some of the companies who have suspended recording operations or largely curtailed their monthly lists, owing to the slack season, the British Zonophone Co. continues to maintain substantial and acceptable lists, that for the month of August being especially so, time of year considered. The issue mainly comprises musical selection of not too heavy type, this class finding a ready sale during the summer. Some examples worthy of mention are as follows: "How Lovely Are the Messengers" (Mendelssohn), and "I Will

Lift Up Mine Eyes" (Whitfield), a church choir, with organ; "Apart" (Scott Gatty), and "I'll Sing Thee Songs of Araby" (F. Clay), Ernest Pike; "Let's Make a Night of It To-night" (Glover Kind), and "Come With Me to the Races" (Bennett Scott), Harry Fay; "Oh, You Beautiful Doll" (Ayer-Moret), and "The Rooster and the Hen" (Wm. McKenna), Alf. Campbell and A. Collins; "St. Patrick's Day" (Vieuxtemps), and "Cradle Song" (Pechotsch), violin solos, Jan Rudenyi; and "Anvil Chorus" ("Il Trovatore") (Verdi), and "Entr'act Gavotte" from "Mignon" (Thomas), Black Diamonds Band.

"His Master's Voice" Records for July.

"His Master's Voice" July list of records is notable for two more excellent items by the Band of H. M. Coldstream Guards, the titles being "Coppelia," mazurka and valse (Delibes), and "Bohemian Girl" selections (Balfe); a new number by Harry Lauder, "It's Nice When You Love a Wee Lassie" (Lauder), and another "may be" by Eugene Stratton entitled "I May Be a Millionaire." Other issues which will commend themselves to my readers are: 12-inch Celebrity Records—"Tarantella Sincira" (Vincenzo de Crescendo), Caruso; "Ritorna vincitor" ("Aida") (Verdi), Frl. Emmy Destinn; "Sequidilla" ("Carmen") (Bizet), Mme. Kirkby Lunn, and "Salut! tombeau!" ("Romeo et Juliet") (Gounod), M. Franz. Other 12-inch records are: "Sous la lune" (Clarke), Bohemian Orchestra; "An Evening Song" (Blumenthal), John McCormack; "The Donovans" (Needham), Robert Radford; "The Valley of Laughter" (Sanderson), Carrie Tubbs; "King Charles" (M. V. White), Thorpe Bates; "Waltz in A Flat," op. 42, piano, Wilhelm Backhaus; "Bohemian Dance" (Smetana), Wilhelm Backhaus; "Youth and Love" (Laker), flute, celeste, piano and orchestra, Olga, Elga and Eli Hudson; and "Gems from The Pink Lady" (McClellan-Caryll), Light Opera Company 10-inch Records—"The Gaby Glide" (Hirsch), Bohemian Orchestra; "Slippery Place Rag" (Hacker), Pryor's Band; "A May Morning" (Denza), Evan Williams; "Little Brown Bird" (del Riego), Mme. Kirkby Lunn; "Jimmy Valentine" (Madden-Edwards), American Quartet; "La Cinquantaine" (Gabriel-Marie), cello, W. H. Squire; and "Valse Triste" (Sibelius), violin, Joska Szigeti.

Auxetophone for Park Concerts.

A liberal scheme for al fresco park concerts at which the Gramophone Co.'s Auxetophone presides is now in course of operation. Arrangements with the London County Council and various provincial authorities concerned permit of a

String Fiddle

STROH VIOLS

VIOLIN, VIOLA, ETC.

The mellow and matured tone of these instruments, which are constructed largely of aluminum, yet possess none of the characteristics of the gramophone or wind instrument, is only one of its many points which are fully set out in an illustrated booklet which will be mailed free on request to the sole makers.

FROM OUR LONDON HEADQUARTERS—(Continued from page 62).

fixed program, giving dates and times, and the publication of this has offered dealers an opportunity of planning local sales schemes synchronizing with the giving of the concerts. The result is usually of a highly satisfactory nature.

An Interesting Letter.

Exceptional interest is attached to the subjoined communication extracted from the London Budget:

Sir—In reply to your question as to how the Gramophone Co. secures its merchandise from the world's markets, I will endeavor to answer it in as condensed a way as possible.

In the first place I will divide our product under two headings:

1. The artist.
2. The means of sound reproduction.

The latter I will again sub-divide into:

- (a) Instruments.
- (b) Records.

To deal with the first heading. The artists employed by this company are the most eminent in every branch of art, the larger number of whom give their talents exclusively to this company. We control through a system of branches a vast "international" organization of musical men, specially trained for judging the suitability of an artist. The services of Melba were first obtained in Monte Carlo; Caruso in Milan; Shaliapin in St. Petersburg; Battistini in Rome; Plançon in Paris; Destinn in Berlin; Geraldine Farrar and John McCormack in New York; Yamina, famous as an Arab singer, in Algiers; not to mention a host of other great artists whose services were obtained in this country during passing visits, such as Tetrassini, Paderewski, Kubelik. I mention but a few names to give you an idea of the ramifications of our organization required to obtain the services of such eminent artists. The men in question who are able to handle such a difficult proposition are of no ordinary calibre.

The whole of this organization is controlled from London, and there it is arranged as to whether the artists in question shall be recorded in

one of our Continental laboratories or brought over especially to London. This in itself is the work of a separate department. The former organization secures the artists, and the second makes records of his or her voice or instruments, as the case may be.

I may mention that all the time every opera house in Europe and America is being continuously visited, as well as every musical comedy, every concert hall, so as to secure the first call on the best of the world's talent.

To deal now with the first sub-division of our second heading—the instruments. The expansion of the demand for cabinet instruments necessitates our securing supplies of woods from every corner of the world. Our mahogany comes from Africa and South America, in great logs; our oak from Great Britain, North America and parts of Russia; and beautifully grained walnut from southern Russia and America.

Our local agents purchase the original log in the country in which it is grown, and we have them shipped to us, when, on landing, they are sawn into rough boards or planks, varying in thickness according to our requirements. The sawing is done by one or two of the large firms who make a specialty of this class of work. When sawn into planks the wood is then despatched to our factory at Hayes, Middlesex, either by canal or rail, where it is then stacked in our timber yards, and ultimately finds its way into our cabinet factory.

A small but interesting part of the instrument is the needle, and this comes entirely from Sheffield, where the works of Hall & Co. are situated, and they have a special factory maintained entirely for the sole purpose of making "His Master's Voice" needles.

And now to deal with the last sub-division—the record. There are six materials employed, the nature of which I regret cannot be disclosed. The three principal ones come from the Far East, mainly from India; a fourth ingredient from Spain; a fifth from France; and a sixth from America.

All these six ingredients are specially selected at the point of origin by specially-trained buyers, much in the same way as our various woods are bought, but here again the calibre of the man is totally different to that of the man who buys the wood, or selects and recommends an artist. The underlying system, which controls these organizations is based on the same fundamental principles.

Having collected our raw materials in the shape of artists, instruments and records, at our factory, they are manufactured and then shipped to London for distribution to the English market. They find their way to the British public mainly by means of the piano trade of this country.

Records for foreign countries are manufactured at our factories, of which we have one in Paris, Spain, Berlin, Austria, Russia, India, and distributed by the local branch, while the instruments are shipped mainly from England.

I think this short note will give your readers a rough idea as to the size and nature of the organization which it has been necessary to build up in order to secure for "His Master's Voice" the proud position of what has been recognized as the best known trade-mark in the world. I beg to remain,

Yours faithfully,

June 3, 1912.

JAMES C. GOFF.

Gipsy Smith Home from 25,000 Mile Tour.

Gipsy Smith, the famous singing evangelist, has just arrived in London after his lengthy American tour. The ceaseless activity of the famous missionary is such that he will proceed with an extended English tour almost immediately, visiting all those towns in which his name is a household word. Gipsy Smith records on Columbia-Rena, the sales of which proceed apace, and which follow his movements very closely, will therefore receive a great impetus.

Will Not Extend Postal Facilities.

The Postmaster-General intimates that after full inquiry he has decided to abandon the proposal to extend the postal cash on delivery system between

the United Kingdom and other European countries. Trade organizations and various chambers of commerce have expressed their hostility to the service.

New Additions to Paris Voice Museum.

The Voice Museum, which was officially inaugurated in the basement of the Opera by M. Pedro Gailhard in 1907, has just received another year's addition to its voice records of the best singers who have been heard at the Paris Opera and elsewhere, and also some other records that will be of value for the history of music. The ceremony, says the Telegraph, which has now become an annual one, was presided over by M. Leon Berard, Under Secretary of State for Fine Arts.

The museum consists of phonographic discs, carefully wrapped in asbestos and covered with glass, which for greater protection are placed separately in hermetically sealed metallic boxes, from which the air is exhausted. The boxes are placed in rows on shelves in the vaults, and when each shelf is full the front of the vault is walled up. The discs are not supposed to be opened for one hundred years. The singer's name and a detailed instruction as to how to use the disc are placed inside each box.

The first discs placed in the vaults included the voices of such singers as Tamagno, Scotti, Mme. Calve, Adelina Patti, Schumann-Heink, and a piece executed by Kubelik. The discs added to this year's collection contain the voices of the tenor Franz, Caruso, Amato, Mme. Sembrich, Geraldine Farrar, Bessie Abbott, Tetrizzini, and a piano piece by Paderewski. The ceremony, although it was described as a "burial of the voices," had nothing funereal about it. The many visitors present enjoyed a speech by a well-known Parisian actor and manager, M. Gemier, delivered by the phonograph.

Sound Carried by Telegraph.

A discovery is said to have been made as the result of experiments between Toulon and Algiers by which space or distance no longer counts in the transmission of sound. The descriptions of the invention are very vague, but it seems to have some sort of analogy with wireless telegraphy. The experiments are being conducted on board the yacht of Prince Albert I of Monaco, anchored in the Roads off Algiers. The apparatus has been patented by M. de Zepel, and it differs from wireless telegraphy in this, that it transmits bodies of sound. Distance and space are abolished. The persons on board the yacht are thus said to have heard distinctly at Algiers a band that played the "Marseillaise" at Toulon. If, says the Telegraph, we can hear bands playing across the Mediterranean, we may as well, it is argued, hear them at the other side of the Atlantic or at the Antipodes.

An Empire Trade-Mark.

The Chambers of Commerce of the British Empire Congress concluded their deliberations at the Guildhall, June 14, and they have agreed upon some very important and material recommendations affecting the interests of imperial commerce. A large number of resolutions were disposed of, one of great value being moved by Sir John Cockburn (Australian Chamber of Commerce in London), asking the congress to support the action taken to secure the adoption and registration of an empire trade-mark for the purpose of indicating that the goods to which it was applied were manufactured or produced in some parts of the British Empire. On that question, he said, Free Traders and Protectionists alike could take a common stand. It was necessary that they should have some means of recognizing those goods which were made in the British Empire for the purpose of promoting imperial commerce. The proposed mark would be merely one of origin, not of quality. Some said that the mark would be of incalculable benefit to British trade, and of more value than all the

tariff reform that had ever been proposed. After some animated discussion, resulting in an amendment, which was lost, the motion was duly carried.

New "Marathon" Record Now Ready.

The National Gramophone Co., Ltd., have at last got to work with their new "Marathon" record, and the first list of titles is now almost ready. As I have previously described in these columns, this record represents quite a new principle to what one is accustomed. The cut is a fine V-shape combining both the needle and phonograph style, and although the record is played with an ordinary steel needle, the sound box has to be affixed at an angle, and broadcast on the track, in the same way as the Pathé. Marathon records will play up to five minutes each side (10-inch), and as much as eight minutes of music can be given on a 12-inch record. For the moment, however, the company will concentrate on the building up of a substantial repertoire of the 10-inch series, and given the right class of music, a big future should await this concern.

New Offices for Columbia Co.

Having been literally burned out at the factory, the Columbia Co.'s office staff were forced to locate in one of the remaining storerooms pending more suitable arrangements. Any discomfort which they may have temporarily experienced is now more than compensated for by the provision of really excellent quarters in town. It consists of a self-contained suite, comprising seven well-furnished rooms equipped with all the latest appliances and labor-saving devices calculated to insure efficiency and accuracy in the conduct of so intricate a business. The position is a splendid one, and much more convenient for trade visitors than the old factory location at Wandsworth, some miles outside the city of London proper.

Lipkowska on Columbia.

The Columbia Co. announces that Lydia Lipkowska, the famous Russian soprano now at Covent Garden, London, is singing exclusively for Columbia grand opera records. The Lipkowska records are four in number, two including soprano arias from "Lucia," "Rigoletto" and "Romeo et Juliette," and the other being grand opera duets in company with Baklanoff and Blanchart, respectively.

New Bell Record on Columbia-Rena.

Those who know the immense success of the previous bell solo records by the Regimental Band of H. M. Scots Guards on Columbia-Rena will rejoice to see another admirable double record of this type on the current list. We suppose there can be few collections of records that do not include either the Belfry Serenade, the Carillon in E flat, or Weymouth Chimes and the Bells of St. Malo, so that this new record of Valse Royale and the Bells Waltz may be expected to appeal to a very wide circle.

Affairs of the Russell Hunting Record Co.

In the matter of the Russell Hunting Record Co., Ltd. (in liquidation), the Board of Trade have issued a further statement of affairs comprising a summary of "liquidator's accounts" from July 27, 1911, to January 26, 1912. The balance shown is £696 10s. 10d., but this amount will be entirely swallowed up by preferential claims, and there appears not the slightest chance of the ordinary creditors getting anything. The exact position will be placed before creditors within a few weeks, after which the final winding up will soon be completed. Considering it is close upon four years since this concern went into liquidation, we think it about time the accounts were closed. The failure of the creditors' action against debenture holders on a £2,000 stake, is held responsible for there being no dividends.

In Memory of Titanic Disaster.

Edison-Bell record No. 436, "Stand to Your Post," and "Be British" conveys an excellent imaginative impression of the last scenes enacted on board the ill-fated leviathan prior to her disappearance beneath the ocean surface. In announcing the issue it is stated that "These records are specially dedicated to the greatest maritime disaster the world has ever known, contain particulars for future reference—'Yea, when our babes are old' in memory of the lost and to the honor of the brave who sacrificed their lives for others in obedience to the instinct of their race and the gallant captain's exhortation, 'Be British.'"

Additional publicity has been given by the Columbia Co. of their determination to restrain dealers from selling Columbia-Rena records below established prices. Further examples of orders for perpetual injunctions obtained in the high court of justice against delinquents are published, accompanied by a warning to the trade that the company will take immediate legal steps to protect their patents from infringement. Needless to say the move is heartily welcomed by all straight-trading dealers.

Concertina Records.

Alexander Prince's latest concertina records on Columbia-Rena have beaten all previous sales figures, we are told. This clever player has admirers all the world over, and his new records are as eagerly booked for in the Antipodes and in the Far West as in the mother country. The Columbia Company evidently "knew something" when they placed Prince under an exclusive contract. This month he gives us two Waldteufel waltzes.

MAKES LIGHT AUDIBLE.

Test of Optophone Made at London Conference Has Amazed Many—May Open a New Era of Hope for the Afflicted.

(Special to The Talking Machine World.)

London, Eng., June 20, 1912.

A blind man stood in the middle of a large room at the Optical Conference Exhibition in London yesterday and told, without using the sense of touch, how many windows were in the room and how many persons were between himself and the wall. He did it by "hearing," light and shade.

The medium of the seeming miracle was the optophone, a wonderful invention of Dr. Fournier d'Albe. The optophone makes light and darkness audible. The invention is based on the metal selenium's well-known property of being affected by light. Dr. Fournier d'Albe contrives to make the effect of light on the passage of electric currents through selenium appreciable in a telephone receiver, and clockwork mechanism can be adjusted so that darkness is audible and bright light silent, or vice versa.

The apparatus is contained in an oblong box, about 26 inches long and 8 inches deep. When the blind man had a glimpse into the invisible yesterday he held the box in one hand and in the other hand held a cardboard cylinder which acts as the "feeler" of the optophone. Moving this slowly before him, he was able to tell by the sudden increase of sound in the telephone receiver held to his ear, with the tube pointing at the window, whenever anyone stood between him and the window. Swinging the tube slowly around, he counted the persons before him.

A reporter who tried the optophone found that a glimpse out of the window sounded like a cinematograph reeling off a film. The ticking sank almost into silence as the receiving tube was held in the shadow of the table and leaped into a lively rattle when placed against an electric light bulb.

The optophone has not yet been perfected so as to enable a blind person to distinguish a chair or other article of furniture, but it is eventually hoped to improve the apparatus so that the operator may spell out letters in fairly large print.

Don't be too insistent when waiting on a customer. There is a happy medium between indifference and insistence.

TRADE BETTER ON PACIFIC COAST.

Wholesale Business Especially Pleasing to San Francisco Houses—Eilers Music House Now Controls Distribution of Columbia Line While Sherman, Clay & Co. Get Victor Agency for Entire Coast—Growing Demand for Business Machines—Dictaphone for Language Study in College—Other Talking Machine News of Timely Interest from the Far West.

(Special to The Talking Machine World.)

San Francisco, Cal., June 28, 1912.

The talking machine business is getting into somewhat better shape, particularly the wholesale trade with outside firms. Dealers in summer resort towns are sending in large orders for records right along, and there is more call for the higher-priced machines than for some time past.

Get Victor Agency for Entire Coast.

According to a recent report from Spokane, Wash., the Eilers Music House has decided to take up the distributive agency for Columbia goods in that district, having handled the goods in other parts of the north coast for some time. This, it is understood, will involve giving up the wholesale agency for Victor goods at Spokane, the one spot on the Coast where these goods have not been controlled by Sherman, Clay & Co., with the natural result that the latter firm will hereafter be wholesale agents for Victor goods throughout the entire Coast. Andrew G. McCarthy, of Sherman, Clay & Co., states that no particular change will be necessary at the Spokane branch on this account, as the talking machine facilities at that place have been kept in good shape. The change gives the Columbia line a solid organization through the north, which is expected to bring good results.

Sales of Business Talking Machines.

The use of talking machines in business is making rapid strides on the Coast. Peter Bacigalupi & Sons have been giving a great deal of attention to the Edison business phonograph of late, and with this machine in use by some of the leading

firms of the city, sales are rapidly increasing. Some large sales have also been made of the Columbia dictaphone, and a marked increase is expected in this business, as Geo. S. Murray has taken charge of the dictaphone department at the local Columbia office, and is losing no time in getting to work.

Visiting Columbia Men.

H. L. Wilson, from the main office of the Columbia Phonograph Co., recently made a visit to W. S. Gray, the Coast manager. Another visitor at the local office was Mr. Farquharson, formerly traveling man from the Los Angeles office, who has just returned from a trip to the New York office.

Doing Well with Columbia Line.

Mr. Scott, Columbia dealer at the Kohler & Chase store, is well pleased with the progress made this month, noting a material increase over the May business both in machines and records. The pleasing and convenient arrangement of his new quarters has by this time become widely known and is drawing in more steady customers all the time.

B. Curtaz & Sons Change Plans.

Benj. Curtaz & Sons have changed their plans somewhat in regard to the talking machine department, and instead of moving it to the ground floor, large display rooms for high-class machines have been established on the third floor, leaving the demonstration rooms on the mezzanine floor. The stock has been increased and a complete line of both Victrolas and Grafonolas is carried. Frank Sharpe, who has been manager of this department, returned recently after an absence of three months and has again taken charge. Mr. Sharpe looks for an all-round improvement within the next month.

To Visit the Northwest.

Nelson Berkholt, city salesman for the Wiley B. Allen Co., will leave shortly for a vacation trip through the Northwest and British Columbia. James Black, manager for this firm, reports a marked improvement for June.

The Busy Grouchy Letter Writer.

Byron Mauzy is well satisfied with the showing made by his talking machine department of late. The activity of Herman Beck, the manager, recently resulted in the following communication being sent to the board of supervisors, signed with the fanciful name of Newton Locke:

"As a gentleman of leisure, I spend considerable time taking the rest cure in Union square, where, with others, I am almost constantly annoyed by apparatus which claims to reproduce the gems of song and immortal music. If the noises aforesaid were occasional and spasmodic I would have little complaint, but they are continuous and harrowing to the soul. I have heard the implements give a ragtime tune when a funeral procession moved by, to the great dissatisfaction of the Italians who followed the hearse, and who are supposed to know more about music than the purveyor of canned choruses. Is there not some way in which those who desire philosophic calm may escape additional sorrows when they flee to this beautiful spot for recreation and rest?"

The communication was referred to Supervisor Mauzy with instructions to investigate, but this investigation, like many others of a political nature, has produced little apparent result.

Phonetic Department for College.

The Washington State College at Pullman, Wash., has established a phonetic department in connection with the teaching of modern languages, bringing the dictaphone and Grafonola into use. John W. Graham & Co., of Spokane, dictaphone agents, are making good use of this sale to increase the reputation of that machine in their territory.

Important News Brieflets.

The Girard Piano Co., of Oakland, has opened a well-appointed talking machine department in its new branch at Richmond, Cal., handling both Victor and Columbia goods.

The J. Raymond Smith Co., on Fillmore street, (Continued on page 66.)

Every Columbia record carries a quadrupled guarantee of better quality, better surface, greater endurance of material and better quality of reproduction. Don't you lose sight of this; we'll see that record buyers are kept reminded of it.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

TRADE BETTER ON PACIFIC COAST.

(Continued from page 65.)

will shortly have better facilities for its talking machine business than ever before. More space has been added to the store and a number of new demonstration rooms have been set aside, the entire place being newly decorated.

The Eilers Music House at Seattle, Wash., is having great success with a series of Thursday afternoon talking machine concerts, in which the Grafonola with the Peerless sound reproducer is used.

T. Sullivan, formerly of San Francisco, recently started a business in San Diego, Cal., as the San Diego Phonograph Record Exchange, with quarters in the Savoy Theater building.

The Ogden, Utah, Music Co. is having its place entirely remodeled, and expects to have the finest talking machine department in northern Utah. The sheet music and small goods are being closed out and the space will be used for more demonstration rooms, etc.

Billings Bros., piano and talking machine dealers of El Paso, Tex., are retiring, with the intention of going into the restaurant business, and have sold out their talking machine business to W. G. Walz & Co.

Sherman, Clay & Co. are planning some changes in the arrangement of their local small goods and talking machine departments, whereby the latter will have the entire third floor of the building. The plan has not been definitely adopted, but with the present growth of business an increase in the talking machine facilities will soon be necessary.

Walter Metzner, a talking machine man of St. Helena, Cal., was in the city this week.

The Central Music House is a new concern which has just been opened with a large line of Victor and Edison goods at Petaluma, Cal. The company is operated by H. S. Gutermute, who has been in the business under his own name for some time.

EDISON'S OWN FLAG.

(Special to The Talking Machine World.)

West Orange, N. J., June 24, 1912.

Thomas A. Edison never had a coat of arms, but he has a flag, and this is its birthday. The occasion was marked at noon with a presentation and flag raising at the laboratory.

Edison chose the colors at the request of the Edison Electric Illuminating Co. of Boston, where the idea of an Edison flag was conceived. W. H. Atkins had the bunting made and the second specimen will float from the building where the electrical show of Boston is to be housed. Other Edison companies are expected to adopt the emblem and fly it from their buildings. Mr. Edison preferred yellow and green, and accordingly the field of the flag is yellow, with the name Edison worked on it in green.

Miller Reese Hutchinson accepted the flag on behalf of Mr. Edison. The presentation was made by W. H. Atkins, general superintendent of the Boston company. H. W. Moses, manager of the electrical show, and John Campbell, superintendent of the special service department of the Boston company, hauled the flag to the top of the staff.

GRAFONOLA AND PLAYER-PIANO

Heard in Recital Given Under the Auspices of J. C. Martin & Co., at Dayton, O., with Charles Duncan Allen as Presiding Artist.

A very charming musicale was that given recently by J. C. Martin & Co., at its recital hall at Dayton,

much enthusiasm over the musical ability of Mr. Allen, the program he interpreted, and the instruments employed, which are handled by the J. C. Martin Co. The members of the J. C. Martin force extended themselves in their efforts to make everyone comfortable, with the result that the evening proved to be one of more than ordinary pleasure.

Columbia and Player Recital at J. C. Martin & Co.'s Warerooms.

O., when Charles Duncan Allen, the noted musician, pianist and organist of Chicago, was heard in a player-piano recital, with Columbia Grafonola numbers also being introduced with a galaxy of grand opera stars as the soloists. The combination of both instruments was novel and exceedingly interesting and delighted everyone. The hall was prettily decorated with palms and yellow coreopsis in wicker baskets.

The large audience which was present evidenced

TO BE MARRIED IN LONDON.

José Juan Hoffay, who is connected with the export department of the Columbia Phonograph Co., New York, will be married on the 22d inst. to Miss Edith Mary Twyford. The marriage ceremony will take place at Brompton Oratory, London, at 2 o'clock, and a large reception afterward will occur at 67 Edgerton Gardens, S. W., before the couple leave on a wedding trip.

Audience at Recent Columbia and Player Recital at J. C. Martin & Co.'s.

MILWAUKEE AFTER SUMMER TRADE

And What Is More the Talking Machine Men of the Cream City Are Getting It—General Conditions in the Wisconsin Field Show Much Improvement—Edmund Gram in New Quarters—Thank McGreal for Entertainment—H. W. Krienitz Moves to New Store—Interesting Personal Items of the Month.

(Special to The Talking Machine World.)

Milwaukee, Wis., July 9, 1912.

There is no denying the fact that the retail talking machine business is considerably better than at this time a year ago. The summer resort season, opening just as soon as the schools about the State were closed, has been one of the potent factors in helping along retail talking machine sales. Dealers have been pushing this phase of the business with a vim, and the results have been more than satisfactory. People have been quick to see that it is a profitable and sensible arrangement for them to purchase smaller machines to take with them to their summer homes or on their regular outings, while the record sale to summer resorters seems to have attained a new high mark this season.

Conditions in general in the Wisconsin field are showing much improvement. The second crop report of the season, recently issued by Secretary J. C. MacKenzie, of the Wisconsin State Board of Agriculture, was even more favorable than the first report, and this has gone a long way in instilling confidence in all lines of business.

Gram in New Quarters.

Edmund Gram, representative of the Steinway and other pianos, has moved into his recently purchased four-story building at 414-416 Milwaukee street, and is now making preparations for opening his new Victor department. While the work of remodeling the \$100,000 structure is far from completed, the first and third floors of the new building are being occupied and it is expected that the establishment will be complete by August 1. Handsome new parlors will be installed on the first floor and in the basement of the new building, where the Victor line will be displayed at a good advantage. Paul A. Seeger will be manager of the new Victor department. He is a graduate of the University of Wisconsin and regarded as a hustler in every sense of the word. The order for goods for the new department was placed with the Wisconsin Talking Machine Co., local Victor jobbers.

Secures Good Location on South Side.

Harry W. Krienitz, enterprising young talking machine dealer, has removed to a new store at 326 Grove street, which is located in a busy section of the South Side. Mr. Krienitz discontinued his piano department some time ago and is now giving his entire attention to talking machines.

Thanks McGreal and Gannon.

Upon their return from the annual trade excursion through southern, central and northern Wisconsin, members of the Milwaukee Merchants and Manufacturers' Association passed a resolution thanking Lawrence McGreal, Milwaukee Edison jobber, for the entertainment which he furnished the excursionists en route. Mr. McGreal took along several machines and a generous supply of records. Joseph Gannon, assistant manager of the Wisconsin Talking Machine Co., jobber for the Victor line, who accompanied the party with a Victrola and records, was also thanked in a special resolution.

Big Demand for Dictaphones.

A. G. Kunde reports a tremendous dictaphone business at the Columbia store, despite the fact that the line has been carried only about four months. General business is brisk, according to Mr. Kunde, but the dictaphone business has exceeded all expectations. Mr. Kunde was in Chicago recently and was complimented by Charles F. Baer, manager of the Chicago Columbia store, for the sales record which the Milwaukee man is making.

Returning from Vacation.

L. C. Parker, manager of the talking machine department at the Gimbel Bros.' store, is expected home from a three weeks' vacation spent at Rhineland, Wis., his first in eight years. The Gimbel talker department reports a brisk business.

TRADE IN SOUTHERN CALIFORNIA.

Little Dulness Noted in Either Wholesale or Retail End of Talking Machine Business—A. G. Farquharson's Important New Position—What the Individual Houses Are Doing—Geo. S. Marigold in the East—Doing Business with the Japanese—Dealers Agree to Charge Interest on Instalment Sales.

(Special to The Talking Machine World.)

Los Angeles, Cal., July 6, 1912.

Business in the talking machine field has been by no means quiet in the wholesale and retail lines for the past month. The season so far has brought forth many gratifying results due to the activity of all dealers, who have been making a special effort for this line. The dealers are very much pleased with the Victor Book of Opera, which is proving itself a tremendous seller, also a knowledge giver not only to the record buyer but to all who are interested in good music.

After a month's trip through the East A. G. Farquharson returns to this section not as the special representative for the Columbia Phonograph Co., but as the new general manager for the entire Dominion of Canada. Mr. Farquharson, who has successfully filled the former position for many years, will leave many friends in the business who will miss him very much, but believe in his ability to make new friends in his new field of work. A very successful future is predicted for Mr. Farquharson.

Sherman, Clay & Co., Victor distributors, report through their local manager, Chas. S. Ruggles, a very remarkable trade for the past month; in fact, much better than the corresponding month of last year. Mr. Ruggles reports a shortage in Victrolas IX, X and XII, which have been popular sellers of late.

A. D. Mellor, who has been in Southern California for several months, will soon return to his home in Pittsburgh, Pa. Mr. Mellor is one of the firm of a very progressive Victor dealer, the C. C. Mellor Co., 604 Wood street.

The Geo. J. Birkel Co. is enjoying an unusually good trade in all high-grade machines and records, especially the Victrola XVI in various finishes, which is a very popular seller.

Geo. S. Marigold, vice-president of the Southern California Music Co., left for several weeks' trip East, visiting many Eastern points of interest, principally the jobbers' convention and the Victor factory. Mr. Marigold was accompanied by his young son George.

The Fitzgerald Music Co. is doing splendidly of

late in the Columbia Grafonola Regent, in which Miss Brown reports many good sales.

H. H. Schwenker, traveling repairman for the Victor Talking Machine Co., Camden, N. J., spent several days in Los Angeles and vicinity, calling upon the dealers, giving practical demonstrations of the general construction of the Victor machine. This feat has been most helpful not only to the repair men but to salesmen as well.

The Andrews Talking Machine Co. report business very good for the past month in all departments.

The Eilers Music Co. has been receiving exceptionally good results from the efforts of the new manager of the talking machine department, E. E. Jarrett, who is alive in every sense of the word.

W. F. Stidham, local manager of the Columbia Phonograph Co., General, reports the close of another very successful month, both in Grafonolas and records.

K. G. Okada, of the Teikokuw-Boyeki Co., 311 East First street, is doing a tremendous business in the talking machine line with the Japanese in his district. The firm carries a very large stock of machines and Japanese records, which possibly will be increased in a very short time to even a larger stock.

In our last month's issue reference was made to the agreement among the talking machine dealers of this city to charge 7 per cent. interest on all instalment sales. This agreement was the direct result of the formation of the Los Angeles Talking Machine Men's Association. This organization having been started through the efforts of A. G. Farquharson, the special representative of the Columbia Phonograph Co., General.

GAINING GROUND IN CANADA.

Prominent Piano Houses Take on Columbia Phonograph Co. Line in the Dominion.

The Columbia graphophone and Grafonola are making great progress in Canada and new names are constantly being added to the list of agents in that country. Among those who have recently taken up the Columbia line are Whaley, Royce & Co., Ltd., who have their headquarters in Toronto, and the Mullholland-Newcombe Co., who have added the Columbia line since moving to their new salesrooms at 313 Yonge street, Toronto.

That employee is headed upward who is willing, courteous, kind, possesses initiative, can be depended upon, and manifests these qualities in action.

UDELL CABINET No. 412

For Disc Records for Victrolas IV, VI, VIII and IX. Quartered oak top and front. Any Victor finish. Mahogany front. Holds 272 10 or 12-inch Disc Records.

4 NEW BREAD WINNERS IN The Udell Guaranteed Line OF DISC CABINETS AND TABLES

There is ample cause for the splendid business that we are receiving from dealers and jobbers in all sections. Why, sir, we have the prices, the patterns, the generous stocks, the newspaper cuts, the courteous handling of correspondence—everything that enters into a satisfactory relationship.

And, sir, there is every reason why our New Catalog now on the press should be on your desk. It's Catalog No. 41, and say send it.

THE UDELL WORKS
INDIANAPOLIS, IND.

LESSONS IN MUSIC FOR ZOO WOLVES.

Talking Machine Emits Melodies at Night and Some of the Howlers Imitated—One Bear Is an Adept Pupil—Occasionally Taking Three Notes in a Scale Just Like a "Teacher"—A Scientist's Dream of Voice Culture.

The long-drawn howl of a timber wolf shattered the solitude which comes at nightfall in the Zoological Park in the Bronx. There came a chorus of howls, and then silence. After an interval there came another howl, this so low that heard at a distance it sounded like the echo of a moan, and this last sound was more melodious than the first—a sort of ideal wolf call to the night; slightly scarping and rising musically, note upon note.

This last call was not the cry of a wolf. It came from a phonograph hidden near the wolf cages and was a demonstration of an experiment that is being conducted by a student of animals to prove that the calls of wild animals can be made more musical; in other words, that voice culture is possible among animals. Raymond L. Ditmars, the curator of the Zoo, is enthusiastic over this experiment, as he is over the oddities in the Zoo which from time to time find their way into print. Mr. Ditmars is of the opinion that already the wolves can howl more in harmony and in key than they could before the phonograph and the scientist began to teach them the way to reach high C gracefully. To the untrained ear, however, the howls remain as unmusical as they were in the nights before the experiment began.

Mr. Ditmars did not give the name of the scientist who is demonstrating his theory, and he offered no information regarding the identity of the person or animal who gave forth the melodious wolf call which is now recorded on the phonograph and let off at intervals to frighten staid, home-going Bronxites. He admitted it was not a record of Caruso's voice. The new wolf call is bad enough, but it is certainly an improvement upon the call given out by the untrained wolf voice.

Animals, according to a theory of Mr. Ditmars, utter peculiar sounds by nature and environment. The first wolves howled a certain way, and their successors took up the same doleful call, and the call of the wolf is little changed to-day. It is the relative importance of the effect of environment that is being tested. It is believed that the wolves will learn in lifting up their voices to insert more and more melodious and harmonious notes.

For some nights now the phonograph has been at work. There has been some inquiry as to what new animal has arrived, but not much information has been volunteered. The experiment has not reached the point where publicity can be officially authorized. Besides, the animals may refuse to respond to voice culture.

Wolves were chosen as the first students because their call is a long one and because the animals occupy quarters in the open, separated from the other sound-makers by such a stretch of territory that they cannot be interfered with by any other animal anxious not to lose the chance of having its voice cultivated.

One wolf, a grizzled old fellow, is a most encouraging pupil. All took readily to the music, and the whole pack sat up on their haunches and howled lustily when first the phonograph was turned loose to surprise them. Now they appear more reconciled to the musical call.

The grizzled wolf—"a most excellent pupil," to quote Mr. Ditmars—has caught the spirit of music. This wolf appears to have an ear for technique. He does not have to be urged to sing, either, for as the last sound of the phonographic cry dies away he will lift up his head and give voice to a long howl. There is not much that is musical to the untrained ear, but in at least three places, the experimenters say, the wolf has introduced short runs which follow note by note the phonograph. He has a bass voice. The second best pupil is a female, a contralto.

The second stage of the experiment will be to find out whether, after the wolves have been taught the proper way of giving utterance to their howl, they will revert to their unmusical cries when the phonographic lessons have stopped. If some of the wolves learn the lesson until they are letter

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

The Music Master To The Front

MUSIC MASTER
Solid Wood Horn

Have Samples
Sent
On Approval

You Know

That it is reasonable that all sound waves from a Talking Machine should be carried by cylindrical shape construction. LISTEN to music reproduced through the

Music Master Solid Wood Horn

on a Talking Machine, and compare the resonant tones with any horn or hornless machine, and you will be convinced of the Musical Possibilities only found in a cylindrical shape construction to convey sound waves.

The Music Master brings out the full tone values of vocal and instrumental sound waves. Choice of oak, mahogany or spruce for any make of, or style of Talking Machine.

ONLY HORN GUARANTEED.

If your jobber cannot supply you, write us.

PHILADELPHIA, PA.

perfect, they might become music teachers and instruct uncultivated wolves.

The lions and the tigers, and perhaps the camel, it is believed, may be taught to change their vocal methods, if the experiment with the wolves succeeds, and the optimistic say that in time the whole Zoo collection can be taught to blend their voices into one great harmonious chorus, which will lift the Zoo into the Conservatory of Music class and be a constant source of delight to the Bronx.

TESTIMONY FOR COMPLAINT.

Attorneys for the American Graphophone Co.
Preparing Papers in Action Against the Boston Talking Machine Co. for Infringement of Macdonald Patent.

The attorneys for the American Graphophone Co. have now begun taking testimony for the bill of complaint to be filed by that company in its suit against the Boston Talking Machine Co. for infringement of the "graphophone grand" patent issued to the late Thomas H. Macdonald in 1902.

According to one of the attorneys the case will be pushed to the limit, as a very important patent is involved. The leading talking machine manufacturers recognized the patent rights and took out licenses under the Macdonald patent, which in brief makes possible the great volume of sound produced by the talking machine, but the Boston concern has seen fit to fight the matter. The only other company which decided to fight the patent was put out of business by another patent suit before the suit to protect the Macdonald patent was brought to court and a final decision was not obtained.

EDWARD D. EASTON TO EUROPE.

Edward D. Easton, president of the Columbia Phonograph Co., General, sailed on the "Kaiser Wilhelm," June 25, for Europe on a combined business and pleasure trip. He will visit the Columbia headquarters in the principal cities abroad and expects to return to this country in August.

BETTER BUSINESS IN QUAKER CITY.

Dealers Generally Well Pleased with Present Conditions in the Trade in That City—Interest Shown in Reported Change in Victor Styles—O. C. Dorian Found Good Columbia Business in Interior—Recent Visitors of Record—Philadelphia Pleased at Louis Buehn's Election as Secretary of Association—General News of the Month.

(Special to The Talking Machine World.)

Philadelphia, Pa., July 5, 1912.

The talking machine business in Philadelphia has been most satisfactory in June. June and July are considered the quietest months in the business, but I have received various reports from dealers, not one of whom says their June business this year was below that of last, and several of the firms note that it was larger almost by one-half over the business they did last year. They all agree, however, that collections are rather slow and not coming in in the same proportion as last year.

There is very little striking news to be noted in the Philadelphia trade at this, the beginning of a new month. The notification by the Edison Co. that it will place a disc machine on the market the first of next October has been the chief topic of discussion.

The announcement that the Victor Co. is going to materially change its styles is also interesting. There have been no new talking machine houses opened in June in Philadelphia and there is not likely to be any until fall. During this month the dealers will slacken in their efforts and give their men their vacations and the campaign is likely to be called early this year.

C. J. Heppe & Son report that their talking machine business was fairly good in June, at least so far as June business goes. In certain lines of goods they find themselves short of stock, but the situation has eased up considerably over past months. "July," Manager Elwell says, "opened up very good, and things look very encouraging. Our June business was better than last year, and as every month thus far has run ahead of 1911, I see no reason to complain, but rather to look in an optimistic way at the situation, in view of the fact that so few lines of business show the same results. Among visitors to the Heppe house recently were William Keyes, of the Stoll Blank Book & Stationery Co., of Trenton, and Harry J. Holt, the Mt. Holly (N. J.) dealer.

Acting Manager O. C. Dorian, of the Columbia Phonograph Co., reports a good business. He just returned from a few days' trip up the State, during which he visited Wilkesbarre, Reading, Easton, Bethlehem and Harrisburg, in all of which cities the Columbia agents have been doing good work. He brought with him a very nice order, among others, from the Troup Music House of Harrisburg, which house will eventually put in the complete Columbia line.

C. A. Pusey has taken Walter Linton's place as wholesale representative of the Columbia, and he has been doing very well. He has never been in the talking machine business, but in a similar line, and he is very enthusiastic—and having bright red hair he ought to make a hit selling Red Seal records.

George W. Lyle, Mrs. Lyle and daughter, Mr. and Mrs. Walter Eckhart, and Tom Murray recently motored over from New York, which was Mr. Lyle's initial trip in his new car, and they had many amusing incidents to relate, including a few break-downs.

The Philadelphia trade is highly enthusiastic over the success of the meetings in Atlantic City last week of the National Jobbers' Association, and they are loud in praise of the Victor day in this city, which is noted fully elsewhere. Louis Buehn has been receiving many congratulations on his election to the secretaryship of the association. Mr. Buehn has been attending conventions for the past two weeks. The week before the Atlantic City convention he was in Boston attending the convention of the National Credit Men's Association.

Mr. Buehn says that the business of his house in June was 40 per cent. greater than during the June of last year, and he thinks the outlook for the

rest of the summer and fall is great. "Our business has surprised me," he says, "and the outlook seems to be extremely good." Business has been very good at the Pittsburgh house of Buehn, and Edmund Buehn has entirely recovered from his recent illness and is attending to business regularly again.

The Buehn firm has been having a wonderful success with the Edison dictating machine. Recently they were requested to send a list of the firms in this city who use more than ten of these machines, and they were able to name close to forty, the Curtis Publishing Co. having been the greatest purchasers, having installed 200 machines. This business is in charge of P. E. McCurdy.

Lit Bros. report business as quiet but equal to last year at this period. They are making an effort to unload all of their old stock, so that they can begin the fall season with an entirely new line, when they expect to enlarge their department, adding several new hearing rooms. Charles Bennett, sales manager of the Victor Co., was a visitor at the Lit department this week.

Manager Stewart, of the Gimbel talking machine department, notes that their business in June shows a most satisfactory increase over last year. They have the promise now of four more hearing rooms, which will be ready for them by the first of September. They are at present adding some attractive decorations to their department in the shape of a Japanese lattice work overhung with wisteria. It will add very much to the appearance when finished. W. B. Fulghum and Albert H. Bates, of the Victor Co., were visitors at the Gimbel house this week. Mr. Bates had not paid the department a visit for some time and he was very much surprised at the amount of stock they carried at present over his previous visit. Manager H. H. Stewart and G. F. Wurtele, of the department, were both attendants at the Atlantic City convention.

The Estey Co. has started to build booths for its talking machine department, which when finished will be one of the classiest in the country.

GRAFONOLAS IN THE SCHOOLS.

Interesting Letter from Superintendent and Principal of Schools in Portland and La Grande, Ore., on This Subject.

Recently the Portland (Ore.) branch of the Columbia Phonograph Co. supplied the public schools of La Grande, Ore., and the Holladay school, of Portland, with Columbia Grafonolas, and their installation has been attended with marked success. Recently a letter was received from John D. Stout, superintendent of the La Grande city schools, in which he states that as a result of installing four Columbia Grafonolas during the past year, the children have been trained to appreciate more keenly not only the value of classical music, but have become informed of musical history, voice placing, phrasing, etc., through listening to the reproduction of distinguished artists. He added further: "The introduction of the Grafonola to our schools has created a deeper interest in school work. It has not only been the means of entertainment, but a source of instruction as well. The children are delighted with the plan and look forward with great pleasure to the time that the Grafonola will be played in their room."

A. M. Cannon, principal of the Holladay School, of Portland, also writes in enthusiastic vein regarding the pleasure, entertainment and instruction derived from the use of the Favorite Grafonola which was placed in the school last spring.

WHERE WASTE MOTION EXISTS.

One trouble with modern commercial life is that there is too much scientific salesmanship on articles that don't deserve it, and too little scientific investigation of articles that do on the part of the buyer. In industrial economy we hear a great deal about "waste motion." The biggest waste of motion in the world to-day is the motion that is never made.

Almost any kind of a bargain offering will attract buyers, but it takes quality in the goods sold to make steady customers.

An engineer on a Southern railway, where the trains were always late, pulled into Bingville at 10 o'clock sharp one morning. That was the hour his train was due and prominent citizens crowded forward to congratulate him for being on time.

"On time", he said sadly, "why this is yesterday morning's train".

Do you get your goods on "yesterday morning's train," or worse, or are they always really "on time"?

No question about everything being on time when you get it from us, for every business day in the year we live up to this motto—

All orders shipped the same day they are received.

That's us — every time. Right to-day you likely need something in Victors, Victor-Victrolas, Victor Records, record cabinets, needles, fiber cases, horns, repair parts and other accessories. Send us a trial order and watch how quickly we deliver the goods. And you'll always get the same prompt delivery.

A card brings our booklet, "The Cabinet That Matches", and our interesting catalog.

New York

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., July 7, 1912.

TALKING MACHINE. Walter Hyer Pumphrey, New York, N. Y., assignor to Boston Talking Machine Co., a corporation of Maine. Patent No. 1,026,178.

This invention relates to talking machines and has particular reference to a mounting for the tone-arm thereof. In such machines, it is ordinarily essential that the tone-arm have free movement in vertical and horizontal planes and the purpose of the present invention is to produce an extremely simple and inexpensive form of mounting which will permit such movement of the tone-arm and reduce friction to a minimum.

It is a further object of the invention to provide for readily removing the tone-arm or placing the same in position, without requiring the aid of skilled workmen or tools, thus facilitating packing, shipping and assembling the machine for use.

A further object is to avoid the necessity for

careful and accurate adjustment of parts in mounting the arm and produce a construction in which confusion or mistake in assembling will be rendered improbable if not impossible and the parts will be self-adjusting when brought into operative relation with each other.

In the drawings—Figure 1 is a view of elevation, partly in section, showing the invention applied to a talking machine of the concealed horn type. Fig. 2 is a section on the line S2—S2 of Fig. 1. Fig. 3 is a similar view on the line S3—S3 of Fig. 1. Fig. 4 is a vertical sectional view illustrating a modification. Fig. 5 is a horizontal sectional view of a further modification.

REPRODUCER FOR GRAPHOPHONES. Victor H. Emerson, New York, assignor to American Graphophone Co., Bridgeport, Conn. Patent No. 1,026,084.

This invention relates to talking machines employing disc records which have vertically undulating record grooves.

In machines employing ordinary disc records, the record groove is relied upon to feed the sound-box across the disc, the spiral groove acting as a feed screw. Heretofore, vertically undulating sound-grooves have generally been confined to cylindrical tablets; and when applied to disc tablets they fail to feed the sound-box properly, because of their shallowness—the stylus being liable to leave the track, skipping one or more grooves and giving imperfect reproductions.

One object of the present invention is to provide a talking machine in which vertically undulating disc records may be employed that will properly feed the sound-box. Again, disc records have heretofore required a fresh stylus (or "needle") for each reproduction, whereas cylinder records (with their vertically undulating grooves) employ the same stylus over and over again. By applying the vertically undulating record to a disc tablet, and by giving the groove the proper con-

figuration the combined results of both feeding the sound-box across the disc and of using the same needle for all reproductions are accomplished. In the third place, if the ordinary reproducing stylus employed in cylinder machines be used with a vertically undulating groove deep enough to feed it, the stylus will not enter the more minute irregularities, and the reproduction will be correspondingly defective.

Another object of the invention, then, is to provide, in connection with a record-groove capable of feeding the sound-box, a stylus that will give faithful reproductions from such record groove.

Figure 1 is a cross-section greatly enlarged, representing a recording tablet and the recording stylus used in the present invention; Fig. 2 is a similar view of the record tablet employed in the present invention, showing the reproducer in connection therewith; and Fig. 3 is a plan view of a disc tablet, partly broken away, showing the position of the reproducing stylus in connection therewith.

APPARATUS FOR DUPLICATING SOUND RECORDS. Jonas W. Aylsworth, East Orange, N. J., assignor by Mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,024,965.

This invention relates to an improved apparatus for duplicating sound records from matrices or molds by the expansion of a blank, and is adapted

particularly for the making of records from relatively hard material, such as hard rubber, celluloid and similar composition, although the invention may be used for making records from wax-like compositions, such as those now employed in the art of making duplicate phonograph records by a molding operation.

PHONOGRAPHIC RECORDING AND REPRODUCING DEVICE. Samuel W. Wylie, Jamestown, N. Dak. Patent No. 1,029,249.

This invention relates to phonographic devices for recording and reproducing sounds; and as the mechanism and principles of the invention are applicable to both recording and reproducing devices, it is described mainly as a reproducing device.

The main object is to provide a device that will record and reproduce sounds with more volume, clearness and exactness than the devices heretofore provided. To attain this object the inventor has dispensed with all moving weights or bodies, like pistons, pressure weights, balance weights, etc., in connection with the stylus lever and diaphragm, as the momentum of weights in that connection tends to disturb and often resist the proper vibration of the stylus. He then provides means whereby the diaphragm is normally held in plane position when the stylus is in contact with the record,

so that the diaphragm may vibrate with ease to either side of its plane position, while in ordinary phonographs the contact of the stylus with the record causes the diaphragm to stand in a bulging position, from which it is only partly sprung back by the vibratory effect of either the sound waves on the record or the sound that should produce such waves on the record; and it is evident that such imperfect vibrations can only produce imperfect results. The inventor next provides a very delicate or sensitive point by which to permit the stylus to follow the middle of the spiral groove of the record thus avoiding the effect of a tendency of the stylus to climb up the sides of the spiral grooves; and lastly, a means for the prevention of all lost motion between the stylus, the diaphragm and the record.

In the accompanying drawing, Figure 1 is a partly sectional end elevation of the upper portion of a phonograph with the improvements applied to it. Fig. 2 is a top view of the portion shown in Fig. 1 with the feed screw, feeder arm, record and record mandrel omitted. Fig. 3 is a section near the line a-a, Fig. 1. Fig. 4 is a section on the line b-b, Fig. 1, with the recorder arm omitted. Fig. 5 is a section on the line c-c, Fig. 1. Fig. 6 is a bottom view of the diaphragm casing and stylus lever and its connection. Fig. 7 is a section on the line d-d, Fig. 6, with the casing proper omitted.

APPARATUS FOR MAKING PHONOGRAPHIC RECORDS. James Albert Whitman, Grantwood, N. J. Patent No. 1,030,364.

This invention relates to apparatus for making phonograph records. Its organization comprises means for evenly forcing or pressing a tube of celluloid, a paper tube coated with celluloid, or a cylindrical surface of any other suitable material against a matrix from which a sound record is to be taken.

In the accompanying drawings Figure 1 shows an elevation partly in section of one form of the invention, Fig. 2 shows a top plan view of Fig. 1, Fig. 3 is a section of Fig. 1 on the line 3, 3, Fig. 4 shows an enlarged partial section of Fig. 3 on the line 4, 4, Fig. 5 represents an elevation and partial longitudinal section of a modification of the invention, Fig. 6 shows a section of Fig. 5 on the line 6, 6, Fig. 7 represents an elevation and partial section of another form of the invention, and Fig. 8 shows a top plan view of Fig. 7 with a portion thereof broken away.

BACK SPACER FOR DICTAPHONES. Thomas H. Macdonald, Bridgeport, Conn., assignor to the American Graphophone Co., same place. Patent No. 1,030,740.

This invention relates to dictaphones, or that class of talking machines designed for taking dicta-

tion which is subsequently transcribed, and more particularly to the reproducing portion or element of the machine.

In machines of this character it is desirable for the operator who is transcribing the record to repeat certain portions of the record, that is, to place the reproducer back for a short distance, in order that the last portion of the record reproduced may be repeated.

The particular object of the present invention is to provide a simple and efficient means for throwing the reproducer back for a short distance over the record; in other words, to back space the reproducer for the purpose of securing the repetition of the part of the record that has just been reproduced.

Fig. 1 is an end elevation of a machine, with parts shown in section, taken on line 2-2, Fig. 2. Fig. 2 is a broken plan view thereof; Figs. 3 and 4 are broken details of portions of the back-spacing device.

SOUND CONDUIT OR AMPLIFYING DEVICE FOR TALKING MACHINES AND THE LIKE. Alex Fischer, West Kensington, London, Eng. Patent No. 1,029,002.

This invention relates to sound conduits applicable to talking machines and the like in which one or more bends are formed for the purpose of directing the sound waves in the desired direction, and the object of the invention is to so form the bends that the sound waves may be passed through the conduit in straight lines without being compressed, intermingled or diffused without being deflected against the side walls of the conduit.

In carrying out this invention each joint or bend in the conduit is provided with a reflecting surface which is inclined equally to the axes of both parts of the conduit on opposite sides of the bend so that the sound waves are reflected in straight lines parallel with the axis of the conduit. The cross sectional area of the conduit in the narrowest part of the bend is approximately the same as the cross sectional area of that part of the conduit from which the reflector receives the sound waves whereby such waves are transmitted without compression or diffusion. The reflecting surface is of such size as to receive all of the waves and directly transmit all of them to the next part of the conduit.

The cross sectional area of the conduit at the narrowest part of the bend is approximately the same as the cross sectional area of that part of the conduit whence the sound waves proceed. The section of the conduit will in most cases consequently and relatively increase in size from the receiving to the discharge end in order to obtain the advantages above specified. By the construction explained, sound waves are transmitted without compression, deflection or diffusion, and these

waves are discharged from the conduit with full volume of clear tone and of good quality.

of a talking machine. Fig. 2 is a plan view of part of the conduit shown in Fig. 1. Fig. 3 shows an elbow joint suitable for connecting a tone arm with a trumpet.

the diaphragm may be readily removed and replaced without injury thereto.

In the drawings, Figure 1 is a longitudinal section of a sound box constructed in accordance with this invention; Fig. 2 an enlarged fragmentary portion of the same, and Fig. 3 a front elevation of the diaphragm and its supporting ring.

SUPPORT FOR CYLINDRICAL SOUND RECORDS. Frank X. Hofbauer, East Orange, N. J., assignor to George S. Iddings, Cleveland, O. Patent No. 1,029,808.

This invention relates to talking machines of the type employing sound records of cylindrical form and has reference more particularly to the construction of the supports on which the sound records are mounted in such machines.

In talking machines using cylindrical sound records it is common to provide a mandrel for supporting the record provided with a tapered exterior surface and the interior of the record is also slightly tapered so that when the record is moved upon the mandrel it will come to rest in a position in which it is held firmly.

In different records, and particularly in records put out by different manufacturers, the size of the opening through the record varies, and, with the forms of supports for cylindrical sound records now commonly used, this variation causes a proportionate variation in the position in which the record is held upon the mandrel lengthwise of the mandrel.

In some machines, as for instance those of the magazine type, it is important that the record always assume the same position longitudinally of the support in order that proper coaction with the reproducing mechanism may be obtained, and the record must be held in this position with sufficient rigidity to preclude movement thereof relatively to the support during the operation of the machine.

The present invention involves the provision of a support for a cylindrical sound record specially constructed so as to fulfil the conditions above set forth without detracting from the facility with which the record may be placed upon it or removed therefrom. In accordance with the invention a support is provided having a tapered cylindrical surface on which the record is received and at the end of this surface a stop projection, preferably a circumferential flange, against which the

In the accompanying drawings, Fig. 1 shows a side elevation of a sound conduit with several bends made in accordance with the invention, such conduit being in this instance of suitable construction for the tone arm of a talking machine. Fig. 2 is a plan view of part of the conduit shown in Fig. 1. Fig. 3 shows an elbow joint suitable for connecting a tone arm with a trumpet.

SOUND - BOX FOR TALKING MACHINES. Bentley L. Rinehart, Camden, N. J., assignor to Victor Talking Machine Co., same place. Patent No. 1,028,606.

The main objects of this invention are to provide a sound-box, an improved mounting for a diaphragm; to provide a sound-box having a diaphragm, in which

end of a record abuts so that in every case the record will lie upon the mandrel in the same position relatively to the length of the mandrel. The tapered cylindrical surface of the mandrel is so made that it can yield radially and the parts thereof are pressed outwardly to a predetermined extent with a yielding pressure; in this way the records will always be held firmly upon the mandrel when moved thereon into coaction with the

stop though there be considerable variation in their interior diameter. The outward movement of the parts forming the cylindrical surface is suitably limited so that in no case would the smaller end of the support be expanded to such extent that a record would not slide thereon readily.

Fig. 1 is a plan view of the support showing record thereon in section; Fig. 2 is a longitudinal sectional view of the support; Fig. 3 is a longitudinal sectional view of the support at right angles to the section of Fig. 2, and Fig. 4 is a transverse section on line 4-4 of Fig. 3.

TRUMPET. Joseph Marguilies Landon, Upper Norwood, London, Eng. Patent No. 1,029,502.

This invention refers to talking machines and relates especially to the horn or sound amplifying device for use in connection with such machine.

Considerable inconvenience has been experienced with talking machines of all classes owing to the

fact that a large trumpet has to be used in order to secure the best results, which trumpet is unsightly and also extremely cumbersome when it is required to transport the machine from place to place.

Various machines have already been devised fitted in cabinets, with a sound conduit located in the cabinet, but it is found that the reproduction from a machine of this type is not so satisfactory as when the ordinary trumpet or horn is used owing to the restricted dimensions of the trumpet and to the lack of a proper bell portion.

The present invention refers to a method of constructing a trumpet either alone or in connection with the cabinet containing the talking machine in such a way that the whole trumpet or the bell portion can be folded into a very small compass and yet when opened a full sized trumpet or one of any required dimensions is formed.

In the drawings, Figure 1 is an elevation of the bell portion of a trumpet formed from folding flaps with the flaps closed; Fig. 2 is a similar view showing the flaps open; Fig. 3 is a detail of the fastening of the flaps together; Fig. 4 is a diagrammatic view showing a device such as that illustrated at Figs. 1 and 2 attached to the front of the cabinet of the talking machine. Fig. 5 shows a whole trumpet built up from hinged flaps.

DICTAPHONE USED IN FAMOUS TRIALS.

The dictaphone is steadily growing in favor for court use. It was employed in the famous Spencer murder trial in Springfield, Mass., as well as in the McNamara trial in Los Angeles. The use of the

dictaphone, which greatly facilitated the printing of evidence for the use of counsel, was the subject of an extended illustrated article recently in the Springfield Union, in which the modus operandi is explained in detail. In both trials, through the use of the dictaphone, the court stenographers, with

typewriter assistance, were able to get the brief of each day's proceedings at 7 o'clock in the evening, so that all interested were able to use them for reference and study—a remarkably good time record in turning out court reports and a decided tribute to the dictaphone.

MOVING PICTURES IN SCHOOLS.

An Early Possibility if Edison's Latest Plan Works Out—Animals and Insects Shown as in Actual Life—Some of the Subjects That Are Already Planned for the Pictures—History and Geography Served in Attractive Form in the Schoolroom.

In a very short time you may see from the car window a man squatting in the Jersey meadows, winding what seems to be a black box. That man is helping to get rid of some of the \$3,000,000 which Thomas A. Edison means to spend in introducing the moving picture into the schoolroom.

The man with the black box is one of Mr. Edison's operators. He is recording with the microscopic lens the life, love, adventures, villainy and death of a Jersey mosquito and some time next fall in some schoolhouse in Illinois there will rise up a chorus of "Ahs!" and "Ohs!" as the mosquito appears big as an elephant on the moving picture screen. Incidentally as the habits of that mosquito are unfolded on the screen the youth of Illinois will learn the methods of getting rid of the pest.

Mr. Edison has decided that the moving picture can be made more than a mere plaything. It was announced recently that he intended to put \$3,000,000 and eight years behind his idea. For six months now men all over the world have been at work planning the details and by next fall it is hoped that the first of the series of pictures will flash across the sheets in schoolrooms.

Mr. Edison intends to use his home kinetoscope for this pictorial education. It is a small machine, easy to carry about and easy to operate. Non-inflammable films are used and eighty feet of film contains as many pictures as 1,000 of the films used in theaters.

The pictures are extremely small, less than three-sixteenths of an inch high and one-quarter of an inch wide. The Edison folk say that a six-foot picture from one of these photographs can be thrown upon a screen. Technically this is called projection from microscopical objects, which means simply that the inventor has found a way to project a sharp, clear picture from a photograph so small that a microscope is required to make out the objects contained in it.

So much for the machine. Now, Mr. Edison believes that the average child would rather see an elephant walk across the screen in front of his delighted eyes than look upon a picture of an elephant in a text-book. Furthermore, the child will get a better idea of what the elephant really does and looks like from that moving picture. Take, history, says Mr. Edison. Would it not give the child a better idea of the Battle of Lexington if he could see it acted out before him by trained actors faithful to all the historical detail moving upon the very spot where the battle was fought in a little town in Massachusetts and that so many men were lost on each side?

Mr. Edison thinks so, and a convention of school principals that recently met in St. Louis—some 2,000 of them—agreed with him when one of his operators showed the films already made and outlined future plans.

So far a prospectus has been made for moving pictures in seven subjects that parallel the text-book courses. These are some of the pictures that Mr. Edison hopes will make geography attractive and real to the dull student: "Off the Coast of Maine," "New York of To-Day," "Icebergs Off the Coast of Labrador," "The Panama Canal in 1911," "The Chunco Indians of the Amazon River," "1,000 Miles Through the Rockies," "In and Around Havana, Cuba" and "Over Mountain Passes."

This is only the beginning of the geography course, for Mr. Edison has sent James Ricalton, a veteran photographer with a long news photography experience, around the world to catch with his lenses anything that may give the American school child a wider and clearer vision of the world he lives in. Mr. Ricalton will be gone three years. He took pictures of the Durbar for Mr. Edison and is now in Asia.

For the history courses Mr. Edison has sent out

CLEVER ILLUSTRATED PUBLICITY.

We reproduce herewith one of the cartoons which is now running in the Columbia Phonograph Co.'s house organ, The Columbia Record—one of the products of the progressive advertising

department of the Columbia Co., and which is attracting widespread attention among the trade. A picture advertisement, and especially one in the line of a humorous cartoon, is nearly always a business getter. The one in question herewith is no exception.

He Couldn't Beat It For Value.

from his Bronx laboratories several companies to set forth the events of American history on the actual spots where they occurred. The Battle of Ticonderoga, for example, has been enacted on the shores of Lake Champlain by an Edison company. In the Battle of Bunker Hill you can see above the lines of redcoats the shaft of the monument. The Battle of Trafalgar has been fought out in the Bronx laboratories with all the historical accuracy as to costumes and events that is possible.

The country child can see the plunge of horses of the New York fire department or the whirl of the new automobile fire-fighter. There are pictures of naval parades for the delight and education of inland youth. The processes of the chemical crystallization of certain substances are to be thrown upon the screen.

In a public school in Brooklyn where the films were tried out the other day the operator let the teacher choose a pupil to run the machine and the instant competition that began suggested to Mr. Edison's workers the idea of setting up the handling of the machine as an incentive to scholarship.

So the fathers of the next generation must not be startled if their sons return with intimate knowledge of the habits and customs of the inhabitants of the Isle of Guam.

"I saw them in the school pictures to-day," will be the answer.

RESOLUTION WORTH KEEPING.

I resolve—

To keep my health;
To do my work;
To live;
To see to it I grow and gain and give;
Never to look behind me for one hour;
To wait in weakness, and to walk in power;
But always fronting onward to the light,
Always and always facing toward the right.

—Charlotte Perkins Stetson.

WIRELESS MUSIC 434 MILES.

Much Success Attends French Tests of Wireless Telephony.

For some time past extensive wireless telephony experiments have been under way at Toulon, France, where the Prince of Monaco has installed a board on the "Hirondelle," a wireless station with a radius of 600 to 700 kilometers. This apparatus gave a continuous current with musical sounds, producing all the notes of the octave.

The sounds were easily heard by an operator, who was able to distinguish them from the subsidiary sounds which are always produced during an electrical disturbance of the atmosphere.

A portion of the "Marseillaise" sent from Fort de Leau, in Algeria, was heard perfectly aboard the "Hirondelle" in the inner harbor of Toulon, a distance of over 700 kilometers (434 miles). The "Hirondelle" wireless mast is only 120 feet in height. The experiments were carried out at mid-day, when the transmission of Hertzian waves is most difficult.

Experiments in wireless telephony were made during recent naval manoeuvres off Villefranche between the warships "Verité" and "Justice" of the French navy. At that time wireless telegraphy could not be worked on account of atmospheric disturbances caused by heavy gunfire, but telephony worked admirably at a distance of nearly 150 kilometers (93 miles).

SELECT A GOOD MAN.

Something of Walter G. Linton Who Has Been Chosen to Take Charge of the Talking Machine Department of the Estey Co.

Thos. K. Henderson, the new and efficient manager of the Estey Co. in Philadelphia, has engaged

Walter G. Linton.

Walter G. Linton to take charge of the talking machine department which has just been started most auspiciously in the Estey Co.'s handsome building in the Quaker City.

Mr. Linton is typical of the best brand of American salesman. A clean-cut, bright, brainy, always alive business man with a personality that pleases. For three years Mr. Linton sold Victors and in 1907 he was in charge of the talking machine department in Wanamaker's store. Two years later he joined the National Cash Register forces, and in 1911 he was persuaded to line up with the Columbia Phonograph Co. He is now leaving the Columbia staff and goes with Estey. Though the Columbia Co. regrets losing him there is some compensation in the fact that Mr. Linton

ATTRACTIVE COLUMBIA EXHIBIT AT MERCHANTS' CONVENTION, DALLAS.

The accompanying illustration shows the booth of the Columbia Phonograph Co. at the Twelfth Annual Convention of the Retail Merchants' Association of Texas, held at Dallas, recently. The exhibit attracted much attention from retail merchants of Dallas, as well as visiting merchants from other sections of the State. The exhibit was the means of lining up many prospects for Dictaphone sales and was instrumental in furthering the reputation and publicity of the Columbia product in general. Texas is one of the strong

will be doing Columbia work for the house of Estey, as it handles the Columbia product.

INTEREST ON OVERDUE ACCOUNTS.

Perusal of Letter Which Recently Won a Prize and Which Should Interest Readers.

A prize for the best letter written a customer, presenting the reasons for charging interest on overdue accounts, was recently offered by President Parker, of the St. Paul, Minn., Credit Men's Association. It was won by Z. H. Thomas, of that city, his letter being as follows:

"Replying to your favor of the 25th inst. regarding interest charged on your account we wish to say that our prices are based on getting our money according to our terms when our bills mature. The terms are plainly set forth upon our order sheets and invoices, are understood by you, and are just as much a matter of agreement as is the price of the merchandise.

"We are obliged to pay our bills when they become due, and have to depend upon our own receivables being paid promptly in order to do this. When our customers do not pay us it means that we must borrow money ourselves and pay interest on it in order to carry their accounts, and it certainly seems most reasonable that they should be willing to pay us interest to offset what we are obliged to pay in order to accommodate them.

"If you borrow the funds of your banker to pay us he charges you interest. If, instead, you depend upon us for the accommodation we are entitled to the same consideration at your hands as you would give him, for it is our money you are getting the use of, while we, in the meantime, are deprived of it.

"We want your business and shall always endeavor to merit it, and to that end assure you as good treatment as we give to any of our custom-

States of the South so far as the popularity of the Columbia is concerned.

ers. We have but one policy, which is to treat all with equal fairness, and we cannot consistently exempt you from paying us interest on past due accounts while requiring it from others, and we feel sure this will appeal to you as just and reasonable."

CONVENIENT FOR VACATIONISTS.

Practically every vacationist, whether going to the woods, the beach or on an extended trip, wants to keep in touch with his home folks and his business house. For that purpose the convenience of a fountain pen meets with his instant approval. Right here is a field which is full of opportunities for the salesman who is wide awake enough to suggest fountain pens to the customer contemplating a vacation trip.

The greatest demand naturally falls upon the pen of the non-leakable type, such as Moore's Non-Leakable, the product of the American Fountain Pen Co. This pen is particularly adapted for vacationists because it can be jogged around any old way in the hip or vest pockets or in the pocket of a white outing shirt, without showing the slightest trace of leakage. It is a time and labor saver, too, as it requires no shaking or coaxing to start the ink flow, or no unscrewing of joints preparatory to filling. You should by all means have at least a small stock of Moore's Non-Leakables on hand to supply the vacationists' demand.

NEW HORNLESS MACHINE READY.

The U-S Phonograph Co. is showing samples of a new small-sized hornless machine which will soon be on the market in quantities and which is listed at \$25. The new machine is of convenient size, attractively finished and makes a thoroughly desirable addition to the strong line of the company.

The TALKING MACHINE WORLD

AND
NOVELTY
NEWS

Published Each Month by Edward Lyman Bill at 373 Fourth Avenue, New York, August 15, 1912

The best-known trade mark in the world

“The Victor talking machine’s design, ‘His Master’s Voice,’ has become a household word, and the quaint little fox terrier at attention before the horn is familiar to more Americans than any of the world’s great masterpieces”—*Collier’s Weekly*.

Victor-Victrola

Main display room of Sol. Bloom, Inc., New York.

In awakening the public to a proper appreciation of the best music, the Victor-Victrola did what was inevitable—transformed the stores of Victor dealers into the thoroughly modern, handsomely furnished salesrooms you see today. And at the same time it put the entire music trade on a higher and better basis.

Steadily and surely the influence of the Victor-Victrola kept on growing, until now it is universally acknowledged as the greatest instrument the world has ever known—musically and commercially.

Great as its influence is at the present time, wonderful as are its achievements of the past, the Victor-Victrola is destined to accomplish still greater things—things that mean much to the prosperity of every dealer; things that no progressive dealer will want to overlook.

Victor Talking Machine Co., Camden, N. J., U. S. A.

Berliner Gramophone Co., Montreal, Canadian Distributors.

Always use Victor Machines with Victor Records and Victor Needles—the combination. There is no other way to get the unequalled Victor tone.

Price Ten Cents

THE QUESTION OF TWO PRICES.

What the Jobbers Did Regarding the Matter at Their Convention at Atlantic City Last Month—Matter Left in the Hands of the Executive Committee Until the Proper Time for Bringing It Up—Companies Willing to Discuss Subject with Jobbers and Dealers.

Following the reports of the recent annual convention of the National Association of Talking Machine Jobbers, a large number of dealers and jobbers not in attendance have made inquiries regarding what formal action the jobbers took regarding the campaign for two list prices on all machines, one on a cash basis and the other for installment purchasers, thus increasing the volume of cash sales through the simple expedient of offering the prospect a substantial inducement to pay the cash at once.

As a matter of fact, the question was discussed at length in the sessions and was the subject of a long report made by J. Newcomb Blackman. Mr. Blackman stated that all three manufacturing companies—the Victor, the Edison and the Columbia—were willing to take up the matter with the dealers and discuss it from all sides, the companies sending committees to meet with the jobbers and the dealers for that purpose. Owing to the uneasiness prevailing regarding the outcome of the efforts to pass the Oldfield bill and the general unsettled patent situation, it was deemed a matter of simple prudence to let the price question rest for the time being and not stir up any public discussion of the question while more important and far-reaching matters were under consideration.

In accordance with the decision of the meeting, therefore, the price question was left with the executive committee of the association with instructions that it should be taken up and settled at a later date, when other matters were out of the way. There was much to indicate that the two prices were highly in favor and that there was much chance of them being finally adopted when the time is ripe.

A HANDSOME EDISON FLOAT.

Entered in a Recent Street Parade in East Auburn, Cal., by the Auburn Music Co., and Which Won Second Prize.

That the decorative talents of the dealers handling the Edison phonographs and records is not

NEW EDISON LINE ON EXHIBITION.

Visitors to New York Will Find It Worth While to Call at 10 Fifth Avenue—Great Advance Sale of New Disc Phonographs Reported by Mr. Dolbeer—Visitors to the Factory.

The exhibition of new Edison disc phonographs and records at the Edison building, 10 Fifth avenue, New York, which was duly chronicled herein last month, has been open since the first part of July and will remain open till further notice. No doubt visitors to New York city will be enabled to examine this line there till after Labor Day.

F. K. Dolbeer, sales manager, reports a wonderful advance sale of the new Edison disc machines and records, saying that many people who are not now Edison jobbers, or, in fact, jobbers of any line of machines, have come to Orange to intercede for the privilege. Mr. Dolbeer says that in justice to the present representation, many of these had to be refused. This is a sign that is especially noteworthy inasmuch as it shows that the merits of the new Edison line are appreciated.

L. C. McChesney, advertising manager, is forgetting that there are such things as types, slogans, displays, magazines, et al, being at present sojourning on the shores of Racquette Lake, N. Y.

Carl H. Wilson, general manager, has dropped cares, too, and is at Red Rocks Inn, Newfoundland, N. J., for a recreative period.

Visitors at the Edison plant since the last issue of *The World* are as follows: H. Paul Mann, Eilers Music House, Walla Walla, Wash.; H. E. Gruttemeyer, Springfield, Mass.; Wm. Keller, Louis Buehn & Bro., Philadelphia, Pa.; Daryl H. Kent, M. W. Waitt & Co., Ltd., Vancouver, B. C., Canada; J. N. Swanson, Houston Phonograph Co., Houston, Tex.; F. E. Bolway, Oswego, N. Y.; Miss L. Shepherd and Mrs. D. Shepherd, L. Shepherd & Co., Fort Worth, Tex.; J. N. Blackman, Blackman Talking Machine Co., New York; C. H. Short, C. H. Short Music Co., Pomona, Cal.; H. H. Blish, Harger & Blish, Des Moines, Ia.; J. M. Hayes and Mr. Bertcheri, the Hayes Music Co.,

Auburn, Cal., by the Auburn Music Co., that city, and with which the company carried off the second prize among the business floats. In view of the attractiveness of the Edison float, the winner of the first prize must have been exceptionally handsome and clever. The Auburn Co.'s float represented a "Horn of Plenty," with an Edison horn as chief factor. The large signs along side of the

Wenzell, the R. C. Kletchmar Co., Philadelphia, Pa.; F. E. Glover, Plainfield, N. J.; G. E. Ackerman, Ackerman & Co., Scranton, Pa.

NEW MANAGER FOR CANADA.

A. G. Farquharson Succeeds James P. Bradt as Manager of the Canadian Interests of the Columbia Phonograph Co. with Headquarters in Toronto—Mr. Bradt's Long and Interesting Career in Europe and America.

(Special to *The Talking Machine World*.)

Toronto, Ont., Aug. 9, 1912.

The friends of James P. Bradt, who for nearly three years has had charge of the business of the Columbia Phonograph Co. in Canada and who has been connected with the same company in various important capacities for the past fifteen years, were greatly surprised to learn that he has resigned that position and will be succeeded by A. G. Farquharson, formerly special representative for the Columbia Co. in Los Angeles, Cal., and adjacent territory.

Since entering the employ of the Columbia Co., fifteen years ago, Mr. Bradt has represented the interests of that company in all parts of the world. In the course of his career in the talking machine trade he spent a year in Philadelphia, four years in charge of the Columbia business in the southern States, with headquarters in Baltimore; seven years in Europe as sales manager for Germany, Austria, Russia and England, and finally, almost three years as Canadian manager. At the present time Mr. Bradt has not made any announcement regarding his plans for the future.

AN EDUCATIONAL DEPARTMENT

With Prof. Frederic Goodwin as Manager, Has Been Established by the Columbia Phonograph Co.—His Qualifications for the Position Are of the Highest.

It is interesting to note that the Columbia Phonograph Co., General, has established an educational department, with Prof. Frederic Goodwin at its head as manager. Mr. Goodwin is a professional musician and teacher, one of the State corps of the Department of Education of the State of Massachusetts, a man whose ideas are noted for their clarity and practicability of performance; of strong character, a self-made man, a close student of educational matters, well versed in theoretical pedagogy, with an artistic and poetic temperament, he seems equipped to an unusual degree to serve a broad and helpful purpose in the uplift of the child through systematic educational courses. Mr. Goodwin was one of the active officers in the recent convention, serving on the nominating committee of the N. E. A. representing the State of Massachusetts.

Nothing has occasioned more interest among teachers at the National Educational Convention, recently held in Chicago, relative to school apparatus, than the talking machine, with its vast library of recorded music. Its possibilities were only hinted at by the demonstration of the different companies. The unusual interest shown at these demonstrations furnish but a vision of its tremendous grasp upon the future in matters educational.

The scope of the department established by the Columbia Phonograph Co., General, it is announced, will be largely educational and developed along broad and comprehensive lines, both musical and literary. Didactic devices, based upon personal school and class room experience, are to be promulgated by Prof. Goodwin, but along lines of modern pupil study.

How the Auburn Music Co. Features the Edison Phonograph.

confined entirely to their window displays is proven by the accompanying illustration of an automobile float entered in a recent street parade in East

car precluded any possibility of anyone making a mistake that the line advertised was other than the Edison phonograph.

ON THE SOUTH OF THE RIO GRANDE.

The Real Situation Brought About by the Mexican Revolution as Described by Texas Talking Machine Men—Want Decisive Action Taken by Federal Government to Protect Americans—Texas Rangers Confident of Ability to Settle the Trouble, Along the Border at Least, if Step Is Necessary.

To get a real line upon the situation in Mexico and to realize to a certain extent its importance as affecting American interests on or near the Rio

The Leaders of the Mexican Revolution.

Grande, one has but to talk with the talking machine and piano men or other merchants who do business in the Lone Star State. The feeling of the Texans against the Mexican revolutionists is running high, and judging from the conversation of those who have visited the East recently, the threat of the Governor of that State to take matters in his own hands and send the State militia against the Mexicans has been received with general favor by the people of that State.

Mexicans Dead on the Battlefield.

Juarez House After Bombardment.

At the recent convention of the National Association of Talking Machine Jobbers there were present J. M. Swanson, of the Houston Phonograph Co., Houston, and H. T. Walz, of the W. G. Walz Co., El Paso. Mr. Walz has necessarily kept in close touch with the situation over the border, especially in the neighborhood of Juarez, which is just across the river, and is of the opinion that the failure of the Federal Government to take decisive action in the matter, particularly after the battle of May, 1911, when several people were killed and a number wounded in El Paso by Mexican bullets, and it was not safe to traverse the streets of the latter city owing to the rifle fire directed against the town, has no emboldened the rebels and also the Mexican Federals that they will go to extremes to inflict damage to Americans

Burning Bodies After Battle.

when the opportunity offers. It is the opinion of Mr. Walz that a single field battery, properly manned by regulars, could make it so hot in Juarez that random firing from across the river would be forgotten in the effort to get clear of the danger.

Mr. Swanson is an old-time member of that world famous organization, the Texas Rangers, a body of soldier police who do not include the word fear in their vocabularies, and when the

threat of the Governor to call out the Rangers and other State troops to meet the impending danger reached him while at the convention he was all anxiety to be home and answer the expected call. The business of the State has felt the effects of the Mexican upheaval to a surprising degree and, what is more to the point, the pride of its citizens had suffered a blow.

Only recently a letter was received at this office from George W. Jordan, a piano tuner located in the State of Sonora, who writes that conditions have become so upset in his vicinity that he finds it unsafe to travel in the pursuit, especially in view of the fact that he is an American.

The accompanying photographs, showing the leaders of the Mexican revolution and some scenes in which are depicted the horrors of war, were obtained through the courtesy of Mr. Walz, who witnessed some of the tragedies personally.

SOME LOUISVILLE BRIEFLETS.

Coming and Going of Traveling Men for the Leading Companies and the Local Houses.

(Special to The Talking Machine World.)

Louisville, Ky., Aug. 8, 1912.

Mr. Sigman, talking machine traveling salesman for the Wurlitzer Co., Cincinnati, O., was a recent visitor to this city.

L. J. Reid, of the selling force of the Columbia Phonograph Co., returned July 20 from a two weeks' vacation spent in St. Louis.

The Columbia Phonograph Co. reports a fine retail business for the month of July on the Lyric and Favorite outfits.

L. H. O'Bryan, of the Columbia Phonograph Co., spent a week recently in Breckenridge County.

A. C. Ireton, of the Thos. A. Edison Co. was in Louisville about the first of August demonstrating the new Edison disc product. A great deal of interest was manifested by the local dealers.

E. B. Walthall, manager of the Columbia Phonograph Co., left August 6 for a week's trip visiting the executive offices, New York, and Columbia factory at Bridgeport.

Miss L. A. Lopp, stenographer of the Columbia Phonograph Co., is spending her vacation at Fredricksburg, Ind.

The Columbia Phonograph Co. furnished a Nonpareil and a quantity of records in entertaining the monthly meeting of the real estate men in their new quarters in the Realty building. There were about 100 present.

J. W. Scales, late with the Columbia Phonograph Co., Atlanta, Ga., is now located in Louisville, with the Columbia Phonograph Co. at this place.

VALUABLE SUGGESTIONS FOR THE FALL TRADE.

An Idea or Two for the Dealer Who Desires to Make This Autumn the Most Profitable of His Career—It Means Thinking and Acting—Taking Advantage of Opportunities.

There are a great many of your customers out of town, Mr. Dealer. Some of them are sojourning at the seashore, others enjoying the simple life of the country, while a number of the more fortunate, perhaps, are touring this grand old land of ours. No matter where they are situated, or what they are doing, if you have kept in touch with them as you should they will not be allowed to forget that you are still doing business at the old stand, and that their return to the metropolis will be considered an event well worth the consideration of the talker man.

Endeavor to ascertain approximately the time set for their return in order that you may entice them into your store while the spell of the good time just past is still upon them. Treat them as long lost friends, and entertain them lavishly.

One dealer of my acquaintance keeps a list of his temporarily out-of-town customers, with the dates of departure and return attached, and as the time draws near for their vacation to end he writes them a friendly personal letter, setting forth therein the things of interest which have transpired in talkerdom during their absence, and assuring them of his great pleasure at their anticipated early arrival in the city. At this particular time he is preparing a brochure to circulate among his customers who are upon their vacations. It will be a very attractive little booklet when completed, and just nifty enough to attract attention when left upon the library table of a hotel or country boarding house.

Do you realize, Mr. Dealer, that there is no better advertising method than the simple and easy one of scattering attractive circulars broadcast among people who are susceptible to anything catchy or unique? One talker enthusiast can infest a whole summer colony with the phonograph germ

if his dealer is clever enough to co-operate with him by placing a goodly amount of advertising at his disposal.

There is no reason on earth why each customer of yours now out of town should not submit to you upon his return a memorandum bearing the names and addresses of people who have expressed a desire to know more of the talking machine. Immediately upon receipt of this information you should send each person mentioned in the memo-

A Post-Vacation Poster.

random catalogs covering your entire line, and explain to them confidentially that as your talker shop is a little better equipped and more luxuriously furnished, your clerks a little more courteous, and your goods fresher and more tastefully displayed than the other fellow's, it will most certainly be to their advantage to patronize you. This line of talk will create curiosity. These people have already heard of you through the kindness of your customer, and when they receive a communication from you substantiating everything already told them, *and then some*, it is a sure, safe bet that you will be their host ere long.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools

Box 918, Scranton, Pa.

In a very little while, Mr. Dealer, the migratory human flood which has receded from the city during the torrid months will come surging back once more, bearing upon its crest a host of cheerful hearts, rejuvenated by their period of recreation, and eager to prolong their pleasure.

Now, this is where you get on the job, Mr. Dealer. Before the city gates have closed upon them, bring before their eyes, through the medium of signboard and newspaper advertising, and personal correspondence, a recipe for an extended vacation. In other words, inform them that no matter how royally they were entertained while at Atlantic City, Newport or Hainesport-on-the-Rancocas, the same great bands and orchestras that set their feet to dancing and blood to tingling while at these resorts, and the identical soloist who brought tears to their eyes with his golden voice, will be charmed to perform for them in their own homes, thus making the musical feature of their good time just past a permanent entertainment.

A leading manufacturer is bringing forth a new product this autumn, and if fate is kind it will make its debut at just the psychological moment. I refer, of course, to the disc phonograph. This instrument, combining as it does all the advantages of both the cylinder and disc machines, cannot but make a pronounced hit. To the chap who has always preferred a disc instrument, but who was of too indolent a temperament to engage in the arduous labor of needle changing, this new phonograph from the Edison laboratories, with its permanent diamond point, will fill a long felt want.

Do not wait for the public to come to you with inquiries concerning this product, but begin now, through whatever advertising mediums are at your command, to extol its virtues, explaining in detail its superiority—its special merits—and requesting the trade to call and inspect.

There is a certain class of music lovers who are very fond of the talking machine, but who rarely number it among their possessions. You come upon them very often within the portals of the talker shop, listening rapturously to the latest rag or an andante of de Beriot's, but rarely, if ever, making a purchase. You know the type, Mr. Dealer, for you have them with you frequently. They are the nomads of the glistening rail-traveling musicians, vaudeville actors, lecturers and singers—all melody mad, but abstaining from the joy of owning a phonograph through the false impression that it will prove impracticable while en route. Inquire of a member of this cult why he has not joined the talker fraternity, and he will answer sighing, "Impossible! It is a wonderful instrument, but prohibitive in our profession."

When asked for an explanation he will hold forth voluminously upon hotels which register objections against unnecessary noise, the fragility of records, etc., and end by repeating that it is a wonderful instrument, but *impossible*.

Now, Mr. Dealer, you and I know this to be simply ignorance on the part of our friends, the nomads, and that a heart-to-heart talk upon the subject of sound modifiers and indestructible records will set all things right.

The next time a vaudeville star, during her engagement at the local playhouse, comes to hear one of her own songs, explain to her very carefully how easily the modern talking machine can be made to harmonize with her surroundings, show her that records can readily be transported from place to place with but a minimum of breakage, and that she can procure a really dependable instrument which will occupy no more room than the jewel chest which adorns her dressing table. Tell her of the great artists, Melba and Caruso, who are never without a talking machine, and you will not only make a satisfactory sale, but will establish the phonograph as her traveling companion ever after.

HOWARD TAYLOR MIDDLETON.

It costs me just as much per hour when you worry as when you work. I make my profit out of the work. Worry, and you'll create a cause for it.

Most of us want what we want until we get it, and then we don't want it.

We are determined to have representation wherever Columbia product is not active—and the *best* representation in the business. Columbia money for somebody everywhere!

Tribune Building, New York**

WORKING ON FALL REQUIREMENTS.

Outlook Is for Good Fall and Winter Trade in San Francisco—Perfecting Sherman, Clay & Co.'s Talking Machine Department—Emporium Department Store to Handle Talkers—Edison Home Kinetoscope Being Pushed Throughout the Coast—Large Order Placed for Edison Phonographs—Budget of News from San Francisco and Environs.

(Special to The Talking Machine World.)

San Francisco, Cal., August, 1912.

Dealers all over the Coast find things rather quiet at present. The sale of talking machines and records for vacation use is about over, and the majority of buyers through the country are too busy looking after crops to take much interest in talking machines. A good many dealers are beginning to estimate their fall requirements, and a few orders are coming in, but the general buying movement has not yet commenced. In fact, there is a tendency to buy rather sparingly in some lines, in anticipation of innovations in the market, though past experience has shown that it is usually difficult to get enough of the latest model machines to supply all demands. From all indications the season will be a good one in all lines, as most of the primary industries of the Coast are in better shape than for several years, and the modern types of talking machines are coming to be regarded by many people as almost a necessity.

Sherman, Clay & Co.'s Talker Department.

The principal item of news in the local trade is the complete remodeling of the retail talking machine department of Sherman, Clay & Co. This does not consist merely of a little renovation or the addition of one or two demonstration rooms, but the entire third floor of the building has been stripped of all woodwork, partitions, etc., and the department is being completely rebuilt, taking on much more space than was formerly occupied. The tearing down alone occupied several weeks, and the rebuilding is hardly half finished. This change, which had long been contemplated, necessitated temporary shifting of other departments, so the work was postponed to the quiet season. For the time being the department occupies the sixth floor, which is pleasingly rearranged, though not designed for this class of business. Nevertheless, Mr. McCarthy reports a very satisfactory run of business for this time of year. The third floor has been laid out so as to be almost entirely occupied by demonstrating rooms, with Mr. McCarthy's office in one corner, and a good-sized reception hall next the elevator. The rooms on two sides will be finely lighted from the street, and a special ventilating system will give an abundant supply of fresh air to all the rooms, permitting the absolute exclusion of outside noises. Many fine talking machine establishments have been fitted up on the Coast of late, but Sherman, Clay & Co. intend, at their home establishment, to surpass them all, both in appearance and business facilities. Allowing for all reasonable delay, the new rooms should be ready for use before the end of August, and the improved service is expected to increase the company's business materially during the fall.

Arthur Geissler, distributor of Victor goods at Chicago, is visiting Sherman, Clay & Co. at present. He was formerly associated with this house. Mr. Geissler will probably be in the city until about the middle of the month.

Emporium Store to Handle Talkers.

The Emporium department store in this city, which recently embarked in the piano business, being the only such house in the city handling this line, now plans to add a talking machine department. The need of this line has become very apparent since the piano department was opened, and the house has plenty of room on the same floor for the machines. So far no manager for the department has been named, and nothing is given out regarding the plans, except that all the leading lines will be handled, and a very complete stock of records will be installed.

Pleased with New Amberola III.

A. R. Pommer, head of the Pacific Phonograph Co., is still resting in the mountains, but makes occasional visits to the city, and seems to have about recovered his health. It is hoped that he will soon be able to resume his regular work. Meanwhile the business is being satisfactorily managed by Mr. McCracken. Mr. McCracken reports the arrival of the new Amberola III, with which he is very much pleased, saying that it is the finest Edison machine yet placed on the market. All the dealers who have received this machine, he says, are very enthusiastic over it. Business in general, however, he finds rather quiet at present. All the Edison dealers, he says, are looking forward to the arrival of the new disc phonographs, for which a tremendous demand is predicted on the Pacific Coast.

Pushing Edison Kinetoscopes.

The Pacific Phonograph Co., and, in fact, all Edison jobbers on the Coast, are now handling the new Edison home kinetoscope. This device is rapidly gaining in popularity, and contracts for them have been signed by some of the leading talking machine retailers of the Coast.

Romaine Giving Technical Instructions.

M. B. Romaine, of the mechanical department of the Edison factory, is doing a valuable work on the Coast in instructing the various dealers in regard to repairs, mechanical demonstration, etc., of the Edison machines, and especially of the later types, with the mechanism of which many dealers and repairmen have not had time to become familiar. Mr. Romaine spent several months this spring in southern California, making his office with the Southern California Music Co. at Los Angeles, and for about six weeks past has been visiting the Pacific Phonograph Co. in this city, and making numerous trips into the surrounding territory. His work in California is about completed, however, and he will leave shortly for Oregon, where he will make his headquarters for some time with the Graves Music Co., of Portland. His work in this State has been greatly appreciated by dealers, who would like to have him stationed here permanently.

Large Order for Edison Phonographs.

The Palace Drug Co., of Monterey, Cal., has placed a large initial order for Edison phonographs with the Pacific Phonograph Co.

Recitals Bring Many Customers.

P. H. Beck, talking machine manager for Byron Mauzy, has been holding daily recitals for some time and gets a good attendance, notwithstanding the vacation season. Mr. Beck has adopted an effective follow-up system in his record business, enabling him to inform regular customers of new records that would be likely to please them.

Returns from Vacation.

Andrew G. McCarthy, of Sherman, Clay & Co., recently returned from a successful hunting and weight-reducing trip in the mountains of northern California, accompanied by Mr. Douglas, of the Victor Talking Machine Co.

Visited Columbia Factory.

H. H. Hill, who has charge of the talking machine department of Kirk, Geary & Co., of Sacramento, Cal., made a visit to the Columbia factory early this month, and is now back at work. Kirk, Geary & Co. have the distributing agency for Columbia goods in northern California and Nevada, having covered this territory successfully for several years.

Wiley B. Allen's Victor Display Attracts.

The Wiley B. Allen Co. recently placed a Victor display in one of its windows, which was so attractive that it was allowed to stand for two weeks. The window was backed by pastoral scenery, a lake in the foreground being continued in the window itself, with a real tree and rushes, and a boat containing a young lady and a small Victrola, designed to show the convenience of such a machine on an outing trip.

Used Talking Machines for South America.

The local Eilers Music House has recently been advertising to the effect that, having an order for second-hand talking machine outfits for Central America, it would accept used Graphophones or Victrolas, with records, at full value as first payments on player-pianos.

CHARACTER—CAPITAL—CAPACITY.

Frederick P. Vose of Chicago, general counsel of the Electrical Trades Association, made the following pertinent comments on credit before the Credit Men of Toledo, Ohio:

"Credit is the confidence reposed in the ability and purpose of men to meet future obligations. You grant credit on the three C's, namely: Has the customer Character, Capacity, Capital? If he lacks Character, but possesses the other two, beware! If he possesses Character and Capital, but lacks Capacity, beware! If he has Character and Capacity, the chances are that he will not long want Capital, and yet, we all know innumerable instances where the Capital never comes. Then, beware. If the customer possesses all three, you are safe. In the same way grant to your commercial lawyer Confidence, Consideration and Commensurate Compensation, and, behold, you are secure."

Trust more to work than to talent. Rely more on your own sweat than upon your friends' recommendations. Pin your faith to labor rather than to the short cut. The genius who works indefatigably is the only one his generation remembers.

The Edison

The Opera

This type has a powerful double spring motor, geared to body. It plays Amberol Records only, and is equipped with the new style Model L reproducer which is stationary, the mandrel feeding the record past. Furnished in mahogany or oak with self supporting wood cygnet, horn to match.

All Edisons have

The right home tone.

The sapphire reproducing point.

The long playing, smooth running motor.

NEW YORK, AUGUST 15, 1912.

REPORTS from correspondents of The Talking Machine World regarding trade conditions throughout the country are all couched along optimistic lines. This is attributed in the largest possible measure, not only to the great volume of trade which has been enjoyed by talking machine men throughout the spring, and which has lasted well into the summer, but also to the unusually excellent prospects that exist for a largely increased volume of trade the coming fall and winter, due to satisfactory crop conditions all over the country.

This year in some sections the farmer will enjoy the largest crops in history, while, broadly considered, the increase over last year is enormous. All this means, of course, a larger surplus for such necessities to comfort and enjoyment in the home as the talking machine.

During the prosperous years the farmers in Kansas and the Middle Western States were the largest buyers of high priced pianos, and judging from present tendencies the farmers are destined to become large purchasers of high priced talking machines. The American, whether he be a tradesman, a merchant, a farmer, or a financial magnate, wants the best, and that is why, as in no other country, articles of value are in greatest demand. Thanks to the talking machine, millions of homes throughout the country have been transformed from unattractive places into opera houses and concert halls, through being able to enjoy the greatest artists and orchestral organizations in the world.

Think of the value of this education!

Just realize what the talking machine means as an uplifting and educational medium throughout America!

It is simply marvelous—almost beyond computation.

The talking machine is rapidly coming into its own everywhere. The greatest educational leaders of the country are now realizing that it is a medium of the greatest importance in inculcating a greater love for music as well as the languages in the schools, while eminent teachers of the voice and of the piano are using the talking machine in their studios to enable the pupils to learn how the great artists interpret their numbers either vocally or instrumentally.

On every side the talking machine is receiving recognition. It has attained a place in public estimation that must be surprising to those who comparatively only a few years back characterized it as a toy.

The talking machine is really destined for greater and better things. It will continue to amuse as well as instruct in the home

and in the school, and be the means of disseminating a larger measure of musical appreciation and culture throughout America. As a factor in this connection no one to-day can overlook its mission and its success.

IT is quite evident that there can be no let-up in the fight against the proposed patent reform legislation which is now before Congress. It was thought that the vigorous campaign inaugurated by the talking machine men and other interests in opposition to this patent bill had successfully removed it from any prospects of passage this year.

But in the waning days of the present session a bold attempt has been made to bring patent legislation to the front through the introduction by Congressman Oldfield of a substitute for his previous patent reform bill, a complete résumé of which appears in another part of this issue.

The new bill embodies all the features of the old measure that aroused the opposition of the leading men in the talking machine and music trade industries—legislation which again imperils the whole principle of price maintenance, although there are some slight qualifications in regard to contracts which may lull the reader of the bill into the belief that it is not as drastic as the old one.

The new bill comes before the legislature with a certain prestige, having been recommended by the patent committee of the House of Representatives. It is much more brief than the old one, and concentrates in a few clauses the very ones, it appears, which must concern the business interests having to do with the manufacture and sale of patented articles.

It is clearly the duty of the trade to become fully awake to the situation which has now materialized, and the fight against this new patent reform bill should receive a fresh impetus.

Manufacturers and dealers alike must carry on an active campaign to the end that representatives in Congress and the Senate are bombarded with commands to oppose to the end this legislation, which, if passed, would nullify the rights of the manufacturer of a patented article to restrict the selling price of such goods.

It would bring about a chaotic condition of things in the retail field. The cut price dealer, or department store, for instance, after buying these goods would have a legal right to put the price at any figure chosen, demoralizing the market and making a football of the manufacturer who sought to protect his own rights and those of the merchant who believes in maintaining prices.

WITH a great many dealers in this industry the sale of a talking machine is completed as soon as the instrument has been paid for, and the matter apparently holds no further interest so far as they are concerned. With such a dealer the instalment buyer receive the greatest consideration, for he must be kept satisfied and contented until the last payment is made, and through the collection department the dealer keeps in touch with him for a year or more.

There are dealers, however, and they are the dealers who can see their business growing year by year, who make it a point to keep in close touch with the customer as long as possible, and long after there is any possibility of financial benefit from the connection, on the theory first that the friendship of a satisfied customer is an advertisement, the value of which in future business cannot be computed on a cash basis, and secondly, there is the prospect of a continuous sale of records.

Every buyer of a talking machine should be a perpetual customer, provided he gets the proper treatment. The manager of the store should keep him acquainted with developments in the record field, send him all the new lists, invite him to a recital, or send a selected number of records to his home by one of the salesmen for his hearing and selection. When a dealer looks after these details he is best conserving his interests.

RECENTLY a large piano house in the West took advantage of the dull summer season to send out several automobiles manned by salesmen, tuners and repairmen, who called upon a large number of people who purchased pianos from this house and put the instruments in first-class condition. They did not confine their work to pianos, but as this concern handled talking machines they also made inquiries about their condition, whether the machine was allowed to get into disuse, whether it needed repairs,

whether the owners kept in touch with the latest records, and other pertinent questions.

By means of this trip business was stimulated immeasurably. A great many new customers were secured and people who had lost interest in the talking machine became enthusiastic and a tremendous lot of good resulted from this stroke of enterprise.

There is certainly a lesson in this experience for talking machine men everywhere. If it means anything it means that it pays to keep in touch with purchasers of talking machines no matter where they are located. Do not allow them to get lukewarm in their appreciation of the talking machine. Find out why they do not buy records. Have a man call and supervise the use of the machine to the end that the best results are secured—in other words, manifest an interest in the customer, and the customer will manifest an interest in you.

DIFFICULT problems that occur from time to time in business are being solved daily by those who have the courage to face them and the intelligence to seek advice and counsel from those qualified to speak.

There are many men of recognized ability whose business careers have been spoiled because of spasmodic efforts. They seem

to do things by sudden impulse, instead of progressing orderly and quietly. One class of men seem at the moment quick and more powerful in propulsive force, which soon expends itself in the rush to get results quickly. The other class is slow, deliberate, step by step in advancing and generally wins out. It is the old story of the race of the hare and the tortoise, with the victory always in favor of the latter. "Patience and perseverance made a wig for his reverence," says an old Irish proverb, and these two qualities, added to systematic work and close study, invariably bring their own reward.

Some captains of industry are gifted with the faculty of selecting the right kind of men for the right place, a rare and valuable asset for business men. The market for ordinary help, both for office and workshop, is almost always overstocked, but the men who have the ability to successfully select, manage and supervise others, are scarce, but vitally needed in developing enterprises. When discovered and given fair opportunity under attractive conditions, they make good, and work out the problem of the largest possible output at the least possible cost. They are thinkers, besides being doers. No matter what their occupation, they accomplish what is desired, and displace the plodders who do little thinking and planning.

PHOTOGRAPHS SOUND WAVES.

Dr. D. C. Miller, of Cleveland, Shows His Latest Invention to the American Society of Mechanical Engineers—How the Records of the Various Instruments Differ Demonstrated by Means of Photographs—A Topic of Interest to Acousticians.

At the convention of the American Society of Mechanical Engineers in Cleveland a few weeks ago Dr. Dayton C. Miller, of the Case School of Applied Science, of Cleveland, made a public demonstration before a large audience of his new invention, the phonodeik, which photographs sound waves and by an ingenious system of enlargement makes them visible.

Dr. Miller's work has long attracted attention in the music trade, and recently he was visited in his laboratory by President Harry B. Tremaine and Secretary Edwin S. Votey, of the Aeolian Co.

Violin, Flute and Other Tones.

With a horn, a sensitive diaphragm, a small bit of mirror, a flash of light and magnifying lenses, Dr. Miller gives the picture of the tone of a violin, a clarinet, a flute, a trombone, a piano and, best of all, of the human voice in every possible variation of pitch, volume and color tint.

You sing before the horn or long cone of metal, which gathers the sound, and you look over its edge at the dark screen some feet in front of your eyes. Wavy lines begin to appear—several of them—some in slight undulating curves, some in sharp zig-zags, which increase in height as the sound is swelled to larger volume, and in frequency of minute repetition, as the zig-zags record the higher pitch.

When Dr. Miller says that the sound picture of the voice one sees is two thousand times its actual size, one's ideas of the sound waves in an auditorium have to be entirely readjusted from the thought of vague floating things occupying an appreciable space, to a sense of fineness and minuteness that make it easy to comprehend why the presence of large hats in audiences not only mars the character of the sound waves but obstructs their passage to the ears of the listener.

The Sensitive Diaphragm.

The delicacy of the eardrum is also perhaps better understood when Dr. Miller tells you that the sensitive diaphragm that he uses is made of glass one-two-thousandth of an inch in thickness. One seems to deal in four figures in discussing the entire subject. Dr. Miller has made far more important experiments than any other scientist in this field, says a writer in Musical America, and his particular achievement is the analysis of tone-quality. The music world calls it by various names, timbre, tone color, klang-farbe, etc., but in scientific English it is simply "quality."

What is the secret of the tone of the oboe? What makes a melancholy note in music? Why is the tone of the violin so clear, so resonant? And

why is the clarinet the most capable of all the wood-winds? We may say it is because of the "partials" and the "over-tones." The violin has been said by Helmholtz to have eighteen of these component tones. Dr. Miller tells us, however, that in his experiments with the wood-wind instruments he has found twenty-six separate simple tones in the one resultant tone which we hear from the clarinet. Moreover, he shows them to us in a photograph.

Dr. Miller's Future Aim Is Scale Improvement.

In order to analyze the sound waves Dr. Miller found no adequate instrument for tracing the curve which corresponds to each peculiar motion of the particles transmitting the sound and his instruments, of his own invention, consists of a combination of little watch-like discs, each of which records measurements, while a device like a pencil draws the wavy line before your eyes. Agreements of divergencies in the curves signify accentuation of certain qualities in the tone, characteristic of the instrument played. Another machine recomposes the curving lines—the simple or partial tones—and recreates the picture of the voice of the flute, the bassoon, the human voice or even of the chorus or orchestra. The sound of an orchestra is one voice, though we rarely think of it as such,

and each of its component parts records its line in the analysis of its sounds. Its picture is a rough, "fuzzy" thing compared with the record of a boy's soprano voice, one of the simplest and least complicated of sounds. An animal's voice, a screech, or a scream, has a wilderness of zig-zags.

Of course, one of the dreams for the music of the future is that there shall, somehow, at some time, be a perfecting of our common diatonic scale. Such experiments as Dr. Miller's, which can definitely divide each note of it into its component parts, mean that there is already more than the "ghost of a chance" that this may be accomplished.

CONTINUOUS ADVERTISING PAYS.

Advertising is a business proposition; it is not luck. It requires time to show results. Two or three advertisements will not make you rich, or cause a large increase in your sales, but a series will surely show results. If you are willing to build carefully and within your means, using space regularly and persistently, there will be no question about your success. Business is not built in a day or a week; it requires time, constant and unremitting efforts before the real effects or the real results of advertising can be felt and appreciated.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

ROLIVER DITSON CO., Boston, Mass.

We have the merchandise, the merchandising policy and the discounts. Which is a triple combination never yet beaten in any line of business.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

TRADE IN INDIANAPOLIS.

Conditions Show Steady Improvement and All Leading Houses Make Encouraging Reports.

(Special to The Talking Machine World.)

Indianapolis, Ind., Aug. 10.

Miss Lazarus, manager of the Victor talking machine department of the Aeolian branch here, made a record last month in the sales of Victrolas Nos. XVI. and IV. It was necessary for her to send in rush orders for these makes. A number of prominent people here bought Victrolas last month and had them shipped to the lakes. The out-of-town business of the Victor department was so good in July that Miss Lazarus said: "If it keeps up like this we won't need any city business at all. Of course, we want the city business along with it."

Harry B. Levy, the St. Louis manager of the Victor wholesale department of the Aeolian Co., stopped off at Indianapolis on his return from the talking machine jobbers' convention.

The local branch of the Columbia Phonograph Co., at 27 North Pennsylvania street, is giving a window demonstration of the dictaphone. The display attracts wide attention from the passers-by. C. P. Herdman, of the local store, dictates and the transcribing is done by a stenographer.

The dictaphone has come to stay with Indianapolis and Indiana business men, according to Thomas Devine, manager of the Columbia branch here. The Henderson Accelerator, a paper published by the Henderson Motor Car Co., of Indianapolis, praises the instrument. Fred E. Wilson, of the sales department, said: "I don't know what we would have done without the Dictaphone. It doesn't seem that we could have caught up had it not been for the wonderful little talking machine. As a result of the time-saving qualities of the machines and the expert operators, we are almost caught up with our mail in the sales department."

Walter E. Kipp, president and manager of the Kipp-Link Phonograph Co., wholesale and retail distributors of the Edison Phonograph, has just returned from a visit to the Edison factories in New Jersey, and is enthusiastic over the prospects of the new Edison disc machine. Mr. Kipp spent about an hour and a half with Mr. Edison and when he left the famous inventor he had an autograph photograph of his host which he prizes highly.

The Kipp-Link Co. is making preparations to handle the new Edison machine and is enlarging its quarters. Mr. Kipp believes the new machine is a wonder. The company will have a special day on which all the dealers throughout the State will be invited to come to Indianapolis and inspect the new machine, as soon as it is ready for the market. Mr. Kipp says the new disc records play longer and without any scratching. "It is the best ever produced in the way of disc machines," said he.

The talking machine department of the Wulschner-Stewart Music Co., which handles the Victor machines, reports good business conditions in the last few months.

NEW COLUMBIA CATALOG.

Quarterly Edition, Just Issued, Is a Most Complete Publication—Admirably and Conveniently Arranged—Must Excite Praise and Admiration—Shows Skill in Book Making.

In the quarterly issue of the Columbia double-disc record catalog, which is now being mailed to the trade, the Columbia Phonograph Co., General, New York, has outstripped any previous attempt, so far as the publication of a complete, comprehensive book is concerned. It contains as wonder-

compared by a small half-tone cut of the artist, and the sizes and prices appear under the headings.

In this issue of the Catalog of Columbia double-disc records there are listed about fifteen new and famous artists, with a musical offering of 125 new records, or 250 selections. This in itself is a feature worthy of special mention.

The catalog is 72 pages larger than the last issue, having a total of 272 pages. On the last few pages of the catalog are illustrated and described the complete line of Columbia machines, which materially assists the dealers in exchanging old Columbia machines for new and higher priced ones.

The accompanying illustration shows the cover page. The design is unique and a fitting illustration of the Columbia Co.'s slogan: "All the Music of All the World."

MOCKING BIRD AND NIGHTINGALE.

Mr. James E. Chase, of the Chase Furniture Manufacturing Co., of Dallas, Tex., a customer of the Dallas Talking Machine Co., purchased the record No. 64,164, "Song of a Nightingale," and after playing it over twice at home was surprised at an apparently very plain echo from outside the house, and upon investigation learned that a mocking bird which had its nest in a nearby tree was imitating the record, and since that time has been constantly around the house calling to the nightingale, and when the record is started the mocking bird comes to the window, perches on the vines and calls back to the nightingale and seems very reluctant to leave after the song is finished. It is evident the mocking bird believes there is a caged bird inside the house.

"TALKER" DEALERS SHOULD MAKE NOTE.

To the question as to whether it is a good business proposition to keep the window lights burning until 10 p. m., an Eastern dealer informs the Hardware Dealers' Magazine that the expense is small. If a dealer has anything in his show windows it is advisable to keep the window lights on until 10 and perhaps 12 o'clock. Especially is this true in the summer time when the people are on the streets and they are looking for something to attract their attention. In a town where the stores are all closed and dark in the evening it is a pretty dead town. It is one of the best advertisements you can have. Keep your windows lighted in the evening.

A traveling salesman died suddenly in Kalamazoo, and his relatives telegraphed the florist to make a wreath, ordering that the ribbon should be extra wide with the inscription, "Rest in Peace" on both sides, and if there was room, "We Shall Meet in Heaven." The florist was out of town and his new assistant handled the job. It was a startling floral piece which turned up at the funeral. The ribbon was extra wide and bore the inscription, "Rest in Peace on Both Sides, and If There is Room We Shall Meet in Heaven."

Cover of New Columbia Catalog.

fully balanced a list of musical offerings as could possibly be compiled.

The arrangement of the catalog is exceedingly simple, making it an easy matter for one to turn immediately to the department desired and find the selection required. The alphabetical list covers the pages from 5 to 96. Following that and running through from page 97 to page 144, are the grand opera and concert selections. Page 145 contains the complete classified list. The index of records begins on page 171, and is arranged under the names of the artists. The sizes and prices of all records in the alphabetical list are plainly indicated opposite the titles of the selections. The grand opera and concert selections are arranged under the names of the artists, ac-

THE RIGHTS OF RECORD-MAKING TALENT.

A Well-Considered Criticism of the Attempt Made by a New York Theatrical Firm to Place a New Construction on Its Contracts Covering Well-Known Singers Who Make Talking Machine Records—New Issue May Be Fought Out In The Courts—Interesting Review by Waldon Fawcett, Especially for The Talking Machine World.

A movement fraught with rather formidable possibilities for the entire world of mechanical music and sound reproduction is found in the attempt of a well-known New York theatrical firm to place a new construction on its contracts covering the services of well-known vocalists. The contracts

Alice Nielsen, the Boston Prima Donna.

themselves, which are the basis of this radical innovation, are not, it will be understood, different in any essential from the form in general use for years past as compacts between operatic and theatrical managers on the one hand and the singing and dramatic artists on the other. Indeed, some of the contracts which are being utilized in this attempt to establish a precedent have been in existence for some time past.

The present turn of affairs is nothing more nor less than a startling if not high-handed new interpretation of existing agreements. The contracts of

Sammarco, the Famous Baritone.

the firm in question with their artists contain a stipulation, as do almost all such contracts, reserving to the managers the "exclusive services" of the artists engaged. The phrase "exclusive services" has always heretofore been interpreted as meaning the sole services of the artists in giving public per-

formances of any kind or private appearances for profit—although in some instances there has been no question of the right of an artist to appear at private residences at will (either for fees or gratuitously) so long as such engagements did not interfere with his or her public appearances or adversely affect box office receipts.

The Question of "Exclusive Services."

Now come the pioneers of a new movement and declare that the heretofore undefined, and seemingly elastic, term "exclusive services" covers the making of talking machine and phonograph records and they have notified their artists—including a number who are popular record makers—that they will not be allowed to make records in future and that any attempt to do so will be regarded as a violation of contract—with dire intimations of suits for damages, etc.

The outcome of this attempt to restrict the rights of record-making talent, and incidentally to cripple important branches of the music trades, will be watched with keen interest. Presumably the new issue will be fought out in the courts and the case probably carried to the highest tribunal in the land, so that some time may elapse ere the legal

Mesha Elman, Violinist, and Percy Kahn, His Pianist, Whose Records Are Among the Most Popular Issued.

status of the existing contracts is conclusively determined.

However, whatever the outcome of this prospective legal battle, and regardless also of whether or not other managerial firms attempt to follow the example of the New York house that has made the first move in this matter, there is no doubt but that this raising of the question will cause all artists who are in the habit of making talking machine or other records to exercise greater care as to the exact stipulations of contracts which they may in future enter into for public appearances. Singing and playing by proxy to country-wide audiences, millions strong, through the medium of the sound-reproducing instruments is much too profitable to the artists not only in financial returns, but also in fame, to be lightly abandoned.

It is predicted that if managers are found to have the legal right to thus expand the scope of the term "exclusive services" the time is not far distant when "stars" who have sufficient prestige to enable them to make a declaration of independ-

Victor Herbert Chatting to Mme. Cisneros.

ence will be found insisting upon the incorporation in their contracts of an explicit stipulation to the effect that they are permitted to make talking machine records. It goes without saying that the artists will be supported in such a stand not only by the manufacturers of phonographs and talking machines, but by almost all branches of the music trades, for this new proposal, if it were generally adopted, might extend to surprising lengths.

How the Prohibition May Be Defined.

For instance, the prohibition might not be confined merely to vocalists enrolled in the prominent operatic companies who make records as an incidental activity. It is quite conceivable that if there seemed to be sufficient incentive the managers of leading pianists might not only seek to prevent their stars from making talking machine records, but might even attempt to monopolize their services to the extent of denying them the privilege of producing autograph player-piano rolls, etc. Or—and this may be the crux of the whole situation—the artists under "exclusive contract" would be permitted to contribute their art through the medium of rolls and records only in case the manufacturers were willing to make liberal payment to the controlling managers as well as to the artists themselves.

There has been no end of speculation ever since the attempt at a new policy was announced, as to the animus of the action. Very few persons, of

David Bispham, American Baritone.

John Philip Sousa and His Favorite Horse.

course, take seriously the contention of the managers that they are prompted by fear lest the voices of their artists will be permanently injured by singing for record-making purposes. A much more generally accepted view of the situation is that the managers are eager to "get in" on the profits which are supposed to have accrued from the enormous growth in popularity of mechanical musical instruments during recent years. There has, indeed, been growing evidence of a spirit of unrest in managerial circles for some time past. Other managers had protested against their artists singing for records before the firm now in the limelight followed protests by threats of legal action. And several operatic managers have attempted (unsuccessfully thus far) to cut down the salaries paid

(Continued on page 14.)

THE RIGHTS OF RECORD-MAKING TALENT. (Continued from page 13.)

to stars of the opera on the ground that such celebrities are deriving an enormous revenue—unknown in days gone by—from the talking machine and phonograph companies.

The Theatrical Man's Viewpoint.

The state of mind of the theatrical and musical comedy managers is the more readily understandable in the light of business conditions in the amusement field during the past couple of seasons. No person contends, I presume, that, generally speaking, box office receipts have been satisfactory. And what applies to the theatrical field applies in lesser degree to the concert field, at least in certain sections of the country. Managers feeling the force of the revolt against the two dollar scale of theater prices have looked about for explanations. They have found them primarily in the vogue of motion pictures, but—with less tangible evidence to go on—they are equally suspicious that their receipts have been cut into heavily by the home entertainers—the player-piano and the talking machine. Hence a determination to handicap these competitors, if possible, or else force the accounting of a share of the profits.

Without venturing an opinion on the obviously mooted question of whether these "universal musical instruments" have actually cut into box office receipts, it is the opinion of many shrewd observers that certain managers are taking a short-sighted view of the situation. By and large, these home entertainers should in the long run prove a help rather than a hinderance in the amusement field. The situation seems to be, in the matter of misconception, very similar to that which existed in the transportation world when the interurban trolley lines first began to be constructed on an extensive scale. At the outset the companies operating steam railroads were bitterly opposed to the new lines and fought them tooth and nail, fearing that the electric roads, with their lower passenger rates, would capture the lion's share of the business. But, as time went on the operators of the steam roads found that, far from stealing their business, the long-distance trolleys were creating new business and were actually acting as "feeders" of the steam roads.

Something of the same result, in effect, is to be expected in the higher branches of the amusement field. Indeed, it has already come to pass. Any person who has made any study of the matter realizes full well that the tremendous awakening of interest in opera throughout the United States during the past few years has been due primarily to the educational "missionary work" performed by the talking machines and player-pianos. Similarly the country-wide reflection through these mediums of the art of eminent vocalists and instrumentalists has created a desire on the part of the public to hear the makers of the reproductions that have charmed them and, in consequence, an opera-growing and concert-growing public is being recruited more rapidly than could be done by any other means. An illuminating illustration of the marvelous efficacy of this form of introduction to the public was afforded during the recent trans-continental tour of John McCormack, the Irish

tenor. Prior to the time that he began making his matchless series of talking machine records, McCormack was by no means the best known tenor or the most admired before the American public, but when he recently made a coast to coast tour, singing the same songs that are featured in his talking machine records, he won a verdict phenomenal both in point of enthusiasm and box office receipts.

Records as Publicity Promoters.

Similar evidence as to the value of records as the most potent of publicity promoters is afforded by the experience of David Bispham, the eminent baritone whose records are among the most perfect ever produced, and by that of Alice Neilsen, the American prima donna who has made records of appealing quality for all the principal companies. It is such disclosures as to where their real interests lie that have stiffened the determination of many eminent artists to stand firm on their rights to make records.

And there is yet another consideration that influences the artist. This is found in the circumstance that a satisfactory repertoire of rolls or records may, in effect, constitute a pension fund, the income of which means a life of comfort and mayhap of luxury long after a golden voice has lost its sweetness or a virtuoso's hand has lapsed in cunning. For all that the business is comparatively new there is ample evidence that popular demand for an artist's records by no means diminishes when that artist retires temporarily or permanently. It may be even stimulated by such retirement, and the object lesson of Madame Emma Eames enjoying an almost ideal existence in France, largely as a result of the generous royalties derived from the sale of her talking machine records, has not been lost on artists who have a thought for the proverbial "rainy day."

Taking the most pessimistic possible view and granting that short-sighted managers are willing to lose the invaluable publicity that records and rolls give their artists, and that furthermore the courts hold that they are within their rights in their new interpretation of "exclusive services," it is impossible to see how the music trades can be really seriously inconvenienced. As has been intimated, the great artists of international fame will certainly not consent to be bound by such restrictions. All the artists from Caruso to Harry Lauder, who stand at the head of their respective lines, may be expected to change management ere they would submit to such dictation. On the other hand, there are for the talking machine companies several important sources of supply that cannot possibly be affected.

There are Artists Still Left.

For one thing, there are the great musical organizations, such as Victor Herbert's Orchestra and Sousa's Band, whose managers would neither attempt nor desire to enforce any such mandate. And then, again, there are the great numbers of gifted church singers and independent concert artists who are really the mainstay of the sound-reproducing field. From this source of supply the record-making companies have developed a force of record-makers who specialize in this work and whose counterfeit renditions are, by reason of their technical or mechanical excellence, often preferred

to those of artists of greater fame, but who do not manifest such grasp of the possibilities of the reproductive process.

There are wise men in the trade who predict that if this "closed shop" sort of policy does obtain to a limited extent for a time it will ere long be abandoned entirely. By way of "horrible example" of the effect of shutting out the player-pianos and the talking machines they cite the case of the opera, "The Girl of the Golden West." This work has, of course, manifested certain drawing powers (due in some measure, no doubt, to the American inspiration of the work), but who will contend that it has fared as well at the hands of the public as it would if a shrewder policy had acquainted the whole American public with the music through the medium of mechanical musical instruments.

VALUE OF THE SHOW WINDOW.

**A Recent Record Display by R. Wurlitzer Co.
Shows Its Advertising Worth.**

(Special to The Talking Machine World.)

Cincinnati, O., Aug. 8, 1912.

A typical instance of the value of show window trimming and using the same as a medium of advertising is shown in the case of the R. Wurlitzer Co., when it recently gave some attention to the

A Clever Wurlitzer Window.

record, "Oh! You Beautiful Doll." It sold over 1,000 records in less than a week. The company attributes this tremendous gain in business solely to the window display. This was staged under the direction of H. C. Shillito, who does all this kind of work for the Wurlitzer Co. Shillito secured the largest doll in the city and placed it in a swing, facing a Victrola. Scattered about the show case were numerous records. The background was of the summer-like type and naturally the entire color scheme was extremely attractive. Just now the company is moving an extra accumulation of the records, "Moonlight, the Rose and You." The settings are appropriate for the title and the success will be almost as great as that of "Oh! You Beautiful Doll." Shillito, as a member of the National Association of Window Trimmers of America, was in Chicago on August 1 to attend the annual meeting of that organization.

Above All Mr. Dealer

NO COMPLAINT OF CLEVELAND TRADE

With Normal Summer Conditions Prevailing—Better Class Machines in Good Demand with Cheaper Models Increasing in Favor—Only Union Instruments in Labor Parade—Phonograph to Lengthen Life—Opening of W. H. Buescher & Sons Co.'s New Victor Store Interests Trade—U-S Phonograph Co. Factory Busy—G. M. Nesbitt Home from Canadian Trip—What the Various Jobbers and Dealers Have to Report About Prospects.

(Special to The Talking Machine World.)

Cleveland, O., Aug. 9, 1912.

July closed a very satisfactory month in the talking machine trade. The dealers generally more than averaged a normal midsummer volume of business, running largely to the better grade, highest-priced machines and records. Sales of the cheaper types, however, are increasing with the improvement in business in the various industrial lines, which affords the workman, as well as the boss, an opportunity and the means to purchase.

The Cleveland Federation of Labor has promulgated an edict that no band instrument will be permitted in the Labor Day parade unless it bears the union label. It doesn't matter if it has been handed down from the forefather, is prized for its memories, its melody and its magic touch—it has simply got to have that union label, notwithstanding it was made before unions were invented.

The Cleveland News recently had a book lovers' contest, and among other prizes offered a \$200 talking machine. The lady who won it acknowledges its receipt and writes: "It is certainly a beauty, and I am, with my friends, passing many enjoyable moments in our home with this beautiful machine. Had I known what pleasure it affords I would have possessed one years ago."

Dr. G. H. Michel, of this city, has made discoveries that not only preserve the body but cause it to retain its natural color. He asserts that there

is now no reason why bodies cannot be preserved indefinitely to be viewed by descendants. For a time science marveled at the perfection of photography and the phonograph—inventions which permanently preserve the image of the body and the sound of the voice. Now Dr. Michel literally proposes to preserve persons themselves in a perfectly lifelike state, so far as appearance goes. "It would be interesting, to say the least," said the doctor, "if we could now see President Lincoln in a lifelike pose, with the full bloom of color on his cheeks, his eyes not those of the dead, while through a phonograph we heard his voice giving the famous Gettysburg address. That is too late now, but in a hundred years our descendants might view Theodore Roosevelt in this way." Experiments conducted for a period of a year show the perfection of Dr. Michel's preservation.

J. J. Bennett, Canadian representative of the U-S Phonograph Co., is on his way to the western part of the Dominion.

J. C. Button, assistant of Frank Dorian, of the Columbia Co., on his way from Canada to New York, spent a day at the company's store here. He reported business was good all along the line.

R. R. Gorham, formerly with the Victor Co. and lately with the Eclipse Musical Co., is now located at Saskatoon, Saskatchewan, Canada, and is doing well.

The chief feature of interest in the local trade this month was the opening of the new quarters of the exclusive Victor store of the W. H. Buescher & Sons Co. on Euclid avenue. It is considered the largest and most elaborately fitted and furnished store of the kind in this country, which was the consensus of opinion of a number of jobbers and dealers from all parts of the country, who stopped off on their way to and from the convention. The store has a frontage of 30 feet on the avenue and extends back 180 feet to an alley, where there is a large covered area, affording admirable facilities for shipping and receiving stock in large quantities. The stock room, 95 x 120 feet, is on the third floor, and with the large basement

affords room to carry a much larger stock than ever before. The entire wholesale and retail business is concentrated in the one location. The interior is finished in driftwood oak, the walls and ceiling beautifully frescoed, and lighted by the indirect system, and the floors are covered with Oriental rugs throughout. There are three large demonstrating rooms, with a separate record room conveniently adjacent, amply sufficient to carry the entire Victor list of records. Mr. Roberts stated business was good, and had opened with increased volume in the new quarters, and that the company was in better shape to do business than heretofore, especially in the wholesale department.

Conditions at the factory of the U-S Phonograph Co. are of the most satisfactory character. "We are running almost up to full capacity on both machines and records," said Geo. M. Nesbitt, "and sales of our products continue with the most gratifying increase. We are, in fact, swamped with orders from all parts of the country for the Rex and Royal types—the \$25 and \$50 concealed horn machines. All of our branches are doing remarkably good business."

The American Multinola Co. claims to have now reached a point when matter of interest in talking machine circles will soon be made public.

Under the energetic management of P. J. Towell, brother of the president of the Eclipse Musical Co., a growing, large business is developing in the wholesale department. Daily increase of shipments indicates constant expansion of trade, and added customers to the company's lengthening list. "Business is very good," said Mr. Towell. "It is gradually improving, and gives promise of an unusually excellent fall and winter volume of trade. The demand, you might say, covers the entire line of Victor goods, but there is a more especial present demand for Victor IV and Victrola IX." In the retail department an excellent demand is reported for the better types of machines, as also good sales of the cheaper ones. The record trade was said to be large and included a large proportion of the higher-priced ones.

PICTURE-DISC COMPANY

Los Angeles, Cal.

G. M. Nisbett, sales manager of the U-S Phonograph Co., has just returned from a trip to Toronto and other towns in Canada. He says business is booming up there and the outlook for fall and winter very encouraging, as the crop conditions are the best and largest ever known throughout the Canadian Northwest. The August list of U-S records affords a wide field to select from, by well-known composers, authors and musicians.

O. E. Kellogg, of the H. E. McMillin & Son Co., stated that the talking machine department receipts during the past month were more than double what they were a year ago. "We are making a special effort in pushing the foreign record trade," he said. "One of our employees, a fine musician, can converse in twelve different languages, and we are prepared to greet every customer in his native tongue. Present business in both the Victor and Edison lines is good, and the prospects are very promising. J. J. Anderson, Mr. Kellogg's able assistant, has just returned from his vacation, which he spent on a fishing expedition up the lakes.

Miss Ethel M. Volk, manager of the talking machine department of the May Co., is a devotee of the business. She insists that no issue of The Talking Machine World is complete unless mention is made of the May Co. and its prosperous trade. "Business in both machines and records," she said, "is exceptionally good, considering the season. It is much ahead of last year in both the Victor and Edison lines. Demand is specialized more particularly for Victor III, IV and VI, and we are having a fine record trade. I look for a good fall trade."

The Columbia store has been greatly improved. New silk and velvet window curtains have been hung, a Persian carpet laid, and artists have re-decorated the walls and ceiling. Speaking of trade, Mr. Madson said: "The Columbia business was very good last month throughout the Cleveland territory. Our July business showed a heavy increase over July of last year and June of this year. Conditions are very satisfactory." Clinton Routh, formerly manager of the player-piano department of the W. F. Frederick Piano Co., is now connected with the Columbia store as assistant manager.

The situation at the store of the B. Dreher's Sons Co. is one of satisfaction, not only with the handsome new quarters, but the pleasure universally expressed by customers at the magnificence of the new music emporium and the courteous, square deal accorded them. F. B. Guyon, manager of the talking machine department, said: "While we are not working overtime during this hot spell there is something doing every day. We are having inquiries daily regarding Victrolas and Victor machines, and there is promise of a good fall business. Increasing interest in the record trade is manifest by people who already own machines, and indications are that there will be a very marked increase this fall over last year's big business."

The W. F. Frederick Piano Co. enjoyed a very satisfactory business during the past month. "Every day throughout the usually expected dull season," said Norman H. Cook, of the talking machine department, "we steadily added to our list of pleased customers, and through their boosts and our earnest efforts with the best line manufactured—the Victor—see no reason for not enjoying a bright future in the talking machine department of our Cleveland store. Our Canton store, under the direct charge of W. H. Watkins, is more than fulfilling our most sanguine hopes."

The Bailey Co. is having its usual good run of business. "Trade is good," said Mr. Friedlander, "and since the first of the month has been improving. We are making sales of machines daily in goodly numbers. The demand is more especially for Victor III and IV, and Victrolas IX and XI; at the same time we are selling a good many of the cheaper machines. The record trade is very good."

The Victor machine and record parlors of the Caldwell Piano Co. are popular resorts and are usually thronged with customers. The company carries a full line of Victor goods.

Business is reported quite as good as it was last

month at the Edison store of Louis Lucker. Mr. Paterson said trade was keeping up remarkably good and that he and the customers were anxiously waiting the advent of the new Edison disc machine.

Charles I. Davis, music publisher, jobber and dealer, reports the talking machine business exceptionally encouraging, which he accredits to his prominent location on Euclid avenue, his attractive window displays and beautiful Victrola parlors. His Pittsburgh branch is showing an increase right along, he says, and it is his intention to remodel his building in Buffalo and devote an entire floor to the talking machine department, and as it is in a very prominent location, anticipates a big business there.

CHANGES IN BALTIMORE.

Thomas Gordon Buys Out Half Interest of G. Fred Kranz in the Kranz-Smith Talking Machine Co.—Name of Company to Be Changed—General Business for July Reported as Being Very Good—News of the Vacationists—Other Trade Happenings.

(Special to The Talking Machine World.)

Baltimore, Md., Aug. 10, 1912.

Thomas Gordon has bought out the half interest of G. Fred Kranz in the Kranz-Smith Talking Machine Co. and will now conduct the business of that company by himself under the firm name of the Gordon Talking Machine Co. Mr. Gordon will continue to occupy the second floor of the Kranz-Smith building, but will make a number of up to date changes, including a new record and machine room and new furniture. Mr. Gordon has been manager for the Kranz-Smith Talking Machine Co. for the past two years and is thoroughly familiar with the trade and announces that he expects big results during the coming fall and winter, judging by the excellent prospects in hand. He will run a complete line of Columbia and Victor machines from the highest to the lowest price, and will also have a full line of the various styles of records.

William Knabe & Co. announce through Manager E. Fred Colber that the July business in Columbias, especially during the last week, showed up excellently and was far better than the same month of last year. To finish up the month the firm closed out the last week three high priced Columbia machines, the line the firm handles. Mr. Colber speaks very encouragingly of the prospects for the fall and winter.

The Hub Piano Co., which handles the Columbia line, reports a good July business, with the pros-

pects for the fall and winter being better than ever.

Similar reports are made by Manager Rosenstein, of the Rosenstein Piano Co., regarding the Columbia line, which this firm also handles.

Manager W. C. Roberts, of the E. S. Droop & Sons Co., speaks well of the July trade with the Victors and Edisons and declares the prospects indicate that the fall of 1912 will be one of the biggest and most successful periods for the talking machine industry in this section, as well as Washington. Mr. Roberts also manages the Washington store of the company. The record business has also shown a nice increase, with prospects for the demands increasing right along.

After a pleasant trip by sea to Savannah and Jacksonville, Manager S. A. Dennison, of the local branch of the Columbia Phonograph Co., General, is back on the job. Mr. Dennison was away for eight days and he said that he had a most enjoyable time during every moment of his trip. Mr. Dennison declared that what pleases him more is the fact that business for July has kept up in excellent shape and he has every reason to believe that the fall and winter months will show a big improvement even over the fine record made for the same periods of last year.

In order to equip himself physically for an arduous fall and winter battle, Manager W. C. Roberts is spending two weeks by the seashore and up around New York way. He left Friday for Atlantic City, where he will remain for the rest of the week, after which he will visit relatives who live along the Hudson River.

Manager M. Silverstein, of Cohen & Hughes, Victor and Edison dealers, is away on a business trip. It was announced at the store that the firm has enjoyed a very good trade for this season of the year.

H. R. Eisenbrandt Sons are having good warm weather results with the Victor line of machines and records. Manager Strohr has been a very busy man all summer, especially with the sale of popular records, and he is now preparing to take a well-deserved recuperation. Mr. Strohr has made no especial plans for his vacation, but will enjoy water trips to Washington, Philadelphia and other popular nearby towns.

TO HANDLE VICTOR LINE.

The Hallet & Davis Piano Co. has completed arrangements for the installation of a complete line of Victor talking machines and records in the Harlem store of the company on 125th street, New York.

ket only a short time, but it has proven most popular and is growing more so as the public becomes better acquainted with its meritorious points.

HERE'S A TRUE PROGRESSIVE.

Give me the man who can hold on when others let go; who pushes ahead when others turn back; who stiffens up when others weaken; who advances when others retreat; who knows no such word as "can't" or "give up," and I will show you a man who will win in the end, no matter what obstacles confront him.

THE COMMISSION FIEND.

An Important Letter Sent Out to the Trade on the Commission Evil Which Is Worthy of the Closest Consideration.

The following timely and important letter has been sent out by the Victor Talking Machine Co. to Victor dealers under date of July 31:

"From time to time our attention has been called to instances where our dealers are tempted and duped by what is known in the music trades as the 'commission fiend.'

"Fiend" Described.

"Specifically, this microbe may be described as one which lives upon commissions wrung from dealers through the claim that certain sales by the dealer are consummated primarily through the efforts or influence of the 'commission fiend.' Claiming this, he demands a remuneration in the form of a commission.

A "Fiend" Disconcerted.

"We have in mind an incident which came to our notice in the automobile trade a few weeks ago. The manager of an auto firm was approached by a party who claimed to know of a 'live prospect' for the Autoplex car, and agreed to bring him around to the garage the next day providing, of course, a sufficient number of the 'almighty dollars' was forthcoming. The commission seeker turned pale and red in turn when the manager replied that he could not see the prospective customer the next day, for he was going to New York City with Mr. X for the purpose of bringing over the new Autoplex car sold him that morning. (Mr. X was the 'live prospect' referred to by Mr. Commission Man).

"So it goes.

"The chances all are that by legitimate advertising you will pick up your 'live prospects' without the aid of commission men.

Our Contract Provision.

"Knowing the evils of the system and the blood-sucking propensities of the parasites under discussion, we incorporated a paragraph in the Victor contract which, if followed, will successfully bar the undesirables from our line of business. This paragraph reads as follows:

"No commissions on sales of Victor goods must be granted in any form, except in lieu of a regular salary to salesmen whose services are employed regularly and exclusively."

"It will be noted, however, that we have provided for the legitimate giving of commissions to regular employees in lieu of a regular salary, or as an incentive to promote interest in sales.

Honest Clerks Necessary.

"This plan of giving a bonus for extra effort and results has been advocated by us, and we know it to be a potent influence in increasing sales, but even this system is fraught with pitfalls, of dire consequence, and unless thoroughly honest and reliable clerks are employed the Victor dealer will find price cutting existing in his organization unbeknown to himself.

Usual Methods Employed.

"The system as usually worked by the dishonest

clerk receiving a commission is this: A few extra records are given the customer with other goods which are properly paid for, and although a regular entry appears on the firm's books for all goods leaving the store, the clerk goes down into his own pockets and makes up the difference between the amount received from the customer and the proper retail price. If the sale is large enough and the commission worth while, he can well afford to do this.

A Warning.

"Let us right here warn all proprietors paying clerks by this method that dealers must be held responsible for not only their own acts, but also the acts of their agents, i. e., their sales people.

Bond the Unreliable.

"If you cannot trust your clerks, then your only alternative is to bond them, thus protecting yourself from their illegitimate acts in connection with the sale of one price goods. As long as we do not govern the matter of hiring your employees we cannot be expected to suffer unrequited for their misdemeanors.

Guaranteed Profits Endangered.

"Price cutting to us means a chopping at the very tap root of our existence. Our successful business has been built, to a great extent, upon the foundation of reasonable prices to the public and guaranteed profits to our dealers. These profits can only be secured by the maintenance of corps of reliable sales people by our dealers.

"Reiterating: It is 'up to you' to purge your business and our business of all suspicious or questionable vendors of Victor products.

Your Responsibility.

"Finally and sincerely: If price-cutting is exposed in your establishment—although such is unknown and unsanctioned by you—we must hold you absolutely accountable for the same. It therefore behooves each and every dealer to look well into the personnel of his organization, with the object in view of weeding out those who may cause trouble, or, at least, bond them as a guarantee of their good faith.

"Above all, warn all of your employees that they have in their hands the very permanency of your Victor representation. Yours very truly,

"Victor Talking Machine Co."

OFF ON VACATION.

George P. Metzger, advertising manager Columbia Phonograph Co., General, left Saturday, August 10, for two weeks' motor trip through the hills of New England.

Marian Dorian, treasurer of the Columbia Phonograph Co., General, returned to his desk this week after a sojourn at Atlantic City. His sturdy appearance would indicate that the rest produced good results.

An American consul in Germany reports to the Bureau of Manufactures in Washington that there appears to be no market in his district for high grade American phonographs, but an important firm manufacturing and exporting musical instruments, with branch houses in Russia, intends to import high grade American machines into that country.

THREE NEW VICTROLAS WILL SOON BE READY.

New Styles Which Have Aroused So Much Enthusiasm Throughout the Trade and of Which Much Is Expected During the Fall and Winter, Illustrated Herewith for the First Time—Attractive Qualities of the Instruments and Their Respective Prices Prove Especially Interesting to the Retailers—Shipments to Begin August 15 and New Models to Be Placed on Sale on September 15—Dealers Advised to Prepare for Holiday Demands in Advance.

It is safe to say that the greatest enthusiasm displayed during the recent convention of the National Association of Talking Machine Jobbers at Atlantic City was on the occasion when, at the banquet, Louis F. Geissler, general manager of the Victor Talking Machine Co., announced the three new Victrolas which are to be placed on the

which are known as Victrola X, XI and XIV, respectively, and each of which is a complete upright instrument, are introduced by the company as offering the purchaser the best value for his money in the history of the Victor line, and those who are to sell them apparently coincide in the opinion. The new models retail at \$75, \$100 and \$150, and an

ducing qualities are fully up to the Victor standard, as has already been demonstrated.

Before this issue of The Talking Machine World reaches all its readers the Victor Co. expects to begin the shipment of the new Victrolas in response to the large volume of orders which began to pour in as soon as the new machines were announced. The new Victrolas will be placed on sale on September 15, and the leading distributors and dealers have already made arrangements for a sufficient stock to meet the demand which they feel will develop immediately upon the advertising and exhibition of the new models, and to enable them

Victrola XIV.—Open for Playing.

Victrola XI.—Open for Playing.

Victrola X.—Open for Playing.

market on September 15 this year. The first samples of the instruments themselves, when displayed during the dinner at Fort Side Inn the fol-

lowing day, called forth further praise from the Victor distributors, and the dealers, in their turn, were equally enthusiastic. The new Victrolas,

chief difference between the new styles and the other higher priced models lies in the interior arrangement of the cabinets and the sound repro-

duce their orders to the limit of caution and their faith in the future with a view of avoiding disappointment during the busy season,

The Talking Machine Trade in New England

LOOK FOR RECORD-BREAKING FALL.

F. H. Silliman, Manager of the Pardee-Ellenberger Co.'s Boston Store, Tells a Story of Progress and Good Cheer That Is Encouraging—Kinetoscope Possibilities.

(Special to The Talking Machine World.)

Boston, Mass., Aug. 7, 1912.

"Present indications prompt us to believe that this fall will be the best ever enjoyed by the New England trade," comments F. H. Silliman, manager of the Boston headquarters of the Pardee-Ellenberger Co., Inc., of this city and New Haven, Conn., jobbers of Edison phonographs and records, as well as the new Edison home kinetoscope. Continuing, Mr. Silliman explained: "For the first time in the history of the country the steel industries did not shut down for repairs during this summer; they have sufficient orders on hand for a year; crops in the South are reported as excellent; wheat crops are bountiful; the general run of manufacturers have a good business and find a scarcity of skilled labor; railroads are prosperous and the election of a President does not seem to be the disturbing element this term as it has been in former years.

"In New England particularly, the general report is that this summer's business is a trifle ahead of last summer. Most every line of commercialism is enjoying this prosperity. All this prosperity reflects upon the home owner, or, I should say, the home enjoyer. There the head of the house wants things as entertaining as possible, and it is in this niche that the Edison home kinetoscope is filling a want that has been long felt. Give a home this machine and an Edison phonograph and it has a joy combination of tremendous power. As this is the season for purchasing—the long nights make entertainment imperative—it is up to the kinetoscope dealer to get busy. These machines only cost \$65 to \$88—a nominal sum—and they permit a good profit. Films cost but little, with an endless exchange for new ones. The low price has helped wonderfully in the distribution of Edison kinetoscopes."

Mr. Silliman will take the last two weeks in August and exchange them for a lot of recreation and rest, the exchange taking place at Narragansett Pier. Mr. Silliman is original, in his vacation

F. H. Silliman.

respects, because he is one of the few men who can go to the seashore, come home and not burst ear drums with tales of highly magnified fish.

NEW ENGLAND CONCERNS

Making Good Showing with Columbia Line.

(Special to The Talking Machine World.)

Boston, Mass., August 9, 1912.

Manager Erisman, of the Columbia Co., has lately been in close touch with several distant New England concerns which are doing wonders with Columbia outfits. Goodwin & Derby, of Peterboro, N. H., a small town, has been able to sell fifty-two machines within the past five weeks. Another house to order large shipments through Manager Erisman is the Denholm & McKay Co., of Worcester, which concern is stocking up for a big fall trade. Forbes & Wallace, a large establishment at Springfield, also has been sending in large orders. A Boston concern that is doing a big business is Navin & Kelley, of 757 Washington street, a large installment house.

IMPORTANCE OF STORE SERVICE.

A Well Considered Article on the Character and Quality of Service by Chas. C. Cessna in The Hardware Dealers Magazine Which Applies Forcefully to the Talking Machine Trade.

Business to-day revolves around the customer, and the character and quality of the service any business renders regulates the success of that business. This is true in all businesses, because all have something to sell. It depends on the service which the business itself or the article sold yields whether the customer returns a second time, becomes an enthusiastic advertiser for the concern, or never returns and is forever condemning the concern and its wares.

Someone asks, "What constitutes good service?" Taking the retail store for example, it means selling merchandise that is trustworthy; representing that merchandise to the customer exactly as it is so that the customer will not have a wrong idea of what she is getting and expect too much. Especially is this true of the less expensive goods, and it frequently leads to an unfortunate misunderstanding. Salespeople often in their zeal to close a sale will exaggerate the values or the quality, with the outcome that the customer is disappointed and condemns the store.

In these days of close competition, taking two stores catering to the same classes of people, there can be no great difference in the quality and value of their merchandise at given prices. On some things one may have the advantage, on some the other; but on the whole they will average alike. As to which store is the better, then, becomes a matter of service, and this service depends entirely on the salespeople who come in contact with the customers.

How customers are greeted; how promptly they receive attention; how merchandise is shown; how attentively and thoughtfully customers are waited on; how capable the salespeople are to make helpful suggestions; how the merchandise is wrapped; how it is delivered—all have an important bearing on service. The smile and the kindly greeting, as well as the pleasant "Thank you," or "Come in again," are part of the service. It is not always the big things, they are generally all right, but it is the little things, little attentions that count most.

It is a pleasure when entering a store to be met with smiling faces and pleasant greetings. It makes you feel welcome and at home, and it goes a long way to overcome any other shortcomings the store may have. It is gratifying when you step up to a clerk and ask a question to receive a bright and intelligent answer. It is gratifying that when you ask to see a certain article the salesperson is eager for the opportunity and seems anxious, without overdoing it, that you should know what a large assortment he or she has. It makes you feel as though you want to buy, and that is the attitude the customer must be in before he does buy.

So many salespeople fail to catch the spirit of the store; they fail to understand just what the store is trying to do; fail to grasp the importance of the little things. It's not always their fault if they do not realize all the possibilities of their position. Teach them how through business meetings. Teach them the importance of having customers leave the store fully satisfied. Teach them what not to say, what to say, and how to say it, and to avoid actions or expressions that will wrongfully affect the customer. Teach them to be frank and honest and to say nothing that will lead the customer to expect more than he will get.

Too many stores' rule books are merely lists of "Don'ts" and "Musts" on conduct. They should be more on the order of a text-book on what to do and how to do things under certain circumstances. Remember, all business revolves around the customer. The store depends on the customer's trade; salespeople depend on the store, therefore it's "up to" the salespeople to make the most of every customer.

YOUR coat of tan will soon be hidden by sleeves; schools will open and there will be long Fall and Winter evenings to be spent at home.

This is the time that you can sell the greatest number of *Edison Home Kinetoscopes*; you'll soon make your biggest profits.

Provided, of course, that you are a Kinetoscope dealer. If NOT, you had better write to us today for an unusual proposition that means more money for you.

The Pardee-Ellenberger Co.

Kinetoscope Jobbers in New England

NEW HAVEN

BOSTON

The Edison Home Kinetoscope retails from \$65 to \$88, with the right profit to you. Films correspondingly as cheap. Simple in operation, durable.

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., Aug. 7, 1912.

With the beginning of the fall rush the Victor department of the Henry F. Miller Co. in Boylston street will be better able than ever to care for the growing business in Victor outfits, for during the past month there have been great changes under way. The second floor has been considerably rearranged through the taking out of partitions. At the front of the establishment there are two large demonstration rooms, one tinted in a soft buff, the other a Pompeian red. Both rooms are handsomely furnished, and the polished floors are covered with beautiful Oriental rugs. An outer room, whose walls are a soft green, contains desks for Francis T. White and Warren A. Batchelder, while Ubert Urquhart, the manager of the depart-

ment under whose personal supervision the changes were made, has a private office at the rear of a larger room at the rear through which visitors first enter. In the apartment occupied by Mr. White and Mr. Batchelder are kept the records, one whole wall being devoted to the shelves. Manager Urquhart has returned from his vacation, a part of which was spent in New York. Mr. Batchelder goes away the last two weeks in this month.

Some Notable Victor Sales.

An expensive Victor outfit was sold to Charles H. Allen, vice-president of the American Sugar Refining Co., at the Miller Co.'s place the other day and it was shipped to Mr. Allen's Lowell home. Another outfit was sold to E. B. Heffer, and as he was in a hurry to use the machine that same night he had the \$200 machine placed in his auto, which

stood outside, but it was only by the removal of the shield at the front that it could be got in, and the operation of loading caused quite a lot of interest in the vicinity.

Henry Rosen's Educational Vacation.

Harry Rosen, of 3 School street, is leaving in a few days for a trip that will keep him away from his place of business for at least a fortnight. From Boston Mr. Rosen will go to Bridgeport, Conn., to pay a visit to the Columbia factory. Then he will continue on to New York, where he will pay his respects to the trade. Likewise he will visit the leading establishments in Philadelphia, following this with a visit to Camden, N. J., where he will inspect the Victor factory. Atlantic City and the Edison plant also will be visited before he returns. Mr. Rosen, who reports a very good trade during the summer thus far, has added language and business machines to his large line, which included the Victor, Edison and Columbia outfits.

Rearranging Quarters at Eastern Co.

Extensive changes are under way at the Tremont street headquarters of the Eastern Talking Machine Co., and when they are finished, which will be in ample time for the fall trade, the patrons of this store will be served in a more expeditious and more adequate manner than ever before. Heretofore most of the rear of the ground floor has been given over to Edison demonstration rooms. All of these compartments are being torn out and hereafter the larger part of the third floor, formerly the hall where the Eastern Talking Machine associates use to have their assemblies, will be devoted to the uses of the Edison outfits. There are four sound-proof demonstration rooms installed and finely furnished. In the front will be an exhibit of horn machines including the Victor goods, and at the rear there will be a large storage room for the Edison cylinders and a good-sized repair shop. The second floor will remain much the same as it has been, but the ground floor will have some mahogany-finished demonstration rooms, mainly for Victor uses, and there will be a large rack the length of one side large enough to hold nearly 12,000 discs. Thus will there be the best possible service for the patrons of the Eastern Co. The improvements were made under the personal supervision of A. W. Chamberlain, the assistant manager of the company.

Where They Are Vacationizing.

W. J. Fitzgerald, Mark Read and George Reese, of the Eastern Co., are enjoying their vacation at Capital Island, Me. Later M. J. Price will start, probably going to Maine which is a favorite resort of his. Miss C. L. Collins, the treasurer of the local headquarters, left on Aug. 3 for her vacation, and Mr. Chamberlain is starting soon for New Found Lake, N. H., where he will enjoy angling for trout and salmon. Mr. Chamberlain will be accompanied by his wife and they will make the trip by their automobile.

F. K. Dolbeer in Boston.

F. K. Dolbeer, general sales manager for the Edison Co., Inc., in New York, was a visitor to the Boston trade lately, calling upon several of the leading houses of the city.

F. H. Silliman's Outing.

Manager Silliman, of the Boston headquarters of the Pardee-Ellenberger Co., is leaving town on Aug. 17 for a fortnight's vacation at Narragansett Pier. Mr. Silliman reports the Edison business as unusually good during the summer and this applies equally to the new kinetoscope for which there is a large demand all over New England.

What Mr. Pardee Reports.

W. O. Pardee, of the Pardee-Ellenberger Co., was in town for a few days early in the month. He states there is a great amount of enthusiasm among dealers for the new Edison disc machines which are to be put on the market early next month.

(Continued on page 22.)

If you could get Duplex-weather—hot or cold at will—you would jump for the chance. In your own line is a chance for jumping—two tones with the same needle—the

DUPLEXETONE Talking Machine Needle

This is the position for **LOUD** playing; the best position for band and recitation records.

For **SOFT** playing this is the position, invaluable for solo singing and stringed instrument records.

A little twist either way secures all intermediate tones from **LOUD** to **SOFT**.

Write us to-day for samples of this wonderful Duplexetone Needle, together with a booklet telling about the Bagshaw Service in detail.

W. H. BAGSHAW
SOLE MANUFACTURER
LOWELL, MASS., U.S.A.

The exclusive Columbia feature of tone-control shutters—did you ever see anything take hold as they have? And at that we haven't been quite ready to push them until our dealers had opportunity to move their stock of instruments equipped with the doors.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

FROM OUR BOSTON HEADQUARTERS.
(Continued on page 21.)

H. L. Royer Visited Canada.

Manager Herbert L. Royer, of the Arch street Victor quarters of M. Steinert & Sons Co., has been enjoying a vacation up in Canada and returns well rested and ready for the big fall business that is confidently looked for. The summer business which this house has had, especially in furnishing outfits for summer homes, has been very large indeed.

Far in Advance of Last Year.

Manager Arthur Erisman, of the Columbia Phonograph Co., General, states that business has continued uninterruptedly good all summer and that the 1912 business up to August 1 was considerably in advance of the whole twelve months of 1911. This is an unusual showing, says Mr. Erisman, in view of the fact that there are several of the best months of the year still ahead. Manager Erisman has not been able to get away on any uninterrupted vacation, because so many of the establishment are away. So he is contenting himself with afternoons at the beach. He is stopping at the Hotel Pemberton, Hull, coming up early in the morning and leaving the office each day about 2 o'clock.

Prof. Goodwin a Visitor.

Professor Frederick Goodwin, who has lately accepted the post of director of the educational department of the Columbia Phonograph Co., was in Boston for several days the first of the month. He came here to plan out a campaign of publicity by which the Columbia outfits may be more widely known. Professor Goodwin formerly was a supervisor of schools at Westfield.

An Attractive Victor Window.

Charles F. Atwood, of 207 Tremont street, has an attractive window display of Victor goods. He has arranged the summer camp, which is familiar to most people, as one of the season's best advertisements in an unusually attractive manner.

Movements of Columbia Men.

At the Columbia Phonograph Co.'s establishment one misses Fred Erisman, the assistant manager of the concern, who is enjoying a vacation at Wildwood, N. J. R. C. Sylvester, one of the busy salesmen, has just returned from New York, where he spent most of his vacation. John O'Hara had a pleasant time at Cazenovia, N. Y., and J. A. Holohan has returned from Manomet, down on the Cape.

Making Rapid Strides.

The talking machine department conducted by F. C. Henderson at the Shepard-Norwell Co.'s place in Winter street and running through to Temple place, is making rapid strides under the personal supervision of J. G. Widener, who now is vice-president for the F. C. Henderson Co. This department now handles both the Columbia and Victor goods and it is a busy place all of the time.

Visited Nantasket Beach.

Chester J. Sylvester, manager of the talking machine department of the C. E. Osgood Co., is taking a fortnight off from work and, with his young wife, is spending a vacation at Nantasket Beach. When he returns to business, Frank Jenkins, his right-hand man, will go away.

Sign Miss Jeska Swartz.

Manager Erisman reports that the Columbia Co. has just signed Miss Jeska Swartz, of the Boston Opera Company, and she will be at the laboratory shortly to make records of some of her best numbers. Miss Swartz has been winning favor at the opera house for the past three seasons and this year she is to sing more ambitious roles than ever before.

Concert Room Nearing Completion.

The concert room on the second floor of the Columbia Co. is rapidly nearing completion and will be ready by September 1. The lettering is on the wide expanse of windows, the painting is done and a new dictaphone room has been installed at the rear. When the floor is polished, the rugs down and the fine furniture put in the room promises to be a thing of beauty. Manager Erisman is planning to have regular society days.

Large Victor Trade at Ditson's.

Henry Winkelman, manager of the Victor department of the Oliver Ditson Co., says he has no kick coming, as business has been uniformly good right along. Mr. Winkelman will take his vacation the last two weeks of the month and is going to Swan Island, Me. John Canavian, one of Mr. Winkelman's salesmen, is now at Ocean Point, Me.

AN ORIGINAL VIEW OF EDISON.

Snapshot of the Great Inventor Indicates That He Is Not Entirely Wrapped Up in Scientific Investigation at All Times and Appreciates Healthy Outdoor Sports.

No general learned or public discussion of matters of scientific importance for some time past have been considered complete without the pub-

lication of some opinion offered by Thomas A. Edison, and which was generally sharp and to the point and displayed real knowledge of the subject, however complex. The result of all this, taken together with the anecdotes and biographical sketches of "the wizard," has been to create the impression that Mr. Edison is constantly wrapped up in his scientific work and does not take any interest in things outside the laboratory. No better proof that the foregoing impression is erroneous could be offered than the snapshot reproduced herewith, which shows the great inventor throwing out the first ball in the baseball game that was one of the chief events of the recent Edison field day. The picture indicates that Mr. Edison has a delivery that would do credit to a professional pitcher and that he knows a great deal more about the baseball than that it is spherical in shape. The photograph is, on the whole, decidedly unique.

GUARDING AGAINST LOSS.

How to dispose of small initial rush orders? This is the suggestion of a man of experience: Upon the receipt of an order calling for immediate shipment from a party whose name does not appear in one of the agency books, or if there, has an off rating, his custom is to wire the local bank as follows: "Do you consider Blank good for \$50, sixty days (or whatever the terms may be)? Answer quickly." This credit man says further that if the order is accompanied by bank references it is sometimes a good plan to wire the other bank in the town, if there be one, and if the credit man desires to go still further he can wire some reputable attorney either located in the same town or the nearest town. By taking such precautions, he declares, the losses sustained from the small initial rush order will become negligible.

Edison Throwing Over First Strike in Ball Game.

WITH THE CREAM CITY TRADE.

Usual Dog Day Dulness Seems to Have Overlooked Milwaukee Talking Machine Dealers This Year—Crop and Industrial Conditions Generally Encouraging—New Edison Home Kinetoscope Exhibited and Lawrence McGreal Is Enthusiastic Over Proposition—Personal Items of Interest—What the Various Jobbers and Dealers Have to Report Regarding Conditions and the Outlook.

(Special to The Talking Machine World.)

Milwaukee, Wis., Aug. 10, 1912.

These are usually the dull "dog days" in the talking machine business, but there seems to be a change in the situation this season. Jobbers and retailers are all congratulating themselves on the fact that business is holding up in a remarkable way, while the prospects for future trade were really never better.

The weather has had something to do with preventing the usual summer slump in sales. Wisconsin is usually sweltering in heat during the months of July and August, but the weather man has been lenient this year and has chalked up more cool days than hot ones during the past few weeks. People have not found themselves caught in the usual hot weather inertia and have been more willing to get into the market for the necessities and luxuries of life. What is more, there has been more ready money this year with which to make the purchases.

Steady but gradual improvement has been taking place in the iron, steel and heavy machinery business since last spring, and orders are now coming in like old times before the panic of 1907. Milwaukee is one of the leading centers in the United States for the manufacture of heavy producing machinery, and when business in this line is good it means prosperity in most lines. Consequently, business in general has taken on new life, now that confidence is more widespread and money is more plentiful.

Crop Conditions Give Encouragement.

As the days go by the assurance grows that a bumper crop will be harvested in the Northwest this season. Everybody knows that this means prosperity of the right sort, and no one knows it better than the talking machine dealers of the Badger State, who are preparing for one of the biggest fall trades in the history of the business. Proof of this is found in the fact that dealers are stocking up in machines, records and supplies with more freedom than has been expressed in several seasons. The early grain crop is now being harvested, with promises of a tremendous yield, while plenty of rain and favorable weather in general has brought along the corn crop to a point where all fears, caused by the late start of the crop, have been allayed.

"July business showed an increase over that of June, while the prospects all indicate that trade during August will attain a new high mark," said J. H. Becker, Jr., manager of the new Victor department at the Espenhain Dry Goods Co.'s big department store. "Machines are selling well, while the August records are all proving to be good sellers."

Exhibit New Edison Kinetoscope.

The first public free demonstration of the Edison home kinetoscope, for which Lawrence McGreal, well known Edison jobber of this city, has the agency, was held on the afternoon of August 2 at the new McGreal headquarters at 2113 Grand avenue, and the large crowd which gathered was proof of the interest aroused by the new machine. These exhibitions are now being held daily at the McGreal store in connection with grand opera concerts on the Edison machines, and are resulting in a brisk business for Mr. McGreal.

"The Edison home kinetoscope, Mr. Edison's latest triumph, will meet with a tremendous sale," said Mr. McGreal. "Most of our business has been done with people who are installing the machine in their homes, but we look for a big demand from the schools from now on. The possibilities of the kinetoscope as an educational factor are unlimited, and I am positive that its future is assured. The fact that this machine can be

safely operated by children in their homes appeals to people, while the fireproof films used are one of its chief merits. The machine is considerably smaller than those used in moving picture shows, as it weighs only twenty pounds, while its eighty feet of film contains as many pictures as 1,000 feet of films used in the moving picture theaters."

The new auditorium, arranged in the McGreal store for the public demonstration of the Edison kinetoscope and for talking machine concerts, has been named Mozart Hall. There is seating capacity for practically 100 people, while around the room have been arranged raised platforms for the display of talking machines and cabinets.

J. W. Campbell Takes Charge.

J. W. Campbell has been made manager of the talking machine department of the Edward Schuster & Co.'s department store at Third and Garfield streets. Miss Elsie Meisner is now with the talking machine department at the Schuster store at Twelfth and Vliet streets, over which Albert Friedman has general supervision.

Coming and Going.

Joseph Gannon, assistant manager of the Wisconsin Talking Machine Co., jobber for the Victor line, is enjoying a two weeks' vacation in St. Louis.

George D. Ornstein, general sales manager of the Victor Talking Machine Co., was in Milwaukee recently on business. While in the city Mr. Ornstein was the guest of his sisters.

Reports Gain of 78 Per Cent.

L. C. Parker, enterprising manager of the Victor department at Gimbel Bros., has returned from a three weeks' vacation spent with relatives at Rhinelander, Wis. Mr. Parker, while at Rhinelander, narrowly escaped meeting with a serious injury when struck in the face while cranking an automobile. Mr. Parker sustained a broken nose and other bruises, but does not show the effect of the accident now, due to the fact that a physician was with him when the injuries were received. Mr. Parker finds that his talking machine business made a gain of 90 per cent. during the month of July, as compared with the same period a year ago, while a total average gain of 78 per cent. was made during the first six months of the year.

Columbia Business Grows.

As proof that the Columbia business in Milwaukee is increasing by leaps and bounds, A. G. Kunde, 516 Grand avenue, Columbia jobber and retailer, sent out more than \$1,000 worth of machines in one day recently for delivery to Milwaukee buyers. Mr. Kunde has been forced to increase his office and his sales force in order to care for the big increase in trade. The New Favorite Columbia, with the shutter attachment, has arrived at the Milwaukee store and is proving popular with the trade.

Mrs. Kunde, accompanied by her young daughter, has returned from an outing of several weeks spent at Okauchee Lake, and is again assisting her husband in the Columbia store.

Lawrence McGreal for Sheriff.

Lawrence McGreal has announced his candidacy for sheriff of Milwaukee county on the Democratic ticket. Mr. McGreal ran for the office two years ago and was beaten by a very narrow margin by the Socialist candidate. This year he hopes to fare better.

Take on the Regina Line.

The Heller Piano Co., 616 Grand avenue, has added the Regina line and is displaying several Regina instruments with horn attachments. The company is completing arrangements for erecting

an annex and securing adjoining quarters, which will give the company more than 12,000 square feet of floor space.

In Operation by September 1.

The work of preparing the talking machine quarters at the new Edmund Gram building, 414-416 Milwaukee street, is rapidly drawing to completion, and Paul A. Seeger, who will act as manager of the new Victor department, hopes to have it in operation by September 1. Mr. Gram will have one of the finest piano and talking machine establishments in the Northwest when the work is completed.

Miss Gannon Returns from East.

Miss Gertrude Gannon, owner of the McGreal retail store and head of the Wisconsin Talking Machine Co., Victor jobber, recently returned from a trip through the East. Miss Gannon visited the factory of the Victor Talking Machine Co. and placed her fall order for Victor machines.

Optimistic Over Outlook.

E. F. O'Neil, special representative of the Victor Talking Machine Co., who spent a few days in Milwaukee recently, is particularly optimistic regarding the outlook for the fall trade.

Brieflets.

Emil O. Schmidt, 310 Grand avenue, Milwaukee's one-price piano dealer, reports a fine Victor business, especially in the Victrola No. IV.

E. S. Liechti, formerly with the Alfred Griggs Music Co., of Davenport, Ia., is in Milwaukee and expects to become connected with one of the leading local talking machine houses.

The daily afternoon Victor concerts which Manager J. H. Becker, Jr., of the new Espenhain talker department, is giving, are proving decidedly popular with the Milwaukee trade.

J. E. Meagher, representing Lyon & Healy, of Chicago, and Mr. Gibbs, of the Rudolph Wurlitzer Co., of Chicago, recently called upon the Milwaukee trade.

The same ideas come to all men—it is only in the use we make of these ideas that we differ. The most successful men are those who make the promptest use of the ideas that do come to them. They are the men of action—the men who lead and dominate.

VITAPHONE CO. PROGRESS.

Plans Perfected for an Extensive Factory Addition to Present Plant in Plainfield, N. J.—Catalog in Spanish Issued—Sound Reproduction Principle Described—H. N. McMenimen Becomes Secretary and General Manager of the Company.

Among the important trade changes last month was the election of H. N. McMenimen to the secretaryship and general managership of the Vitaphone Co., manufacturers of the Vitaphone, of which C. B. Repp is president and J. H. Greene, Jr., treasurer. Mr. McMenimen is known from coast to coast in Canada, United States and Mexico, claiming an average of 50,000 miles of traveling a year for the past sixteen years, or a grand total of 800,000. His wide knowledge of conditions and

The Vitaphone Reproducer.

the trade in general should prove of immense benefit to the company.

Plans have been drafted for the erection of an extensive four-story factory adjoining the experimental plant at Plainfield, N. J., work upon which will start immediately. In drafting this first building, the architects have planned for the erection of three more buildings like the first one, to be built from time to time as the demands of the increasing business require. The buildings will be approximately 150 by 100 feet, four stories and basement.

The Spanish catalog has already been published and is being distributed throughout the world where Spanish reigns. In this catalog is a descriptive talk about the Vitaphone, together with illustrations and descriptions of several models—the \$185, the \$85, the \$55, the \$35 and the \$15. The English edition will be off the press within a few weeks.

The object of the company in starting with the export department is to create a market there that will be coming through when the first products for general shipping come through the factory.

The illustration herewith shows the new principle used in the Vitaphone. A solid wood arm is used. Of course, the wood is specially treated, of special length and the angle from diaphragm to record is the one they believe is best. The use of wood for this reproducer follows out the ideas of violin and organ pipe makers, wherein the older the wood the greater the resonance.

The Vitaphone sound box is stationary and made of few parts. The machine will play any record, as an ingenious arrangement permits an immediate change from needle to jewel, as the owner wishes. All that is required is to change the position of the diaphragm spring and put in the needle or jewel, according to what is required by the record.

The sounding board of the Vitaphone is placed over the diaphragm. It takes about two seconds to change the hornless Vitaphone to a horn machine, or vice versa, it being possible to put the largest horn for the loudest volume upon the smallest cabinet size. The motor was invented several years ago by Mr. Repp and its qualities thoroughly tested and tried.

A further reference to the Vitaphone and its merits will appear at an early date in The World.

Myers' Phonograph Shop, in the Wright building, Pittsfield, Mass., was recently damaged by fire.

GOV. WILSON MAKES RECORDS

Of His Notification Speech Delivered to 6,000 Democrats Assembled at Sea Girt Last Week—To Be Used with Moving Pictures.

The speech of acceptance as candidate for the office of President of the United States that Gov. Woodrow Wilson delivered to 6,000 assembled Democrats on the lawn at Sea Girt last week he will probably deliver beginning in a couple of weeks through phonographic records to as many millions of people as there were thousands to hear it upon the occasion of its first delivery.

The "canned" version of the speech will, of course, be abridged and new matter will be added to give it inclusiveness as to issues in the campaign which Gov. Wilson did not feel worked in well with the theme of the original.

It is planned to send the phonographic records out with the moving pictures so that patrons of the moving picture theaters can see how the Democratic candidate looks at home and also can hear what he has to say about the vital issues.

Hal Reed, a moving picture man, who took "800 feet of Governor Wilson," as he expressed it, declared that the moving picture concerns have invested upward of \$20,000 in films of Governor Wilson, and that every-

where they have been shown the pictures have brought hearty applause from the audience.

A VISITOR FROM TURKEY.

J. O. Prescott, Who Has Been Making His Headquarters in Constantinople, is in New York for the Purpose of Buying Machinery.

Old timers in the talking machine trade were delighted to meet J. O. Prescott, who was in the metropolis last week on "a buying trip" from Turkey.

Mr. Prescott has been flying around the world for the past eight or nine years, so that the trip from Constantinople to New York is but a mere trifle.

Since the old days of the American Record Co. Mr. Prescott has been in Japan, where he built up a very successful talking machine business, and a year or more ago went to Constantinople owing to a very liberal offer made him to manage a record making business in that city.

Mr. Prescott has changed but little. He seems as young and active as in the olden days, and was given a very cordial greeting by hundreds of friends, who were delighted to meet him.

Mr. Prescott's visit to New York is largely to buy machinery for the talking machine company with which he is connected in Constantinople, and as soon as that is accomplished, which will be early in September, he expects to return.

INCORPORATE TO DEAL IN RECORDS.

The Record Distributing Co., Manhattan, has been incorporated under the laws of the State of New York for the purpose of dealing in sound-reproducing records. The capital stock is \$50,000 and the incorporators are E. H. Randolph, F. J. Coupe, C. W. Pope and W. C. Carrigan.

REMOVE TO NEW OFFICES.

The Condon-Autostop Co. has removed its offices from 26 Front street to 109 Broad street, New York, where it has convenient quarters for the development end of its business. This company reports increased demand for its Autostop from the talking machine trade throughout the country.

GRESSING WITH O'NEILL-ADAMS CO.

Will Take Charge of the Talking Machine Department to Be Opened on a Large Scale by the O'Neill-Adams Co., of New York, on September 1—Has Had Wide Experience.

Otto A. Gressing, who at one time was manager of the St. Louis Talking Machine Co. and the talking machine department of the Aeolian branch in Indianapolis and Aeolian Hall, New York, has been engaged as manager of the talking machine department to be opened on a large scale by the O'Neill-Adams Co., Sixth avenue, between 20th and 22d streets, New York, about September 1.

Otto A. Gressing.

This department will adjoin the new piano department, which will be opened at the same time, and a full line of Victrola and Victor talking machines and Victor records will be displayed.

The O'Neill-Adams Co. has been handling the Victor in a small way for the past two years, but with the introduction of the piano department greater effort will be made toward giving the Victor line the strongest kind of a representation.

Those who are acquainted with Mr. Gressing and his ability are confident of his success in his new sphere of operation.

EDWARD D. EASTON RETURNS.

Edward D. Easton, president of the Columbia Phonograph Co., General, New York, returned from a six weeks' trip to North Cape, Europe, Monday, August 5. Mr. Easton, who was away from the middle of June, made the trip purely for pleasure and rest, and returns to New York and business in excellent health, and expresses himself as perfectly fit for the coming year's work. The Columbia Co. anticipates the heaviest year in the history of its career. Mr. Easton, the active head of the company, is confident that results will bear out that belief in full.

You expect your clerks to be loyal to you. Are you loyal to them?

A four-thousand dollar call to dealers

Preliminary to a campaign of advertising this Fall that will have extraordinary interest to all Columbia dealers, we are printing the full-page message shown here in this week's Saturday Evening Post.

It's a good, lusty call to dealers—and while we intend to negotiate with active merchants in any line of business, who are equipped to give Columbia products a worthy and profitable representation, yet we shall naturally prefer, whenever possible, to come to an agreement with those more experienced, qualified retailers who are already turning over talking machine money. You may need to be reminded that in order to carry the Columbia line it is not necessary for you to discontinue any other line. You are not compelled to handle the Columbia line exclusively. We are so well satisfied with our product, and with the market for it, that we are entirely content to have it sold strictly on its merits—upon side-by-side comparison with competitive product. We are very glad to have your customers given the same opportunity for comparison that you yourself must have before you sign a Columbia dealer's contract.

TALKING MACHINE ON PLAYGROUNDS

Youngstown, Ohio, Minister Gives Little Citizens a Treat with Victrola and Is Invited to Come Again.

From the Youngstown, O., Vindicator the following account of a visit through the playgrounds of the city with a Victrola is clipped and sent to The Talking Machine World by Scott & Jones, the progressive music dealers of that city:

Rev. J. W. Van Kirk writes of a trip to the city's playgrounds in which he gave concerts with Christ Mission's Victrola. He says:

By the ever active and resourceful mind of J. H. Chase for the amusement and development of the children an hour of music was suggested.

The Victrola at Christ's Mission being kindly offered it was proposed to give the writer the pleasant task of going to the different playgrounds to entertain the children.

Mr. Metcalf made a few selections of such records as he thought would be most appropriate. His standard was based on the musical talent of the children about the mission where I saw a boy handle a violin with as much skill and familiarity as the ordinary boy does a baseball. Some of the children about East Boardman street are members of the bands and orchestras which furnish music for the saloons, dance halls and other places of amusement. Their knowledge and taste for music is somewhat higher than the children of other playgrounds possess.

The introduction was made at Poland avenue on a hot afternoon. The Victrola was placed on elevated planks with all the children and Miss Hillman, the director, seated around.

We played several classical selections, all of which seemed to please, but did not excite very much enthusiasm.

A negro laughing song was given, to which they all responded with hearty approval. However, good attention was given for half an hour, when some children one by one took to their play, while others remained for an hour. They expressed the desire

of having me return another day. About fifty children listened to the music. A fine looking boy helped with the instrument to the street car and to East Youngstown.

Here the children were eager to hear and crowded around, sitting on the fallen trees and the improvised support for the music box. The same general results were experienced as at Poland school.

At Baldwin the hour was not so favorable for a crowd, but the interest and attendance were good.

We chanced to arrive at Glenwood at the swimming hour and when a threatening storm was approaching. But Miss Sherman gathered the children together and held them for a brief program.

We arrived at Steelton a few minutes before a shower, which compelled us to postpone the program till the next day.

Here the children were attentive and seemed to be under good control. There were eighty in the audience.

The success of the first round warranted another effort.

A change of records was made, with a greater variety of lively music and "funny" songs, as the children put it. These selections held a larger proportion of the children for a greater length of time.

The observation of the directors at Christ's Mission "that the music had its good effects upon the children for the entire day" is the strongest recommendation for a music hour. The music is certainly a happy diversion for the youth in the midst of their excitement and contest of games.

A variety of program was found to be taking. A waltz from "Faust," solo by Caruso, "Dill Pickles Rag," "Kentucky Jubilee," songs of America, a medley, "Down in Turkey Hollow," Peluse's orchestra, "Hearts and Flowers," and "Home Sweet Home," all seemed to supplement each other with pleasing effect.

I was on the ground at other times than the music hour and all remembered me as the music man and wanted to know when I was coming back.

Music on the playground would certainly be a valuable asset in the education, the discipline and the culture of the children.

MAX LANDAY ON AUTOMOBILE TOUR.

Max Landay, of Landay Bros., Inc., 563 Fifth avenue, New York, left Monday last for an automobile tour to the White Mountains. He is following the Ideal Tour trail, and with his big power car ought to be able to turn off miles like he sells records. He will probably be away two weeks or more—all depending upon the gasoline market.

By the way, August 8 was Max's birthday. To the first thousand readers who send in the correct birthday sum of this trade member The World will ask Mr. Landay to give them a birthday tribute in the shape of a package of imported talking machine needles. Succeeding thousands of guesses will be entered upon the list of the honorary guessers' association, with life membership card.

And again, Max is due for further congratulations because he escaped a lot of jury duty, all of which tends to show that the star of good fortune is still with him.

MUSICAL HORN QUITE NOVEL.

Something decidedly novel in the way of a musical instrument has been designed by a New York man. He concluded that if there were automatic pianos and organs, there might as well be an automatic horn. So he took a horn with the general shape of a cornet and set a series of transverse pipes along the main pipe. These transverse pipes have valves controlled by key arms, just like the ordinary cornet, but they lead into a music roll with perforations on it like the usual music roll. This roll is caused to revolve automatically, and as it turns around the musician blows steadily through the horn, and whatever piece is on the roll is reproduced. With a good collection of rolls any man can earn the reputation of being an accomplished cornetist.

DEALERS SEEK INSTALMENT REGULATION.

Stand of the Eastern Talking Machine Dealers' Association and Its Arguments in Relation to Its Campaign for Two List Prices for Machines Set Forth in an Address by Its President.

The Eastern Talking Machine Dealers' Association has for some time been interested in a campaign for the establishment of two prices for talking machines, one to apply to cash and the other to instalment sales, with a view to increasing the proportion of cash sales and lightening the burden of instalment accounts to be carried by the dealer. The association has also been very active among the Eastern jobbers and had a delegation of three members present at the convention of the National Association of Talking Machine Jobbers at Atlantic City. The stand and arguments of the Dealers' Association are well set forth in the address read before a recent meeting of the association by its president, David Switky, and which was, in part, as follows:

"Strange as it may seem, it is true, nevertheless, that many jobbers have not yet grasped that great fundamental truth that the dealers' welfare means the jobbers' welfare likewise. They do not realize that their own prosperity cannot be greater nor less than the prosperity enjoyed by their dealers collectively.

"We, the Eastern Talking Machine Dealers' Association, want the jobbers to petition the Victor, Edison and Columbia companies, asking them to adopt two sets of prices for their machines, one price for cash, and a greater price for instalment sales.

"We logically look to the jobbers to do this, as they are the men through whom the manufacturers market their product. They are the bridge that separate us from, and at the same time connects us with, the manufacturers. They are the men who solicit our patronage. By extending us credit they become literally a partner in our business. Therefore we call upon them to help themselves by helping us.

"We want two sets of prices—one for cash and another for instalment sales. If the rank and file of the dealers upon whom the jobbers rely for support are to prosper, if they want to get their check promptly each month, from all their dealers, do something that will better the condition of the latter.

"Until now we have been tossed unmercifully back and forth between the jobber and the manufacturer. On the one hand we are urged to plunge headlong into the whirlpool of reckless instalment selling, and on the other hand the jobbers are doing all they can to draw tighter the credit reins, even calling upon the manufacturers to assist them in preventing the dealers from getting liberal terms of credit as to time, etc.

"Instead of sensibly trying to help us build up our cash business, so that some of our profits could be felt and counted in cold cash, we are compelled to take our profits in instalment accounts on the ledger and in record stocks that pile up month by month at a fearful rate.

"The manufacturers educate us with instalment literature that would drive 90 per cent. of the trade into bankruptcy if they were to attempt to

live up to those teachings. They advise us to borrow money—borrow, borrow—and then borrow some more. They urge us to call on our bankers. How many dealers of the rank and file do you think are able to borrow money enough to float an instalment business? You know as well as we do, that the most that the average dealer can borrow is a few hundred dollars that must be repaid in much less time than he will be able to gather them in from his instalment accounts.

"They tell us to look at the \$60,000,000-a-year piano industry which rests almost entirely on the instalment plan. But they don't tell us that the piano trade for that very reason is so thoroughly demoralized that it is fast joining the talking machine ranks—choosing the lesser evil of the two.

"We are told that the Singer Sewing Machine Co. built up its 10,000 branch offices and millions of assets through easy payments of \$1 per week. This sounds good, but the parallel is bad. The 10,000 Singer branches are not required to invest their own capital nor to pay for their machines in 30 days.

"They advise us that the largest department stores in the United States are making enormous profits, that entire railway systems are bought and national debts are paid for on the instalment plan. This is darn poor comfort for the average dealer. It reminds us of a story told of the late Jay Gould, who advised the members of a Y. M. C. A. to save up their pennies and buy a little railroad.

"In a recent letter sent to us strongly indorsed, a brilliant advocate of instalments, tells us that the instalment buyer 'pays for the time accommodation.' He says further that 'they pay more than the interest on the money, pay a bigger profit than the smaller, wealthier class, and are safer pay.'

"If this were true, that 'they pay for the time accommodation,' there would be no need for us to plead for two sets of prices. Is there any good reason why we should not have the assistance of the manufacturers in, boosting our cash business? Our present plan of selling on one or two years' time at cash prices does not do justice to our business, nor does it do honor to our intellect or ability as merchants.

"The E. T. M. Dealers' Association recently undertook to obtain a referendum vote of a limited number of dealers in and about New York City. We appealed to eight jobbers to send out post cards to their dealers, asking their signatures, should they favor the two-price system. The returns were overwhelmingly gratifying. Some of the comments accompanying the returns were vigorous.

"In justice to the work attempted by our association, we want to say that three out of the eight New York jobbers approached, did not send out our cards to their dealers. One very courteously asked that the matter be allowed to rest for the present. Another, although heartily indors-

ing our fight for two sets of prices, and while doing certain original work along these lines, regretted being unable to co-operate with us because he had agreed in certain correspondence to let the entire matter rest so as not to prejudice our case before the Congressional Committee having the Oldfield Bill under consideration.

"If the manufacturers honestly believe that we should lie low until that cloud has passed over our heads, let them give us assurance at the present time that they will grant our request at the first opportune moment.

"But why should we wait until the dealers have gorged themselves with more indigestible instalment business until their tongues hang out and their faces are purple with distress?

"The third jobber wrote in part as follows: 'We feel that it would be entirely contrary to business principles to send out these cards. It is our opinion that a great majority of dealers would favor any system or method that would make it possible for them to get better prices on goods sold on instalment. It seems to us that the factories must be aware of this quite as well as we are, but perhaps there are obstacles we do not know of that prevent them from printing two sets of prices at which to sell their goods.'

"This jobbing house must be pardoned for its error when they accuse us of trying to get better prices for our goods. They do not know that we are *not* complaining about the percentage of profit. They are blind to the fact that our real aim is to preserve the vast amount of cash business that could be saved from the instalment sales if we show our customers that they save money by buying for cash.

"They also think it a crime to presume to press too persistently the demand for two sets of prices. They have not experienced the truth that some things can only be gotten by asking for them—and even then not by asking for them only once or twice—but by steady hammering away until you get what you want.

"The manufacturers have been unfairly accused of objecting to two sets of prices because it might interfere with their output by restraining the business of the large department stores, the big advertisers of 'no interest and no extras.' It will surprise you to learn that the majority of the large department stores interviewed are in favor of two sets of prices. All they ask is that the factories incorporate two sets of price in their contracts and make them binding on all. We don't blame them for claiming that local or gentlemen's agreements are weak and ineffective.

"Granting the need of the two-price system, we believe that the difference between cash and instalment prices should be great enough to induce the customer to pay cash."

MERIT WINS OVER PRICE.

Price never has sold an article of merit in competition and never will. The man who quotes a price with butts and apologies is indeed a pathetic object in the mind of the average American business man. Price is the last consideration in a merit transaction.

BIG SAVING IN FREIGHT RATES.

Jobbers' Association Traffic Committee Finally Secures Definite Ruling by Uniform Classification Committee Putting All Talking Machines, With or Without Cabinets, in L. C. L. First Class and C. L. Third Class Rating—Estimated That Saving Will Amount to \$100,000 a Year to Talking Machine Trade.

(Special to The Talking Machine World.)

Chicago, Ill., Aug. 10, 1912.

The National Association of Talking Machine Jobbers, working through their special traffic committee and the traffic managers of the large talking machine companies, have finally followed up their previous victory in defeating the proposed change on talking machines in cabinets from first class to double first class by getting a uniform transportation which keeps all talking machines, hornless or otherwise, in the first class in less than carloads, and in third class in carloads.

This will mean a saving of something like \$100,000 to the jobbers and retailers of the country per year.

This applies to all territory except that in the Southern Classification Committee, but this may be expected to speedily fall into line.

The value of the definite ruling may be understood when it is said that even since the increase was defeated many freight inspectors throughout the country have insisted on giving hornless machines the one and a half first class rating, placing them in the category of music cabinets. This is all settled definitely now by the ruling just promulgated by the Uniform Classification Committee.

The story is told in the following letter sent out under date of to-day by L. C. Wiswell, of Chicago, chairman of the special traffic and transportation committee of the National Association of Talking Machine Jobbers, to the members of the association:

"Your traffic committee spoke truly in their report read at our recent convention when they said that they had every reason to believe that the Uniform Classification Committee would act favorably on the proposed change in the classification on talking machines, the proposed change being a uniform one, reading as follows:

"Phonographs, graphophones and talking machines, mounted in cabinet or without cabinet, with or without motor mechanism, in crates or boxes, 'carload C. L. minimum weight, 24,000 pounds,' 'subject to rule 27, L. C. L. first class, C. L. third class.'"

"Docket No. 10 of the Uniform Classification Committee, just received, tells us that the new classification was adopted by the committee and it will be effective September 1, 1912.

"This new ruling means that talking machines now have a UNIFORM CLASSIFICATION and that it will eliminate future controversies as well as annoyances that a number of our members have been recently put to because some freight inspectors have seen fit to change the classification on shipments from first class to one and one half first class.

"This is a signal victory and proves that 'in unity there is strength'—for were it not for the efforts put forth by your committee, reinforced by the support of all the members of the association, as well as the work done by both the Victor and Edison companies, this uniform classification would not have been brought about. Respectfully submitted,
L. C. WISWELL,
Chairman Special Traffic and Transportation Committee."

E. R. JOHNSON THE FEATURE

Of Interesting Article in Sunday's Sun—His Romantic Career, and Development of Talking Machine Reviewed.

The interesting and romantic career of Eldridge R. Johnson, president of the Victor Talking Machine Co., in connection with the development of the talking machine to its present state of perfection, and how as a penniless mechanic four-

teen years ago he established a business that has developed to a point where it represents an investment of millions of dollars, was the subject of a long special article in the New York Sun on Sunday, August 4. The article was headed "From \$10 a Week to a Business in Millions," and included a description of the talking machine, some of the details of its manufacture and figures regarding sales and output. Special attention was called to the fact that while a decade or so ago only singers of little repute could be persuaded to sing for the talking machine, at the present time the greatest vocal artists in the world, such as Caruso and Tetrassini, are more than willing to have their voices recorded.

NEW HOME FOR EDISONIA CO.

Celebrate Formal Opening of Handsome Five-Story Building in Newark, N. J.—Elaborate Quarters for Talking Machine Department.

(Special to The Talking Machine World.)

Newark, N. J., Aug. 10, 1912.

An event of particular interest to the local trade was the opening this week of the new quarters of the Edisonia Co., corner Broad street and Central avenue, close to the heart of Newark's business center. The new home of the company is a large five-story and basement building, thoroughly modern in construction and equipment, occupying about 50 feet front on Broad street and running back

about twice that distance on Central avenue. The Edisonia Co. occupies the basement and first two floors and will sublet the upper three floors. A section of the basement, the front part of the store and the entire second floor will be given over to a stock of pianos.

In the rear of the first floor is to be found the department devoted to the disc talking machines, both Victors and Columbias, and it is one of the finest departments in the vicinity of New York. All the leading styles of machines are displayed in the rear of the main floor and in a special large room to the left, which may be cleared and used for recital purposes when desired. Off this room there open four smaller but complete rooms for demonstrating purposes, each of the four laid out along the same general lines but decorated in a manner to obtain distinctive effects. All the rooms are larger than the average demonstration booths and have heavy rugs on the parquet floors and elaborate lighting fixtures overhead. The disc records are kept on file in the larger room, the various compartments of racks being fitted with sliding doors so that the record stock is hidden except when access to it is desired.

The Edison machines and records are displayed in a special room in the front of the basement, while the reserve record stock is kept in the rear.

The new quarters were formally opened on Monday of this week, the opening features being continued throughout the week. The store was kept open evenings for the accommodation of these who could not call during the day.

INSURE YOUR HOLIDAY PROFIT

YOU CARRY FIRE INSURANCE—DON'T YOU?

☞ Most people do, and yet they don't expect or want a fire.

THE NEW VICTROLAS MAKE GOOD HOLIDAY BUSINESS CERTAIN

☞ Are you INSURED against losing GOOD PROFITS through not being able to get these Victrolas?

EXPERIENCE—THOUGH EXPENSIVE—IS THE BEST TEACHER.

☞ You can't afford to forget the EXPERIENCE of those Dealers last year who did not properly PREPARE for HOLIDAY NEEDS, when the low-priced Victrolas were announced.

☞ This is also true in the case of records. PREPARE NOW.

ARE YOUR EGGS ALL IN ONE BASKET?

☞ The "basket" represents your jobber, the "eggs" your orders. Will the "basket" stand the strain of Holiday requirements? If not, who suffers?

YOU MAY NEED TWO POLICIES.

☞ That will depend on "past performances" and the reputation of the "basket" to meet such requirements.

NOW TO THE POINT. THESE ARE FACTS.

☞ You cannot place "additional insurance after the fire has started and collect your Insurance." Can you expect to call on an extra jobber AT THE LAST MINUTE and be sure of getting the goods?

INSURE WITH BLACKMAN NOW AND BE PROTECTED.

☞ We cannot recall a single case where a "Blackman dealer" lost a "real sale" last year, because we could not deliver the goods. When we say a "regular dealer" that doesn't mean the fellow who came to us at the last moment after FAILING to get the goods from his "regular jobber."

BE A "REGULAR BLACKMAN DEALER" NOW.

☞ That means we will PREPARE FOR YOU, as we do for "OUR DEALERS." Call on us at the last minute, if necessary, and we will do the best we can, but the "Blackman policy" is to recognize the obligation to fill the requirements of REGULAR DEALERS FIRST. We call this "fair dealing" and it is appreciated by our dealers.

NOW IS THE TIME TO TAKE OUT THAT POLICY.

☞ Start giving, at least a share of your business, to Blackman and you will feel easy about your Holiday profits.

Summer Business in the Talking Machine Trade as a Whole Shows Considerable Improvement Over That of Previous Years—Much Interest Displayed in New Machines—Recent Visitors to the Windy City—Interesting Personal Items—Late Additions to the List of Dealers—Department Stores Taking Active Interest in Talking Machines—Changes in the Arrangement of the Rudolph Wurlitzer Co. Quarters—The "Book of the Opera" Well Received—Various Accessories and Specialties Selling Well—Prophecies That Talking Machines Will Supplant Orchestras in Theaters—Other Live News.

(Special to The Talking Machine World.)

Chicago, Ill., Aug. 9, 1912.

There is nothing in particular to say about the talking machine situation except that business is not as it should be, according to tradition. By which we mean that it is a good deal better than it usually is during the period of summer dulness, and especially when it is considered that a Presidential campaign is on. Nearly all of the large distributors say that wholesale trade was a great deal better in July than in the corresponding month of last year. One avers July made a good manly increase over June of this year. Peculiar factors entered into the condition in this case.

Great interest is being displayed in the new Victrola styles and advance orders are coming in from dealers in fine shape. Publication of the full line of the Edison disc machines in last month's World revived interest in the forthcoming departure, and the definite announcement of the company as to when shipments can be made is awaited eagerly. The Columbia Co. expect very big things from their new styles of Grafonolas just making their advent.

New Manager Visits Chicago.

Otto Krause, the new manager of the talking machine department of the Hoeffler Manufacturing Co., of Milwaukee, has been here for several weeks making a study of the large retail stores preparatory to making various changes in the methods and arrangement of his department. It will be redecorated, new windows put in, and regular Victor concerts inaugurated.

Various Personals.

A. D. Geissler, general manager of the Talking Machine Co., is still in California, accompanied by his wife and his minutest son. The other two Geissler offsprings, Scrubby and Allen, are in Chicago exhibiting great executive ability in managing their respective nurses, and have already caused several deep furrows to appear in the formerly placid brow of Roy J. Keith, who is trying to keep a supervisory eye over the youngsters.

J. H. Clark is posting up at the Talking Machine Co.'s office, preparatory to assuming a position as private secretary to Mr. Geissler when the latter returns.

The many friends of Otto A. Gressing, well known in Chicago, were pleased to hear that he had been made manager of the talking machine department of the O'Neill-Adams Co., of New York.

Among the dealers visiting Chicago recently were Lenhart & Murphy, Peru, Ind.; H. K. Nelson, Dowagiac, Mich.; J. N. Freeman, Cedar Rapids, Ia.; Mrs. A. G. Kunde, of A. G. Kunde & Wife, Milwaukee.

W. C. Fuhri, district manager of the Columbia Phonograph Co., is taking his vacation semi-on-board-an-auto in Michigan. He went equipped to land one of the lineal descendants of Jonah's whale and took his two English bulldogs with him for

protection in case it is needed when the capture is effected.

A. D. Harriman, formerly retail floor manager of the Columbia Co.'s office, is now in newspaper work in the Dakotas and he has been succeeded here by O. D. Standke, formerly manager of the Columbia store at Des Moines, Ia., and a most valued member of the company staff.

Frank D. Moses, Wisconsin traveler for the Talking Machine Co., has been quite ill for the past week or two, but is again on the job. George P. Cheattle, who represents the same company in Michigan and Indiana, is back again from his vacation spent on his brother's farm near Luddington, Mich.

W. A. Everly, representing the Columbia Co.'s Chicago office in Illinois and Iowa, was in to-day and says crop prospects are magnificent in his territory and everybody is being assured of a big fall business, Presidential excitement to the contrary notwithstanding.

F. A. Harnden, purchasing agent for the Talking Machine Co., spent his vacation at home supervising by telephone the nursing of his two children, who were both down with scarlet fever.

New Columbia Models.

C. F. Behr, manager of the Chicago office of the Columbia Co., says that dealers who have seen the new Regal Grafonola, with record stand, selling at \$40, have waxed quite hysterical over its merits and selling potentialities. Orders are coming in rapidly. The new Eclipse machine also promises to be a big seller. It has tone shutters and sells at \$20 in oak and \$28 in mahogany.

New Combination Dealer.

P. A. Tyson, who for several months has conducted a talking machine store at 1010 Wilson avenue, this city, has formed a stock company under the name of the Talking Machine and Music Parlors, with himself as president. He is making extensive improvements in his quarters. Both Victor and Columbia lines are carried.

Department Stores Waking Up.

There is a stirring among the talking machine departments of the big State street stores.

Rothschilds, who have been out of the talker business a year, while their new buildings were being constructed, will open up next month a splendidly arranged department on the eighth floor. There will be three booths and a magnificent display room. They will probably handle Victor, Edison and Columbia goods.

Hillman's is arranging a fine department on the mezzanine floor, with concert hall, etc. They handle Victor and Columbia.

The Boston Store is preparing to make enlargements both in quarters and stock carried. It also handles Victor and Columbia.

No definite statement comes as yet from Marshall Field & Co. as to whether they will add talking machines or not.

Incorporation.

Incorporation papers have been filed for The Phonograph Co., Chicago; capital, \$50,000. The incorporators are Clyde E. Shorey, Fred Barth and Morris Cohen. They are lawyers and are not yet ready to announce the names of the members of the company or its purpose. Its headquarters are at 137 South LaSalle street.

Wurlitzer Improvements.

The Chicago house of Rudolph Wurlitzer Co. is now in the midst of the change and improvements previously reported soon to be made. Details are deferred to a later date, when they can be given in their completeness, but it may be said that the wholesale stock is now being moved to the building recently leased at 14 South Wabash avenue and the main Wurlitzer building, 329 South Wabash avenue, will be given up entirely to the retail business, with the exception of a portion of the third floor, where the general offices will be maintained. Extended improvements will be made

(Continued on page 34.)

It operates easily; works like pliers—Fine!

It is made of the best metal **hardened with electricity** to give it durability.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 33).

in the talking machine department on the first floor, including new reception rooms and new demonstrating booths. In addition the first floor annex now utilized for pianos will be given up to talking machine salesrooms.

Tom Clancy is making a fine record for himself as sales manager of the automatic department of the house, with headquarters in Cincinnati, while T. O. Weiss, who succeeded Clancy as manager of the automatic department of the Chicago house, is showing himself to be the right man for the place.

The Book of the Opera.

L. Kean Cameron, manager of the retail talking machine department of the Wurlitzer Co., ordered a hundred of the new Victor books of the Opera and received a thousand. Kean philosophized a bit about this new evidence of the development of something from nothing represented by a cipher, and then tried to see if he couldn't dispose of the whole bunch. He made a solid window display of the books, and receiving an inspiration from his artistic instincts and his knowledge of human nature, opened one of the books placed near the front of the window to a page containing a handsome engraving of Tannhauser, and the beautiful exponents of the Venus-berg ethics. It was not long before a man came in who soon showed by his conversation that he was totally unable to distinguish between a caterwaul and a grand opera aria rendered by Caruso. He was interested in the picture of Tannhauser and the sirens, however, and bought the book. By thus catering both to the yearners for musical knowledge and to the artistic and pseudo-artistic the bulk of the thousand books was soon sold.

A. B. C. of Record Filing.

Many dealers have been able to systematize their record stocks by the use of Talking Machine Co.'s system of sectional shelving. The company has now made some improvements in this shelving which are bound to enhance its popularity. The sectional cabinets are now made of stronger wood than formerly and sheet metal shelves have been introduced. These shelves are crimped, adding to their strength, and the record envelopes move over them with less friction than on smooth shelves. These record shelves are slotted and grooved, so

as to pull out easily. Dealers who find it very difficult to provide for increased record stock without totally demoralizing their stock-keeping system, should investigate the merits of these very moderate-priced sectional record shelf cabinets.

New Salter Catalogue Aids Business.

Although the new catalog of the Salter Manufacturing Co., of Chicago, showing their complete line of talking machine and music roll cabinets, has been out but a few weeks, already a noticeable business has resulted directly from its circulation. All the products of the Salter Co. are advantageously shown in this publication, which is being mailed to dealers upon request. Just at present the Salter factories are running full time and finding it difficult to keep up with back orders, and for this reason dealers who contemplate taking on the Salter line will do well to order immediately to insure seasonable delivery. Another catalog showing a new addition to the Salter line, in the shape of player roll cabinets, will come from the press in a few days.

Wade & Wade Needle Cutter Business.

When a first-class product or piece of merchandise is put on the market it usually takes some time and considerable advertising to bring it to the attention of the public, but if the product has merit it is soon established as a standard and becomes a leader in its line. Such has been the experience of Wade & Wade, manufacturers of the Wade fibre needle cutter. Their cutter is one of the most simple in operation now upon the market, and its durability is insured by a high grade of workmanship and the best materials obtainable. The Wade has been advertised vigorously and the results have been most gratifying.

Farrand Co. Installs Talkers.

The Farrand Co., of Detroit, Mich., has recently installed a Victor department to which it will devote a large part of the first floor of the new piano house on Woodward avenue. It also will have a large representation in the main store. E. K. Andrews, son of E. P. Andrews, will have charge of the records, which will include every number in the catalog.

Condon Auto-Stop Cinches Sales.

While in Buffalo, N. Y., last month, returning from the convention of talking machine dealers

at Atlantic City, a representative of the Condon Auto-Stop was told how the sales of two machines put out on trial by Neal, Clark & Neal were cinched by two of the Condon product. The prospective purchasers complained of the trouble in having to get up to stop the machine after each selection, and when they were introduced to the Condon, seized upon it immediately as the solution of their troubles and closed their contract for the machines.

Says Orchestras Are Doomed.

In discussing the strike of theater musicians of New York City, while the fiddlers were resting on their bows, Percival Knight, of "The Quaker Girl" company in Chicago, advanced the theory that within a comparatively few years the orchestra will be supplanted by the talking machine.

"Talking machines will reach such a degree of improvement that it will be possible to make records of all the orchestral effects of every song and number of a show, no matter how big it is," declared the comedian, "and then all that will be required will be a musical director and a boy to 'feed' the machine."

"All that producers will have to do is to assemble an orchestra and play into these machines and records will be made. Thus one-night stands will have the same musical effects that the big cities have. And the artists can no longer upbraid the musical director for not keeping the right tempo. Not only will such an arrangement prove a big money saver, when musicians' salaries and railroad fares are taken into consideration, but it will keep a performance right up to the standard from a musical viewpoint."

L. & H. Service.

The magnificent service offered to talking machine dealers on Victor and Edison goods by Lyon & Healy is aptly illustrated in the company's page advertisement in this issue. This house has for years been noted for the promptness with which it fills orders, and with the complete Victor and Edison catalogs in stock and 150,000 records always on hand, it follows as a matter of course that "outs" are reduced to an absolute minimum. Other important points about L. & H. service are indicated in their announcement.

A BUSINESS PRODUCING VACATION WINDOW DISPLAY IN CHICAGO.

(Special to The Talking Machine World.)

Chicago, Ill., Aug. 10, 1912.

One of the most realistic and attractive "vacation" window displays in Chicago this season was that of Lyon & Healy's, which was used to show the pleasure that the talking machine can bring to the family on its outing. This was the most pretentious of any of the Chicago displays and was admired by hundreds of people.

The big window space, including the four large, well lighted sections facing on Wabash avenue, gave the decorator, U. G. Stewart, an almost unlimited space to work in and he used it to the best effect, as can be seen. Included in the scene was the front of a summer cottage, with a lady on the porch adjusting a record to a cabinet Victrola; a man dressed in khaki togs with fishing tackle in his hands, who seems to be waiting to hear

this last selection before going out to set his line in a stream of water near the house, where a little boy is already busy with rod and line.

Prominently displayed are several styles of Victor machines. The cottage front presents a really homelike and inviting appearance, with climbing vines entwined around the porch posts and foliage showing from the surrounding trees. A beech log is faithfully reproduced at the extreme right of the picture near a stream of water, and by an ingenious mechanical device a fish which the boy has pulled from the stream lies flapping on the log. There are also a number of squirrels and partridges in the trees and underbrush.

NEW MENACE TO TALKING MACHINE TRADE IN LATEST PATENT LEGISLATION

Legislation First Proposed in Oldfield Bill Has Reappeared in Congress in New Form—Many Clauses That Affect Price Maintenance and Other Matters in Which Trade Is Interested—Situation Reviewed by Waldon Fawcett, the World's Washington Correspondent.

(Special to The Talking Machine World.)

Washington, D. C., August 3, 1912.

After having been supposedly "put to sleep" by the opposition of such interests as the talking machine and player-piano manufacturers, the patent legislation first proposed in the Oldfield bill has reappeared in Congress in new form.

The latest development at Washington only goes to show that Louis F. Geissler, of the Victor Talking Machine Co., was indeed a true prophet when he stated at the recent Atlantic City convention of the National Association of Talking Machine Jobbers that the fight on this proposed legislation could by no means be counted as won.

That an attempt should be made in the closing days of the present session of Congress to get through this legislation which imperils the whole principle of price maintenance, has come as a distinct surprise to almost everybody in the music trades as to other manufacturing fields.

Nor does it alter the situation that it is not the original Oldfield bill that is now presented. It is a substitute for that bill, and it embodies all the features that so aroused the men in the music trades when the Oldfield bill was first introduced.

New Bill More Dangerous Than Old.

Furthermore, this "eleventh hour" substitute for the measure that was so vigorously fought is even more dangerous to trade interests that believe in the manufacturers fixing the resale prices on their patented articles, than was the original bill. There are two reasons for this added danger.

In the first place the new bill is much more likely to stand the scrutiny of the courts than was the old measure. The chief counsel for the Victor Talking Machine Co. and other eminent legal lights were very emphatic in the belief that the original Oldfield bill was unconstitutional, and would be so declared as soon as cases under it got into the courts, provided Congress enacted the measure into a law. The bill that has been drafted to replace the patent revision bill that set the trade by the ears a few months ago seems to be much stronger legally than was its predecessor.

In the second place, this new bill has the prestige that attaches to a recommendation for passage by the Patent Committee of the House of Representatives. The original Oldfield bill had a certain significance, to be sure, because its author was Representative Oldfield, who is the chairman of the House Committee on Patents, but for all that the original bill was merely introduced in the House and then referred to the Patent Committee for a report, as any other similar bill would be. Now comes a bill which is reported out of the committee with the endorsement of said committee in favor of its passage by Congress—something that the old bill did not possess. Of course, a committee endorsement is not equivalent to passage by the House, but undoubtedly it helps some. Or at least a bill that has not such committee sanction stands

little chance of ever coming to a vote in the National Legislature.

So that the present turn of affairs shows that the law-makers who are bent upon revolutionizing merchandising conditions, as they apply to patented articles, are very much in earnest. And it indicates that there cannot with safety be any let-up in the opposition, even if it is the "dog days."

How New Bill Came to Be Drafted.

The new patent revision bill, which will from this time forth claim attention was drafted, as was the old, by Congressman Oldfield. Only in the present case he acted in accordance with the suggestions and consensus of opinion of the various members of the Patent Committee, whereas originally he proceeded largely on his own initiative.

In rewriting his measure Mr. Oldfield was guided also by the disclosures made at the hearings before the Patent Committee on the original bill. It was at those hearings, our readers will remember, that various representatives of the music trade, including leading officers of the Victor, Edison and Columbia companies, appeared in person and presented forceful arguments against the bill, some of which were printed in these columns. Hundreds of letters were also received by members of Congress from manufacturers, jobbers and retailers in the music trades in all parts of the country, and some "missionaries" for the cause, such as Mr. Droop, of Washington, even extended their appeals to Senators, although it was announced that the Senate would not tackle this proposition until the House had arrived at some conclusion.

Well, to make a long story short, a good many of the music trade men, alike to those in other lines, felt that the fight had been won by the showing made at those committee hearings. It was even stated in some instances that the Oldfield bill had been withdrawn. Certainly the committee allowed the impression to go out that they were not going to be in any hurry to dispose of the bill one way or the other.

These circumstances, combined with the fact that the session of Congress was seemingly drawing to a close, lulled most of those in trade circles to a sense of security. Hence the shock when, like a bolt from a clear sky, has come this new proposition.

New Bill More Brief Than Old One.

The new bill is much more brief than the old one. The latter went into a revision of all the patent laws, including many provisions that are of great interest to patent attorneys, but are of little concern to manufacturers and merchants. The new bill does not attempt any wholesale revision, but concentrates on a few issues—the very ones, as it happens, which most concern the business interests having to do with the manufacture and sale of patented articles.

The rewritten bill, indeed, embodies in somewhat altered form the stipulations contained in clauses 17 and 32 of the original Oldfield bill—the two sections on which the music trade interests concentrated their opposition.

Clauses That Affect Music Trade.

There are two new clauses which cannot be said to have had any counterpart in the former bill, and yet both of which will have bearing upon the music trade. Indeed every one of the four clauses of this latest proposition will have greater or lesser influence upon existing status in this field.

The first clause of the new bill provides that an inventor's patent will in effect expire nineteen years from the date of his application. The actual term of the patent remains as in the past—seventeen years, so that this changing in the wording of the law will mean that an inventor has two years, and only two years, to get his patent through.

This measure is designed to block the plans of inventors who wish to insure patent protection for an idea, but who desire, for one reason or an-

other, to delay the actual taking out of a patent; that is, the beginning of manufacture. For instance, an inventor of an improvement in a player action, or in talking machine mechanism, might feel that he was "ahead of his time"—that the public was not yet ready to accept his advanced theories. Under the present plan such an inventor can, from time to time, submit amendments to his design which will delay final action in the Patent Office, and his patent (with full seventeen years to run) need not be taken out until he feels that the public has been educated up to the idea and he is ready to manufacture. Something of this kind happened, you will remember, in the case of the automobile. But if the patent law is amended as proposed by this initial section of the new bill an end will be put to such a scheme for waiting for a favorable market. An inventor will have to get his invention on the market within two years of the time he files patent application, if he wants the benefit of the full seventeen years that Uncle Sam guarantees him an exclusive market.

Supplant "Compulsory License" Clause.

The second section of the new bill supplants the "compulsory license" clause of the old bill, which stirred up so much opposition. In the original bill this clause compelled an inventor or manufacturer to either begin manufacturing a new invention or an improvement on which he had taken out a patent within four years, or else grant a license to manufacture to any person else (mayhap a competitor) who applied for it.

This stipulation was bitterly fought by both player-piano and talking machine manufacturers. It was represented that in many instances it was not possible to perfect an improvement or new invention and begin manufacturing within four years. In other instances it was shown the manufacturers of musical instruments held patents under which they are no longer manufacturing, for one reason or another, but which they do not want to be compelled to share with a competitor.

As revised this section is of somewhat different scope. It is now framed with a view to giving all possible protection to the original inventor. The compulsion to license cannot be enforced against an original inventor. He can hold his invention the full seventeen years without ever manufacturing if he so desires. But the compulsory license club is held over the head of any manufacturer or interest that acquires a patent for the purpose of suppressing the invention or crippling competition by "bottling up" an invention.

How Price Maintenance Is Affected.

The third clause of the new measure has to do with that chief bugbear of the old bill—the section that knocked out price maintenance and prevented a manufacturer from enforcing a resale price on his patented goods. The rewritten clause would cause almost as much havoc as would the old, because it stipulates that no purchaser or lessee of a patented article can be sued for infringement because he fails to observe the price

restrictions imposed by the manufacturer. In one sense this knockout of the principle of fixed, uniform prices is intended to be more complete than the old, in that, as now drawn, the prohibition of infringement suits because of price-cutting applies to present patents, whereas the other bill would, in the opinion of shrewd lawyers, have been possible of enforcement only in the case of patents taken out after the date of the passage of the bill.

Although this rewritten clause affords scant comfort for the manufacturer and dealer who believes in price maintenance, it does offer one loophole that did not appear in the old bill. It is so written as to dodge the subject of contracts, and to have no bearing on relations between buyer and seller based on contracts. Heretofore many manufacturers of patented articles have relied solely upon their patent rights to enable them to uphold prices, and have had no formal written price contracts with agents, retailers or others. But if this bill should become a law the only salvation of the manufacturer who desires to uphold prices would be to enter into ironclad contracts with jobbers and retailers, and perhaps they in turn would have to have contracts with the customers to whom they sold. Under this plan redress for price-cutting would have to be obtained on an action for breach of contract. Even under this contract system it would seem to be all but necessary to have the written agreements extend to the final consumer, as otherwise there would be no means of blocking a price-cutting department store that saw fit to buy instruments one at a time, here and there, at the full retail price, and then offered them for sale at a cut price as "leaders."

Patents and Restraint of Trade.

The fourth and last clause of the redrawn bill deals with a phase of the subject that was not touched upon in the old bill. It is virtually an amendment to the Sherman anti-trust law, making that law applicable to combinations in restraint of trade based on United States patents. This is the feature of the bill which will cause least uneasiness,

probably, in the music trades, and yet it is conceivable that there may be instances in which such a law might be invoked against manufacturers who are using one another's patents on the exchange or royalty basis (as are some of the firms in the music trades), provided these interests sought to exclude from the benefits of such patents newcomers in the field.

Bill Reported August 8.

The Oldfield bill to revise the patent laws to meet the recent patent monopoly decision of the Supreme Court was reported to the House by Chairman Oldfield of the Patent Committee on August 8.

GETTING BUSINESS IN SUMMER.

The New York Talking Machine Co. Showed an Increase of 33 1-3 Per Cent. for the First Six Months of 1912, and Summer Business Is Keeping Up If Not Adding to the Record.

During a brief chat this week with General Manager G. T. Williams, of the New York Talking Machine Co., 81 Chambers street, New York, distributors of Victor machines and records, he said: "We feel highly elated over the result of summer trade to date, and so far as that is concerned we can see no reason why it should not be better for the balance of the season. Our fiscal year closed the last of June, and the first six months of this year show an increase over the first six in 1911 of 33 1/3 per cent. This rate of increase, part of which was produced during the so-called dull season, is a little out of the ordinary.

"It would seem to me," continued Mr. Williams, "that a substantial gain of this nature, in the summer months and during a Presidential campaign year, effectually demonstrates that slow business, because of political unrest, is a myth and purely imaginative. Personally I do not believe that it will cause the slightest difference, except possibly during election month itself. However, our business

for the year so far is altogether too satisfactory to cause any worry for the remainder of 1912."

Mr. Williams expressed the opinion that the gain over 1911 was simply due to the high grade advertising of the Victor Co. and to the first grade product which the Victor Co. build. These two essentials, coupled with the New York Talking Machine Co. spirit of "get out and hustle for business," have accomplished marvellous hot weather results.

DOESN'T PAY TO "KNOCK."

Easy to Offend a Customer When Drawing Unfavorable Comparisons with Competitors.

A large manufacturing company, in its recent monthly schedule, made the following remarks, which are well worth passing along: "Gentlemanly bearing, frank address, mastery of your subject and enthusiasm are all so obviously necessary that everyone whose line of effort is sales work instinctively acquires or seeks to acquire these qualifications. Occasionally we see a salesman who has developed an exaggerated standard for one or all of these 'essentials' of salesmanship. It is easy to 'overdo' any good thing.

"We should particularly guard against drawing unfavorable comparisons with competitors, which might in any way be construed as 'knocking the other fellow.' There is not one salesman in ten thousand who can institute unfavorable comparisons, reflecting on the integrity and fair dealing of another dealer or manufacturer without creating the impression that the other fellow is a formidable competitor, and we fear him.

"Building up a customer's list on 'prejudice' is 'bad business.' Such a list will last just so long as you can find a new prospect to humbug—to take the place of the customer who 'woke up.' The only customers who last are those secured on a basis of 'Quality,' 'Service' and 'Fair Dealing.'"

GOOD TIMES IN CINCINNATI.

Situation as a Whole Most Encouraging—Manager Whelen, of the Columbia Co., Optimistically Inclined—Aeolian Co.'s Splendid Showing for Fiscal Year—Victrolas for Prominent Institutions—Columbia for Public Parks—Wurlitzer Co.'s Good Report—Lyric Co.'s Platform Expounded by President Stever—Other News of Trade Interest.

(Special to The Talking Machine World.)

Cincinnati, O., Aug. 2, 1912.

The talking machine situation in the Cincinnati district is somewhat encouraging. Considering the time of the year business is good. The Milner Musical Co. is still in business and apparently has made no changes, the firm continuing to carry a small line of pianos. The Krolage Music Co. has not yet opened up a new store for its talking machine department, as has been intimated for some time. John Arnold, over at Fifth avenue and Elm street, is doing fairly well, while Poorman is trying to take on a new line of goods, the Zonophone people having gone out of existence.

Manager R. J. Whelen, of the Columbia Phonograph Co., General, in the early spring predicted that business would be good this summer in the talking machine line and his predictions have been more than realized in the Cincinnati territory. He stated when asked as to the reason for this boom, which is unusual for the hot summer months, that it was mainly due to the elaborate advertising campaign of the Columbia people and the new types of Grafonolas which keep up the dealers' enthusiasm and makes them hustle for business. Mr. Whelen further stated that the Cincinnati store has doubled its business over July of last year, and added: "We must also give credit to the artists of world-wide fame who record exclusively for the Columbia. The Dictaphone again comes in for its share of the glory and we have closed one of the most satisfactory months in the history of the Columbia Co. on the sale of these wonderful instruments. One sale of note was the installation of nine machines each in the office of the auditor of passenger accounts and the office of the chief engineer of the C., C. & St. L. R. R. in this city. This sale was closed after a close competition."

Speaking of the business situation, the Aeolian Co. said: "This July finished our fiscal year for our new location, and we have found our new quarters to be handsomely remunerative as well as bearing the reputation of being the finest store in the entire West.

"It is remarkable," remarked Mr. Ahaus, manager

of the Victor department, "what location means to a Victor department. We will soon have to add a few more record rooms to our already spacious ones, and with the expected fall rush we will be prepared to give all, not missing one, our guaranteed 'Record Service.' Every record in stock is making a decided hit, and this month as usual we have every record cataloged in our store and the demand met.

"We have vigorously kept our features before the public and are now reaping the patronage we desired, and if we don't treble this year's total business next year we will be very much disappointed.

"We have a campaign laid out for the public school system for the fall that will be a hummer and sure to get all the trade possible, and the maximum is what we are after and shall get.

"We have just recently equipped the Cincinnati Sanitarium at College Hill with Victrolas, which affords us a fine advertisement and should produce a number of good sales. We are more than satisfied with our year's business and should have a wonderful patronage for the ensuing one."

The Columbia Co. has closed a number of contracts with dealers in the past month, who will from now on handle exclusively Columbia products. Many of the Columbia dealers are beginning to figure on their fall stock and prospects for a phenomenal fall business are very alluring. There is a steady trade for the Favorite and Regent Grafonolas.

Lewis G. Pilgrim, of Richmond, Ind., has made extensive improvements in his Grafonola department, building a very handsome booth for demonstration purposes and putting in a complete line of Grafonolas. Mr. Pilgrim spent a day in the Cincinnati store selecting such models as he desired, together with a very large assortment of grand opera records, which will figure prominently at his formal opening. Further announcement will be made of his formal opening, as he expects to have "big doings," so to speak.

The local Columbia store has succeeded in placing musical instruments in five of the public parks as a means of putting the best in music before the children. The five parks where these instruments can be seen and heard every day are McKinley, Sinton, Hanna and Inwood parks, and the Pearl Street Playing Grounds.

Harry Brower and wife, of C. F. Brower & Co., Lexington, Ky., stopped a short time at the Columbia's Cincinnati store and were very enthusiastic about the unusual summer business and the coming fall trade.

There are several new faces to be seen in the

Cincinnati office of the Columbia Phonograph Co., General. Miss Stella Green, who for several years was chief clerk with Messrs. Burch, Peters, Oppenheimer & Connolly, attorneys-at-law of this city, who, by the way, are large and enthusiastic users of the dictaphone, will replace Miss Nola Minton, who resigned recently from the Columbia service to take a much needed rest in the Kentucky mountains. Miss Stella Schwein will replace Miss Mandy Jacky, who has also resigned as stenographer.

The Rudolph Wurlitzer Co. in discussing current conditions said: "Business held up during July very well. The month opened up rather light, but the last two weeks showed a big increase, which made the average for the month very satisfactory. The wholesale demand for the cheap machines was very active, and large shipments were made, which very materially reduced our big stock of those styles, but the retail demand ran practically entirely to the higher priced machines, ranging above \$50.

"The wholesale trade has shown a very marked improvement, and the prospects are that the fall trade will open up very early this year, because of the encouragement that the dealers have received during the summer months.

"Some very big orders are booked for September and October deliveries, and a number for August 1 and 15. With heavy advance orders in our files, we feel assured that the trade will be very satisfactory from a jobber's standpoint. In regard to the retail end, we have only one thing to regret and that is that the working class have shown no disposition as yet to resume purchases of instruments. The working class among the foreign population are active buyers, but with this exception we have been getting very little trade from the working class.

"We have planned a fall campaign which will make active buyers out of the greater number of machine owners, and the record sales should increase very materially in consequence."

The situation at the Lyric Piano Co. is explained in the following snappy manner by President Stever: "Yes, we are very well pleased with the results we are obtaining in our talking machine shop. It is quite astonishing to know what can be accomplished little by little with energy.

"The writer not being a small goods man, put in a line of Victor talking machines and to tell the truth it was quite discouraging for a while, owing to the fact of our being away from the so-called piano row or music shopping district. But we have found by a little unique advertising and by courteous treatment, ever ready and willing to show the public something new, let them hear something new, that we have worked up quite an envious trade in our talking machine department.

"We have three people employed now in our department, and while we did not know how in the world to handle one when we first opened up the department, we find that all three of them are kept busy now.

"I think a great mistake is oftentimes made in people handling a proposition of this kind and not using enough time and patience to play records for their customers. I do not believe in using the same machine for all kinds of records. By changing them about we find that we interest customers, and by playing something new for them they are very often induced to buy two or three more records than they expected to purchase when they called in. So taking it all in all, we are very well pleased with the results we are now obtaining in our talking machine shop.

"We do a strictly cash business on all of our records, and we send out very few on approval. When a party selects a machine we take the time and patience to play the records right here for them and in this way it gives us an opportunity to keep a better selection to show at all times than it would if we were to put out five or six machines and send out a large selection with each and every machine. At that rate we would have a bunch of records distributed in different parts of the city and could not lay our hands upon any particular record which perhaps we would like to use, or would perhaps be called for by some customer."

TRADE NEWS FROM QUAKER CITY.

Business Reported as Satisfactory—New Dealers Enter Field—Pennsylvania Talking Machine Co., with W. L. Eckhardt in Charge, Take Over Columbia Jobbing Business—Estey Department Very Attractive—Buehn's Good Report for July—Taking Stock at Gimbels—News of the Month.

(Special to The Talking Machine World.)

Philadelphia, Pa., Aug. 8, 1912.

The talking machine business in Philadelphia for the month of July and early August has been most satisfactory. The good work of the previous six months of the year was kept up and there was no falling off in the lead of July, and it looks now as if this lead was going to be steadily maintained throughout the year. There is probably no business of any character in Philadelphia of which so much can be said, and it speaks well for the future of the talking machine business, and naturally the dealers and jobbers here are very optimistic.

They admit, however, that they have a problem before them that must be solved this fall which is going to be a very trying one for them to handle. They believe, however, that it is going to be adjusted and to the satisfaction of all parties concerned. Few dealers have started in the business during the past month, although a number have attempted to enter it, but the present restrictions as to the amount of the first order have kept many of them from opening.

The most important news of the week is the announcement, under date of July 30, of the Columbia Phonograph Co., as follows:

NOTICE TO OUR PHILADELPHIA PATRONS.

"In line with the general policy we announced about three years ago, whereby our distributing branches from time to time may be turned over, with exclusive rights and full protection, to individual jobbing concerns, we beg to announce that on August 1 our Philadelphia store and territory, heretofore conducted by us direct in the interest of our dealers, will be taken over by the Pennsylvania Talking Machine Co., under the able management and control of Mr. Walter L. Eckhardt.

"In expressing our sincere thanks and appreciation to the Philadelphia trade for their patronage in the past we beg a continuance of that patronage in behalf of the Pennsylvania Talking Machine Co. Mr. Eckhardt's experience and well known disposition to treat fairly with the trade, backed up by the high quality of Columbia goods and the great campaign of national publicity we are running for the benefit of all the trade, is a guarantee to you of a continuance of mutually profitable relations through our Philadelphia distributing agent.

"Address your orders and communications to the Pennsylvania Talking Machine Co., No. 1109 Chestnut street, Philadelphia, Pa. With renewed assurances, we are, yours very truly, Columbia Phonograph Co., General."

Mr. Eckhardt is now in full charge and there has been no change whatever in the force. The business of the Columbia for July was very much better than last year. The present Columbia store is going to undergo an entire rearrangement, and many changes will be made with a view to expedite the business. The policy of the Pennsylvania Co. will follow closely that of the Columbia, and they intend to make the place a home for all the dealers, a place for the handlers of other machines as well as their own, and will give them a practical illustration of how to handle the retail business.

Mr. Eckhardt says: "We want to extend a cordial welcome to all up State men and want to assure them that we will be glad to see them here and that we are going to get around to see them in their own homes."

The whole appearance of the store will be changed in remodeling it, and it will be one of the most attractive and convenient stores in the country, and they are going to try and arrange things in such a way that they will be able to give the best of service.

The Columbia Co. in July increased its Dictaphone business from 400 to 500 per cent. A. S. Irwin and Miss Kate McClain, of the Columbia force, are at present away on their vacation, and Joseph Murphy starts on the 9th. There is a rumor about the store that it is going to be Joe's honeymoon trip, but he modestly denies this. The Columbia has received the announcement of several new records by Kathleen Parlow, the violiniste, and Miss Gertrude Rennyson, the soprano.

The Estey Co. has its talking machine department fully established. It presents a very attractive appearance and is quite an addition to the fine Estey building. Aside from the booths, which are especially attractive, all the furnishings are in keeping in every way, and the manager, Walter Linton, is very proud of the department and already has been having some very good results. This end of their business will be pushed as soon as the fall arrives, and already a very large and varied stock of machines, cabinets and records has been received.

Manager Elwell, of the talking machine department of C. J. Heppe & Son, has been suffering for a month or more with an attack of rheumatism, but is very much better at present. He reports that their business was very good in July, and Mr. Elwell thinks it was considerably better than last year, although he has no figures to confirm it as yet, but he says they seem to have been shipping out a great many more goods. Among the out-of-town dealers at the Heppe house the

past week were Harry F. Cake, of Pottsville, Pa., and O. C. Hoffman, of Lambertville, N. J.

Louis Buehn, of Louis Buehn & Bros., notes that business was splendid in July and that his firm has run considerably ahead of last year. They are away ahead on the year, for their spring business was tremendous. Their business in Pittsburgh has also shown a healthy increase in July over the preceding months. Mr. Buehn says that the outlook for fall business is exceptionally good. He believes that the advent of the new Victor machines, the \$75, \$100 and \$150, will stir things up considerably. Mr. Buehn has his family at the shore for the season and is going back and forward each day in August.

They are taking account of stock in the talking machine department at the Gimbel store. They carry about three times more stock this year than last. Emmet Stewart, of the selling force, is at present away on his vacation. G. F. Wurtele was home sick for nearly a week, having been threatened with appendicitis, but fortunately he recovered without the necessity of an operation.

METZGER'S "QUIET" DAY.

Cartoonist Parkhurst Pictures One of the Familiar Scenes in the Office of Advertising Manager George P. Metzger.

The accompanying cartoon hits the nail plumb on the head. It is a typical scene in the office of Advertising Manager George P. Metzger of the Columbia Phonograph Co., General, New York, and was sketched offhand by the celebrated car-

toonist, H. L. V. Parkhurst, while awaiting his turn at the manager's ear. Mr. Parkhurst says that the picture is exactly what he saw. The caption which he attached to it was "Mr. Metzger's office on a QUIET day." Believe us, Mr. Parkhurst's eyesight is good. Many a time The World representative has witnessed the same thing, but lacking the artistic ability of reproducing it we can only thank Mr. Parkhurst for his sketch. Mr. Metzger certainly is a busy man—he keeps a bunch of busy ones around him—but he never loses control of the tiller, or of his smile and his ever genial manner.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

Although Summer Quietness Prevails Throughout Britain the Talking Machine Men Look Forward to an Active Autumn Season—Some Uneasiness Regarding Possible Disturbances in Labor Field—Small Types of Machines in Demand by Vacationists—James C. Goff Retires as Manager of Gramophone Co., Ltd.—New Copyright Act and Its Provisions Continue to Interest—Question of Royalty Payments—Thomas A. Edison on Merchandising—What the New Record Lists Have to Offer to the Public—Interesting Report on Trade in Russia—New Columbia House Organ Issued—Big Needle Output of One German House—Manufacturers Concerned Regarding Movement to Revise Patent Laws—Other Talking Machine News.

(Special to The Talking Machine World.)

London, E. C., Aug. 5, 1912.

We are now in the throes of the real quiet season and relaxation from the cares of business is the order of the day. Some of the leading talking machine men have already been and returned from holidays, looking all the better for the change. Many are now away, while others contemplate devoting some time of this (truly) August month at the seaside, in the country, or whither fancy leads them. Afterwards we shall be able to look forward to making plans in preparation for the fall trade, prospects of which, by the way, as far as one can predict from present signs, is regarded as being bright.

Manufacturers and traders find their chief concern engendered by the possibility of further trade disputes, and although a certain amount of uneasiness is perhaps not unnatural in view of recent happenings in the labor world, a careful analysis of the situation fails to reveal any cause for serious alarm. At least, it is not expected judging from present signs, but as these trade disturbing elements are engineered often with startling suddenness the future must, to a great extent, remain an unknown quantity so far as talking machine business stability is concerned.

Trade has not been too good these last few weeks, but an outstanding feature that calls for some notice is the remarkably steady demand from the public for the portable or hornless type of instrument. It is becoming increasingly popular each summer season, of that there is ample evidence, and when one reflects upon the derisive reception accorded the hornless machine only two or three years back, its present-day favor with all classes should greatly encourage dealers to direct their energy in pushing this line more than ever during the quietest time now with us. Every machine sold means orders for records, and if dealers would only recognize that their main source of profit is gained by the sale of records there should be less talk of summer trade slackness.

While the home trade is quiet, manufacturers are securing some nice shipping orders for delivery over a period, and on this basis I hear occasionally of contracts being signed for as many as one hundred thousand records.

James C. Goff Resigns.

Looked upon by the trade, friends and competitors alike, as a leader in his particular sphere of activity, a deal of surprise has been occasioned here by the news that James C. Goff has severed his connection with the Gramophone Co., Ltd. For something like three years he occupied the managerial chair with conspicuous ability, and the strong policy which he maintained to the last won for him the respect and admiration of the whole trade. A keen business man and a wonderful organizer, it may be said that Mr. Goff's influence will remain for a considerable period. He kept in close personal touch with the company's employees, and was held in much esteem by gramophone agents among whom he wielded a remarkable in-

fluence. A pleasing evidence of his popularity was the spontaneous send-off accorded him by the employees of the City Road office. Temporarily discarding the tools of their trade, they assembled outside, and as he emerged, in round after round of cheering, they gave full vent to their feelings. Attracted by such an unusual scene, and evidently thinking it was in honor of some great artist, passers-by soon joined the throng in their hundreds, and contributed not a little to swell the chorus of cheers. It was with great difficulty that the police succeeded in clearing a way for the traffic, and not until Mr. Goff's car had moved off did things resume their wonted aspect.

Sidney W. Dixon, sales director, who acted as manager prior to Mr. Goff's connection with the London branch, will return to that position for the time being. He is, of course, well and favorably known in trade circles and is sure of a hearty welcome.

Played Piano for Seventy-four Hours.

William Kendal, the young South African pianist, recently completed a seventy-four hour continuous performance on the piano, thus breaking the world's record. There is little credit in such a waste of energy, but in every walk of life there is to be found some crank obsessed with a determination to go one better than his fellows of the same family. Well, let them fight it out among themselves—it can do no harm, if it can do no good.

Discuss Orders Relative to Copyright Matters.

In a recent issue of the London Gazette are to be found voluminous details concerning the orders in council relative to copyright matters made by His Majesty; by and with the advice of his Privy Council, covering territory under His Majesty's protection and foreign countries, subject to the provisions of the copyright act 1911.

Recognizing that the phraseology of these orders in council is beset with so many difficulties, the directors of Universal Copyrights, Ltd., a concern which is devoted to the protection of record manufacturers' interests, convened a meeting on July 16 of all the members with the object of arriving at some understanding of the various points of the orders in question. Counsel was present in the person of Fletcher Moulton, who, by the way, has been given a general retainer on behalf of the company. An interesting debate ensued. The deliberations have resulted in letters of instruction as to reasonable interpretation of the orders in Council being sent out to all members for future reference and guidance. But in the opinion of eminent barristers there are many complex provisions, the real effects of which will only be known upon appeal to the courts.

Universal Copyrights, Ltd., by the way, is composed of fifteen record manufacturers, who have banded together and formed this association primarily to safeguard their interests in all matters concerning copyright difficulties. Under the company's articles of association, however, it has power to embark upon various ventures in the music publishing sphere, in addition to other fields of activity. The chairman is Sir George Croydon Marks, M. P., and Messrs. Louis Sterling, manager Columbia Phonograph Co., General, and Paul H. Cromelin, director Thos. A. Edison, Ltd., have been appointed directors. H. M. Lemoine, for some time assistant manager of the National Phonograph Co., Ltd., and lately as personal assistant to Sir George Croydon Marks, M. P., is the secretary of Universal Copyrights, Ltd., and with his extensive knowledge of talking machine matters he is just the right man in the right place.

The Royalty Payment Question.

As I have foreshadowed in these columns from time to time, the leading manufacturers have now decided not to increase retail prices on account of royalty dues. The penny tax on half crown records will be equally divided as between manufac-

turer and dealer, the factors for some reason or other being let off scot free. Bearing upon this subject, the following circular was recently issued to the trade:

To Edison Dealers.

Beginning July 1, 1912, the new Copyright Act takes effect, and although the stocks held by dealers on June 30 will be free, the manufacturers will be obliged to pay copyright dues on records shipped July 1 and after.

The heavy expenses of administration in connection with the act will necessitate an increase in the price of records, but to give our dealers the opportunity of laying in a stock in readiness for the season's trade, we have decided to make no increase in our prices until September 1, 1912.

By taking the utmost advantage of this concession and laying in a good stock prior to September 1 in anticipation of their needs for the coming season, our dealers will be enabled to postpone the effects of the change for an indefinite period.

On September 1, 1912, and until further notice, the dealers' prices of Standard, Amberol and Amberol Concert records will be raised by one half-penny (½d.), the list prices remaining as heretofore.

The National Phonograph Co., Ltd.
Edison Works, Willesden Junction,
London, N. W.

The Copyright Act renders copyright automatic, and it being no longer necessary for English authors to protect their works by registering them at Stationers' Hall, this famous repository for literature, etc., is now closed.

Edison House on Merchandising.

I have been asked to say a few words to serve as an introduction to the publication of a series of plans which have been selected from a number submitted by Edison dealers.

I believe in class merchandizing because it is intensified salesmanship, and intensified effort is a modern necessity in all lines of human endeavor.

As the adroit trial lawyer classifies the men in the jury box and directs to each the arguments which he thinks will prove most effective, so ought the merchant to classify the citizens of his district and address to each class that character of selling argument most likely to arrest their attention and excite their interest.

Dissect a department store advertisement and you will find it impregnated with skilfully diversified class appeal. Department store methods represent wheels within wheels of class merchandising. So ought every retail business.

It is sometimes contemptuously said of a merchant, who potters about his store and waits for custom, that he has adopted the line of least resistance. That is scarcely true. Waiting for trade is the line of least resistance towards nothing but failure. Nowadays the successful merchant must go out into the highways and byways to search for business. The right kind of newspaper advertising is one way to do this; intelligent letters—not cheap circulars—is another; dignified, tactful but aggressive canvassing is another—and the best of all.

But let the theory of class appeal underlie all of your selling effort. When you say to Mr. Jones "I know you like so and so, and I have it for you," how much more probable it is that you will get Mr. Jones' patronage than if you leave it to him to discover, unaided, that you have something which is capable of appealing to his particular fancy.

The lion's share of the phonograph business is going to the dealers who intelligently and persistently practise class merchandising, and it is well to remember that the sale of phonographs and phonograph records contains a problem a good deal like the old question: "Which came first, the chicken or the egg?" Phonograph records (the kind of music the prospective buyer likes), help to sell the phonograph, and thereafter the phono-

graph helps to sell the records. Therefore, in offering the phonograph for sale, offer it as musical entertainment as well as musical merchandise.

I hope to see every Edison dealer make and carry out a great many class merchandising plans. Many of you will, no doubt, be able to devise much better plans than the ones suggested. I am sure you will find it profitable to devote a good deal of thought to this subject. We have big things ahead of us, and I hope every Edison dealer will take the fullest advantage of his opportunities.

Success of Amberol Concert Records.

The Amberol Concert records have now become an established and permanent feature of the Edison monthly record supplements, and already 20 of this class have been issued. Everybody does not aspire to grand opera, but it is certain that everybody finds a constant issue of comic and ragtime selections a little wearing. With the happy medium in the shape of the Concert Amberol the monotony has been very appreciably removed. The dealer and public alike is in full sympathy with this Edison departure, which they accord a full measure of support.

In the advance September list to hand we find two further Amberol Concert selections, one vocal—"Abide with Me" (Liddle), beautifully sung by Miss Christine Miller, which is enhanced by a splendid orchestral accompaniment, and two charming violin selections, (a) "Menuett," G flat major (Beethoven), and (b) "Valse Bluette" (Drigo), beautifully played by Miss Kathleen Parlow.

Edison Amberol Records—"Be British" (P. Pelham and Lawrence Wright), George d'Albert, a descriptive song and recitation dedicated to the memory of the officers and crew of the "Titanic"; "Gems of Grand Opera," No. 1 (special arrangement), National Military Band; "Oh! Mister McPherson" (Godfrey and Williams), Billy Williams; "When the Convent Bell Is Ringing" (Mellor, Lawrence and Trevor), Stanley Kirkby; "Let's All Go Into the Ballroom" (Allen and Murphy), Miss

Florrie Forde; "The Admiral's Broom" (Weatherly and Bevan), Peter Dawson; "Walking Round the Bandstand" (Marlow and Heat), Jack Charman; "The Green Eye of the God" (Milton Hayes), Bransby Williams; "Same As His Father" (Lauder), Harry Lauder; "The Lament of Flora Macdonald" (traditional) (Neil Gow, Jr.), Archie Anderson; "The Lea Rig" (traditional), T. F. Kinneburgh; "The Land o' the Leal" (traditional), William Davidson; "Oh, You Beautiful Doll" (Nat. D. Ayer), Premier Quartette; "A Night in Venice" (G. Lucantoni), Miss Elizabeth Spencer and C. W. Harrison; "Passing Review—Patrol," National Guard Fife and Drum Corps; "Romance from l'Eclair" (J. F. Halsey), Venetian Instrumental Trio; "Black Diamond Rag" (H. Lodge), New York Military Band; "Favorite Airs from Robin Hood" (R. de Koven), Edison Light Opera Company; "I'll Take You Home Again, Kathleen" (T. P. Westendorf), Will Oakland and chorus; "Baby Mine" (A. Johnson), Miss Elizabeth Spencer; "Moonlight Dance" (H. Finck), American Standard Orchestra; "(a) I Know a Lovely Garden," (b) "Because" (D'Hardelot), Hugh Allen; "Rye Waltzes—Scotch Melodies," National Promenade Band, and "Goodbye, Rose" (H. Ingraham), Walter Van Brunt.

Edison Standard Records—"All the Houses Are Going Round" (Godfrey and Williams), Billy Williams; "The Broken Heart" (T. Dennis), Wm. McEwan; "The Blacksmith's Reel" (Irish bagpipe solo), Wm. Andrews; "Passing Review—Patrol," National Guard Fife and Drum Corps and "I'd Love to Live in Loveland with a Girl Like You" (W. R. Williams), Walter Van Brunt.

British Losing Ground in Russian Trade.

In his latest report, the British Consul at Moscow, Russia, has this to say:

"Statistics show that during the last five years imports into Russia from Germany, France and the United States have made great advances, while British imports have remained almost stationary.

In extenuation of this unsatisfactory state of affairs, it may be urged that figures are unreliable and that, further, certain branches of industry which once were practically British monopolies, are now being exploited by foreign competitors. However, even allowing for the inaccuracy of figures and for the inevitable increase of competition, other reasons must be sought for the stagnation of British trade in the Russian market. First and foremost comes the question of credit. It is impossible for British firms to grant the same credit as German and French firms, which are supported by their local trade banks; in Moscow alone there are five German and two French trade banks. This shows the necessity for creating a British institution in Moscow to assist British firms.

"Another factor which tells against British firms is the immense advantage which the foreign commercial traveler, especially the German, possesses over the British, owing to the fact that English is hardly spoken at all in Russia, whereas German is widely known. The British traveler not only usually knows no Russian, but is also very often greatly handicapped by the fact that he is niggardly treated by his firm as regards such expenses as entertaining allowances, etc. In Russia, most business is done 'over the bar,' and before a man can receive a big order he must, as the saying goes, 'show his money.' The German traveler, in addition to knowing the language of the country, is more liberally treated in this matter. British firms are also very badly represented by their foreign agents, often employing Germans or German Jews, who will take an agency for a British firm simply for the sake of blocking it.

"The credit system, which is the crux of the whole situation, is a sore point with British commercial journals, who point out, very rightly, that in urging the giving of long credit, consular reports are advocating what is under present conditions impracticable. British firms cannot compete with

foreign firms, which are backed by their own trade banks, and until the United Kingdom establishes local banks in Russia and falls into line in this respect with other nations, British firms will always be at a serious disadvantage, as far as the Russian market is concerned.

The Latest Columbia Rena Records.

The latest batch of Columbia Rena records comprises a magnificent collection of popular fare by popular artists. They are all good selling titles, a few examples of which being:

Twelve-inch Records—"Les Cloches de Corneville"—"With Joy My Heart"—Valse Rondo (Planquette), Andrew Laxon and "Les Cloches de Corneville," vocal gems, Columbia Light Opera Company; "The Herd Girl's Dream" Aug. Labitzky, violin, flute and harp trio, and "Love in Idleness," serenade (Allan Macbeth), violin, flute and harp trio; "The Last Hope—Religious Meditation" (Gottschalk), and "Gloria from 12th Mass" (Mozart), Prince's Grand Concert Band.

Ten-inch Records—"Questa o Quella," from "Rigoletto" (sung in English) (Verdi) Walter Wheatley, and "Angels Guard Thee" (B. Godard), Walter Wheatley; "The Pink Lady," waltz (Ivan Caryll), and "Interruptions, One-Step" (Felix Godin), Casino Orchestra, and "Valse Royale," with bells (Walter Partridge), and "The Bells Waltz," with bells (Walter Partridge), Band of H. M. Scots Guards.

New Columbia Co. House Organ.

"The World of Records" is the suggestive title given to an attractive little house organ issued by the Columbia Phonograph Co. It gives interesting details concerning the various Columbia record issues, in addition to many other news items and is for circulation among the great talking machine public through the medium of dealers, who can have supplies free of charge.

Big Output of Needles by German House.

It is reported that one of the largest needle manufacturing in Germany produced in the course of last year something like 1,400 millions of needles of all kinds.

Patent Law Revision.

It is significant that President Taft recently sent a special message to Congress, in which he asked for authority to appoint a commission to investigate the patent laws of that country, and to report concerning the changes considered necessary to make them fit for the present commercial and scientific conditions. While the President points out the great value of the existing patent system, he also sees quite clearly that reform is needed. Especially noticeable is it that he urges a simplification of the patent laws, and that the burden of proof in cases of contested validity should be imposed upon the individuals who infringe.

It is generally believed that the German patent law will be revised in 1914, and it is considered probable that one of the changes made will be to lengthen the life of a patent. At present only fifteen years are available in that country, and the real life is at least two years shorter, because the life is reckoned from the day the patent is filed. It will be remembered that there has been a recent amendment of the German patent law to bring it into line with the revocation practise in the United Kingdom.

As a writer in the Daily Telegraph says, the experience of most English inventors is that it is more difficult to obtain the grant of a patent from the German office than from any other country in

the world. It is fairly certain that an extremely thorough search is made. There are many directions in which the patent law of this country could be improved, and one of the things that seem to be required is an international society, which will tend to discussions revealing the good and bad points of the patent systems of other countries.

Farewell Dinner to Frank L. Dyer.

Just prior to his departure for the States, President Dyer, of Thomas A. Edison, Inc., who visited this country in June, was the object of a pleasing little ceremony at the Kingsway room of the Holborn Restaurant. To commemorate his visit a dinner was arranged by the management and staff of the National Phonograph Co., Ltd. Sir George Croydon Marks occupied the chair, and in introducing Mr. Dyer to those present referred to the many difficulties the company experienced in the early days and the continuous litigation that ensued, owing to copyright legislation and other conditions, the pirating and duplicating evils which were rife at the commencement of the phonograph industry were now, happily, non-existent. In an interesting reply Mr. Dyer outlined his association with the company since 1904, and proceeded to predict further improvements in the phonograph product during the coming fall. The home kinetoscope, it was hoped, would be on the market before long, and what with that and several other changes and improvements now being contemplated, the trade would be in for a time of much prosperity. Paul Cromelin, in response to Mr. Dyer's speech, made reference to the high esteem in which the president was held by them all. During the course of the evening a toast was proposed to the great inventor, Thomas A. Edison, and was responded to with great enthusiasm.

Stimulating Summer Business.

As usual, the Gramophone Co. has in being an excellent summer scheme for encouraging the dealer to persevere in his efforts to maintain a satisfactory turnover, and to this end the company is spending quite a liberal amount of money in advertisements, posters, booklets and other publicity trade winners. A special list of titles suitable for playing in the open air and suggestions for booming hornless machine sales are of real practical benefit these days, when dealers are apt to overlook the necessity of bringing into use all their energies and best thoughts with the object of stimulating public interest in the grand enjoyment-possibilities derivable from the use of a gramophone in the garden, on the yacht, picnic or at other outdoor functions.

"And the night shall be filled with music,
And the cares that infest the day,
Shall fold their tents like the Arabs,
And silently steal away."

"His Master's Voice" Records for August.

A number of excellent pieces suitable for outdoor use are to be found in the current August list of "His Master's Voice Records," and are as follows: (1) "Molodka Comic Folk Song," (2) "Sun in the Sky, Stop Shining!" (folk dance), and "Toreador et Andalouse," from "Bal Costume" (Rubenstein), Imperial Russian Balakaika Court Orchestra; "Dwellers of the Western World" (Sousa), Sousa's Band; "Cankanibalm Rag" (Pryor), Pryor's Band; "Kathleen Mavourneen" (Crouch), John McCormack; "The Dear Homeland" (Slaughter), Thorpe Bates; "Anchored" (Watson), Peter Dawson; "Within a Mile o' Edinboro' Town" (Durfey), Miss Lucy Marsh; "My Message" (d'Hardelot),

Miss Marion Beeley; "The Rosary" (Nevin), Mme. Edna Thornton; "The Skeleton Rag" (Wenrich), American Quartette; "Tambourin Chinois" (Kreisler), Fritz Kreisler; "Serenade" (Squire) (cello), W. H. Squire; "Novelletten, No. 2" (Gade), The Renard Trio; "The Ghost of the Banjo Coon" (Caldwell), Arthur Collins; "The Same as His Father Did Before Him" (Lauder), Harry Lauder; "Poor Old Cassidy" (W. H. Atkinson), Nelson Jackson.

Edison "Opera" Phonograph Finds Favor.

The new Edison "Opera" phonograph is said to be finding much favor in talking machine circles here. So much so that the Edison Co. estimate orders in hand will absorb the new few consignments, but supply and demand, it is hoped, will be leveled at no distant date, although their temporary estrangement is, in a sense, a good index of satisfactory business. The company reminds dealers that an oak "opera" model, similar in construction to the mahogany type, can now be obtained at the price of seventeen guineas retail.

Jose Juan Hoffay Married.

A marriage of considerable interest to talking machine trade circles took place on the 22d inst. at the Oratory, Brompton, at 11 o'clock, the marriage of Jose Juan Hoffay, third son of the late Theodore Hoffay, of New York and Mexico, and Miss Edith Mary Twyford, second daughter of the late Augustus S. Twyford, of Wimbledon. The marriage, which was performed by the Rev. Father O'Hare of St. Aloysius Church, Oxford, assisted by Father Crewse of the Oratory, was followed by nuptial mass. Paul H. Cromelin, manager director of the Edison Co. in London, acted as best man.

Following the ceremony a reception was held at 67 Egerton Gardens by Mrs. R. Percy Simpson, sister of the bride, where the young couple received the congratulations and well wishes of their many friends. The gifts from relatives and friends were numerous and costly. Mr. and Mrs. Hoffay left later for the New Forest, where they will spend their honeymoon. They will sail for Buenos Aires in August, which will be their future home.

Mr. Hoffay was for many years the representative of the Columbia Co. in Mexico, and is now its general representative for South America, with headquarters at Buenos Aires.

Gramophone in Drama.

At the Theater Royal, Belfast, a gramophone is a conspicuous feature of the first act in the drama, "My Partner." A sort of entertainment is given and the use of a talking machine was certainly a happy inspiration. The instrument was loaned by Thos. Edens Osborne, who derived much publicity therefrom in the local press.

Quarterly Dividend Declared.

A quarterly dividend of 10 per cent. per annum on the ordinary shares has been announced by the directors of "His Master's Voice" Co.

A New Consolidation.

Messrs. Blum & Co., Ltd., this city, informs me that the Kalliope Musikwerke, with whom they recently amalgamated, has absorbed the entire concern known as the "Symphonium Gessellschaft."

A small number of well-paid, well-trained, efficient clerks can do more work at less cost than a great number of poorly paid, untrained, inefficient workers. The value of the article sold is increased by being sold by an efficient clerk. A wholesome, bright, smiling, contented clerk adds worth to even the poorest article.

NEW CONCERN IN LOS ANGELES.

Musical Record Co. Has Attractive Quarters—Handling Victor Line—Many Visitors Recently—Edison Phonograph Business Lively in Oxnard—A. J. Morse, of San Diego, Brings Back a Bride—July Made a Good Showing Although Vacations Cut Into Business in a Marked Degree—What Dealers Report.

(Special to The Talking Machine World.)

Los Angeles, Cal., July 30, 1912.

July closes as a very brisk month among all jobbers and retailers of talking machine goods. The fact that many owners of talking machines are away to the beach or mountain resorts does not affect record trade in the least. Talking machines seem to be a necessity on vacation trips and outings more than any previous years.

A new talking machine company has recently sprung into existence, the Musical Record Co.'s "Victor Shop," 814 South Broadway. This new firm has spared no expense to equip its rooms in the most up-to-date fashion, having several absolutely sound-proof rooms for the demonstration of goods. These rooms consist of a Vernis Martin, Turkish, mission, mahogany, golden oak and other finishes, each decorated accordingly as to their respective salesrooms. A very novel feature in connection with the talking machine line is that of a Japanese tea garden with rustic effect, where ladies can be served with afternoon tea by Japanese. A Victrola XVI. is used to entertain its patrons.

Albert D. Wayne, a very prominent talking machine man in this city, is general manager of the concern, assisted by H. F. Major. Every effort has been used to make this the ideal spot for the comfort of its customers, catering only to the highest class of trade possible.

Shireson Bros., 349 North Main street, have sold many talking machines within the last few weeks to the Latin races of their section.

There has been a number of out-of-town dealers in the city recently among whom are C. W. Beattie and family, of Marawpa, Cal., who is stopping at Long Beach for an outing, and A. W. Raney, of Hanford, Cal., who is spending his vacation at Ocean Park. These two dealers are very prosperous Edison dealers in their respective districts.

A. J. Morse, manager of the branch of Southern California Music Co., of San Diego, has returned from New York after several weeks' vacation, bringing back with him a bride. By this act Mr. Morse surprised many of his friends and associates.

The Talking Machine Shop reports business on the upward bound, closing the month with a very satisfactory trade in both machines and records.

Scott T. Allured, connected with the talking machine department of the Wiley B. Allen Co., of this city, has been transferred to the San Diego branch to manage the same department in the place of Miss Ruby, who has just left for New York.

E. Howland, of Central avenue, has shown a great selling ability by disposing of many Edison machines in the past few weeks.

B. H. Burke, who has been connected with the Southern California Music Co. for some time, is now located with the Wiley B. Allen Co., of this city. Mr. Burke is by no means a stranger to this section, but is a very prominent figure in this line all along the coast.

The J. B. Brown Music Co. has demonstrated by its sales of late that business is not quiet in the talking machine department, thus showing a decided increase in this line for the same period last year.

Earl S. Dible, manager of the talking machine department of the Southern California Music Co., of San Diego, spent several weeks' vacation visiting relatives and friends.

Geo. T. Austin, a prosperous Edison dealer of Oxnard, was in the city for a few days and states that the phonograph business is most excellent since the harvest of a very heavy bean crop, of which his section is so noted. Mr. Austin will leave in a few days for the mountains on a fishing trip and he expects to have as much success fishing as he has selling phonographs.

O. A. Lovejoy, manager of the talking machine

SHEIP & VANDEGRIFT, Inc.
PHILADELPHIA, PA.

department of the Southern California Music Co., reports that the wholesale trade is above the average for the summer months, especially in the larger Edison machines, which its dealers in general have been very active in selling.

The T. J. Johnson Music Co., 415 South Main street, a wide-awake Victor dealer, is making wonderful progress with the Victor goods, which he considers the only line to handle.

MUSIC IN THE AUTO-HORN.

The Peculiar Request That Has Come to the Office of Henry W. Savage.

From Sunbury, Pa., to the office of Henry W. Savage there came recently a query regarding the consideration that would be demanded for the privilege of playing the airs of "Little Boy Blue," "The Merry Widow," "Somewhere Else" and other musical comedy and operatic successes controlled by that manager, on automobile horns, said horns to be sold promiscuously to whomsoever will buy them. The writer,

signing himself Allan L. Pencross, explains that he has perfected a plan for equipping auto horns with miniature talking machine disc records, which he intends to put on the market as soon as the patents covering this method of sound reproduction have expired. He enthusiastically discusses the possibilities of tremendous fortune lying in wait for the genius who makes it possible for the rich farmer to lessen the tedium of his journeys of inspection by tickling his ear with the strains of popular music, which his absorption in farm duties and his distance from the theatrical district make it impossible for him to enjoy in a playhouse. Pencross draws a vivid picture of a hundred thousand tired business men skidding from their suburban homes in the morning and back in the evening to the accompaniment of tunes calculated to drive the most active care into retirement.

Why is it that when a man makes a success he is very apt to swell out his chest like a pouter pigeon and take all the credit, but when he registers a failure he is inclined to blame it upon conditions over which he had no control?

The Columbia Demonstration Double-Disc Record—the only advertising device that literally tell its own story; the only “talking catalog” in the world; the record that gives the owner not only a full 65 cents’ worth of music for 10 cents, but three minutes of argument and demonstration which seem to be even more popular than the music side of the record itself.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

MUSIC ON THE WATER POPULAR.

Talking Machines for Canoes a Big Feature of St. Louis Trade This Summer—Bollman Bros. Victor Publicity—Voight with Silverstone—Pleased with New Edison Disc Phonographs—Summer Trade Has Been Exceptionally Good in Both Retail and Wholesale Fields—The Outlook for Fall and Winter Is Most Promising and the Trade Is Buoyant.

(Special to The Talking Machine World.)

St. Louis, Mo., Aug. 10, 1912.

The Meramac river, which flows into the Mississippi river near St. Louis, is a popular resort with St. Louis young folk who like canoeing as a summer sport. Heretofore it has not figured in the talking machine business, but this year it has created a source of a goodly number of sales for small machines. The canoes are frail craft and the stream is swift, and in the last few years there has been a appalling loss of life among the merry-makers, but so far no craft supplied with a talking machine has overturned or lost an occupant. The tiny machines fit nicely in the bows of the boat and the rollicking boating song records make an appropriate accompaniment for a ride down the turbulent stream. It is just a bit weird, according to campers, to be awakened at night with a well sung chorus from light opera or a sprightly waltz done by a good band, as some canoe goes by. None appears to know just how the fad started, but a number of young men fitted their canoes with tiny machines and others followed suit, and now excellent music is the accompaniment of the laughter and shrieks of delight from the boating parties. Concert playing, with half a dozen machines working within hearing distance, has been successfully tried, and this method gives the same melody for several miles up and down the river. The Columbia Phonograph Co. caught the first of this trade, and it has had a neat line of business, bringing into the store some young men who are very desirable customers, and the trade has spread. Sales managers are anticipating some more business from the same source this fall, when these young men come to trade the tiny machines for larger ones, suitable for home use in their homes. Some of them will, it is likely, merely be transferred to winter club houses, but then will come a demand for more elaborate records, for longer and more interesting programs.

The trade so far this summer has been very good and previous summer totals are being eclipsed except where outside salesmen were used very extensively. None of the houses is pushing business with large outside forces this summer, because of the cost of solicited sales in the summer months. But while this is not being done, the service idea is being pushed as strongly as possible and it is giving excellent results, and the conclusion is that it is really of better profit to follow customers more closely in summer than in winter. A talking machine on the porch will often attract for an informal call a neighbor who will express a liking for talking machine music but who would not dream of dropping in when the doors are closed. The retail business has been

especially good and jobbing prospects look excellent if advance orders are correctly stated.

Bollman Bros.' Piano Co. made a neat window display for the Victor machines with a tent erected on a green sward with figures of the campers reclining about listening to a talking machine inside the tent.

Raymond Voight, recently with the Ditzell Music Co., Oklahoma City, has taken charge of the dictating machine department of the Silverstone Talking Machine Co., and is pushing the installation of these instruments. Mr. Silverstone, on his return from the east, installed a window display for these instruments that was a little out of the ordinary. He had one of the machines in operation and on an extension of the cylinder he had an endless belt, twelve inches wide, on which was printed several recommendations for the dictating machine. The belt reached from the cylinder almost to the floor and moved round rapidly enough to make the reading a very interesting task. The question as to whether the belt was moving too rapidly was an interesting one, but it was noticed that the spectator who missed a word as it went around would wait until the return to complete the sentence.

T. E. Price of Belleville, Ill., was a recent visitor at the Victor and Columbia jobbing rooms and reported excellent business prospects in that suburban city.

Mark Silverstone, president of the Silverstone Talking Machine Co., was delighted with his trip East to see the new Edison machines, and said that to him the most remarkable feature of the exhibition was eighty jobbers enthusiastically applauding the music product of a machine. Mr. Silverstone praises the new machine very highly and declares that his only disappointment in the new product is that none are to be priced on a popular scale. While one cannot but admit that the machines from a quality standpoint are a strictly high-class proposition, says Mr. Silverstone, for business reasons a popular priced machine would be desirable. "I believe the Edison disc is the thing to give accurate and desirable reproductions," said Mr. Silverstone, "and that in time all machines will use the up and down reproduction method. To those who heard the demonstration in New York it was amazing. Of course I am anxious for October to come, when I can show these machines and try them out on the public."

Harry Levy, manager of the talking machine department of the Aeolian Co., says that store is enjoying an unparalleled summer trade in the retail department, with the XVI. models leading all others in the demand. "We have every reason to believe that this fall will show an unprecedented business in all talking machines," he said to the World correspondent. "Our outlook for the jobbing trade was never better, and we are in excellent shape to make shipments complete; better than ever before. The country trade has been good and our order book will show that it is going to be better as soon as the fall shipments begin. We arranged the usual vacation schedule for the stock room for this summer, then had to call one of the boys back."

John Henry Lynch, an Edison dealer, at Ed-

wardsville, Ill., came over as soon as Mr. Silverstone returned from New York to get the latest news from the new machines.

A. C. Thiebes, president of the Thiebes Piano Co., one of the large Victor retailers down town, has gone to Massachusetts to spend the rest of the summer at the seashore with his family.

H. C. Currens, of the Piano Exchange, who handles a good many used talking machines, left Roy Thompson in charge while he spent his vacation in Chicago and Indianapolis.

Sales Manager C. L. Byars is back on the job at the Columbia store after spending his vacation fitting up his chicken coops and garden for the fall campaign. Mr. Byars, like Manager Ramsdall of the same company, admires poultry and finds pleasure and profit in raising it. This spring he moved to Clifton Heights, a suburban district inside the city limits, and is settling down to business so well that he called off a trip to spend his time at home enjoying complete rest from phonograph talk and the satisfaction of doing something for himself.

Manager Ramsdall of the Columbia Co. made one of his trade excursions to Taylorsville, Ill., early this month and says that his "getting acquainted" visits to dealers are proving profitable and pleasant.

Harry Levy, of the Aeolian Co., returned from his convention trip east enthusiastic over his outing from social and business standpoints. On his return he visited Cincinnati and Indianapolis, trade which he supplies from the St. Louis depot.

Manager Robinson, of the talking machine department of the Thiebes Piano Co., reports excellent summer business with splendid record sales.

E. C. Rauth, secretary of the Koerber-Brenner Music Co., Victor jobbers, returned from his convention trip the middle of July with a carbuncle well on the road to development under his eye. The result has been that he was kept away from business until the first of the month, the location of the carbuncle on such an acute nerve center giving him so much pain that he was confined to his home. When he returned to his desk he found trade moving along well and fall prospects very bright. Mr. Rauth expressed satisfaction over his eastern trip.

The Columbia Co. have experienced excellent results from advertising the demonstration record.

THE TRUTH AND ALL THE TRUTH.

It is said that the following notice is to be found in every part of a big institution that issues a mail order catalog. It's worth reading:

NOTICE.

There must be no lying—white lies or fabrications—in any department of this business. Whatever the cause, whosever the mistake, however bad the mix-up or heavy our loss, we are going to sit tight and tell the truth. This applies to everybody, from the head of the concern to the newest office boy, and includes every detail of business from salesmen's promises to excuses for non-delivery. It concerns our relations with our customers and our relations with one another.

"TALKER" TRADE IN MICHIGAN.

The Much Advertised Cadillaqua Celebration Did Not Help the Talking Machine Business—Join in Victrola Advertisement—Many Sales of Dictaphones in Detroit—Interesting Talk on the One Price System—Strasburg's Plans—Occupy New Quarters in September.

(Special to The Talking Machine World.)

Detroit, Mich., Aug. 10, 1912.

That blighting Cadillaqua, the civic celebration of the birthday of Detroit, which was heralded the country over as a coming additional wonder of the world and touted among the business men as sure to bring a million dollars or so to the city from the provinces to be spent with Detroit merchants, did more harm to the talking machine business here than anything which has turned up in years. Trade was almost absolutely dead, but since the thing ended the population has got back to its normal stride, which is largely a stride to the talking machine stores. The managers are hoping that the reaction will get them back some of the profits they failed to accrue in the last week of July.

The Farrand Co. has taken a niche in the big Victrola advertisement which is almost constantly run in the local dailies. It occupies a space of half a page or so, with the word Victrola and a cut as the feature and the subsidiary announcements of the Max Strasburg Co., the Victrola shop, Grinnell Brothers, state jobbers, the Farrand Co., the Cable Piano Co., the American Phonograph Co., and the Doran Phonograph Co., the principal downtown stores which handle the Victor line.

It is considered one grand scheme, for the announcement emblazons the name Victor on the minds of everybody who has any idea of buying a talking machine, and the cost is divided so that the price of a half-page is not onerous.

The Columbia Co. has sold thousands of dictaphones to manufacturers and professional men in Detroit. Some big plants have more than fifty of them in their offices. Among these are the Studebaker Corporation, manufacturers of E-M-F and Flanders motor cars, and the Burroughs Adding Machine Co., two of the largest manufacturing concerns in Michigan. Dozens of other industrial establishments have a score or more—the Gray Motor Co., the United States Tire Co., the National Manufacturing Co. and many others. In thousands of offices of lawyers, bankers and business men generally there are from one to half-a-dozen. In short, there are so many in the city that the Columbia Co.'s branch here keep two men busy constantly on inspection work, seeing to it that the machines are in perfect order.

Manager K. M. Johns, of the Columbia branch, still on his auditing tour, is in Indianapolis now. S. E. Lind, acting manager, received a letter from him this week commending the business shown in the last report Mr. Lind made to his absent chief. Except for Cadillaqua week July has run away from June, though generally July is a lighter month than the first one of summer. This condition is ascribed to the weather. Everybody is postponing vacation in the hope that after a while the weather will warm up sufficiently to make it worth while to take a couple of weeks off, consequently their purchases of talking machines and records are made later.

Acting Manager Lind has been notified that he won the May collection prize. The Columbia Co. offers a cash prize each month to the manager of the branch store which shows the best collections in proportion to the business done. Manager Lind did not appropriate all the credit to himself, however, but divided the purse among the members of his staff who had been of greatest service to him.

Manager Harry Rupp, of the talking machine department of Grinnell Brothers, is much disappointed at the failure of the recent convention in Atlantic City to take action on the proposition to permit adding a legitimate interest to the price of talking machines sold on contract, and also pleased at the firm stand the association took on the matter which forced the first mentioned into

the background—the campaign against the measure in Congress which proposes to forbid manufacturers of goods of any kind to fix the price of their product.

The talking machine men in Michigan are doing their part toward the attempt to kill this bill. Michigan Congressmen are hearing from the dealers and their friends daily, with explanations of how such an act would injure not only the talking machine business but many other businesses as well. Besides this, the activity of the talking machine people has awakened the representatives of other lines of business. They all realize how the withdrawal of a manufacturer's right to establish a price on his product would transform the present striving for high quality in goods, whether talking machines or anything else, into a striving for cheapness and the lowest price possible. The appeal for business would have to be on price, not quality.

"The one-price system is very well established in Detroit," said Mr. Rupp. "It is enabling the talking machine dealers to obtain a high class of trade which they did not even aspire to a few years ago. They got this fine trade because they offer high-class goods. If the one-price system is knocked out by law the trade will be knocked into a cocked hat. There will be a scramble to cut the cost of manufacture in every way possible and what will be the result? Who wants a low-grade talking machine? It won't furnish any real music. Therefore it will have no value. Yet the manufacturers cannot afford to put the value into their machines that they do now, for they will have no guaranty as to whether they can charge enough for them to get their money back.

"The talking machine business needs high quality and the right to fix a price to maintain high quality more than does any other business. At present the talking machine has superseded other musical instruments in schools and other public places and in many of the best homes. With quality lowered, it would come out of all these places.

"However, I don't think there is much danger of the bill getting through Congress. We are doing too much good work against it."

The Max Strasburg Co. will not get into its additional space this month, as had been hoped, but probably will be able to spread out by the first of September. That will be exactly a year from the date of going into business. The fact of being compelled to seek double the space originally contracted for within the first year of business speaks for itself with regard to the growth not only of the Max Strasburg company's trade but of the entire talking machine industry in this city.

COLUMBIA FIBRE NEEDLES

Now Ready for the Trade—Can Be Used on All Columbia Instruments Except "Bijou."

The Columbia Phonograph Co. announces that it is now ready to supply the trade with Columbia fibre needles, which may be used on all Columbia instruments with the exception of the "Bijou" without entailing any cost for new equipment. This company is also supplying the Columbia needle cutter, which will enable the fibre needles to be repointed eight or ten times.

The Columbia fibre needles come in two sizes, No. 1, standard length and thickness; No. 2, shorter and heavier for greater volume of tone. The needles and needle cutter are sold at very reasonable prices and may be had by dealers from Columbia distributors throughout the country.

DISPOSES OF MCGREAL BUILDING.

(Special to The Talking Machine World.)

Milwaukee, Wis., Aug. 8, 1912.

Lawrence McGreal, local Edison jobber, has disposed of his lease on the McGreal building at 174-176 Third street, devastated by fire recently to the Ogden estate, owner of the property, for \$25,000. The lease had ten more years to run. It is rumored that an Eastern theatrical syndicate, probably the Shuberts, will lease the property, tear down the present shell and erect a new theater. It is an excellent center.

**We'll help you out of the hole**

If a customer comes into your store and "puts you in a hole" because he wants something you haven't got and wants it quickly, you can always depend upon us to help you out.

That's a part of our service—our regular service—and while the need of a "rush" may get you a bit excited it won't cause a ripple at our end of the line, for every order is a rush order with us.

All goods are shipped the same day the orders are received.

Everything you want in Victors, Victor-Victrolas, Victor Records, record cabinets, needles, fibre cases, horns, repair parts and other accessories you can get from us instantly whenever you want it.

That's "some service", but it's the kind we give our customers always.

As a starter, drop us a line today for our latest catalog and our booklet "The Cabinet That Matches".

Foreign Records

We have in stock ready for immediate delivery the entire list of Victor foreign records:

Arabian	Greek	Norwegian
Bohemian	Gregorian (Latin)	Polish
Chinese	Hawaiian	Portuguese
Croatian	Hebrew	Roumanian
Cuban	Hungarian	Russian
Danish	Italian	Sistine Choir (Latin)
Finnish	Japanese	Slovak
French	Jewish	Spanish
French Canadian	Mexican	Turkish
German	Neapolitan	Welsh

"If it's in the Victor catalog, we have it".

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., Aug. 8, 1912.

AUTOMATIC GRAPHOPHONE OF THE DISC-RECORD TYPE. James I. Gemmill, Orrville, O. Patent No. 1,028,707.

This invention relates to automatic mechanisms and particularly to a multiple disc-record graphophone. It more particularly relates to mechanism

of the character adapted to handle and play a large number of disc records of the type having a selection recorded on each side thereof and further adapted to turn the record and play the reverse side, from that last played, in an alter-

nate manner. This arrangement provides a machine, excellent for the purpose of a continuous performance without any attendance whatever.

The silent period, or the time during which a record is changed and turned, is very short, and

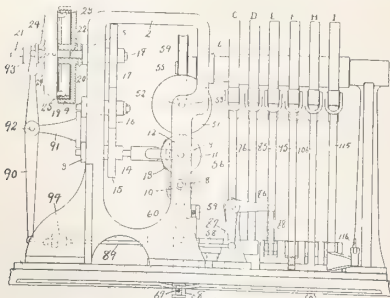

as the machine is electrically operated it means all of the requirements for this type of a machine.

Figure 1 shows the entire machine; Fig. 2 is a vertical front view of said machine as in Fig. 1, with the lid and front side removed and cut

away respectively, and serves to disclose therein a portion of the mechanism and a bank of the records in position; Fig. 3 is a view similar to the last, except that the mechanism shown in Fig.

2, or the greater part thereof, has been removed, and the elevated structure, comprising the elevated belts as a traveling member, and the tracks to-

gether with the necessary pulleys are shown, and two records are also shown as they appear going to and from the playing position and on their respective tracks. Fig. 4 is a plan view of the machine, viewed from above, and serves to show

the whole system of belts and guide tracks and their relative position to the large transferring wheel. Fig. 5 is a front elevation of the principal actuating mechanism, comprising the cams, levers and other active elements. Fig. 6 is a side ele-

vation of Fig. 5, as viewed from the right side thereof. Fig. 7 is a plan view from above of Figs. 5 and 6, and shows all of the respective parts in their relative position, except the two housings which are set in, in the drawing, and the base plate, shafts and connections are broken away, so as to permit this said condition. Fig. 8 is an elevation view of the chain sprocket wheels and frame-work for same and gearing adapted thereto, and represents the rear end of the chain

carrying mechanism. Fig. 9 is an elevation view of the companion chain sprockets adapted to the front end of the said chain carrying mechanism. Fig. 10 is a semi-perspective view of the sides of the last two described figures, com-

combined to show their assembly position and including two of the chains mounted thereon, together with a series of records assembled in the said chains. Fig. 11 is a side elevation in enlarged form of one of the sprocket wheels, with a section of one of the said chains showing how it is adapted thereto. Fig. 12 is an edgewise view of the last figure, and serves to show the relative thickness of the chain blocks. Fig. 13 shows two block links, with male and female joint lugs, respectively, being shown thereon. Fig. 14 is a side elevation of one of the elevated guide track brack-

ets showing the said tracks in section thereon. Fig. 15 is another view of the same from the front. Fig. 16 is a side elevation of one of the combination guide track and pulley brackets show-

ing a pulley and belt thereon and a portion of the guide track in section thereunder. Fig. 17 is another view of the same from the front. Fig. 18 is a perspective view of a portion of the lower track way, for the records, and showing the slideway over which the record passes to enter the track. Fig. 19 is a section of the large transferring wheel at point K and serves to show the shape of the continuous circular record track formed thereon. Fig. 20 is a side elevation view of the slide member, while Fig. 21 is another view of the same.

Fig. 22 is an enlarged end view of Fig. 20 as at point PP, and serves to show how this end is shaped to conform with a certain depression in the record track. Fig. 23 is a detailed elevation view, partly in section, of two of the cam levers and bearings therefor, and serves to show how they both operate upon one center. Fig. 24 is a plan view of the "sound box" or reproducer with its mounting. Fig. 25 and Fig. 26 are other views of Fig. 24, and serve to show the mechanism for traversing the reproducer along horizontally, as well as elevating it to raise it from off a record when in a playing position. Fig. 27 is a rear elevation view of the advancing mechanism for the records, showing the lever and com-

pression plate without the central support. Fig. 28 is another view of the same, including the central support. Fig. 28 is an eight-tooth ratchet wheel and spring detent therefor, in enlarged form, and again seen as a part of Fig. 8. Fig. 30 is a rear elevation view of the turntable and the lever connected therewith and shown without the central support. Fig. 31 is another view of same and includes the central support and base for same. Fig. 32 is diagrammatic of the extreme end of the lever 95, where it connects with the pin 97, and shows the finger arrangement of same. Figs. 33 to 38, inclusive, are detail views in side elevation of the actuating cams, showing the engaging position of each cam with its follower.

TRIMMER FOR PHONOGRAPH RECORDS. George A. La Mountain, Marshalltown, Ia. Patent No. 1,032,338.

The chief object of this invention is to provide such an attachment in the nature of a trimmer or shaver for phonograph records, whereby the records may be trimmed or shaved off for further use, which trimmer is readily and easily adjustable to cut to any desired depth and so constructed and arranged that it will not break or chip the record but will trim such records

smoothly, regularly and evenly, thereby preparing a smooth, even surface for receiving a new impression.

A further object is to provide such a device which at all times presents the cutting edge to the record at the same angle, thus causing a true and even cut.

A further object is to provide such a device which holds the cutting instrument in exactly the same position during the trimming of a record.

Figure 1 shows a side elevation of a trimmer for phonograph records embodying this invention. Fig. 2 shows a top or plan view of said trimmer. Fig. 3 shows a central, sectional view through the trimmer and parts of a phonograph showing the trimmer installed in position for use.

This improved trimmer for phonograph records is designed especially for use with phonographs using cylindrical records and is also designed to be secured to the ordinary arm or bracket in which the reproducer is held.

RECORD-CHANGING MECHANISM FOR SOUND REPRODUCING MACHINES. Julius Wellner, Philadelphia, Pa. Patent No. 1,023,573.

This invention relates to sound reproducing machines of the class in which are employed a series of records discs, a magazine to support the series, a rotatable table to support and rotate a record during the reproduction thereof and mechanism to transfer record discs from the magazine to the table, and from the table to the magazine.

The object of the present invention is to provide a novel, simple and efficient magazine and transfer mechanism for the record discs, whereby the record discs may be supported in vertical positions, or substantially so, in the series, and whereby a selected record may be first moved edge first from the series to a position away from the same and adjacent the rotatable table and then moved face first from said position to a horizontal position upon the table to be reproduced;

and whereby the record, after being reproduced, may be first moved face first from the table to a position adjacent the magazine, and then returned edge first to the magazine.

This invention in its broader aspect contemplates a record disc transfer mechanism

employing parts which may be operated to move a record disc face first down upon the rotatable table in transferring the record disc from the magazine to the table irrespective of the angular relation of the record disc to the table when the record disc is in the magazine.

In the accompanying drawings, illustrating this invention, Figure 1 is a plan view of a sound-reproducing machine, embodying the invention. Fig. 2 is a vertical section on line 2-2 of Fig. 1. Fig. 3 is a vertical section on line 3-3 of Fig. 2.

HORN FOR TALKING MACHINES. Thomas H. Towell, Cleveland, O., assignor to the U-S Phonograph Co., same place. Patent No. 1,033,215.

The present invention, relating as indicated to horns for talking machines, has as its object the provision of a horn suitable for use on such machines, whether of the disc or cylinder type, and one that will be readily adjustable to the various requirements encountered in operating either such type of machine.

The subject matter of the present case has been divided out of applicant's co-pending application Serial No. 574,467, filed July 29, 1910, and relates more especially to the amplifier as distinguished from such amplifier in combination with the talking machine mechanism.

In said annexed drawing, Figure 1 is a side elevation of one typical form of cylinder talking machine, with a horn shown in connection therewith embodying the present improvement; Fig. 2 is a horizontal sectional detail of such horn, taken on the plane 2-2, Fig. 1; Fig. 3 is a vertical section of a detail of the jointed elbow connecting on the plane 2-2, Fig. 1; Fig. 3 is a vertical section of a detail of the jointed elbow connecting the tone arm with the amplifier proper; and Fig. 4 is similarly a vertical section of the forward end of said tone arm, the pitch of the coiled interlocking strip composing such tone arm being exaggerated in order to render the construction of the latter clear.

MEANS FOR AUTOMATICALLY ARRESTING TALKING MACHINES. Arthur E. Spencer, San Francisco, and Frank C. Thomas, Mill Valley, Cal. Patent No. 13,453 (reissued).

This invention relates to means for arresting the rotation of a talking machine automatically upon the stoppage of the sounds reproduced by the talking machine. The object of the invention is to provide a device for accomplishing this and which will not necessitate any change in the form or construction of the record itself or in the mode of using the talking machine.

Figure 1 is a broken plan view of a talking machine equipped with the invention; Fig. 2 is a broken side view thereof; Fig. 3 is a detail cross-section on the line 3-3 of Fig. 1; Fig. 4 is a detail vertical section on the line a-a of Fig. 1, showing the positions of the parts when the tone tube is elevated; Fig. 5 is a similar view showing the positions of the parts when the tone tube is lowered to its operative position; Fig. 6 is a similar view showing the positions of the parts when the tone tube is also in the lower position but the pin has arrived at the end of the record.

METHOD OF MAKING SOUND RECORDS. James W.

Owen, Philadelphia, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 1,033,909.

The main object of this invention is to provide an improved method whereby a matrix or a record of sound may be produced, so marked for identification that duplicates thereof cannot be formed or "dubbed" from it without incorporating into such duplicates the identification marks of the original, this application being a division of inventor's prior application, Serial No. 430,657, filed May 4, 1908, upon which issued United States Letters Patent No. 964,686, dated July 19, 1910.

This method is preferably utilized to form an identification mark or marks within the recorded surface of the record, the term "recorded surface" being used to define the whole or any part of the surface of the undulatory sound groove or ridge of a record or of the surface between the turns of such groove or ridge. Preference is given to an identification mark or marks such as a word or words, or characters of any description, that will indicate the origin of the record or that will give any other information desired.

In the drawings forming a part of this application, in which the same reference characters are used to designate like parts throughout the various views, Figures 1 to 3 illustrate one method of forming identification marks in a sound record matrix; Figs. 4, 5 and 6 show a modified manner of carrying out the said method; Figs. 7, 8 and 9 show a still further modified process of marking a sound record tablet having identification marks formed in the recorded surface thereof.

NEEDLE HOLDER FOR TALKING MACHINES. Julius Jetter, Camden, N. J. Patent No. 1,034,387.

This invention relates to machines of the character known as "talking machines," more particularly those employing disc records; and the object of the invention is to provide a multiple needle holder which may be mounted upon a suitable supporting arm whereby attachment may be made to the recording or reproducing element of the talking machine.

The needles ordinarily employed when reproducing talking machine records wear out very rapidly, and it is the present practice to supply a fresh needle for every record. Attempts have been made to produce a needle capable of use for a number of records, but they have not proved very satisfactory, and in general the high cost of production has usually prevented their adoption.

The multiple structure forming the subject of this invention is rotatable and operates in such a way as to permit the needles carried thereby to be used consecutively and afterward removed at one time and others set in their places, and it may be made of any suitable material, preferably metal.

Figure 1 is an elevation of a multiple needle holder embodying the invention; Fig. 2 is a side elevation of the same, partly in section, on the line a-a, and Figs. 3, 4, 5, 6, 7, 8, 9 and 10 are views illustrating forms of needles which may be mounted for use in the structure embodying the invention shown in Figs. 1 and 2.

TALKING MACHINE. Eldridge R. Johnson, Merion, Pa., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 1,034,015.

The main objects of this invention are to provide in a talking machine an improved support or mounting for a swinging sound box arm or tone arm; to provide improved means for limiting the movement of a tone arm; and to provide other improvements as will appear hereinafter.

In the accompanying drawings, Fig. 1 is a fragmentary top plan view partially in horizontal section on line 1-1 of Fig. 2 of a talking machine constructed in accordance with this invention; Fig. 2 a fragmentary side elevation partly in vertical section one line 2-2 of Fig. 1, of the same; Fig. 3 a fragmentary side elevation partly in vertical section on line 3-3 of Fig. 1; and Fig. 4 a fragmentary vertical section of a portion of the same.

SOUND REPRODUCER. Daniel Higham, New York, N. Y. Patent No. 1,034,014.

This invention relates to phonograph reproducers of the pneumatic type, or, generally speaking, of the type in which undulations corresponding to sound waves are impressed upon a current of any suitable moving fluid by the operation of a suitable valve through which the fluid is allowed or caused to pass, the valve being operated in accordance with the sound waves as by connection with a reproducing stylus tracking a record groove.

The objects of the invention are the construction of a sound reproducer whose tones will be characterized by more perfect quality than those of reproducers ordinarily used, and which will cause undulations corresponding to the original sound waves, but greatly amplified thereover, to be impressed upon the current of air or other moving fluid passing through the reproducer with the result that tones of much greater volume may be reproduced than is commonly possible in devices of this character.

The invention operates upon a new principle by which the movement imparted to the valve member by connection with the stylus lever is greatly amplified in the vibration of the valve member. This is accomplished by forming a valve of flexible material which is seated upon a port connecting two communicating chambers, or is otherwise suspended across the path taken by the moving fluid in its passage through the sound box, this valve normally being bent in an arc of slight curvature. The valve member is fixed at one end and is connected to the reproducing stylus at its other or free end in such a manner that the reciprocating motion derived from the movement of the stylus in traveling over the record groove is communicated to the free end of the valve member by alternate pushes and pulls lengthwise of the valve member of substantially parallel to the valve plate upon which it is seated. The longitudinal movements thus imparted to the free end of the valve member result in a corresponding, but greatly amplified, movement of that portion of the member which is seated upon the port toward and away from the port as the curvature of the member increases and decreases. The movement of the center of the flexible member as it vibrates at right angles to its length may easily amount to seven or eight times the movement imparted longitudinally of the valve member by connection with the stylus where the arc of the flexible member is quite flat.

This inventor has also constructed the sound box in a novel manner, one chamber being formed within a member which extends within the other chamber, somewhat in the form of a pipe of smaller

diameter than the first named chamber, this member or pipe being provided with a port upon which the flexible valve is seated. This construction need not necessarily be used, however, in connection with the valve connections just described.

Figure 1 represents a vertical cross-section through a reproducer embodying this invention, certain parts being shown in side elevation. Fig. 2 is a view of the improved valve and the member containing the port upon which it is seated taken on line 2-2 of Fig. 1. Fig. 3 is a horizontal section taken on line 3-3 of Fig. 1. Fig. 4 is a bottom plan view of the device shown in Fig. 1.

SOUND REPRODUCER. Alexander N. Pierman, Newark, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,034,031.

This invention relates to sound reproducers of the fluid pressure operated type, and has for its object the provision of means whereby improved results in the reproduction of sounds will be secured.

This invention consists of an improved form of valve for varying the rate of flow of elastic fluid through the ports by which the resonating and equalizing chambers of the reproducer communicate, and in improved means for supporting the valve referred to.

Figure 1 is a bottom plan view of the port plate; Fig. 2 is a cross-section on the line 2-2 of Fig. 1; Fig. 3 is a cross-section on line 3-3 of Fig. 1, and Fig. 4 is a vertical cross-section of a reproducer embodying this invention.

REDUCTIONS IN EXPRESS RATES.

Interstate Commerce Commission Formulates Radical Plan of Rate Regulation to Go Into Force the Coming Autumn.

Members of the talking machine trade who have occasion to ship by express so frequently will be gratified at the report made by the Inter-State Commerce Commission prescribing reductions in the express rates. A cut of 15 per cent. on rates is advised. The report comes as a result of the commission's investigation into the business of thirteen of the great express companies of the United States. It is proposed to make the rates effective some time next autumn. In detail the reductions recommended are as follows:

The new rates may be said to be based on a minimum charge of 21 cents for a one-pound package. This charge increases in ratio to the increase of weight and distance at rates varying from three-tenths of a cent a pound to 12 cents a pound.

Packages weighing two pounds, for instance, may be shipped 1,000 miles—New York City to Chicago—for 24 cents, and 2,000 miles—New York City to Denver—for 31 cents, the present rates being, respectively, for each 35 cents.

A three-pound package will cost 27 cents for 1,000 miles and 37 cents for 2,000, the existing rates being, respectively, each 45 cents. A 10-pound package may be transported 1,000 miles for 42 cents and 2,000 miles for 77 cents, as against the existing rates of 75 cents and \$1.25, respectively. The cost of transporting a 25-pound package 1,000 miles will be 76 cents, against the present

rate of \$1.10, and for 2,000 miles \$1.64, against the present rate of \$2.25.

For many years the express business of the United States has been handled "almost as a family affair." By agreement the country has been parceled out between the large companies into zones, and competitive territory has almost ceased to exist. At the same time, through stock ownership and otherwise, the companies are so interlocked with one another and with the railroads that for practical purposes the business is managed by not more than three groups of interests.

Against this grasping combination the power of the Federal Government, under the Interstate Commerce act, is now for the first time to be employed for the protection of the public. For twenty years since the railroads became subject to the act the express companies, and to that extent the railroads which in large measure shared the express companies' receipts on a percentage basis or actually controlled them, have escaped regulation.

Double collection of lawful charges; overcharges and undercharges resulting in discrimination between shippers, and the granting of rebates; obscure and unreasonable rates; slow service through arbitrary routing by indirect lines; confusing and unfair classification of matter; delays in settling claims for loss and damage, and excessive insurance charges were found to prevail so generally that the commission proposes revolutionary reforms. Without interfering with the relations of the express companies and the railroads, it has undertaken to reconstruct the business and to create a national system of rates, classification and routing.

If the express interests had ever shown any inclination to correct their methods or to meet the public half-way in a spirit of fairness, instead of relying upon their political influence to prevent legislation, they might be entitled to a certain amount of sympathy because of the severe treatment to which they are about to be subjected.

The new rates are being worked out through the zone system, and the first step was to divide the United States into blocks, each approximately fifty miles square. Rates are proposed between these blocks, treating cities and towns as common points. Each of these blocks is one degree of longitude in length and one degree of latitude in width. To every express station within each of these blocks the rate is the same from any other given block. The rate is stated as between blocks rather than as between cities.

INSTALL VICTOR DEPARTMENT.

McClure & Cowles, the prominent piano house of Albany, N. Y., have recently installed a talking machine department with a complete line of Victor talking machines and Victrolas with records for same. The new department is under the management of Charles S. Hotelling.

Don't think you are putting too much in your windows because you have heard someone say a window looked overcrowded, etc.; you can't get too much in a window if you display each article as it should be, the less you show in a window the less the window will sell, and the month's sales will be less that amount.

PEARY'S CHECK TO COLUMBIA CO.

The Discoverer of the North Pole Buys a Columbia "Princess" While Visiting Portland, Me., Recently and Speaks Highly of It.

We take pleasure in printing a facsimile of the check tendered by Admiral Peary, the famous Arctic explorer, to the Columbia Phonograph Co. in payment for one of the "Princess" models.

Facsimile of Check Given by Admiral Peary to the Columbia Co.

Admiral Peary visited the company's store at Portland, Me., and was so pleased with the appearance of the machine that he ordered it shipped immediately to his summer home at Eagle Island, Me., allowing only a half hour for crating and delivery to the boat. That the force of the Portland store filled the order on time goes without saying.

"TALKERS" IN THE SCHOOLS.

Hiawatha Has an Idea That Will Probably Catch the Whole Country.

Hiawatha, Kans., is the originator of an idea that is sure to become nation wide. It has made graphophone music one of the courses in its primary schools. A government expert, after watching the experiment and noting its effect upon the little children in the primary grade, says:

"The best and most sure way of developing an appreciation for the best in music is for the child to hear it and become familiar with it in the formative period of his life, when impressions are indelibly stamped upon the mind and memory. Those impressions can never be effaced.

"Let this movement become nation wide and we will develop a national music sense which will not allow our operas and best songs to be sung in French, Italian, and German, but will demand that they be sung in English, which we can all understand. Each revolution of the disc will sound the knell of the departing ragtime music. Kansas is in the lead again, but other States will soon follow."—Kansas City Journal.

"There seems to be a strange affinity between a darky and a chicken. I wonder why?" said Jones. "Naturally enough," replied Brown. "One is descended from Ham and the other from eggs."

CANADIANS ORGANIZE.

Distributors and Dealers Handling Victor or Gramophone Goods Form Association with W. R. Fosdick as President.

(Special to The Talking Machine World.)

Toronto, Canada, Aug. 9, 1912.

At a meeting of talking machine distributors and dealers, held recently in this city, and made up entirely of gramophone or Victor representatives, "The Victor-Berliner Wholesale and Retail Dealers' Association" was organized with the following officers: Honorary president, Emil Berliner, of Washington, D. C., president Berliner Gramophone Co., Montreal; president, W. R. Fosdick, manager His Master's Voice Gramophone Co., Toronto; first vice-president, H. E. Wimperly, manager Toronto branch Bell Piano & Organ Co.; second vice-president, J. H. A. Clark, of Clark Bros. & Co., Ltd., Winnipeg; treasurer, F. B. Kelley, of C. W. Kelley, Guelph, Ont.; secretary, H. O. Shuttleworth, of E. C. Corbeau, Regina.

Messrs. J. D. Ford, of R. S. Williams & Sons Co., Ltd., Toronto, Fosdick and Wimperly were appointed a by-laws committee to prepare a draft constitution and by-laws to be submitted at the next meeting.

While the attendance was not as large as expected those present were very enthusiastic, and it is hoped to put into force many plans for bettering the trade through this organization.

WILL HELP THE DEALERS.

Price Cards and Stands Issued by Columbia Phonograph Co. Should Act as Trade Developers.

For the purpose of calling attention to the different instruments, the Columbia Phonograph Co., General, New York, has ready for its dealers something new in price cards. There is a card for each Columbia instrument in the catalog, and neat little stands to hold them. Each card is well lettered, brilliantly embossed in gold and can easily be read clear across a store. A further touch of quality is added to their appearance by the gilt beveled edges.

The stands to hold the cards, also ready for the dealer, are supplied at cost, and are built of handsome oxidized metal. Each one has an adjustable screw for the raising or lowering of the card and is also equipped with steel spring clip to hold the card firmly in place. The base of the stand is heavy enough to insure stability and is felt lined, so that it is possible to place the stand on the polished wood of an instrument without fear of scratching the wood.

There is little doubt that the new cards and stands will prove of value in calling attention to the different Columbia styles. The colors of the cards harmonize well with the finish of the various designs and, together with the stands, set off the instruments to the best advantage.

HEINTZMAN & CO. HAS VICTOR LINE.

Heintzman & Co., the well-known piano house of Toronto, Can., has decided to handle Victor talking machines, and a special department is being fitted up on the fourth floor for this purpose. The opening of the talking machine department will occur about September.

NOW PRESIDENT MCCHESNEY.

L. C. McChesney, advertising manager of Thos. A. Edison, Inc., who was recently elected president of the Association of National Advertising Managers, was the subject of an extended mention, accompanied by his portrait, in The Editor and Publisher and Journalist recently.

Mr. McChesney at the age of twenty-two began his business career in the employ of the Orange, N. J., Chronicle, a weekly newspaper, with which he remained for twenty years, being business manager of the publication when he resigned in 1902 to become advertising manager of the Edison interests, a position which he has filled with distinction.

ONE OF FIRST TO TAKE UP PHONOGRAPH.

Edmund Rickards, who was one of the first men to realize the entertaining qualities of the phonograph and purchased one of the first machines manufactured for the purpose of traveling around the country and giving exhibitions with it, was found dead in his home in Rockville, Conn., last month. He was fifty-eight years old.

The reputation that endures, or the institution that lasts, is the one that is properly advertised.

The TALKING MACHINE WORLD

AND NOVELTY NEWS

Published Each Month by Edward Lyman Bill at 373 Fourth Avenue, New York, September 15, 1912

The world's greatest singers make records only for the Victor

The world's *greatest* singers! The greatest tenors; the greatest sopranos; the greatest contraltos; the greatest baritones; the greatest bassos.

These famous artists—universally acknowledged *the* greatest, and commanding the highest salaries—make records *only for the Victor* because *only the Victor* brings out their voices as clear and true as life itself.

Four new style Victor-Victrolas

More beautiful, more artistic,
more complete.

Wonderful improvements
that make the world's greatest
musical instrument greater than
ever before.

And the greatest thing of all is that there is no increase in price.

Just as much profit as ever for every Victor dealer, and with the opportunities for selling increased a hundredfold.

Price Ten Cents

A VOICE WITH REAL QUALITY.

Choosing Chorus Girls for the Savage Productions and a Press Agent's Up-to-Date Method of Grasping the Opportunity.

The following press agent's yarn, coming from the Savage offices, is interesting from its originality and might "get by" despite the slight technical inaccuracies regarding the records that have crept in. However, here goes:

"To lighten his labors and to give himself more time for tests of particular voices, Frederick Rycroft, chief of the musical branch of Henry W. Savage's engagement department, recently installed on the top floor of the Savage office building in New York a series of booths, each one of which is furnished with a recording graphophone. Aspirants for positions with the Savage musical companies whose voices do not require immediate attention sing into the machines and the voice records are examined later by Rycroft at home. A clever young woman of Chicago, who learned of the scheme through the newspapers, 'saw' Rycroft's bet and then 'raised' it. To the Savage office she sent a graphophone record of her voice, made, so she said, in her own home. It was offered as a reason for her engagement for the prima donna role in Henry W. Savage's prospective production of 'Somewhere Else.' Rycroft listened to the record once and voted the voice exceptionally good. He ran it through a second time and liked it better. Then he wrote to the sender, thanking her for the record, but declining to consider it as an argument in favor of her engagement. The voice which came from the horn was Tetrizzini's. The record was in perfect condition except for that part of it which bore the announcement of the singer's name. Something, probably a thumb nail, had made that unrecognizable."

PLEASED FREIGHT HANDLERS.

Invitation Placed on Concrete Phonograph Cases to Handle Roughly Is Taken Full Advantage of by Freight Handlers.

These are happy days for baggagemen and freight handlers.

To test the durability of his new concrete phonograph cases Thomas A. Edison is shipping scores of them to various parts of the country. Each case is packed in a box marked "Handle Roughly." He is anxious to have them subjected to all the wear and tear of shipping possible and for that reason freight handlers are invited to treat the boxes "roughly."

Can you imagine the joy of a baggageman's heart when he reads such a sign on a box in his keeping? says the World. One freight hustler was discovered carrying a box thus marked to a third-story window to drop it to the sidewalk. He was sorely disappointed when it did not smash on the stone flagging below.

U-S PHONOGRAPH CO. INCORPORATED

With the Secretary of State of Ohio, with a Capital of \$500,000.

The U-S Phonograph Co., of Cleveland, O., on September 6 received a charter from the Secretary of State of Ohio to deal in phonographs, accessories and records, with a capitalization of \$500,000. The incorporators are William L. David, T. H. Hogsett, F. H. Ginn, Thomas H. Jones and J. C. Rexroth.

A stenographer in one of the talking machine stores was transcribing a letter, when she commenced laughing heartily. The manager inquired what she was laughing about. "Oh," said she, "I just thought of something. 'Well, really,' replied the manager, 'I'm astonished!'"

FRANK L. DYER'S EUROPEAN TRIP

Was a Most Enjoyable One—Consummated Many Business Plans With Manager Cromelin, of the London House, and Found Time to Tour Through England's Quaint Old Towns—Mr. Dyer Looks Forward to Busy Times—Dolbeer on the Jump These Days—McChesney's Literary Efforts Appreciated—Recent Visitors to Edison Plant.

Frank L. Dyer, president of Thos. A. Edison, Inc., has returned from his European trip, which was three-quarters for business and the remaining time for pleasure. He spent most of his time in England, Germany and France, his pleasure being taken while in England, one of Mr. Dyer's delights being to motor through the many quaint English towns. He spent a great deal of time in consultation with Paul H. Cromelin, manager of

Frank L. Dyer.

the Edison London organization. Mr. Dyer believes that the coming few months will show magnificent business strides and that the year will be a bountiful one from a prosperity standpoint. He has closely followed conditions here and abroad and his summary comes as a result of careful study and investigation.

F. K. Dolbeer, general sales manager, is doing a lot of jumping about the country these days, the stops being short and numerous. He left last week for a week's jaunt through the Middle West. Before departing, M. Dolbeer reported that the disc phonographs and records are coming along fast, consistent with the quality standard that is maintained at the Edison plant.

C. E. Goodwin, manager of salesmen, got in Monday morning following a two week's vacation spent principally upon golf courses, here and in the Middle West. Mr. Goodwin has a bag of golf apertunances that would make a plumber orange with envy (no joke), there being everything from rolling a quinine pill a few feet to dislodging a push ball and shooting it over a mountain. C. E. will drop everything except business to talk about golfology.

L. C. McChesney, advertising manager, recently wrote an article on "Circulation" for Printers' Ink, and a number of magazines thought so much of the force of his remarks, that they took some of the story, incorporated it into advertisements and published them.

Recent visitors to the Edison works included: Daryl H. Kent, of M. W. Waitt & Co., Vancouver, B. C.; J. N. Swanson, of the Houston Phonograph Co., Houston, Texas; F. E. Bolway and F. E. Bolway, Jr., of Oswego, N. Y.; Mrs. D. Shepherd and Miss L. Shepherd of L. Shep-

herd Co., Fort Worth, Texas; C. H. Short, of the C. H. Short Music Co., Pomona, Cal.; H. H. Blish of Harger & Blish, Des Moines, Iowa; J. M. Hayes and Mr. Bertcheri, of the Hayes Music Co., Toledo, Ohio; Howard E. Wurlitzer, of the Rudolph Wurlitzer Co., Cincinnati, O.; F. K. Babson, of Babson Bros., Chicago; Wm. C. Hamilton, of the Hamilton Co., Pittsburgh, Pa.; Louis Buehn, of L. Buehn & Bro., Philadelphia; R. C. Kretchmar, J. Haines and S. S. Wenzell, of R. C. Kretchmar, Philadelphia, and E. F. Glover, of Plainfield, N. J.

A PUZZLING WINDOW DISPLAY.

Mark Silverstone, Head of the Silverstone Talking Machine Co., Again Puzzles St. Louisians With Working Display—Experts Cannot Discover Secret, Hence Its Value.

(Special to The Talking Machine World.)

St. Louis, Mo., Sept. 10, 1912.

Mark Silverstone, head of the Silverstone Talking Machine Co., this city, who is becoming noted for the original and attractive qualities of his window displays, is again puzzling the electrical and mechanical experts with a display in the Silverstone Talking Machine Co. windows. This time he had an Edison record and a cartoon with rounded ends that travel end over end in a circle on a circular track on a surface about the size of a sugar barrel head. The track surface stands at about a 20-degree angle, and why these somersaulting cylinders do not roll off is one of the mysteries. The sign says:

"This Edison record and cartoon doing a somersault stunt for your entertainment was gotten up by our Mr. Silverstone to remind you that Edison records have entertaining qualities. Come in and hear one."

The display, says Mr. Silverstone, has brought more direct inquiries into the store than any other he has devised and scores of persons have come into the store and asked that the special record doing the tumbling act in the window be played for them. A quick glance at the inquirer suggests what the record in the window ought to be, and frequent sales have resulted. The display was suggested to Mr. Silverstone by the toy men that always sit upright and those which can be placed on a slightly inclined surface and turn somersaults to the bottom of the incline. Electricity under the surface over which these two grotesque figures enable them to keep up their constant somersault tour. Incidentally, the demonstration suggests that the Edison records are very durable. Mr. Silverstone is not explaining in detail how this mechanism works, and it is certainly a puzzle to the laymen, and he says no electrician has yet solved it. He has had several offers to buy rights to his device, especially from men making the fair and carnival circuits, who want a moving exhibit to attract crowds, but he has not yet struck a bargain. The constant crowd at the Silverstone window is guarantee of the interest aroused.

BUSIEST MEN ARE READERS.

The busiest men are the readers. They've found that they can't succeed without the benefit of the ideas of other men; they know that the successful man is merely the composite of the ideas and methods of other successful men, as is the successful business the composite of other successful businesses.

Successful men, then, find time to read, and consequently succeed.

They see to it that their employes read, also, even if they have to adopt such heroic means as subscribing and paying for their employes' literature.

The man who climbs over your head was stronger than you—don't envy, but imitate him. "Good luck" is just a lazy man's estimate of a fighter's success.

VALUE OF TALKING MACHINE LINE

Is the Subject of Some Interesting Remarks by W. H. Stever, President of the Lyric Piano Co.—Has Obtained Satisfactory Results from His Incursion Into This Business—Heavy Victor Business at Wurlitzer's—Victor-Victrolas Displayed at the New Haven Commissary Managers' Association—Columbia Co.'s Phenomenal Summer Trade—Manager Whelan Well Pleased with Outlook.

(Special to The Talking Machine World.)

Cincinnati, O., Sept. 9, 1912.

The intense heat in the Middle West has somewhat limited the activities of the talking machine trade. Then, too, the coming and going of Labor Day, a holiday in Ohio, together with a campaign over amending Ohio's constitution, has not helped the situation.

Business at the Rudolph Wurlitzer Co. in August opened up with a rush and the sales for the month far exceeded those of last year in spite of the shortage of all styles of machines over \$50. In the retail way the situation from the dealer's standpoint was extremely unsatisfactory. There was practically no stock of Victors Nos. 10, 11, 14 and 16, but in spite of this drawback a very big volume of business materialized.

Orders for the new style Victors Nos. 10, 11, 14 and 16 have been pouring in to the wholesale department, but business was stagnated to a very great extent because of the fact that the dealers were either disposing of their old stock or else waiting for the new line before resuming operations.

The feature of the month was the convention of the National Commissary Managers Association at the Hotel Sinton, Cincinnati. The Rudolph Wurlitzer Co. had Victor Victrolas on display in a room on the convention floor. The display was in charge of Frank Mahret and T. Sigman, representing the wholesale department. The room was crowded at all times and some big deals were consummated. The company looks forward to a good trade in the new styles as soon as the stock arrives.

President W. H. Stever, of the Lyric Piano Co., in an interview with The Talking Machine World, said:

"Through the columns of The Talking Machine World we are always willing to give the other fellow the benefit of our experience, although we have not been in the business long enough to be in a position to solve some of those questions which might be handled more appropriately by parties who have been in the business for years. The only advantage that we feel that we would have over such a party is that the majority have

W. H. Stever.

an established reputation and they are satisfied to sell a few records and leave "well enough" alone, but in our particular case it was absolutely necessary that we make a special effort to get talking machine business, because we either had to take it from the other fellow or create new business of our own, and by doing so we have had to originate ideas that would appeal to the people before we were in a position to gain the customer's confidence. We have done this and we believe that our ideas of advertising have been unique and original to the majority of the people at large.

"We are still doing this and we find that we have a nice business; in fact, receiving our share of the trade compared to a great many others who are following the same line. I have in mind a few little original stunts which we soon expect to put before the public, and we expect to get results.

"We are pleased with our efforts in every way and the results which we have obtained are very satisfactory, and anyone that is in the piano business and has a space which they can spare and will handle this matter in the proper way, we believe that it will pay them to put in a nice line of talking machines, because I have been positively convinced against my own convictions, as

I was not very much in favor of a talking machine department, but by patience and giving the matter proper attention, I believe that it has been an addition to my company, and I can recommend it."

Another month has passed and Manager Whelan of the Columbia store still smiles over the phenomenal summer trade and the splendid outlook for fall and winter business, and why shouldn't he? Talk about the Presidential year slump in business—nothing doing in the talking machine line. The Presidential bugaboo has not shown itself around the local headquarters of the Columbia Co., hence the "Whelan smile." Women may get the vote and maybe not, but there is no maybe about the increasing popularity of the Columbia product.

Manager Whelan says he is more than pleased with the condition of business, and the sales last month show a marked increase over the same period in 1911 in both wholesale and retail departments, and the marked call for the more expensive types of Grafonolas this year is very gratifying. He says that the widespread summer publicity campaign which was carried on by the Columbia people is directly responsible for the unusual summer boom, and the former plan of relegating the talking machine to the has-beens during the summer months is a thing of the past, the increased sales of records proving this to a certainty. Now as fall approaches the school campaign will be carried on no less zealously.

Many notable installations of Dictaphones have been made this month in both railroad offices and manufacturing concerns, which sales have helped materially to establish the substantial gains registered during the past few months.

Recent visitors to the Columbia headquarters were Cliff Herdman, present assistant manager of the Indianapolis store, and for many years associated with the local store. Mr. Herdman spent a week among his old Cincinnati friends and the week passed quickly and pleasantly. Others were Mr. Green, of Green Bros., of Connersville, Ind.; R. L. Seeds, of Columbus, and Mr. Todd, of Forbes & Todd, Hamilton, O. The last two named were here in relation to several large installations of dictaphones in their respective territories, which they expect to place in the very near future.

Geo. Mueller, for many years connected with the retail sales force of the Columbia store, has gone on the road selling Columbia product. Mr. Mueller's success is already assured, as he is a thorough salesman, thoroughly conversant with his line, and has the happy faculty of making friends.

During the Summer Months We Were Active

Preparing for the Fall and Winter rush. Receiving and storing machines, records and supplies to admit of our making prompt deliveries when the rush is on.

Remember This Fact This Fall

when excuses are offered for non-delivery of your orders by your jobber and get acquainted with *Eastern Service*. It's different from others. Exclusiveness is the reason.

For Eighteen Years Talking Machines Exclusively

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

Victor-Victrola X, \$75
Mahogany or Oak.

Bigger Opportunities

Victor-Victrola XIV, \$150
Mahogany or Oak.

The opportunities presented to Victor dealers by

the introduction of the four new Victor-Victrolas are absolutely without a parallel.

The placing on the market of these new styles ranks as one of the greatest achievements of the Victor Company.

To make such marked improvements is a wonderful thing in itself; to do this and yet not increase the cost to either the dealer or the public makes these instruments all the more wonderful—and makes them mean all the more to every Victor dealer.

They bring new opportunities at a particularly opportune time—the biggest selling season of the year—and give assurance of bigger sales and greater profits than ever before.

Victor-Victrola XI, \$100

Always use Victor Machines with Victor Records and Victor Needles—the combination. There is no other way to get the unequalled Victor tone.

Victor-Victrola XVI, \$200
Mahogany or Quartered Oak.

VICTOR LINE WITH STEWART CO.

Latest Addition to the Talking Machine Stores of Indianapolis—Has Arranged Its Hand-some Quarters at 110 North Pennsylvania Street—The Kipp-Link Co., Edison Representative, Is Enlarging Its Quarters—Columbia Eclipse Machine Promises to Be One of the Big Sellers of the Season Throughout Indiana—Aeolian Co. Makes Excellent Report Regarding Summer Trade—Other News.

(Special to The Talking Machine World.)

Indianapolis, Ind., Sept. 9, 1912.

The Stewart Talking Machine Co., handling the Victor machines, is the latest addition to the talking machine force here, and it is rumored that in a few months several other companies will install talking machine departments. The Stewart Co. is not strictly a new company, but it has new quarters at 110 North Pennsylvania street. A. M. Stewart, who recently disposed of the Wulschner-Stewart Music Co., retained the ownership of the Victor talking machine department and moved this department to new quarters. W. E. Ludlow will continue to act as manager and W. S. Barringer will be sales manager. The company is now arranging its stock and expects to have one of the most complete Victor talking machine stocks in the country. A number of booths are being placed in the room and when everything has been "fixed up" the quarters of the Stewart Co. will be inviting.

The Kipp-Link Co., which handles the Edison line, is also getting ready to make a few changes in the way of enlarging its quarters. This company is busy getting ready to handle the new disc phonograph, to be put out by the Edison Co., and a visit to the factory at Orange, N. J., has led the company to indulge in great hopes. M. G. Kreusch, of the phonograph sales department of the Edison Co. for Indiana, has just returned from the factory and is thoroughly enthusiastic over the new product. He said Mr. Edison was working on an average of four nights a week and

that he put in "time" just as the other workmen do. He believes the new product of the Edison Co. will revolutionize the talking machine business. Mr. Kipp could not give a definite date as to when the new machine would be ready for the market, but he said he had been assured that the machine would be ready in time for the holiday trade.

Thomas Devine, manager of the local branch of the Columbia Phonograph Co., believes he has a good thing in the Eclipse machine, which sells for \$20. Mr. Devine is planning a heavy advertising campaign on this machine and expects to make a record in selling it. The early part of August was slow for the Columbia Co. here, but trade picked up in the latter part of the month. The company expects a good fall trade. The October records of the Columbia Co. are expected to make good and the local manager believes they will be big sellers. C. P. Herdman, assistant manager, has returned from his vacation, which he spent at Cincinnati.

Miss Lazarus, in charge of the talking machine department of the Aeolian Co., says she had as much business in August as she had in July, and July with the Aeolian's talking machine department was unusual.

CHANGE IN JACKSONVILLE, FLA.

W. H. Ransom has disposed of his interests in the Ransom Talking Machine Co., Jacksonville, Fla., on account of failing health. The purchaser of the business intends to conduct it along the same enterprising lines that enabled Mr. Ransom to win such a large measure of success. Mr. Ransom has left for South Carolina for an extended stay.

The United Piano & Talking Machine Co., Newark, N. J., has been incorporated with capital stock of \$10,000 for the purpose of dealing in pianos, talking machines, etc. The incorporators are: Samuel Popick, R. E. Giordano and J. Herman Buehrer.

CLEVER ADVERTISING DISPLAY

Gotten Up by A. H. Landry, of Donaldsonville, La., in Which the Columbia Is Featured.

Albert H. Landry, of Donaldsonville, La., is responsible for the advertising scheme shown in the accompanying illustration. It is clever and proved a decided business puller. The enormous machine was specially made for the occasion and mounted

Featuring the Columbia in Louisiana.

on the wagon. It was plenty large enough for a smaller Columbia machine and a small boy to occupy the interior and "make music." The Columbia "Musical Notes" were prominently displayed and the outfit was driven through the streets of Donaldsonville during the pageant or festival which was recently held there.

WHO MAKES THE CLAIM?

When the Shipper of Goods Has Duly Complied with the Instructions of His Customer, It Is the Latter Who Must Stand Any Loss or Damage in Transit or Collect for Same from the Transportation Company.

"If a shipper ships goods according to instructions and the goods arrive damaged or short, who should take the claim up against the railroad—the shipper or the consignee?"

This question of general interest to members of the "talker" trade, as well as of other industries, was put to The Dry Goods Economist recently and answered as follows:

The rule is that under ordinary circumstances sold goods become the property of the consignee, i. e., the purchaser, immediately on being placed in the hands of the proper carrier, provided, of course, the consignor or shipper obtains a proper shipping receipt or bill of lading.

The law in the case is that any loss or damage which goods may sustain while in transit falls first upon him who is their owner, while they are in transit, and to him alone the transportation company, if liable, must make good. Briefly, the transportation company is the agent of the party to whom the goods are shipped over its lines and not the agent of the party by whom the goods are shipped. Hence, it is the consignee, or purchaser, who is their owner.

There is, however, an exception to this rule; that is, in a case where the shipper has failed to comply with specific instructions received from the purchaser, or consignee, as to the transportation company by which the goods shall be shipped. In such case, the goods on being placed in the hands of the transportation company do not automatically become the property of the purchaser, or consignee, but remain the property of the shipper. Hence, the shipper is responsible for any shortage or damage while the goods are in transit, or for the entire shipment should it be destroyed in transit or should the transportation company, for any other reason, fail to make delivery.

The law, of course, applies in all cases, whether the shipment is made by railroad, steamboat or express company.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools

Box 918, Scranton, Pa.

Read the \$8,000 Columbia advertisement of the new "Eclipse" in this week's Saturday Evening Post. It is the chance of a lifetime to begin a Fall business right.

Tribune Building, New York**

DEALERS AND JOBBERS ALIKE LOOK FOR BIG BUSINESS.

Excellent Outlook in Wisconsin—Keen interest in the New Victrola and Edison Disc Styles—McGreal Nominated for Sheriff of Milwaukee County—Celebrates Tenth Anniversary—Victrola Figures in Opening of New Gram House—Victor Expansion at Gimbel Bros.—Managers of Schuster Stores—Increasing Victor Trade at Espenhain Co.'s—Talking Machine for Milwaukee School for the Deaf—Other Gleanings.

(Special to The Talking Machine World.)

Milwaukee, Wis., Sept. 10, 1912.

The fall trade seems to have opened up even at this early date and dealers and jobbers alike are looking for a big business from now on. Dealers about the State have been so confident of future business that they have been ordering stocks at a better rate than in several seasons and jobbers have been meeting with a good demand as a result. Milwaukeeans have returned from their summer outings and are now in the market for machines and records. General business is showing much improvement, money is more plentiful and confidence seems to be widespread.

A bumper grain crop is being threshed in this and surrounding States, while the general crop outlook is bright. The extensive rains which have been received in Wisconsin have caused some anxiety regarding the proper maturing of the corn crop, but experts say that the warm weather is putting the crop in proper shape, so that the yield will be far above the average. It is a foregone conclusion that when crops in this State are good general business conditions will be all that could be asked for.

Much enthusiasm is expressed by Victor dealers regarding the new styles of Victrolas X, XI, XIV and XVI, which are to be placed on the market September 15, and business is expected to show decided improvement as a result of the increased demand for these machines. Advanced shipments of the new styles were received some time ago by the Wisconsin Talking Machine Co., and jobbers for the Victor line and dealers have been evincing a lively interest.

Lawrence McGreal was nominated for sheriff of Milwaukee county on the Democratic ticket at the Wisconsin primary election held on Sept. 3. Despite the fact that there were four or five candidates in the field and the vote was divided, Mr. McGreal received a vote of more than 5,000 and led his nearest competitor by more than 800 votes. Judging from present indications Mr. McGreal's election in November is assured. Oscar H. Morris and Guido Endéris, two well-known Milwaukee newspaper men, were campaign managers for Mr. McGreal.

Harry T. Fitzpatrick, manager of the Wisconsin Talking Machine Co., has returned from a visit to the Victor factory at Camden, N. J., where he placed an order for additional fall stocks.

A. G. Kunde, 516 Grand avenue, Columbia jobber and retailer, says that the September Columbia business is attaining a new high mark for September. Mr. Kunde is enthusiastic regarding fall prospects and is confident that Milwaukee dealers can expect great things during the next three months. A fine Dictaphone business is reported by Mr.

Kunde. Mrs. Kunde and little daughter have been spending some time at the Kunde summer home at Okauchee lake, near Oconomowoc.

Lawrence McGreal, celebrated his tenth business anniversary in Milwaukee on September 2. Mr. McGreal, who has been dubbed "the father of the talking machine business in this city," opened the first talking machine store west of New York at 173 Third street, on September 2, 1902. The well-known jobber has always pinned his faith to the value of publicity, and when he embarked in business in Milwaukee he promptly seized upon the medium of the newspapers to advertise his line. His unique advertising campaigns are still fresh in the minds of Milwaukeeans.

The daily Victrola concerts at the new Espenhain machine department, under the management of John H. Becker, Jr., are proving to be a fine advertising medium, according to Mr. Becker. The Victor department is located on the second floor of the department store, easily accessible to the crowds of shoppers.

The Victrola was scheduled to fill an important role in the interesting musical program which had been arranged to feature the formal opening of the new three-story \$100,000 building of the Edmund Gram Music House at 414-416 Milwaukee street, September 10 to 13. Leading pianists of Milwaukee and about the State were engaged to give recitals, while the Victrola concerts were to be interspersed throughout the entire week. Paul A. Seeger, head of the new talking machine department, is to be in charge of the Victrola features. The new Victor department at the new Gram store is located in handsome quarters in the basement, easy of access and furnished in the most modern manner. Mr. Seeger recently returned from a visit of several days' duration in Chicago, where he was the guest of Roy J. Keith, of the Talking Machine Co.

The Heller Piano Co., 616 Grand avenue, which added the Regina line recently, is now carrying the entire line of Victor machines, records and supplies. Louis Leo, general manager of the Heller interests, says that special quarters for the Victor line will be arranged in the two-story annex which the company is preparing to erect at the rear of its Grand avenue store.

The McGreal building at 174-176 Third street, partly destroyed in the disastrous fire on June 13, will be replaced by an eleven-story hotel building, which will cost in the neighborhood of \$750,000. Lawrence McGreal recently disposed of his lease on the property for \$25,000.

As proof of the good business which has been received by the Victor department at Gimbel Bros.' store, L. C. Parker, manager of the talking machine department, presents figures which show that

during the first seven months of the present year the department met with a gain of 71 per cent. as compared with the same period of 1911. The daily concerts which are held forenoons and afternoons in the Victor auditorium at Gimbel Bros. have proven to be decidedly popular with shoppers at the big store and have done much in the way of increasing the talking machine sales.

H. P. Gibbs, of Chicago, representative of the Rudolph Wurlitzer Co., recently called upon the Milwaukee trade.

J. W. Campbell has assumed the management of the talking machine departments at both department stores of Edward Schuster & Co., and is introducing several innovations at the Third and Garfield and at the Twelfth and Vliet street establishments. Miss Esther Hughes has been placed in direct charge of the Third and Garfield streets store, and, although she has been in the business only one month, she knows the Victor catalog better than some who have been in the business for years. Miss Elsie Meisner is in direct charge of the Victor department at the other Schuster store.

One of the committees of the Milwaukee school board nearly broke up in confusion recently when a request came from the Milwaukee School for the Deaf for a talking machine. The committee members were up in arms at once. "A talking machine, and not a hearing person in the school outside of the teachers? What on earth does a school for the deaf want of a talking machine?" These were only a few of the questions asked by the ruffled committeemen.

Then Miss Wettstein, principal of the school, calmly replied that of the eighty pupils in the school who are absolutely deaf, thirty-six have received pleasurable sensations from the music of the talking machine, while twelve who never had given any evidence of hearing a sound and were regarded as totally deaf also "heard" the music. The committee was convinced.

J. H. Becker, Jr., manager of the talking machine department at the Espenhain Dry Goods Co., who has returned with his wife from a two weeks' vacation spent in the country, reports that the talking machine business at Espenhain's has increased 25 per cent. over the month of July, the first month after the department had been opened. He says that September is opening with a rush and that there is every indication of a big fall trade. Mr. Becker has been meeting with a big sale in the Victor IV at \$15, as a result of a neat circular which he issued some time ago. Something of an innovation in department store window displays has been started by Mr. Becker, who is featuring regular Victor exhibits which are attracting much attention.

In overruling a protest by Kornfeld, Saunders & Co. and others for duty of 35 per cent. ad valorem on phonograph and gramophone discs as manufactures of hard rubber under paragraph 464, act of 1900, the Board of General Appraisers holds the merchandise properly assessed at 45 per cent. as parts of phonographs and gramophones under paragraph 468.

The Edison

The Opera

This type has a powerful double spring motor, geared to body. It plays Amberol Records only, and is equipped with the new style Model L reproducer which is stationary, the mandrel feeding the record past. Furnished in mahogany or oak with self supporting wood cygnet, horn to match.

All Edisons have

The right home tone.

The sapphire reproducing point.

The long playing, smooth running motor.

NEW YORK, SEPTEMBER 15, 1912.

WE are now standing on the threshold of a promising fall business—promising so far as anything to the contrary can be observed, and if the dealers of the country will keep their minds clear, and their nerves under control, they will have very little occasion to worry about a phenomenal trade this fall and winter.

The fact that the "Presidential year" is regarded as an "off one" by some, is one of those unaccountable superstitions periodically disproven, yet it bobs up serenely indifferent to the oft-repeated verdict against it.

There is one thing clear, the talking machine business is destined to score one of its busiest and most prosperous seasons despite the fight for Presidential honors, simply because we have not had in many years more satisfactory crop conditions.

It is estimated that the season's crops will exceed ten billions in value for the first time. This is fully five hundred million dollars more than last year's yield. In addition to this remarkable wealth from the ground, the principal cities throughout the country report an increasing demand for labor in the factories showing that the industrial army is also getting its share of the increasing prosperity which is now becoming so manifest.

This condition of things should bring cheer to the talking machine dealer, and everyone else throughout the country. It means that there will be a large surplus left, both in the agricultural and manufacturing communities, for the purchase of talking machines.

With the leading companies introducing new styles next month at prices that appeal to every pocketbook, it is clear that it only needs wideawake, progressive methods on the part of the dealer to secure a record business this fall and winter.

EVERY talking machine dealer alive to opportunities should so adjust his business as to get the most out of it this fall. In other words, nothing should be left undone to this end.

First and foremost sales cannot be made without stock, and it is most essential that orders should be placed early with the manufacturers based upon the probable sales output, so as to give manufacturers an idea of their needs.

Then there is another matter, a rather serious one, too, and that is the scarcity of freight cars. The railroad people state that it will be difficult to move goods with the accustomed despatch the coming fall and winter, because of the famine in freight cars. This

will mean delay in receiving stock, and those located at faraway points will suffer accordingly.

The talking machine jobber or dealer who has a good stock of instruments on hand is certainly well equipped, but he must also see that orders are placed in sufficient volume for the future, based upon his good judgment as to the needs of his special community. Those who delay placing orders until a late period will find it difficult to get their stock in time to profit by the accentuated demand which is bound to come. But there are some people who never seem to learn a lesson even when it is forced on them with sledgehammer strength.

Next to carrying full stocks of machines and records, so as to serve the public with promptness and despatch, comes the matter of interesting purchasers in the goods handled. This means that the dealer should co-operate in the most enthusiastic way with the manufacturer in advertising his goods, locally—advertising them in an individual way so that the announcements may attract, interest and bring results.

Apart from this publicity, dealers can always win a special place in the news columns of their local daily or weekly papers, if they give recitals or other entertainments to acquaint the public with the merits of the talking machine.

We have long held that the recital stands foremost as a dignified and profitable form of publicity. It widens the knowledge of the possibilities of the talking machine among people who may be skeptical, while at the same time it advertises the store in which the concert is given.

WE are now entering the season when the fall campaign is to be seriously considered and developed, and every dealer who desires to "do things"—to achieve results—should plan a definite policy to be pursued so that he may expand his business.

Too many people are content to drag along in the same old rut without giving a thought to the inauguration of new ideas that would stimulate interest in their business and enlarge its possibilities.

The man "in the rut" cannot continue long there. He is bound to be crowded out by the quicker witted, progressive chap who moves along indifferent to ruts, or washouts, and who always lands the business prize.

We hear of dealers who get together and talk about the bad features of the business—how their records pile up and the difficulties met with in cleaning up dead stock—the mistakes made by the manufacturers and jobbers, and other passing topics.

There is no denying that it is a good thing to get together and discuss these things.

But, admit that the manufacturers and jobbers are not always right—they are only human. Grant there are bad features in the trade—there are in all lines of business! But why dwell upon the subject continually?

THE grouch is a bad partner in business. Make it a silent partner during business hours, and exercise it at odd times if you must. It will be noted that the dealer who is doing all he can to get more business and keep what he already has—who is studying the talking machine business as a business and acting accordingly—is always too busy to spare time to kick.

Optimism is a more valuable asset than pessimism in business, no matter what may be the conditions. And there are few industries where the dealers are better equipped to capture a large and satisfactory volume of trade than in the talking machine field.

This is due to the stupendous advertising policy of the manufacturers who virtually bring the business to the doors of the dealers; to the unending suggestions of value and importance which are sent by the manufacturers and dealers almost daily or weekly; to the price protection insured them, so that unlike other industries there is no drastic cutting of prices, thus freeing the trade of one of the most harmful forms of competition.

All that is needed is enterprise and ideas to interest the public locally in the store—to bring the merits of the goods to their attention in a novel, but profitable way.

This means planning and concentration, and now is just the time to start the ball rolling.

HIS trade newspaper institution has been in receipt of a number of complimentary communications from South American houses praising our new publication recently put forth entitled *La Maquina Parlante Mundo*.

This paper has aroused widespread interest throughout Latin America and it affords American manufacturers the best opportunity to reach the export trade, which is rapidly growing in magnitude and desirability.

We have recently added to our Spanish staff Mr. Luis G. Rocha, a gentleman who has had a long and varied experience in the Spanish export trade.

He has been in close connection with talking machine interests and he will become business manager of our Spanish paper.

Advertising copy intended for the next issue of this paper should reach this office at an early date, as this work always necessitates considerable time in translation, in careful handling, setting up and proofreading, and we are particularly desirous of having as few errors in this work as possible, and we would urge all advertisers to supply us with copy at the earliest possible moment.

RECENTLY some eminent writer in discussing the varied forms of advertising, and the value to be derived therefrom, stated that window display as a selling power has been largely overlooked, and that this branch of advertising was still in its infancy as far as the National advertiser is concerned.

There is a lot of truth in this. It is only within the past few years that the talking machine trade has really become alive to the

value of show windows, and there are a large army of people who are still indifferent to this manner of conveying information to the public regarding their products.

Those who have taken advantage of the possibilities that lie in the show window have gone into the matter in a most careful way, and with a thoroughness that characterizes the successful advertiser of to-day. Others have gone into this form of advertising in a haphazard, desultory way, but by far the greater number have utterly ignored this fruitful field.

This will not always be so.

Thomas A. Bird, in discussing this subject recently, made some very pertinent remarks which fit in here. He said: "In a few years every manufacturer whose goods are handled by the department store will have learned the tremendous selling power of the combined show windows of the stores that sell his goods. He will make it profitable for the merchant to put his goods in the windows. The show window is a force that must be reckoned with by the national advertiser of the future. It has a 'circulation' comparing favorably with that of any publication, and, in addition, it has a directness of appeal to each individual that no printed matter can ever have.

"It will pay the young man who is entering the general advertising field to study the show window and its possibilities as a factor in the big general scheme of distribution. He will be required to understand at least the fundamental principles of display, and the more he knows about it, the more useful he is likely to prove to his firm."

NEW VICTOR SOUND BOX.

Letter Sent to Dealers by Victor Co. Giving Choice of Sound Boxes as Regular Equipment—Shipments Made Middle of the Month.

The Victor Talking Machine Co., under date of September 3, sent out a letter to the Victor dealers, calling attention to the Victor "Improved Concert" sound box, sold at \$5, subject to regular Victor discount. In this connection it states:

"This is a sound box whose merits we are quite sure you will quickly perceive, and as you have your choice of either this new 'Improved Concert' sound box or the exhibition sound box as regular equipment on all Victors and Victrolas, we must request that on all orders placed by you with your distributor, that you distinctly specify with which sound box you wish them equipped. Each distributor now has a Victor 'Improved Concert' sound box in his possession, and you can make your test and comparison at your distributor's salesrooms. We expect to supply distributors with a stock of this new sound box by September 16."

VICTOR PUBLICITY IMPRESSES.

Advertising Manager Brown Tells How It Influences and Interests the Trade and Public in the Victor Line Generally.

Referring to the four-page Victor insert in colors which appeared in *The Talking Machine World* for July, and which contained as a centerpiece a double-spread illustration of the great Victor plant at Camden, N. J., H. C. Brown, advertising manager of the company, in a chat with the representative of *Printer's Ink*, said:

"This advertisement we believe cannot help but impress the merchants who should handle our line with its high quality, and also, with its fast money-making possibilities. It tells them about the wonderful things the Victor-Victrola has accomplished in the musical industry, which they know to be true, and it also gives them a hint of what we do for their benefit in the way of advertising; and further impresses on them the value of the Victor trade-mark.

"The illustrations are very effective, and at the same time full of business, showing as they do the complete line of Victor-Victrolas, the immense Victor factories that supply these instruments, and the Victor trade-mark which guarantees the quality of all Victor products.

HOW ADVERTISING HAS ADVANCED,

Both as a Profession and in the Opinion of the Public During the Past Thirty Years, Discussed by L. C. McChesney.

In the course of an interesting article which appeared recently in *Printer's Ink*, L. C. McChesney, advertising manager of Thos. A. Edison, Inc., and president of the Association of National Advertising Managers, spoke as follows regarding the evolution of advertising methods and changes:

"Twenty-four years have taken advertising out of the doubtful business classification and made it a profession of dignity, with a code of ethics as clearly defined as that of the physician or the lawyer. Twenty-four years ago men engaged in advertising were regarded by the public as a species of confidence men, and most advertising men agreed with the public. Today no one questions the standing of advertising as a business or profession, whichever way it may be classified. The

public has given it a recognition that is unquestioned and men are proud, not ashamed, of their connection with it. Twenty-four years ago sales forces had only sneers for advertising as a factor in business-getting. To-day they admit it to be a factor as great as their own, if not greater.

"Advertising, in twenty-four years, has made tremendous progress toward honest standards. Then advertising men unblushingly declared that they were not keepers of their brothers. To-day the best of them admit their responsibility to those who read their copy or their publications, and they are working hard to induce all other advertising men to get the same viewpoint. The spirit of organization and getting together along progressive lines is strong evidence of this changed condition. Twenty-four years ago advertising men were quite as afraid of each other as they were that the public would ostracize them because of the character of their business. To-day thousands of men are eagerly working together for the advancement and uplift of advertising as a whole."

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

EDISON TALKS OF HIS NEW DISC PHONOGRAPH.

The Great Inventor Tells How He Perfected the New Disc Phonograph with Its New Records and New Form of Reproducer—A Characteristic Interview with the Wonderful but Always Genial Inventor That Will Prove Interesting to Talking Machine World Readers—Working Now on Talking Pictures.

An interesting story of what Thomas A. Edison has accomplished in the work of perfecting the new disc phonograph and records, and how, was told by Karl K. Kitchen in last Sunday's World. The story, which was in the form of an interview with Edison, was, in part, as follows:

"Go to West Orange and see what Edison is doing now," was my commission.

I took the first train for Orange. At the Edison plant it was Charles Edison, one of the inventor's sons, who led the way up two flights of dark stairs to the third floor of the laboratory, where he turned into a small partition roughly boarded off from the big room.

Thomas A. Edison had dropped his work and was standing up when I entered the partition. He was dressed in blue serge, with square-toed shoes much the worse for wear.

"Glad to meet you," he said, greeting me with the most democratic of handshakes. "Don't you know I never have anything to say to newspaper men?"

There was a merry twinkle in his eye, for his kindness and courtesy to newspaper men is proverbial. I knew that once he wrote a story for a cub reporter who had been sent to see him.

"I want you to tell me what you are working on now," I said.

I had to repeat my question, for Mr. Edison is quite deaf. He put his hand to his ear the second time I spoke.

"This," he answered with a smile, pointing to a phonograph three or four feet from his chair, "What do you like, grand opera or ragtime?"

On being assured that I was very catholic in my tastes, he jotted down a dozen numbers on a slip, which he handed to a small boy.

"I'm going to make you sick," he laughed. "I want to see what you think of my new phonograph."

The boy returned with an armful of disc records, one of which Mr. Edison selected. A moment later we were listening to a brilliant march. Never had I heard such a remarkable record. There was not the slightest scratching at the beginning, nor were any of the sounds that mar phonograph records audible. There was no metallic luster to the music. It was just as clear and full as if the orchestra had been in the adjoining room.

Once or twice I turned my eyes from the phonograph to the chair where Mr. Edison was sitting. He was bent forward with his chin on his right hand, his elbow resting on his right knee. A smile was playing on his mobile features.

"What do you think of it?" he asked when the music stopped.

"It's wonderful," I admitted. "I've always been prejudiced against talking machines, but this has converted me."

He heaved a sigh and mopped his brow as if the great task had just been finished. "It's taken years, but I've got it," he added.

So now, gentle reader, you know what Edison has been doing and what he has accomplished.

He has perfected a phonograph which has eliminated all scratching noises as well as the metallic luster to the tones, which has marred all types of talking machines in the past. The music is reproduced in rich, full tones just as it is first rendered.

"What's the secret of it?" I asked.

The famous inventor led me to the machine. "A diamond instead of a needle," he said, lifting up the metal arm which extends over the disc. "The diamond moves up and down on the disc instead of sideways—there's no noise, no scratching; there can't be; also no replacing of needles."

He picked up one of the new records. This is made of condensite, a new material which has carbolic acid for its base. It's indestructible, you can't scratch it and it will never wear out. That's more than you can say for the present records, isn't it?" he added with a laugh.

"These new records contain twice as much music as the old ones," he went on. "Let me play you another one."

We resumed our chairs and listened to the accompaniment of "My Evening Star," from "Tannhauser."

When it was finished Edison tugged at his eyebrows for several moments in silence. Then, suddenly, as if awakening from his reverie, he stood up and began to talk.

"That's one of the four or five good things that Wagner wrote," he said, looking directly at me through his glasses. "Wagner was a good musician who went wrong. He should have stopped when he finished 'Tannhauser.' That was the zenith of his achievement. He should have been an Italian like Verdi. He was a crazy fellow—some of his music is awful," and Edison swept his hands before his face to ward off the "awful" music. "But he wrote four or five good things, and the 'Evening Star' song is one of them."

When the music stopped Mr. Edison continued: "There are better voices in America than there are in all of Europe put together. I know, for I have heard all the famous singers in Europe, and I have tested the voices of American singers. The time will come when Americans will wake up to this fact."

There were two or three men in shirt sleeves in the doorway waiting for an opportunity to speak to the great inventor. They had parts of

machinery in their hands and they seemed impatient, but Mr. Edison paid no attention to them. He put another record on the machine and sat down to enjoy it.

It was "Moonlight in Jungle Land," a ragtime ditty sung by a colored quartet.

A violin solo followed. "We don't need to go abroad for our violinists, either," he went on.

This was followed by half a dozen grand opera records. During most of them Edison sat with his right hand to his ear to catch the slightest defect. One record produced a slight scratching noise. He ordered it thrown out.

Son Charles explained that his father was personally testing eleven thousand records. No wonder the great man is busy and has to content himself with three or four hours' sleep a night.

In fact, he had not been home for four nights before my visit. His meals had been brought over from his home and he had slept on a cot in the library on the first floor of the laboratory building.

"This isn't all father has been doing," said Son Charles. "He's been working on the talking pictures. They are practically perfected."

When the phonograph was silent for a moment I turned to Edison, Sr., for verification of his son's statement.

"Talking pictures?" he repeated. "They're not quite ready. We're testing them in the tent out in the yard. I think they'll be ready this winter. I hope so."

"Anything else?" I asked, my attention having been called to the fact that some of the phonograph cases were made of concrete.

"No, nothing of any importance," answered Mr. Edison. "I've devoted practically all my time to these new disc phonographs. Concrete is an old story. Let me play you another record."

Before I took my leave a score of records had been played. The Wizard had become so engrossed in listening to them that he had forgotten my presence, and when I said "Goodby" he shook my hand perfunctorily.

But I had got what I was sent for.

FEATURING THE CONDON-AUTOSTOP.

The Condon-Autostop Co. has been conducting a great campaign of publicity at Atlantic City all summer, a prominent display being made at the Exhibition Arcade on the Board Walk, where millions of people have seen the Autostop in operation. This has been conducted solely as a means of stimulating trade for the dealers and will doubtless result in many sales this fall. A big shipment of Condon Autostops was made last week to Grinnell Bros. of Detroit, Mich., who have been displaying this specialty at various public affairs and making many sales. Following the usual summer quiet business with the Condon Autostop Co. is now looking up, and William A. Condon, of the company, in a chat with The World this week, stated that he expects an unusually active fall business.

Doubt does to success what the daggers did to Caesar.

COLUMBIA PUBLICITY.

Another Up-to-the-Minute Book Is "Music Money," Just Issued by the Columbia Co. and Which Is Being Closely Studied.

"Music Money, a Book for Merchants," is the title of one of the latest and best of the many books for the trade issued by the Columbia Phonograph Co., General, New York. It contains only ten pages, but those ten pages are packed full of meat and good advice to the talking machine dealer—particularly to the prospective dealer. Herewith we quote the opening paragraph:

"Columbia product is music. Do you know a man who does not like music? If so, dodge him. There's something wrong in his make-up. The four great necessities of civilized humanity are food, drink, clothing and lodging. But music ranks right with them. The passion for it is earthwide. The desire for music is wider than the necessity for clothes and lodging. In some countries clothes and a house are unnecessary. But all races in all countries have their own music. The desire for music is not bound by any line of race or

creed or country. It is absolutely universal everywhere.

"And the demand for Columbia instruments is just as wide as the passion for music.

"Columbia product is music. Every Columbia graphophone and Grafonola is the one incomparable instrument of music capable of giving music for all races in all languages; vocal music and instrumental—music without limit. That does not leave any doubt that Columbia product has a demand to meet.

"Now please observe how Columbia product does meet it."

Then the book goes on to explain, in brief, crisp and right-to-the-point paragraphs how the Columbia product does meet the demand. It takes up and discusses every phase of the business. For instance: How the increase proves the demand; the certainty of the future; the range of price; the record supplements as a monthly magnet; easy selling; big cash business always in sight; easy and profitable instalment business, and advertising pre-eminence and protection of dealers are a few of the interesting headings over more interesting paragraphs to be found in "Music Money."

The book is a typical sample of the excellent advertising which is always a feature with the Columbia advertising department. Present or prospective dealers would be wise to send for one.

EDISON FORGETS TO SLEEP.

He Works 122 Hours Out of 144 to Perfect Disc Phonograph.

Despite his advancing years Thomas A. Edison was so busy last week that he found time for less than 22 hours' sleep in the course of the six work days, according to the New York Times. By his own accounting he devoted 122 hours of the 144 to hard work. This spurt of energy was inspired by the need of finishing touches on his disc phonograph. To-day he was ready to say that the invention was about perfected, and he hopes and believes that he will be able to put it on the market by October 1 or thereabouts.

The man who fails to keep his efficiency a notch above the average is breaking away from his moorings.

Value of Artistic Environment in Talking Machine Show-Rooms.

Despite the rush with which the average business is conducted, the general absence of parley, the evident desire to have the deal closed and done with, there is still enough sentiment left to influence the buying public to appreciate pleasant surroundings while conducting their business, especially in certain lines. Drugs bought over a plain

lines of business, not excepting that of talking machine retailing. In this business one of the most essential features is the necessity, or at least desirability of making the customer feel at perfect ease and in the mood to spend some time in looking over and hearing the new records, as well as inspecting the new lines of machines. A choice of

One of the most elaborate and at the same time original arrangements of talking machine sales rooms are the two new rooms recently added by the Talking Machine Shop, Pittsburgh, Pa. The walls and ceiling of the rooms are covered with trellis work, which in one room supports an abundance of wisteria, while in the other room

Wisteria Room

Rose Room

deal counter would probably prove as good as those handed out over a massive plate glass showcase, but the modern druggist has learned that elaborate fixtures help business. In selling haberdashery the dealers have found that attractive displays and handsome and attractive fixtures increase trade through their drawing powers. So it is in many

records, one that will really please the customer and prove profitable to the dealer cannot be made hurriedly and without due consideration, and the surroundings in which the talking machines and records are offered must be such as will encourage the customer to remain for some time and feel that he is welcome.

the rose is the prevailing flower. Handsome mural paintings are to be seen through the open spaces on the lattice. The whole effect is one of rest and repose that does not in the least suggest business, yet the success of such an arrangement is proven in the increase of the Talking Machine Shop since its establishment in October, 1911.

WILL OVERSHADOW ALL PREVIOUS SEASONS.

St. Louis Talking Machine Men Confident Regarding the Coming Trade—Heavy Orders Placed for Machines and Records—New Models Expected to Create Trade—Talking Machine Department for the Jesse French Piano Co.—Do Moving Picture Houses Hurt Talking Machine Sales?—Personal Items of Interest—May-Stern Co. Enlarging Department—Vacations Now Over and Everyone Is Planning for a Busy Fall.

(Special to The Talking Machine World.)

St. Louis, Mo., Sept. 10, 1912.

Local talking machine men are predicting that this fall and winter will far overshadow any previous season in the talking machine business, and the jobbers have placed orders for new machines in keeping with that outlook. With the arrival of the new Victor models in the jobbers' warehouses, that line took on quite a spurt. Heavy advance orders were on the books for these machines from men who had never seen them but were accepting the promise of the Victor Co. for radical improvements.

The Columbia Co. is expecting great things from the new Regal Grafonola, which at \$40, including record albums, is a trade winner.

The Edison dealers are looking forward to the stir their disc machines will cause, and at the Silverstone Talking Machine Co. it was said that a heavy shipment of these machines would be absorbed by advance orders when the goods arrived. "The trade is taking to the new machines in fine style, considering the price asked," said Mark Silverstone.

"Advance orders for the new style Victors have been phenomenal," said Harry Levy, of the Aeolian Co., "and the trade now fears no competition for years to come with these handsome instruments. These machines are going to be the biggest boosters the trade has had, and while the enthusiasm of dealers over these machines is great, it will grow rapidly when they actually see them. The advance orders now on our books will equal the business ever done before in this department. With the spreading of the St. Louis territory and the increased volume of the talking machine trade, we cannot help have a record trade. Locally we have enjoyed a good business and know that our customers have. Our retail business is making an excellent showing."

"We anticipated a fine demand for the Victor new models," said E. C. Rauth, of the Koerber-Brenner Music Co., "and we are in fine position to handle shipments of them promptly. I look for an excellent business in all lines of the talking machine trade. We have been doing excellently with the records."

"Our August trade was the best we ever put on the books for that month," said C. L. Byars, of the Columbia Co., "and we are anticipating an excellent fall. The record trade has been very good, and what pleases us best of all is that the class of trade is improving steadily."

"Jobbing business has been very fine," said Mark Silverstone, of the Silverstone Talking Machine Co. "We could have done more in a retail way,

but the record trade was very good and the business is looking up nicely. The class of trade is excellent and leads to a belief that the new disc machines will meet with a ready reception."

The retail trade is much interested in the announcement of the Jesse French Piano Co. (Field-Lippman) that a Victor talking machine department will be added to that store on October 1. Changes are being made in the basement of the Olive street warerooms for the new department which will equal any in the city, according to the firm. It is said that some trouble has been experienced in selecting a staff of experts. Anyway, the Field-Lippman Co. ran a large display advertisement in the local Sunday papers asking talking machine expert salesmen, mechanics and record keepers to call and talk it over. Incidentally, the advertisement served to notify the public that Field-Lippman wanted the best help obtainable for their new department.

Mark Silverstone has an idea that the moving pictures are hitting the talking machine trade pretty hard, especially the record trade. "I have been watching my neighbors," he said, "and I know that a good many of them who used to enjoy concerts on their lawn on hot evenings now go to picture shows, especially since the airdome fad became general. There they are comfortable and they both see good pictures and hear songs between times. Some of these persons used to buy one or two records weekly. Now they spend about the price of those two records for picture shows."

L. A. Cummins, who has been in Colorado with Mrs. Cummins for the latter's health most of the summer, has returned to the Koerber-Brenner Music Co. and taken up his work in the Illinois territory.

Charles L. Byars, retail sales manager for the Columbia Co., took the second half of his vacation the last week in August and spent the time in Cincinnati as the guest of his sister, who will soon become a full fledged M.D. Mr. Byars had the pleasure of being in the Ohio city during the period that it held the heat record for the summer for the Middle West region.

Harry Koerber, president of the Koerber-Brenner Music Co., returned the first of September from Bass Rock, Mass., where he spent August wishing that he had taken his overcoat.

L. E. Elshan, Kansas traveler for the Victor, spent one day in St. Louis on his return from a visit to the factory, the guest of Harry Levy, of the Aeolian Co.

C. H. Hawk, of Greenville, Ill., an Edison dealer, was a recent visitor in the city.

Stark Bros., of Louisiana, Mo., one of the biggest fruit tree selling concerns in the world, recently ordered four dictating machines from the Silverstone Talking Machine Co., of this city.

Robert Duffy, assistant to C. L. Byars, retail manager of the Columbia Co., started on a two weeks' vacation September 1.

Dollie Connolly, of vaudeville fame, was headliner in a local theater the first week in September, and the Columbia Co. celebrated this event and picked up some business by making a window display of her popular hits on its records.

D. S. Ramsdall, manager of the Columbia Co., spent his vacation during August in the Arcadia Valley, one of the beauty spots of the Ozarks.

H. A. Hummer, of New Madrid, Mo., dealer, stopped off here on his way to Colorado on a vacation trip.

The extending of the St. Louis trade territory is perhaps the cause of the announcement of the Aeolian Co. and the Silverstone Talking Machine Co. of increasing their traveling force this fall. The Aeolian Co. will add two men and the Silverstone Co. one man.

Miss Ruby Graf, an efficient employe of the Val Reis Piano Co., has been advanced by being placed in charge of the talking machine department of that company. She will have charge of both records and machines, and beginning with her administration the department will be greatly enlarged.

The May-Stern Furniture Co. is enlarging the talking machine department connected with that store.

It is announced that the Story & Clark Piano Co. will add talking machines to its lines when it opens on Olive street. No announcement has been ventured as to what line will be handled.

ENSURING FIRE PROTECTION.

Employees Should Be Made Acquainted with the Details of Arrangements Made for Preventing Fires and Their Spread.

It is not enough to install fire protection facilities in your store or factory. You should be sure that each of your employes knows about them and how they work, not in a hazy, general way, but definitely. If their attention has not been called to the sprinkler system, the fire buckets, extinguishers, wired glass, doors with fuse attachments, etc., very likely a large percentage have scarcely given them a moment's thought. Tell them about these things through enclosures in their pay envelopes and require them to return the enclosures signed, to the effect that they have read and understand. In this way you will get your employes enthusiastic in fire prevention subjects and cause them to discuss them during their lunch hour or other leisure time.

Treat your customer as if a guest. Don't go beyond the point of tactfulness, and use your own personality. There is no set rule to sell goods, but be always alert.

**"DUSTOFF" RECORD CLEANER**

De Luxe model for discs. Made of a "unique" tiger-back, oxydized finished metal holder with Wilton fabric cleaning surface. Retail at 50 cents each. (Each in a box and 12 in a display carton.) Sample postpaid for 35 cents.

"DUSTOFF" RECORD CLEANERS

SELL FAST

Because they possess those essential features of true merit, thorough effectiveness of operation and practicability, carry a good profit for the dealer, and, further, because they appeal to the customer as being an absolute necessity for his talking-machine records.

"DUSTOFFS" are the only record cleaners made that thoroughly remove all accumulated dust and dirt from the minute sound grooves of the record without scratching in the least. They are simple to use—merely brush over the record a few times before playing.

**"DUSTOFF" RECORD CLEANER**

Regular model for discs, made of Wilton fabric. Regular model for cylinders, made of special processed white lamb's wool. Retail at 15 cents each. (Each in a two-color carton.) Sample postpaid for 15 cents.

THE USE OF
"DUSTOFFS"
DISCOUNT
TO DEALERS

PROLONGS the life of the record by keeping the reproducing point track clean. PURIFIES the reproduction, ensuring clearness and distinctness of tone. PREVENTS the harsh sounds, blurs, and scrapings caused by settling of dust in the minute sound grooves.

40% YOUR JOBBER

can supply you

{ Or we will ship direct to any point in U. S. Carriage paid on 1 dozen or more de luxe model and on 3 dozen or more of the regular models.

MINUTE SHINE COMPANY 281 CANAL STREET, S. W. PROVIDENCE, R. I., U. S. A.

The Talking Machine Trade in New England

SALES PROMOTING FEATURE

Are the Pardell Folding Boxes, Manufactured by the Pardee-Ellenberger Co., of New Haven, Conn.—Special Prices Quoted on This Stock Which Make Them Most Attractive to Dealers—Will Also Prove Helpful Factor in Increasing Sales of Records.

(Special to The Talking Machine World.)

New Haven, Conn., Sept. 7, 1912.

Prices have been reduced on Pardell folding boxes, manufactured by the Pardee-Ellenberger Co., of this city and Boston, Mass. While the prices always were cheap, with the further cut makes them cost about the same as paper bags. For instance, the No. 3 size, holding three cylinder records, cost a cent a piece; the No. 6 size, holding six cylinder records, cost 1½c. each; while No. 12, holding a dozen cylinder records, cost but 2¼c. each. These prices are in 100 lots, as that would be the smallest quantity any dealer would want to use.

To show that Pardell folding boxes are profit makers, suppose a dealer has sold two ten records to a customer. He shows her the dozen size box, and how two more records will just fill the "pretty box." Practically everybody sees the practicability of using a good box to carry their records, so the dealer sells two records more than he would if he hadn't had the Pardell box. If this happens many times a week during the course of a year the extra profits must be tremendous.

On this page of The World will be found the P-E announcement of the reduction in Pardell folding box prices.

VICTORS IN HEAVEN.

Hymn in Church Causes Confusion in Mind of Small Parishioner.

A little boy of six had been visiting an Episcopal Church for the first time. On returning home his mother began to question him. "Why, mother," answered the little boy, "the people first knelt down and then stood up, and the minister wore a kimona nightgown. And, oh mother, they have Victor talking machines in heaven." "Oh, no," corrected his mother, "that is impossible." "But they do," insisted the boy, "for I heard them sing 'Fling open wide the golden gates, and let the Victor in.'"—The Voice of the Victor.

BIG TRADE IN EDISON GOODS

Reported by John H. Massey, Manager of the Edison Department of the John S. Foster Co., of Providence, R. I.

(Special to The Talking Machine World.)

Providence, R. I., Sept. 10, 1912.

John H. Massey, manager of the Edison department of the J. A. Foster Co., has returned from a three weeks' vacation, which was spent absolutely in quietness and happiness. As a result, he has gained a few pounds in weight and a whole lot more to his already large stock of Edison enthusiasm.

Mr. Massey speaks very encouragingly over the summer's trade in Edison goods and said that it was far ahead of the similar period of last year. He says that the Edison interest is increasing in Providence, and that there is a larger number of machines coming in to have the Amberol attachments applied.

"A CLEARING HOUSE OF KNOWLEDGE"

Is the Trade Journal—Not Merely a Distributer of Trade News or Personals, but an Earnest, Well Equipped Teacher in the Trade or Profession to Which It Is Devoted—Its Higher Purposes in Trade Development.

The great English philosopher, Sir Francis Bacon, stated: "I hold every man a debtor to his profession, from the which, as men do, of course, seek to receive countenance and profit, so ought they, of duty, to endeavor themselves, by ways of amends, to be a help and an ornament thereunto."

The technical or trade paper has come into existence largely to record the "amends" made to the callings represented thereby, says B. B. Herbert, editor National Printer-Journalist. It is a clearing house of knowledge, of experiences, theories, principles and accomplishments in the trade or profession to which it is devoted.

It is wise that a man of attainment in his vocation give of his wisdom to others, and it is a duty of others to learn of that wisdom, that they may profit, and in time become a help and an adornment to the calling.

Educational Purpose.

The trade or technical paper exists not alone to make men more successful, to help them to meet and solve the difficulties that confront them from time to time, but to instruct and educate them, to make them more able, more worthy, for the encouragement, inspiration and uplift of others.

The editor of a trade journal is never more pleased or encouraged than when subscribers state that they carefully go over and study each number when received and mark with a pencil all those things they think they can apply to their own business and then go back and study these marked paragraphs or articles and seek out methods for their application.

The woes of the editor of the technical journal come from subscribers who are alike indolent, listless, inattentive, with the feeling that there is no need for learning or that they already know it all. He is troubled by those who have no object higher than getting a present living, no sense of the duty and privilege of highest possible service or desire of becoming a help and an ornament or glory and inspiration to the calling that furnishes them, or should furnish them, if intelligently and earnestly pursued, "a profit and advancement."

The home papers all over this land (and all newspapers, whether metropolitan or rural, are now home papers), are, in an important sense, in the nature of trade papers to their respective cities and communities and to all the activities and industries carried on therein.

Duty of Newspaper.

It is the privilege and duty of every newspaper as well as of every trade paper, to advance knowledge in promoting the callings of their readers and the uplifting of their lives. One of the curses of the newspaper calling in the past has been the use of the paper for political advancement. Professional office seeking is now at a discount and editors and publishers have come to strive and glory in their work and in making their business useful, worthy and permanent.

The work of the editors and publishers of trade papers devoted to newspaper and printing has been greatly helped by this change and where only one feeble journal existed twenty-five years ago devoted to these callings, a score of strong, worthy journals now find support. The trade paper as a teacher of newspaper making and good printing has come to be appreciated.

The trade papers aid those engaged in the developing of better appliances, better devices and supplies in the way of presses, types, composing machines, paper, etc., for the use of these callings. They build up the members in the knowledge of their use, as well as in all knowledge that tends to higher professional or expert attainments, to economic management, efficiency and all else that tends to better production, broader and more useful service and a permanent success with rewards and honors.

DISPLAY AT BOSTON ELECTRIC SHOW.

Thos. A. Edison, Inc., Will Exhibit Its New Disc Phonograph, Records and Entire Line, From September 28 to October 26.

At the Boston Electric Show, held at Boston, from September 28th to October 26, Thos. A. Edison, Inc., Orange, N. J., will have an exhibition of its entire line, including the new disc phonographs and records which are about to be marketed.

Reduced Prices ON Pardell Boxes

PARDELL FOLDING BOX

A folding container for three, six or twelve Cylinder Records. These boxes are being very generally used by phonograph dealers and are the most convenient package for delivering Records to customers, particularly during the hurry hours. Many times you can sell "just one more Record to fill the box" by using them. Made of heavy cardboard and shipped "knocked down."

Prices Per 100

No. 3 Size	- \$1.00
Holds 3 Cylinder Records	
No. 6 Size	- \$1.50
Holds 6 Cylinder Records	
No. 12 Size	- \$2.25
Holds 12 Cylinder Records	

The Pardee-Ellenberger Company
NEW HAVEN, CONN.

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., Sept. 6, 1912.

The sensation of the month has been the marriage of Arthur Erisman, manager of the Columbia Phonograph Co., General, which took place on August 28, the ceremony being performed at Watertown by Rev. Edward C. Camp, pastor of the Congregational Church in that town. Several of the daily papers played up the wedding in a more or less sensational manner, inferring that it was an elopement, which it was not. The bride, whom Mr. Erisman has taken for his lifemate, is Miss Rel'a Winn Reid, of Washington, daughter of Irby W. Reid, who was chief accountant for the Columbia Phonograph Co., General, for a number of years. Miss Reid, or, rather, Mrs. Erisman, has a beautiful voice and was to have studied

at the New England Conservatory in the Back Bay this coming fall, having already been graduated from the Dolly Madison School in Washington.

Mr. Reid, having associated himself with an automobile company in Boston, had brought his family here for the summer, and during July and August they were located at the Hotel Pemberton, Hull, where Mr. Erisman also has been. Despite the stories of a romance, love at first sight, and so on, Mr. Erisman's acquaintance with the young woman was not a sudden affair, as he had known her some time. The wedding was a very quiet one, but at the breakfast, which was served later at the Hotel Lenox, there was a jolly party of congenial friends.

A few days ago Mr. Erisman delved further into hospitality and had as his guests the whole

working staff of the Columbia's Boston establishment, which number more than thirty. A fine banquet was served at one of the Back Bay cafes and there was jollity supreme until a late hour. Mr. Erisman and his bride have taken up their residence at 28 Westland avenue, Back Bay, where Mr. Erisman had been making his home with his brother, Fred Erisman, for some time. Everybody in the talking machine business has been calling up Mr. Erisman on the 'phone offering their congratulations; and these friends are legion, for the head of the Boston office of the Columbia is a very popular man and good fellow.

Silliman Chats of New Edison Disc Phonograph.

Manager F. H. Silliman, of the Boston quarters of the Pardee-Eilenberger Co., has returned from his vacation at Narragansett in fine fettle for the fall campaign. He is more than enthusiastic over the new disc machine which Thos. A. Edison, Inc., is about to put out, and he says that it about represents perfection in tone reproduction. The new goods, he says, are looked for toward the end of September, although dealers everywhere are loudly clamoring for them, as having heard of the superior merits of this new machine they are most anxious to get hold of them. W. O. Pardee was up from New Haven the other day and he and Mr. Silliman took in the ball game. Of course, they also discussed business.

New Columbia Dealers.

Manager Erisman, of the Columbia Phonograph Co., General, has entered into contracts with a number of large dealers in New England the past month, and among those who will handle the Columbia outfits are J. H. Barney & Co., of Newport, R. I.; George H. Sharp & Son, of Westfield; A. W. Dickerman, of Keene, N. H.; Charles S. Plummer, of Newport, R. I.; H. B. Wentworth, of Middleboro; H. Marshall Gardiner, of Nantucket, and Harris Gleason, of Worcester, whose establishment is a very large one.

Handsome Victor Quarters.

The new salesroom and demonstration booths of the Victor department of the Henry F. Miller Co., which were reported last month as being entirely done over and rearranged, are proving to be among the finest, most conveniently arranged and most artistically embellished of any in the city, and the customers are loud in their praises of the arrangements. The department, under Ubert Urquhart's personal management, is making a record for itself, and the month of September has started in surprisingly well. Warren A. Batchelder, of this department, has returned from his vacation, spent first at York Beach, Me., and subsequently over in New York. There was something doing on the Great White Way while Batchelder was there.

Chas. Trundy Becomes Manager.

Charles Trundy, who has a number of friends in the talking machine business, is back at his old place as manager of the Victor department for George Lincoln Parker in the Colonial building. Mr. Trundy possesses many admirable qualities that are requisite in a good salesman, and he has the well-wishes of his friends in again associating himself with Mr. Parker.

Winkelman Enthusiastic Over Outlook.

Henry Winkelman, manager of the Victor department for the Oliver Ditson Co., is back at his desk again after an enjoyable vacation at Swan Island, Me., and he is most enthusiastic over trade prospects for the coming season. Yesterday Mr. Winkelman entertained James F. Bowers, of Lyon & Healy, Chicago, who was in town calling upon the piano trade. Otto Pissendell, Mr. Winkelman's valued assistant, is taking his fortnight's vacation and will be back the latter part of September.

Eastern Co.'s Magnificent New Quarters.

The improvements now nearly completed at the warerooms of the Eastern Talking Machine Co.

(Continued on page 18.)

The Talking Machine Needle Maker
Lowell, Mass., U. S. A.

Such was the name and address on a letter that came thousands of miles and was delivered to us recently. This brings up for reiteration the fact that there is but one Lowell, Mass., in this world and that there is one Bagshaw who is a manufacturer of talking machine needles in that city and he supplies the world. When you think of Lowell, Mass., think of Bagshaw, and when you think of talking machine needles, think of both—Bagshaw, Lowell, Mass.

DUPLEXETONE Talking Machine Needles

You will make more money by pushing the Duplexetone needles! This is the needle with two tones which has been the talk of the trade since its introduction. Duplexetone needles represent everything that might be desired for the proper musical interpretation of every record, whether LOUD, SOFT or intermediate tones. It seems amazing that a little piece of steel could perform these functions, but its shape has been as carefully designed as the architect's building plans. It has cost thousands to create Duplexetone needles and thousands to introduce it. Jobbers, dealers and owners consider them the best, and with that indorsement Duplexetone needles are made and sold. Could more be said?

Write to-day for samples of this wonderful
DUPLEXETONE Needle, with a booklet
telling about the Bagshaw Service in detail.

W. H. BAGSHAW,

Lowell, Mass., U. S. A.

The more you realize that in the future of this industry the best results are yet to come, the more freely you must admit that the Columbia is the line best worth the investment of your time, your energy, and your capital. (Printing this every little while. Proving it all the time.)

Columbia Phonograph Co., Gen'l
Tribune Building, New York

FROM OUR BOSTON HEADQUARTERS.
(Continued from page 17.)

in Tremont street reflect the greatest credit on Manager Taft, who has worked early and late to see that every detail is as it should be. By the time this issue is being read the new establishment—for such it will prove to be—will have been opened. At the rear of the ground floor are four beautiful demonstration booths done in mahogany and having double sound-proof windows. The front of this same floor has had the walls all done over in a soft shade of red with a suggestion of ivory; there has been a complete new outfit of mahogany furniture installed, the chairs being of handsome Colonial design, elaborate electrolers have been put in and a new consignment of Oriental rugs has been laid on the floors. Both Mr. Fitzgerald and Mr. Read have new mahogany desks with their names on a brass plate on the side. Mr. Chamberlain, the assistant manager, has a room all to himself at the rear of the demonstration booths and his quarters likewise are handsomely fitted up. Everyone connected with the Eastern is full of enthusiasm over the improvements, and it all will play its part in pushing for business on the part of the intelligent and business-like staff, which now comprises nearly forty men and women. One innovation that will be highly appreciated by a certain class of customers will be the presence of two young women on the floor, who will give their attention to the female customers.

Steinert Plans for Fall.

The Arch street headquarters of the Victor department of the M. Steinert & Sons Co. is undergoing several changes that will help materially in the conduct of business. The principal changes are on the second floor, where the executive staff is located. New counters and rails have been installed under the personal oversight of Manager Herbert L. Royer. Mr. Royer is a very busy man these days. He lately made a hurried trip over to Philadelphia and on the way back stopped at New York, New Haven, then back to Boston and on to Portland, Me., all in the space of less than a week. Just now he is off again, visiting the leading dealers throughout New England. Mr. Royer reports a great business ahead and is full of enthusiasm for what he believes is to be the record season in Victor goods.

Chamberlain Figures as a Waltonian.

Assistant Manager A. W. Chamberlain, of the Eastern Talking Machine Co., is back from his vacation at New Found Lake, N. H., where he found delight in catching some large salmon and trout, and he has some "large" stories to relate of the fish's eagerness to grab at his bait. Mr. Chamberlain, speaking of the Victor business, says it never was in a healthier state and he believes that this fall it will come along by leaps and bounds.

Geo. P. Metzger a Visitor.

George P. Metzger, the advertising manager for the Columbia Phonograph Co., General, and Mrs. Metzger, have lately been on an auto trip to the White Mountains. They stopped in Boston to pay

their respects to the Boston office of the Columbia on their way up and back.

Improvements Now Completed.

The improvements in the second floor of the Columbia Phonograph Co., General's Tremont street quarters are practically completed, but the official opening will be deferred until a few weeks. Manager Erisman has planned a fine campaign for the winter by which these new quarters will be used to excellent advantage by way of promoting publicity of Columbia goods. He is planning a series of lectures on grand opera to be given by W. L. Hubbard, lately the distinguished musical critic of the Chicago Tribune, who is coming to Boston to promote a new interest in the Boston Opera House. In his talks Mr. Hubbard will largely confine himself to those works that are to be given at the opera house this season, and he will have the assistance of a pianist and a singer, who will give excerpts from the operas under discussion. The first lecture will be given about the middle of October.

Anent the New Grafonola Room

The officers of the Columbia Phonograph Co., General, through Manager Erisman, are sending out invitation announcements to their patrons informing them of the completion of the new Grafonola room. The card, which is tastefully gotten up, says further:

"It is our intention to have Thursdays known as Society Day, and our customers will find every convenience and comfort for those who are lovers of music."

Changes in Columbia Staff.

R. V. Perrett, who has been in charge of the instalment department of the Columbia business, is leaving this concern on September 15 in order to accept a fine position with a large Boston house, though in a different line. Fred Baker also is leaving the Columbia's employ, and these two resignations have necessitated the addition of several other men. W. E. Getchell, who has been on the road for the Columbia, will come into the office to take Mr. Perrett's place, and Austin Forbes, of Bel'ows Falls, Vt., who at one time was associated with the Columbia's Chambers street, New York, store and who is a nephew of General Manager Lyle, will come to Boston and go into the wholesale department. Harold B. Drown, secretary of the Vermont Seminary, whose home is at Newport, Vt., will associate himself with the dictaphone department of the Columbia's Boston business. B. D. Harris, who formerly was with the Edison Co., in charge of its dictating business, but who was obliged to go South because of the illness of his wife, will associate himself with the Columbia.

GETTING OUT OF THE RUT.

As soon as a man has reduced his work to habit he is in a rut, he gets to doing it in one way, and other ways do not appeal to him; he has incapacitated himself for advance and improvement, because he has a groove so deep that he cannot get out; therefore, if a man wants to advance in his work he must shun habits, he must give attention to all details of his work, in order that he may

have his eyes open for an advance and therefore a better way of accomplishing it.

NEW UDELL CABINET CATALOG.

Cabinets for Disc and Cylinder Records for the Season 1912-13, Shown to Advantage in Handsome Twenty-Four Page Volume—Some of the Features—Free Cuts for Dealers' Local Advertising.

The Udel Works, Indianapolis, Ind., the prominent manufacturers of cabinets for talking machine records, sheet music and music rolls, and of other artistic specialties in the furniture field, has just issued a thoroughly interesting twenty-four page catalog of cabinets for disc and cylinder records for the season of 1912-1913. In the catalog there are illustrated and described an even dozen different styles of cabinets for disc records and six styles of cabinets for cylinder records, all handsomely finished in harmony with the leading styles of machines and arranged with a view to affording the greatest convenience to the record owner.

The disc line includes tables with shelves for holding the record albums while the machine is on top, closed cabinets designed to hold the records flat or on edge and with or without the machine on top. The Udel record box, for use in connection with the tables, is most ingenious in construction and is indexed in order to facilitate the finding of any desired record. The cabinets are furnished with or without rims as desired, there being no extra charge for the rims.

In the cabinets for cylinder records the drawers are fitted with special clamps for holding the records in their original cartons, which arrangement offers the greatest insurance against breakage or scratching. The drawers are also made with a slide which permits of the drawer being pulled entirely out of the cabinet so that every record is readily accessible.

With the issuing of the new catalog the Udel Works has inaugurated a new advertising scheme under which special line cuts of the most popular cabinets of the line are furnished free to dealers handling the Udel cabinets for use in their local newspaper advertising. The cuts show the cabinets and their uses to distinct advantage and can be used to advantage by dealers in their advertising matter.

The line of styles shown in this new catalog is up to the usual Udel standard—always a high one.

WHAT THE CREDIT MAN MUST BE.

The credit man must be a student; a student of broad and liberal mind; a student of the moral, social, physical, financial and commercial elements, which go to make up the credit risks of to-day. First a student, then a teacher—a moulder of character—not merely a dispenser of credit, but a dispenser of good, wholesome, helpful knowledge, which goes to make men better sons, better brothers, husbands, fathers and merchants.

DETROITERS WELL SATISFIED

With Summer Business in Talking Machines—Late Summer Due to Cool Weather Helped Sales—With Vacations at an End Talking Machine Men Are Planning Lively Campaign for Fall and Winter Business, Which They Expect Will Exceed All Previous Years.

(Special to The Talking Machine World.)

Detroit, Mich., Sept. 12, 1912.

A statement made in this correspondence and reiterated several times, to the effect that there was business enough for another big talking machine store in Detroit, new business that actually could be created without detracting any from the business of the established companies, has been borne out by the record of the Farrand Co. since that institution's new store was opened.

The other stores are doing as well as ever, which is saying considerable, while the Farrand Co. is advancing at a rate that, for a newcomer in the talking machine field, is remarkable. E. K. Andrew, who is manager of that department, hardly ever is at his desk—always on the floor demonstrating and selling Victor talking machines. It is likely that some new demonstrating rooms will have to be provided before the holiday rush descends on the city.

The first week of September was much like a home-coming week in the talking machine circles here. Most notable was the return of K. M. Johns, manager of the Detroit branch of the Columbia Phonograph Co., General, after an absence of nearly a year, in which he visited nearly all of the Columbia branches east of the Mississippi as an auditor. Mr. Johns brought home with him unbounded faith in the prospect for a winter business all over the Columbia circuit which will make even the surprising volume of last year look like a mere shine.

S. E. Lind, in charge of the city wholesale business, who has been acting manager in the absence of Mr. Johns, took immediate advantage of the return of his chief to get off the job for a while. He went to St. Louis for his vacation. His pals all conceded that after holding down two jobs for a year, and that year a record breaker in the development of business in every department, he was entitled to all the vacation he could get.

Another home-comer was Max Strasburg, of the Max Strasburg Co., who has been touring the intricate East in a motor car, accompanied by his family for almost three weeks. He did not pay any attention to business affairs in the cities he visited. His route was by steamer to Buffalo, thence over the highways to Boston, down to New York and all the way home by motor, following generally the New York Central's course.

The Strasburg Co. is still balked in its plans for an extension of space, and Mr. Strasburg is worrying somewhat over the outlook. His present quarters were entirely inadequate to take care of the holiday trade of last year. The people who have the lease on the stores on both sides of the Strasburg corner know this, and apparently figure that as a matter of absolute necessity the Victrola shop will have to come to their terms. Mr. Strasburg would like to extend his holdings on both sides, thus retaining the desirable advantages of a corner location, with large frontage on two streets and light from all sides. But there is a limit to the value of even the best of locations, and Mr. Strasburg may be compelled to open a separate store somewhere. The present corner is too valuable to relinquish, and besides the lease has nine more years to run anyway. It is quite likely that there is room for still another big talking machine store.

Another home-comer was Mr. North, of the Victor Co., who has charge of the Victrola sales in Michigan. Mr. North does not reside here, but the Victrola business keeps him in Michigan so constantly that his resumption of activities September 1 was more like a home-coming than anything else. The Victor people all were glad to see him—Strasburg, Farrand, Doran and Grinnell Bros., the latter the largest Victor jobbers in the State. Manager Harry Rupp, of Grinnell

Bros., has himself just come back from a vacation.

Grinnell Bros. have joined the Canadian Talking Machine Association, an organization whose purposes are to advance the talking machine business in the Dominion. This step is taken because of the prominence of the Grinnell stores in Windsor, Chatham and Sarnia. The latter store is a new addition to the Grinnell string of branches, being No. 27 on the list. A full line of Victors is carried in all of the twenty-seven branch stores.

Talking machine dealers are speculating as to exactly what kept the summer business up almost to high water mark all through the months that ordinarily are dull. Generally they hold the weather responsible. Summer did not begin in Michigan this year until August 30. Since then the weather has been what usually is handed out in July. The coolness and the rain of June, July and August kept people in the city, instead of urging them to depart. Being home, they purchased talking machines and records for their entertainment.

Money which under ordinary conditions would have gone into the coffers of the steamship companies and into the cash tills of summer resort souvenir sellers and lunch rooms has been diverted largely to the bank deposits of the talking machine houses. The reasonableness of this theory is attested by the figures of the excursion steamship companies, the managers of those institutions setting forth that they carried a quarter of a million fewer passengers than they did last year.

Anyway, the talking machine folks got the business, and it does not seem that it was a discounting of the future either, for there is no let-up.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Four Weeks.

(Special to The Talking Machine World.)

Washington, D. C., Sept. 6, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

Aug. 17.

Antwerp, 2 pkgs., \$100; Barbadoes, 8 pkgs., \$290; Barranquilla, 20 pkgs., \$118; Berlin, 57 pkgs., \$1,473; Buenos Aires, 72 pkgs., \$7,593; Callac, 9 pkgs., \$112; Colon, 2 pkgs., \$143; Hamburg, 8 pkgs., \$408; Heilbronn, 4 pkgs., \$144; Iquique, 2 pkgs., \$112; 10 pkgs., \$665; Kingston, 9 pkgs., \$645; Kobe, 36 pkgs., \$1,332; Limon, 8 pkgs., \$221; London, 69 pkgs., \$3,118; 94 pkgs., \$1,158; Para, 26 pkgs., \$1,392; Rio de Janeiro, 69 pkgs., \$3,722; Shanghai, 7 pkgs., \$631; Trinidad, 7 pkgs., \$117; Vera Cruz, 43 pkgs., \$2,779.

Aug. 24.

Berlin, 16 pkgs., \$743; Callao, 5 pkgs., \$179; Cape Town, 40 pkgs., \$1,356; Dublin, 13 pkgs., \$566; Havana, 15 pkgs., \$463; 13 pkgs., \$472; La Paz, 6 pkgs., \$350; 8 pkgs., \$242; Liverpool, 68 pkgs., \$7,600; London, 47 pkgs., \$2,615; 54 pkgs., \$2,754; Maracaibo, 14 pkgs., \$1,437; Natal, 3 pkgs., \$229; Para, 35 pkgs., \$3,265; Porto Barrios, 2 pkgs., \$120; Vera Cruz, 158 pkgs., \$5,404.

Aug. 31.

Antwerp, 3 pkgs., \$1,405; Callao, 3 pkgs., \$164; Chemulpo, 8 pkgs., \$596; Cape Town, 93 pkgs., \$3,235; Etten, 28 pkgs., \$471; Guantanamo, 8 pkgs., \$207; Guayaquil, 3 pkgs., \$214; Havana, 7 pkgs., \$490; Havre, 16 pkgs., \$388; Iquique, 14 pkgs., \$839; La Paz, 8 pkgs., \$373; Limon, 4 pkgs., \$259; Montevideo, 8 pkgs., \$583; Rio De Janeiro, 43 pkgs., \$2,953; Shanghai, 10 pkgs., \$450; Tampico, 12 pkgs., \$203; 7 pkgs., \$286; Vera Cruz, 297 pkgs., \$8,227.

September 7.

Autofagasta, 7 pkgs., \$250; Batavia, 128 pkgs., \$1,003; Berlin, 6 pkgs., \$116; Buenos Aires, 14 pkgs., \$1,592; Callao, 6 pkgs., \$195; Guayaquil, 3 pkgs., \$364; Iquitos, 10 pkgs., \$135; London, 1 pkg., \$150; 273 pkgs., \$11,994; 64 pkgs., \$74,419; Maracaibo, 4 pkgs., \$102; Montevideo, 132 pkgs., \$14,665; Para, 24 pkgs., \$731; Port of Spain, 6 pkgs., \$313; Port Limon, 10 pkgs., \$528; St. Johns, 3 pkgs., \$112.

ENLARGES VICTOR DEPARTMENT.

Davis, Burkham, Tyler Co., Wheeling, W. Va., Remodels Main Floor of Building to Make Room for Additional Demonstrating Booths.

(Special to The Talking Machine World.)

Wheeling, W. Va., Sept. 9, 1912.

The Davis, Burkham, Tyler Co., of this city, which has met with great success in retailing Victor talking machines and records, has recently been compelled to remodel the first floor of its store in order to make room for several more demonstrating booths.

In redecorating the store the interior was finished in mahogany with white beading around the plate glass partitions, which gives a very attractive appearance. The interior of each room is finished and furnished differently. One is all white enamel, another golden oak, another mahogany, etc. The appearance of these rooms is causing a great deal of favorable comment from customers.

The rooms are connected by swinging doors, which enable a salesman to attend to the customers in one or more rooms at the same time.

This enterprising company has inaugurated a big advertising campaign for fall business, and with its splendidly equipped sales force and complete department expects to do a rushing business.

ANENT MISLEADING ADVERTISING.

The Effects of Such Publicity Pointed Out In Current Issue of the Voice of the Victor.

Under the caption, "Misleading Advertising which Helps No One and Hurts Your Victor Business," two pages in the September number of the "Voice of the Victor" are devoted to a discussion of the many evils that grow out of misleading advertising. In emphasizing the arguments advanced there is shown a copy of an advertisement in which a 50 per cent. reduction in the prices of record cabinets is so featured as to make it appear that the reduction also applies to the Victrolas illustrated and described in the lower section of the ad. It is pointed out how the reader is confused regarding the prices and how the price maintenance policy of the Victor Co., which has been largely responsible for the success of its business as well as the business of the dealers, is thus undermined in the eyes of the public.

The Victor Co. watches all the advertising of its dealers very carefully and calls attention to all apparently misleading advertisements at once, even when it is apparent that the motive is all right. A sample letter, commenting upon the specimen advertisement, is also published in the "Voice of the Victor."

AT THE SUMMIT OF THE ANDES.

Where a Traveler in Peru Finds a Talking Machine in Action.

Travelers bring back strange tales as to where they have heard the Victor, but one of the most vivid is that of an American mining engineer who lately visited the mountain hamlet of Poto in Peru, near the summit of the Andes. Said he:

"While convalescing from malarial fever contracted in lower altitudes, I passed the time in listening to a Victor talking machine which was the property of some of the American miners employed there, and without which they said they would hardly undertake to stay there at all. The Caruso selections were specially fine. I wondered what the famous tenor would have said if he could have heard his voice three miles up in the air, where, on account of the rarified atmosphere, he himself could not have sung a note!"—The Voice of the Victor.

Educate those under you to make the best of their time and allow them to take a rest when you can, for they will return clear-headed and do their duty better. The deep, hard thinker is usually the best worker.

Style 102

THIS picture will give you a faint idea of the attractiveness of *this* talking machine record cabinet. If we literally filled the page with cuts we would succeed only in giving a partial idea of our line. So we want to confine ourselves to a talk about one cabinet, this Style 102, because it is a beauty and is representative of our whole stock.

Did you ever try to run a warped record on a talking machine? Then you will appreciate one of the good points of Style 102. The shelves are arranged horizontally and records lying in them *can't* warp.

Did you ever try to cram four or five records into one compartment with the result that you scratched all the records, probably split some of the compartment shelves, and lost your temper to boot? With Style 102 you wouldn't have tried that. *One* shelf is made for *one* record; each shelf is numbered and you know where each particular record goes. Furthermore *every compartment is felt lined, and felt cannot scratch.*

Notice our large needle box on door, which has a separate cup for loud, medium and soft tone needles, also extra holder for used needles. Very convenient.

You cannot get a neater, more compact, or better made cabinet than the Salter Style 102. It is a handsome piece of furniture.

And, Mr. Merchant! If these good points in a cabinet appeal to you they will appeal to *your* customers. Remember that.

Salter products are not limited to talking machine record cabinets. The new catalogue will show talking machine record cabinets, sheet music cabinets, combinations of sheet music and player roll cabinets, in half a hundred different styles, all of the latest design and up to the Salter standard of quality. Write for catalogue.

"It's hard to find the equal of the Salter."

SALTER MANUFACTURING CO.

RECORDING VIBRATIONS.

Rev. F. C. Odenbach, of Cleveland, an Inventor of Note, Discusses His Latest Apparatus for The Audible Recording of Material Vibrations.

(Special to The Talking Machine World.)

Cleveland, O., Sept. 12, 1912.

Somewhat along the line of the possibilities and productions of the phonograph are the inventions of the Rev. Frederick L. Odenbach, director of the meteorological and seismological observatory of St. Ignatius' College, of Cleveland. He is a scientist and astronomer of more than local note, who has invented a number of instruments which accurately diagnose terrestrial phenomena. Philosophy, theology, the natural sciences, chemistry, insect study, clock-work and mechanics generally, in fact, anything puzzling, have been his constant and welcome studies and investigatory tasks. At present he is evolving an apparatus for the audible recording of material vibrations. In an interview he said: "I am now engaged in the construction of an instrument that may enable my ear to tell me more about the identity of vibrations than my eye tells me at present. This instrument in brief consists of a platinum contact pressing against the diaphragm of a microphone, constructed on the style of that used in modern telephony, and having a battery and telephone receiver in circuit. At present we can record every sort of vibration on sheets of smoked paper. The undulating lines show the variation of these vibrations as well as their frequency and length and shift. We know the vibration is going on somewhere, but as to its identity—exactly what it is—we cannot definitely determine.

"Now, I suspect that many of the vibrations that our present instruments record are caused by the breaking of waves on the lake shore. There is a certain rhythm and similarity of lines on the smoked paper record that suggests the surf coming in at regular intervals. When my instrument is finished I will listen through the telephone re-

ceiver at the same time the smoked paper shows a recurring vibration. Calling up the harbor master I will ask him to time by seconds the break of the waves. They may—as I suspect—exactly correspond with the beats of my receiver and the marks on the record paper. If this experiment proves correct, when an exactly similar record is shown on the paper again and through the receiver, I can be reasonably sure that it is the waves rolling in on the lake shore.

"Then, by the same method, the sound of certain trains passing certain points can be positively identified. For instance, suppose I get the time tables of various roads. Their vibrations come at a certain time. My record paper shows exactly what their vibrations are. My new instrument will identify it beyond all reasonable doubt. Eventually I would thus be able to tell by the quality of the sound that such and such a train was causing the vibration, even though I had no time table to verify the particular hour, and could thus locate it, although at a considerable distance."

CO-OPERATION AND ITS VALUE.

Where Conflicting Elements in a Trade Are Brought Together All Have Greater Prospect for Success—Value of Trade Association.

Trade associations have made possible the bringing together of conflicting elements, where these subjects which are so vital to our individual prosperity may be discussed in a most friendly and impartial way, wholly for the purpose of benefiting all alike. It is really remarkable sitting in one of these trade conventions to note the interest that each takes in the welfare of his competitor, and the co-operative effort that is exerted for the betterment of general trade conditions. Each is apparently most anxious to contribute something gained through his own experience that will make for the general good. We have learned that co-operation is the password to success—not necessarily in the maintenance of prices, but co-opera-

tion in establishing more cordial relations; co-operation in discarding that which is harmful and developing that which is good, co-operation in developing friendships, and eliminating strife, co-operation in establishing those higher ideals which are so essential to the general welfare and permanent success.

It is most pleasing to note that the manufacturers are also included in this national movement for co-operative effort. As the movement gains force, and purposes are better understood, members will increase more rapidly, and collectively we will exert a most potent effort in establishing and maintaining an era of long-continued prosperity.—W. M. Pattison in the Dodge Idea.

RECORD A WELCOME MESSENGER.

California Mute, Learning to Talk Under Direction of St. Louis Teacher, Makes Record of His Voice to Acquaint Parents With Progress Made—Message of Hope and Joy.

(Special to The Talking Machine World.)

St. Louis, Mo., Sept. 10, 1912.

Mark Silverstone, president of the Silverstone Talking Machine Co., made a record for a visitor to the store a few days ago that carried a message of hope and joy to a certain home in Los Angeles, Cal. Mrs. Beatrice Henderson, who conducts a "special school for special needs" in Kirkwood, a St. Louis suburb, came to the store accompanied by a 12-year-old boy, called Joe, who had been under her care for a year. This boy, she explained, was entirely unable to talk when he was sent to her and that she had learned his trouble and by careful training had him so that he could read ordinary words and she wished him to make a record so that his parents could hear his voice for the first time in their lives. Joe was a bit nervous for this important undertaking, but with some care on the part of Mr. Silverstone he soon made, under the circumstances, an exceedingly creditable record, and one, which those who heard it repeated declare, was a very natural one.

KEEP UP THE FIGHT AGAINST THE OLDFIELD BILL.

Now That Congress Has Adjourned, Without Any Action Being Taken, It Is Time to Bombard Congressmen and Senators with Facts and Figures Why the Bill Would Be a Menace if Enacted Into Law—Strong Letter Being Sent to Legislators.

It is a source of gratification to the talking machine trade, and indeed to every merchant in the United States that Congress has adjourned without any definite action being taken on the Oldfield Bill, which threatened to undermine the present one-price system of selling goods and demoralize merchandising conditions generally.

The Oldfield Bill, however, is still a "live issue," and between now and the next session of Congress, dealers must keep up a live cannonading of their Congressmen and Senators, to the end that they may be fully informed of the unjust provisions of this Bill. There is ample time not only to write them, but to talk with them in person, and thus point out how every business may be injured by the proposed Oldfield amendments.

If this educational campaign is kept up during the recess of Congress, and every dealer does his share, there is no reason in the world why this bill should not be finally rejected.

We understand that within a week or so, a copy of an article on this subject, entitled, "Price Cutting a Restraint of Trade," which has been prepared by Eldridge R. Johnson, President of the Victor Talking Machine Co., will be sent to every Congressman and Senator; to every editor, publisher, and business manager of every important publication in the United States, as well as to every manufacturer who advertises his goods, and to every Victor dealer.

A very excellent letter entitled, "Price Regulation and the Consumer," is now reaching members of the House and Senate. It covers a phase of the patent situation which is illuminating and which must prove a source of information and education to our legislators. It reads as follows:

Dear Sir:—In compliance with your desire for the fullest information on the subject of the proposed revision of the patent laws, the writer would respectfully ask consideration, at your convenience, of two of the many sides of this question.

It is proposed in the bill (23417), reported by the Committee on Patents, to deprive owners of patents of the right thereunder to regulate resale or retail prices.

The Supreme Court of the United States in its recent decision in the case of Dick vs. Henry, affirmed such right under the patent grant by the government.

One purpose of the proposed legislation is to nullify that decision and leave to patent owners no other recourse than an action under the law of contracts.

The purpose of this communication to you is to emphasize two points: First—That the committee's contention that those manufacturers who are acknowledged by them to have justified price control will be safeguarded under the law of contracts, is untenable and, Second—That the existing system, both of necessity under changing trade conditions, is the consuming public's best weapon of protection against mendacious advertising and the swindling methods of a large and increasing class of department stores.

The inefficacy of the law of contracts in many cases will be conceded if we take, as an illustration, the Ingersoll Dollar Watch.

The manufacturers of this article have 61,000 retail dealers selling these watches. The impracticability of attempting to supervise and have legally executed in all parts of

the world 61,000 individual contracts is almost self-evident; or, granting that such a system is possible, a suit for damages must necessarily be based on a specific violation of a contract; that is, in the case of this article, on the sale of one Ingersoll watch for more or less than one dollar. The damages that could be proved from each violation would naturally be insignificant as compared with the expense which each suit would involve.

In the determination of this question it must be recognized that it is a trade condition and not an economic theory that confronts Congress; a trade condition which is the result of precisely the same tendency that has produced the trusts.

The modern department store is in effect a retail trust and in so far as it is uncontrolled employs the same tool, ruinous price cutting, to build its business and to destroy its smaller and weaker competitors.

As a result, distribution is confined to fewer hands, the manufacturer's output is lowered, thereby raising his cost, the small dealer is crushed, and the consumer is injured by lessened opportunity to purchase and by eventual increase of prices or reduction of quality necessitated by the smaller production.

As a practical illustration of the way price regulation benefits the consumer, let us take as naturally as we may a hypothetical case.

You have a young son who greets you some evening with the glad tidings that his birthday is on the morrow and that when Johnnie Jones had his, his pa gave him a watch and a new baseball. You know the kind of watch he wants, but you ask him about the baseball and he promptly says "Spalding, dollar and a quarter." He knows. You immediately "dig down" and produce two dollars and a quarter, cautioning him to be sure to get an Ingersoll watch and, as he goes racing down the street, you settle down to your evening paper confident that he'll get your money's worth because you know the prices and you trust the manufacturer.

Pretty soon he comes back with a long face and says that the Soakem-Good Company is just out of both Ingersoll watches and Spalding baseballs, but they say they've got some other makes better for less money. You don't say: "That's good, go and get them." Oh, no! You lay down your paper and put on your hat and say you guess you'll go along with him. Why? Because you don't trust the dealer.

In this case you are the consumer. As long as your boy was going to buy at fixed prices you knew they couldn't swindle him, but the moment you found he was up against unknown goods at unfixed prices you thought you'd better watch the game.

Is it or is it not a good system for the consumer?

How many of the wage-earners of this country know any more about values than your boy? I am, Yours faithfully,

P. S.—It is important to consider the character and conscienceless methods of the only class of concerns that favor this legislation and for your information I enclose a reprint of a statement made to the committee by the writer on May 24, last. "PRICE REGULATION PREVENTS EXTORTIONATE PROFITS."

This campaign of education will be kept up for some time to come, and dealers should also be on the alert to every opportunity that presents itself so as to head off this unwise bill becoming a law at any future session of Congress.

It's well enough sometimes to let a customer have his last word; he'll think over his victory, pro and con, and often see his mistake.

THE PHONOGRAPH ATTRACTS FISH.

Skill of a Brooklyn Disciple of Walton Revealed Through Suit Brought by the Game Protector of Sullivan County, N. Y., in Which the Phonograph Plays the Star Role.

(Special to The Talking Machine World.)

Monticello, N. Y., Sept. 9, 1912.

Being of a purely original turn of mind, John Read, who once was an assemblyman from Brooklyn, saw its possibilities as soon as the idea occurred to him. That is why the first phonograph salesman who happened by Mr. Read's estate on the shore of Sackett Lake, a short distance from here, found his commissions unexpectedly increased, and that is also why Mr. Read gave vent to some perfectly good oratorical explosions tonight when he learned that his hitherto undiscovered scheme had resulted in making him the defendant in a unique suit, started, according to Mr. Read, by the most unsportsmanlike sportsmen who ever have invaded Sullivan county.

As everybody knows who is acquainted with that territory, no better bass pond than Sackett Lake ever existed in New York State. But when the big idea came to Mr. Read, chagrin, disappointment, empty baskets and other unpleasant things developed for fishermen who had sung the praises of Sackett Lake for so long they could recite their commendatory orations backward. Day after day they sought to learn the reason for their inability to lure any of the funny inhabitants of the placid lake within two miles of their choicest flies. Cast or troll, the result was the same.

Then, out across the waters of the lake there came to the receptive ears of the fishless fishermen the vibrant notes of an operatic selection. The lure was too great to be resisted and as their boats drifted on toward the spot from which the music was pouring in ever increasing volume they made no effort to coax the bass from their hiding places.

Then, suddenly, the secret was out. Straight across the lake the fishermen saw the unperturbed Mr. Read cast, draw in his line, then cast again. At each return of the Read hook another fine specimen of the bass family landed safely on the bottom of Mr. Read's fishing craft.

The irate fishermen looked at Mr. Read and then at one another. They said things not thoroughly appreciated by Mr. Read. Then they hurried to the home of Isaac Stevens, game protector, and lodged a complaint against Mr. Read.

"I couldn't hire an orchestra," explained Mr. Read to-night, "so I bought a phonograph, placed it on the porch of my bungalow and let it play. Visitors were made happy and the bass were hypnotized. I and my friends never needed to cast twice while the phonograph was playing. Why can't those fellows get a phonograph of their own or else be sports and go where the fishing's good? I'll go to the United States Supreme Court to prove that the phonograph does not constitute an unlawful advantage."

Then he placed the phonograph in his boat house, directly above the water.

LANDAY BROS. TO HANDLE PLAYERS.

The Prominent Victor Distributors in New York Become the Representatives of the American Piano Co., and Will Handle Rythmodik Player Rolls and Player-Pianos—A Chat with Mr. Landay, and His Plans.

One of the most interesting agency appointments which has been made in some time in the music trade was announced this week, when Landay Bros., Inc., of New York city, were selected as representatives of the Rythmodik player rolls. The concern will also handle player-pianos made by the American Piano Co.

Landay Bros., Inc., are among the best-known Victor distributors in the United States, and now operate four stores where Victor goods are handled exclusively.

In order to give the Rythmodik player roll its proper representation Landay Bros., Inc., have rented an additional store next door to their warehouses at Fifth avenue and 46th street, wherein the American Piano Co.'s product will be shown exclusively. The said store is now being fitted up in a manner that will be a credit to the lines represented therein.

Landay Bros., Inc., is the first talking machine house of importance to make a feature of music rolls and player-pianos. In chatting with The World, Max Landay, of Landay Bros., Inc., said:

"I have been interested in the music roll situation for some time, and, after investigating the various player rolls on the market, have decided upon the Rythmodik, which was drawn to my attention by B. Feinberg, special representative of the Rythmodik player roll.

"One objection to the music roll business heretofore has been the uncertainty of prices, and abuses have crept in, such as cut-rate fights, etc. In looking over the music roll situation one of the important features was not to handle any roll that did not have a fixed price.

"The success of the Victor talking machine business has largely grown out of the fact that the dealer knew exactly where he was at and that a strict one-price has been maintained, enabling him to get a reasonable profit. The talking machine companies have protected the dealer, and as soon as the music roll manufacturers will do the same there will be unquestionably a larger number of music rolls sold.

"We are assured that Rythmodik player roll prices will not be subject to fluctuation and that a fixed price will prevail. This, as stated above, was one of the important reasons for deciding upon the Rythmodik, but, among the other important reasons was the fact that it reproduced the playing of a piece of music as perfectly as if the artist himself was there to play it. It has none of the objectionable mechanical reproductions which are so evident and noticeable in many player rolls."

ALLEGES PATENT INFRINGEMENT.

Victor Co. Makes Public Letter Sent by Horace Pettit, the Company's Attorney, to Keen-o-phone Co.—Reply of Latter Company.

The Victor Talking Machine Co., Camden, N. J., has just sent out to the trade a copy of a notice served by its counsel, Horace Pettit, upon the Keen-o-phone Co., of Philadelphia, Pa., alleging infringement of various patents controlled by the Victor Co. Special attention is called to the large cabinet machines having enclosed horn construction, motors and sound boxes. Ten patents held by the Victor Co. are specifically mentioned in the matter, eight of which are claimed to cover products of the Keen-o-phone Co., already advertised and on the market, and two to cover the manufacture of disc records.

The Keen-O-Phone Co., Philadelphia, Pa., in replying to the letter recently sent to the trade by the Victor Talking Machine Co., charging the former company with infringing various patents owned and controlled by the Victor Co., denies in an open letter that its machines infringe the Victor patents in any particular and claims that the

Keen-O-Phone machines are constructed along original lines and are covered by patents and pending applications controlled by the manufacturers. The company also states that it will defend any action brought against it for patent infringement.

SINGING FOR TALKING MACHINES.

An Odd and Interesting Occupation in Which Women May Make "Good Money."

How many of those who on a summer evening listen idly to the music of the phonograph reeled off so easily and carelessly ever stop to think how those records were made or to wonder what were the emotions of the musician who poured sweet sounds into inanimate ears, without any of the inspiration of lights, flowers, beautiful clothes and an applauding audience?

Although it doesn't bring so much glory as singing at the Metropolitan Opera House, this business of singing for records is a very lucrative one. Caruso is said to make \$150,000 a year in this humble fashion, and stars of lesser magnitude may count on \$2,000 annually, which means much more than it would if gained behind the footlights, because the phonograph does not demand that its entertainers keep up with the latest caprices of fashion. In the beginning, however, it is rather trying.

"Stage fright is nothing to the feeling with which one confronts that awful horn," testifies a young woman who is now singing for these silent audiences, "and afterward, when the record is played and one hears every false note, every clearing of one's throat, even an audible swallow, it is a wonder anyone ever has the courage to try again. Yet it is a wonderful experience, and one realizes as one never could otherwise how truly marvelous is the talking machine.

"The room where we make our records is an absolutely bare, barnlike place, with a board partition at one end, dividing the room proper from the small space where the recording instrument is placed. The horn into which one sings is suspended from the ceiling, and protrudes through an opening in the partition. Grouped around it are the musicians of the orchestra, seated on elevated chairs, their music hung in front of them on strings and weighted so as not to swing too much in any chance breeze. The instruments themselves are the strangest looking things, the violins having, instead of the regular body, a hollow tube affair, in which are arranged the strings. The 'cellos are skeleton in construction—no sides and very slight wooden supports separating the top and bottom of the body. And to every instrument is attached an aluminum horn, directed toward the large horn in the wall, to concentrate the sound waves.

"The singer is placed on a little platform directly in front of the large receiver, then when all is in readiness he or she slips down out of the way of the sound waves. A light gives the signal and the conductor, who is perched even higher than the musicians, starts the orchestra. At the side of the soloist is an assistant, who, when the orchestra begins, puts into the mouth of the horn a large extension, so as to catch more of the sound, and when the introduction is finished quickly removes it. Then the soloist, rising and standing quite close to the horn, sings. It is rather distracting, for one hears one's voice become at once concentrated and more vibrant than usual, and one must remember those dreadful little sounds which an audience would scarcely notice, but which the horn records relentlessly.

"On finishing the verse one steps down below the level of the horn. The assistant once more puts on the extension and keeps it in place until the second verse starts. This assistant is a most useful person for those new to making records, for he sways one first forward when one is using the middle or low register, then back for the high notes. If the singer makes a mistake he stops. If anything goes wrong with the recording instrument a bell rings and all stop, to begin over again at a given signal.

"After the song is finished the record is played. One listens to see where it can be improved. Perhaps in places the orchestra is scratchy. If so, they rehearse the weak spots once or twice; then again they take their positions, await the red starting signal and try once more.

"The wax discs on which the records are actually made are behind the partition, and all about is a mass of what at first looks like fuzz or fluff, but is in reality wax spun off by the needle. These wax imprints are sent to the factory—about four or five are made of each song—where a metal impression is taken from them. From this pattern the hard black records are manufactured."—New York Tribune.

MILNOR SUCCEEDS BRUSHABER

As Head of the Dictaphone Department of the Columbia Co.'s Chamber Street Store—Mr. Brushaber Engages in Business in Newark.

O. Brushaber, for a long time the manager of the Dictaphone department of the Columbia Phonograph Co. store at 89 Chambers street, New York, has resigned that position and removed to Newark, N. J., where he will operate a Dictaphone salesroom for himself. The Dictaphone out-

N. F. Milnor.

look in Newark is of the best and there is little doubt that Mr. Brushaber will be hugely successful.

N. F. Milnor will fill the vacancy as Dictaphone manager at the New York store. Mr. Milnor has been for the past five years connected with the Oliver Typewriter Co. as manager of the branch at Memphis, Tenn., and as superintendent of sales in New York. He is equipped with a business knowledge which is suited to his new vocation and is already producing results with the Columbia Co.

L. J. GERSON ENTERTAINS STAFF.

Manager of the Talking Machine Department of the John Wanamaker Store Acts As Host for the Employees of the New York Department on Labor Day at His Farm Near Palisades, N. Y.—Have Enjoyable Time.

The staff of the talking machine department of John Wanamaker's New York store had a thoroughly delightful outing on Labor Day, when the members were entertained by Mr. and Mrs. Louis

cept at Brookdale, where, nevertheless, it was cloudy and threatening, and as a necessity the outdoor entertainment originally planned was curtailed. However, the day was spent almost wholly out of doors, and the "boys and girls" helped themselves to such sports as tennis, baseball, croquet, riding and walks through the woods and fields. In the middle of the day an old fashioned country chicken dinner was served in the house, covers being spread for twenty-one.

The crowd returned to the city about 7 p. m. looking tired but quite happy and thoroughly ap-

Employees of Wanamaker's Talking Machine Department at Mr. Gerson's Farm.

Jay Gerson, at their country place, "Brookdale," in Rockland County near the town of Palisades, N. Y. When the party reached the railroad station at Sparkhill automobiles were in waiting to take them the two and one-half miles to the farm, which is on the State line and about half a mile from the Hudson River.

Labor Day was chosen for the outing for it was a legal holiday and coming at what is practically the end of the summer provided a fitting close for the vacation season.

It rained almost everywhere on Labor Day ex-

preciative of the generosity of Mr. and Mrs. Gerson.

Among those invited were: Alexander Russell, H. B. Bertine, Martin B. Lynch, Edward J. Kierman, Alice M. Dillon, Anna C. Deady, Yetta Klinger, Charlotte S. Conroy, Helen L. Slade, Bertha C. Johnson, Geo. M. Boyce, James G. Martin and wife, J. H. D. Rehberger, Chas. J. Collins, James Bratherton, Sadie Davidson, John P. Rice, Joseph Fonte and wife, Howard Arnold, Nelson Hartford, Samuel Terry, Rose Flavin, James Livingston, Rebecca Morton and Mr. Van Wulven.

GRINNELL BROS.' EXPANSION.

Talking Machine Departments of the Grinnell Business to Be Benefited by Recent Incorporation of the Concern with Capital Stock of \$3,750,000—Employees Become Interested in the Business.

(Special to The Talking Machine World.)

Detroit, Mich., Sept. 10, 1912.

The talking machine department of the various stores of Grinnell Bros. are destined to share in the advancement which is sure to accrue through the incorporation last month of this, the largest retailing and manufacturing establishment in the music trade in this city, and which controls twenty-six branch stores in Michigan and Ontario, Province of Quebec. The capital stock of the new company is \$3,750,000, all paid in, and the officers include the three Grinnell brothers, Clayton, Ira L. and Albert A. Grinnell, Clinton I. Nye, head of the financial department, and Seward E. Clark, general manager of the branch stores department and of the big store in this city.

Two million dollars of the stock is common and \$1,750,000 is preferred, which is subject to redemption at par thirty years hence at a par value of \$100 per share and carries interest at 7 per cent., payable quarterly, cumulative and payable before any dividend shall be set aside or paid on the common stock, thus offering full protection to the holders of the preferred.

The assets of the company include \$216,500 in cash, stocks and interests in Detroit, Kalamazoo, Lansing, Flint, Ypsilanti and Hancock valued at

\$790,315.26, including a lease for ninety-nine years on the real estate occupied by the Grinnell Bros.' Detroit building at 243-245-247 Woodward avenue, copyrights on forty-one sheet music compositions valued at \$100,000 and three patents on player-pianos.

The stock of the corporation is divided into 37,500 shares, of which Clayton A. Grinnell holds 6,250 shares of preferred and the same of common, Ira L. Grinnell holds similar amounts of each kind of stock, Albert A. Grinnell five hundred of preferred and five hundred of common, Clinton I. Nye a hundred and fifty shares of each kind and S. E. Clark fifty of each kind.

Grinnell Bros. have been in business here for more than a quarter of a century, but always as a partnership. They have advanced from a small beginning to a position of influence throughout the State, having a branch store with a resident manager in every city of more than 10,000 population in Michigan, with the exception of Grand Rapids.

The firm also has a manufacturing plant in Detroit which compares favorably with a big proportion of those in the country, and a smaller one in Windsor, from which their Canadian trade is supplied. Grinnell Bros. have long handled Victor talking machines and records with great success.

"Have you ever read the article on how to tell a bad egg?" asked the Inquisitive One at the hotel table. "No, I haven't," replied the Traveling Salesman, "but my advice would be, if you have anything to tell a bad egg, why, break it gently."

THIRTY YEARS OF ELECTRIC LIGHT.

It Was on September 4, 1882, That Thomas A. Edison Started the World's First Central Station in New York City—An Interesting Description of the Event.

Thirty years ago, or to be more precise, on September 4, 1882, Thomas A. Edison started in operation the world's first central station for the supply of incandescent electric lighting for commercial purposes.

It was 3 o'clock in the afternoon of that day, in an old brick building, a converted warehouse, in lower Pearl street, New York, that steam was turned into a single dynamo and current was sent through underground cables into about 400 lamps that had been distributed through a territory about a mile square.

The newspaper accounts of the demonstration read curiously in this day. While it was generally admitted that the exhibition had been a success so far as proving that the incandescent bulbs gave light, there was a dubious feeling running through the reports as to whether the invention could be made commercially successful.

In the Sun's report Edison's appearance on that occasion was thus described: "He wore a white high crowned derby hat and collarless shirt," and in an interview which followed Mr. Edison was quoted: "I have accomplished all that I promised. We have a greater demand for light than we can supply at present, owing to the insufficiency of men to put down the wires."

Since that day thirty years ago, this city has had electric lighting with only two interruptions, the second and most serious one of which was in 1890, when the old Pearl street station was destroyed by fire.

On this occasion before the flames even had been routed, new dynamos were ordered. In less than four hours' time service had been re-established in other quarters. One of the old "Jumbo" dynamos, designed by Edison himself, was saved from the fire, and is now treasured as a relic of the old days.

Thirty years ago fifteen miles of underground cable sufficed to connect all the installations. Now 1,400 miles of "underground" sends current to 5,250,000 lamps, while the bills are ticked off by 159,000 meters.

The first electric motor was put on the lines in 1884. For six months previously it lay upon the shelf before any one could be found who was willing to experiment with this novel apparatus. Today in New York City 337,000 horsepower is used in motors.

Instead of the old reconstructed brick building at 257 Pearl street that housed the six "Jumbos," as the old time generators were called, there are now two Bastille-like structures covering two city blocks.

LOST MOTION AVOIDABLE.

Lack of System in Shipping and Handling Goods a Big Factor in Costs.

There are too many merchants—not only retailers but wholesalers—there is too much lost motion in selling and reselling, shipping and re-shipping, and every time the goods are handled, on goes an extra to the price, which does not add to the value of the article to the consumer. Ask any merchant if there are not too many in the distributing market; he is sure to say yes. Of course, it is always the other fellows that ought to get out—but that does not alter the fact that the excess of shopkeepers is recognized. The problem is to eliminate waste or reduce its sting.

A great howl goes up about mail-order houses. I do not care to defile or defend them. I do say that there must be some reason for this great development in business, and it strikes at a part of our distributing methods that needs attention.—M. W. Mix.

The man who loafs on his job soon discovers that every day in the year is Friday the 13th.

For four \$5 bills

A genuine Columbia—

To our good friends, those talking machine dealers who still, for one reason or another, are missing a mighty good thing, and needn't miss it, and ought not to:

This advertisement, in the Saturday Evening Post this week, marks the opening of the Columbia fall campaign with the greatest money's worth of musical instruments ever built.

Get the size of this instrument in your mind—15 $\frac{5}{8}$ inches square! Gather the significance of such an instrument in quartered oak, well finished and equipped with that astonishingly attractive feature, the Columbia tone-control shutters!

This same "Eclipse" in mahogany will list at \$25. And all it needs is a comparison against all comers. Anything in the world at \$25, set up alongside the mahogany "Eclipse," is discounted at first glance—the only mahogany machine on the market under \$40.

Sum up this offer—and what it means to your business:

1—A machine at \$20 bigger and better than anything on the market at near the price.

2—Furnished in mahogany at \$25—the only machine on the market in mahogany under \$40.

3—Offered at terms that are easy for you and for your customers.

4—A Columbia Demonstration Record free—to you, and from you to your customers.

5—A signed guarantee with every machine.

Don't be caught "without the goods"!

COLUMBIA

PHONOGRAPH CO.

Tribune Building, New York

With the Columbia tone-control shutters **closed**, the volume of music is very soft, yet round and natural.

With the Columbia tone-control shutters **partly open**, the music is brought nearer, with its resonance somewhat less restrained, yet with no loss of definite detail.

With the Columbia tone-control shutters **wide open**, the full, brilliant, vibrant notes of the singer's voice, and the unconfined music of the band or orchestra, pour flooding out.

COLUMBIA

one a month) on free trial —full size and complete

FREE

With each instrument delivered within thirty days, this Columbia Demonstration Double-Disc Record.

The "Eclipse" measures 15 $\frac{5}{8}$ inches square. Like all Columbias, regardless of price and in contrast to others, this instrument has a **continuous** tone-chamber, with the motor-mechanism separated and insulated. See the diagram below.

Diagram showing the continuous tone-chamber.

Every money-making reason for carrying the Columbia line gets a fifty per cent. increase of strength by the adding of this new 1913 model. Not too cheap to be perfectly satisfactory to your customers, nor to be unprofitable to you, yet not so expensive that anyone need to think twice before buying—and just as good a record-selling medium as our \$200 Grafonola, because, absolutely, the tone-quality is there.

'ECLIPSE' HORNLESS GRAPHOPHONE

REVIEW OF THE TRADE SITUATION IN NEW YORK.

Summer Business Makes Satisfactory Showing—Fall Opens Up with Demand for Better Grade of Machines and Records—Collections Show Improvement—Politics Not Hurting Business—Opinions of Some of New York's Leading Distributors Are Optimistic.

There is a feeling of general satisfaction throughout the talking machine trade in and around New York. The manner in which business has held up during the hot season and the briskness with which the fall is breaking in is the best indication of what the New York jobbers say will be by far the largest year in the history of the industry.

There is a decided tendency prevailing toward a higher grade of machines and records, and this in itself is one of the best signs possible in any line. Many new machines from the different manufacturers are on the market, machines in which are incorporated the popular features of last year's models as well as additional features destined to make the new machines factors in the coming year's business. To the dealers as well as the manufacturers this is important, and adds just so much more to the prospects ahead.

According to general opinion the quickness of collections is in advance of last season. Cash sales are more frequent and there is a general underlying strength to business which is a gratifying argument in itself. Politics is so far making little or no difference in the trade. It is getting close to actual election time, and the fact that no effect has been noticed up to the present time is enough to warrant the future as safe so far as the political situation is concerned.

Following are published brief interviews with G. T. Williams, general manager of the New York Talking Machine Co., Victor distributors; R. F. Bolton, manager of the Columbia Phonograph Co. store on Chambers street; J. Newcomb Blackman, president of the Blackman Talking Machine Co., and Max Landay, of Landay Bros., Inc., of New York City.

Said Mr. Williams: "We are perfectly contented with the result of the past summer and with the prospects for the fall and winter. August was more than a satisfactory month. I have not the figures for comparison with last August, but there is no doubt that it was well in advance. I am confident that this, the fall of 1912, will be the largest in the annals of the industry. The new line of Victor-Victrolas which the Victor Co. has just announced will insure the dealers their biggest fall trade. The machines are just what was needed to round out the comprehensive Victor line, and there is little doubt but what

they will enjoy an unprecedented demand. Reports from outside of New York in the talking machine trade and in general commercial lines are of the best. The railroads the country over are showing better earnings and are bemoaning a shortage of cars; this, of course, means that shipments are active, and active shipments mean brisk business. We are prepared for an enormous season, and in my opinion it is assured."

Said Mr. Bolton: "Truly, business with us is so good that I am actually afraid to tell you just how good, for fear of injuring my reputation as a truthful man. I have been posted here for fifteen years and I have never seen a season to compare, or even begin to compare, with the present one, or never a time when the prospects were so good for the future. The increase of July and August of this year over July and August of last was, respectively, 84 per cent. for July and 90 per cent. for August. I appreciate the fact that those are strong figures, but they are nevertheless true. The Columbia factory at Bridgeport has been running to capacity both night and day since the first of July, and present conditions indicate that this will be necessary for the balance of the season. The two new Columbia machines just announced are bound to prove winners from the start and will afford an extra stimulus to the already tremendous demand for Columbia goods."

J. Newcomb Blackman, president of the Blackman Talking Machine Co., 97 Chambers street, New York, during a brief talk with The Talking Machine World regarding the business outlook, said: "You can quote me as being thoroughly optimistic. We are preparing for the heaviest fall and winter business in our history, and I am confident that I shall not be disappointed in the outcome. I believe that the basic prosperity of the country lies in the crops, that the crops in a large measure control the high cost of living. This year, according to reports, the crops will be the largest in the history of the country; that can mean nothing less than the reduction of living expenses and is bound to increase business generally. So far as politics are concerned I do not anticipate that they will cause any detrimental effect to business. All three of the candidates have more or less worthy platforms, and considering the condition of the country it is doubtful if they will create much disturbance

commercially. Personally, I have a strong leaning toward the progressive movement."

"In view of the present bright status of the country," commented Max Landay, of Landay Bros., Inc., Victor distributors, "I have every belief that the ensuing four months' business will assume magnificent proportions. Crops were never larger; manufacturing industries of all kinds are flourishing, and there is an optimistic feeling throughout the country that is very bright. No! I do not believe that the Presidential election will have any detrimental effect as in past elections, the present election seeming not to arouse any too much interest anywhere."

RECORDS BY KATHLEEN PARLOW.

The Famous Violinist Making Records for the Columbia Phonograph Co.—Talented Artist.

The first violin records by Kathleen Parlow, the famous woman violiniste, have just been announced by the Columbia Phonograph Co., General, New York. Miss Parlow is a native of Calgary, Alberta, but much of her childhood was passed in California, and her first violin instruction was received in San Francisco, where she appeared in public at the age of six years. In 1905 she went to London, and in November of that year played with the London Symphony Orchestra. Tours of northern Europe followed shortly after this, in course of which Miss Parlow aroused extraordinary enthusiasm, more especially in Berlin, where her first recital was the sensation of the musical season.

She has appeared in recital in all of the principal cities of the United States, where she has won notable triumphs for her art, and during 1911-12 she was chosen as soloist for the entire fall tour of the Boston Symphony Orchestra, appearing more than sixteen times with that orchestra, an enviable reputation for any artist.

REPORTS AN EXCELLENT BUSINESS.

(Special to The Talking Machine World.)

Cincinnati, O., Sept. 11, 1912.

The Victor department of the Aeolian Co. reports a nice business for the month of August, having trebled its record sales, as well as machine sales, over the corresponding period of last year. This increased volume of business will necessitate augmenting our force in this department. The outlook for the ensuing month is exceedingly bright. With the new style Victrolas, which will be put on sale September 15, they expect to have a "record breaking" month.

A VISITOR FROM TURKEY.

Old timers in the talking machine trade were delighted to meet J. O. Prescott, who was in the metropolis recently on "a buying trip" from Turkey.

Since the old days of the American Record Co. Mr. Prescott has been in Japan, where he built up a very successful talking machine business, and a year or more ago went to Constantinople owing to a very liberal offer made him to manage a record making business in that city.

Mr. Prescott has changed but little. He seems as young and active as in the olden days, and was given a very cordial greeting by hundreds of friends, who were delighted to meet him.

Mr. Prescott's visit to New York is largely to buy machinery for the talking machine company with which he is connected in Constantinople, and as soon as that is accomplished, which will be early in September, he expects to return.

On September 12 the Thos. A. Edison Co. will ship to jobbers four records made by Theodore Roosevelt, giving the Progressive leader's views upon the great questions of the day.

The Eilers Music House, of Seattle, Wash., is doing some effective publicity work by means of sacred concerts in the churches, for which invitations are sent out.

No. 415 Cabinet for Disc Records

Quartered oak front and sides. Any Victor finish. Mahogany front and sides. Holds 272-10 or 12 inch disc records.

A Good Cabinet For You To Buy

A beautiful and comprehensive New Catalog is ready for you. Shown between its covers is a splendid line of Cabinets and Table Cabinets for Disc Records and Cabinets for Cylinder Records.

The point is just this; that we make attractive designs that are properly priced: then we guarantee the workmanship and finish. Because of a heavy demand all styles are cut in large quantities which is your assurance of prompt shipment.

The necessity for a cabinet to file your customers records in is unquestioned.

It only remains for you to sell that customer the best in a cabinet that you can buy.

So get Udell Cabinet Catalog No. 41 by dropping a line to

THE UDELL WORKS

INDIANAPOLIS
INDIANA

Some of the largest talking machine men in Latin America have written letters to the publisher congratulating him upon his new publication La Máquina Parlante Mundo.

This Spanish paper has created widespread interest in business circles in the countries which lie south of us and the first edition, which was a very large one, has resulted in calling the attention of thousands of merchants in all lines to this new publication.

Our business plans have been further perfected and we have associated with us Mr. Luis G. Rocha whose long experience in export matters connected with the talking machine trade make him an extremely valuable addition to the staff of our Spanish publication.

We, therefore, are in a better position than ever before to cater to the interests of manufacturers in all lines who desire to be brought into close business alliance with merchants in the southern countries.

PLANS OF THE PHONOGRAPH CO.

The Company, Recently Incorporated Under the Above Heading in Chicago, Will Conduct a Wholesale and Retail Business in Edison Phonographs and Supplies—Its Headquarters Will Be at 227 South Wabash Avenue, Chicago—Those Interested.

(Special to The Talking Machine World.)

Chicago, Ill., Sept. 10, 1912.

Clyde E. Shorey, the attorney of 137 South LaSalle street, who appeared as one of the incorporators of The Phonograph Co., recently incorporated, with a capital stock of \$50,000, to-day made the first statement as to the plans of the company. It is as follows:

"The Phonograph Co. is an Illinois corporation with a capital stock of \$50,000, which is fully paid. It expects to conduct its business at 227 South Wabash avenue, Chicago. The company expects to conduct a wholesale and retail business in Edison phonographs and supplies. The company is fully organized and a certified copy of all the papers is filed in the office of the Secretary of State and filed for record in the recorder's office of Cook county."

The records in the office of the recorder give the charter by which the company is authorized to "manufacture, buy, sell and deal in phonographs, phonographic supplies, moving picture machines and supplies, merchandise and personal property of every kind and description." The directors are given as follows, together with their stock holdings: Clyde E. Shorey, 137 South LaSalle street, \$49,600; A. W. Armstrong, Oaklawn, \$100; Wm. J. Fenton, 137 South La Salle street, \$100; Morris Cohen, 137 South LaSalle street, \$100; John E. Gorin, 137 South LaSalle street, \$100.

The building at 227 South Wabash avenue is a four-story structure and it is understood will be extensively improved and a new front constructed.

OCCUPY NEW FACTORY.

The Standard Gramophone Appliance Co. Has Well Equipped Quarters at 173 Lafayette Street, New York.

The Standard Gramophone Appliance Co., manufacturers of the Simplex "start and stop," is now located in its new factory at 173 Lafayette street, New York. Modern in equipment and in policy, it ranks high in the estimation of manufacturing experts. Visitors are cordially invited to inspect the making of Simplex devices, and a guide will be placed at the disposal of any talking machine man who comes to the factory. Orders are piling up for the Simplex start-stops, and a rush working schedule is in force at the factory in an attempt to cope with the order situation.

SOME STRONG ARGUMENTS

Against Interfering with the Manufacturer's Right to Regulate Prices at Which His Goods May Be Sold, Presented in Eldridge R. Johnson's Volume on "Price-Cutting."

Just as we close the last pages of The World for the month we are in receipt of a most important booklet entitled, "Price Cutting—A Restraint of Trade," written by Eldridge R. Johnson, president of the Victor Talking Machine Co., and which in brief is an argument against any legislation that contemplates interference with the manufacturer's right to regulate the price at which his goods may be sold. As might be expected, the argument is forceful and convincing and appeals to the reason of thinking, practical men. The introductory to the volume is in part as follows:

"A number of new bills, most dangerous to general business interests, have been introduced in Congress. The purposes of these bills are to prevent the regulation of prices by manufacturers either through the patent laws or any other method whatsoever. They are based on the erroneous theory that the manufacturer has no rights, interest or responsibility in goods after they leave the hands of the original producer. These bills are aimed at the so-called trust monopolies. No doubt their authors are acting in good faith, but they do not understand the true situation. These bills will not only fail to accomplish the object intended, but will foster certain classes of monopolies based on price-cutting conspiracies from which the public as well as honest manufacturers and merchants are already sadly in need of protection."

Next month we shall take pleasure in reviewing this volume at greater length.

TRADE-MARKS IN CHINA.

Shanghai Chamber of Commerce Requests a Uniform System of Trade-Mark Registration—The Present Situation Summarized.

A Reuter dispatch from Peking states that the Government is considering a telegram received from the Chinese Chamber of Commerce in Shanghai, requesting the promulgation of a uniform system of registration of trade-marks. The present status of trade-mark protection is summarized as follows by Vice-Consul-General W. Roderick Dorsey, of Shanghai:

Although the commercial treaty between the United States and China of 1903 contemplated the protection of trade-marks, patents and copyrights to citizens and (or) subjects of those countries, no patent laws have as yet been enacted and no patent office has as yet been established in China.

Provisional registration bureaus for trade-marks have been opened at the Shanghai and Tientsin offices of the Chinese maritime customs.

A registration is first effected in the consulate of the country of applicant, and is then sent on to the commissioner of customs for registration in the provisional bureau. The result is merely a provisional registration giving tangible evidence of priority of claim of ownership to be considered when trade-mark, patent and copyright laws come into effect in China and application is made for actual registration under those laws. No actual protection from infringement results, hence the importance of action.

BLUE AMBEROL RECORDS

To Be Shipped by the Thos. A. Edison, Inc., the First Week of October.

At a meeting of the operating heads of Thos. A. Edison, Inc., it was decided that shipments of the first 55 Blue Amberol records would go forward some time during the first week of October, taking the place of the November wax list. Fifty of these Blue Amberol will be regular records, while five of them will be concert. With these also will be shipped the diamond reproducers and the combination attachments for the four-minute records. The Blue Amberol records are the first of the new indestructible Edison cylinder records.

WILLIAM F. NYE
NEW BEDFORD, MASS.

INCREASING SALES EFFICIENCY.

A department where a number of sales people are employed should be as harmonious and quiet as a well-ordered household. Work is greatly hindered and impaired by petty strife among employees. Competition there must be, and personal effort to excel, and it is too much to expect of human nature that there should be no friction at all, but it should never be displayed before the customers.

Sales people should not argue with each other over their respective duties within hearing of people in front of the counter; such matters can always be settled when there are no listeners about. Ts the Dry Goods Economist well says: "The customer wants to be properly served, and any distraction delays her purchase by turning a part of her attention from what she is doing to what is going on."

If there is an unfriendly feeling among sales people it may easily bring about actual damage to the interest of the firm. Many a time a fault-finding customer will complain to a salesman of the treatment he or she has received at the hands of some other salesman. If the former has a little grudge against the latter he will sympathize so heartily with the customer as to tacitly admit that his business associate is really an inefficient person. Such an admission reflects immediately upon the firm, carrying the impression that it is not employing capable people.

Customers who believe that the shop, the goods and the sales people are the best to be found will not want to trade anywhere else. This impression should be made stronger with each visit. The slightest hint of criticism from an employee creates uncertainty in their minds.

A department where orders are quietly given and executed, where sales people are attentive and courteous, attracts custom, for everybody knows that a smooth-running machine does efficient work.

Talking Machine Business for Sale.

FOR SALE.—Talking machine business on West Side of New York City; established 7 years. Address "Victor," care The Talking Machine World, 373 Fourth Ave., New York City.

Will Buy Established Store.

WILL BUY an established store, in or near New York, handling the Victor line; state full particulars and location. Address "Business Wanted," care The Talking Machine World, 373 Fourth Ave., New York City.

PARCELS POST READY BY JANUARY.

Talking Machines and Records Not Exceeding 11 Pounds Weight and Limited in Size May Be Mailed—Charges Fixed by Zones—Act Also Authorizes Commission to Investigate Subject of a General Parcels Post for All Packages—Details of New Law Will Interest.

(Special to The Talking Machine World.)

Washington, D. C., Sept. 12, 1912.

Postmaster General Hitchcock let it be known to-day that the proposed parcels post plan enacted into law when President Taft signed the new post office appropriation bill would be put into effect as soon as possible. The Bourne-Lewis parcels post plan goes into effect Jan. 1, 1913, so far as the establishment of the parcels post rates and zones are concerned, and Mr. Hitchcock will endeavor to have the details worked out by that time.

Under this legislation it is provided that hereafter fourth-class mail matter shall embrace all other matter, including farm and factory products, not now embraced by law in either the first, second or third class, not exceeding eleven pounds in weight nor greater in size than seventy-two inches in length and girth combined, nor in form likely to injure the person of any postal employee or damage the mail equipment or other mail matter, and not of a character perishable within a period reasonably required for transportation and delivery.

For parcels post purposes the United States and its territories, including Alaska but excepting the Philippines, is to be divided into units of area thirty minutes square, identical with a quarter of the area formed by the intersecting parallels of latitude and meridians of longitude, represented on appropriate postal maps, and these units of area are to be the basis of eight postal zones, as follows:

The first zone will include all territory within such quadrangle, in conjunction with every contiguous quadrangle, representing an area having a mean radial distance of approximately fifty miles from the center of any given unit of area.

The second zone will include all units of area outside the first zone, lying in whole or in part within a radius of approximately 150 miles from the center of a given unit of area.

The third zone will include all units of area outside the second zone, lying in whole or in part within a radius of approximately 300 miles from the center of any given unit of area.

The fourth zone will include all units of area outside the third zone, lying in whole or in part within a radius of approximately 600 miles from the center of any given unit of area.

The fifth zone will include all units of area outside the fourth zone, lying in whole or in part within a radius of approximately 1,000 miles from the center of any given unit of area.

The sixth zone will include all units of area outside the fifth zone, lying in whole or in part within a radius of approximately 1,400 miles from the center of any given unit of area.

The seventh zone will include all units of area outside the sixth zone, lying in whole or in part within a radius of approximately 1,800 miles from the center of a given unit of area.

The eighth zone will include all units of area outside the seventh zone.

The rate on fourth class matter weighing not more than four ounces is to be 1 cent for each ounce or fraction and on matter in excess of four ounces weight the rate is to be by the pound, the postage in all cases to be prepaid by distinctive postage stamps affixed. Except as provided above the postage on matter of the fourth class, which is to be admitted to the parcels post, is to be prepaid at the following rates:

On all parcels post matter mailed at the post office from which a rural route starts, for delivery on such route, or mailed at any point on such route for delivery at any other point thereon or at the office from which the route starts, or on any rural route starting therefrom, and on all matter mailed at a city carrier office or at any point within its delivery limits, for delivery by carriers from that office, or at any office for local delivery, five cents

for the first pound or fraction of a pound, and one cent for each additional pound or fraction of a pound.

For delivery within the first zone, except as above, five cents for the first pound or fraction of a pound and three cents for each additional pound or fraction of a pound.

For delivery within the second zone, six cents for the first pound or fraction of a pound, and four cents for each additional pound or fraction of a pound.

For delivery within the third zone, seven cents for the first pound or fraction of a pound, and five cents for each additional pound or fraction of a pound.

For delivery in the fourth zone, eight cents for the first pound or fraction of a pound, and six cents for each additional pound or fraction of a pound.

For delivery within the fifth zone, nine cents for the first pound or fraction of a pound, and seven cents for each additional pound or fraction of a pound.

For delivery within the sixth zone, ten cents for the first pound or fraction of a pound, and nine cents for each additional pound or fraction of a pound.

For delivery within the seventh zone, eleven cents for the first pound or fraction of a pound, and ten cents for each additional pound or fraction of a pound.

For delivery within the eighth zone and between

the Philippine Islands and any part of the United States, including the District of Columbia and the several Territories and possessions, twelve cents for the first pound or fraction of a pound and twelve cents for each additional pound or fraction of a pound.

Postmaster General Hitchcock, as required by the new parcels post law, will provide such special equipment, maps, stamps, directories, and printed instructions as are necessary to administer the parcels post, and to hire teams and drivers. He will be allowed to draw on a special appropriation of \$750,000 made in the post office appropriation act.

The Postmaster General is also required to provide by regulation for the indemnification of shippers using the parcels post for shipments injured or lost, by insurance or otherwise, and, when desired, for the collection on delivery of the postage and price of the article shipped, fixing such charges as may be necessary to pay the cost of those additional services.

The act also authorizes the President to appoint a joint commission of six members of Congress to make a further inquiry into the subject of a general parcels post. Three members of this commission will be Senators and three will be Representatives. An appropriation of \$25,000 is made available for the expenses of this commission.

Ideas, somehow or other, seem to strike the busy man—not the idle one.

INSURE YOUR HOLIDAY PROFIT

YOU CARRY FIRE INSURANCE—DON'T YOU?

☞ Most people do, and yet they don't expect or want a fire.

THE NEW VICTROLAS MAKE GOOD HOLIDAY BUSINESS CERTAIN

☞ Are you INSURED against losing GOOD PROFITS through not being able to get these Victrolas?

EXPERIENCE—THOUGH EXPENSIVE—IS THE BEST TEACHER.

☞ You can't afford to forget the EXPERIENCE of those Dealers last year who did not properly PREPARE for HOLIDAY NEEDS, when the low-priced Victrolas were announced.

☞ This is also true in the case of records. PREPARE NOW.

ARE YOUR EGGS ALL IN ONE BASKET?

☞ The "basket" represents your jobber, the "eggs" your orders. Will the "basket" stand the strain of Holiday requirements? If not, who suffers?

YOU MAY NEED TWO POLICIES.

☞ That will depend on "past performances" and the reputation of the "basket" to meet such requirements.

NOW TO THE POINT. THESE ARE FACTS.

☞ You cannot place "additional insurance after the fire has started and collect your Insurance." Can you expect to call on an extra jobber AT THE LAST MINUTE and be sure of getting the goods?

INSURE WITH BLACKMAN NOW AND BE PROTECTED.

☞ We cannot recall a single case where a "Blackman dealer" lost a "real sale" last year, because we could not deliver the goods. When we say a "regular dealer" that doesn't mean the fellow who came to us at the last moment after FAILING to get the goods from his "regular jobber."

BE A "REGULAR BLACKMAN DEALER" NOW.

☞ That means we will PREPARE FOR YOU, as we do for "OUR DEALERS." Call on us at the last minute, if necessary, and we will do the best we can, but the "Blackman policy" is to recognize the obligation to fill the requirements of REGULAR DEALERS FIRST. We call this "fair dealing" and it is appreciated by our dealers.

NOW IS THE TIME TO TAKE OUT THAT POLICY.

☞ Start giving, at least a share of your business, to Blackman and you will feel easy about your Holiday profits.

THE PLACE TO GET THE GOODS—EDISON AND VICTOR

97 CHAMBERS ST. NEW YORK
EVERYTHING FOR EDISON OR VICTOR WHOLESALE OR RETAIL

¶Pioneers in selling Victors and Edisons, today our system is far better than the ordinary methods.

There is real help all along the line for live dealers in getting in touch with us. Especially do we aim to assist those dealers who are desirous of achieving supremacy in their local territory.

Three things you find here:

The largest stocks.

The quickest service.

The most courteous attention.

A request from a dealer will result in placing his name at once on our rapid-fire mailing list

MUSIC HOUSE

Lyon & Healy

Chicago

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., Sept. 12, 1912.

In spite of the fact that there was a good deal of "waiting" on the part of dealers during August on account of new models of machines the appearance of which was scheduled for September, the month is generally referred to by jobbers as having shown a material increase over the corresponding month of last year. Advance orders of goodly volume were placed, however, and it is generally believed that September, notwithstanding the extremely hot weather so far, will make a very fair showing indeed. Business is expected to open up quite briskly about the middle of the month and increase in a steady crescendo up to the holidays.

"We are looking for a big fall business," said L. C. Wiswell, manager of the talking machine department of Lyon & Healy. The farmers are loosening up and are buying liberally. This report we get from our dealers everywhere. They are in good condition now, this year's crops fill them with confidence in the future, and the fact that the big bulk of the crops will not be marketed until next spring means that the farmer is going to have plenty of money in his jeans for months to come at least. Dealers writing in say very emphatically we are going to do business this fall. They don't say that when they have any doubt of it. The advance orders for the new Victor machines have been surprisingly large. The Victor XI, the new \$100 machine, is going to be a phenomenal seller. Although the other new types are being given their full share of attention machine sales are naturally somewhat slack in the summer months, but have been more than up to the average, while our summer record business has been in all respects exceptional."

Arthur D. Giessler, general manager of the Talking Machine Co., says that August showed an increase over every similar month since 1907. The advance orders on all of the new Victor types has been phenomenal. An encouraging feature has been the demand for the new XVIs, showing that while the attractive models at lower figures are being eagerly taken hold of that the dealers are energetically after the highest class of trade in their sections and getting it. The company have their large warehouse facilities crowded to the utmost preparation for the large trade they anticipate this fall.

W. C. Fuhri, district manager for the Columbia Co., said: "We have had an unusual summer business, the total figures for the Chicago office, including local retail, dictaphone and wholesale, running ahead during the entire period and exhibiting a gain of something like sixty per cent. over last year. The business of the Chicago office has grown so rapidly that we will be obliged to increase our warehouse facilities in the near future. I was in New York last week and learned while there that the output at the factory had been greatly increased and that they had been able to lay in a large stock of the popular selling machines at the factory that will enable them to fill orders promptly this fall."

C. E. Baer, manager of the Columbia's Chicago office, is jubilant over the manner in which the fall trade is opening up. He reports the establishing of several sizable new Columbia dealers since the first of the month.

With the Wurlitzer house talking machine business is opening up in good shape both in wholesale and retail. Assistant Manager Fred A. Simon says that material increases have been made in both branches, although there is a feeling that

dealers are holding off to some extent until the new Victor styles are put on sale. He says, though, that while the new Victors will probably be very popular, there is still a demand for the old styles and that it is hard to supply the demand for them.

The talking machine department of the Aeolian company reports a good prospect for fall business. Demand for machines has been rather spirited with the beginning of September, despite the June-like days that ushered in the month.

The Talking Machine Shops in the Steger building also report a considerable picking up of trade during the last of August and the first week in September.

Roscoe M. Breeden, of the Breeden Office Supply Co., of Salt Lake City, Utah, and dictaphone representatives in that city, was a Chicago visitor this week.

Col. F. B. T. Hollenberg, of the Hollenberg Music Co., Little Rock, Ark., was a Chicago visitor.

W. C. Fuhri, district manager for the Columbia Phonograph Co., leaves this week on a trip to Omaha, Kansas City and St. Louis.

Mr. Carmine, representing the Pooley Furniture Co., was in the city a few days ago. He had with him two new styles of the Pooley talking machine cabinet, selling at \$18 and \$25. Jobbers here say the new cabinets will certainly prove heavy sellers.

Good Dictaphone Month.

August was one of the biggest months of the Columbia Co.'s Chicago dictaphone department. W. W. Parsons is jubilant over some especially good installations, among them being the Illinois Steel Co., American Radiator Co., and International Harvester Co.

Novel "Bird" Window.

The Columbia Phonograph Co. are preparing an exceptionally attractive window in celebration of the aviation meet on the Lake Front. An aeroplane model will be the essential feature, and the window will be filled with the Columbia Aeroplane Glide records, which contain on the reverse side a popular number entitled, "Waiting for the Robert E. Lee."

O. M. Kiess, manager of the talking machine department of Wooley & Co., Peoria, Ill., was a recent caller in Chicago.

Makes Talking Machine Exhibit.

One of the most attractive flats in the parade of the Woodlawn Business Men's Association, which was a part of the association's annual field day and athletic meet, Aug. 21, was that of Miller's Grafonola Shop, 1126 E. 63d street. Mr. Miller's automobile was gaily decorated with flags, pennants and bunting, and on a platform built over the wind shield reposed a Columbia horn machine. It was kept playing throughout the journey of the parade and was surrounded by crowds of eager listeners who followed it for blocks.

The Wade Cutter.

S. O. Wade, of Wade & Wade, manufacturers of the Wade Fibre Needle Cutter, says that business has shown a marked increase with them the past few weeks. They are now filling some of the largest individual orders they have ever received from their wholesale customers.

The Salter Cabinets.

The Salter Manufacturing Co. is not only getting an excellent business on the Salter felt-lined shelf record cabinets, but is also having a nice trade on the new style of sheet music and combination music and player role cabinets which they lately put on the market. The two lines go together in many instances. Dealers would do well to write for both record and music cabinet catalogs.

Favors Music in the Schools.

In connection with the progress of introducing
(Continued on page 34.)

The Wade

Fibre
Needle
Cutter

THE WADE FIBRE NEEDLE CUTTER trims the needle at the proper angle, and the needle can be re-pointed from ten to twelve times, thus giving more tunes per needle than any other cutter made. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The WADE CUTTER has an upper and a lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

Order from your regular Distributer—we sell to Jobbers only.

WADE & WADE, 1227 East 46th Street
CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 33).

music in the schools by talking machine, upon which the large talking machine companies are now making extensive campaigns, a statement recently made by Anton Foerster, one of the foremost teachers of music in Chicago, will be of interest. "Music in the schools is the basis for development in other branches of study," says Mr. Foerster. "The educational force of music," he said, "is not generally recognized. The child's first work in all the arts should be creative rather than imitative. Study of music should begin in the lower grades." Mr. Foerster does not advocate compulsory music work except in the lower grades.

A Political Record.

"Sir: The best record Mr. Taft ever made was for a phonograph company four years ago, in which he tells how the Republican party stands by Theodore Roosevelt and in which he promises a continuation of 'his policies.' We tried one on our standpat dad the other evening. The effect was wonderful. If we were the Victor people, we'd push that record as the funniest little piece of monologue in stock. L. B. M."

The foregoing from Lyne-o-type-or-two in Chicago Tribune is respectfully submitted to the Victor Co.

Wurlitzer Improvements.

When the improvements now under headway at the Chicago Wurlitzer store have been completed the space devoted to talking machines will be more than doubled. It is expected that the alterations will be completed in about two weeks.

The annex, one door south of the present entrance to the store, will be devoted to a concert room in front, while in the rear will be a number of display rooms for the machine, the repair shop and the shipping department. In the past this part of the building has been occupied by the wholesale piano stock, which has now been moved to new quarters farther south on the Wabash. Entrance to the annex will be through a large door to be opened in the wall between the two rooms at the front of the building and immediately to the left of the present entrance. The stairway on the right side of the main room leading to the mezzanine floor will be closed, as will be the door now opening from the foot of the stairway into the annex. Toward the rear and middle of the building several doors will be cut between the annex and the main room.

A change will also be made in the arrangement of the talking machine record stock and display rooms on the first floor of the main building. Instead of following the isle which runs straight down the center of the building, between the display rooms, as they are located at present, customers will go through the demonstrating room at the left and pass down a corridor on the left side of the building. The present middle isle will be fitted as quarters for the employes of the talking machine department, where the record stock will be handled.

Visitors and Personals.

Will A. Young, known as "The Music Man" of Fort Wayne, Ind., was in Chicago the other day placing orders for talkers and other musical goods preparatory for the fall trade. Mrs. Young accompanied him.

Bert Chaffee, of Young & Chaffee, furniture and talking machine dealers of Grand Rapids, Mich., was in the city last week demonstrating to the Chicago trade the new Vitaphone, in which he is interested.

Harry B. Hopkins, assistant to L. C. Wiswell in the wholesale talker department of Lyon & Healy, is on vacation. He is making his headquarters at his home in Ferndale, but is making daily runs into the surrounding country in his newly purchased American Roadster. At last reports both Hopkins and the auto were reported safe and sound.

Opening of Gram's New Building.

Paul A. Seeger, who will be the manager of the new Victor department which the Edmund Gram Co., of Milwaukee, is establishing, coincident with his removal to the new Gram building, was in the

city the other day. The formal opening occurs this week. The talker department will occupy commodious and elegantly fitted-up quarters in the basement, consisting of three booths, reception room and stock, and there will also be space on the first floor for display purposes. Mr. Seeger has been with the House of Gram for several years and those in the trade who know him say that he is pre-eminently the man for the place.

Add to Sales Force.

The Talking Machine Co. has just made two notable additions to its sales force. Both are bright, clean-cut young men and college graduates and give promise of success in their respective fields. H. L. Flentye, who owns the University of Wisconsin as his alma mater, will visit the Chicago city trade and has gone through a preparatory course in the shipping, stock and repair departments.

Elmer H. Dittmer, a University of Kansas man, will preach the Talking Machine Co. Victor service gospel in Illinois and Iowa, and is now engaged with Sales Manager Keith in arranging for itinerary of his first missionary journey.

Miss Pauline Tishler, the well-known and hustling little saleslady of the Talking Machine Shop, has just returned to the city after a month's vacation spent in the East. She visited Niagara, Cleveland, New York, and other Eastern cities.

Chandler Gets Coast Territory.

A. V. Chandler, for many years traveler for Illinois, has been promoted and will hereafter make Coast territory for the company. He said good-by last week and headed for the Golden Gate, followed by the choicest benedictions of hosts of friends in the Chicago trade. Mr. Chandler succeeds Mr. Voltz, who left Lyon & Healy a year ago to join the Edison forces.

GEISSLER ON COAST CONDITIONS.

General Manager of the Talking Machine Co., Chicago, Returns from Annual Visit to Pacific Coast, and Discourses Interestingly on Conditions as He Observed Them—Enjoyable Feature of His Stay Was His Visit to the Ranch of L. F. Douglass.

(Special to The Talking Machine World.)

Chicago, Ill., Sept. 11, 1912.

Arthur D. Geissler, general manager of the Talking Machine Co., of this city, returned the latter part of last week from his annual combined business and pleasure trip to the Pacific Coast.

He was accompanied by Mrs. Geissler and their small daughter, the two boys having now reached an age when they can stay at home and bring additional furrows to the brows of their temporary guardians.

"In spite of the fact that there has been something of a slump in general business on the Coast, the talking machine business has kept up remark-

ably well," said Mr. Geissler. "Everywhere I went I found the talking machine dealers enthusiastic about business and prospects and tangible evidences of prosperity in the form of new buildings and extended departments on every hand. In Frisco Sherman, Clay & Co. have just let the contracts for four additional stories to their building, which will enable them to greatly increase their Victor department. At Los Angeles the Southern California Music Co. has nearly as much money invested in talking machines as in pianos and is doing a really remarkable business. The George J. Birkel Co., of which my uncle, Edward Geissler, is vice-president, is now thoroughly settled in its new building on Broadway, where it has one of the finest Victor departments on the Coast. The Musical Record Co., of which W. E. Allen is president and Albert Wayne is manager, has opened an exclusive Victor shop, embodying features which it would be impossible to duplicate anywhere except in a climate like that of California. The store itself is attractive, but there is a Japanese tea garden in the rear, where tropical plants and a pond stocked with gold fish gives distinctly the Oriental flavor. Here Victor concerts are given every afternoon and silent-footed Japanese serve tea. At Santa Monica I found Van Sant & Raynor doing a nice business in an exquisitely fitted up store. Mr. Raynor, by the way, was formerly one of the directors of the Southern California Music Co."

Incidentally, it should be said that the Talking

Arthur D. Geissler Enjoying Ranch Life.

Machine Co. enjoys a big business on the Coast, the joint result of the up-to-date service of the Talking Machine Co. and Mr. Geissler's wide acquaintance and popularity with the trade there. As usual, he brought back with him orders from his friends for Victor machines and records amounting to an imposing figure.

A most enjoyable feature of Mr. Geissler's stay in California was his visit to the recently purchased ranch of Leon F. Douglass, in the Geyserville district, in the mountains a hundred miles north of San Francisco. The property comprises a tract of 2,500 acres, part of it heavily wooded, has a trout filled stream running through it and is prolific of farm products and cattle by the hundred head. There is a fine shooting lodge containing eight or nine rooms with baths, running water and all the conveniences of city life and a commodious keeper's lodge. About thirty deer were sighted by Messrs. Douglass and Geissler and the latter succeeded in bringing down a fine three-pronged buck, which weighed dressed a hundred and twenty pounds. Ocular evidence of the capture of the buck is presented in photos here presented and which were taken on the spot.

BOOSTING ONE'S HOME TOWN.

There should be a natural desire on the part of everyone to boost his own town, his own community; for by building up the place in which you live you are providing for yourself a guarantee for future prosperity, says a Westerner of wide experience.

This should apply universally to purchasing your necessities; to banking and making your investments. Many will be loud in denouncing the consumer for spending his money with mail order houses and then turn around and buy a supply from distant points while he could have done just as well at home.

Again, many get a living out of one community and then invest their profits in some enterprise at some distant point, while their immediate neighborhood is badly in need of many improvements for lack of local interest and finally "slumps" to such an extent that it becomes an impossible business center.

A. D. Geissler as a Deer Hunter.

ably well," said Mr. Geissler. "Everywhere I went I found the talking machine dealers enthusiastic about business and prospects and tangible evidences of prosperity in the form of new buildings and extended departments on every hand. In Frisco Sherman, Clay & Co. have just let the contracts for four additional stories to their building, which will enable them to greatly increase their Victor department. At Los Angeles the Southern California Music Co. has nearly as much money

THE QUAKER CITY SITUATION.

Business Keeps Up to Marks Set by Former Years and Many are Waiting to See the New Machines Before Going Ahead Rapidly—New Houses in the Local Field—Columbia Trade Makes Distinct Advance Over That of Last Year—Improvements Made in Local Columbia Store—What the Various Jobbers and Dealers Have to Report—Recent Trade Visitors of Record.

(Special to The Talking Machine World.)

Philadelphia, Pa., Sept. 6, 1912.

While the talking machine business in Philadelphia during August has given the dealers general satisfaction, it was the only month of the year thus far that they have not run considerably ahead of last year. Business was about the same as last year, but the bulk of it was for records and not machines, and this is due to the fact that everybody seems to be waiting to see what the new Victor machines are going to be like, as well as the new Edison disc phonographs—that is, everybody but those who are buying the Columbia.

Those who are buying the Columbia have been legion and the handlers of that machine in Philadelphia report a big increase for the past month of August over last year. The moving shutter of the Columbia seems to be one of its prime qualifications as a seller, and there is no discounting its advantage, for the operator of the Columbia is able to get some wonderful effects out of some of the fine operatic arias by the way he manipulates this shutter, the same idea as the man who is interpreting a composition on the player-piano.

The dealers will only have a very few days longer to wait before they will get the new Victor machines, which will be shipped on the 10th. It is only three weeks off before the Edison disc machine will be on the market. There is much speculation as to what is going to be done. I cannot learn of any of the jobbers who will handle the Edison machine and company may have to get independent men to sell it. Frank K. Dolbeer, general sales manager of Thos. A. Edison, Inc., was in Philadelphia this week, and it is thought that he was looking over the conditions here to see what his firm could do. I believe he gave the dealers to understand that the Edison were going to have instruments of all grades and prices to compare with those of their competitors. There is no doubt going to be a lively talking machine trade all over the country between this and the

ONE OF THE ESTEY COMPANY'S TALKING MACHINE ROOMS.

An Illustration of One of the Several Hearing Rooms in the New Talking Machine Department, Just Installed, in the Estey House at 12th and Walnut Streets, Philadelphia, Pa., Where the Columbia Line Is Handled.

first of the year, or until the new machine question will regulate itself.

I understand that during the past month there were a number of applications for stock to open new talking machine houses in this city, all of which were turned down owing to the exacting conditions now prevalent if anyone wants to go in the business. New dealers started during the month, however, at 6018 Market street—Walter Trepte & Sons, who are piano dealers at that address and who have added an extensive talking machine department to their business. They have a very complete lot of machines and records. The department was opened on August 30. They have been in the piano business for a number of years.

The talking machine business at the Heppes house has been most satisfactory. W. J. Elwell, the manager, went away the latter part of August on a vacation and does not expect to return to work until the 9th of this month. He is spending most of his time on a hunting trip in Delaware County. Among the out-of-town visitors to this department recently were Jerry Charles, a dealer of Selinsgrove, Pa.; Harry F. Cake, dealer of Pottsville, Pa., and Harry Holt, a dealer of Mt. Holly, N. J.

As to records, the Heppes report that the demand for popular songs during August was phenomenal and attribute the reason to the fact that

the month was unusually cool and that people remained at home and entertained themselves in this way. E. H. Bruchl, of the talking machine department, has resigned to go to Buffalo, N. Y., in a similar business, and his place has been taken by William Elton. Frank Schallar also resigned to accept a position with Kretschman & Co., and Frederick Neally is at present taking care of the wholesale department. M. R. Matrott, of the selling force, was married during the month to Miss Soby.

As noted above, the talking machine business with the Columbia Co. was way ahead of last year. It has been making extensive improvements in its wareroom. It has changed the offices about and has brought its cashiers down stairs and has built a little office for the selling of Metropolitan Opera House tickets. It has painted and repapered the place throughout and it now presents a most attractive appearance. It has brought all its record stock to the first floor and has arranged shelves for it at the rear of the hearing rooms. It has conceived an excellent idea, and has placed two boys in charge of these records. There are little windows at the back of these hearing rooms, and when the salesmen are waiting on customers any records they may desire are handed to them from the shelves nearby by these boys. This will allow the men to devote all of their time to the selling. It has also installed in all of its hearing rooms very attractive and large alabaster lights. It has been receiving a number of the company's latest machines, the \$20 Eclipse, and Mr. Dorian says he believes it has anything beaten that has heretofore been out up to \$50. The Regal \$40 machine, Chipendale style, is also being received with much favor. The firm has an attractive September list of new music, and the Kathleen Parlow records have just been received. George W. Lyle, general manager of the Columbia, was in town last week.

The report of Joseph Murphy's having eloped during his vacation it would seem was premature. He did not elope, nor is he married, and Joe says the fellows around the Columbia are not going to hustle him off until he gets doggone good and ready. No proposals by telephone in his, and he winked at the Metropolitan box office man who had a little romance all by himself last winter, which has never been placed in grand opera.

Manager Harry Hovey, of the talking machine department at Lit Bros., says that business was a little quiet in August, but they have an unusually large number of prospects for the fall and he believes they are going to have a fine business. They are getting everything to shape to that end.

Manager Doerr, of the Weymann department, says that August was great and the entire summer was good. "There is no kick on this summer's business," he says, and he believes when the new machines come out that they are going to have the largest business they have ever experienced. They

are arranging to put up a great many additional racks for the accommodation of almost double the number of records they have previously carried.

Louis Buehn notes that their business was this year about the same as last year in the number of instruments sold, but they jumped way ahead on records. Buehn & Bro. have already on hand a great many orders for the new Victor machines, and they expect that they will have a lively September business. In their Pittsburgh store about the same conditions prevail. But in their business phonograph department they have more than doubled over last year, and they have a number of the biggest firms in the city in line for these machines this fall and they believe it is going to be a very big percentage of their business.

Gimbel Bros.' department looks unusually attrac-

tive at present. They have fixed it up for the fall business and are showing all lines of instruments they handle most tastefully displayed. An artistic eye has done the decorating, for nothing more attractive is to be seen in Philadelphia. They were in hopes that they would be able to have two new hearing rooms by this time, but thus far they have not been started. They are very much handicapped, especially since their business has been more than doubled over last year. Two Victor men called at the department the past week, Mr. Bennett and Morley Somers. The firm carries four times the stock it did at this time last year. Emmett Stewart, who was connected with the department for about a year, has gone to Easton to accept a similar position in a big talking machine store in that city.

open up several branch stores throughout Orange and Los Angeles counties, all being equipped with a talking machine department.

Scott T. Allured, the new manager of the talking machine department of the Wiley B. Allen Co., of San Diego, was in Los Angeles for a few days and placed a large order for Victor goods to be ready for the fall season. Mr. Allured takes special pride in his department and takes his men to dinner occasionally at Sargent's Grill, where they discuss the welfare of the department.

A. Graham Cook, who had charge of the talking machine department of the Geo. J. Birkel Music Co. for many years, has just returned from a three months' trip East, visiting many points of interest, including the Victor factory at Camden. What he enjoyed most was the visit to the old Boston home. Mr. Cook is very well pleased with the talking machine business of the West, stating that the Western dealer is just as well equipped to handle the trade as the Eastern dealer.

F. M. Martell, who was formerly connected with the talking machine department of Wanamaker's, of New York city, has recently joined the sales force of the same department of the Wiley B. Allen Co., of this city. Mr. Martell has already had splendid success selling talkers and records in his new location.

SOUTHERN CALIFORNIA TRADE LOOKS FOR RECORD FALL.

Improvement in Business for Past Month Presages Great Activity for the Future—Many Changes Among the Various Houses—Wm. Hobbs Richardson Married—Temporary Quarters for Fitzgerald Music Co.—Woman Manager Makes Good—Other News.

(Special to The Talking Machine World.)

Los Angeles, Cal., Aug. 31, 1912.

Los Angeles and vicinity has enjoyed a very excellent trade in the talking machine lines within the past thirty days. Dealers throughout the country are looking forward to the most promising fall trade that this section has ever had. Owing to the fact that many new styles of instruments are being placed upon the market there is every prospect of a good business for the coming season.

Chas. S. Ruggles, local manager of Sherman, Clay & Co., Victor distributors, has recently returned from his vacation at Camp Baldy, where he had a most delightful time. Mr. Ruggles is expecting a record-breaking fall business.

A great surprise came to the friends and associates of William Hobbs Richardson when news was received of his recent marriage to Mrs. L. Russ. The couple are very well known in southern California, especially Mr. Richardson, who has been connected with the Southern California Music Co. for many years, being manager of the talking machine department. Mr. and Mrs. Richardson will spend a few weeks visiting cities along the coast as far north as Vancouver, B. C.

Geo. J. Birkel, of the Geo. J. Birkel Music Co., has recently returned from a trip to San Francisco, where he had been visiting friends and relatives.

The Southern California Music Co., of Riverside, Cal., has moved into its new quarters, 924 Main street. Morris Griffin, manager of the store, states that the new location will be more of a trade center than before.

L. M. Hay, 5438 Central avenue, has recently taken on the Columbia line and has already been classed as a successful dealer.

August is the closing month of a very successful year for the Geo. J. Birkel Co. Now with new energy the company looks forward to still a

greater year, with prospects of a good beginning with the fall business.

W. F. Stidham, local manager of the Columbia Phonograph Co., is well pleased with the past business and the outlook for the future is so good that he has procured a several years' lease of the entire third floor of the Winsel block, 420-422 South Broadway, thus giving them more than double the capacity than before. Mr. Stidham reports a strong increase in demand for the two new types of Grafonolas, the Regal and Eclipse.

Everybody's Drug Store, Mesa, Ariz., reports a successful season with the Edison line and expects good returns from the coming line of disc machines.

Harold Jackson, the new road man for the Southern California Music Co., is making his first trip over his territory. To Mr. Jackson's line is added the Wood filing cabinet, of which the Southern California Music Co. has just received the jobbing agency.

Max Shireson, 367 North Main street, is very much pleased with the big increase in business in his section of the city. Mr. Shireson is a strong Edison man and is making a record with this line.

H. B. Hinman, manager of the talking machine department of the J. B. Brown Music Co., accompanied by his wife, returned from a trip to San Francisco. This trip was rather a unique one, being made entirely by tandem motorcycle, and Mr. Hinman boasts that they did not have a breakdown on their entire trip.

The Musical Record Co., although a short time in business, has been doing its share of the talking machine business. A. D. Wayne, the manager, predicts a tremendous fall trade and says he is in the position to handle all that comes his way.

Miss Bernice Roby, who has charge of the talking machine department of the Thearles Music Co., of San Diego, has proven herself worthy of the position by the many recent sales.

Guy S. Pooler, salesman for the Southern California Music Co., has returned from Avalon, Catalina Island, where he has spent several weeks' vacation. Mr. Pooler is a live salesman in every sense of the word, proving it by the recent sales.

W. S. Gray, coast manager of the Columbia Phonograph Co., was in this city for a few days combining business with pleasure while calling upon dealers of the city and vicinity.

V. B. Chatten, of the J. B. Brown Music Co., has been showing a splendid selling record of late by making a number of high-priced deals.

The Fitzgerald Music Co. is erecting a new building for temporary quarters at 947-949 South Broadway. It expects to be located in its new home in a very short time. Miss A. Brown, manager of the talking machine department, and her sister returned from a trip to the northern part of the State, where they spent several days.

Whittier Music House, Whittier, Cal., will soon

LOUISVILLE'S TRADE HAPPENINGS.

Ray Bros. Expansion—Dictaphones for L. & N. R. R. Co.—Cerf to Push Columbia Disc Line—Display at Kentucky State Fair—E. B. Walthall Returns from Visit to New York.

(Special to The Talking Machine World.)

Louisville, Ky., Sept. 9, 1912.

E. B. Walthall, local manager of the Columbia Phonograph Co., has just returned from a visit to New York and the Columbia factory at Bridgeport.

Ray Bros., Edison and Victor dealers, are making some extensive improvements in their retail store on Jefferson street.

The Dictaphone department of the Columbia Phonograph Co. has just closed an extensive deal with the L. & N. R. R. Co., whose general offices are located here.

Henry Cerf, of 209 Pearl street, New Albany, Ind., in the future will push the Columbia disc line.

The Victor and Edison dealers and the Columbia Co. all report a good August business, with good collections.

The Columbia Phonograph Co. had an extensive display, in charge of Local Manager Walthall and his able assistant, Mr. Reid, at the Kentucky State Fair, held at the State Fair grounds in Louisville, September 9 to 14, inclusive. This was good advertising, as the crowd for the week was estimated at 250,000.

SIDE LIGHTS ON SUCCESSFUL HOME RECORD MAKING.

Hints Regarding a Fascinating Pastime That Should Prove Valuable to the Dealer Desirous of Increasing His Business—Home Recording Has Its Practical as Well as Its Amusing Side—Making the Talking Machine Supplement the Camera.

Just how far, Mr. Dealer, have you encouraged your customers along the line of home record making? Have you asked them to realize what great fun it is to record the vocal or instrumental talents of a friend? If not, now is the psychological moment!

Long before the postman lays the magazine containing this story upon your desk, a new recording outfit will have been born into the world of talkerdom. It is a wonderful contrivance, this latest Edison recorder, for it makes the amateur four-minute record a practical reality, and, further than that, the shaving machine which accompanies it should eliminate the last shred of objection from the mind of your customer who has failed to become the owner of a recorder in the past, owing to the inconvenience attending the shaving of records. I know by sad experience, the best of teachers, that very often when one is upon the verge of a recordfest, the talent assembled, the repertoire satisfactorily arranged, all seems well. Then a glance at the box of wax cylinders dissolves this state of self-satisfaction into thin air. There are no blanks! This would be an encouraging state of affairs in a prize drawing contest, but applying, as it does, to a recording festival, it is a grim joke. One indulges in exclamatory paragraphs, for which in his saner moments he will be sorry, and marathons to the nearest dealer. All this takes time and money, besides destroying at least in a measure, the success of the occasion.

But when one has a thoroughly dependable device at hand, and with a few turns of a mandrel, can bring forth upon the cylinders to be shaved as smooth and glossy a surface as his dealer, with his far more elaborate paraphernalia, ever dared produce, the situation is saved without the painful necessity of indulging in a marathon or the expenditure of a single copper.

And again, Mr. Dealer, think what this four-minute recorder means to your patrons from the standpoint of old Father Time. I will venture in all sincerity to make the statement that in every household which shelters a talking machine there is a song, a poem, an essay, or what not, recalling some beloved event in the long ago, laid reverently away between the pages of the family Bible or in some other sacred place.

Why not suggest, through whatever medium of advertising suits you best, that these gems from the past be brought to light and engraved upon the new four-minute cylinders?

I hear you answer me: "I have suggested this same scheme to my customers in the days that are gone, and it proved entirely impracticable."

Very good, Mr. Dealer, but why? I will be only too glad to tell you. Until now you have had nothing but a two-minute recording zone to offer them, and that was not sufficient. They have tried to the best of their ability to obtain a satisfactory record of something dear to them upon the old style blank, and failed dismally because it was impossible to record without mutilation. No song is so sweet, and no oration so masterful that can not be ruined by "cutting."

Go back to these fellows, my friend, with the good things you have to say concerning the new outfit. Ask them to bring that abandoned selection once more into the light of day and engrave it, in its entirety, upon a four-minute cylinder.

The lecturers, clergymen and all those who make a living through their voices, should welcome this new recorder with open arms. There are a number of these gentlemen among your customers, Mr. Dealer. Why don't you prepare an attractive little booklet telling in an interesting way just what the new outfit will do for them? (Methinks I hear you mutter: "There's that time-worn booklet crack again.") They have talking machines, but for amusement purposes alone, and could not in all probability, even if its merits were pointed out to them, afford to invest in a commercial phonograph, but when you demonstrated in this brochure you are going to send them that they can get

practically "commercial" results from the machine they now own plus the four-minute Edison recording outfit, you take it from me, they will be eager to talk business with you.

* * *

There is a certain exhilaration to be experienced from an indulgence in amateur photography, just as there is from the recording of human voices. But when one deserts the beaten paths, worn smooth by the multitude of snapshotters who know nothing

Getting Bro. Squirrel's Opinions.

ing of picture making aside from the loading of plate holders and the squeezing of the rubber bulb; fleeing also from those phonographic experts whose exploits in the world of recording are more noisy than melodious, and wanders far afield among God's creatures, photographing them in their own habitat, and making records of their voices as well; then, and then only, is he enjoying to the full his camera and his talking machine.

To those among your customers, Mr. Dealer, who are also interested in photography, I submit

Johnnie Flicker's First Conversation.

the following, trusting I may be able to widen their field of pleasure:

When next you take your kodak to the fields or woods in quest of a nature picture, include the talker also. Will it not prove eminently more satisfying when you return home from a successful hunt, to have not only your film roll loaded with

Still Another Little Record Maker.

negatives of the images of birds and animals, but your record case filled with their voices as well? This sounds fantastic, does it not? However, it can be done, and in some cases very easily.

It is not at all difficult to obtain an oration from Mr. Chick R. E. Squirrel. He is a curious little rascal, a great glutton and a loud talker. Therefore, by arousing his curiosity, and supplying an appetizing feast, you can induce him to pose for his portrait, and tell you the story of his life at the same time. You must be patient, however, as he will misjudge your intentions at first, but after he is convinced that the piece of wood you have nailed to the trunk of his favorite tree is for his especial benefit—dedicated to his use as a declaiming platform—and that the luncheon of walnuts placed in tempting array along its top is also for His Squirrelship, he will draw near, loudly chattering his thanks, but still a little afraid of the queer looking funnel and the hooded black box with its three long legs.

Eventually he grows very daring, and with a flirt of his plumed tail, and much high-pitched jabbering, steals a walnut, retreating with it to a near-by branch. But there are more sweetmeats to be consumed, and he is still quite unharmed; therefore, his next call is a more deliberate one. He is quite assured by this time that all is well, and upon his third visit settles down to enjoy himself, munching and talking.

At the click of the shutter he is off, but in the meantime your camera and talker are not idle.

Young birds make fine "photo-phono" subjects also. The young gentleman in the accompanying illustration is Master Johnnie Flicker. He, too, has a voracious appetite and is also an accomplished conversationalist. He is making his first pilgrimage into the world, having left his home (the hole to be seen at the lower right hand corner of the photograph) for the purpose of notifying the world at large that he is now open for hole boring and worm exterminating contracts at a surprisingly low figure.

Now, Mr. Dealer, bring the subject of phonography before your patrons this autumn. It will take them out into the parks, the forests and the country lanes at the time when the paint brush of nature is dripping with the most gorgeous colors of the whole year, and whether or not they return with game bags heavily laden, they will have gained clear complexions and improved digestions, besides an entirely new understanding of the doings of the wood folk.

To those of you who believe in side lines, it seems to me that the promoting of phono-photography among your customers should create a demand for cameras also.

HOWARD TAYLOR MIDDLETON.

PROFITING BY MISTAKES.

Looking for What to Avoid Rather Than What to Copy in Competitor's Business.

"I find that most business men when they visit other establishments in their own or a similar line, keep their eyes open for things to copy," said the owner and manager of a large factory in the Middle West. "When I go around, however, I look for their mistakes, and then avoid the same ones in my own place. In this way I believe that I can keep ahead of the game, because I keep away from imitating."

"I believe that so long as you are looking to the other fellow for inspiration, you are a follower, not a leader. If you should lead, you must break away from the beaten track—be a pioneer. Look to the other man to profit by his mistakes—but not to do your thinking for you."

Because her slumbers were disturbed by the cries of a baby next door, Miss Sarah Davenport, a wealthy and eccentric woman of South Norwalk, Conn., is reported to have purchased the loudest talking machine she could get and hired a man to keep it running from 10 p. m. to 3 a. m. every night, playing the same piece continually. The father of the child threatens to have the woman arrested for maintaining an intentional nuisance.

Another Columbia triumph—records from that wonderful Stradivarius of Kathleen Parlow, the one greatest of all women violinists.

CLOSE A BUSY SUMMER SEASON.

The Talking Machine Trade in Cleveland Well Pleased with Summer Business, and Are Now Preparing for a Lively Campaign During the Fall and Winter—U-S Phonograph Co. Reports Increasing Output—Wm. Taylor, Son & Co. Take on the Victor Talking Machine—L. H. Lucker Places Big Orders for Edison Disc Phonographs and Records—Leading Dealers Make Optimistic Reports.

(Special to The Talking Machine World.)

Cleveland, O., Sept. 11, 1912.

The vacation season, political State and national agitation and the weather interfered somewhat with the talking machine trade during August, but in the aggregate an unusually large volume of business was done, while the month, usually one of the most inactive of the year, was very quiet. September has ushered in more activity and trade is materially improving. Dealers are now turning their attention to an expected large fall trade, and judging from their optimistic talk a decided improvement is already manifest.

The summer season as a whole was very satisfactory to the trade generally. The demand covered the entire range from the lowest to the highest priced machines and records. Local reports, as well as from outside territory, are of a general tenor regarding a favorable fall trade, and extensive preparations are being made by the distributors to meet it.

A. W. Roos, auditor of the Columbia Co., spent several days at the store of the company here the first of this month.

J. O. Hanna, formerly district manager of the Edison business phonograph, has joined the forces of the Dictaphone in Cleveland. He has had a number of years' experience in the business.

Wm. Taylor Son & Co., a large dry goods and notion store, is installing a talking machine department and evidently intend to do an extensive business in this line. The company's initial order was for \$7,000 worth of Victor goods.

Business is reported moving along at a lively pace at the factory of the U-S Phonograph Co. Mr. Nisbitt, sales manager, said that conditions continued favorable and that he anticipated a good fall trade.

"The Dictaphone business is very good," said G. J. Prebeck, manager, "and the prospects are very flattering."

The same prosperous conditions that existed at the store of the Eclipse Musical Co. during July prevailed during the month of August. "We are just as busy as we can be in the wholesale department," said P. J. Towell. "About the only thing that is worrying us is our inability to get the goods from the factory as promptly as de-

sired. We have booked a number of orders for the new style of machines from retail dealers and are getting in large quantities in hopes of being able to meet the demand which unquestionably will be large. Business is moving along fine in the retail department. Sales of both machines and records are good."

The situation is very satisfactory at McMillin's and everything is said to be booming. "Trade in both machines and records is very good in both the Victor and Edison lines," said O. E. Ke'logg. "We have placed advance orders for a large shipment of the new Victrolas for October 15 delivery, for which we expect there will be an excellent demand. A party recently came in here and purchased \$27 worth of Spanish records. His home is in Rochester, N. Y., and he was on his vacation. He said he wanted to hear some Spanish records, naming some selections, with which he was accommodated. He said he had tried a number of places in Chicago, Detroit and other cities and two other stores in Cleveland before finding them. He struck the right place here, for McMillin's specialize on foreign records and are working up a fine business in them.

Conditions at the Edison distributing store of L. H. Lucker are of the most satisfactory character, judging from the highly elated expressions of Mr. Peterson, manager, over the results of summer trade and future prospects. Mr. Peterson had just returned from a visit to the exhibit in New York of the new styles of Edison disc machines and the new models of the cylinder type. "From what I had heard and read of the new disc machine," he said, "I expected to see and hear a wonderfully improved talking machine, and I was disappointed in that it was far superior to what I had anticipated. In every particular, both as to the machines and records, it is a very long step forward in the perfection of the phonograph. As an evidence of the opinion of Mr. Lusker, whom I accompanied on the visit, as well as myself, we placed an order of \$15,000 for the new machines and 10,000 records. I am now booking a large number of orders for the different styles of these phonographs, and am preparing to meet an expected big demand for them, as well as for the new improved models of the cylinder machines and adamant cylinder records.

Although the activity manifest at the store of the Collister & Sayle Co. is more largely in the sporting goods line, the talking machine department is a close second in the volume of business transacted. Trade was said to be fairly good—about normal in both the retail and wholesale departments.

Business in the talking machine department of the Caldwell Piano Co. is reported seasonably good. A number of sales of Victrolas were made

during the month, and the record trade was said to be excellent and increasing. R. W. Schirring, a young man of considerable experience in the music trade, has been appointed manager of the department.

R. Svchla, proprietor of the West Side Columbia store, is building up a large business, especially in the foreign record line. "I am quite well satisfied with conditions," he said. "Business is very good considering the season. I have a good steady trade in both machines and records and other musical instruments." Mr. Svchla has opened a branch store on Broadway, and is sanguine of doing a prosperous business there.

The W. H. Buescher & Sons Co. report the most satisfactory conditions. "Business for August," said Mr. Roberts, "was exceptionally good, but as the shipments from the factory were slow by reason of the new models coming out, deliveries of sales could not be made complete. Our new auto truck, on the sides of which is the large, beautiful oil painting of the 'Victor dog,' is attracting universal attention. When our new model Victrolas arrive and the store is filled with instruments a formal opening will be held."

The talking machine department of the Dreher Bros. Co. is a busy place. Mr. Guion said he was making daily sales of machines and that the record trade was fine and constantly increasing. "We are having numerous inquiries, indicating a prosperous fall trade," he said.

A prosperous, satisfactory business is being done in the talking machine department of the Bailey Co.'s store. "We are making large sales of machines," said Miss Sarah Shulman, the able assistant of Mr. Friedlander, "and our record trade runs into the thousands monthly. Our August business was more than double that of the same month last year. We expect a largely increased trade when the new model Victrolas are received."

The May Co. reports business in the talking machine line excellent, both in Victor machines and records. Miss Ethel M. Volk, manager of the department, is away on her vacation, which accounts for the brevity of this notice.

The Bailey Co. and the Caldwell Piano Co. have secured the representation of the Edison home kinetoscope and films for Cleveland. Judging from the optimistic expressions and the energetic way the dealers are pushing the new invention, it is destined to prove an eminent success.

WINS FIGHT FOR LOWER DUTY.

The United States Board of General Appraisers upheld the Columbia Phonograph Co., General, recently in its contention that wax master records should be assessed at 25 per cent. under Par. 462 of the tariff, instead of at 45 per cent. under Par. 468.

The cash value of proper lighting cannot be over-estimated. The well-lighted store is the store that attracts trade. Under the influence of good and sufficient light the employees work more efficiently, are more responsive, maintain better health, are more cheerful and give better service to customers.

Despite Weather Conditions Talking Machine Dealers Are Looking Forward to an Excellent Autumn and Winter Trade—The Public Has Awakened to the Vast Possibilities of the Talking Machine as a Means of Enjoyment in the Home—Gramophone Records in Future Will Be Double Sided—Hitherto Only Single Records Were Issued—Important Odeon Changes and Developments—S. B. Turner, Formerly of Pathé Frères, Starts in Business on His Own Account—Records of the Voice of the Commander-in-Chief of the Salvation Army—New Records Announced and More Coming—The Large Fees Earned by Opera Singers—Some of the Many Interesting Records Issued by the Various Companies During the Past Month—New Amberola Style Announced by the Edison Co.—Other Items of the Month.

(Special to The Talking Machine World.)

London, E. C., Sept. 5, 1912.

Reports from the different centers of trade activity indicate in no uncertain measure the probability of an early commencement of the season's business, and unanimous opinion prevails that the hustling time is not far ahead. And there is good ground for this belief. Partly due, perhaps, to the unsavory weather conditions of late, trade shows a steady increase each week, and many large record orders have been booked for delivery over a period. Dealers, too, are experiencing a better time. Interest in the latest record issues is keen, and the public seem to have awakened to the vast possibilities of home talking machine enjoyment rather than a "damping" holiday at the seaside. Many new machine models are in course of preparation for the season's trade and, with improvements in other styles, dealers have a voluminous and attractive range from which to choose at prices ranging from 12s. 6d. upwards. The leading houses have commenced operation in earnest by opening up stock rooms in the chief cities throughout the country, and sales reports are exceedingly satisfactory.

Announce Double-Sided Gramophone Records.

Under the simple words "an announcement," Sidney W. Dixon, sales director of the Gramophone Co., Ltd., tendered a startling item of news to "H. M. V." dealers this month, which, in effect, made known that a certain category of gramophone records will in future be double-sided. Hitherto only single records were issued, and the gramophone company is practically the last to adopt the two-in-one disc. Such a radical departure calls for exceedingly careful handling, having in view the extensive character of the single-side record repertoire. The change, therefore, will be very gradual at first, and applies only to band and instrumental impressions, a list of which has been sent to the trade. Prices for the double records are the same as for single, i. e., 10-inch, 3s. 6d.; 12-inch, 5s. 6d.; which really represents a very substantial reduction in price. The initial double-sided issue of titles is thoroughly representative and forms a lengthy list. To ease dealers' stocks the company gives advice of a generous exchange plan, but only certain records, particulars of which were given on a separate sheet, may be returned for exchange, these numbers having now been deleted from its catalog. A certain quantity of new double-sided records will be issued each month in future. Trade prices remain unaltered.

In addition to the enormous extra expense involved by this change, the company announced they will back it up with an expenditure of £20,000 this season on newspaper publicity.

The various changes which have and are taking place in this industry, must exert a powerful influence in the direction of increased popularity for

mechanical music, but so keen is competition becoming that the market is liable to be overtaxed and trade stability threatened. And what with the new records promised this season, there is already close upon thirty different makes, things would appear to look very lively. It is possible to have too much of a good thing!

Odeon Developments and Changes.

An important item of news this month is the announcement relative to vital changes in the Odeon business here. Perhaps the most sensational aspect of the new move is the price reduction from 4s. to 3s., and in the case of 12-inch records from 6s. to 5s. Hitherto 10½ inches in diameter, the future size of the 3s. double record will be 10 inches, although for some little time ahead the monthly issues will include a few of the 10¼-inch size. There is to be a practically "all English" list of titles, comprising the pick of the old 10¼-inch catalog embodied with current 10 and 12-inch impressions. In this list only two prices prevail—3s. and 5s. Mainly composed of operatic and foreign titles, a separate list of what is called "Royalty" records is issued, and the prices of these will vary according to the value and standing of the artistes.

In order to counterbalance the depreciation of stock which the price reductions entail, Messrs. Barnett, Samuel & Sons, Ltd., who control the Odeon output here, have adopted a very generous rebate plan, of which their dealers have taken full advantage.

A choice selection of 150 titles appears in the Odeon "Popular" record catalog, and the "Royalty" series consists of some 500 titles by artists of the very highest rank, including Mme. Emmy Destinn, John McCormack, Walter Hyde and H. M. Grenadier Guards Band, to mention only a few, some of whom also figure in the "Popular" catalog.

This new departure has very naturally aroused a great amount of interest in trade circles, where it is regarded as a further manifestation of the kaleidoscopic-like nature of this industry. Received, however, with the utmost favor by dealers, it will doubtless prove a wonderful sales stimulant, insuring an exceptionally fine harvest this season for all live Odeon dealers. As an additional means to that end it may be mentioned that Messrs. Barnett, Samuels have planned an extensive advertising campaign throughout the country.

S. P. Turner Resigns from Pathé Frères.

S. P. Turner, who has been connected with Messrs. Pathé Frères, London, as manager for the last few years, has just resigned, with the object of starting in business on his own account early in October. Negotiations are proceeding for the rental of spacious premises, consisting of six floors in the neighborhood of Cheapside.

Having acquired a new patent tone arm in which he puts very great faith, Mr. Turner will start an extensive advertising campaign to make known the ingenuity and excellent properties of the invention, which, by the way, has been patented in all important countries.

In this new business Mr. Turner will have his own style of instruments, and will trade in all makes of records. Through the medium of The Talking Machine World Mr. Turner wishes to thank all those with whom he has come into contact during his 11 years' connection with the talking machine trade for the courtesy and good fellowship that has been extended to him. More anon when everything is ready.

Records of Commander Booth's Voice.

With the passing of the venerable Commander-in-Chief of the Salvation Army, it is interesting to recall that the only records in existence made by General Booth are two listed by the Columbia Co., the titles being "Don't Forget" and "Rope

Wanted." They are well recorded and furnish excellent examples of the general's unrivaled declamatory power and oratorical fire. Both are single-sided 10-inch records priced at 4s. each. Part of the proceeds of each sale is credited to the Salvation Army fund for reclaiming the criminal and assisting the unemployed.

Meeting of Russell & Co. Creditors.

A meeting of the creditors of F. M. Russell & Co., Ltd., was recently held at the company's registered office, Junction Works, Hythe Road, Willesden. This firm, it will be remembered, was the manufacturer of the "Russell" disc record, but little was heard of it, and after a few months' precarious existence and a five days' law action, now some three or four years back, it died a natural death.

New Records in the Field.

Since last season several new records have seen the light of day and, according to dame rumor, others may be expected shortly!

"His Master's Voice" Titles for September.

In the following list of "His Master's Voice" titles for September, special attention is drawn to the first issue of double-sided records by some of the most renowned performers of the day. Particulars will be found elsewhere as to this new departure, and I may here mention that it has caught on to an amazing extent, which, despite the company's huge output facilities, bids fair to tax the resources of the factory to the utmost. Some idea of the magnificent fare provided this month may be gleaned from the list hereunder:

His Master's Voice, 10-inch records—"Minuet" (Beethoven), Miss Marie Hall (violinist); "I Know of Two Bright Eyes" (Chelsam), John McCormack; "Haste to the Fair" (Kennedy Russell), Thorpe Bates; "Autumn Winds Are Sighing" (Klem), Herbert Heyner; "That Hypnotising Man" (Von Tilzer), American Quartet; "Carmena—Vocal Waltz" (H. Lane Wilson), Lyric Quartet, and "Berceuse" (Jarnefeldt), Renard Trio. Twelve-inch records—"Unfinished Symphony," Part I of first movement (Schubert), new Symphony Orchestra; "Unfinished Symphony," Part II of first movement (Schubert), New Symphony Orchestra; "Like Stars Above" (W. H. Squire), John McCormack; "When the King Went Forth to War" (Koenemann), Robert Radford; "Sincerity" (Emilie Clarke), Peter Dawson; "The Vale of Dreams" (Baer and Schmid), Florence Smithson; "Come to Town, Miss Brown" (Sterndale Bennett), Margaret Cooper; "Gems from 'The Sunshine Girl,'" Part I (Rubens and Wimperis), the Light Opera Company; "Gems from 'The Sunshine Girl,'" Part II (Rubens and Wimperis), the Light Opera Company; "Little Girl, Little Girl," "Sunshine Girl" (Rubens), Georgè Grossmith; "The Night When the Old Cow Died" (a song of the impossible) (H. Montague), Tom Clare, and "E Can't Take the Roise Out of Oi" (West), Albert Chevalier.

His Master's Voice Celebrity Records—"Voce di Donna o d'angelo" ("La Gioconda") (Ponchielli), Mme. Kirkby Lunn; "The Lost Chord" (in English) (Sullivan), Caruso; "The Swallows" (in English) (Cowen), Tetrizzini; "Pescator, Afonda l'esca" ("La Gioconda") (Ponchielli), Amato; "Ge Sal Solle Drude" ("Norma") (Bellini), Schaliapin. Two new records by Mme. Clara Butt are also to be issued this week. The titles are "My Ain Folk" and "Daddy."

His Master's Voice new double-sided records—"Come Sing to Me" (Thompson) (assisted by Frank Winterbottom), (cornet solo by Corporal W. Bright) and "Gypsy Love Waltz" (Lehar), band of H. M. Coldstream Guards; "The Geisha," Selection I and Selection II (Sidney Jones), band of H. M. Coldstream Guards; "Sunshine Girl," Selection I and Selection II (Rubens), band of H. M.

FROM OUR LONDON HEADQUARTERS— (Continued from page 40).

Coldstream Guards; "Mystic Beauty," intermezzo (Finck), and "Rosemary," intermezzo, Elliott; "Princess Caprice," Selection I and II (Leo Fall), by Mayfair Orchestra; "Lisclotte" and "Lancelot" (Leon Adams), by Bohemian Orchestra.

Fees Earned by Opera Singers.

A contemporary gives some interesting notes of the immense fees paid to some of our leading singers. It is announced that Caruso has just signed a contract to appear at the National Opera House in Buenos Ayres at twelve performances, for which he is to receive £1,400 each. Madame Patti often received £1,000 for each appearance, and during one season at New Orleans the diva was paid \$1,200 a night, plus a percentage of the receipts above a certain amount, besides all traveling expenses for herself and her staff.

One Order for 125,000 Records.

It is reported that the London branch of the Favorite Record Co. recently secured an order for no less than 125,000 records at full trade price. For this time of year it is regarded as a "record" contract, and I congratulate Karl Harth on his success. Certainly, under his guidance, the Favorite record business has increased wonderfully.

Records Now Made by New Process.

J. E. Hough, Ltd., announces that as all its phonograph records are now made on the "new process" system, the distinctive letters "E. B." and "N. P." will no longer be used.

Speaking of Edison Bell records, it may be mentioned that the disc sales for this year show an increase of something like 50 per cent. over last year, a fact which suggests eloquent appreciation of Edison Bell quality.

Planning Big Advertising Campaign.

The Gramophone Co., Ltd., has advised its dealers of plans for a big advertising campaign this season which will involve them in an expenditure of £20,000! A truly record amount this—at any rate, in the talking machine business.

Concert Tours by Record Artists.

"His Master's Voice" Co. issues particulars of an unique undertaking in the shape of concerts at which prominent talking machine artistes will be presented. These concerts are booked for various dates in October at Glasgow, Edinburgh, Manchester, Liverpool and Birmingham. Among the performers we notice the New Symphony Orchestra (70 musicians), conducted by Landon Ronald, who is also principal of the Guildhall School of Music; Miss Irene Scharrer, described as the greatest English pianiste, and Evan Williams, who, we are told, is making a special 3,500 mile trip from his home in Akron purely to gratify the clamorous demand of those who have heard his records and wish to hear and actually see this wonderful tenor in the flesh.

It is obvious that "His Master's Voice" tour will prove one of the big musical events of the season.

New Columbia Record List.

Among the recent scoops announced by the Columbia Co. we notice "The Two Bobs" (Adams and Alden), two genial comedians—with their piano—who came to this country from the States some few months ago with some of their best ragtime hits, two of which may now be obtained on Columbia-Rena records. Nel'a Webb is another exclusive Columbia acquisition, whose appearance at leading London music halls won for her a lasting place in the hearts of Londoners. She has been described as a "very pretty parcel of good looks and glad glances." Her first records will be found in the current Columbia list, which also includes the following excellent numbers:

Columbia 12-inch records—"I Have a Song to Sing, O" (from "Yeoman of the Guard") (Sullivan), Walter Passmore and Miss Hilda Francis, and "Like a Ghost H's Vigil Keeping" (from "Yeoman of the Guard") (Sullivan), Walter Passmore and Robert Howe, and "Festival Overture"

(E. Lassen), and "Sleeping Beauty Waltz" (Tchaikowsky), Russian Symphony Orchestra. Ten-inch records—"Cavalleria Rusticana," selections (Mascagni) (organ solo), J. J. McClellan, and "The Gondoliers," from "A Day in Venice" (Nevin) (organ solo), J. J. McClellan; "Gipsy Love" selections, Part I and Part II (Franz Lehar), regimental band of H. M. Scots Guards; "Patricia" (Maurice Scott), and "We Must Have a Song About the Isle of Man" (C. W. Murphy), Stanley Kirkby; "Cigarette Papers," Part I and Part II (Jack O'Connor), comic sketch by Jack and Evelyn; "In the Land of Harmony" and "Stop, Stop, Stop" (Ted Snyder), and "Dill Pickles Rag" (C. L. Johnson), accordion solos by Guido Deiro, and "Viva la Jota March" (P. Marquina), and "El Albanico March" (arranged by Ord Hume), regimental band of H. M. Scots Guards.

Now "Thomas A. Edison, Inc."

The names of the National Phonograph Co., Ltd., and Edison Manufacturing Co., Ltd., have now been dropped in favor of Thos. A. Edison, Ltd., under which name the company will in future be known. An excellent move, truly.

New Beka Record Exchange Scheme.

During September the Beka Record Co. has a live exchange scheme running and no more appropriate time could have been chosen to relieve dealers of old stock and put in new goods for the season. The firm itemized over twenty different makes of records which they are prepared to accept in exchange for new Bekas on liberal terms.

Reduction in Telephone Rates.

The Postmaster General announces particulars of a reduction in the telephone rates for trunk calls, details of which may be obtained from any post office.

Improved Protection Against Fire.

The recent terrible fire in London, which involved such a heavy sacrifice of life, has stimulated

FROM OUR LONDON HEADQUARTERS—(Continued from page 41).

lated many firms to overhaul and reorganize existing methods of protection against and in the event of fire. The basic principle underlying schemes of this nature is, of course, to insure the utmost safety for employes, and doubtless with this idea in the forefront additional protective measures against a possible outbreak have been recently installed by the Gramophone Co. Hand hydrants and buckets will be kept ready for instant use should occasion arise, and on every landing and in other prominent positions are to be found large red-lettered notices indicating the nearest exits and giving clear instructions as to course of procedure in the event of fire. The whole arrangements are in the hands of a thoroughly efficient man, whose duties will entail, among other things, a weekly visit of inspection. Although the best laid plans, etc., do sometimes fail, it is evident that the Gramophone Co. can justly claim to have utilized the best possible means of minimizing the danger accompanying an outbreak of fire.

Many Standard Records Withdrawn.

Accompanying its October list of records, which, by the way, contains an exceptionally pleasing selection of titles, is an announcement from the Edison Co. notifying the trade that something like 250 "Standard" records will be withdrawn from sale. The various pieces are itemized and dealers are urged to closely study the list and order at once any titles they may require, as when the present supply becomes exhausted the moulds will be destroyed.

The current list contains two specially fine Amberol concert records, in addition to the usual quantity of Amberol, but it is to be noticed that the "Standard" titles diminish in numbers each month. The complete list is as follows:

Edison Amberol Concert Records—"O Happy Day, O Day So Dear" (C. Götz), Miss Margaret Keyes, and "Nocturne E Flat" (Chopin) (violin solo), Miss Kathleen Parlow.

Edison Amberol Records—"Battle March of Delhi" (Pridham), National Military Band; "Its Nice When You Love a Wee Lassie" (Lauder), Harry Lauder; "Money Talks" (Terry, Pelham and Wallis), George D'Albert; "The Lady with the Glad Eye" (A. Allen), Miss Florrie Forde; "I Feel So Lonely" (Bert Lee), Stanley Kirkby; "Les Sirens Waltz" (Waldteufel) (concertina solo), Alexander Prince; "Here's to All the Girls" (Jones and Martyn), Jack Charman; "The Wolf" (Shield), Peter Dawson; "The Hundred Pipers" (Lady Nairne), William Davidson; "Gae Bring to Me a Pint o' Wine" (Robert Burns) (traditional), Archie Anderson; "I Want a Girl" (Harry Von Tilzer), Walter Van Brunt and chorus; "Drifting" (W. R. Williams), Miss Elsie Baker and James F. Harrison; (a) "Silver Threads Among the Gold" and (b) "Cordelia Polka" (xylophone solos), William Dorn; "Because I Love You, Dear," Charles W. Harrison; "Scarf Dance" (C.

Chaminade) (piano solo), Karel Bondam; "With All Her Faults I Love Her Still" (M. H. Rosenfeld), Will Oakland; "By the Old Cathedral Door" (A. Solman), Cathedral Choir; "The Last Hope" (L. Gottschalk), Edison Concert Band; "Pastel—Minuet" (H. Paradis), the Tol'efsen Trio; "Mysterious Moon" (N. D. Ayer), Miss Ada Jones and Billy Murray; "When the Old Folks Were Young Folks" (A. Solman), Manuel Romain and chorus, and "Hear That Orchestra Rag" (J. Hollander), Peerless Quartet.

Edison Standard Records—"Bonne Bouche Polka" (Waldteufel) (concertina solo), Alexander Prince; "God Will Take Care of You" (Martin), Wm. McEwan, and "Will You Come Home With Me?" (Irish bagpipe solo), W. N. Andrews.

Book on Music Refers to Records.

I am in receipt of a valuable little work entitled "Recueil de Chants," compiled by D. L. Savory, professor of French and of Roman philology, Belfast University. It contains the text, in French, of some of the gems from the works of Gounod, Bizet, Meyerbeer, Schumann and other popular authors, but the interesting point is that all these pieces are obtainable on "His Master's Voice" records (by such artistes as Caruso, Plancon, Calve, Journet, etc.), the index numbers of which are given in the book. The usefulness of such a handy work to the gramophone enthusiast is obvious. Professor Savory strongly favors the use of both gramophone and phonograph as aids to the teaching of foreign languages, and has adopted this

means at the college. All the records mentioned in this excellent publication, by the way, may be obtained from Thos. Edens Osborne, of Belfast.

Billy Whitlock Now Recording Expert.

Chancing across that famous humorous singer, Billy Whitlock, whose chief aim would seem to be to invest the world with mirth, I learned that he has secured the responsible position of recording expert to the Favorite Record Co. A good man in a good place. Congratulations!

September List of Zon-o-phone Records.

Up-to-date in every respect, the September list of Zonophone records reveals a striking example of quality and popular prices. It is a fact that the Zonophone offerings become increasingly interesting and more enjoyable each month, and if any evidence of this be required it is certainly to be found upon perusal of the following choice examples:

Zonophone 10-inch records—"I Bring My Roses" (A. Von Ahn Carse), and "Pack Clouds Away" (Macfarren), Mdme. E. Jones-Hudson; "Hush-a-Bye Baby" (yodling song), C. P. Watson, and "Roll on Silver Moon," Pete la Mar; "Shadows of the Night" (cello solo), Van Biene, and "The Deep Blue Sea" (Piccolo), Miss W. Hudson; "Nearer My God to Thee" and "Fierce Raged the Tempest" (Dykes), Besses o' the Barn Band; "Hush, Little One" and "I Want to Be Your Nightingale" (Max Erard), Zono Vevey, and "Motoring" and "Fishing," by Harry Tate.

New Edison Concealed Horn Machine.

A new concealed horn phonograph, to be known under the title of Amberola III, is announced by the Edison Co. The cabinet, measuring 44 inches high, is made of mahogany, and in all respects the finish and construction of this model is of the highest technical and artistic merit. It will play only 4-minute records and five of these without rewinding. Special features are: Movable mandrel, stationary reproducer arm, an ingenious automatic stopping device and a combination starting lever and reproducer lift which releases the feed nut and raises the sapphire for the return of mandrel and removal of record. Lowering this lever places the sapphire in contact with the record and starts the motor. The operator, it would seem, has little to do but listen. That is mechanical efficiency undreamt of a few years ago. Amberola III will retail at 25 guineas.

Another Edison departure is a new 4-minute home recording outfit consisting of shaving machine, three blanks and recorder. With the many trade-winning schemes initiated by the Edison Co. this last few months, dealers should experience a real bumper season.

The man who *never* makes mistakes, *never* makes anything else.

Anybody can cut prices, but it takes brains to make a better article.

STROH VIOLS

VIOLIN, VIOLA, ETC.

The mellow and matured tone of these instruments, which are constructed largely of aluminum, yet possess *none* of the characteristics of the gramophone or wind instrument, is only one of its many points which are fully set out in an illustrated booklet which will be mailed free on request to the sole makers.

BIG SEASON IN BALTIMORE.

Dealers Close Great Trade in August—Victor-Victrola Used for Dancing at Swimming Club—A. Thomas Gordon Married—Peabody Piano Co. Takes the Columbia Line—Growth of Business with E. F. Droop & Sons Co.—Dealers Handling Columbia Line Make Encouraging Reports—Other News.

(Special to The Talking Machine World.)

Baltimore, Md., Sept. 9, 1912.

Dealers here closed one of the best Augusts in the talking machine business that they have experienced. This is a gist of statements given out at all the stores, and those engaged in the trade declare that they have no fear of the Presidential year having any detrimental effect upon the trade whatever. They are all preparing for a big season and believe that it will compare favorably with any previous year.

While many novelties have been introduced from time to time with talking machines, the latest in this section is the use of a Victor Victrola for dancing music. This stunt has been introduced by members of the Maryland Swimming Club at their spacious club rooms at Dundalk, Md. Of course, the use of the Victrola for dance music is only impromptu and takes place on nights other than the regular dance evening, when an orchestra is in attendance. While the members of this club for the most part are athletes, they are always ready for a good social session in the evening, with the result that the Victrola is kept busy furnishing waltz and two-step music while the dancers skip merrily over the floor. The Victor Victrola which the swimmers use was purchased from the Gordon Phonograph Co. Mr. Gordon says the selection of a Victrola by the swimmers speaks well for the Victrola, and he is delighted to get in with such good company.

Manager Denison, of the Columbia Phonograph Co.'s branch in this city, announces that he has placed the Columbia line with the Peabody Piano Co., of this city. Mr. Denison says that this has been the biggest August he has had and that everything points to a big fall trade. This is both the case with the retail trade and the wholesale trade, as he has most roseate reports from his traveling representatives in the various sections covered by the local office.

A. Thomas Gordon, proprietor of the Gordon Talking Machine Co., is now a benedict. He became one on August 12 when he eloped to Philadelphia with Miss Mary O. Ostendorf, daughter of Lieutenant Frank Ostendorf, of the Police Department, and Mrs. Ostendorf, while the parents of the young lady were quietly enjoying a vacation at Ocean City, Md. They were married in Philadelphia by Rev. Father Schuler of the Cathedral, Logan square, Philadelphia.

Joseph Fink, of the Gordon Talking Machine Co., has made several good sales of large machines since returning from his vacation the first part of August.

After a most enjoyable stay in Atlantic City and up the Hudson, Manager W. C. Roberts, of the E. F. Droop & Sons Co., is back on the job ready for a big fall business. He says that he has no doubt that the fall of 1912 will be a banner one for both his Baltimore and Washington stores, and he is making every arrangement with this idea in view.

Hammann-Levin & Co. report a fine month for Victors. In fact, Mr. Levin said that figures for the close of the firm's fifth year show up excellently in every branch of the music trade, the figures for the fifth year doubling those for the fourth.

Cohen & Hughes announce that August has been as good as could be looked for, while September and fall prospects are fine.

H. R. Eisenbrandt Sons are enjoying a big Victor trade, according to Manager Strahan, who is just back from a vacation which he spent in short trips out of Baltimore.

The Columbia line has also been in good demand in a retail way, according to the reports of many of the local dealers. Such statements are

made by the William Knabe & Co. branch of the American Piano Co., the Hub Piano Co., Rosenstein Piano Co. and Sanders & Stayman. Manager Albert B. Widen, of the talking machine department of Sanders & Stayman, has just returned from a two weeks' trip to Atlantic City.

SELF-CONFIDENCE HELPS TO WIN.

No Man Can Succeed at Calling Regarding Which He Feels Apologetic.

The man who has confidence in himself and his wares has an easy battle with the competitor who lacks self-confidence and who is not sure of the value of his proposition. No man can hope for respect from others unless he has it for himself; he cannot readily win others to his cause unless he has first convinced himself. No man can do himself justice in a calling which makes him feel apologetic and neither can he successfully advocate a cause for which he feels called upon to apologize. The remarkable effectiveness of such phrases as "The kind you'll eventually buy" is to

be found in this spirit of unbounding confidence which the promoter displays in his commodity.

CURE FOR BUSINESS ILLS.

Hustling and Advertising Sure Remedies for Business Stagnation.

If anybody asked us for a sovereign remedy guaranteed to cure all business ills, we should simply say, "Hustle, my boy, hustle. Also advertise and again advertise." The prescription is simple, and in its very simplicity lies much of its efficacy. But advertising, for instance, means necessarily in our business good advertising. The player, trade has spent uncounted thousands already in bad advertising, which has brought next to nothing in the way of returns. That is a condition which no longer can be permitted to exist. We must have greater efficiency in all departments of our great business, and in none is the tonic needed more than in that of advertising. Good advertising will be the remedy for any slow player business this winter.

DECIDED ACTIVITY APPARENT IN SAN FRANCISCO.

General Conditions Point to a Large Fall and Winter Business in the Talking Machine Trade—Much Interest in New Styles of Machines—Girard Co. Expansion—A. G. McCarthy Honored—Columbia Co. in New Quarters in Los Angeles—Babson Bros. Enlarge Establishment—The News of the Month Worth Recording.

(Special to The Talking Machine World.)

San Francisco, Cal., Sept. 7, 1912.

The talking machine dealers here have been predicting a lively fall business all during the dull summer season, and it seems they are not to be disappointed in their anticipations, as already a decided activity is beginning to make itself felt at the various houses. What new goods have been received have at first showing been enthusiastically pronounced a decided improvement over the old, and for that reason, together with the fact that general conditions are better than in a number of years, fall business will probably surpass any previous record.

Waiting for New Edison Disc Phonographs.

At the Pacific Phonograph Co., Manager Pommer, who has been indisposed for some time, is back at his desk feeling almost himself again and is glad to resume the responsibilities of business. Mr. McCracken, who has been in charge lately, says business has shown a marked improvement in the last two weeks, although the new disc Edison phonographs, which promise to stimulate trade, have not yet arrived. Advance orders have been placed for the new product in a very gratifying manner. Further shipments of the new Edison home kinetoscope are also awaited somewhat anxiously, as a large business is expected with them. So far only a small shipment has been received from the factory, and they could not be pushed as much as the company would have liked.

Preparing for Increase in Business.

At the San Francisco branch of Babson Bros., Chicago, which does a large mail order business in Edison machines, two new demonstration rooms are soon to be installed in view of increased business when the new disc machines arrive. J. S. Bailey, manager of the local store, thinks these will be a great factor in the local trade. He reports very good success with the new model Amberola, which he says is the finest Edison machine yet placed on the market. The first shipment of the new four-minute Edison recorders is expected in San Francisco most any time now. A number of orders have already been placed for them. F. K. Babson, of the main office at Chicago, paid the store here an inspection call not long ago.

New Quarters for Columbia Co. in Los Angeles.

The Los Angeles headquarters of the Columbia Phonograph Co., General, have been moved from their former location on Broadway a few doors farther up the street. The move was necessitated by the building which it had been occupying being re-leased, and besides the company needed more room as the business in the southern part of the State has grown very rapidly of late. W. S. Gray,

Pacific Coast manager, with headquarters here, has just returned from Los Angeles, where he went to see that arrangements for the new location were satisfactorily adjusted.

New Columbia Machines Well Received.

The principal feature of interest at the local office of the Columbia Phonograph Co., General, is the arrival by express of samples of the new Regal and Eclipse machines. Mr. Gray says that dealers to whom they have been shown are very enthusiastic over the instruments, as evidenced by their expressions of praise, backed by good substantial orders for as early delivery as possible. Fred R. Ang'emier, manager of the wholesale department, has just returned from a month's vacation in the San Joaquin valley.

Dictaphone Department Growing.

Geo. S. Murray, manager of the Columbia dictaphone department, says that the closing of August marks the closing of a glorious month in his department, although no very notable single orders have been taken, still general business has been exceedingly good and promises to be better as the season advances.

Trade Visitors of the Month.

H. L. Hill, manager of the talking machine department of Kirk, Geary & Co. at Sacramento, Cal., who are distributing agents for the Columbia machines, spent a few days last week at the San Francisco headquarters of the Columbia Phonograph Co.

J. T. Stitt, a director and the advertising manager of the Southern California Music Co., Los Angeles, who is a talking machine enthusiast, has been spending a few days in San Francisco and vicinity.

With Sherman, Clay & Co. a Quarter Century.

During the month A. G. McCarthy, treasurer of Sherman, Clay & Co. and manager of the talking machine department, celebrated his twenty-fifth anniversary with the firm, or, rather, the firm celebrated the event. The employees of the company presented him with a handsome silver service, and the directors gave a dinner at the St. Francis Hotel in his honor, at which time he was presented with a silver loving cup.

August Business Proves Excellent.

In speaking of business, Mr. McCarthy reports the sales of this August in the talking machine department ahead of the same month last year. The first part of the month was rather slow, but business has been better toward the end, easily making the sales exceed what they did last year. The revival is attributed largely to the fact that the vacation season is practically over and also to the showing of new style Victrolas, which are

creating a decided sensation on the Coast. Chas. C. Skinner, of the department, who has been visiting the northern branches of Sherman, Clay & Co. for the past month, is expected home within a few days. Work on the remodeling of the Sherman, Clay & Co. building, which will give the talking machine department the entire fourth floor, is progressing nicely, but owing to the extent of the alterations the fourth floor will not be ready for occupancy much before the end of September.

A. D. Geissler on Douglas Ranch.

Arthur D. Geissler, of the Talking Machine Co., Chicago, who has been visiting the Pacific Coast distributors of Victor goods for the past month, is about to leave for home after a week's hunting and fishing at the Douglas branch in Sonoma County. Mr. Douglas is also connected with the Victor Talking Machine Co.

Girard Piano Co. Activities.

The branching out of the Girard Piano Co., of Oakland, into new fields promises to give that city a much improved talking machine department. The company has purchased the lease, stock and fixtures of the Busey-Mihan Furniture Co. and is now operating under the name of Girard's at the former furniture store location. George H. Barnes, who for the past three years has been manager of the Fitzgerald Music Co., of Los Angeles, has given up that position to become vice-president and general manager of Girard's, and it is his intention to give the talking machine department special prominence. As soon as arrangements can be completed, it will be installed on the first floor, which will be the first instance in Oakland of a talking machine department occupying space on the main floor of a music establishment.

Advertising Campaign Makes Good.

Geo. R. Hughes, assistant manager of the Wiley B. Allen Co., says their advertising campaign in talking machines has met with a great deal of success. The members of the force have all returned from their vacations and preparations are under way for fall business, which, from all indications, Mr. Black, manager of the department, says, will be an improvement over that of a year ago. The new Victrolas, he thinks, will stimulate trade, as there is a growing demand for the machine and the cabinet all in one. The Oakland branch, under the management of Mr. Dougherty, formerly with the Victor Talking Machine Co., is doing a nice business.

Bacigalupi on Hunting Trip.

Peter Bacigalupi, Jr., manager of the phonograph department of Peter Bacigalupi & Son, has just returned from a hunting and fishing trip in southern Oregon extending over the past month. The hunting, from reports, was especially good, as the party of six killed twenty deer.

"Business," says a very wise observer, "is like friendship. 'Tis sensitive. It goes only where invited, and stays only where well treated."

We are not measured so much by what we do as by what we get done.

A CHIP OF THE OLD BLOCK.

Tosti Russell, Son of Henry Russell, Director of the Boston Opera House, Writes Interestingly About His Efforts in the Operatic and Musical Field—Emphasizes the Value of the Columbia Phonograph as an Aid in His Miniature Opera Productions.

The following letter from Tosti Russell, son of Henry Russell, director of the Boston Opera House, to the Columbia Phonograph Co., General, New York, is reproduced in full. It ex-

Tosti Russell.

plains itself and effectually demonstrates what a lot of pleasure and knowledge an ingenious youth can derive from a useful Christmas gift. The letter was under date of July 24, 1912, at Camp Algonquin, Holderness, N. H.

"For our Christmas present on December 25, 1910, father gave us a theater; a model of the Boston Opera House. The stage had footlights and two border lights, connected with 12 batteries and a switchboard. Immediately I set to work and painted some scenery, regardless of the fact that I already had some very artistic scenery painted at the opera house by an expert.

"From the start my aim was to render the theater worthy of the name I had given it: 'The Boston Miniature Opera House.' In other words, I wished it to be not only a very high class toy (which it was), but also an extremely interesting 'piece of workmanship.' Several months after this, and about

two weeks before the time my brother and I were told to get ready to go home (to Paris), father got us a phonograph through the courtesy of the director of the Columbia Phonograph Co., General. With the phonograph came many of the Columbia Co.'s best records. Owing to the shortness of the time during the first season of the Boston Miniature Opera Co. I had time only to execute very few of my very numerous plans. In fact, during six months while I was abroad I saw nothing at all of my theater. When I came home in October I started to do some serious work on the stage of my theater. I removed the foot and border lights that came with the theater and made some myself. It seems a shame to do away with the original electric fittings, but I was not satisfied with them for the reason that the footlights had 18 lamps; 6 white, 6 blue and 6 red. I could not turn on less than six lamps at one time. Of course, that made any change of color in the lighting extremely sudden. Therefore you can see why I thought I should make some foot and border lights of my own. The latter included two switchboards, which enable me to turn on the lamps two by two. I have mounted an opera (The Golden of the Golden West). I have fixed up a fan behind the stage, which when I switch on the current starts blowing paper snow through Minnie's log cabin door. The stage includes three curtains: asbestos, drapery and a drop curtain.

"I have fixed up my stage so that it should work exactly the same way as the Boston opera stage does. That is to say, that the scenery works by weights. Next year I intend to fix up hydraulic pressure for the curtains. You may be sure that I owe a great part of my success to the excellent Columbia phonograph that I have."

EMPHASIZING SCHOOL CAMPAIGN.

Circular Letter Sent to Victor Dealers Shows What Has Already Been Done in That Direction and What May Be Accomplished.

Mrs. Frances E. Clark, director of the public school educational department of the Victor Talking Machine Co., has just sent out to the Victor dealers some interesting printed matter regarding the Victor in the schools, together with suggestions for the dealer who desires to get business in that field. One of the new features mentioned in the letter to the dealers is a series of two double faced twelve-inch records giving the tone, color and quality of each instrument in the modern orchestra and their grouping into families and sections, with combinations of each group. These records have been perfected after a year's work.

Attention is also called to the advertising, which will be run in twenty of the leading educational magazines beginning September, of the special types of Victors and Victrolas most desirable for school use. Dealers are also furnished with a copy of the circular letter sent out to supervisors of music all over the country, with the various booklets relating to the Victor in the schools which have also been compiled. The booklets include both the Victor playground, with special attention paid to folk dances, singing and games and dance music of modern character; a graded list of records for practical school use, which has been carefully compiled—how to use the Victor in the schools, an interesting booklet telling how, when and where to use the Victor, and how to get the best effects, and a book of "Encomiums on the Victor in the Schools," containing letters of praise from school authorities in all sections of the country, and what we hear in music; a prospectus for a four years' course of study of music for high school pupils.

FINAL MEETING OF CREDITORS.

A final meeting of the creditors of the Leeds & Catlin Co. was held on Thursday, August 29, at the office of the Referee in Bankruptcy William Allen, 67 Wall street. At the meeting application was made for allowances for the attorneys for the trustee, for the appraisers and for other services, and the trustee's account was examined.

We protect our customers' interests

by giving them the kind of service that enables them to take the best care of their customers.

We have the right goods and in the right quantities to fill every order that comes our way, and as soon as you give us the word we start them to you on the "double quick".

We have a reputation for being "Johnny on the spot," because we ship every order the same day it is received—and we keep it up every business day in the year.

Let us show you how quickly and satisfactorily we can fill your orders for whatever you want in Victors, Victor-Victrolas, Victor records, record cabinets, horns, fibre cases, and accessories of every sort.

Send along a trial order as a "feeler" and we'll take a chance on that clinching the argument for our kind of service.

Write for our catalog anyway, and we'll also send you our booklet, "The Cabinet That Matches".

"If it's in the Victor catalog, we have it".

Yes, we even have in stock the entire list of Victor

THE Heise SYSTEM

You need the Heise System for the best keeping of your records.

Above is shown a small multiple of the system. Made for 10" and 12" records; built of heavy, strong wire, plated and lacquered. Furnished in 2 to 7 tiers, each tier holding about 250 records. Cost about \$2 a tier. An immense space saver; keeps records clean and accessible.

Write for 20-page catalog giving details and information on record systems.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., Sept. 10, 1912.

PHONOGRAPH REPRODUCER. Herbert H. Dyke, East Orange, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., same place. Patent No. 1,036,469.

This invention relates to phonograph reproducers, and the particular object of the invention is to provide an improved mounting for the stylus lever, whereby the same may be permitted freely to travel in a direction transverse to the record groove tracked by the stylus. This invention resides chiefly in an improved construction whereby this desirable freedom of movement can be attained.

Fig. 1 is a side elevation, partly in section, of a phonograph reproducer, showing the invention, and Fig. 2 is a fragmentary bottom view of the same.

PHONIC APPARATUS. Daniel Higham, East Orange, N. J. Patent No. 1,036,235.

This invention relates to phonic apparatus of the type in which a shoe is held in frictional engagement with the periphery of a rotating wheel of suitable material, such as amber, and the pressure of said shoe upon said wheel is varied by any suitable means which is representative of sound vibrations, and which may be termed the primary vibrating means, as for example, a reproducer stylus capable of being operated by a phonograph sound record. Such variations in pressure cause corresponding variations in the friction between the wheel and shoe, thereby causing the shoe to vibrate in accordance with the sound vibrations and such movements of the said shoe may be transmitted by any suitable mechanical connection to a diaphragm or other means for propagating the effects of such variations in friction and which may be termed the secondary vibrating means. In this class of apparatus the friction shoe in frictional contact with the rotating friction wheel has a certain angular extension with respect to the periphery of the friction wheel and it is desirable that the angle of such extension should be considerable so that the shoe will have a tendency to "bite" or bind upon the friction wheel. The required amount of this circumferential extension or the degree of mechanical bite of the shoe must, in order to obtain the best results, vary inversely with the coefficient of friction of the frictional contact of the shoe and rotating wheel; that is, a lower coefficient of friction will require a greater circumferential extension or a stronger bite, and a higher coefficient will require correspondingly less extension or bite to obtain equal results from this type of apparatus. In such apparatus, however, the amount of circumferential extension of the friction shoe cannot be readily varied, although owing to varying atmospheric conditions which always affect the coefficient of friction, the latter continually varies so that it has

heretofore been impossible to secure uniformly good results with this type of apparatus.

It is the object of this invention to provide means whereby variations in co-efficient of friction can be readily compensated for, such means acting to vary or adjust the degree of the mechanical bite of the friction shoe upon the rotating friction wheel.

Figure 1 is a side elevation, partly in section, of an apparatus constructed in accordance with the invention and adapted to be used as a phonograph reproducer, and Fig. 2 is a view of a certain of the parts as viewed from the left in Fig. 1.

TALKING MACHINE. Louis Lumiere, Lyon, France. Patent No. 1,036,285.

This invention has for its object, to provide improved means for connecting the stylus with the diaphragm.

A further object of this invention is to so construct the connection between the stylus and the diaphragm, particularly when diaphragms of large diameter are employed, such as are illustrated in above mentioned application, that the said diaphragms are permitted to and will vibrate freely and fully without being subjected to any torsional or other strains, due to the fact that the diaphragm is attached to a stylus bar, the axis of oscillation of which is comparatively remote from the diaphragm; and to so arrange the connection that the point of the attachment of the stylus with the diaphragm will not vibrate in any other manner than in a line substantially normal to the plane of the diaphragm.

Referring now to the drawing forming a part of this application, Fig. 1 is a partial side elevation of one construction embodying this invention; and Figs. 2 and 3 are similar views of modified forms of the invention. In all these figures the manner of mounting the diaphragm and the manner of mounting the stylus bar, in so far as the support for these parts is concerned, are not illustrated, in as much as they are substantially the same as is illustrated in the drawings of aforesaid patent No. 986,477.

ACOUSTICAL INSTRUMENTS. Louis Lumiere, Lyon, France, assignor to Victor Talking Machine Co., Camden, N. J. Patent No. 1,036,529.

This invention relates to improvements in acoustical instruments, such as telephones, microphones, sound recording and reproducing machines and musical instruments in general, and the present application is a division of an application filed June 30, 1909, Serial No. 505,149.

As applied to sound recording and reproducing apparatus, this invention relates more particularly to that part of the instrument which is generally known as the diaphragm, or the body which in the process of sound recording is thrown into vibration by the sound waves, and the vibrations of which are traced and recorded, by means of a stylus in the original record; while in the process of reproduction the diaphragm (as a general rule, the diaphragm of a separate machine) is thrown into corresponding vibrations by a stylus to which it is attached, being made to follow the undulations in the record.

This invention also relates to the sound box in which said diaphragm is mounted.

The object of this invention is to provide a diaphragm and a mounting therefor, by means of which sounds may be faithfully recorded and reproduced, which will be sensitive to sound waves and by the use of which the reproduction of sound will be improved and amplified.

Further objects of this invention are to increase the reproducing surface of a diaphragm, and, at the same time, to place the entire surface under a tension (preferably torsional), to make it sensitive; to increase the active surface of a diaphragm of a certain given diameter; to increase the diameter of the diaphragm without making it liable to vibrate in parts, or to set up nodes or inactive portions in the diaphragm, or, in other words, to

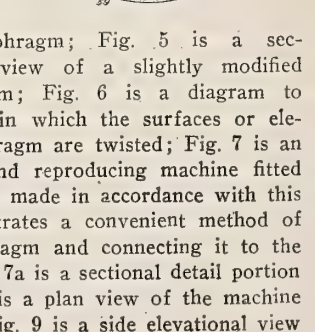

substantially increase the size of the diaphragm and at the same time have it vibrate throughout; to construct a diaphragm having a plurality of sound responsive elements, each of which is subjected to a molecular tension, and to subject each of a plurality of sound responsive elements to a molecular tension to increase the sensitiveness thereof and to cause them to vibrate as a whole.

The invention consists in a diaphragm for acoustical instruments, having one or more freely resilient, sound responsive surfaces or elements, which have been brought into a condition of molecular stress, of an aggregate superficial area substantially larger than the surface of a plane disc of the same diameter, and in a recorder or reproducer in which said diaphragm is mounted.

It is found that the effect of bringing the surfaces of a vibrating body into a condition of molecular stress by torsion, is to reduce to a minimum the tendency of the vibrating body to form nodes during operation, so that the surface or surfaces of the diaphragm will vibrate as a whole and will not produce the disagreeable effect which is technically known as blasting or shattering.

One construction of diaphragm made according to this invention and the method of making it is illustrated in the accompanying drawings, in which

Fig. 1 shows a folded strip of material from which the improved diaphragm may be made; Fig. 2 is a plan view of a modified form of folded strip of material from which a diaphragm may be made; Fig. 3 is a plan view of the diaphragm; Fig. 4 is a sectional elevation of the diaphragm; Fig. 5 is a sectional elevational view of a slightly modified form of diaphragm; Fig. 6 is a diagram to illustrate the way in which the surfaces or elements of the diaphragm are twisted; Fig. 7 is an elevation of a sound reproducing machine fitted with the diaphragm made in accordance with this invention and illustrates a convenient method of carrying the diaphragm and connecting it to the stylus bar, and Fig. 7a is a sectional detail portion of Fig. 7. Fig. 8 is a plan view of the machine shown in Fig. 7; Fig. 9 is a side elevational view

partly in section of a modified form of sound reproducing machine provided with the invention. Fig. 10 is an enlarged view, partly in section, of the diaphragm and stylus bar mounting shown in Fig. 9, and Fig. 11 is a bottom plan view of the reproducer shown in Fig. 9.

PHONOGRAPH. Frank D. Lewis, Elizabeth, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,036,279.

This invention relates particularly to phonograph reproducers, and the object is chiefly to provide a device by means of which two styluses adapted to track records of different character as the well-known "one hundred thread" and "two hundred thread" records, may be carried by the single reproducer, which is provided with a single diaphragm, one of the said styluses being in operative position to track the record with which it is designed to co-operate, while the other stylus is in inoperative position. One stylus is removed from operative position and the other stylus placed in such position by a bodily movement of the whole reproducer, preferably by swinging the same through an angle of 180 degrees.

In carrying out this invention, the two styluses referred to are mounted on stylus levers which are preferably pivotally mounted each on a separate

floating weight. The construction of these two floating weights, by means of which the weight of each may be advantageously distributed and the construction made compact and efficient, also forms the subject matter of one of the objects of the invention.

Another object is

the provision of improved means for pivoting the stylus levers in their respective floating weights, whereby universal motion of the stylus may be attained.

In the drawings, Fig. 1 represents a central vertical section through an improved reproducer, some of the elements being shown in side elevation. Fig. 2 is a bottom plan view of the same.

PHONOGRAPH RECORD. Jonas W. Aylsworth, East Orange, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,036,415.

This invention relates to improved duplicate phonograph records, which can be manufactured very cheaply and which will be of superior character.

The inventor has also devised an improved process and apparatus designed especially for producing the improved records, although they may be employed for the manufacture of records of other types. The process referred to forms the subject matter of the patent of which this is a division.

The improved record which constitutes the present invention is a composite cylindrical structure having an outer layer of a tough, smooth, amorphous material, in which the record surface is formed and from which a smooth and brilliant reproduction can be obtained, and a main body or support therefor composed of a very cheap and tough material unsuitable itself for receiving a record surface, the two layers being welded together so as to constitute practically a single homogeneous structure.

The improved process is one in which the material in a molten state or in solid or powdered form is introduced into a rapidly rotating mold, as described in patents numbered 855,605, 855,553 and 855,554, all granted on June 4, 1907, the outer layer being first formed by the centrifugal force developed and, when the material thereof is sufficiently set but preferably while still slightly plastic, the material to constitute the inner or main layer is introduced so as to be intimately welded to the outer layer. The process also contemplates the carrying on of operations by which the interior of the record may be suitably developed to fit the supporting mandrels of talking machines of the phonograph type, although if an expanding mandrel is employed as disclosed in the Patent No. 855,604, granted June 4, 1907, of Aylsworth and Dyer, no

separate finishing operation is necessary, since when the records are removed from the molds after being chilled therein, they will, as an inherent result of the process, be formed with perfectly smooth cylindrical bores.

The apparatus used in the above process is essentially of the type disclosed in Patent No. 855,605, above referred to, except that supplementary use is made of the mechanism for finishing the bores of the records, when this is desirable.

Figure 1 is a longitudinal sectional view of the improved duplicate phonograph record; Fig. 2, a similar view of the rotating mold, showing the formation of the record thereon.

PHONOGRAPH. Leslie A. Brown, Bedford, Ind., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,036,440.

This invention relates to phonographs of the type in which a traveling carriage carrying a reproducer stylus is fed axially past a rotating record cylinder, and the object of the invention is chiefly to provide efficient means whereby the phonograph may be started and stopped automatically.

In the preferred construction, the operating mechanism of the phonograph is stopped by the action of the traveling carriage in unlatching the end gate of the machine when the end of the record is reached, or at some other desired predetermined point, the machine being automatically started when the end gate is closed, which would in practice, of course, be after a new record has been inserted on the mandrel.

More broadly, this invention comprises efficient means for starting and stopping the operating mechanism of the phonograph without regard to the end gate.

This invention also comprises means for preventing slipping of the record when in place upon the mandrel.

Figure 1 represents a side elevation of a phonograph equipped with this invention; Fig. 2 is a plan view of one end of the phonograph showing improved starting and stopping means; Fig. 3 is a detail view showing the tripping means carried by the traveling carriage, and Fig. 4 is a view of the rotating mandrel showing the improved anti-slipping device attached thereto.

PHONOGRAPHIC APPARATUS. Thomas A. Edison, Llewellyn Park, West Orange, N. J., assignor to the Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,036,470.

This invention relates to phonographic apparatus, and the object thereof is to provide a diaphragm adapted to be used in a sound recorder or reproducer, but particularly in the former, and having such qualities as to cause it to vibrate truly in accordance with the sound waves to be recorded or reproduced, when mounted in a suitable sound recorder or reproducer.

This invention also consists in a sound recorder or reproducer having such a diaphragm as an element thereof.

It has heretofore been proposed to manufacture diaphragms from a large number of substances, among which copper and other metals, glass, mica, felt, fiber, paper stock and thin wood may be mentioned. None of these substances possesses all the attributes necessary for the perfect diaphragm. In the case of diaphragms made from substances which do not occur in nature in such a form that they can be directly used for the purpose, as metals, glass, etc., internal and local stresses are bound

to occur, so that the thin elastic disc constituting the diaphragm necessarily has an uneven and buckled surface, each minute buckle or portion of different tension vibrating independently when the disc is vibrated as a diaphragm resulting in the production of foreign noises. In the case of mica, the structure is such that the best results can not be obtained. In the case of wood, birch bark, etc., the grain and natural formation of the same render them unable to vibrate in perfect accordance with the sound waves to be recorded or reproduced.

The difficulties above noted are overcome by the use of cork as a diaphragm material. Cork is a substance which is absolutely free from internal stresses or distortions, and which is not striated or foliated, or otherwise rendered uneven in its structure. Preferably, the diaphragm is cut from a section of the bark taken at right angles to the diameter of the tree, so that the small holes or pits which are found in cork, and which extend radially outward when the bark is in position on the tree, will extend transversely of the diaphragm. A cork may be obtained in which these openings are very fine and slight, and this material should be used for the manufacture of diaphragms.

If diaphragms are made from cork of poorer quality, in this respect, having a number of holes or air passages extending therethrough, the proper operation of the diaphragm will be interfered with. The diaphragm should be sufficiently thick to have the requisite firmness. The best results are obtained with a diaphragm having a thickness of at least one-sixteenth of an inch.

Figure 1 represents a central vertical section through a phonograph recorder embodying the invention. Fig. 2 is a bottom plan view thereof.

AMPLIFIER FOR TALKING MACHINES. James M. Evans, Westport, Conn. Patent No. 1,036,474.

The said invention relates mainly to amplifiers of sound reproducing or talking machines, its object being to deliver the amplified sound waves with uniform and equal distribution and without interference or distortion, into the surrounding atmosphere. The form of amplifier which is devised for these purposes also is well adapted to a form of musical instrument at once compact and convenient, and susceptible of ornamentation.

Figure 1 shows a central vertical section of the instrument; Figs. 2 and 3 elevations of details.

PHONOGRAPH REPRODUCER. Alexander Pierman, Newark, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,036,329.

This invention relates to phonograph reproducers, and has for its object the provision of an improved mounting for the stylus lever, in order that the same may have great freedom of movement in tracking the grooves of the sound record, and in order that chatter of the stylus in the record groove due to inertia and lack of balance of the moving parts, may be obviated.

More particularly, the object of this invention is to provide a mounting for the stylus, which shall permit the latter to be used in connection with records having two hundred threads to the inch, and track the same faithfully—and without injury to the record or the stylus.

While the stylus mounted in the manner of the invention is equally well adapted for use in connection with records having one hundred or some other number of threads per inch, the requirement of great facility of movement of the stylus lever,

(Continued on page 48.)

both in a direction parallel to and transverse to the record groove, is particularly important in the case of the two hundred thread record, or other record having a great number of threads per inch, owing to the thin walls between the record grooves, which might be broken down, or jumped across, by a stylus, the parts moving with which have considerable inertia, and to the character of the record grooves generally. Accordingly, a stylus mounting of the least possible inertia and the greatest possible balance is desirable. This is provided for in the invention by mounting the stylus lever on a member, preferably the floating weight, which is so shaped as to be symmetrical with respect to an axis upon which it is mounted to allow rotation or lateral movement in a plane transverse to the record grooves, the said member also being permitted to shift longitudinally of the said axis, to allow movement of said stylus in a direction parallel to said grooves. A weight or member so mounted is evenly balanced and can not be jarred from its position by a blow on the phonograph

Figure 1 is a central vertical section through a reproducer equipped with the invention, and Fig. 2 is a bottom view thereof.

TALKING MACHINE ATTACHMENT. Peyton J. Henry, Charlotte, N. C. Patent No. 1,036,492.

This invention relates to an attachment for talking machines, the object of the invention being to provide a damper and modulator of simple, cheap and efficient construction, which may be readily attached to the sound-box of a machine for dampening and regulating the sound producing mechanism at will and eliminating the harshness and squeakiness of the sounds sometimes produced and at the same time rendering the enunciation of the sound producing mechanism clearer and more distinct.

A further object of the invention is to provide a device of this character which may be employed

Figure 1 is a front elevation of the sound box of a talking machine with the device attached thereto. Fig. 2 is a sectional plan view of the same. Fig. 3 is a detail section through the bracket and damper and showing the adjusting screw. Fig. 4 is a perspective view of the device detached.

FEEDING MECHANISM FOR PHONOGRAPHS AND OTHER MACHINES. Chas. N. Wurth, Orange, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,036,403.

This invention relates to mechanical movements and more particularly to means for imparting a progressive movement to the carriage which carries the reproducer or recorder of a phonograph, whereby the same is fed transversely to the direction of movement of the surface of the record and the stylus traverses a spiral path on the record.

In ordinary phonographs now in use, it has been usual to provide a feed screw having a pitch of substantially one one-hundredths of an inch. As records can now be produced with a very much smaller pitch, preferably one two-hundredths of an inch, and as it is impracticable to manufacture feed screws with so small a pitch, it is the object to provide means whereby the ordinary phonograph

may be adapted for the recording or reproduction of records having either of the above, or any other desired pitch. This object is accomplished by the production of improved means whereby the carriage may be advanced either directly by the rotating feed screws, as has hitherto been the practice, or whereby, at the will of the operator, the carriage may be advanced at each revolution of the feed screw, a distance bearing any desired ratio to the pitch of the said screw.

Figure 1 is a plan of a phonograph provided with a feeding device constructed in accordance with the invention; Fig. 2 is an end elevation of the device shown in Fig. 1, the feed screw being shown in section taken on the line 2-2 of Fig. 1; and Fig. 3 is a section of the improved feeding device taken on the line 3-3 of Fig. 1.

PHONOGRAPH. Oscar Arnold, Neustadt, Coburg, Germany. Patent No. 1,036,413.

This invention relates to phonographs and particularly to an improvement therein whereby at the

end of the particular record the reproducing apparatus is automatically returned to the starting point, ready for a second reproduction upon the release of the driving mechanism.

A phonograph constructed according to this invention is particularly well adapted for use in connection with talking dolls and like toys in which the speaking apparatus is built into the doll body and is caused to operate by the pressure of a button.

Figure 1 is a view partly in section. Fig. 2 is a front elevation of the same. Fig. 3 is a plan view of the parts shown in Fig. 4, and Fig. 4 is a sectional plan taken on the line C-D, Fig. 3.

METHOD OF PRODUCING TALKING MACHINE RECORDS. John P. Snare, Modesto, Cal. Patent No. 1,035,057.

The present invention has reference to the production of records for talking machines, and it comprehends, briefly, a method or process whereby the medium which transmits or carries the sound waves from the performer to the recording instrument is highly improved and rendered more efficacious for that purpose. To effect this object, the recording operation is carried out in a closed chamber wherein the contained air constituting the aforesaid transmitting medium is subjected to an appreciable degree of pressure, all extraneous disturbing influences which would otherwise affect such medium being at the same time removed, with the result that the voice of the performer is

more perfectly reproduced than has heretofore been possible. This is due primarily to the fact that the condensation of the air produces a medium which transmits or carries the sound waves much more readily than air at normal or atmospheric pressure. In consequence, the slight strain to which the voice of the performer is subjected, (and this is particularly true of amateur recording, as opposed to professional recording in specially constructed and equipped laboratories), is avoided, and the sounds reproduced approach more nearly the natural tones actually sung or spoken. For the same reason, the lowest and softest tones may be perfectly recorded, and subsequently reproduced, and this holds good for both vocal and instrumental performances, which is a matter of considerable importance, inasmuch as at the present time many records of selections containing extremely low notes and pianissimo effects are more or less considerably spoiled by the flattening of a low note, or the failure to record and reproduce all of the notes in a passage played or sung pianissimo. Finally, the recording is further facilitated to an appreciable extent both by constructing the chamber in part in the form of a bell made of sound-amplifying material, preferably metal, and in mounting such bell in much the same manner as the bell of a gas tank; that is to say, the bell is supported in a pit or stand partly filled with water, which latter will act not only as a seal to prevent entrance of extraneous disturbing influences, but also, to some extent, as a deflector for directing the sound waves toward the recording instrument.

A vertical sectional view of one form of apparatus for carrying out the invention is illustrated in the accompanying drawing, but it is to be understood that such illustration is intended merely as diagrammatic, and, moreover, that the term "talking machine," as employed both above and hereinafter, is used in its broadest sense, as covering the so-called phonographs, graphophones, gramophones and the like in general use at the present time, without restriction to the character of record utilized in connection therewith.

ADD PHONOGRAPH TO PHONE.

Scheme Is New Adjunct to Berlin System—Tells Would-Be Talkers When Line Is Out of Order.

The phonograph has been temporarily installed as an adjunct to the telephone service of Berlin. When the line gets out of order, the phonograph automatically calls out to would-be talkers "The line is not working." The operators may also switch on the phonograph to ask persons what numbers they want. It is said for the new instrument that it is so nearly inaudible that the work of the exchange can be carried on with less noise and wear and tear.

"Two heads," it is said, "are better than one." That all depends on how harmoniously the two heads are working together.

You cannot sell the goods unless you have them.

- I Bersaglieri D'Italia, Canzonetta, Baritone Solo sung by L. Baldassare.

SOLD OUTSIDE THE STORE.

One cause for forgetting to charge goods is, when goods are sold in warehouses and basements, or on the sidewalk, or away from the main part of the store. The salesman tries to remember to make the entry upon returning to the store; something distracts his attention when he does return; later he tries to think of all the items, but some escape him. Arguments with a customer, a fire alarm, an accident on the street, a parade, a fight, a remark, the unusual attractiveness of a customer, weariness, illness, lack of interest, positive disloyalty, spite, revenge, and a thousand and one things cause the employer, as well as the clerk, to forget to record a sale or part of a sale.

Teach your help to know the goods. A salesman who can quickly marshal the selling points of a line of merchandise can keep the upper hand of customers. Goods are sold upon their merits (usually), and if a sales person has the good qualities of a line of merchandise at his finger tips he can completely overwhelm the objections of a doubting patron.

NEW MODEL COLUMBIA MACHINE.

The "Regal," Just Announced to the Trade, Possesses Many Features of Particular Interest, Including the Price.

Columbia "Regal" is the name of a new machine which the Columbia Phonograph Co., General, New York, is announcing to the trade. The accompanying illustration is a better description than we could present in words. It is distinctively a Columbia model and contains the elements and features of the Columbia line, with which the trade is already familiar. The shelf record capacity is prominent in the "Regal," and is one of the units

New Columbia "Regal."

to mark the advance in the devising of talking machines.

The "Regal" is already being featured by the company in an extensive advertising campaign and, according to reports from headquarters, a surprising demand has already been established. The price of the "Regal," without albums and containers, is \$40. The price with two twelve-inch and three ten-inch albums and containers is \$50.

The Columbia Co. prophesies great success for the new machine and bases its claims on the fact that the price is reasonable, the quality is wonderful and that the "Regal" has all of the attractive features which are embodied in any first class instrument.

You may be right in thinking that you know more about the business than the boss does, but be careful about how you assert the fact.

SALESMANSHIP AND SUCCESS.

A Disquisition on the Various Factors That Tend to Interfere with or Promote Success—The Combination of Brains, Work and Ginger Will Enable the Salesman to Make Good in the Talking Machine Field as in Any Other Line of Effort.

A salesman pre-eminently is the graduate of the University of Hard Knocks. He comes from nowhere in particular, goes everywhere, and ends—who can say where? It is said, a "man's destiny is in his own hands," and in no line of endeavor is this so applicable as in salesmanship. Most salesmen, like Topsy, just "grewed"; few have been made, they mostly just have happened. No matter how they came to be, however, they are fearfully and wonderfully made. If shaped of the common clay nearly any man can make for himself a name in the salesman's hall of fame.

Let us look at the future which beckons the salesman. He starts with a house and if he proves to be a good man and gets a record for honest dealing, he may be taken behind the frosted doors marked "private" and come out a member of the firm. The other kind of salesman continues periodically to renew his acquaintance with poor hotels, musty sleepers and frequently in his lifetime buys enough mileage to stretch several times around the globe.

The question then is: how to be a "class A" salesman and earn the promotion that comes to his lot? Let us say here, many steam engines use only about 25 per cent. of their potential energy, while the other 75 per cent. goes to waste. That's the answer. A man who stays a salesman, uses only part of his energy on his business, the remainder is expended in having a "good time," blowing off steam. Find the man who keeps good hours, never goes to a ball game during business hours, does not drink to excess, and smokes little, and you have a man who some day will sit behind the frosted glass, bossing the man who had the "good" times.

All a salesman needs is the average small supply of brains, a large amount of work, a dash of ginger and soon the road will lose a good man, for no firm will long permit a natural leader to hit the road. The way to win is to work, and the way to work is to start, and that means begin right now. Whistler, the great artist, was asked by an aspiring artist: "What do you mix with your colors?" He replied: "Brains," and brains must be mixed with every line of work, if success is to result. You have brains, and constant use will make them efficient.

WHERE DOES THE FAULT LIE?

You tell me that there are many unpleasant things troubling you in the store in which you work. If you can answer without betraying a secret, would you mind telling me if you ever knew of velvet being successfully used as a substitute for sandpaper. The unpleasant, the hard, the trying, the temper-testing things are the sandpapy aids that smooth you off, that train you, that fit you to shoulder bigger responsibilities, and resist more trying troubles later on. Be thankful for the sandpaper.

The new Victor-Victrolas bring new and greater opportunities

The wonderful instrument that has accomplished so many great things keeps right on with its splendid work.

The four new styles of the Victor-Victrola created another big stir in the music trade and established more firmly than ever the supremacy of this instrument.

The prosperity and profits the Victor-Victrola has brought to Victor dealers in the past is only a foretaste of what may be expected from now on.

The Victor-Victrola line is now more complete and attractive than ever before and offers new opportunities for profit and prestige far overshadowing all its wonderful successes of the past.

Price Ten Cents

LESSENING SELLING COST

Without Decreasing Efficiency by Studying and Regulating Salesmen's Expense Accounts by Comparisons—How One Concern Did It.

An experienced manager of sales declares that he knows of one mercantile house that purely through the use of analyzed comparative expense accounts by salesmen, and by territory, and by branch, have reduced their traveling expenses almost 25 per cent.; and here is the funny part of it; they have increased the efficiency of these same salesmen nearly 25 per cent., as shown by the results!

Now, the way they did it, and it is possible in lots of concerns: They were operating quite a number of offices, and they took the comparison between the several branches as it related to sales, and so on, and this was all stacked up in parallel columns and figured out in percentages. They did this in a lot of things—in credit losses, and whole general classes of expense. And, by the way, their comparative statement enabled them in one town to uncover a defalcation which had gone past their traveling auditor for five mortal years.

It was a continuous performance by a young man who was slated for one of the most important offices in the country, but just as soon as they prepared this comparative statement and saw the percentage in that one district looked so much higher than it did in the others, they just shot a man from one of the nearest offices down there to find out what was the matter. It wasn't so much higher—there was only three-fourths of one per cent. difference—but it was so much out of proportion to the others that it was noticed. So they are finding out discrepancies in lots of other things.

Now, the sales department, by the use of comparisons, and especially percentage comparisons, can check a great many things of this kind. It doesn't do people any good to waste money. I am not talking about dollars in a niggardly way. I am talking about preventable waste for which there is no excuse.

NOW LOCATED IN NEW FACTORY.

U-S Phonograph Co. in Larger Quarters in Cleveland—Business on Increase—Changes in Staff—Other Interesting Items.

(Special to The Talking Machine World.)

Cleveland, O., Oct. 8, 1912.

Things are booming along at the factory of the U-S Phonograph Co. in fine shape. The company has moved from 1013 Oregon avenue and is now located in its new factory at 1204 East 55th street, and in a few days will have the plant fully installed and running up to capacity. Great savings will be effected in the new factory, since the cabinets, phonographs and records will all be made under one roof. Attention is directed to the page advertisement of the U-S Phonograph Co. elsewhere in this issue of The World. Regarding the wearing qualities of the U-S records, the original record and affidavit are on file at the factory.

Hugh Gulley, formerly in the talking machine business in this city, is now engaged with the U-S Phonograph Co. as traveling representative in Michigan. He spent the week end in Cleveland.

W. B. Timms, formerly with the Victor, and later with the U-S Co., is now on the staff of the Eclipse Musical Co. He is a thoroughly equipped talking machine man.

Many of the talking machine dealers throughout the country combined with the booksellers to honor James Whitcomb Riley, "The Hoosier Poet," during the week of October 7 to 12. This period was known as "Riley Week," and the Victor records which this master of laughter and tears made were as largely in demand as his books. It was a very happy and thoughtful idea.

NEW DEPARTMENT IN NEWARK, N. J.

Victor and Columbia Lines to Be Featured Strongly in the New Store of L. Bamberger & Co.—S. Semels to Be in Charge.

(Special to The Talking Machine World.)

Newark, N. J., Oct. 9, 1912.

A feature of L. Bamberger & Co.'s magnificent new establishment, which opens next week in this city, will be the department devoted to pianos and talking machines. In the latter, which is in charge of S. Semels, the Victor and Columbia machines and records will be presented to the public in very attractive quarters. There are five splendidly equipped booths in mahogany finish, and the entire establishment is most attractively furnished. It is convenient to the piano warerooms and also to the spacious recital hall, which will prove to be one of the great attractions of this new building.

Talking machine recitals will form one of the means of interesting the public during the fall

The New Bamberger Store in Newark.

and winter season, and Manager Semels is a great advocate of this kind of work. He believes, as The Talking Machine World has long upheld, that there is no better means of interesting the public in the talking machine than through recitals, hence it is that these will form a part of his program.

Mr. Semels has been in the talking machine trade since its inception practically, and won an excellent success in his varied fields of activity. He looks forward to attaining a larger measure than ever in the new Bamberger store.

EDISON TO BE HONORED.

A Statue of the Inventor of the Phonograph to Be One of Several Eminent Inventors Whose Statues Will Be Used in the Machinery Building at the Panama-Pacific Exposition.

(Special to The Talking Machine World.)

San Francisco, Cal., Oct. 6, 1912.

The Machinery Building, which is to grace the 1915 Universal Exposition, will be the largest of the thirteen exhibition palaces that are provided for in the plans being prepared by the members of the Architectural Commission. This building is of huge proportions, consisting of three great naves, with a cross nave of the same proportion. The treatment of the exterior will be a free adaptation of Spanish renaissance, and the Castilian period of influence of architecture in Mexico. It is expected that the Machinery Building will be the first contract let for the main exhibition palaces. Four heroic statues, representing the personalities who were greatest in the advancement of mechanical arts—Archimedes, Gutenberg, Watt and Edison—will, in all probability, be placed on this building.

PAYS TO THINK AND ACT.

How a Talking Machine Salesman Watches News Events and Profits Thereby—The Death Recently of Massenet Illustrates a Point Which Is Well Worth Consideration.

The death recently of Julius Massenet, the famous French operatic composer, has resulted in a greatly increased demand for talking machine records of the principal numbers from his various operas throughout the country.

This matter brings to mind the importance of salesmen and dealers keeping in touch with musical matters. Some wide-awake salesman took occasion following the death of Massenet to make a special window of the records from his operas, and in this way not only centered the interest of the musical people on his establishment, but profited in a business way also. It is the small things in the business world that count. They advertise a man not only as a keen reader with a knowledge of musical matters, but demonstrate that he is progressive merchants.

COMPLIMENTS BISPHAM.

William Shakespeare, the Eminent Vocal Teacher of England, Speaks Enthusiastically of Bispham's Singing Which He Heard Through Means of a Columbia Record.

David Bispham, the popular baritone, who sings for the Columbia, writes as follows to the Columbia Phonograph Co.:

"The following from an interview in the August Musician, with the celebrated English singing teacher, William Shakespeare, may be of use to you in advertising my records:

"'But, Mr. Shakespeare,' ventured the interviewer, 'most of the male voices heard in the phonographs are of Italian, French and German singers—only rarely Americans.'

"'Maybe so,' replied Mr. Shakespeare, 'maybe so, but I will say I heard a glorious exception the other day, and he is an American born singer, too; and that is David Bispham, whose song recital was a really great singing lesson. A truly observant pupil could have got as much out of that recital as he would from six months' lessons with—me, for example.'

TRIES IT ON HIS MEN.

How One Merchant Judges the Value of New Advertising Before Issuance.

A Western merchant who does a great deal of local newspaper advertising, does not put out a line of it until the proposed copy is submitted to at least three of the men in his store for criticism. The points he seeks are these:

"Does this ad hit you in the eye, so that you cannot avoid seeing it? Does it open in a manner that would lead you to read it through? Does it tell its story; convince you we mean business, and are telling the truth? Would it have any pull with you in the purchase of goods?"

The merchant confesses that in many cases the suggestions of his men constitute the strong points of the ad.

This is an excellent idea well worth emulating—it is co-operative work of the right kind.

THREE SOURCES OF WEALTH.

As long as 300 years ago, Sir Francis Bacon pointed out that the sources of wealth of any nation were: First, its productivity, in other words, the productive capacity of its natural resources; second, the manufacture of raw materials into a form more useful to man; third, the venture, or transportation, from the point where they were produced or manufactured to the point where they could be used.

"BLUE" AMBEROL RECORDS READY.

Thomas A. Edison, Inc., Issues First List of Fifty-five of the New Unbreakable Records That Are Played with a Diamond Point—Only Four-Minute Machines in Future—Special Record Return Allowances.

An important event of the month is the announcement by Thos. A. Edison, Inc., of the placing on the market of the first of the new "Blue" Amberola cylinder records. The initial list consists of fifty regular and five concert numbers, which will take the place of the regular November supplement. Shipments of the new records have already begun, the first allotments going to the far West and working Eastward in regular course. The first list of the "Blue" Amberol records appears with the regular lists of November records on another page of this issue of The World.

In connection with the announcement of the new records the manufacturers state that with the advent of the "Blue" Amberol record they are preparing to introduce a reproducer of new design, equipped with genuine diamond point.

On Amberola and Concert type phonographs the Diamond "A" reproducer will be used, while on Alva, Triumph, Home, Standard, Fireside and Gem type machines the Diamond "B" reproducer will be required.

The Diamond "B" reproducer may be used on Alva, Triumph or Home phonographs which are at present equipped with model "O" reproducers as it will fit in the same reproducer arm. On Alva, Triumph and Home machines which have not been fitted with model "O" reproducers, as also on Standards, Firesides and Gems, or where other types of reproducers are being used, it will be necessary to obtain a special arm for each type machine (which will be included at the prices quoted for reproducer only), and in ordering it should be plainly stated, for instance—Diamond "B" reproducer for Standard; Diamond "B" reproducer for Gem, etc.—which will prevent misunderstanding.

It is also stated that while the diamond-pointed reproducers may not be used on wax records, the four-minute reproducers with sapphire points may be used on the "Blue" Amberol records.

On and after October 1 all phonographs will be of four-minute type only, and Amberola, Concert, Triumph and Home machines will be equipped with Diamond reproducers, while Standards, Firesides and Gems will be regularly shipped with model "N" reproducers, fitted with sapphire point, all at present list prices.

Recorders will not be included as part of the Triumph and Home outfits in the future, and

where desired must be purchased as an extra, at regular list and discount.

Shipments of phonographs with Diamond reproducers began about October 1, and of Diamond reproducers as extras, also combination attachments with Diamond reproducers, shortly thereafter.

In view of the marketing of the "Blue" Amberol records, special return allowances have been made for jobbers and dealers which have been explained in the circulars sent out regarding the new records, machines and attachments.

In connection with the issuance of the new records, Thomas A. Edison, Inc., has prepared, for the benefit of the jobber and dealer, an attractive booklet which explains the various features of the "Blue" Amberol record and its valuable features at length for the purpose of interesting the phonograph owner or the prospective phonograph customer. The excellent tonal and wearing qualities of the new records are expected to prove the means of materially increasing the demand for cylinder records and reviving the interest of those who own machines, but who have grown tired of them.

WORKING TO FULL CAPACITY.

The Standard Gramophone Appliance Co. Experiencing a Great Demand for Its "Start and Stop" Device—Additional Equipment Installed in the Factory.

The Standard Gramophone Appliance Co., of 173 Lafayette street, New York, manufacturer of the Simplex "Start and Stop" and other devices, is enjoying a most prosperous season. Its new and commodious factory is working to full capacity, and in order to meet increasing demands it has become necessary to install additional equipment.

That the "Start and Stop" has met with approval is evident from the many large orders filled in the last fortnight. A visitor to the factory is impressed by the evident signs of prosperity on every hand. The orders have multiplied so rapidly in the last few weeks that the shipping department has been taxed to the utmost to cope with increasing requirements.

In order to make visitors feel entirely at ease a guide is always waiting to accompany callers throughout the factory and explain the workings of all the different pieces of machinery. This service is very much appreciated by the talking-machine men who have paid the factory a visit, and the large numbers of visitors have all spoken highly of the modern equipment in the new factory. The company is growing steadily, and for a young concern its expansion is truly remarkable.

THE VICTROLA FOR LECTURES.

George R. Duppy, Manager of Talking Machine Department of Sherman, Clay & Co., in Seattle, Arranges for Series of "Musical Talks," by Mrs. Lilly Van Ogle.

(Special to The Talking Machine World.)

Seattle, Wash., Oct. 5, 1912.

Something very novel, dignified and in keeping with the character of the Victor talking machine is the series of Victor concerts arranged by Geo. R. Duppy, manager of the talking machine department of Sherman, Clay & Co., this city. Arrangements have been made with Mrs. Lilly Van Ogle to give a series of "Musical Talks" on the opera, illustrated with selections on the Victrola during the fall and winter. Mrs. Van Ogle, owing to her long residence in Berlin, has had exceptional opportunities to study with such renowned teachers and artists as Josef Lhevinne, Harold Bauer and Leopold Godowsky.

The first talk which occurred this month, when Mrs. Van Ogle discussed the opera "Carmen," was a most delightful affair. There was no public announcement of this talk through the newspapers, nor will there be hereafter, as it is the desire of Sherman, Clay & Co. to have as guests their friends who are at liberty to bring any guests they choose.

Among the subjects listed for future talks are "Faust," "Mme. Butterfly," and other well known operas. These unique musical events are held in the auditorium of the new Sherman, Clay & Co. building, adding still further to the prestige of the Victrola. At the first concert the hall was crowded, although the weather was unusually warm.

The talking machine trade in this city and throughout the northwest as a whole is making an excellent showing. The talking machine men kept things at a lively pace even during the summer, with the result that there have been most satisfactory continuous results. In his efforts to place the talking machine business on a higher plane, Manager Duppy is having the cordial co-operation of T. W. Searle, general manager of the local house of Sherman, Clay & Co.

ENTERTAIN LOUIS F. GEISSLER.

The executive staff and the traveling department of the Victor Talking Machine Co. gave a special dinner in honor of Louis F. Geissler, general manager of the company, recently, at the Bellevue-Stratford Hotel, Philadelphia, Pa. It was a most enjoyable gathering, and many heart-to-heart talks were indulged in between the various courses.

In Justice To Our Regular Trade

**We Are Not Soliciting New Accounts This Season
When the Demand Exceeds the Supply**

We feel under obligations to supply our own dealers' wants in so far as factory shipments will permit and not solicit new business which to supply would mean taking out of the mouths of our own regular trade goods needed by them and placing it in the hands of dealers who under ordinary circumstances look to their regular jobber for their goods.

Some jobbers look upon this outside trade as "velvet" but in taking it work hardship on their regular dealers who are loyal to them the year round.

EASTERN SERVICE IS GOOD SERVICE. BUT ABOVE ALL IT IS JUST.

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

FOR EIGHTEEN YEARS TALKING MACHINES EXCLUSIVELY

Victor-Victrola

Victor-Victrola XVI, \$200
Mahogany or quartered oak.

The instrument by which the value of all musical instruments is measured.

Each year has witnessed important improvements in the development of this wonderful instrument; and the four new styles recently introduced embody some of the most important improvements ever made.

They give to the Victor-Victrola a still more exalted position in the world of music, and make it still more valuable as a source of profit and prestige for every dealer—and the biggest selling season of the year is right at hand.

Victor Talking Machine Co., Camden, N. J., U. S. A.

Berliner Gramophone Co., Montreal, Canadian Distributors.

Always use Victor Machines with Victor Records and Victor Needles—the combination. There is no other way to get the unequalled Victor tone.

HEAVY FALL BUSINESS ON THE PACIFIC COAST.

This Is Now Certain, Based Upon Reports from the Leading Houses Throughout California—Many Improvements in Talking Machine Department of the Sherman, Clay House—New Columbia and Victor Styles Exceedingly Popular—Anxiously Awaiting Edison Disc Machine—A. C. Alvis Succeeds William Kingen in Charge of the Hauschildt Department—Blaine Buys Booth Business in Paso Robles—W. S. Gray's Trip.

(Special to The Talking Machine World.)

San Francisco, Cal., Oct. 5, 1912.

A heavy fall business is no longer a speculation with the talking machine dealers of this section. Without exception they report a splendid business during the past month. The new Columbia and Victor machines are taking so well with the trade that the distributors of both lines say their chief difficulty at present is to get enough of the instruments to fill their orders. The Edison jobbers are a little handicapped, as their prospective customers are inclined to postpone buying until the new disc machines are placed on the market, which will cause them a rush at the holidays. Inquiries are coming in already concerning holiday orders, and extensive preparations are being made by the retailers for a big Christmas business. The distributors are anxious to get in their goods as fast as possible now, so as to give the retailers every opportunity for pushing sales, but this is very hard to accomplish, as there is a general clamor over the country for the new style machines.

Sherman, Clay & Co.'s Department Remodeled.

The remodeling of the Sherman, Clay & Co. Victor department, which was under way, together with other alterations of the building, for a couple of months, is now complete, giving them one of the finest talking machine departments in America. The department takes in the entire third floor of the building and is arranged in a most convenient manner. It is provided with a number of demonstration rooms, which are light and airy, and at the same time are absolutely soundproof. The opening of the new quarters for the department and the placing on sale of the three new-style Vic-

trolas, has made September a very lively month, reports A. G. McCarthy.

Improvements at Other Branches.

The improvements undertaken by Sherman, Clay & Co. do not stop in San Francisco. They are having their building in Sacramento entirely remodeled, and the plans call for a large talking machine department which, though not on so elaborate a scale as the local department, will be a credit to the trade in that section. Sherman, Clay & Co. have purchased the stock of talking machines from the A. J. Pommer Co., of that city, and will assign the management of the new department to J. C. Van Horn, formerly with Wanamaker's, New York. The formal opening of the department will take place in about a week, with a full line of Victor machines and records.

W. S. Gray Preparing for Long Trip.

W. S. Gray, Pacific Coast manager for the Columbia Phonograph Co., is preparing for a trip North. In Spokane, Wash., which is the most northerly point of his territory, he is to meet Geo. W. Lyle, vice-president and general manager of the company, who is making his annual trip over the Coast territory extending from Spokane to San Diego. From Spokane the two will make the trip down the Coast together, calling on the various agencies on the way.

General Columbia Co. News.

The new Eclipse and Regal machines seem to be the principal feature of interest at present with the Columbia trade. Notwithstanding the fact that carloads of them have arrived here, Fred R. Anglemier, wholesale manager, says they are behind on orders. He is very enthusiastic over the new ma-

chines, which, he says, considering the price, are by far the best values the company has ever placed on the market, and while the higher class types are selling, they are being "eclipsed" by the Eclipse. C. J. Moore, traveling representative of the Columbia Phonograph Co., made a trip down through the valleys last week and is now calling on the trade in the Coast towns. He is finding things in very good condition generally all along the line, and notes a tendency among dealers to place large orders, showing confidence on their part that business is going to increase as the season advances.

Recent Trade Visitors.

Among the recent visitors in town was W. E. Lindsey, manager of the talking machine department of the Palace Drug Co., Monterey, Cal. Mr. Lindsey has been spending a vacation in and around Sacramento and stopped over here to place orders on his way home.

Another out-of-town retail dealer to spend a few days in San Francisco this week was Mr. Logan, of the Logan Music House at Salinas, Cal. He has a good-sized department and says his most successful scheme to secure business is by giving concerts at the store. He makes these real entertainments and has a regular attendance of about 150 people.

Hard to Meet Victrola Demand.

Manager Black, of the talking machine department of Wiley B. Allen Co., says the new style Victrolas are meeting with great public favor, its only cause for complaint being the fact that there is necessarily a shortage of goods owing to the large orders placed in advance for the new styles. So far, he says, the Victrola XI is taking the lead in popularity, but that the other two are not far behind. Record sales are reported very satisfactory. Joel R. Scott has recently assumed the management of the record department, to succeed Nelson J. Barkholm, who has taken the position of city salesman. Mr. Scott is assisted in the department by Miss Honda. Reports from Mr. Austin, San Jose manager, show a steady summer business, and with heavy fruit crops in the Santa Clara valley, conditions are very favorable for future trade.

Preparing for New Edison Disc Machine.

Manager Bailey, of the San Francisco branch of Babson Bros., Chicago, reports trade for the past month very good, considering the fact that no new Edison models have been placed on the market as yet. Amberola records are in great demand. Two additional demonstration rooms have been installed and everything is in readiness to rush orders through when the new disc machine is received. From the interest manifest in it at present, it will no doubt be a big boost for Edison trade.

Change in Hauschildt Department.

A change of management of the talking machine and small goods department has taken place at the San Francisco store of the Hauschildt Music Co., owing to the resignation of William Kingen. Archibald C. Alvis, formerly with the same company in Oakland, is now in charge of the department, assisted by Clarence Moran, also from the Oakland house of the Hauschildt Co.

Buys Out Booth Business.

Chas. D. Blaine, phonograph and music dealer of San Luis Obispo, Cal., has purchased the stock and phonograph supplies of Fred G. Booth at Paso Robles, and will continue the store as a branch of his other house. It will be under the management of Mr. Booth, and from it all the northern part of the county will be supplied. This will enable Mr. Blaine to devote his attention to the southern end of the business.

LOOKING FOR NEW FACTORY SITE.

According to reports the H. Schroeder Hornless Phonograph Co. is looking for a suitable factory site and is considering Fairground, N. Y., as a possible location. The company claims to have \$500,000 capital and expects to employ 200 people or more at the start. The headquarters of the company are in New York. H. Schroeder is well known as an inventor in the talking machine field and for some time had a small experimental and manufacturing plant in the Bronx.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

BUSINESS IN CLEVELAND ON BROADER LINES.

Jobbers and Dealers Make Gratifying Reports Regarding the Expansion of Trade—Interviews with the Leading Men of the Business Indicate a Volume of Trade This Fall and Winter That Will Be Unprecedented—Cleveland School Board Contemplating Adding Moving Pictures and Stereopticon Views to the Present Social Center Course of Victrola Concerts—Many New Columbia Agents Reported by Columbia Manager—T. H. Towell Interested in Automobiles—Other News of General Interest.

(Special to The Talking Machine World.)

Cleveland, O., Oct. 9, 1912.

Regardless of the Presidential campaign and its outcome, of what the next Congress may do with the tariff, of whether women are granted the right of suffrage or not, of what is done with the trusts, and of whether or not the voters shall take a more direct part in government, the talking machine dealers of this city are moving straight ahead and doing a more successful business than ever in their history.

There was manifest improvement in the trade during September, and October has inaugurated business on broader lines, indicative of an unusual successful season. Helpful propositions from the manufacturers, not only in an active campaign of publicity, but in the offerings of new models, with wonderful improvements relating to the four new style Victrolas, the new Columbia hornless graphophones, the new Edison disc machine and "Blue" Amberola records, and the U-S Royal and other new products of the U-S Phonograph Co.

Increasing sales and inquiries are reported by all the dealers, more especially for the latest products, and include all styles, from the popular low-priced to the most expensive ones. The sale of records, covering the entire lists, shows a widespread interest and is growing to wonderful proportions.

The Cleveland school board have under consideration the question as to whether there are sufficient funds to enable them to add moving pictures and stereopticon views to the present social center course of Victrola concerts. It is more than likely the plan will be adopted.

C. Buhl, president of the Buhl-Sander Co., of Chicago, spent several days here the last of September demonstrating and taking orders for the "Phonostop," a new patent applied for disc record stop. He said he was meeting with good success.

T. H. Towell, president of the Eclipse Musical Co., with others, has organized the Cadillac Automobile Co., of Cleveland, with a capital of \$50,000. Mr. Towell is president and treasurer of the company, which will have the distribution of the Cadillac in the Cleveland district. His large acquaintance, geniality and extended business experience insures the success of the enterprise.

Geo. R. Madson, manager of the Columbia store here, reports business moving very prosperously. Sales in September of a large number of machines and records closed an unusually successful month's trade in both the wholesale and retail departments. He said there was perceptible improvement in business generally and that sales of the highest grade machines were common, as well as for the cheaper machines, cabinets and records.

Dealers handling Columbia goods, the H. M. Brainard Piano Co., H. D. Berner, in the Taylor

Arcade, Brown Bros., Aldrich, Harvey & Co., K. Svehla, of Cleveland, and A. O. Wright, Berea, and Shinn & Crombie, Oberlin, are all doing a large increasing business.

Affairs with the W. H. Buescher & Sons Co. are of the most roseate character. "Business is fine," said Irving H. Buescher. "We have increased our sales force and now have six on the floor, and they are kept constantly busy. The summer sales have been compared with last year's and we made a big gain in spite of the fact that we changed our location in the middle of the summer.

Mrs. E. I. Leighton, nee Edna Rankin, is now connected with the Buescher Co. She is well known in this line and is a very popular and capable saleslady.

"Business is moving along prosperously and very satisfactorily," said A. O. Peterson, manager for Lawrence H. Lucker, jobber of Edison phonographs and records. "Orders from dealers in this territory," he said, "are coming in steadily and with increasing frequency, indicating they are already making preparations for the coming holiday trade. I am receiving many inquiries and booking orders for the new disc machines, also for the new unbreakable Blue Amberol and Concert records."

Increasing business has forced the Hart Piano Co., 33-35 The Arcade, to enlarge the talking machine department by the addition of two demonstration rooms. Mr. Hart stated he was agreeably surprised with the large volume of trade the department was attracting for both the Victor and Edison lines.

The new talking machine department in the store of Wm. Taylor Son & Co. has been fitted up in beautiful style, conjointly occupying the art rooms. The company has put in a commodious line of Victor machines and records, and are prepared to meet the wishes of all classes of customers.

T. H. Towell, of the Eclipse Musical Co., is one of the busiest of busy men nowadays, supervising the daily receipt and shipment of Victor goods. "Business in the wholesale department is fine," he said. "It has increased 50 per cent. over the same period of last year. Dealers are ordering machines and records liberally, covering all grades, from the cheapest to the highest priced.

In accord with the other dealers, the most satisfactory conditions are reported by Collister & Sayle. Bessie M. Grabler, in charge of the talking machine department, said business was good, both retail and wholesale, and that the past month had been a very busy one. The favor with which the new Victrolas had been received was said to be surprisingly good.

"We are very well satisfied with the way business is coming along in our new location," said F. B. Guion, of the B. Dreher's Sons Co. "We made

a considerable increase in sales in September over August, and made a number of sales of the high-priced machines during the past month—in fact, our sales of Victrolas were larger than during any previous month."

Marked activity and an optimistic feeling are prevalent at the Bailey Co. store. E. A. Friedlander, manager of the talking machine department, said: "Business is good. We are having a fine trade in machines and records. We are fitting up a large room especially for the display of the Edison Home kinetograph and will give daily exhibitions and expect to attract many customers." Mr. Friedlander has opened new display quarters and two demonstration rooms in the most prominent position on the floor, directly in front of the elevators.

"The Victor-Victrola X and the Victor-Victrola XI are the two articles that are attracting most attention just now," said O. E. Kellogg, of McMillin's. "We have made a number of sales and are having numerous inquiries. They are making quite a hit."

R. W. Schirring, manager of the talking machine department of the Caldwell Piano Co., said: "Machines are in active demand, and we are having a fine record trade, which is daily increasing."

Extensive arrangements have been made in the talking machine department of the May Co. for a large fall trade. Miss Ethel M. Volk, manager, said business was good and improving.

The most prosperous conditions exist at the store of Chas. I. Davis. He says it is not so difficult to dispose of machines and records as it is to obtain the goods from the factories. He is superintending the opening of the new talking machine department in his store at Buffalo, which occupies an entire floor.

D. Gold, located at 8310 Woodland avenue, occupying unpretentious quarters, is doing a prosperous business in the talking machine line. He sells and repairs all kinds, carrying in stock principally the cheaper grades suited to the customers of his environment.

J. Witt, of the Witt Music Co., Lorain, O., the graphophone dealer of that city, frequently visits the Columbia headquarters here. Meeting him recently, he said: "Our enterprising city is growing rapidly, and with it the talking machine business is thriving in the most satisfactory manner. We are doing a fine business, which is constantly expanding, and the prospects for a big fall trade are very bright."

Sales Manager G. M. Nisbett, of the U-S Phonograph Co., recently spent a few days in Canada on a pleasure jaunt exclusively, accompanied by Mrs. Nisbett. Notwithstanding wet weather was experienced during the whole trip, he says they had a most enjoyable time.

QUALIFY AS VICTOR DEALERS.

Among the recent piano houses that have qualified as Victor dealers are the Hallet & Davis Piano Co., of New York, who have just remodeled their warerooms at 125th street, near Fifth avenue. In the alterations just completed a number of special Victor rooms have been allowed for.

The Edison

The Opera

This type has a powerful double spring motor, geared to body. It plays Amberol Records only, and is equipped with the new style Model L reproducer which is stationary, the mandrel feeding the record past. Furnished in mahogany or oak with self supporting wood cygnet, horn to match.

All Edisons have

The right home tone.

The sapphire reproducing point.

The long playing, smooth running motor.

NEW YORK, OCTOBER 15, 1912.

IN the great campaign of education which is being conducted to enlighten our legislators and the general public regarding the bill, fathered by Congressman Oldfield, which contemplates interference with the manufacturers' right to regulate the prices at which his goods may be sold, the contribution of Eldridge R. Johnson, president of the Victor Talking Machine Co. and reproduced elsewhere in this issue of *The World*, is a most important document—one that merits the closest reading.

Mr. Johnson goes to the very heart of the subject and studies it from varied viewpoints. No one who reads this forceful, argumentative and convincing presentation of facts entitled, "Price Cutting—A Restraint of Trade," cannot help but realize that the suggested Oldfield amendment to the present patent law, should it meet with legislative approval, would work a distinct injury to the best interests of the manufacturers and trade of this country.

The talking machine industry would be particularly affected, because from the very start it has been conducted on a very high plane. The type of men engaged in the business is above the average. And it is all due to the maintenance of fixed prices, and the absence of those competitive wars which come into being with elastic, or cut prices.

THIS subject of price-cutting is particularly well covered by Mr. Johnson when he says: "Price-cutting is generally confused with competition and, while it may be so classed, there is a very great and important difference, as many forms of price-cutting are unquestionably unhealthy competition. It benefits no one save a class of price-cutters who could very well be dispensed with, for they live and grow rich by breaking into and diverting to themselves the good-will of a trade that others have created. They never build up a business, but invariably appropriate that which someone else has created. The foundation on which their business stands is not constructive, but destructive and monopolistic. They sell at less than an ordinary percentage of profit if, by so doing, the trade that is going to many others can be diverted to themselves. This is the whole story. There would, of course, be a public gain in this were it done fairly and in good faith, but more than often it is not done fairly, or even decently, and is but the means to an end that has aroused so much indignation in this country—monopoly. There are many legitimate occasions to reduce prices, but such occasions are temporary and have no relation to professional price-cutting."

Our national legislators, even our state lawmakers, cannot fail

to be impressed with the fact that the price cutter, and particularly the man who cuts prices on a standard article, is not considered as having a legitimate standing in the business world. In fact, the discussion of the Oldfield Bill, and the discussion which has arisen over the statement of Justice Holmes in the Miles Medicine Case, in which he refers to "Knives who cut reasonable prices for mere ulterior purposes of their own," has given an opportunity to the business man to show to the public exactly where the price cutter stands in the business community, and to expose the methods he used to "bunco," or hoodwink, the majority of his customers.

MR. JOHNSON is a keen student of trade and economic conditions and he presents such a masterly array of facts against the passage of the suggested amendment to the present patent law that no one, free from prejudice, can fail to be impressed. He has made one point in particular which has come in for editorial mention and approval in the *New York Sun* and other papers when he says: "The suggested amendments to the present patent law may be in response to the needs of the present administration in enforcing the Sherman anti-trust law, but should the administration change a law that has been working entirely satisfactory for more than one hundred years in order to punish a few who may have missed it?"

This is the situation in a nutshell, and it is a point well worthy of consideration.

This little volume of Mr. Johnson's should prove a stimulus to members of the talking machine trade not to relax in their campaign, during the present recess of Congress, against the effort being made to undermine price stability. They should keep in touch with their Congressmen and Senators and reiterate their position as opposed to this legislation to the end that when Congress opens there will be a solid front on the part of the manufacturers and dealers of this country—at least those who believe in business advancement and progress along the right lines—so that the efforts of Mr. Oldfield and his associates may be thwarted.

THE patent situation is further handled in a very illuminative way in a recent letter sent out by the Victor Talking Machine Co., and it contains many supplementary facts in connection with Mr. Johnson's arguments that really compel consideration by reason of their pertinence to the subject under discussion. After pointing out that a number of new bills most dangerous to general business interests had recently been introduced in Congress, it says:

"The purposes of these bills are to prevent the regulation of prices by manufacturers either through the patent laws or any other method whatsoever. They are based on the erroneous theory that the manufacturer has no rights, interest or responsibility in goods after they leave the hands of the original producer. These bills are aimed at the so-called trust monopolies. No doubt their authors are acting in good faith, but they do not understand the true situation. These bills will not only fail to accomplish the object intended, but will foster certain classes of monopolies, based on price-cutting conspiracies from which the public as well as honest manufacturers and merchants are already sadly in need of protection.

"It is necessary, in order to carry on many lines of modern business, to have fixed policies and fixed prices. These policies and prices are regulated according to the character of the commodity dealt in and the quality of the goods produced, and can only be maintained by the maintenance of that certain standard of quality or by the fairness of the policies. All the better classes of manufacturers market their goods by some such system either through the patent laws or by refusing to sell to price-cutters. A complete estoppel of such a beneficial system would produce a chaotic condition hard to realize. It is only the sweatshop manufacturer and the producer of goods of poor quality that care nothing about the price at which their goods are sold or the conditions under which they are sold."

MANY of the great producing combinations have systems of distribution entirely under their own control. This class of manufacturers and producers are not always dependent on patent protection, nor are they dependent upon the ordinary means

Merchandising, Selling and Operating Plans.

PLANS that are outlined early usually mature best. Many merchants delay business plans for fall and winter to such an extent that they are apt to lose some of the finest results of seasonable trade.

Business problems should be solved now instead of later, for there is but a portion of October left and with November looming up it is not wise to delay placing orders until too late or until a time when the delay may be expensive and annoying.

Merchandise stocks must not only be assembled in warerooms and in the different departments before trade actually opens up, but selling and operating plans must be formulated that will further the movement of goods.

Plans for stimulating trade must be not merely outlined, but must be completed and problems of administration and systematization must be worked out; also the personnel of the sales and operating forces must be looked into as well as important items relative to the store's physical accommodation.

Merchandising, selling and operating plans are never good until they are well matured.

They cannot be devised and applied simultaneously to fit the problems of selling. Therefore, the farther ahead the average merchant can look, the clearer his survey of the road and the smoother his going.

Already much of the merchandise in many lines of trade which will form the basis of business later on has been bought, and it is quite time that talking machine merchants obtain an accurate line on the fall campaign while October is still on the calendar.

Now is the time to get the whole machinery of business into careful working order, and now is the time to begin getting up steam to run the machinery—that is, if full merchandising speed is expected when the flood tide of business actually reaches us.

A careful survey of business possibilities in the local fields should be taken at this time. Has the population of your city and town increased within the year? Since last fall has any material change taken place in the population with direct reference to the absorption of talking machines and records? Has the percentage of high-class trade increased?

Are there many newcomers to your city whom you have not canvassed directly in order to acquaint them of your store—its line of instruments and its service?

All of these things require minute consideration and should be looked into with a view of meeting every new circumstance of trade with force, precision and directness.

Then, again, have you a clearly formulated idea of how your store measures up with other stores in your vicinage with special reference to competing lines of goods?

If you have failed to do this, now is the accepted time to analyze the situation.

The talking machine merchant with keen foresight should see to it that the individual members of his sales force obtain an intimate knowledge of the various lines of instruments which he handles.

Every salesman should acquaint himself thoroughly with the different styles of machines and how they fit into different selling plans.

Every salesman should understand the kind of advertising put forth daily, not only by the establishment with which he is associated but by others in his vicinage, and the proprietors should see to it that there is no haphazard advertising.

Space in newspapers may be a source of great loss at any time unless that space is wisely used.

There are many things to consider in the fall campaign, but the ones which I have outlined are well worthy of the careful consideration of readers everywhere, for we should remember that securing a profitable business is largely a matter of being equipped to handle it when the proper time comes, in response to well directed efforts to stimulate business. Being in full readiness to handle fall business is pre-eminently a matter of foresight and planning ahead.

There are in the business world of America too many men who do not give the whole business situation the careful study which it deserves.

They go at it in a haphazard way with plans perhaps not varying from those of years ago, thus forgetting that the world is constantly changing; and the business man who fails to adjust his machinery with the changing times will be thrown in the scrap heap of trade failures unless he remodels his plans so that they conform to a 1912 setting.

EDWARD LYMAN BILL.

of advertising and distribution. Most of these enterprises are a great public benefit, and, fortunately, they can change their methods faster than the laws can be changed to interfere with them. But the great middle class of producers and manufacturers, such as those that advertise extensively and sell through jobbers to the retailers, would get the full force of a blow that would prove more disastrous and confusing to general business than any legislation yet suggested.

The writer of this letter says furthermore: In defense of the public, the maker upon placing his name and the specifications on an article, giving the purchaser a clear and truthful conception of the value of the purchase, should be allowed to regulate the retail price by a contract with the retailer, whether the article is patented or not. This plan under reasonable restrictions is practical, and we believe a constitutional right if labor is worthy of its hire. This would stop the tendency to abuse the patent law; would encourage the production of a better grade of goods; would show up the makers of the poorer grades of goods; would protect the purchaser against cheap goods marked at a high price; would check the tendency to combine among manufacturers; in short, its every influence is for good. On the other hand, absolute prohibition of price control is an innovation with which no civilized community has as yet had experience. It is Oriental in principle and a backward step. It would encourage monopolistic combinations; reduce the average quality of goods manufactured to worthlessness by making the selling price the only feature of competition; would breed labor troubles by making wage reductions necessary; in short, every influence is for the bad.

THE whole idea of totally and unconditionally prohibiting price control is wrong, and the quality of goods made in the United States has rapidly deteriorated since this policy has been pursued, and will continue to deteriorate until a more intelligent policy is adopted.

None of the bills offered by individuals or by Congressional Committees for changing the present patent laws, or for regulating methods of trade, should be even considered by Congress. No doubt beneficial changes can be made, but each subject to be considered should be assigned to a commission composed equally of business men and Congressional representatives appointed by the President. These commissions should give each subject careful consideration, and submit a report to Congress from which intelligent bills could be drawn.

These questions are all of great importance, and bungling legislation will have a far more disastrous effect in these matters than anyone is likely to conceive of without careful study of the situation from the standpoint of long experience in business affairs.

DO not lose sight of the great fundamental truth—the value of advertising—its trade-pulling power depends on individual advertising in your local newspaper over your own name. The royal route to success and the shortest route is by personal appeal—letting the folks at home know who you are, where you are and what you have to sell. Thus you help the manufacturer who creates the national demand for talking machines. Local publicity tells readers where the advertised goods may be obtained and this co-operative work brings about mutual benefits.

There are still some not-yet-Columbia dealers who don't positively know that they are absolutely at liberty to carry the ready-money Columbia line along with their present lines and let their customers have the privilege of doing a little choosing without going across town or down street.

Tribune Building, New York**

MCMENIMEN DISCUSSES VITAPHONE CO. POLICY.

Secretary and General Manager of the Vitaphone Co., Who Has Had a Long and Varied Career in the Talking Machine Field, Reviews Recent Accomplishments—The Principle Upon Which the Construction of the Vitaphone Is Based—Some of the Patents Controlled and What They Cover—The Vitaphone Machine Plays Any Disc Record.

H. N. McMenimen, secretary and general manager of the Vitaphone Co., manufacturer of the Vitaphone, at Plainfield, N. J., in an interview recently with The World representative, gave some interesting facts anent the products and policy of this company. Mr. McMenimen is credited with being the first traveling man to sell disc goods and he is considered an authority upon talking machine matters.

"It has been my fondest hope and desire for years," said Mr. McMenimen, "to see the talking machine made a musical instrument of the highest order, realizing that the talking machine is the one musical instrument that combines all musical instruments. For a long time I have watched C. B. Repp working out the details of his basic principle of a wood vibrating arm, the perfection of which would bring out all the musical tone that the record has in it. No better evidence of the realization of this can be found than in the quality of rendition of all classes of records from the smallest machine manufactured by us, retailing at \$12.50.

"The scientific and mechanical principle of the Vitaphone is simply a process of taking advantage of the knowledge gained through all wooden musical instruments—vibrating tones by a molecular displacement in the molecules of the wood and being applied to talking machine reproduction. If one were to take a string of a violin with a tin body and draw the bow across it, nothing would be secured but a very nasal metallic screeching sound, whereas the constant displacement of the molecules of the wood in the body gives that sonorous, sweet tone that has even caused destinies to fall."

"Your explanation of the Vitaphone principle is fine, Mr. McMenimen," commented The World man, "but how about the patent situation?"

"As to patents," answered Mr. McMenimen, "this company controls all the patents secured by Mr. Repp on the basic principle of reproducing and recording sound. Chief among the basic patents is No. 1,003,655, issued September 19, 1911. This, together with the many applications which he has at the present time in the Patent Office, gives us a position that cannot be successfully attacked by any company or persons, for the simple reason that we have not followed anyone in making our products, but have worked out an entire new basic principle of reproducing and recording. We have had the advice of the most eminent attorneys knowing the art of sound production, and not one of them has been able to discover that the principles utilized in the Vitaphone have ever before been used in talking machines, or to cite an instance where we in any way infringe any existing patents. We intend to maintain our position in every way possible, and shall prosecute all infringers of our patents, as well as resist any attempt that may be made to litigate us through unreasonable claims

or selfish motives. Beyond the question of a doubt our position will be maintained and the Vitaphone will be shown to be not only the best reproducing machine ever offered to the trade, but one that comes into it with a clear title."

"What are your general styles of machines?"

"These will be hornless constructed machines that can be equipped without the use of tools, time or ingenuity, with horns of any type in order to

H. N. McMenimen.

satisfy the public who demand a big volume of tone. We have a line of solid wood horns ranging from a 16-inch bell to a 22½-inch bell horn that we will catalog as an extra. While the public seems to demand a hornless constructed machine, yet most of us in the trade realize that the horn presents a greater detail and volume of the reproduction. This has been shown by the number of orders that we have on file at the present time. However, the fact that we can use a horn on our hornless constructed machine is a very great advantage to both the dealer and the public."

"And the records?"

"The Vitaphone is capable of playing any known cut of disc record equally as well as it will play the Vitaphone record. A simple change of the position of the tension spring causes the arm to take either the lateral or vertical cut vibrations."

If the plans of the Vitaphone Co. mature as

they have been formulated, the shipping production of the present factory will be soon over 200 machines a day. The production of the present works has been sold for a number of weeks in advance, and Secretary McMenimen says it is discouraging to look at the pile of inquiries and orders every morning, knowing that they cannot cope with the situation. When the new factory is built there will be enough goods to go around—unless the demand grows with it as it gives promise of doing.

A REMARKABLE BOY SINGER

Is Walter Lawrence, Who Has Just Made Records for the Columbia Phonograph Co.—Two Examples of His Versatility.

The Columbia Phonograph Co. has just secured two selections of unusual interest. These are records produced by Walter Lawrence, the famous boy soprano of All Angels Church, New York City. In this connection it says: "For the first time in the annals of recording art, a perfect voice of a boy soprano has been adequately recorded." The Columbia Co. has just cause to feel proud of the new records—they are remarkable in every way.

Walter Lawrence is only twelve years of age, and possesses a wonderfully sweet and clear voice. He is not a prodigy in any sense of the word, but a normal, healthy, American boy, gifted with a remarkable voice. He is acknowledged to be the greatest boy soprano in the United States. His first selections comprise two famous coloratura numbers, calculated to tax the resources of the most experienced, and which this gifted boy executes with the grace, and finish of the great artists. They are "With Verdure Clad" from Haydn's "Creation," one of the most melodious and perfect examples of the old oratorio forms, and the light and dainty measures of Dell Acqua's "Villanello," (The Lark's Song)—a coupling of compositions, in which the contrast serves to accentuate the versatility and high musical intelligence of the young singer.

A GREAT ADMIRER OF THE VICTROLA.

Joseph Sheehan, for many years the principal tenor of the Savage Grand Opera Co. in New York, and who later organized the Sheehan English Opera Co., touring through the West with great success, is a great admirer of the Victrola. Mr. Sheehan has found this instrument most helpful, and on the train, at the hotel, and, in fact, whenever and wherever possible the members of the Sheehan Co. played, listened to, discussed and profited by Victor music. This is in line with the policy of a great number of vocal teachers, who consider the records of noted singers most valuable in getting proper ideas of phrasing, interpretation and all the vital considerations which the singer must observe.

The W. F. Frederick Co., Pittsburgh, Pa., is devoting one whole side of its immense main floor to Victor booths and reports a great business in this line.

Breakage Loss Eliminated

Fit Any Phonograph

STATE OF NEW YORK, }
COUNTY OF ERIE, } ss.
CITY OF BUFFALO }

EDWIN H. FORSTER, being duly sworn, deposes and says, that he resides at No. 129 Laurel Street, in the City of Buffalo, New York; that since April, 1909, he has been employed at the PEOPLES' ARCADE, operated by the Automatic Exhibit Company, at 206 Main Street, in the City of Buffalo, New York; that he has entire charge of the phonographs and other machines at said arcade, including Edison and Columbia phonographs and other coin machines; that he also has entire charge of the repairs and adjustments on these machines and of changing the selections or records.

Deponent further says that U. S. PHONOGRAPH CO. "EVERLASTING" RECORD No. 219, "LA SECRET—BELLS SOLO—BENZLER" was placed on one of the machines in said Peoples' Arcade by deponent and that at that time the automatic register on said machine, which shows the number of times the records on this machine had been played up to that time, was 60,812; that at the time the said record was removed from this machine, the automatic register thereon bore the number 113,233; that the said record, therefore, was played on that one machine, without interruption 52,421 times.

Deponent further says that U. S. PHONOGRAPH CO. "EVERLASTING" RECORD No. 223 "PETER PIPER MARCH—XYLOPHONE SOLO" was also played on one of the machines at the Peoples' Arcade; that the automatic register number on said machine at the time the record was placed thereon was 41,591 and at the time the said record was changed, the automatic register bore the number 82,035; that the said record was therefore, played without interruption on that one machine for 40,444 times.

EDWIN H. FORSTER.

Sworn to before me this 28th day of November, 1910.

TALKING MACHINE TRADE WAS NEVER BETTER.

Milwaukee Dealers State the Demand Makes It Difficult for Them to Keep Stocks on Hand—Excellent Crop Conditions Help Sales—New Types of Machines Prove Popular with Public—A. G. Kunde Calls on Wisconsin Dealers—Will Oakland Shows How Records Are Made—Lawrence McGreal Home from the East—Recent Trade Visitors.

(Special to The Talking Machine World.)

Milwaukee, Wis., Oct. 9, 1912.

The talking machine business was never better at this season of the year than it is at the present time, according to jobbers and retailers. In fact, all expectations have been exceeded and a feeling of genuine optimism is noticeable everywhere in the local trade. Dealers all over Wisconsin seem to be rounding up a big business and are forced to file duplicate orders with jobbers for records, supplies and machines. Local dealers are so rushed that they are meeting with considerable difficulty in keeping their stocks up to a point where the trade can be satisfied.

General business in all lines in this section of the Northwest has taken on new life during the past month. Fears that the corn crop, all important in Wisconsin and surrounding territory, might not ripen satisfactorily have been set aside and a bumper crop is being harvested at the present time. This, added to the remarkably heavy grain crop which Wisconsin farmers threshed this season, has resulted in widespread prosperity, and the talking machine interests are coming in for a goodly share of the money, which is flowing more freely than at any time since the days preceding the panic of 1907.

Industrial conditions in Milwaukee have shown decided improvement of late, and the big heavy machinery manufacturing plants are operating more nearly at the capacity point than at any time in the past five years. Working people are more prosperous than they have been in many a day, despite the much mooted problem of the high cost of living. Jobs in Milwaukee are now hunting the men, according to the recent report of the Wisconsin Free Employment Bureau, which says that there are twenty-five jobs waiting for every man who happens to be in the field for a position. All the local talking machine houses report that sales in low and moderate priced machines are exceptionally good. The call for the high-priced machine has naturally increased in direct proportion.

"Business in the jobbing and retail field is so good that we are having trouble in getting in enough stocks to meet the demands of the trade," said Miss Gertrude Gannon, owner of the McGreal retail store and head of the Wisconsin Talking Machine Co., jobber for the Victor. "The new styles of Victrolas X., XI., XIV. and XVI., which were placed on the market on September 15, have been popular from the very start and have done much to increase the general volume of business. Here again we are finding it hard to get in enough of these machines."

J. H. Becker, Jr., manager of the Victor department at the Espenhain department store, says that business has been increasing steadily. He finds the daily concerts given are most resultful.

Several good sales of Victors to the Milwaukee

schools have been made by L. C. Parker, manager of the talking machine department at Gimbel Brothers' store, since the fall opening of the schools. Manager Parker reports an exceptionally large increase in business during the month of September, as compared with the same period a year ago.

Business is so good at A. G. Kunde's Columbia store at 516 Grand avenue that Mr. Kunde has been forced to increase his sales and office forces. Keith Meyer and Roy Peterson have joined the sales force and Arthur Lembke has assumed charge of the bookkeeping.

Mr. Kunde was one of the 100 members of the Merchants and Manufacturers' Association of Milwaukee who visited the Dodge County Fair at Beaver Dam, Wis., on October 2. Mr. Kunde called upon various dealers at Beaver Dam and other points in the interests of his jobbing trade, and he reports that the trip was highly successful. Mr. Kunde gave out an interesting little souvenir. Mr. and Mrs. Kunde recently returned from a business trip to the Chicago offices of the Columbia Phonograph Co.

Paul A. Seeger, enterprising young manager of the new talking machine department at the Edmund Gram Music House, has been making some remarkably fine Victrola sales during the short time that the handsome new Gram store has been opened to the public. The formal opening of the \$125,000 establishment was held about the middle of September, and people who visited the store, which is undoubtedly one of the finest west of New York City, were evidently well impressed with the attractive talking machine quarters and the fine line of Victor machines carried, as sales thus far have exceeded all expectations.

Miss Elizabeth Hughes, who is in direct charge of the talking machine department at the Third and Garfield street store of Edward Schuster & Co., is more than "making good" in the talking machine business, and during the past month has made several Victrola XVI. sales. Miss Elsie Meisner, who is in charge of the talking-machine department at the other Schuster store at Twelfth and Vliet streets, has also made some fine sales during the past four weeks. J. W. Campbell is general manager of both Victor departments.

The Heller Piano Co., 516 Grand avenue, has secured a lease on adjoining quarters, which, together with an addition now being erected on the rear, will give the concern at least 12,000 square feet of additional floor space. Special quarters have been provided for the new Victor talking machine department, located in the new portion of the establishment, and Manager Louis Leo expects to make a special feature of the talking machine business. The adjoining quarters have been connected with the main store by archways and the

entire interior has been remodeled in a handsome manner.

William P. Hope, genial traveling representative of the Thomas A. Edison Co., Inc., in Wisconsin and northern Michigan, spent a few days in Milwaukee recently. Mr. Hope was displaying the new "Blue" Amberol records.

W. J. Augustine, enterprising young Edison and Victor dealer at Fond du Lac, Wis., is receiving the congratulations of dealers about the State as the result of his recent marriage to Miss Marie Connor, formerly a school teacher of Fond du Lac.

Will Oakland, the well-known singer, who has made so many records for both the Edison and Victor people, spent a week at one of the Milwaukee theaters recently. Mr. Oakland appeared at the McGreal retail store one afternoon, presenting several of his songs and explaining fully the system of record making. Miss Gannon and Mr. McGreal had advertised the event extensively and the new auditorium at the McGreal store was packed with people.

Lawrence McGreal, Edison jobber, has returned from a business in the East. Mr. McGreal spent several days at the Edison factory and ordered his fall stocks. He is anxiously awaiting the appearance of the new Edison disc machine, and says that dealers expect great things of the new machine. Mr. McGreal reports that the new Edison Kinetoscope, for which he has the Wisconsin State agency, is selling even better than he had anticipated. Dealers seem to be meeting with some good sales from schools all over the State.

William Voss, of Appleton, Wis.; William Schoofs, of West Bend, Wis., and Peter Kraus, of Kraus & Grau, of Port Washington, Wis., were among the Wisconsin Edison and Victor dealers who were recent Milwaukee visitors. All report that trade is brisk and that the prospects for a big fall business were never better.

CARUSO AND HIS INCOME.

First Began Making Records in 1903, and Income from That Source Now Nearly \$90,000 Annually.

Caruso's income from talking machine records, it is estimated, runs close to \$90,000 a year, and according to an official of the Victor Talking Machine Co. it has even surpassed that figure. Caruso made his first record in 1903, and he has a contract running over a long period of years with the Victor Co. While some of the ballads which he has sung are exceedingly popular, yet it is the operatic numbers that find the greatest favor, and his selections from "Faust," "Aida" and "Pagliacci" are constantly in demand.

TAKES ON HOME KINETOSCOPES.

Among the New York concerns who have recently taken on the new Edison Home kinetoscopes is the Blackman Talking Machine Co., 97 Chambers street, who received its first lot of machines late last month and already reports a surprisingly large demand for the interesting adjunct to the Edison lines.

BUSINESS EXPANSION IN THE QUAKER CITY.

Each Month Seems to Reveal Most Satisfying Conditions so Far as Business in the Talking Machine Field Is Concerned—New Styles of Machines Are Winning a Great Deal of Favor—New Quarters of the Columbia Phonograph Co. Most Attractively Gotten Up—Many New Accounts Opened by This Company—Some Estey Innovations—Cornell Retires from Wanamaker's to Develop Victor Trade—Other News of Interest.

(Special to The Talking Machine World.)

Philadelphia, Pa., Oct. 8, 1912.

With each month the talking machine business is pushing itself upward, and each month brings the same information that it was much busier than last year, and has surpassed expectations, followed by the same old complaint of the inability to get goods. The new lines of the Victor Co. have caught on well here; the Columbia Co. is just about putting the finishing touches to its ware-rooms, making them the most attractive in the city, and probably there is nothing finer in the country—at least nothing where business can be done with greater facility. The Keen-o-Phone Co. has been able to get a number of prominent capitalists interested here, so that it will have unlimited capital with which to proceed. There are many other interesting things in the talking machine life of Philadelphia which will be treated in connection with the news from the various houses.

When I asked Louis Buehn how his business was in September, he replied, "We sold some stuff in September," with emphasis on the "some." Mr. Buehn is highly elated over his business, and said that every month during 1912 has been much better than last year, and that September was exceptionally so. In fact, it was the best month they have had this year, due, Mr. Buehn says, very largely to the sale of new Victor machines. While the shipments from the factory were very good, they were not large enough by a great deal. Among the visitors to the Buehn store was Frank Stanton, who was showing the new indestructible Edison records—the hard "Blue" Amberola.

Mr. Cornell, who had been at the head of the Wanamaker talking machine department, has resigned, and it is said that he will assist in establishing Victor stores in a number of the large cities. J. C. Angle is in charge at present, but whether permanently or merely temporarily could not be learned, as Manager Commerer is out of town.

The Edison business phonograph is growing rapidly in popularity in Philadelphia. Louis Buehn & Bro. have succeeded in placing them in large numbers with prominent firms here, and they have prospects at the present time for several more large orders which they expect to close during the present month. C. Auerbach has been added to the Buehn selling force to assist in the handling of the Edison business phonograph.

Manager Walter Linton, of the Estey Co.'s Columbia department, has introduced a number of innovations into that business. Not the least striking of which is the getting out of a full page on calendared paper, which is headed "Estey Hall Bul-

letin No. 1." It contains pictures of the Estey building, both interior and exterior, as well as pictures of the various machines they handle, and a list of records that "should be in every home." These pagelets have been mailed to all the customers of the Estey house as well as to a large number of other addresses. They are getting the business there, and why shouldn't they, for they have most attractive salesrooms, a most genial manager, and machines that sell on sight, if you will allow the proverbial term.

Lit Brothers have been renovating their talking machine department. They have removed the unsightly platform and have recarpeted the department and have much better facilities for waiting on customers. They are also adding an additional hearing room to the department. Manager Elwell, of the Hepe talking machine department, reports that their business has been very good all through the month of September. "Our business," he says, "is far in excess of the supply from the factory." They have never had a September as big as the one just past. Among their recent visitors were Harry J. Halt, of Mt. Holly, N. J.; A. F. Winterstein, of Bristol, Pa.; and Harry F. Cake, of Trenton, N. J. They all report a good business in their section, with most flattering outlook for the future.

The Gimbel department is hustling these days for business, and in a few days will have added two new hearing rooms to their department. These rooms were previously occupied as offices, which will be moved elsewhere. They made a gain in September of 60 per cent. over last year. They have put on a new outside man, David Davidson, who had been connected with their piano department for a short time, and came here from Pittsburgh, where he had been connected with the Miller firm.

Word has been received in this city from Emmet Stewart to the effect that he is doing very well in his new position with Keller & Sons, Easton, Pa.

The Columbia Phonograph Co. on Saturday last finished a work which it started more than a month ago of improving its warerooms, in rearrangement, redecoration and refurnishing, which makes them in most ways among the finest warerooms in this city. They have been doing an excellent September business, and October already shows signs of even better results. Walter L. Eckhardt has certainly the right idea not only in the beautifying of the warerooms and making them very much more convenient for the business, but in every other way he has infused an unusual amount of life into the business and has started out to leave nothing undone to keep the Columbia to the front.

Since the rearrangement of the warerooms, the company is handling considerably more business than it ever handled before, and with very much less confusion.

Mr. Eckhardt was in New York last week to see the new machines that the Columbia will get out the middle of November, and he was very enthusiastic over them. He believes that when those new machines are put on sale that they will cause a sensation. The Columbia Co. here has opened a number of new accounts. It has started Charles W. Flood, 4914 Baltimore avenue, and Charles Heinle, 3501 Kensington avenue, in the exclusive handling of the Columbia here, and it has secured a number of new men in the State to handle the Columbia. They have put on some new salesmen. R. W. Jackson, for years eastern salesman for the Sheldon School of Scientific Salesmanship, is covering eastern Pennsylvania, and A. J. Heath is traveling in the northern central part of the State for the firm. The Columbia Co. has also supplied the complete stock for Guiseppe Piacentiana, who has opened a talking machine store at Pacific and Tennessee avenues, Atlantic City. The firm had orders last month for a great many Dictaphones, and it has increased its business in this line over last year more than 100 per cent. A year ago it had two men looking after this end of their business, and to-day it has eight, and where it had one traveling man in Pennsylvania it now has three.

REAL MUSIC IN THE AIR.

Aviator Takes Victor Machine with Him on Trip During Michigan State Fair—Music Plainly Heard at Height of 700 Feet.

(Special to The Talking Machine World.)

Detroit, Mich., Oct. 9, 1912.

For what is believed to be the first time in history, a talking machine went aloft in an aeroplane here a while ago, entertaining the aviator and the throng on terra firma with "The Midnight Flyer" during its flight. It was at the recent State fair. A birdman was at the grounds all the week, and one day Manager Rupp, of Grinnell Brothers, who was at the fair in charge of the Victor exhibit, suggested that he take a machine aloft as an experiment. The offer was accepted and a Victor VI. was selected for the entertainment of the angels. It was arranged so that it could be started with a string, to be pulled from the aviator's seat.

The machine soared up about 700 feet, when the aviator pulled the aforesaid string and the music started. It could be heard very plainly by the audience below. The aviator then commenced a spiral glide to his starting point, the Victor playing throughout the descent. Extensive applause greeted the landing. As 700 feet is about the height of a sixty-story skyscraper would be if there were such a thing, it is likely that this is the nearest to heaven that music ever has originated—music on mountains not figuring, for no matter how high up, it still is on earth.

"DUSTOFF" de Luxe

for discs made of Wilton fabric mounted on oxydized metal holder finished in "unique" "tigerback" design. Each in a box and 12 in a DISPLAY CARTON.
Retail at 50c. each. (In Canada at 75c. each.) Liberal discount applies.

YOUR JOBBER can supply you, or write us direct.

"DUSTOFF" RECORD CLEANERS ARE A POSITIVE NECESSITY

To all owners of talking machine records, for their use before playing adds life to the record through removing the accumulated dust and dirt from the minute sound grooves—the cause of the wear and friction in the reproducing point track. It insures a wonderfully clear and distinct tone reproduction free from scrapings, blurs and harsh sounds. "DUSTOFFS" are effective and simple to use, with no possibility of scratching the record in the least.

"DUSTOFFS" are proven "swift sellers" wherever displayed—and there is a good profit in their sale for you. We supply with every shipment a quantity of mailing circulars free.
SAMPLES SENT FREE, for inspection to rated firms, upon naming jobbers.
USE THE COUPON NOW for samples of these PROFIT-MAKERS.

Vitaphone Reproducing Device

A NEW BASIC PRINCIPLE OF REPRODUCING SOUND

A FEW of the EXCLUSIVE VITAPHONE FEATURES

VITAPHONE SOLID WOOD ARM (without metal parts) through which passes every vibration of the needle, refines and develops every note, only reproducing the self-same life-like strains that were received into the original master record; without that metallic, nasal, scratchy sound.

VITAPHONE STATIONARY SOUND BOX eliminates the necessity of carrying a floating sound box across the face of the record, tearing out the delicate sound waves, the life of a record used on the VITAPHONE is more than doubled.

VITAPHONE HORNLESS MACHINE has an amplifying sounding board that allows the sound to travel upward (not under the reproducer). By uncoupling the hornless connection at the sound box it is possible to use any size horn.

VITAPHONE WILL PLAY equally as well either the lateral or phonocut records.

VITAPHONE products are manufactured under Basic patents and we will maintain and protect in every way the exclusive rights enjoyed by dealers handling the VITAPHONE.

The Vitaphone Company,
Plainfield, N. J.

Gentlemen:-

In reply to your inquiry of the 23d inst. as to your legal standing concerning patents, and the advisability of your agreeing to protect the trade in handling the "Vitaphone" machine, I can but repeat the substance of the opinion which I gave you in writing some time ago, that the "Vitaphone" machine differs radically in its fundamental theories from any talking machine which had been patented prior to the invention of your Mr. Repp.

The tensioned diaphragm, the wooden transmitting arm and the manner of mounting same, and the adjustability of the device to both up and down and lateral out records, are the main features in which the "Vitaphone" differs from earlier machines, and, in my opinion, your product does not infringe any existing patent.

The patent to your Mr. Repp granted under date of September 19, 1911, and the pending applications controlled by you, contain basic claims of such scope as to secure to you a monopoly of your product and place you in a position where you can not only defend against attacks, but against competitive machines operating similarly to the "Vitaphone".

In view of your impregnability, both offensively and defensively, I can see no possible objection to your agreeing to protect the trade in handling "Vitaphone" machines whenever an agreement of this kind is required.

Very truly yours,

FTW/EW.

The Talking Machine Trade in New England

GRAND OPERA MUSIC VIA GRAFONOLA FOR HIGH SCHOOL.

William E. Getchell, in Charge of the Instalment Department of the Columbia Phonograph Co. in Boston, Arouses Interest of Instructors and Pupils in Springfield, Vt., School.

(Special to The Talking Machine World.)

Boston, Mass., Oct. 8, 1912.

William E. Getchell, who is in charge of the instalment department of the Columbia Phonograph Co., went up to Springfield, Vt., the middle of September, where he supervised a concert of grand opera music given in the hall of the Springfield

music. Another guest was Professor Jackson, a blind pianist, who gave selections himself between the two parts of the regular program.

While up in Springfield Mr. Getchell attended the Springfield Fair, which ran for two days, and where he was able to give considerable publicity to the Columbia outfits, as the company had a good

Grafonola Concert in Springfield, Vt., High School.

High School. The program was a most carefully and judiciously selected one, and gave great pleasure to a large company of the school and faculty. Mr. Getchell went to Springfield in the interest of the local dealer there, Mr. Wheeler, and as an admission was charged quite a goodly sum was netted with which to purchase a Columbia Nipper. Enough money was made so that a first payment of nearly \$70 was made on the outfit.

Among the interested persons enjoying the concert was Mrs. Jennie M. McCulloch, the supervisor of music in the Springfield schools, and H. D. Casey, the superintendent of schools, both of whom were most enthusiastic over the quality of the

exhibit under a large tent, which Mr. Wheeler installed.

BUSINESS MEN AS EXAMPLES.

Often Depended Upon to Set the Standard by Which Their Community Is Guided and Is Judged.

Commerce and trade concern us all. Commerce and trade are controlled largely by the business men; but not only are millions relying for livelihood upon an intimate relation to commerce and trade, but those who are not exactly engaged in

that exercise are just as much in touch with it; for the farmers, the professional men, the women, the children of the community, and those who do no active work whatever, are all customers, and as such are in touch every day with trade and commerce, and therefore are influenced to a marked degree by the standards of trade and commerce, and of the men who are engaged in trade and commerce.

If those standards are high they react throughout the community, and the tone of the community is raised; if they are not as they should be, then there is a corresponding depreciation in the moral sense of the community, so that the business men have the great responsibility of being the most conspicuous examples for good or for bad throughout the land.

CONDITIONS IN NEW ENGLAND

So Far as They Affect the Columbia Phonograph Co. Are of the Brightest, Judging from the Report Made by H. A. Yerkes, Manager of the Wholesale Department, Who Has Just Returned from an Extended Visit Over That Territory—What He Tells The World.

H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., returned recently from an extended trip through New England. Mr. Yerkes found general trade conditions excellent, and states that the political situation has not affected prosperity in the least. At Portland, Me., both talking machine and record sales have increased so rapidly that the distributing branch in that city is rearranging the store in order to accommodate the unexpected demands made on their products. In Boston, the approach of the opera season has helped to boom sales all along the line. As the Boston Opera Company performers are under exclusive contract with the Columbia Co., many new records will shortly be produced. As an indication of the prosperous conditions in Boston, one of the leading piano houses, with branches throughout New England, is arranging for a line of Columbia products for each store. At Springfield, Forbes & Wallace, who recently installed a talking machine department, are greatly pleased with the results to date. At Hartford and New Haven, the outlook for fall business is most promising, and a large department store in the former city will shortly close a deal for the addition of a talking machine department. Mr. Yerkes is now enjoying a well-earned vacation at his old home in Washington. While there, he introduced his mother to her youngest grandchild.

NOTABLE BUYERS OF COLUMBIAS.

Wealth and politics both figured in two recent sales of Columbia records made in a leading store of Portland, Me. An automobile containing Mrs. Alice Roosevelt-Longworth, Mrs. Cornelius Vanderbilt and Col. Fred Hale, son of ex-Senator Hale, of Maine, drove up to this store and the occupants alighted to make some purchases of Columbia records. Strange as it may sound, the first song chosen by Mrs. Longworth was that famous Champ Clark anthem entitled "You Gotta Quit Kickin' My Dawg Aroun'." Later in the day W. L. Douglas, the well-known shoe manufacturer and ex-Governor of Massachusetts, purchased a number of the latest Columbia records. This Portland store is doing a thriving business with Ellery Band records. The proprietor uses these records as a lever to sell instruments, as the Ellery records sound clearest on the "Favorite," which induces many persons to make exchange arrangements for Columbia machines in order to obtain the full value of these beautiful selections.

It is safe to say that every person you get into your store, or that you talk to, or who sees the displays and store before Thanksgiving Day will begin to think of Christmas and gift-giving on the day after.

Feature the new Edison Records!

55 Blue Amberol Records have appeared; fifty regular and five concert; all indestructible.

These are the new ones that you and your customers have been awaiting. The demand is there and your sales will be big, but you must have the records for demonstrations.

Send for the set—55—and make October the big record month.

At BOSTON and NEW HAVEN

THE PARDEE-ELLENBERGER CO.

NEW EDISON MACHINES with DIAMOND-POINT REPRODUCERS are also out :: Send for several

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., Oct. 16, 1912.

Thomas A. Edison, Inc., has one of the most interesting exhibits at the Electrical Show at Mechanics' building, which opened a few days ago, to continue for four weeks. The exhibit occupies a large portion of the basement under the stage in Grand Hall, and no one cannot miss the display, as at each end of the stage where the stairways descend there are illuminated signs surmounted by a large portrait of Edison. There are two discs which keep flashing out intermittently and a hand points to a "special entrance to Thomas A. Edison, Inc., demonstration exhibits and Edison disc amusement phonographs, kinetoscopes, Edison storage and primary batteries, dictating machines and home kinetoscopes."

Booths Handsomely Decorated.

When one reaches the quarters of the Edison exhibit there is a treat in store, for the whole interior is so artistically arranged that one never would realize the barren state that the space ordinarily is in. Over the top has been spread a canopy of light blue, and the walls are done in a darker blue oatmeal paper with a pretty panelled border. On one side are a series of windows with small panes, and these are curtained in a soft brown, which harmonizes splendidly with the blue. At one end is a slightly raised stage, on which are two big bay trees, and two table electroliers of stained glass. Down one side of the room are other handsome lamps. At the back of the stage "Thomas A. Edison, Inc.," blazes forth in small electric globes. On the stage and down one side of the room are

a number of Edison machines in handsome cases of different woods.

The demonstrations are entirely those of the new disc machine, and it is of more than passing interest that this is the first time that these machines have been given a public exhibition. In the apartment are a number of comfortable chairs which the visitors occupy while listening to the music, and thus does the room become a small concert hall.

Lectures on New Edison Disc Machine.

Before each concert H. R. Skelton, the New England traveling man for the Edison concern, gives a short talk explaining in considerable detail the mechanism of the new disc machine. He tells how music is reproduced in its natural state, what is the cause of the ordinary mechanical noises that one sometimes hears on talking machines, how a permanent diamond point reproducer is used on these new machines, tells of the indestructibility of the discs, tells how Edison took out patents on discs in 1908, but as he could not find a material that would meet all the requirements he did not attempt to put anything of the kind on the market. He proceeds to explain how with these discs there is no chance for leakage of good tones, how Edison found a means of holding all the vibrations that are young and strong.

How the Records Are Demonstrated.

Then Mr. Skelton takes a record and puts it on the machine so that the audience can see just how it is done, and shows how the stylus works, explaining incidentally how the movement is up and down instead of right and left, as in other disc machines. He tries out several records so that one may note the variety of reproduction, such, for instance, as a vocal quartette, a soprano solo, some orchestral or band number and others. Throughout the demonstration the audience sits in the deepest attention, and when the people hear the music one then quickly realizes that Mr. Skelton has given a very accurate description of the tonal quality of the new machines. These demonstrations are given a number of times each day and are largely attended by a most intelligent class of people, who show their interest after each recital by making innumerable inquiries.

Eastern Talking Machine Associates Meet.

The first meeting for the season of the Eastern Talking Machine Associates was held on Oct. 3 in the quarters of the company in Tremont street. President Taft presided, and when it came to the election of officers was unanimously re-elected. Mr. Chamberlain was elected vice-president, succeeding W. J. Fitzgerald; Mr. Fitzgerald was elected secretary, and Mark Read was made treasurer. It was voted to allow the women attached to the large staff of the Eastern company to become members, so they will be privileged hereafter to attend the meetings. During the winter it is planned to have a number of social features, but as the members have not the large opportunities for extensive entertaining they had in previous years they will not be able to entertain this season on so big a scale. However, their quarters are equipped with a piano, so that there always will be opportunity for good music, and among the Associates there is much good talent.

New Quarters Attract Increased Business.

Since the improved quarters of the Eastern Talking Machine Co. have been opened to the public business has shown a marked increase. The interior of the Tremont street quarters are among the handsomest in the city. The wholesale business is reported to be especially good at this time, and it is further stated that the new Victor machines are making a big hit with customers.

A Visitor from New Hampshire.

J. M. Hassett, who is the manager at Portsmouth, N. H., for F. W. Peabody, who is an Edison dealer, was in town a few days ago taking in the Electrical Show. Mr. Hassett lately was fortunate in being able to install a home kineto-

WHAT ARE YOUR NEEDLE POLITICS?

Join the ranks of the
Duplexetone Boosters

and

Cast your ballot for the needles with
the biggest reputation, the largest
profits and the most satisfaction—

DUPLEXETONE Talking Machine Needles

If you counted every intermediate tone of each slight twist of position, you could get 50 tones, but all you really require is 2 tones—LOUD and SOFT. Both secured instantly with Duplexetone Needles; there's no chasing around for different needles for different records—everything is in that ONE needle.

Write for more particulars; a booklet covering the Bagshaw service and a lot of Duplexetone samples. You'll sell Duplexetone needles at a good profit—we guarantee it. Mail us the request to-day.

W. H. BAGSHAW

LOWELL, MASS., U. S. A.

LOUD

SOFT

The Columbia Saturday Evening Post advertisement this week (printed in this issue) will give Columbia dealers a beautiful bundle of business to start the Fall with—business based on the one instrument that has become the **standard** of the world, and that needs no introduction to our dealers, but only needs prompt **deliveries**—and we are prepared for that.

Columbia Phonograph Co., Gen'l
Tribune Building, New York

FROM THE WORLD'S BOSTON HEADQUARTERS.

(Continued from page 19.)

scope on the United States gunboat "Wheeling." He has also installed complete Victrola XI. outfits on the "Wyoming" and "Arkansas."

Reports Strong Victrola Demand.

Harry Rosen, of 3 School street, reports a land office business this fall, and he says he is selling Victrolas as fast as he can get them. Mr. Rosen further states that he proposes to keep up the pace along with other dealers and jobbers, and the growth of his business has necessitated the addition of three more booths, which will be installed in a few days. Mr. Rosen, with a party of talking machine dealers, went to the Electrical Show yesterday to inspect the new disc machines of the Edison Co.

"Blue" Amberol Records Make Good.

Manager Silliman, of the Pardee-Ellenberger Co., reports a heavy demand for the new "Blue" Amberol records, samples of which are now in the hands of the Edison dealers. The diamond pointed reproducers likewise are coming in for a big demand, and those who have tried them with the cylinder records make a most favorable and enthusiastic report on them. Manager Silliman is spending considerable of his time at the Electrical Show these days.

F. K. Dolbeer, manager of the sales department for the Eastern Talking Machine Co., with headquarters over in New York, was a visitor to Boston a few days ago.

Mrs. Frances Clark to Give a Talk.

Mrs. Frances E. Clark, formerly superintendent of schools in Milwaukee, who now is superintendent of the Educational Department of the Victor Talking Machine Co., is coming to Boston on Oct. 15. At Young's Hotel on that evening she will meet a number of school teachers at dinner, after which Mrs. Clark will give a talk on the value of talking machines as an educational factor in the schools. The meeting is under the auspices of Henry B. Hall, master of the John Winthrop School, and among those present will be Mr. Dyer, the new superintendent of the Boston schools, and James M. McLaughlin, director of music in the schools. Samuel Freeman, of the Eastern Talking Machine Co., and George M. Reese, Jr., will be present in the interests of the Eastern Co., and will operate the machines, which will be used by Mrs. Clark for purposes of demonstration.

W. H. Beck Homeward Bound.

President W. H. Beck, of the Eastern Talking Machine Co., is expected in Boston shortly. Mr. Beck has been in Europe most of the summer and spent considerable time in Paris.

Mr. Chamberlain, manager of the wholesale department of the Eastern Talking Machine Co., has been spending a week up in the White Mountains, having gone north in his automobile.

Victors at Electrical Show.

George Lincoln Parker has a good display of Victor outfits at the Electrical Show in Mechanics Building. It is well arranged on the ground floor, and a part of the time Mr. Parker is there and at other times one sees Charles Trundy in charge.

Visitors are given every opportunity of inspecting the workings of these instruments.

Berkley with Landay Bros.

Herbert D. Berkley, formerly of Boston, and widely known in the talking machine business, has gone to New York, where he is now connected with Landay Bros., and he is to be located in their new store in the Longacre building, opposite the Hotel Knickerbocker. The store opened this week. Mr. Berkley formerly was with the M. Steinert & Sons Co. at their Arch street Victor department, and latterly with George L. Schirmer, of this city.

Rushing Business with Ditson.

At the Oliver Ditson Co. Manager Winkelman reports a rushing business, the month of September having shown up exceptionally well. With a most courteous staff of clerks and salesmen Mr. Winkelman is able to have all customers given polite and intelligent attention.

Francis T. White in Charge.

In the Victor department of the Henry F. Miller Co. the greatest difficulty is being experienced in getting a sufficient number of the new machines. Since the retirement of Mr. Urquhart the Victor department has been placed in charge of Francis T. White, whose valuable services to the Miller house thus are shown appreciation. Mr. White is alert, active and courteous, qualities quite essential in attaches of such a house as the Millers, with its splendid traditions.

LANDAY'S NEW PLAYER-PIANO STORE

Will Be Opened This Week—Is an Annex to Present Victor Quarters at 563 Fifth Avenue.

By the time this paper goes to press the new player-piano and music roll store of Landay Bros., Inc., will be open to the public. This new store is an annex to the present Victor quarters at 563 Fifth avenue, and presents a most attractive and pleasing appearance. The furnishings are tasteful and match the decorations of the Victor department.

The new store will be under the management of Frank W. Weems, formerly connected with the American Piano Co., and prior to that with Kohler & Chase in the West. Mr. Weems is an acknowledged player-piano expert and will doubtless be most successful with the new store. The stock to be displayed will be the American Piano Co.'s player-pianos and the well-known Rythmodik music rolls.

Clinton D. Price has opened a phonograph store at 182 Main street, Poughkeepsie. Mr. Price was for nine years in business at 293 Main street, and sold his business there three months ago to his partner, Mr. Ryan.

The Victor Talking Machine Co., Camden, N. J., in the Voice of the Victor, states that Chickering & Sons, of Boston, Mass., one of the largest piano concerns in the East, are making extensive preparations to establish a Victor department some time this fall.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

OLIVER DITSON CO., Boston, Mass.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., Oct. 8, 1912.

Both from the manner in which orders are coming in from the country dealers to Chicago jobbers and the way in which the Chicago retail trade has opened up, it looks as though we were in for an unusually large talking machine business this fall. Everybody is jubilant regarding the volume of September business and that during October so far.

The only apprehension felt on the part of the jobbers is regarding the supply of goods, and they are advising their dealers to anticipate their wants to as great an extent as possible.

The demand for the new Victor types has been something remarkable. The Columbia Co. is having difficulty in filling orders for several of its latest models, and the record demand all along the line is very heavy. All jobbers speak of the number of new accounts being opened up in the West this fall and of the high character of the newcomers in the field.

The Edison Co.'s announcement of 55 new Amberol Blue records with the new diamond reproducer has created a great deal of interest among the company's dealers, and jobbers say that orders are coming forward in a most vigorous manner.

Unique Victor Recital.

John Otto, of the talking machine department of Lyon & Healy, gave a unique Victor recital before an audience that filled the auditorium of the Reformed Church of Irving Park, Tuesday evening, September 24. All of the records, played on a Victor IV, were accompanied on the pipe organ by Miss Nettie Cleveland, the church organist. The voices of Caruso and the other Red Seal artists rang out convincingly against the rich and exquisitely played accompaniments, and it was a matter of general comment that it was hard to realize that the singers were not present in person.

Mr. Otto gave descriptive talks before the playing of each record. The program was arranged with due regard to dramatic effect. The first part ended with the voice, now hushed in death, of Charles Glibert, who died last year on the ocean bound for America, and at the close of the program the audience found themselves singing "The Star Spangled Banner," led by the voice of the late Frank C. Stanley. The program, an ideal one for rendition before a cultured audience, was as follows:

Organ Solo	Selected
Miss Nettie Cleveland		
Solo Profugo (Lost Proscribed) from "Martha"	Flotow
Enrico Caruso and Marcel Journet		
Oh, Dry Those Tears	Bishop
Evan Williams		
M'appari (Ah, So Pure) from "Martha"	Flotow
Enrico Caruso		
Annie Laurie	Scott
Miss Geraldine Farrar		
Crucifix	Faure
Enrico Caruso and Marcel Journet		
Caro Nome (Dearest Name) from "Rigoletto"	Verdi
Luisa Tetrazzini		
Largo from "Xerxes"	Handel
Charles Glibert		
INTERMISSION.		
The Lost Chord	Sullivan
Enrico Caruso		
Oh, Loving Heart, Trust On	Gottschalk
Reed Miller		
Fruhlingzeit (Spring Tide)	Becker
Ernestine Schumann-Heink		
Eternelle (Forever Thine) Garden Scene from "Faust"	Gounod
Geraldine Farrar and Enrico Caruso		
Lolita (Spanish Serenade)	Buzzi-Peccia
Enrico Caruso		
Lucia—Sextet (What Restrains Me)	Donizetti
Sembrich—Severina—Caruso—Scotti—Journet—Daddi		
Star Spangled Banner	Key
Frank C. Stanley		

An interesting coincidence was found in the fact that the pipe organ of the Reformed Church, an exceptionally fine one, by the way, is a Lyon & Healy and the last one built by them before closing that branch of their business a few years ago.

Wedding Bells.

H. R. Jones, assistant to Manager Powers, of the talking machine department of the Taylor Carpet Co., of Indianapolis, was recently married to Miss

Edna P. Tyer. Mr. Jones is well known in musical circles in the Indiana capital, his first experience being as a member of the Newsboys' Band. He developed into an accomplished musician and is making a record for himself as a talking machine salesman. Mrs. Jones is well known among the young society people of the city.

Hunting in the Northland.

Roy J. Keith, sales manager of the Talking Machine Co., left early last week for a hunting trip in the wilds of Saskatchewan, Canada. His friends in the office expect daily shipments of game from the Northland.

Good Advertising.

The Ditzell Music Co., Oklahoma City, Okla., is using large space in the local papers in exploitation of the Columbia product. They call themselves "The Piano and Grafonola House" and feature the Grafonola end of the business most vigorously and with excellent results, according to all reports.

Visitors and Personals.

George W. Lyle, general manager of the Columbia Phonograph Co., is expected in Chicago this week in the course of a general Western business trip which will take him to the Coast.

Mr. Koester, of the Eilers Piano House, of Portland, Ore., was a recent Chicago visitor.

Robert Smallfield, the well-known talking machine and piano dealer of Davenport, Ia., is spending several days in Chicago buying fall stock. He reports that last month was the best September in the history of his business.

Miss Gertrude Gannon, the capable talking machine dealer of Milwaukee, was a recent Chicago visitor.

George Ornstein, manager of traveling salesmen for the Victor Co., arrived in Chicago from the East last week and made the rounds of the job-

(Continued on page 22.)

The WADE FIBRE NEEDLE CUTTERS, No. 1 and No. 2, trim the needle at the proper angle, and the needle can be repointed from ten to twelve times, thus giving more tunes per needle than any other cutter made. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The WADE CUTTERS have an upper and a lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

The construction of the WADE No. 2 affords the most powerful cut of any tool ever made, and the blades work parallel to each other, therefore it requires practically no exertion whatever to trim the needle.

We fully guarantee this cutter in every respect, and if the blade of this cutter ever gets dull we will give you a new blade upon return of the old one.

Order from your regular Distributor—we sell to Jobbers only.

List Prices—No. 1, \$1.50; No. 2, \$2.00

WADE & WADE, 1227 East 46th Street
CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 21.)

bers. He was met here by "Doc" O'Neill, of the Victor field force, and who had been on a trip covering Atlanta, New Orleans, Birmingham and other Southern points. He reported conditions in the South as being peculiarly favorable.

Among the recent visitors at the Talking Machine Co. were Mr. Butters, proprietor of the Western Michigan Music Co., of Luddington, Mich.; R. S. Kinningham, of Danville, Ill.; Mr. White, of the Milliken-White Music Studios, Muskegon, Mich., and Mr. Jackson, of the Talking Machine Shop, Rockford, Ill.

M. P. Baukin, of Beloit, Wis., was a Chicago visitor the latter part of last week.

C. W. Parker, manager of the Victor department of the Gimbel department store, Milwaukee, spent a day in Chicago last week.

Wurlitzer's Handsome Department.

The remodeled and enlarged retail talking machine department on the ground floor of the Chicago store of the Rudolph Wurlitzer Co. will be completed in another week or ten days and will rank with the very finest departments in the country. Full description is postponed until everything is in shape and photographs can be presented, but it may be said that a number of new ideas have been embodied in the enlarged department which will be of decided interest to dealers everywhere. A method of wall construction has been secured which, it is believed, will make the booths as soundproof as it is possible to make them. There are fourteen record demonstration booths, all beautifully decorated and in the Tiffany finish in various shades. The booths are on either side of an aisle in which the record shelving is placed and from which the record clerks work. The customers' entrance to the booths are from aisles on the sides of the booths opposite from the court or aisle in which the record shelves are located. The large store formerly known as the "annex" and hitherto devoted to pianos has been added to the talking machine department. The rear half is taken up with four large machine demonstrating booths and a general machine display room, while the front half has been fitted up as a concert room with a commodious stage. Here daily recitals will be given. The entrance to the concert room is directly to the right of the entrance from the street, and those wishing to hear the concerts do not have to run the gamut of salespeople.

Phenomenal Business Rush.

At the office of the Talking Machine Co. there was every evidence of a business rush unusual even for that busy institution. "The demand for the new types of Victor machines has been simply abnormal," remarked General Manager Arthur D. Geissler. "Notwithstanding the greatly increased capacity of the Victor plant and the extended preparations made to meet the demand, the volume of business has been so great as to make it impossible for the jobbers to fill promptly all the orders that are flooding in. We hope, however, that there will be something of a lull after the first reorders have been satisfied, and I am inclined to think that at the present high rate of speed at which the Victor organization is turning out the new types that there will not be much of a shortage for the holiday trade. The business this year has certainly been wonderful. Up to October 1 our business showed an increase of 33 per cent. over last year, and September, notwithstanding the shortage of the new types, was away ahead of the same month of last year."

Business Records Broken.

"We always expect September to mark the opening of the fall trade, but last month broke previous records in that regard," said L. C. Wiswell, of Lyon & Healy. "It was a wonderful month both in wholesale and retail—one of the best opening months we have had in our history. The demand for all of the new types of Victor machines has been exceptional. The \$100 to \$150 machines lead, perhaps, but the \$200 type is more than holding its own. The demand record orders have been exceptionally good and the dealers are generally preparing for a fine fall business."

"The new Edison Amberol cylinder records and the new diamond pointed reproducers, which have

just been announced for sale, constitute one of the best cylinder propositions I have ever seen placed on the market, and the orders are coming in from the dealers most satisfactorily."

Siemon Visits Victor Factory.

F. A. Siemon, assistant manager of the Chicago house of Wurlitzer, spent several days the latter part of September at the Victor factory, Philadelphia and Cincinnati. He says that the Victor Co. is straining every nerve to meet the demand for the new types of machines, and that with its greatly increased output he believes that there will perhaps not be as great a shortage as last year, although it does not seem possible that the great demand can be met altogether if it continues at anything like the present rate. The September business was unusually good, one of the best months in the history of the Chicago house. There is a general feeling of confidence among the dealers, and an especially encouraging feature is the number of desirable new accounts being opened up.

Opens New Department.

A Victor department has been opened at the branch store of Louis Weber & Co., on North avenue, under the general charge of Mr. Eggerstedt, who has charge of the Victor department at the main store at Van Buren and Clark streets.

Improve Warerooms.

Manager C. F. Baer, of the Chicago office of the Columbia Phonograph Co., is making various improvements to its retail warerooms. The large windows on Wabash avenue and on the corner of Wabash avenue and Washington street, which open right into the store, will have paneled backgrounds built, finished in mahogany, on the store side, but enameled in white in the window, thus forming an effective backing for the handsome displays of machines and records and lighting up the general display effect. The windows on Washington street will have draped backgrounds. Retail Manager O. D. Standke now has his office on a raised platform where he can keep his eye on the entire retail floor.

District Superintendent W. C. Fuhri, of the Columbia Phonograph Co., recently returned from a trip to St. Louis, Kansas City and Omaha. He reported that he found conditions most satisfactory in the sections tapped by the offices located in those cities, and that the prospects for a large fall and winter trade are of the best.

Expansion with Columbia Co.

The September business of the Chicago office showed an increase of about 35 per cent. over last

year. The demand for the new Eclipse \$20 hornless machine and the Regal \$40 machine has been so great that the company is having difficulty in filling orders. The increased output of the factory has enabled them to keep pace with the demand for the other types, and a notable feature of the trade is the manner in which the sales have kept up on the higher priced types, the \$200 table machine, for instance, being strongly in favor in spite of the desirable Grafonolas offered at lower figures.

Will Have Fine Store.

The building at 227 Wabash avenue, in which the newly organized "Phonograph Co. of Chicago" will be located, is now being entirely remodeled. The entire front has been torn out and the building will be practically rebuilt and fitted up in the most modern fashion. It will probably be the middle of November before the improvements are completed. As stated last month the company will be distributors and retailers of Edison goods.

A New Wade Cutter.

In their advertisement in this issue, Wade & Wade, 1227 East 46th street, announce a new Wade fiber needle cutter which will be placed on the market in addition to the popular cutter which has been on the market so long and is so popular with the trade. This gives the firm two excellent cutters, one selling at \$1.50 and the other at \$2, and enables them to meet fully the demands of the trade.

A Big Cabinet Line.

The Salter Mfg. Co. is having an unusually fine fall business on the Salter horizontal shelf, felt-lined cabinets. The various new styles recently introduced have met with instant favor in the trade. Besides its big line of disc and cylinder record cabinets the company also makes a fine line of sheet music and combination sheet music and music roll cabinets, and dealers would do well to write the company for catalogs of all the entire line.

Good Business Phonograph Installations.

Edwin C. Barnes, the Chicago Edison business phonograph dealer, is sending out some handsome post cards from his headquarters in the First National Bank building. On the address side a brisk talk regarding the Edison dictating machine is given, while on the reverse is a photograph in colors of Mr. Edison seated at his desk in the act of approving the perfected electric motor operating his steel cabinet dictating machine. Mr. Barnes has made some very large installations of Edison business phonographs of late.

No. 413 Cabinet for Disc Records

Quartered oak top, front and sides. Any Victor finish. Mahogany front and sides. Holds 272 10 or 12 inch disc records.

A Cabinet That It Will Be Easy For You To Sell

A beautiful and comprehensive New Catalog is ready for you. Shown between its covers is a splendid line of Cabinets and Table Cabinets for Disc Records and Cabinets for Cylinder Records.

The point is just this; that we make attractive designs that are properly priced: then we guarantee the workmanship and finish. Because of a heavy demand all styles are cut in large quantities which is your assurance of prompt shipment.

The necessity for a cabinet to file your customer's records in is unquestioned.

It only remains for you to sell that customer the best in a cabinet that you can buy.

So get Udell Cabinet Catalog No. 41 by dropping a line to

CORRECT
LEVERAGE
FOR A
PERFECT
CUT

FINEST TOOL STEEL

The L. & H. Needle-Cutter or Fibre Repointer we now offer to the user of Fibre Needles is the result of four years' exhaustive experiments, and, we can safely assert, NONE BETTER CAN BE MADE.

The lover of GOOD music will find this cutter invaluable. The upper blade being pivoted above and back of cutting edge insures perfect contact with lower blade. Both of these blades are made from finest tool steel and properly tempered and with ordinary usage will last for years, without sharpening or renewal.

The cutter has a self-acting stop, which prevents cutting away more than enough, thus a pin can be played twelve or fifteen times before becoming too short. Also a receptacle for retaining the needle clippings. We give our absolute guarantee with every cutter sold.

DICTAPHONES USED BY PROMINENT RAILROADS.

Shipment of Ninety-Six Dictaphones to the M. S. & D. A. Byck Co., of Savannah, for the Central of Georgia Offices—Some Other Prominent Sales Recorded—Used Recently in Some Famous Court Trials—Holding a Strong Position in the Business World.

The Dictaphone department of the Columbia Phonograph Co., of which Frank Dorian is manager, is doing an excellent business, and the outlook is promising for an exceptional season. N. B. Easton, executive office representative, recently returned from an extended trip through the Middle West, where he paid particular attention to conditions in Indiana and Kentucky. He reports a steady demand for Dictaphones, with an increasing appreciation of their superiority over the old-fashioned methods of handling correspondence. He closed several important installations which were consummated only after thorough tests and demonstrations.

A recent addition to the Dictaphone selling force is M. Elser, Jr., who formerly represented the American Indian, a publication of 20 volumes, retailing at \$4,000. Mr. Elser met with remarkable success in the sale of this high-class work and is a valuable addition to the efficient Dictaphone force.

The company has been giving considerable time and attention to the possibilities in the railroad field, and in an interview with *The Talking Machine World*, George D. Smith, in charge of the railroad end of the department—a former railroad man and well qualified to specialize in railroad Dictaphone installations—gave an interesting account of work accomplished and plans for the future. He said: "The possibilities of the Dictaphone in the railroad field are growing greater day by day. The roads must be educated and convinced of the value of the Dictaphone, and once that is accomplished, the rest is comparatively easy. Our main drawback at the present time is

road installations were the Louisville & Nashville Railroad and Central of Georgia Railway. Over one hundred machines were placed in the L. & N. offices, and with the recently installed machines there are 96 Dictaphones in the Central of Georgia's offices. We have just renewed our contract with the M. S. & D. A. Byck Co., of Savannah, to handle our machines, and this company was instrumental in our closing the Central of Georgia Railway business. By the first of Janu-

A Dictaphone Shipment Received by the Byck Co., Savannah.

ary I expect to install a thousand machines in railroad offices throughout the country, and these will be the foundation for a record-breaking 1913 business."

Frank Dorian, manager of the Dictaphone department of Columbia Phonograph Co., is away on a week's trip as far West as Detroit. He will accompany General Manager Geo. W. Lyle as far as Detroit. J. D. Westervelt, executive office representative, is away for a week on a trip through New England. Business is especially fine in the Dictaphone department, many prominent firms having installed them in the last few weeks. Among these may be mentioned the American

Radiator Co., 12 machines; Illinois Steel Co., 7 machines; Universal Portland Cement Co., a number of machines installed after a severe test. All of these firms are in Chicago, and shows splendid work on the part of the Chicago office. Business in Washington, D. C., has increased considerably since the passage of the annual appropriation bill. An interesting installation was that of a half dozen machines in the court room at Salem, Mass., where the famous Ettore case, resulting from the Lawrence strike, is being conducted. John Haddon & Co., of Cape Town, South

Africa, Dictaphone agents, report a steadily increasing demand for the machines by business houses throughout that country.

During the past week a fall exhibition, held at Gimbel Bros., 33d street and Sixth avenue, attracted many visitors to the store and the talking machine department.

Using Dictaphones in Freight Claim Office of C. of G. R. R.

a lack of efficient salesmen for Dictaphone work. This is a serious handicap to my plans, but with gradual additions to our sales force the work will go ahead steadily and unceasingly. I was sick from December, 1911, to May of this year, and unable to proceed with my work, but since June 1 I have laid plans for several large installations which will be closed any day. Among recent rail-

NOW THE RECORD REVIEW.

Buffalo Times Devotes Large Space to Careful Review of Talking Machine Records for Current Month—A Movement That Should Spread to Numerous Other Cities.

An announcement of particular interest to talking machine dealers and also to the manufacturers, and which indicates a higher appreciation by the daily press of the importance of talking machine music and the increasing interest shown in it on the part of the public, recently appeared in the Buffalo (N. Y.) Times and read as follows:

"Believing that there are in Buffalo a very large number of people who are interested in talking machine records, particularly those used in the beautiful cabinet-style machine, The Times has decided to publish a monthly review of the best records turned out by the leading companies, with a view of helping those of its readers interested in the purchase of these. The monthly 'record review' is inaugurated in this issue.

"The month of October sees a large number of splendid records turned out by the manufacturing companies, and the lover of music, whether he prefer operatic or comic, sacred or ragtime, violin or band selections, will find it a task to select the best in any department.

"People, everywhere, are recognizing the wonderful pleasure and education to be derived from the modern graphophone, with its wide range of repertory and its superb tonal qualities, as great an improvement over the old talking-machine with its squeaking, grunting, metallic melody as the six-cylinder, 60 h. p. is over the one-lunged machines of the first generation.

"The popularity of the present-day machine is so widespread that the discussion of records, their qualities and advantages is one of the chief topics of conversation of the American dinner-table."

Following the notice and introductory paragraphs, over two full columns of the paper were given over to careful reviews of the new records issued by the Victor Talking Machine Co., and the Columbia Phonograph Co., including a review of the new "Victor Book of Grand Opera." Surely it is a step in the right direction and with the co-operation of dealers in other cities should be widely imitated.

NEW SOL BLOOM STORE

In the Metropolitan Opera House Is Most Attractively Fitted Up—Excellent Location.

Sol Bloom, Inc., is to be congratulated on the location of its new store at 40th street and Broadway—a corner of the Metropolitan Opera House building and in the heart of the theatrical world, it is accessible to all music lovers. The store presents a beautiful appearance, the decorations being of the Louis XVI epoch, and the colors throughout being French gray and old rose. There are demonstration rooms of a most tasteful arrangement, and in the rear are the clerical offices of the store. Milton Goldsmith, manager of Sol Bloom, Inc., tells us that the store has done remarkably well since its opening. A particularly high-class clientele is attracted to the store, and as a result there are many sales of high-priced Victor machines.

HEADS NEW REPAIR DEPARTMENT.

A. H. Dodin Takes Charge of Large New Department Opened by Benj. Switky.

Andrew H. Dodin, formerly in charge of the repair department of the New York Talking Machine Co., has resigned and is now manager of a complete new talking machine repair department opened by Benj. Switky, the prominent jobber in his store at 273 Eighth avenue, New York. Mr. Dodin's long experience in the repairing of talking machines makes him especially fitted for his new position.

Watch the new customers and cultivate their acquaintance, for they sometimes turn out to be the best customers.

FOUR NEW DEALERS IN NEW YORK.

In Addition to the O'Neill-Adams Co. the Two McCreary Stores and the Lord & Taylor Store Will Handle Victor Talking Machines.

The opening of a handsome talking machine department in the great O'Neill-Adams Co. department store on Sixth avenue, 20th to 22d streets, under the competent management of Otto A. Gressing, was recently announced. This has now been followed by the announcement that three more new talking machine departments will be opened in

O'Neill-Adams Co. Store in New York.

New York City—one in the Lord & Taylor store on 20th street and Broadway, one in the store of James McCreary & Co. on 23d street and Sixth avenue, and also in the McCreary 34th street store. Special departments in these prominent concerns are now being erected and a full equipment of Victor talking machines and records will be carried in these stores as in O'Neill-Adams Co.

Otto A. Gressing, manager of the talking machine department of the O'Neill-Adams Co., will also have supervision over the departments, acting as general manager of the four talking machine stores. It is unnecessary to speak of Mr. Gressing's qualifications, as he is widely known throughout the country as a man of ability, having been connected with many prominent houses.

CAPITAL NOW \$1,000,000.

Keen-o-phone Co. Report Progress of Business—New Capital Interested.

(Special to The Talking Machine World.)

Philadelphia, Pa., Oct. 11, 1912.

The Keen-o-phone Co., whose establishment is located at 227 South Broad street, this city, announces that its capital has been increased from one-half to one million dollars, and that the company is now busy at its factory in Frankford, Pa., on a large number of machines which are built along new lines, as well as the big line of indestructible records which possess special features of excellence.

The company has recently brought into its management such names of prominent Philadelphia business men and capitalists as H. W. Stoll, a man who stands high in Philadelphia in financial and corporation circles; Mahlen W. Newton, of Greene's Hotel; Mr. Moeller, of the Philadelphia Knitting Mills; Edgar E. Young, of William B. Riley & Co.; John W. Cooper, the wool merchant; Alexander Uhle, the prominent specialist. Morris Keen is at the head of the company.

TO MANAGE VICTROLA DEPARTMENT.

(Special to The Talking Machine World.)

Crawfordsville, Ind., Oct. 8, 1912.

Arch H. Olds, an experienced publicity pusher and formerly advertising manager of a local paper, has joined forces of the M. L. Claypool Piano Co. as advertising manager and head of the Victrola department of the three stores of the company in Lebanon, Frankfort, and this city. In his new capacity, Mr. Olds will give an elaborate series of recitals at the three stores throughout the winter.

The New York office of the U-S Phonograph Co. at 5 Union square, reports an exceptionally good business at the present time. Orders for U-S machines are coming in rapidly.

INTERESTED IN NEW COMPOSITION.

E. L. Aiken Resigns from Thomas A. Edison, Inc., to Take Executive Position with Manufacturers of Articles from New Composition, Regarding the Development of Which He Played a Prominent Part—Given Gold Watch.

E. L. Aiken, who for nine years has been connected with Thomas A. Edison, Inc., most recently as assistant superintendent of the record plant of the company, has resigned for the purpose of becoming assistant general manager for the Dickinson Manufacturing Co., of Springfield, Mass., which will engage in the manufacture of various articles from a new composition of the general appearance of hard rubber, but much more durable. The composition may be used in the making of pipes, telephone receivers and mouthpieces and articles for which a rubber composition is used, and has been tried very successfully in the making of disc talking machine records, though at the present time the cost of the material has been too high for the latter purpose.

Mr. Aiken and J. W. Ailesworth have done much in the development of the composition and hold several patents covering various processes in that connection.

Before leaving Thomas A. Edison, Inc., Mr. Aiken was presented with a handsome gold watch by his associates with the company as a mark of their esteem.

GOOD YEAR WITH VICTOR LINE.

(Special to The Talking Machine World.)

Indianapolis, Ind., Oct. 7, 1912.

The Taylor Carpet Co. have experienced a fairly good year in the Victor business so far, and are very enthusiastic over the new style Victrolas. They have just added another booth to their department, and have a complete catalog of records.

Miss Anna Abell, although new in the Victor line, has been quite successful as a Victor saleslady, and is making lots of friends in the way she has been handling the record proposition.

BONCI TO MAKE COLUMBIA RECORDS.

The Columbia Phonograph Co., General, announces that Bonci, the world-famous tenor, has contracted to make Columbia records for this company exclusively. He has already produced several records which have met with remarkable success. Bonci possesses a wonderful voice, particularly adapted to record singing, and, needless to say, the Columbia Co. is proud of being the medium of conveying this great artist's voice to its large army of customers.

L. F. GEISSLER'S ABLE ARTICLE.

A further valuable contribution to the campaign of publicity in connection with the Oldfield bill is the article entitled, "Save Fixed Price, or Have Chaos," which was written for a recent issue of Printer's Ink by Louis F. Geissler, general manager of the Victor Talking Machine Co., and which has attracted much favorable notice by the vigor with which he has handled this subject and the many striking arguments adduced. Surely the officers of the Victor Talking Machine Co. have done their share to arouse the business men of this country to the danger that may result from this bill becoming a law, and it is now up to all interested in maintaining fixed prices in the commercial world to get busy and submit their views on this question to their representatives in the national legislature.

A catalog of unusual interest, cleverly written and illustrated, has just been issued by the Vitaphone Co., of Plainfield, N. J. It treats in full of Vitaphone features.

WINS IMPORTANT DECISION.

Searchlight Horn Co. Wins Suit for Infringement of Horn Patent Brought Against Sherman, Clay & Co.—The Latter Will Appeal.

(Special to The Talking Machine World.)

San Francisco, Cal., Oct. 5, 1912.

Following the hearing of the suit of the Searchlight Horn Co., of New York, against Sherman, Clay & Co., of this city, as Victor agents, which commenced October 1, a decision was handed down yesterday by Judge Van Fleet in the Federal District Court, in favor of the plaintiff.

This suit was started May 19, 1911, and was for infringement of patent granted in 1904 to Peter C. Nielsen, assigned to the Searchlight Horn Co., for a phonograph horn, having bell shape, with abruptly flaring outlet, composed of longitudinally arranged metal strips secured together at edges by seam of such character as to produce longitudinal ribs on outer surface.

Judge Van Fleet's decision was to the effect that all metal ribbed horns coming within the above definition are an infringement, and it is claimed by the Searchlight Co. that this covers the horns now in general use by the talking machine trade. Damages of \$3,578 were awarded the Searchlight Horn Co. against Sherman, Clay & Co. This is estimated on the basis of 50 cents each for each horn sold by them. The decision also holds distributors, jobbers and retailers responsible for infringement. Sherman, Clay & Co. took steps at once to appeal the decision.

BELIEVES IN ADVERTISING.

R. Montalvo, the successful talking machine dealer of New Brunswick, N. J., has displayed his faith in the selling qualities of the four new Victrolas by inserting full page advertisements in the local papers regarding the new instruments three times weekly. The ads are strikingly set up in large type and have produced excellent results.

A dreamer is one who dreams and dreams—a doer is one who dreams and does.

Salesmen Wanted

Must have experience in selling Victor goods at retail. Permanent positions offered to the right men, good salaries to commence with, and good prospects for the future. All communications will be held strictly confidential and appointments will be made for the evening, so as not to interfere with their present employment.

BLACKMAN DISCUSSES ASSOCIATION PLANS.

The President of the National Association of Talking Machine Jobbers States That Harmony, Combined with Progressiveness, Will Be the Keynote of His Administration.

In discussing association matters with *The Talking Machine World* this week, J. Newcomb Blackman, president of the Blackman Talking Machine Co., 97 Chambers street, New York, and president of the National Association of Talking Machine Jobbers, said:

"I have just returned from a two days' visit to Philadelphia. While there I discussed association ways and means with Louis Buehn, secretary of the association, and formulated plans and ideas for my administration. We talked over the various committees and other incidental details, and I expect to have my preliminary arrangements completed in the very near future, and will then be ready for the furtherance of my present plans.

"In order that the objects of this association may be clearly and universally understood, I think it well to say something at this time regarding the plans and purposes of this organization. I would like to have it clear in everybody's mind that this association is for all the members, not a few, and should be a body for the commission of good results regardless of affiliations of the members. We should not refrain from taking up important matters simply because the factory viewpoint might not be inclined favorably toward some.

"I want every member of the association to feel that he is a part of it, and that his requests or suggestions will always be welcome and will be given such consideration as they seem to warrant after careful thought, always with the idea in mind that we must consider the welfare of the association as a whole. As our members are inclined toward different manufacturers, it can be readily seen that the association must always regard the welfare of the members as a body, and not favor any one manufacturer. The by-laws of the association state clearly that the association is organized for the promotion of everything that tends for the betterment of the industry. As the industry is not represented by any one member, we must consider the entire industry, and be guided always in that direction.

"What I aim for during my administration is harmony. Any organization, business, social or fraternal, will flounder on the rocks of failure if harmony is missing. I do not want harmony at the expense of progressiveness, however. This association has been organized for a purpose. If its purpose has ceased to exist, then we do not want an organization. If the purposes are still there, however, let us make the best of them, and use the organization for what it was intended. The talking machine business, I believe, in the future will show a most remarkable growth, not only because the business itself is capable of it, but because it will have the added advantage of favorable conditions.

"We have the advantages of protection given us by the patent laws, and the business has never stood still. What has been accomplished is only a start for something better, and we should not rest our oars on it. It is indeed gratifying to see that the trade has taken this position, and successful jobbers and dealers everywhere bear evidence of the splendid work now being done. Though some have failed to take advantage of opportunities, there are many more who have grasped them and are on the road to success.

"The foregoing are some of my ideas for the furtherance of association plans. As regards my own business, I have several ideas for carrying out next year's business. We are improving our organization in every reasonable way. We have put out additional salesmen and are going to do a larger business than ever before, if it will be possible to get the goods. I will leave no stone unturned to give our customers the best available service. Those dealers who are what we might term steady or regular customers will have first call, for I believe that we owe service to those dealers who have been loyal to us under all conditions. We will be forced to recognize not only

this, but the credit standing of customers placing orders, especially for goods that are scarce, for the only way a jobber can give service is to be able to pay his bills. We cannot continue service if we do not get paid. Sentiment is less a factor in business than ever before. Reputations among business houses are based on making good on a 'dollar-and-cent basis,' rather than through the social popularity of the members of the firm; for after all, watches were made to 'keep time,' guns to 'shoot straight,' and boats to 'keep afloat,' regardless of their ornamental beauty.

"How often have we heard it said of the man who was a business failure, 'It is too bad, for he was such a nice fellow.' Business is a legalized constant battle. It can be fought fair, and, regardless of failures, successes are many; but who can please everybody and still be successful? A man often makes enemies among a certain class because he is on the level, but those who know him, and whose opinion and friendship are valuable, appreciate a person with backbone enough to maintain a policy that is fair, even though it does not please all. These problems confront the manufacturer, jobber and dealer in all lines from the 'boss' down to the most humble employe, but the credit man has examples of them every day. There is a big reward waiting for the man who will please everybody in the talking machine business, and who will give them all the machines, records and credit that will be needed during this holiday season. I am afraid he does not exist."

CONDEMNS OLDFIELD BILL.

New York Sun in Strong Editorial Points Out Evil of Proposed Legislation.

Since the booklet "Prince Cutting," by Eldridge R. Johnson, president of the Victor Talking Machine Co., was sent out, a very striking editorial on the revision of the Patent Law appeared in the New York Sun, in which this editorial emphasized that this great metropolitan daily is alive to the danger of the proposed amendment to the Patent Law as interpreted in the Oldfield Bill.

It virtually takes up the same arguments as are set forth by Mr. Johnson. Lack of space prevents reprinting this very excellent editorial, but one section of it, where it points out that this new bill would make the patent laws an effective adjunct to the Sherman Anti-Trust Law, thus causing considerable confusion, says:

RECORDS OF TAFT, WILSON AND ROOSEVELT

Announced by Victor Talking Machine Co. This Week—Subjects of Interest Discussed by Republican, Democratic and Progressive Candidates for Presidency of United States.

The Victor Talking Machine Co. this week announces a series of special records of exceeding interest, in view of the political campaign now under way. They are made by President W. H. Taft; Woodrow Wilson, the Democratic candidate, and Theodore Roosevelt, the national Progressive candidate for President of the United States.

The titles of the three records by Mr. Taft are as follows: "President Taft on Prosperity," "President Taft on a Protective Tariff. 'Who are the People?'" "President Taft Discusses Labor and Capital." Popular Unrest—by President Taft. "The Anti-Trust Law," "Peace—An Address by President Taft."

The titles of the three records by Woodrow Wilson are as follows: "Woodrow Wilson on the Third Party," "Woodrow Wilson on the Trusts," "Woodrow Wilson on the Farmers," "Woodrow Wilson on Democratic Principles," "Woodrow Wilson on Labor," "Woodrow Wilson on the Tariff."

These addresses are on double disc twelve-inch records.

The records by Theodore Roosevelt are as fol-

NYOIL

For polishing
varnished woodwork it is
extremely satisfactory. No oil is so clean.

Ask your watch repairer whose
oil he uses on your watch.

"The Sherman Law was devised for the prevention and prohibition of monopolies. The patent laws, under specific constitutional provisions, grant to patentees and owners of patents exclusive and monopolistic rights. A strong argument might be made to show that if the Sherman Law is inadequate for its proper purposes change should be made in that law without dragging in for its support a system so vital and so complicated, so essentially different in its nature and in its intent as the laws providing for and regulating patents."

DUTY ON DISC RECORDS UPHOLD.

(Special to The Talking Machine World.)
Washington, D. C., Sept. 30, 1912.

In the case of Kronfeld, Saunders & Co. and others against the assessment of duty by the Collector of Customs at New York on talking machine discs composed of hard rubber or gutta percha, the Board of General Appraisers has ruled in favor of the collector. Duty was assessed upon these articles by the collector at the rate of 45 per cent. ad valorem under the provisions of paragraph 468 for "phonographs, gramophones, graphophones and similar articles, or parts thereof." The claim relied upon by the importers is that said discs are dutiable at 35 per cent. ad valorem as manufactures of gutta percha, hard rubber, etc., under paragraph 464 of the tariff act of 1909.

lows: "Mr. Roosevelt Pays His Respects to Penrose and Archbold," "The 'Abyssinian Treatment' of Standard Oil." "Why the Trusts and Bosses Oppose the Progressive Party," "The Farmer and the Business Man." "The Liberty of the People."

The four first titles are on two twelve-inch double discs, and the last named is on a single faced disc.

In these records the candidates discuss questions of moment, and they should find a tremendous market where properly introduced by dealers. In sending out these records, the Victor Talking Machine Co. remarks:

"Certainly, no time is more opportune for the announcement of these records by the three men who are so conspicuously in the public eye. And certainly nothing offers so splendid an opportunity for reaching all the big men of your city as will these personal records of the rival candidates. Once you get them in your store to hear Taft, Wilson and Roosevelt, it will be an easy matter to play for them a record or two by Caruso, Melba or Harry Lauder—the actual sale of an instrument ought to follow in many instances."

A good suggestion.

EDISON NEWS FROM ORANGE.

Much Interest Shown in New "Blue" Amberol Records—Shipments Made to Coast—Some Real Baseball Fans—New Disc Records Not Yet Ready—F. K. Dolbeer Visits Boston Show—Recent Visitors of Trade Note.

The chief event of interest at the phonograph works of Thomas A. Edison, Inc., this month is the placing on the market of the new "Blue" Amberol records, which will take the place of the regular November Amberol record supplement, and which are being eagerly awaited by the dealers. Shipments of the new records began last week, when several carloads were dispatched to the Pacific Coast. The "Blue" Amberol records are made of a composition claimed by the manufacturers to be indestructible, and to back up that statement a test record has been played at the factory over 3,800 times and to all appearances, even when examined under a strong microscope, has not been damaged in the slightest. The new records will be supplied to the Far Western trade first, and the shipments will work East in regular order. There are at present orders on hand for over 1,500,000 "Blue" Amberol records.

The executives of the company are strong baseball fans and on the days when the world's series for the baseball championship were being played off at the Polo Grounds in New York the majority of the force was "on the job" at the grounds. The rooting is about evenly divided between the New York and Boston teams, or, at least, was before the final decision.

The announcement of the placing on the market of the new disc records is still held in abeyance in order that the disc records may meet every conceivable test at the factory. The new records are a hobby with "The Old Man," and he and his assistants in the laboratory have been breaking no-sleep records during the last month perfecting all the details. According to those who are well acquainted with the talking machine situation, the new disc records are claimed to be all that could be desired, but Mr. Edison has not yet put his final O. K. on them for the purpose of placing on the market. Meanwhile plenty of machines are ready for the first record shipment.

Frank K. Dolbeer, sales manager for Thomas A. Edison, Inc., recently spent some time in Boston in connection with the exhibit of the company at the Boston Electrical Show. The company also had a display of business phonographs at the Electrical Show in New York last week, when the New York Edison Co. tendered a luncheon to Thomas A. Edison. There were present, besides the guest of honor, Frank L. Dyer, president of Thomas A. Edison, Inc., and other officials of that organization.

Among the members of the talking machine trade who visited the Edison works during the month were: J. F. Cox, J. F. Cox & Sons, New Haven, Conn.; E. M. Wallace, Olney Music Co., St. Joseph, Mo.; E. M. Backus, Jr., New York City; Louis Poulain, Clarion, Pa.; Mr. Bennett, with Louis Poulain, Clarion, Pa.; B. L. Beard, W. D. Andrews Co., Syracuse, N. Y.; T. J. Blanch, Highland Falls, N. Y.; J. M. Hassett, F. W. Peabody, Portsmouth, N. H.; James H. Fletcher and Mr. Fletcher, Fletcher Bros., Victoria, B. C., Canada; J. C. Haines, R. C. Kretschmar Co., Philadelphia, Pa.; R. L. Proudfoot, Proudfoot Sporting Goods Co., Ogden, Utah; Mr. Mason and Mr. Bainbridge, Quackenbush & Co., Paterson, N. J.; C. B. Haynes, C. B. Haynes & Co., Richmond, Va.; F. H. Putnam and A. E. Severe, Putnam-Page Co., Peoria, Ill.; Mr. McKnight, Brookville, Pa.; W. L. Kipp, Kipp-Link Phonograph Co., Indianapolis, Ind.; W. I. Whitson, Washington, D. C.; W. O. Pardee, Pardee-Ellenberger Co., New Haven, Conn.; O. Stillman and O. Stillman, Jr., Westerly, R. I.; M. C. Koester, Eilers Music House, Portland, Ore.; Edgar C. Smith, Kimball Piano Co., Chicago, Ill., and A. W. Toennies, Jr., Hoboken, N. J.

It is an old and true maxim that "a drop of honey catches more flies than a gallon of gall." So with men. If you would win a man to your cause, first convince him that you are his sincere friend.

PRODUCES SPEAKING FILM.

A. M. Newmann, an American, Residing in Berlin, Produces a Film Which He Claims Will Revolutionize the Cinematographic World—Doubts as to Durability Expressed.

A. M. Newmann, an American residing in Berlin, Germany, has produced a speaking film which it is claimed will revolutionize the cinematographic world. Based on speaking film patents taken out here in 1907, Newmann has formed a Berlin company, with a capital of about a half million dollars to exploit his invention at first in the form of a talking clock. These clocks, which will shortly appear on the market, instead of striking the hour, will call it in a loud, distinct voice at every quarter.

Newmann's company is manufacturing them for all parts of the world, in every civilized language. The whole German output for the next two years has been purchased in advance by a well-known Baden firm. It was an extraordinary international gathering at Newmann's factory recently to hear the talking clocks. Siamese, Persians, Turks, Bulgarians, Russians, Americans and English, after hearing the specimen clock, were invited to make time voice records for the clocks going to their various countries. A Siamese merchant present observed that the Tower of Babel was made real to him at last.

Berlin clock dealers consulted by the World admit the new clocks are pretty sure to compete

seriously with the existing systems, especially for office work.

"Nevertheless," said one dealer, "I should think it would be pretty exasperating to have a mechanical voice calling off each quarter of an hour extra that you allow yourself in the morning before getting up. A kind of mechanical conscience, I suppose."

Other dealers express doubt whether the films or reels will last long enough to appeal to ordinary clock buyers. They will have to be extremely durable, and if they are not, people will soon tire renewing them. The inventor says the question of durability will be satisfactorily solved.

FILES PETITION IN BANKRUPTCY.

Leon Epstein, a dealer in talking machines at 141 Orchard street, New York, has filed a petition in bankruptcy with liabilities of \$2,319 and assets of \$250 in stock and accounts.

RETURNS FROM EUROPE.

I. L. Cochrane, export manager of the Vitaphone Co., Plainfield, N. J., returned two weeks ago from England and other European countries, where he consummated some important business arrangements for his house.

C. W. Lindsay, Ltd., of Montreal, has installed a beautifully decorated department for the handling of a complete Victrola line.

ROOSEVELT-TAFT-WILSON: WHO WINS?

SUPPOSE ALL THREE WERE ELECTED, "ON TRIAL."

¶ If this was the rule, and they were all subject to "recall," history might read different.

DEALERS HAVE THIS PRIVILEGE WITH JOBBERS.

¶ Edison and Victor Dealers elect Jobbers to give "service." They are, and should be, subject to "recall" and "replacement," if they don't make good.

EXPERIENCE COSTS MONEY, BUT IS VALUABLE IF CASHED IN.

¶ What has been your experience as to the ability of your favorite Jobber, or Jobbers, in giving you holiday service on machines and records?

NO JOBBER IS "PERFECT," NONE CAN DO THE IMPOSSIBLE.

¶ You can judge best by "comparison." Don't hunt trouble, but when you find it seek a "remedy."

WE ARE TRYING TO PRACTICE WHAT WE PREACH.

¶ This is important, otherwise we would encourage our Dealers to try the "other fellow." If the "other fellow" is "beating us out," the sooner we know it the better, and we will leave no stone unturned to "catch up" and "get ahead."

NOW TO THE POINT, "BUSINESS IS BUSINESS."

¶ Unless you are in business for your health, you can't afford to have anything but the "best service," and we cannot afford to give anything less. Don't delay, "time waits for no man." Investigate and give us a chance to help you. All applicants will be received in turn and regular customers receive special consideration.

THE PLACE TO GET THE GOODS—EDISON AND VICTOR

Blackman
TALKING
MACHINE CO.
97 CHAMBERS ST. NEW YORK
EVERYTHING FOR EDISON OR VICTOR WHOLESALE OR RETAIL

More of the big

This Columbia *definite offer* advertisement appears in the Saturday Evening Post this week.

Once more the "Favorite;" and the "Favorite" just as it was so successfully offered back in February—the same outfit of records (with the addition of the Columbia Demonstration Record), and the same general layout, except that the "Favorite" is shown with the Columbia tone-control shutters. It is a long time, as time is reckoned in the talking machine industry, since there has been any single improvement or addition so universally approved as these same Columbia tone-control shutters.

You will notice also that this advertising was designed not to create a demand for something the dealer did not carry, but to make a direct, definite, sales-making offer of stock that the dealer already had and assist him to keep it moving in a healthy fashion. Nor is this advertisement the whole story—nor yet the entire year's advertisement—but it indicates the whole story of healthy, solid, continuous and rapid Columbia increase that affects you, right there in your office, just as sure as interest on your bank balance.

This is not meant to suggest to you that you ought to throw out any other line for the Columbia—but we should be

THE SATURDAY EVENING POST

October 12, 1913

Till the end of October at \$59¹⁰ complete

This is a short-time renewal of the most popular proposal ever made to music lovers—except that the Columbia Gramophone "Favorite" is now equipped with the perfected tone-control shutters instead of the former two small doors, and our Demonstration Double-Disc Record is added to the record-outfit.

The 26 selections on the 13 Double-Disc Records include the splendid Sextette from "Lucia," and also the famous Quartette from "Rigoletto," for which two selections alone many talking machine owners have had to pay \$13. (Or your own selection of records to the same value will be supplied.) Record album extra.

\$200 Tone-Quality at a Quarter of the Price

The Columbia Gramophone "Favorite" is a notable combination of high quality and low price. The mechanism is fully cabineted, the reproducing unit being beneath the lid, and the sound waves being led through the tone-arm to the tone-chamber where they are gently amplified and then thrown out through the eugenic, solid, and richly resonant, baffle. The perfect complete closing of the tone-control shutters. The exact work is of the highest possible craftsmanship, the wood used being either selected grain quarter-sawn oak, or strongly marked gesso mahogany, hand polished. No finer finish is applied to a standard instrument. The turntable is revolved by a powerful triple spring motor, which plays three records at one winding, and it is the sound while running. The operation of the motor is absolutely silent, and its speed is regulated on a graduated dial.

If the nearest dealer happens not to be able to supply it, write to us here. If you don't know where to reach a Columbia favor dealer, write us and we will send you his name and address.

If you have been waiting for the perfected talking machine, we are glad to wait any longer it is to you. If you have not been ready to purchase the best included type of instrument could be sold for less than \$200 here is the perfect instrument at a quarter of the price. If you have not yet realized the

quality of the music that the modern Gramophone is capable of, remember that the same was until recently true of many of the greatest artists in the world who are now under contract with the Columbia—Nielson, Nielsen, Pasquini, Bisiani, and a long list of others. The voice of every artist who has made records, without exception, is at your command to take advantage of this October offer.

Hearing is believing—and trying is proving. Don't let this chance pass by before you take action. This is the objective point we have been working for four years, and the only mistake you can make is the missing of it. Don't miss it—see

A TALKING MACHINE ADJUNCT

Which Is Greatly in Favor with Talking Machine Dealers and the Purchasing Public, Is the Adaptor Made by the Picture Disc Co., of Los Angeles—A Description of This Clever Entertainer for Which There Is Big Demand.

(Special to The Talking Machine World.)

Los Angeles, Cal., Oct. 3, 1912.

The Picture Disc Co., of this city, is receiving orders and inquiries not only from all parts of the country but from abroad for the Adaptor, which can be used with either the Victor or Columbia talking machines for the purpose of automatically illustrating the record being played.

This illustrator sprang from the frequent remarks every talking machine man hears from his customers: "The music is delightful, but how nice it would be if we could have the pictures also."

The Adaptor is a picture projection machine or automatic stereopticon used in connection with a talking machine. When so combined it automatically presents on the screen the picture in the song or story record being played. The series of pictures and the song or story are synchronized and thus each picture described appears automatically at the right moment. The picture-disc consists of photographs on a disc of unbreakable positive-film which is inserted in the Adaptor as easily as the record is placed on the talking machine. There are in all sixteen views on the disc whenever such number is required, but some songs require only twelve or thirteen. The Adaptor does not present a motion picture effect but gives what is known as illustrated songs and stories.

The Adaptor is a machine for a threefold use, and is as serviceable for one as for the other. When connected to a talking machine it is a song and story illustrator. When used in the show-window it is a show window advertiser. When used without the talking machine it is a home stereopticon operated by hand like any other lantern.

"The main purpose of the machine, the first idea for its manufacture," said an officer of the company to The Talking Machine World, "was to bring the public into the store and the demonstrating rooms; to advertise records and machines; to stimulate trade in records and cause and compel people to talk about talking machines; to attract to the window display. By this means the window at night can have the pictures of the great artists shown on the screen and changing automatically. The public can be delighted with not only the novelty of the device but with the beautiful and artistic pictures illustrating the songs being rendered.

"To those who give talking machine concerts this Adaptor is of incalculable value. It stops folks in front of the window display and brings them into the store. It helps sell talking machines and records.

"Connecting the Adaptor to a talking machine causes no trouble nor injury to either. It takes but a second. They are independent of each other in their action. The connecting of this Adaptor to the talking machine does not interfere in the least with the speed of the motor nor with the quality of tone production. The selection will be rendered precisely and exactly the same as though the illustrator was not connected. Motive power is obtained from the talking machine by means of a belt.

"Light is obtained from any regular lighting circuit of 110 to 120 volts by plugging into the ordinary lamp socket. An arc lamp is not used because of its heat and danger to the operator. The lamp for the machine is an incandescent bulb with tungsten spot-filament giving a very intense, brilliant, white light.

"The size of the picture one can throw on the screen depends on the length of the room in which you operate. The machine will give a picture from three inches to ten feet in diameter. A thirty-foot room will allow a ten-foot picture. For the average living room we have found the fifteen to twenty-inch picture the most satisfactory and we supply a translucent screen of vellum suitable for this size picture with folding stand with each machine.

"A large number of picture discs containing illustrations of standard and popular songs are now ready and it is planned to issue a regular list monthly.

"There is another field now into which the Adaptor fits, and it is to the kodak user a long-felt want satisfied. With it he can make his own bromide enlargements any size at his own home in the evening if he has no dark room. Any other lantern to do this one thing alone would cost him \$45. Thus it covers four different fields:

"The talking machine devotee can illustrate his records.

"The picture lover can have his stereopticon and throw his views on a screen.

"The kodak enthusiast can make his own bromide enlargements.

"The business man can have changing ads and views in his own window.

"All done with one machine, the Adaptor.

"We have been two years enlarging, changing, remodeling and combining new features. We could have placed the goods on the market sooner but preferred to get the machine right in every particular before doing so. The main aim has been to combine and simplify to the extent of making it foolproof. It is easier to run than a talking machine."

For the holidays the Adaptor promises to be one of the big sellers with the talking machine trade.

WANTS FOUR-MINUTE RECORDER.

Edison Phonograph Enthusiast in Indianapolis Sees Great Possibilities in New Four-Minute Home Recorder.

"The recording feature in connection with the Edison machine, in my opinion, is very much in its favor. I have been experimenting with the recording device for some time and have succeeded in making some very good piano and talking records. I have one piano record in particular which was made in my home that I prize very much, and I have been told by some Edison dealers that it is the best they have ever heard."

In replying to this letter from H. J. Weir, of Indianapolis, Ind., we told him of the new four-minute recording device which would soon be on

the market. His immediate answer to our communication read in part as follows:

"I am pleased to learn that you are putting on the market a four-minute recording outfit and, in my opinion, I think it is one of the best steps toward making the Edison phonograph far more superior to all other talking machines. I would like to know about what time the new outfit will be on the market, as I would like to be the first person in this city to purchase the entire new outfit; if the new four-minute recorder will fit on the 'Opera' machine I thought of changing my 'Home' for a new 'Opera.'"

The letter shows possibilities of the new four-minute recording outfit which might escape some dealers—it may lead owners of small machines to buy Operas and Amberolas. Or rather, it will permit those whom interest in the old recording device forced to retain their cheaper machines, to purchase the newer and more expensive models without sacrificing the pleasure of record making.

Every dealer must know those of his customers who have been using the two-minute recorder. Get up a form letter to these people telling them about the new recorder, emphasizing the fact that it is adaptable to the high-priced machines, and also featuring the hand shaving machine, the value of which they will be quick to realize.

Don't lose sight of the enthusiasm which the mere possibilities of the four-minute device have aroused in this phonograph owner. He is one of many who will be delighted by the new Edison feature and will be eager to purchase an outfit. Are they going to get it from you?—Edison Phonograph Monthly.

The talking machine department in the new Aeolian Hall, New York, will be opened this week. It is located on the sub-first floor, and is equipped with 19 soundproof rooms. Chas. Bobzin is in charge.

Three hundred Javanese records, containing many weird and rare songs, have just been issued by the Columbia Co. They will be sold in Java by Tio Tek Hong, of Weltevden.

An increasing trade in talking machines and records with China and Latin-American countries is reported.

PHONOGRAPH CARRIES MESSAGE FOR AVIATION SCOUTS.

According to experiments made at the Buc aeroplane grounds, near Paris, it is no longer necessary when scouting to carry a second man acting as observer. The pilot can make all the records of the flight by speaking into a specially arranged phonograph. This was tried with good success on a Farman aeroplane piloted by Capt.

back is overcome, and without ceasing to steer, he dictates his observations into a speaking tube. This connects with the phonograph so as to make the record. The record, when filled, may be put into a box and dropped from the aeroplane at any point, while a fresh record is used. It appears that the noise of the motor does not prevent

Aviators Using Phonographs in the Air.

Barès, who was accompanied by M. Jules Richard, the inventor of the new "Roneophone," as it is called. In ordinary cases the pilot, when alone, is not able to note down all that he sees, for even should he be able to write, he must then cease to observe. With the new phonograph, this draw-

making a good record of the voice. During the flight, M. Richard noted all the interesting points on the ground by speaking into the apparatus, and afterward, when alighting, the record could be very well heard. All the aeroplane officers of the Buc grounds were impressed with the results.

VICTOR LICENSE LABELS.

Legal Department of the Victor Talking Machine Co. Calls Attention to Recent Revisions of the Label and Points Out the Importance of Its Observance by the Trade.

(Special to The Talking Machine World.)

Camden, N. J., Oct. 10, 1912.

To comply with legal technicalities, the Victor Talking Machine Co., through its legal department, is directing the attention of its dealers to the fact that the license labels appearing on this company's product, both talking machines and talking machine records, have recently been revised, the date of the revised labels being May 1, 1912, or subsequent thereto.

The text of the talking machine labels follows:

"This patented sound reproducer is licensed by us for sale and use only when sold to the public at a price not less than —, and is licensed only for use in reproducing sound from sound records manufactured or sold by this company or its licensees. No sale of this machine is licensed when sold by any means of transfer to the public at less than the above price, including, among others, sales under order of a court, an auction sale or a sale by underwriters, or a sale by those to whom such underwriters may sell this machine, or a sale by bankrupts or their trustees or referees in bankruptcy, or their representatives, or a sale by sheriffs, assignees, legal representatives, or a sale by any other person, firm or corporation of a similar or analogous nature, or a sale by any of the above mentioned persons, firms or corporations, directly or indirectly. No license is granted to sell or use this machine except under these conditions; all other rights are reserved. Any sale or use of this machine when sold in violation of either of these conditions will be construed as an infringement of our United States patents; among others, U. S. Patents (here is given the list of letters patent under which the talking machine to which the label is applied is manufactured), and all our other U. S. patents under which this machine or parts thereof are constructed; and all parties selling or using this machine, contrary to any of the terms of this license, will be treated as infringers of each of the said patents, and will render themselves liable to suit and damages.

"No license is granted to sell or use this machine in any altered or changed condition, or with any parts not manufactured by this company or its licensees. This machine is licensed for use and sale only in the condition, construction and arrangement in which it is put out by us, and any use or sale of this machine, or parts thereof, in any other or altered construction or arrangement, or in any other casing or cabinet than this casing or cabinet, in which it is licensed to be sold and used, will be construed as a violation of the license.

"This license is good only so long as this label remains upon this machine; any erasure, alteration or removal of this label, or of any of this company's labels or marks, attached to this machine, will be construed as a violation of this license.

"A purchase is an acceptance of these conditions. All rights revert to the undersigned in the event of any violation."

The text of the record label reads as follows: "Licensed under the following patents only when sold to the public by any means of transfer at not less than the retail price marked hereon, and only so long as this record and label remain unaltered. Copying or duplicating prohibited. (Here is given the list of letters patent under which the record to which the label is applied is manufactured.)"

Both labels contain substantially similar provisions, although the record label is necessarily shorter, due to the limited space upon which it must be printed. Both labels, with equal scope, prohibit an unlicensed sale to the public "by any means of transfer."

In connection with the foregoing notice, the Victor Talking Machine Co. reiterates its former notices, "with reference to unauthorized alterations of Victor patented product and the unauthorized use of attachments or accessories in connection therewith," and adds:

"Such unauthorized acts fall within the scope of, and are prohibited by, the license under which Victor talking machines and records are placed upon the market, as will be apparent from the license labels attached thereto.

"The conditions in the license labels seem entirely self-explanatory; it will be noticed that the license is violated, among other things, by adding to a Victor talking machine, any attachment, or any device whatsoever not forming a part of the machine at the time when it is sold by this company, or by substituting for any part or parts of the talking machine any part not manufactured by this company, or by making any alteration or change in the construction or arrangement of the machine whatsoever.

"A provision prohibiting the alteration of Victor records is also included in the said revised record labels, which read, in part, as follows: 'Licensed under the following patents: — only so long as this record and label remain unaltered.' This provision, among other things, prohibits any alteration of the records for any purpose whatsoever.

"A violation of any of the above conditions will be considered an infringement of the patents set forth in the corresponding license label, or labels, attached to the patented product, and under which it is manufactured and sold, and any party guilty of such violation renders himself liable to suit for infringement by the Victor Talking Machine Co. Any party manufacturing, using, dealing in or in any way supplying such infringing devices or attachments, designed to be attached to or embodied in Victor talking machines or records, or used in connection therewith, is also guilty of infringement and liable to be sued."

MUST BRING FRESH ACTION.

Judge Hazel Holds That American Graphophone Co. Must Bring Action Against Hill Piano Co. Assignee in Courts Which Issued Order Permitting Sale of Assets of Company.

(Special to The Talking Machine World.)

Buffalo, N. Y., Oct. 8, 1912.

Attorneys for the American Graphophone Co. appeared before Judge Hazel in the United States District Court here this week for the purpose of securing a restraining order against C. A. Pickard, assignee for the Hill Piano Co., Jamestown, N. Y., to prevent him from selling graphophones and Grafonolas valued at \$4,100 at less than list prices. The plaintiff also demanded that the machines in question be turned over to the Godenough Piano Co., of Jamestown, who now have the agency for the Columbia phonographs and Grafonolas in that city. Judge Hazel denied the injunction and held that the American Graphophone Co. must bring action in the courts of Chautauqua where the original order permitting the sale of the Hill assets was issued.

NEW VICTROLA DEPARTMENT.

W. F. Frederick Piano Co. to Open Large Recital Hall and to Give Much More Space to Display and Sale of Talking Machines.

(Special to The Talking Machine World.)

Pittsburgh, Pa., Oct. 8, 1912.

Following the closing of a fifteen year lease on its present quarters, the W. F. Frederick Piano Co., remodeled several portions of the building and rearranged the departments. Among the improvements will be the giving over of the entire fourth floor to the talking machine and player-piano departments and the enlarging of the Victrola department, which will be known in the future as Victrola Hall. It is planned to give an elaborate series of recitals in the new hall during which the player-piano and organ will also be used.

The Board of Education of New York has approved the use of talking machines in the public schools next year. The introductory cost will only be about \$5,000, and the pleasure derived from their use will, doubtless, be worth far more than this small expenditure.

THE GRAFONOLA-MOBILE

Made by the Columbia Co. and Designed for Use in Schools, Is Proving One of the Season's Big Sellers.

The Grafonola-Mobile, the latest addition to the Columbia line, is designed for use in schools throughout the country. The machine is mounted on wheels and can be readily moved from one

Grafonola-Mobile.

classroom to another without any outside assistance. It is practical and useful and paves the way for a wide range of business for "live" dealers. The price of the machine shown in the illustration is \$60 complete and \$25 without the instrument. The new educational department, in charge of Prof. Frederic Goodwin, has been established to co-operate with dealers in the sale of this new product.

LUNCHEON FOR EDISON.

Inventor Honored on Thirtieth Anniversary of Electric Lights in New York.

In honor of Thomas A. Edison a luncheon was given in the new Grand Central Palace, at Lexington avenue and Forty-sixth street, on Wednesday, on the thirtieth anniversary of the lighting of New York by electricity. The event also marked the opening of the Electrical Show.

More than three hundred guests were at the luncheon, which was tendered by the New York Edison Co. Six men who were on the original payroll of the company thirty years ago and are still employees were, with Mr. Edison, the special guests of the occasion. They are J. F. Atkins, J. H. Redner, H. A. Campbell, J. B. Sproul, Thomas McComb and J. W. Lieb, Jr.

PLAN SPECIAL MUSICAL PROGRAM.

The Columbia Phonograph Co. is planning a special advertising campaign in musical programs throughout the country. Space has been reserved in the programs to be issued in Aeolian Hall, Carnegie Hall, Brooklyn Academy of Music, Metropolitan Opera House and the grand opera houses in Boston, Philadelphia and Baltimore. Whenever possible records will be advertised in the programs that were sung by artists appearing at the hall where the program is issued. It is expected that this advertising will attract a music-loving clientele to the Columbia line.

H. C. Brown, manager of the advertising department of the Victor Talking Machine Co., has just returned from a trip to the Canadian woods. With Manager Mitchell of the export department he succeeded in bringing down a fine specimen of bull moose.

DINNER IN HONOR OF A POPULAR MANAGER.

Members of the Sales Forces of the Talking Machine and Piano Departments of Gimbel Bros. Entertain Manager George W. Morgan at Banquet, to Mark Progress Made During His First Year as Chief—Most Enjoyable Evening—The Exchange of Gifts Made It Look Like a Christmas Eve Festival.

On Saturday evening, September 28, coincident with the celebration by Gimbel Bros. of the second anniversary of the opening of their New York store, the staff of the piano and talking machine departments of the store gave a dinner to George W. Morgan to celebrate the successful closing of his first year as manager of those departments. The dinner was held in the Pompeian Room of Colaizzi's Restaurant, and there were present besides Mr. Morgan Fred J. Fitzgerald, A. H. Kay-

who was appointed Toastmaster, and the gold pencils presented by the hosts, gave the gathering a real Christmas eve aspect.

The toastmaster was delegated by Mr. Morgan to express his appreciation of the honor done him and read the following:

"Fellow Workers and Friends—To say that I am delighted is putting it too mildly. For one whole year past it has been my pleasure to have been associated with a force that has always ac-

Those Present at the Morgan Dinner—W. A. Sambolino, F. J. Fitzgerald, Manager G. W. Morgan and J. H. Dodin, Seated in Front, from Left to Right.

ton, J. H. Dodin, H. Wakefield Smith, Harry K. Mance, L. Ball, Lipman Kaiser, Benj. Switky, George H. Boardman, Carl H. Eichner, J. W. Barlow, C. H. Sambolino, Wm. A. Sambolino, A. W. Lonquet, Jesse C. Van Camp, George D. Cullis, Theodore Nelson, J. P. Fitzsimmons and B. B. Wilson.

The dinner and all that pertained to it will long be remembered by those privileged to attend. The menu, prepared by J. H. Dodin, H. W. Smith and F. J. Fitzgerald, was a work of art and thoroughly entertaining of itself. Each course received attention. Nothing on the elaborate list was skipped. Then, too, under the name of each guest there appeared some trite phrase describing some special characteristic and calculated to make the reader pay close attention.

If the list of eatables was elaborate, the available supply of drinkables was such as would rouse the envy of a member of the bartenders' union, running the gauntlet of cocktails, beer, a bit o' mountain dew, described as being "as harmless as a baby," and a small ocean of real joy water, so much of the latter that there was some left over.

One of the pleasant features of the evening was the presentation by J. H. Dodin, who takes an active part in the conduct of the talking machine department of the Gimbel store, of a handsome silver loving cup to Mr. Morgan with the compliments of the male and female employees of the talking machine and sheet music departments. The men of the piano department also presented the guest of honor with a beautiful diamond studded watch fob. Mr. Morgan for his part came back with a dainty gold stickpin for each of those present. These, with the automatic cigar lighters distributed by Benj. Switky, the prominent talking machine jobber,

ceded to my last request in a most gratifying manner, and in this way greatly improved our departments, the success of which is due to me only in my selection of you gentlemen. On October 1 we start another year, and with the same hearty co-operation which you have given in the past, it seems to me to be a forerunner of a greater successful business future to Gimbel Bros. in both pianos and talking machines."

Following the exchange of congratulations and good wishes between Mr. Morgan and his staff, A. H. Kayton, president of the Milton Piano Co., who was listed as "A European Traveler," addressed the gathering on the subject of team work with the Gimbel staff as a concrete example of what might be accomplished when the members of a staff stick together. Then Lipman Kaiser, the well-known talking machine ambassador, followed with a short and complimentary address of informal character. Wm. A. Sambolino, the prominent small goods man, was also among the speakers of the evening, and paid many compliments both to Mr. Morgan and to the staff. Tel-

egrams of congratulation were received from Messrs. Oakley and Wendel, of the executive staff of Gimbel Bros., and a letter from Edward Lyman Bill, expressing his regret at his inability to be present, was also read.

The entertainment, offered and supplied in its entirety by the members of the staff, was of a nature to make the manager of a high class Broadway cabaret turn green with envy. There was H. Wakefield Smith, well known as a composer of high class songs, and who wrote a special song for the occasion dedicated to Mr. Morgan, who presided at the piano, and later recited with the grace and assurance of a professional. Jesse C. Van Camp, who sang numerous songs in a manner that aroused enthusiasm. George H. Boardman, dean of the staff, played the sextette from "Lucia" with the left hand alone much better than some good pianists can play it with both hands. Then there were six-hand renditions of well-known pieces, with Mr. Smith at one piano, Mr. Fitzgerald at the other, and Mr. Boardman dividing his attention between the two.

RECORDS BY THEODORE ROOSEVELT,

Made by Thos. A. Edison, Inc., Give the Views of the Progressive Leader on Important Public Questions of the Day.

Thomas A. Edison, Inc., Orange, N. J., with their customary progressiveness, began shipping to jobbers on September 12, four records made by Theodore Roosevelt, the first that has been made this season for any talking machine or phonograph. The records are listed under numbers 1146, 1147, 1148, 1149, with the following titles: "Progressive Covenant With the People," "The Right of the People to Rule," "The Farmer and the Business Man," and "Social and Industrial Justice." As their titles suggest, the records give the Progressive leader's views upon the great public questions which we as a nation must face.

BUSINESS VERY ACTIVE

With the New York Talking Machine Co.—Not Trying to Increase Line of Dealers.

The New York Talking Machine Co., of 81 Chambers street, New York, is doing the greatest business in years with the Victor products. G. T. Williams, manager, returned this week from a three weeks' vacation and has resumed work with renewed vigor and enthusiasm. V. W. Moody, who was in charge during Mr. Williams' absence, is greatly pleased with present conditions.

In a chat with *The World*, Mr. Moody said in part: "This is a banner season for Victor products. Our business is increasing faster than ever before, and as an indication of the volume of business on hand, it is of interest to note that we are not making any effort to secure new dealers. This is a new phase of old conditions, for in years past we have always made strenuous campaigns in the fall to interest dealers not carrying the Victor line. This year, however, we have all we can do to fill our regular customers' orders. Such a condition gives some idea of the amount of business we are doing. The new models are selling exceptionally well, and the outlook in general is for a remarkably fine holiday season for the Victor products."

N. H. Phinney & Co., Ltd., Halifax, N. S., have been appointed distributing agents for the Columbia Phonograph Co. in Nova Scotia.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

The Season Has Started In in a Most Pleasing Manner and the Leading Houses Are in Receipt of Substantial Orders from Distributors, indicating Increasing Activity Throughout the Country—Record Situation Causes Discussion—A Great Future in Great Britain for the New Edison Kinetoscope—The Month's List of Records of "His Master's Voice," and Other Concerns Up to the Standard—New Copyright Treaty Between the United States and Hungary—French Aviators Using Talking Machines—Welcome for the Edison Four-Minute Recording Outfit—Other Items of Interest from Abroad.

(Special to The Talking Machine World.)

London, E. C., Oct. 4, 1912.

The season's trade may now be said to have really commenced in earnest, substantial orders from distributors being a sure indication that progressive action is afoot. This aspect is fairly general, but to draw a simile one might say that while the big supply ships are well under way, smaller craft have yet to reach the trade-wind channel which, judging by their pilots' optimism, will soon be accomplished. From the viewpoint of general trade stability prospects are exceedingly good, the business returns of the Board of Trade showing that import and export increases have prevailed this last few months, while another satisfactory index is the absence of labor disputes, although there is some trouble brewing among men engaged in the great cotton industry. Given, however, a continuance of present conditions, the future situation should be one of unparalleled prosperity for all engaged in the talking machine trade.

With the commencement of operations, respective manufacturers are putting into force plans for capturing each their fair share of trade, and present indications make manifest that the fight will be a keen and prolonged one. Every year the big companies allocate larger sums for expenditure on advertising, and this season is no exception to the rule, extensive campaigns having been planned to take effect during the next few months. "His Master's Voice" Co. is spending £20,000, and liberal amounts will accrue to the London and provincial newspapers, magazines, etc., from other leading record companies. With this educational influence at work one cannot go far wrong in prophesying an abnormal volume of sales between now and Christmastide.

Situation in the Record Field.

Within recent months the 1s. 6d. double disc has made much headway here, not, in my opinion, because they can make claim to any special standard of quality or up-to-dateness of selections offered—this with some of them, apparently, being quite a secondary consideration—but their existence has been and is fostered by the hundreds of dealers who, finding a ready market for cheap records, become obsessed with the idea that they have struck a gold mine because they perhaps sell a few more than would be the case with half-crown discs. If manufacturers can profitably market a ten-inch double disc at one shilling and sixpence, well and

good—but can they? The enormous expense involved in recording, advertising, distribution, salaries, to say nothing of rent, rates, taxes, bad debts and other outgoings too numerous to mention, represent a formidable item when it comes to balancing the profit and loss account, and while no one doubts that two or three of such manufacturers could sell a sufficient quantity of records to leave them a substantial margin of profit at the end of their fiscal year, with the coming of others and correspondingly increased competition, which even an expanding demand cannot mitigate to any great extent, profits must eventually dwindle to the vanishing point when a continuance of this cheap record policy becomes alike unprofitable to both manufacturer, factor and dealer. With half a crown as the standard figure there is ample margin of profit to partly expend in creating the demand, and most important of all, in offering the public up-to-date titles by first-class artists. There is a rumor—I give it for what it is worth—that a large number of the best vocal and instrumental artists—the talent that really counts in this business—have been encouraged by extra fees, or exclusive contracts, to record only for certain of the higher-priced record firms. Needless to say this rumor has caused a deal of acrimonious talk. It will be appreciated that we are in the vortex of a peculiar, not to say unique, situation, the outcome of which one may expect to be determined before next season. It is intensely interesting to watch what I might term the evolution of methods competitive. Time will show whether or not these methods will prove detrimental to the interests of the talking machine industry.

Edison Home Kinetoscope Arouses Interest.

The amazing idea of being able to give a real motion picture show in the home will surely come as a great surprise to the British public when the Edison Co. makes public announcement of its Home kinetoscope, which, I believe, has already won popular favor in the States. Edison dealers have already received preliminary advice of the company's plans and the terms and conditions upon which they will market the great wizard's latest invention. The plan is to interest a limited number of factors—who, by the way, look upon the option of an agency factorship as a privilege—and the chosen few will themselves appoint such dealers as conform to certain requirements necessary to the proper handling of this unique line. An essential requirement is the erection of a suitable demonstration room with an intelligent man in charge competent to operate the machine to the best advantage, although from my own knowledge I can most emphatically state that the given A, B, C of the thing—gleanable from one demonstration—there should be no difficulty in that respect. It is proposed to discriminate in the selection of dealers principally with the object of avoiding excessive competition in any town or locality. This matter will, of course, be regulated according to population and other local conditions. Edison phonograph dealers prepared to make an approximate outlay of fifty pounds and abide by the conditions previously mentioned will be given preference.

The Film Exchange Proposition.

I am given to understand that a most useful exchange proposition will come into force after the initial film purchase, whereby at a very nominal cost the user will have a choice of something like fifty thousand subjects. Unlimited in scope, this new achievement must in the future represent an educational influence of a somewhat revolutionary nature in our schools, lecture rooms, and other public institutions, and with which the name of Thomas Alva Edison will be inseparably associated as a public benefactor—more so, perhaps, than in the past.

Correcting Trouble in Hearing.

In his investigation of the illusory sounds of the ear, Dr. Marage, who has examined over one thousand cases, says that derangement of hearing seems to be most often due to irritations of the auditory nerve centers, but the whistling—the most common of the imagined sounds—has been curiously traced to a very minute displacement of the stirrup-bone, one of the three tiny bones of the middle ear. It has proved possible, moreover, to jar this bone back into its place by means of a syren, producing sound waves of any desired length and intensity.

Piano Contest Much Discussed.

Some interesting correspondence has appeared in the Express bearing upon Dr. Charles Vincent's suggestion that British piano manufacturers should prove the superiority of the English instrument by challenging the German makers to a contest. For many years Continental pianos have been regarded as best, and the English makers now think the time has arrived to disprove this fallacy by taking drastic action in the direction indicated. The discussion is arousing great interest in German trade circles, but as yet no formal challenge has been received. It would certainly be a daring experiment.

Auxetophone to Sooth Turbulent Crowds.

The last day of Sir Edward Carson's Ulster tour was marked by a great meeting of "loyal" citizens at Belfast, and the occasion was seized by Thos. Edens Osborne to demonstrate an Auxetophone at the City Hall overflow meeting. Every Irishman belongs to a party, but our friend was out to amuse the crowd by playing over anything but party selections, to which, by the way, the organist in the hall confined himself. Mr. Osborne is a staunch supporter of —, well, never mind, it is sufficient that he exercised a wise discretion in the choice of tunes calculated to pacify rather than provoke any likely attempt by the turbulent section to disorder. Mr. Osborne's enterprise naturally received the wide publicity it deserved, many references being made of the matter in the various local journals, who also report, by the way, Mr. Osborne's recent importation of 900 Edison records, and a large consignment of gramophones, records and albums.

New Copyright Treaty in Force.

The copyright treaty between the United States and Hungary, negotiated by Ambassador Richard Lerens, at Budapest, January 30, 1912, was, says "Music," passed last month by the Senate. The treaty becomes effective after ratification. It will

give Americans the right to obtain literary, artistic, dramatic, musical and photographic copyrights in Hungary on the same terms accorded native Hungarians. In return the United States extends full copyright privileges to Hungarian citizens.

Declare 10 Per Cent. Dividend.

"His Master's Voice" Co. has announced an interim dividend for the quarter ending September 30 at the rate of 10 per cent. per annum on the ordinary shares.

Lower Cable Rates Announced.

The Western Union Cable Co. has arranged with the Postmaster-General to make substantial concessions in the charges for "deferred" communications and to accelerate the dispatch of same. A new night letter service to Canada and the States is also instituted. Other changes are to obtain, and readers can get details from any post office.

"His Master's Voice" Records for October.

A fine bumper list of "His Master's Voice" records is that for the month of October, and especially noteworthy are the new double-sided discs bearing popular titles by such eminent instrumental combinations as the Band of H. M. Coldstream Guards, Mayfair Orchestra and the Metropolitan Orchestra. The various items which they offer will be found below. It may be mentioned that this new departure of the H. M. V. Co. has won golden opinions from its dealers, who look forward to a splendid harvest of sales this season in consequence. The complete list of titles is as follows: His Master's Voice 12-inch records—"Unfinished Symphony," second movement (Schubert), New Symphony Orchestra; "Symphony Pathétique," third movement (Tchaikowsky), New Symphony Orchestra; "The Jewels of the Madonna," intermezzo after Act 1 (Wolf-Ferrari), Imperial Philharmonic Orchestra; "The Jewels of the Madonna," intermezzo after Act 2 (Wolf-Ferrari), Imperial Philharmonic Orchestra; "Astoria" (Trotire), John McCormack; "Ora Pro Nobis" ("Pray for Us") (Piccolomini), Stewart Gardner; "Good-By"

(Tosti), Percival Allen; "Coolan Dhu" (Leoni), Marion Beeley; "Once Again" (Sullivan), Ruby Helder; "Drink to Me Only With Thine Eyes" (traditional), W. H. Squire, 'cello solo, accompanied by Hamilton Harty; "Scherzo and Allegro" (Scarlatti), Herr W. Backhaus, piano solo; "Gems from Princess Caprice," Part 1 (Leo Fall), the Light Opera Co.; "Gems from Princess Caprice," Part 2 (Leo Fall), the Light Opera Co.; "Green Grass Grew All Around" (Montague and MacLaren), Tom Clare; and "The Other Chap," "Sunshine Girl" (Rubens), George Grossmith. His Master's Voice 10-inch records—"A Bachelor's Love Song" (D. Slater), Robert Howe; "The Old Gray Fox" (M. V. White), Percy Whitehead; "Printemps" (Stern), Lucy Marsh; "In Sweet September" (Hope Temple), Mme. Kirkby Lunn; "Waltz Song," Tom Jones (Edward German), Florence Smithson; "Allegro" (Fiocco), Marie Hall, violin solo; "Hear That Orchestra Rag" (Hollander), American Quartet. Double records—"Serenata," "Love in Idleness" (A. Macbeth), and "The Whispering of the Flowers" (Von Blon), Mayfair Orchestra Co.; "Echo des Bastions" (H. Kling), and "Un Pew d'Amour" (Las Silesu), Mayfair Orchestra; "Dreams of Ragtime Intermezzo" (Thurban), "Massa Johnson" (Finck), Metropolitan Orchestra; "Mirella Overture" (Gounod), "Marco Spada Overture" (Auber), Band of H. M. Coldstream Guards; and "Parade of the Tin Soldiers" (Jessel), and "Convivial March" (O'Hara), Band of H. M. Coldstream Guards.

New Columbia Exclusive Artists.

Another big star comedienne has recently been added by the Columbia Co. to the rapidly growing list of exclusive artistes, the latest being Miss May Moore Duprez, whose tag "The Jolly Little Dutch Girl" has aroused laughter and encores at nearly every hall in the kingdom. Her Dutch dialect songs are very well known and appreciated.

Jack and Evelyn are also down in the Columbia-Rena list with their screamingly funny burlesque,

"The Little Corporal Napolian" and "Take Me Somewhere with You, Johnnie." I need scarcely mention that there are several other big sellers in the list, some examples of which are as follows: Columbia 10-inch records—"The Sunshine Girl," selection, Part 1 and Part 2 (Rubens), Band of H. M. Scots Guards; "Sweet Jasmine" (Hesse and Oakley), and "The Colored Major March" (S. R. Henry) (banjo solos), Olly Oakley; "Sunshine and Rain" (F. Blumenthal), and "Beautiful Land of Nod" (Edwin Greene), Miss Carrie Herwin; "Louisa Schmidt" (G. W. Meyer), and "Gretchen" (Wells and Everard), Miss May Moore Duprez; "Baby Rose" and "Alexander's Ragtime Band" (Irving Berlin), the Two Bobs, comedians; "The Manager of the Splitz Hotel" (Geo. Robey) (E. W. Rogers), and "The Night Watchman" (Wilkie Bard) (Frank Leo), Arthur Leslie. 12-inch Records—"When I Was a Lad" (from "H. M. S. Pinafore"), and "Tit Willow" (from "The Mikado"), Walter Passmore; "Laughing Love" (H. Christine), and "Gipsy Love Waltz" (Franz Lehár), Prince's Orchestra; and "Motoring," Part 1 and Part 2 (Harry Tate), Harry Tate and his company.

Little New at Leipzig Fair.

The Autumn Fair at Leipzig revealed little of interest to visitors out to find novelties. Very few members of the trade went over from this side, the fact being that the autumn show is not regarded as of sufficient importance to warrant the journey. Large orders were somewhat scarce, but a considerable business obtained for all that.

Talking Machines for Aviators.

Ever in the van of progress, French aviators are now experimenting with the business phonograph as a medium for recording their observations and impressions when up in the clouds. It is an admirable and practical idea, and if adopted to any extent is likely to avoid the necessity (as at present) of taking up a special observation officer.

New Zonophone Records.

With their usual enterprise the Zonophone Co. has recorded and issued six new titles by the world-renowned Billy Williams, whose latest effusions are, if anything, funnier than the many others which he has recorded for this company. He is certainly at his best in this instance and dealers everywhere should find a ready sale for the following titles: "It's Mine When You're Done with It," "The Kangaroo Hop," "It's a Grand Old Song Is Home, Sweet Home," "Molly McIntyre," "Where Does Daddy Go?" and "Wait Till I'm as Old as Father."

The latest list of Zonophone discs is truly a sensational one, if only from the viewpoint of artists, everyone of whom is a leader in his or her particular musical sphere. They are all "star" artists, and every selection recorded is rendered with lifelike fidelity. 'Twere invidious to choose, but especially worthy of mention are: "A Summer Shower" and "The Miller and the Maid" (Marzials), Mme. E. Jones Hudson; "Why Do You Keep Laughing at Me?" (Long and Scott), and "Rum-Tum-Tiddle" (Madden and Schwartz), Jen Latona; "The Blarney Stone" and "The Same as His Father Did Before Him" (Lauder), Harry Lauder; "Carrot" (Long), and "Daisy's Daisy Roots" (Murray), Harry Champion; "On the Road to Zag-a-zig" and "Pirouette" (Finck), Peerless Orchestra; and "Jerusalem the Golden" and "Jesus Christ Is Risen To-day" (Clowes and Sons), Besses o' th' Barn Band.

New Four-Minute Recording Outfit Pleases.

The introduction of the Edison four-minute recording outfit opens up really great fields of exploitation not hitherto introduced by any company, aside, of course, from the Edison two-minute home recording apparatus. In a letter to traders the company points out that it has been working silently and patiently upon this device for a long time, carefully perfecting every little detail before making any announcement. Now, the only instrument of its kind is on the market. The owner of a phonograph can double his enjoyment with the aid of this wonderful new recording device, in addition to which, if he be a student of music, elocution, or would attain to linguistic accomplishments, he will find the Edison recorder invaluable. With this innovation specially prepared hard blanks are available, and there is also a simple yet effective hand machine for shaving them. Special publicity literature bearing on the subject is ready, and a sixteen-page booklet, "Making Records at Home," tells all about it. In conjunction with other important moves recently the foregoing amply demonstrates that the Edison people mean business—and will get it—this season.

Some Excellent Beka Records.

The Beka Record Co. has opened the season with an exceptionally brilliant issue of vocal and instrumental items, selections by the great Wilkie

Bard, Olly Oakley and the Beka London Orchestra being especially conspicuous. Mention should be made, too, of the wide variety offered, there being selections to suit every taste. The company's recent exchange scheme, which expired September 30, was very successful and full advantage was taken by the trade of the generous terms allowed.

Postal Order Law.

A somewhat revolutionary decision, which will come as a surprise to a good many people, was recently given in the English courts. A lady, it transpired, received from her husband abroad two postal orders which she cashed at a local office. Imagine her surprise to receive from the Postmaster-General a demand for the money to be refunded on the ground that both orders had been stolen before they reached her. It was not suggested that her husband was the thief. Upon refusal to refund action was taken to recover the money. Expressing sympathy with defendant, the magistrate said the law was against her, and she must therefore refund the money.

New Edison Amberol Records.

A particularly strong batch of titles is contained in the current list of Edison Amberol records, and although it is early to talk about Christmas, there are one or two titles which savor somewhat of that festive season. Some of the artists represented are Billy Williams, Harry Lauder, Florrie Forde, and others prominent in the musical world. The list complete is hereunder:

Edison Amberol Records—"Christmas Fairies" (E. W. Seymour), National Military Band; "Why Don't Santa Claus Bring Something to Me?" (Godfrey and Williams), Billy Williams; "Beautiful Girl" (Bryan and Blanke-Belcher), Glandon Roberts; "I Love a Lassie" (Lauder), Harry Lauder; "Fiddle-Dee-Dee" (Goetz and Berlin), Miss Florrie Forde; "Valse Maie" (Felix Godin), Alhambra Orchestra; "Alexander's Bagpipe Band" (Goetz, Berlin and Sloané), Jack Charman; "The Floral Dance" (Katie Moss), David Brazell; "Hello! Susie Green" (Barrett and Darewski), Stanley Kirkby; "The Star o' Robbie Burns" (Thomson and Booth), Archie Anderson; "A Day in Venice" (suite), No. 1 (A) "Dawn" (B), "Gondoliers" (E. Nevin), American Standard Orchestra; "Moonlight Bay" (P. Wenrich), Premier Quartet; "When I Was Twenty-one and You Were Sweet Sixteen" (Williams and Van Alstyne), Joseph A. Phillips and chorus; "Alexander's Ragtime Band Medley" (banjo solo), Fred Van Epps; "Pucker Up Your Lips, Miss Lindy" (A. Von Tilzer), Campbell and Gillette; "The Gaby Glide" (L. A. Hirsch), Billy Murray; "By My Little Baby Bumble-Bee," "The Grass Widow" (H. J. Marshall), Miss Elizabeth Spencer and Walter Van Brunt; "Old Black Joe," with variations (piano solo), André Benoist; "That Aeroplane Glide" (H. Israel), Peerless Quartet; and "La Marseillaise," New York Military Band.

TO HEAR FROM firm or corporation needing an experienced Talking Machine Manager; thoroughly conversant with the business, both wholesale and retail. Address "Manager," care The Talking Machine World, 373 Fourth avenue, New York City.

FOR SALE

5,000 Edison 2-minute records, 10c. each; 5,000 Zonophone 10-inch records, 15c. each; all new, clean stock. Deninger, 335 North street, Rochester, N. Y.

TALKING MACHINE BUSINESS FOR SALE

FOR SALE—Talking machine business on West Side of New York City; established 7 years. Address "Victor," care The Talking Machine World, 373 Fourth avenue, New York City.

DEALERS' ASSOCIATION MEETS.

Holds Regular Quarterly Session at Cafe Lion d'Or, New York—Many Matters of Trade Interest Discussed—The Question of Jobbers' Privileges Taken Up—Many Other Topics of General Interest Discussed.

The regular quarterly meeting of the Eastern Talking Machine Dealers' Association was held at the Cafe Lion d'Or on Wednesday, October 9, with David Switky, president of the association, presiding. The attendance was very fair for the time of year when the dealers find it hard to leave their businesses for a part of the day, and as usual many matters of particular interest to the members and the dealers were discussed though no definite action was taken in that connection.

Among the matters that came up for discussion was the question of jobbers engaging in the retail business and thus disposing of machines and records that were sometimes required by the dealers who depended upon them for their stocks and also the practise of granting jobbers' licenses to department stores and other large dealers who placed large orders for goods but had no intention of distributing among the dealers. It was claimed that in both cases those enjoying the jobbers discounts were in a position to offer special discounts that were harmful to the business of the regular dealer without exactly violating their agreements with the manufacturers. No action was taken on the matter and it was laid aside for further discussion at a later date.

As is usually the case at the meetings held by the dealers, methods of increasing business, handling and repairing machines and other topics of mutual interest were discussed, after which those present made up a merry luncheon party.

The S. B. Davega Co., 126 University place, New York, is experiencing a noticeable demand for high-priced Victors and Edison machines. Philip Marcus, who is in charge of this department, tells us that they have difficulty in securing machines.

LANDAY BROS.' NEW STORE

On Forty-Second Street and Broadway Has Just Been Opened to the Public—Most Attractively Arranged—Large Stock of Victors Being Carried in This Handsome Store.

Landay Bros., Inc., the well-known Victor dealers of New York, with stores at 563 Fifth avenue, 400 Fifth avenue and 37 West 34th street, now announce the opening of another store at 42d street and Broadway. This store is admir-

Max Landay.

ably located, and no resident or visitor to New York can fail to be attracted by its tastefully arranged interior and attractive window displays. In the new display rooms there are seven booths for demonstration and display purposes, and the architecture is of the French style, with decorations to match. A most comprehensive line of Victor products of all styles and description are displayed. Altogether it is a very handsome showroom, and a credit to the progressiveness of Landay Bros., Inc.

Invitations to the trade to visit this new Landay store will be issued within the next two weeks, as soon as some of the many details incident to the opening have been attended to. The manager of the new store for the present will be James B. Landay, treasurer of the company. In the course of a week or so a permanent manager will be named to take charge of this latest addition to the Landay stores.

TALKING PUMPKIN IN BOSTON.

Puzzling Novelty at the Boston Electrical Show Which Answers the Questions of Visitors and Defies Detection by the Curious.

(Special to The Talking Machine World.)

Boston, Mass., Oct. 7, 1912.

"Ask a pumpkin," is a new and engrossing game which is proving one of the attractive features of the Electrical Show at Mechanics' building. A mysterious talking pumpkin, the invention of an Australian professor, is the cause of it. It creates amusement and comment all out of proportion to its size.

A little light table and a stand on which are fastened three high tension insulators support three glass rods, which, in turn, support three high tension insulators. Upon these rests a fiber plate, on top of which sets the Pumpkin with a smile and tall hat and that's all there is to it. Even the layman and schoolboy could see the glass rods ground off, and, knowing glass to be an insulator, could see that it was absolutely a wireless demonstration.

There is nothing concealed about it; it is all in the open; everybody is invited to ask the Pumpkin questions, and the questions are answered. Baseball scores are given; information about the show and the Sons of Jove; and, when some of the audience say there is a phonograph inside the Pumpkin their next door neighbor wants to know how all those questions are prepared for the phonograph.

And there you are.

PICTURE-DISC COMPANY

Los Angeles, Cal.

Style 102

THIS picture will give you a faint idea of the attractiveness of *this* talking machine record cabinet. If we literally filled the page with cuts we would succeed only in giving a partial idea of our line. So we want to confine ourselves to a talk about one cabinet, this Style 102, because it is a beauty and is representative of our whole stock.

Did you ever try to run a warped record on a talking machine? Then you will appreciate one of the good points of Style 102. The shelves are arranged horizontally and records lying in them *can't* warp.

Did you ever try to cram four or five records into one compartment with the result that you scratched all the records, probably split some of the compartment shelves, and lost your temper to boot? With Style 102 you wouldn't have tried that. *One* shelf is made for *one* record; each shelf is numbered and you know where each particular record goes. Furthermore *every* compartment *felt lined, and felt cannot scratch.*

Notice our large needle box on door, which has a separate cup for loud, medium and soft tone needles, also extra holder for used needles. Very convenient.

You cannot get a neater, more compact, or better made cabinet than the Salter Style 102. It is a handsome piece of furniture.

And, Mr. Merchant! If these good points in a cabinet appeal to you they will appeal to *your* customers. Remember that.

Salter products are not limited to talking machine record cabinets. The new catalogue will show talking machine record cabinets, sheet music cabinets, combinations of sheet music and player roll cabinets, in half a hundred different styles, all of the latest design and up to the Salter standard of quality. Write for catalogue.

"It's hard to find the equal of the Salter."

SALTER MANUFACTURING CO.

337-343 NORTH OAKLEY AVENUE

CHICAGO, ILLINOIS

No need to remark on the sales possibilities of the new style Victrolas. It is about settled that the only limit to be set upon sales of these great instruments is factory capacity.

Your real problem is to get the goods.

We are straining every point—doing our utmost to give our trade friends the best service possible. We are confident you will make no mistake in sending Wurlitzer your order for all machines you will want to December 25th. Mark your order for *immediate shipment* and the machines will be rushed just as fast as we can get them. If you say so, we will telegraph for your final O.K. on each shipment when ready.

We know positively no distributor will try harder to take care of you in the present crisis. None will, or can, give you any better service than Wurlitzer.

Wire us your order today and you will have no cause to regret it.

LOOKS LIKE SCARCITY OF STOCK

Judging from the Great Demand for Talking Machines Now in Evidence in Detroit and Locality—Experience in Which Frederick Co. and Grinnell Figure—Outlook for a Christmas Rush to Exceed Last Winter—Columbia and Other Stores Anxiously Awaiting Stock.

(Special to The Talking Machine World.)

Detroit, Mich., Oct. 7, 1912.

"Straws show which way the wind blows," once remarked a sage who ever since has been quoted thusly the world over, and here's a straw. Grinnell Brothers' talking machine department to-day received an order for a number of the new style Victrolas from the W. F. Frederick Piano Co., of Uniontown, Pa. That particular item of business is of no very great consequence in itself, for Grinnell's get many larger orders in the course of a month. But when the Pennsylvania house is willing to pay freight on Victrolas clear from Detroit, it is a compelling demonstration of what the demand for the instruments must be in all parts of the Middle West.

The Frederick Piano Co. could get them at less cost from jobbers in Pennsylvania, New York and Ohio—provided they were not all sold out. Evidently they were all sold out, for the Uniontown firm had to send to Michigan. They came near losing out here also, for Grinnell's are sending out the new style Victrolas as fast as they come in.

It takes a good many of them to keep their own twenty-seven stores supplied. Harry Rupp, manager of the talking machine department, stated to-day that all of the branch stores were practically cleaned out of the old style Victrolas, so the selling is almost entirely on the new ones.

In a less popular line of trade than the talking machine endeavor, the injection of a new and superior class of goods would inevitably result in a cessation of demand for the old ones and a consequent cutting of prices to get rid of them. But there is no danger of such a thing in Victrolas, in Michigan at least.

There is not a two hundred dollar machine remaining in the store. The sale of that style is not confined to the wealthy patrons. It is shaping itself along the lines of the piano trade, and two hundred dollars is a low price for a piano. There is a variance, however, in the facts that the price of a two hundred dollar piano generally is somewhat wobbly while that of a talking machine rules firm.

The new models of Columbias also are an exceedingly live force in the talking machine trade

HAVE ATTRACTIVE SHOWROOMS.

Headquarters of Harger & Blish, Des Moines, Iowa, Ideal for the Display of the Edison and Victor Machines and Records to Advantage.

(Special to The Talking Machine World.)

Des Moines, Ia., Oct. 7, 1912.

The general attractiveness of the quarters of Harger & Blish, the prominent talking machine job-

displayed to advantage, and the passage leading to the eight well-equipped demonstrating rooms in the rear of the store. The main showroom is light and commodious and is decorated chiefly with the large portraits of the various leading Victor artists hung on the walls. The separate demonstrating rooms are encased in plate glass, which ensures an abundance of light and adds materially to their general attractiveness. The Harger & Blish head-

View of the Harger & Blish Warerooms.

bers of this city, are well illustrated in the accompanying cut, which shows the main warerooms with the various types of Victor and Edison machines

here. The Regal and Eclipse, at forty and twenty dollars respectively, keep the shipping clerks busy constantly. The Columbia branch store here is able to keep only samples on the floor. The big advertising that has been done for these models has sent in a rush of orders from dealers all over the State. Manager K. M. Johns stated to the Talking Machine World that he was about three weeks behind on orders, estimating from the number on the books and rate at which the machines were coming in. Once in a while even the samples are sent out to fill rush orders, the main store waiting on its luck to get a machine in to show.

S. E. Lind, manager of the city sales, is constantly establishing new talking machine stores in all parts of the city. Detroit's growth just now is

quarters are a popular rendezvous for many of the music lovers of the city and have been highly praised by all those who have visited them.

such that a considerable sized village is built onto this and that side of the city every month or so, and new business centers are springing up everywhere. These all have to be looked after.

The outlook here is for a Christmas rush exceeding that of last winter, which is saying more than can be properly expressed in words. The Columbia store already has waiting orders amounting to \$2,300 on its books, which is a record for October. Grinnell's recently planned to grasp old Father Time by the forelock by writing to the Victor company a concise explanation of why a certain number of Victors should be shipped here in preparation for the winter's demands, and received back the information that the orders for Victors exceeded the manufactured stock on hand to the extent of some fifty thousand machines, and that the company was catching up as fast as it could, and surprising Manager Rupp by pointing out just how many thousands of machines had been shipped to Detroit in the last few months.

"I had no idea we had sold so many," said Mr. Rupp, "as I had not looked up the records recently."

Freight shipments always are slow in Detroit, after the close of lake navigation. Detroit is just off the route of through travel to the West, and for this reason comparatively few railroads make this port. This condition hampers the talking machine trade every year from December to March. So an effort is being made to get a large number of machines before the ice puts an end to easy transportation.

GEORGE W. LYLE OFF TO WEST.

Will Journey to the Pacific Coast, Visiting Canada First.

General Manager G. W. Lyle, of the Columbia Phonograph Co., is away on a two months' trip. This is Mr. Lyle's semi-annual journey, and he plans to visit Canada, and then proceed to the Coast. All the leading trade centers will be visited.

In a chat with The World, D. Kahn, manager of Ben Switky's store at 9 West 23d street, New York, stated that they were experiencing a splendid season. Victrolas No. 11, retailing at \$100, are oversold for many months, and there is a general demand for high-class records.

The Bell-Hood Needle Sells Itself

777 Chapel Street

New Haven, Conn.

SILVERSTONE TALKING MACHINE CO. TO ADD PIANOS.

When the Silverstone Talking Machine Co. Moves to Its New Quarters on Olive Street It Will Handle Pianos as Well as Phonographs—Mark Silverstone Discusses This Move Which Has Aroused a Great Deal of Interest in the Talking Machine Trade.

(Special to The Talking Machine World.)

St. Louis, Mo., Oct. 8, 1912.

Talking machine men in St. Louis are very much interested in Mark Silverstone's retaliation on the piano trade, which will consist in his adding a line of pianos to the stock of Edison talking machines that he carries in stock. During his ten years in the talking machine business Mr. Silverstone has seen a great many piano dealers add talking machines to their stock and build up a creditable trade without apparent effort or greatly added expense. Now he proposes to make his reputation as a talking machine dealer carry him into the piano trade on much the same lines.

This new move on the part of the Silverstone Talking Machine Co. is chiefly due to rental conditions. At 1010 Olive street, where the company is located, the lease expires next March, and there is little prospect of renewal because the investment in site demands a better return than can be obtained from the two-story buildings on the site. Also the block has greatly improved during the last year and the time is ripe for the improvement of the property. In looking about for a new building Mr. Silverstone was attracted by a five-story building in the 1100 block on Olive street, at the west end of Piano row. This building was larger than he required and cost more than he expects the talking machine business alone to justify, and in looking about for some business to share the rent burden he found nothing that looked better to him than pianos. So he is engaged in selecting a line of pianos.

"In my new venture," said Mr. Silverstone, "I do not expect to set the world afire, but I have built up a reputation among music loving people that I propose to capitalize. I know that many of

my customers here have not pianos but that they expect to buy. I am confident that my reputation among these folk for fair dealing will bring me considerable trade. As to other trade, I will take my chance. I will conduct my piano business along the ethical lines that I have conducted the talking machine business."

Mr. Silverstone does not expect to get fully located in his new building until the first of the year. He already has possession and is busy engaging architects, contractors and others who will transform the interior of the five floors to his liking. On the first floor he will have a display wareroom for talking machines, four sound-proof record booths and space for a few pianos. The second and third floors will be fitted for piano and player salesrooms and the fifth floor for storage of all instruments. The fourth floor will be the workshop.

"I hope to have first and second floor alterations completed by Dec. 1," he says, "and I will put a part of the stock in there for holiday sales of both talking machines and players. While I am not going to go the limit in spending money on my new quarters, I will have up-to-date quarters and I will sacrifice nothing for utility. I am paying special attention to the counters and shelves for the keeping of the cylinder records, and I expect to produce something not excelled in any store. I have not worked out my plans fully, but I am not going to build the ceiling-high shelving that subtracts from the width of the room and makes it so hard to get at stock.

"I found upon investigation that I was not going to be able to do justice to the Edison disc machines in my display rooms here, and that made me more anxious to get new quarters. I will be

good and ready by the time these machines are sent to us, and I think that my display and exploiting of them will equal anything of the kind in the country."

The summersaulting cylinder records in the Silverstone window described in last month's World are still holding attention to his windows. He is leaving them until after the fall festival days, which bring great crowds of country folk to Olive street.

PHONOGRAPH SPREADS SCANDAL.

Rochester Woman Claims Neighbor Made a Record of Uncomplimentary Remarks, and Caused Her Much Annoyance—Case Puzzles Court—Advises a Few Days' Delay.

(Special to The Talking Machine World.)

Rochester, N. Y., Oct. 7, 1912.

"How would you like it if some one in your neighborhood talked into a phonograph and said nasty, mean things about you, and then turned the thing on and let the whole neighborhood hear what she had to say?" was the query put to a clerk in the police court office at police headquarters, last week by Mrs. Christopher P. Fiest, of 437 Maple street, this city.

Mrs. Fiest continued to the effect that a neighbor who lives across the way did not like her, that she owned a phonograph and that she had prepared a record of interesting, uncomplimentary remarks which were not at all pleasing and which were decidedly annoying. Mrs. Fiest alleged that at frequent intervals her neighbor has set the machine going and that all who passed in the street were notified where she lived and were informed in curt tones of her neighbor's opinion. The police court clerk said he did not know a single law which would apply to the case at issue, a law prohibiting unkind things being said by a phonograph never having been placed on the statute books, but he promised Mrs. Fiest that he would "look into the matter and that it might be well to wait a few days."

Mr. Dealer

Do You Sell SESCO?

It is the only Electric Self-Stop for disc talking machines, and considering the fact that it has been before the public but a few months, its success is assured.

Make your department earn all the "traffic will bear." Do not sell a machine unless it is "fully equipped." SESCO means more money in your cash register and twice as much satisfaction for the customer.

A dealer advises that SESCO alone netted him \$300 extra profit. That's what you can do by handling SESCO.

Let us send you one on approval for your demonstrating machine and you will be convinced. When requesting sample mention Gold or Nickel. Further information regarding price and discounts on request.

COLUMBIA LINE WITH WHITNEY & CO.

Representation Placed with This Important House in Albany—New Department Will Be in Charge of Mr. Hoteling.

The Columbia Phonograph Co. has just completed arrangements with W. M. Whitney & Co., of Albany, N. Y., whereby it will handle the Columbia line exclusively in its new piano and talking machine department. In chatting of this deal R. F. Bolton said:

"This is the largest department store in the 'Capitol city,' and in adding them to our list of representatives in Albany we are certain that the Columbia line will be most successful in every way. The new department will be in charge of Mr. Hoteling, a most capable man, and formerly connected with the well-known firms of Cluett & Sons and McClure & Cowles, both of Albany. His knowledge of the trade is extensive, and we are indeed gratified at the able representation we now have in Albany.

"Our business here is remarkably fine. There are heavy demands for all our machines, and the new models particularly have met with universal favor and praise. The call for the \$40 Regal is exceptionally heavy, and there is also a steady, daily increasing demand for the 'Favorite.' As for the 'Eclipse,' we are heavily over-sold, and the reception accorded this new model is beyond our fondest hopes. Orders are coming in so rapidly that the factory cannot supply sufficient stock, and every mail brings in its quota of orders. I am hoping that the dealers will anticipate their needs for the holiday season so that we can have sufficient stock on hand to meet requirements."

BALTIMORE TRADE EXCELLENT.

September Proves Close to Record Month—Sales Forces Being Increased—What Prominent Jobbers and Dealers Have to Report.

(Special to The Talking Machine World.)

Baltimore, Md., Oct. 9, 1912.

Optimism prevails generally among the local talking machine dealers these days. Their reports for September are about the best that have ever been given out for any one month since the talking machine has been introduced into Baltimore. Reports along these lines come from all the dealers and are not the condition enjoyed by only one or two. In speaking of the business condition, F. A. Denison, manager for the local branch of the Columbia Phonograph Co., said:

"September has beaten anything in the way of sales that I have enjoyed since coming to Baltimore. We are having the same old trouble of keeping up a sufficient supply to meet the demand and consequently we are back on deliveries. This is not all. The present prospects would indicate that the Presidential year is not going to cut any figure with the trade and that we are going to do more business than during any previous fall or winter."

Manager W. C. Roberts, of the E. F. Droop & Sons Co.'s Baltimore and Washington stores, made this statement to The Talking Machine World:

"We are doing so much business in these two cities that I have found it necessary to look around for more salesmen to augment my force. We have been hitting things up in great shape, with the result that our September business has exceeded that of any month since we have been in business. And this does not bar December."

Thomas Gordon, manager of the Gordon Talking Machine Co., Victor and Columbia representatives, also makes flattering statements regarding trade. He reports a number of good sales for the month. Joseph Fink, who is associated with Mr. Gordon, also made several good sales during September.

Manager Albert Bowden, of Sanders & Stayman, announces that business with Victors and Columbias has been very brisk for September, and similar reports are made by Manager Strahan, of H. R. Eisenbrandt Sons; Cohen & Hughes, Hammann & Levine, the Hub Piano Co., the Rosenstein Piano Co., William Knabe & Co., the Kunkel Piano Co., the Peabody Piano Co., and even among the smaller dealers in the city.

(Commission expires March 30, 1914)

T. A. Laurie, assistant auditor of the Columbia Phonograph Co., has been in Baltimore for two weeks looking over the books of the local branch.

Manager W. C. Roberts, of E. F. Droop & Sons Co., will visit the Victor factory during the coming week.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Four Weeks.

(Special to The Talking Machine World.)

Washington, D. C., Oct. 6, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

SEPTEMBER 14.

Bombay, 5 pkgs., \$146; Cardenas, 1 pkg., \$113; Havana, 35 pkgs., \$1,705; Kingston, 7 pkgs., \$196; London, 3 pkgs., \$245, 40 pkgs., \$1,685, 22 pkgs., \$445; Manila, 43 pkgs., \$2,435; Mollendo, 7 pkgs., \$308; Puerto Barios, 20 pkgs., \$967; Rangoon, 11 pkgs., \$340; Rio de Janeiro, 21 pkgs., \$1,560; Santos, 105 pkgs., \$6,568; Singapore, 4 pkgs., \$208; Valparaiso, 7 pkgs., \$450; Vera Cruz, 60 pkgs., \$1,796.

SEPTEMBER 21.

Algoa Bay, 108 pkgs., \$2,538; Barbados, 5 pkgs., \$263; Batavia, 16 pkgs., \$758; Berlin, 10 pkgs., \$265, 36 pkgs., \$2,808; Bolivar, 2 pkgs., \$166; Buenos Ayres, 8 pkgs., \$670, 8 pkgs., \$817, 9 pkgs., \$381; Callao, 7 pkgs., \$188; Colon, 10 pkgs., \$141; Havana, 22 pkgs., \$1,100; Iquique, 7 pkgs., \$128; La Paz, 9 pkgs., \$604; Limon, 12 pkgs., \$99; Liverpool, 1 pkg., \$200; London, 505 pkgs., \$4,640; Montevideo, 3 pkgs., \$122; Puerto Cabello, 9 pkgs., \$201; Rio de Janeiro, 5 pkgs., \$420; Singapore, 2 pkgs., \$104; Tampico, 3 pkgs., \$119; Valparaiso, 6 pkgs., \$230.

SEPTEMBER 28.

Berlin, 69 pkgs., \$1,475; Hamilton, 4 pkgs., \$120; Havana, 15 pkgs., \$1,404; Liverpool, 2 pkgs., \$123; London, 168 pkgs., \$4,609; Milan, 9 pkgs., \$417; Para, 25 pkgs., \$1,897; Porto Plata, 1 pkg., \$225; Puerto Barrios, 12 pkgs., \$666; Riga, 4 pkgs., \$640; Rio de Janeiro, 12 pkgs., \$951, 10 pkgs., \$539; St. Kitts, 4 pkgs., \$103; Valparaiso, 7 pkgs., \$162, 1 pkg., \$122; Vera Cruz, 123 pkgs., \$3,383, 81 pkgs., \$2,958.

OCTOBER 5.

Antilla, 2 pkgs., \$191; Berlin, 145 pkgs., \$3,874; Buenos Ayres, 34 pkgs., \$4,143; Callao, 5 pkgs., \$465; Chemulpo, 18 pkgs., \$1,312; Colon, 5 pkgs., \$135; Demerara, 6 pkgs., \$213; Guayaquil, 17 pkgs., \$362, 7 pkgs., \$223; Havana, 25 pkgs., \$1,608; Kingston, 8 pkgs., \$233; La Paz, 17 pkgs.,

\$570; London, 12 pkgs., \$640, 118 pkgs., \$6,020; Manila, 20 pkgs., \$696; Martinique, 1 pkg., \$233; Milan, 14 pkgs., \$720; Soerabaya, 5 pkgs., \$206; Tampico, 8 pkgs., \$334; Valparaiso, 36 pkgs., \$1,334; Vera Cruz, 332 pkgs., \$9,052; Yokohama, 51 pkgs., \$2,665.

AEOLIAN CO. DOUBLES ITS SALES.

(Special to The Talking Machine World.)

Cincinnati, O., Oct. 10, 1912.

The Aeolian Co. has doubled its sales over last year's September, which was really a phenomenal one. The firm is more than pleased with the outlook for this fall's business and believes it will be greater than anticipated and have planned to take care of every detail, including its "Every Record in Stock" service.

The department will feature the Riley records that will cover the entire surrounding territory, including Kentucky, with demonstrations which will popularize the Victor in every home and make the "stay-at-homes" feel that life with a Victor is really sublime. Mr. Ahaus, manager of Victor department, is enthusiastic about the impending rush of business and is fully prepared to cope with the maximum volume.

Don't wind an inch of unnecessary red tape around the selling of goods to delay customers who are in a hurry. Quick service means a good deal to most people in this age of rush.

Retails for a Dollar, with 80 Per Cent. Profit to You

\$1.00 Retail

Our new "Viennese Imitation Leather" is the strongest and only absolutely guaranteed bound record album made. Why use the usual cloth bound albums when you can get an album with a binding 1,000% stronger than any of the cloth bindings now made by our competitors. Bindings in our new albums are guaranteed indestructible, price the same as the cloth albums, but 1,000% stronger in the wearing qualities. Gold Plated Rings in the back of the same. Not the usual brass rings, and are made to match the metal finish on all Victor and Columbia Cabinets. Let us send you one sample album and be convinced.

We have enough big news for Columbia dealers this Fall to make them think their best months heretofore were only promises—and no chance of a slip-up.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

FALL TRADE OPENS UP IN LIVELY FASHION IN ST. LOUIS.

Collections Are Also Better and Indicate Prosperity—Columbia Store Profits by Interesting Window Display—Harry Levy, Aeolian Co. Manager, Reports Pleasing Conditions Throughout the Southwest—New Machines Arouse Enthusiasm and Sell Well—Some Recent Sales of Particular Interest—New Entrants in the Field—Silverstone Talking Machine Co. to Move to New Quarters—To Handle a Line of Pianos—Other News.

(Special to The Talking Machine World.)

St. Louis, Mo., Oct. 8, 1912.

Local dealers are well pleased with the business at the end of September, and without exception they declare that the last two weeks more than recovered the ground lost during the first two, when it was too hot for business. Manager Ramsdall, of the Columbia Co., takes a very cheerful view of prospects. "Money is much easier," he says. "Not only are retail accounts easier to handle, but our jobbing accounts are being met on time better than for a long period. Money is easy in the country, apparently, and the business is running to good machines."

Sales Manager Byars, of the Columbia Co., has been making a hit with his windows recently. This week he had three table machines on display and he reports a number of inquiries due to the window. Four inquiries came in one day. A feature of his recent windows has been illustrated poster cards, the pictures used being those of Columbia artists or cartoons with wording to make them appropriate to the display. The week of the "4 \$5-bill" ad in the Saturday Evening Post Mr. Byars arranged a mystery window, all of the front being hidden with paper except for a peephole. Through this could be seen the ad and one of the machines. Good business resulted and Mr. Byars says that these machines are being sold as rapidly as they can be stocked. For the present Mr. Byars is again turning his sales force to the Favorites, in order to take full advantage of a Favorite advertising campaign that is coming. Mr. Byars regards these national advertising campaigns as the signal to strike and he gets the results.

J. M. Ryan, an addition to the Columbia Phonograph Co. sales force, is traveling in southeast Missouri and is having good success, reporting a new dealer sale almost daily.

Harry Levy, manager of the talking machine department of the Aeolian Co., returned the first of the month from a trip through the Southwest that ended at Houston. "Everything is fine through Arkansas and the other States I visited," said Mr. Levy, "and I was sorry that I was forced to come back, for there is good business in that country this fall. Crops are good, people everywhere are appreciating the talking machine, and the dealers are enthusiastic over the new models and the prospect of a profitable business season. Even in the smaller cities the record business is taking hold in

a way that interests those who heretofore have seen possibilities only in machine sales, and more of the all-year-around business is in sight. I find the St. Louis distributing territory is growing all the time."

Manager Robinson, of the Thiebes Piano Co. talking machine department, says: "The new Victor machines are going to please, I believe. Especially is the XI model going to prove popular. Our record business is growing constantly and steadily in keeping with the new customers put onto our lists, and we are proud of it. As we expected, the bulk of the total sales this fall is for high-priced machines. The trade is appreciative when the machines are shown together."

"Roosevelt will speak here at 11 a. m. and 2 p. m.," reads a sign in the Silverstone Talking Machine Co. window. "A good many persons come in to hear the chief Bull Mooser," said Mr. Silverstone, "and every time there is anyone to hear we put on one or two of the four Edison records we have. Sales usually follow. When I first got these records I took them and a machine to the Bull Moose headquarters by arrangement and was greeted by quite an audience. The enthusiasts applauded as vigorously as though the chief were speaking in person."

Another Silverstone sign that is attracting attention is that over the entrance of the new building he has rented. It says:

"This building will be occupied by the Silverstone Talking Machine Co. when alterations are completed. The store is now at 1010 Olive street. No 'sale' is on there, all goods being sold at regular prices preparatory to removal."

Secretary Rauth, of the Koerber-Brenner Music Co., Victor jobbers, is much pleased with the present business and prospects. "We are well supplied with machines and records," he said, "and anticipate no trouble meeting our orders, although trade is very brisk both in city and country. I believe the small dealers are getting a bit more inclined toward the service idea and when they realize the full extent of this possibility, we shall have more talking machine enthusiasm."

B. F. Philips, a Columbia City salesman, recently made a remarkable sales record of two Nonpareils, one Favorite and one Mignonette, a total of \$450, in one day.

The Columbia Co., as a stimulation to record business and exchange sales, have just sent out cir-

culars to every Columbia owner offering to clean and overhaul his machine, regardless of age or value, free for ten days.

The Bollman Bros. Co. took advantage of the revival of the old St. Louis Fair to design a talking machine window that attracted comment even in the daily papers. It was a reproduction of the grounds, including the race track, lake, boy scout camp and exhibit buildings. The work was done under the direction of H. H. Bollman, who makes a success of these displays by use of his paint brush, with which he is an artist of more than usual amateur merit. Victor machines were placed at conspicuous points in the reproduced scene. The Bollman Co. is inducing talking machine owners to come to its store by circulars offering a gift of needles.

F. W. Bartholdt, formerly of the Bollman Piano Co., is now in charge of the Edison business phonograph department of the Silverstone Talking Machine Co.

The winning of the Piano League baseball pennant by the Thiebes team was well received by the talking machine craft, as that team had five members who are identified with the talking machine department of the store. The five are: A. J. Robinson, captain; W. Lerch, Jesse Druin, A. Engberg and Chas. Burke.

The Jesse French Piano Co. (Field-Lippman) will open its talking machine department this month. A stock of Victor machines and records second to none will be shown, and with the extension of its highly organized service to this branch of the trade great results are expected. The store arrangements for the department have been carefully planned and carried out without regard for expense.

THE UNIQUE "VICTOR GARDEN."

Open Air Victrola Display and Demonstrating Garden Proves Interesting to Music Lovers of Los Angeles—Might Work in Other Localities with Gratifying Results.

One of the most original and interesting of Victor showrooms is maintained by the Musical Record Co., Los Angeles, Cal., in connection with its store in that city, and appropriately called the "Victor Garden." The "Victor Garden" is located in the open air with plain walls to separate it from the surrounding property. There is no roof and a profusion of growing ferns, cacti and other tropical and semi-tropical plants serve to make it a small paradise. Benches and chairs, covered with handsome Navajo blankets, are placed at various points where visitors may sit and enjoy the music of a Victrola as it plays the classics or the latest popular airs. The "Victor Garden" has made quite an impression on Los Angeles music lovers, who frequently take the opportunity of visiting it, thus stimulating the sales of machines and records. The garden idea should prove interesting and profitable in other localities, for even where the climate will not permit of the use of open air garden throughout the year there are several months in the summer when it could be used to counteract the dull season and keep trade interested.

PRICE CUTTING—A RESTRAINT OF TRADE

By Eldridge R. Johnson

President of The Victor Talking Machine Company

An Argument Against Any Legislation that Contemplates Interference With the Manufacturer's Rights to Regulate the Price at Which His Goods May be Sold.

Price wars are possible for the same reason that inspires the scramble for food by a drove of hogs—pure individual selfishness.

Price-cutting is the favorite weapon used by people who conspire to monopolize trade that belongs to others. Once these bushwhackers attack a firm there is no protection, no matter how fair the prices of that firm may be or how satisfactory the quality of their goods.

The Consumer Ultimately Always the Sufferer from All Cut-Price Wars.

The consumers in general suffer by price wars as well as do the manufacturer and the merchant. The ultimate result is always a rise in prices or a deterioration in quality, which latter is the most expensive way possible to the public of raising prices. When a fair and equitable price which has been established by a reliable manufacturer is cut in half by a retailer as an advertisement, a loss is created, and that loss must be made up somewhere. It is certain that the public will pay for it in the end and that they do not gain the difference between the fair price, which had been established by the simple, honest rules of trading, and the reduced price which is the star feature in a conspiracy to monopolize a trade which in fairness belongs to the firm that developed it.

Price-Cutting Is Not Competition.

Price-cutting is generally confused with competition and, while it may be so classed, there is a very great and important difference, as many forms of price-cutting are unquestionably unhealthy competition. It benefits no one save a class of price-cutters who could very well be dispensed with, for they live and grow rich by breaking into and diverting to themselves the good-will of a trade that others have created. They never build up a business, but invariably appropriate that which someone else has created. The foundation on which their business stands is not constructive, but destructive and monopolistic. They sell at less than an ordinary percentage of profit if, by so doing, the trade that is going to many others can be diverted to themselves. This is the whole story. There would, of course, be a public gain in this were it done fairly and in good faith, but more than often it is not done fairly, or even decently, and is but the means to an end that has aroused so much indignation in this country—monopoly. There are many legitimate occasions to reduce prices, but such occasions are temporary and have no relation to professional price-cutting.

The Effect of Price-Cutting.

There is no intelligent citizen in this country who has not seen the operations of price-cutters; who has not seen them drive responsible and honest enterprises out of business without in any possible way benefiting the public. As a matter of cold facts, a decided injury has been done through a general deterioration of product due to the inevitable squeezing down of profits clear back to manufacturer and the workingman, and then in turn squeezing the public after the legitimate trader has been driven out.

Unfair Measures Introduced by Those Unfamiliar with the Needs of Present-Day Business.

There is a decided tendency among the class of citizens who are entrusted with the great responsibility of making, defining and enforcing our laws, to destroy every means by which even a perfectly fair business enterprise may defend itself against cowardly and plainly selfish attacks of price-cutting enterprises. The legislative and judicial branches of the government appear to be working

under the delusion that by this means healthy competition may be stimulated. No such results are obtained; quite to the contrary, a very great injury is being done to many of the most conscientious and reliable manufacturing and mercantile concerns in the country, and without gain to the consuming public. Wholesome competition stimulates trade and benefits both consumer and producer, but wholesome competition means much more than the simple matter of marking down prices. Any numbskull can mark down a price, but it takes brains to lower costs by fair and humane methods.

There seems to be an impression that manufacturers are rather a new and independent class conspiring to monopolize business and to extract a high toll from the people in general. There seems to be an impression that the agriculturalist is the old reliable wealth producer, never doing anything wrong, and patiently supporting the whole world, while cheerfully suffering with but mild protest the high cost of living due to the sins of the manufacturer. The unquestionable fact that for the last two years agricultural products have ruled high and manufactured products have ruled low in prices does not seem to have been taken into consideration. It is still the impression that the high cost of living can be reduced by new laws aimed at the prosperity of manufacturers and merchants.

The Inventor Entitled to All, and Even Greater Benefits Than He Now Receives.

Even the proverbially poor inventor comes in for a share of chastisement. The patent laws, which have been on the statute books for more than one hundred years, and under which this country has become more prosperous than any other country in the world, are to be torn apart and used as new material to reduce the cost of living. The patent laws of this country are not perfect, but they are better than those of any other country. They do not give inventors any greater reward than that class of public benefactors deserve. No doubt some amendments would be beneficial, but such amendments should be directed to the purpose of a more practical administration of the principles which the present law so clearly sets forth, and should not be aimed at radical changes; at least, not without more deliberate and intelligent consideration than seems to be in sight at present. Some of the amendments now suggested would greatly injure and discourage the inventor and would benefit no one.

America's Continued Expansion Threatened by Unwise Legislation.

The continuation of the prosperity of this country rests in the hands of the manufacturers and agriculturalists alike; neither can prosper without the aid of the other, and each is of equal importance. But inventors must unravel the problems that block the way to progress; and we must be fair and liberal with them; they are still useful. **Manufacturing Just as Important as Agriculture in Any Country's Progress and Development.**

The country in which manufacturing does not flourish is always a backward country. Take China, India, Japan and Russia; they are strong in agriculture; the first three named have been developed agriculturally for over 2,000 years; but today, as everyone knows, they are far behind the United States, and they can never equal us until their manufacturing has been developed in more reasonable proportions to their agriculture. All the world comes to the United States to learn manufacturing. The cost of living is low enough in

those countries according to the standard of their masses, but it is higher than in the United States if brought up to the standard of our masses. Therefore, the manufacturers cannot be blamed for the conditions that exist in those countries.

Manufacturing and agriculture have stood side by side as far back as humanity shows the slightest sign of organization, but there is no doubt that manufacturing was the first step by which mankind was raised from the uncertain means of obtaining food by hunting for it among the natural products of the forests, streams and oceans. It takes but little imagination to picture naked creatures with forms of primitive mankind gathering jellyfish and mussels from the tidal flats of some long since receded ocean. Reason can but show that long before crops were sown, baskets were woven in which to gather and store Nature's ready-made food. If this be true, it proves the claim that the manufacturer was the first to take a step toward civilization; yet, we must remember that the primitive inventor prompted that step. That manufacture and agriculture were arts known to a certain degree long before authentic history begins is unquestionably shown by the mythological tales and folk-lore of the ancients. Few of the stories in mythology are true, but they all bear evidence which proves to a certain extent the state of society as to the occupation and religion of the period they represent.

Every Decade of Progress Due to Discovery by Some Poor and Obscure Inventor.

Few people stop to realize that every art and industry, now so familiar to us as to be taken as a matter of course, had to have a beginning. We are not likely to remember that the basic principle of weaving, of making edge-tools from stone and other materials, of making bows and arrows, or the conception of the wheel and axle, are great inventions which have grown into the great industries of to-day. It is the old story of Columbus and his egg again—easy enough after you see it done, but no one could possibly have imagined how to do it before the man who did it made the demonstration. It is no idle boast to say that the inventor has led the way in all progress from the beginning; nor is it an idle boast to say that on the inventor depends the future progress of this country and every other country. As a profit over the total sum of hard-earned compensation to the inventor, the people of the United States have gained a millionfold.

Conditions Responsible for High Cost of Living—Can Never Be Corrected by Laws.

The high cost of living can never be corrected by law. It is the first effect of a thing that progressive people have long sought to bring about; namely, the more equal distribution of wealth by the means of adequate compensation to all for their labor and talents. Food and other necessities cost more to-day simply because the people who are engaged in producing them are better paid for their services than they were a few years ago. There is a great change going on and it is all working toward a better condition for everyone. Of course, there are many to whom the benefits have not yet accrued, but this will be corrected in time. No readjustment of compensations can possibly be made perfect in so short a time; it takes experience, coupled with experiment, but the greater the intelligence used during these processes of adjustment the quicker satisfactory results will be obtained.

No progress can be made by hampering the lead-
(Continued on page 45.)

PRICE CUTTING—A RESTRAINT OF TRADE—(Continued from page 44).

ers of industry, whether they be merchants, manufacturers or inventors. The high cost of living can be reduced only by increasing the efficiency of every element that enters into the cost of manufacturing and of food supplies. It is not that we are living too well, but that we have not yet learned how to live as well as we should. The standards of living have risen in the last few years and will continue to rise until a much higher general plane than that of to-day is reached and until all classes of workers and producers receive fair and adequate compensation.

Cheap Labor a Thing of the Past.

Cheap labor is a passing thing. Farmers who were willing to slave year after year at no profit to themselves are no more. Farmers, merchants, manufacturers, inventors and working people in general must be paid and well paid. They have a right to something besides drudgery in their lives, and the only way to pay all these people well for their services and to control the soaring prices is to increase their efficiency. For this we will have to depend on the inventors and manufacturers who, by working in harmony, will in time succeed in lowering the average cost without decreasing the individual compensation. No law can do this, but unwise laws can hinder its accomplishment. New inventions and systems increasing the efficiency of all the producing factors are the only hope of the human race; we must advance or we perish.

Increase the Reward to the Inventor—Give Him Every Encouragement to Invent Something New.

One of the greatest mistakes and backward steps than can possibly be made is to take away from the inventors any of the rights to an invention. They have more difficulties to encounter in securing proper compensation for their product than any other class. Certainly, the inventor should have the right to fix the price at which goods are sold until they reach the hands of the consumer. The inventor is supposed to have temporarily an extra profit over the ordinary manufacturing profit, as this is all the reward that the patent law has to offer, even though the device may save the country many millions. If deprived of the right to fix prices, the inventor cannot possibly secure anything more than an ordinary manufacturing profit which, under most conditions, is very inadequate compensation for the years of hardship and preparatory work which are necessary in order to perfect even simple inventions. In more than the majority of cases it would be difficult for him to develop his inventions at all or to make any profit. To leave inventors to the scant mercies of cut-price sharps would be base ingratitude and bad policy.

Honest Manufacturers Entitled to Right to Control the Sale and Distribution of Their Goods.

Manufacturers should have the right to regulate the prices at which their goods are retailed in any case, whether they are patented or not. If they are denied this right, the quality of goods in general must deteriorate. There is no possible help for it unless humanity in general can be cured of selfishness. Suppose, for instance, a manufacturer makes an article to retail for a dollar and decides to advertise it all over the United States. It must be a good article and it must be worth a dollar, or the maker cannot hope to sell it in any great quantities. It takes an honest proposition to pay for extensive advertising. The manufacturer may decide to spend half a million dollars in advertising it and by the force of this advertising, if the article is satisfactory, and the distribution of profits to wholesalers and retailers fair, he may succeed in marketing five million articles at one dollar each. This is a good thing all around for the manufacturer, the merchant and the consumer. But what generally happens is that, as soon as the market has been established for the one dollar article, some concern that makes a specialty of price-cutting attempts to appropriate the good-will, and advertises the article at 75 cents. This, of course, brings a tremendous trade to the cut-price store, but it discourages all the other dealers in the vicinity until

they, too, reduce the price to 75 cents, which no longer yields them a satisfactory or paying profit. They then apply to the manufacturer and say, cut-price man and all, "Unless you can quote us a lower price, we cannot afford to sell your article." By this time the cut-price man has lost his advantage through the fact that the other merchants have met his reduction. The manufacturer must then quote a lower price to enable the merchants to continue the sale of his article, or he must go out of business. Of course, the manufacturer reduces the price, and it might be said that all is well as the public have secured an article for 75 cents for which they previously paid one dollar. But right here in the matter is where the public get fooled; at the beginning they may secure for 75 cents a few articles that are worth one dollar, but it generally turns out that they get a less percentage of value than they received when they paid one dollar. The quality of the article is reduced, but the old price printed on the label remains to deceive the purchaser.

Or the story may be different. The responsibility of price-cutting does not always rest with the

Eldridge R. Johnson.

merchant. The producer may use it as a means of absorbing a chain of retail stores, or to concentrate the sale of some line of goods in one large store. There are many other schemes employed, and new ones are being concocted every day, which all depend on price-cutting. No explanation of these schemes is necessary. Everyone knows about them; everyone has seen them and everyone has heard the sorrowful tales of their victims. Every line of trade has suffered, and where trades have not combined to resist the degrading influence of price-cutting, deterioration of product has been the result. And yet the price-cutter is protected by law, and is working for further changes in the laws that will give more victims to the senseless sacrifice!

Goods Priced by Manufacturer Fixes Certain Value, by Which Value of All Similar Goods Are Measured.

One of the greatest difficulties encountered in economical living in this country is to know where to purchase goods that are worth the money paid for them. Low prices have been dangled before the public to such an extent that few realize what a fair price is, and therefore purchase two or three articles of a second quality instead of purchasing one of the first quality, thereby spending a greater amount of money for less results. The manufacture of first quality goods has become a lost art in some lines of trade. We are drifting backward to a condition that Germany is struggling so hard to get out of.

Price-Cutting Makes Monopoly Possible.

Price-cutting is the father of monopoly. All of the great trusts and combinations have been brought about through the operation of drastic

price-cutting wars. Give the merchant and the manufacturer a chance to defend themselves against this pernicious practice, and the formation of great combinations for the purpose of controlling trade will cease in many lines of trade. Manufacturers and merchants do not join a trust because they want to; they all prefer to be independent even at a low profit; they join because they are forced to by destructive price wars.

Fair Wages to Labor Endangered by Hysterical Legislation.

Most of the manufacturing corporations in this country are willing and anxious to maintain fair and liberal wages. They cannot do this if they are handicapped by a conspiracy to force the prices of their goods down to lower point than will yield a fair division of profits between the workingman, the manufacturing corporation, the wholesaler and the retailer. Many manufacturers have been brought face to face with the situation that requires a reduction of wages in order to yield any profit whatsoever. Capital will not continue in enterprises where adequate return for its use is not made. Nothing can be done without capital. The reduction of wages to an unsatisfactory point will bring into existence great combinations of trade unions that may become a grave menace to the stability of this government, because they will have a just cause, and these unions once combined by a just cause may become an unreasoning power that knows no restraint.

Give the People the Right to Work Out Every Industrial Problem.

The so-called industrial unrest is but the leaven of industrial progress. The people will work out their own salvation if they are not interfered with by unwise laws or unduly excited by radical innovations that are preached by political leaders. The working people in this country will not submit to being ground down; they must be raised up. The high cost of living cannot be reduced by the reduction of prices if a reduction in the quality of the goods sold takes place in a greater ratio.

Every business man should have an opportunity to play fair if he wants to. No manufacturer can long maintain a price unduly high. All progressive manufacturers are looking for a way to reduce the price of their goods, as such reductions generally bring increased sales, but every competent manufacturer knows that to fix a retail price below that which will yield a satisfactory profit to everyone necessary to the manufacture and sale of the goods is sure to bring disaster.

Every Manufacturer Jealous of the Reputation of His Goods.

If all manufacturers could sell their products out of their own stores, price-cutting would never reach alarming proportions. When the same interests who have the responsibility of the factory and the future of the business resting on their shoulders have the power to regulate prices, they are more likely to be properly fixed. But when irresponsible sharps can secure the goods of a factory of good reputation and can sell them for any price that suits their selfish purposes, without regard for the welfare of anyone but themselves and regardless of future prospects, past obligations, the safety of capital invested by the manufacturer, the value of good-will and all of the other elements that enter into a well-conducted business, then, surely, some protection is due an honest manufacturer against such destructive manipulations. Nothing but the most short-sighted reasoning can show otherwise.

Difficulty of Manufacturers Selling Direct to Consumer.

There are few classes of manufacturers that can make and sell their own goods; one is the very small manufacturer who makes and sells direct from the factory. This very satisfactory and complete plan must of necessity be confined to a purely local demand. There is also a class of larger manufacturers whose sales happen to be in such units and whose demands happen to be in such territory that they can be covered from a few central points. Both of the above classes can control the prices of their own goods absolutely, and certainly no well-

(Continued on page 46.)

The demand for Columbia is positive and definite. Our national advertising campaign is sending that demand straight to the dealer. The only dealers who are not getting their share are those who have delayed signing up with us.

Tribune Building, New York**

PRICE CUTTING—A RESTRAINT OF TRADE—(Continued from page 45).

informed person can claim that there is any lack of competition among such manufacturers or that they constitute an undesirable class.

Other than the above two, there is the great trust that can afford to do anything that it has to do in order to make a profit. If the suggested changes in the law are aimed at them they will miss the mark.

The Jobber or Middleman an Absolute Necessity in a Country Like the United States.

New laws interfering with price control will handicap and annoy the very class of manufacturers and merchants who have never been guilty of abusing it, but who have always used it for the general benefit. The great bulk of trade must, for a long time to come, be reached through jobbers and dealers—the jobber buying from the factory and selling to the dealer who, in turn, sells to the consumer. It may look like a roundabout way to those who have had no practical experience with trade, but it is the only practical way at present. There is a lot of senseless talk about cutting out the middleman, but if the jobber were not a necessary factor he would not be in existence. No sane producer ever sold to a middleman if he could reach the consumer without doing so. Many manufacturers and producers have tried over and over again to market their own goods direct, and they have succeeded where the conditions were such as to permit them to succeed, but by far the greater proportion of those who have tried have failed, having found that the middleman and jobber can do it for them at a less cost. This country is far too big to get along without jobbers. The jobber performs a service in the matter of credit not generally recognized. On account of his practical knowledge of the commercial value of the merchandise that he handles and his intimate acquaintance with the personal characters of the merchants to whom he sells goods, the jobber is able to extend credit to a better advantage than can either the manufacturer or the banker. The jobber usually well earns the profit secured and in many cases the elimination of jobbers would have the effect of raising prices. All manufacturers should have the right to market their goods under contracts regulating prices and conditions. Only the responsible manufacturer would care to take advantage of the opportunity. Only honest goods will stand advertised prices and price maintenance.

There Is No Difference Between Selling Direct and Through Jobbers and Dealers.

If it is lawful and beneficial for a manufacturer to conduct his business so that he can sell direct from the factory to the consumer, how can it be wrong for a manufacturer to sell by contract through jobbers and dealers? It is practically the same thing. The manufacturer who sells direct has absolute control of the retail price, and the system of sale through jobbers and dealers by contract is practically the same thing. It is necessary to have a contract in such cases in order to insure the observance of rules which must be made for the common good, and to avoid confusion such as the

manufacturer who sells direct would encounter were he to permit his salesmen to quote different prices in competition with one another in order to increase their personal sales. The tendency to prohibit all forms of price control is aimed at the great trusts. They will escape, but the great class of comparatively small manufacturers will get the full force of the blow.

The confusion and differences of opinion on this question are but the natural result of the confusion due to a decided change in the manner, methods and proportions of modern business. Certain classes of business men are urging the government to attack certain other classes of business men. A very large portion of the noise mistaken for popular outcry against trade combinations and price restriction is simply the babble of many tongues raised against one another in the business world—a new and disgusting phase of competition not yet understood by the public.

United States Supreme Court Sustains Right of Manufacturer to Control Distribution and Sale of His Goods.

The United States Supreme Court has lately made an important decision, but with dissenting opinions, based on the rights of the public, in a patent case which fully protects the rights of an inventor. The United States Supreme Court has the confidence of the nation in the matter of legal opinions, but it must be remembered, in considering the dissenting views; that on general business questions and on general questions of public welfare these individual opinions may be of no more value than the opinions of other honest and intelligent citizens; nor are they likely to understand complicated questions of business quite as well as a practical business man who is acquainted with the intricacies of its detail, and who must face the responsibility for the welfare of both capital and labor.

The suggested amendment to the present patent law may be in response to the needs of the present administration in enforcing the Sherman Anti-Trust Law; but should the administration change a law that has been working entirely satisfactory for more than one hundred years, in order to punish a few who may have misused it? Dishonest persons will always find a way to misuse any law. If a pickpocket snatches a purse and dodges into a crowd, the loser of the purse would hardly be called a benefactor if he fired at the disappearing thief with a double-barreled shotgun.

Supplemental.

Since the above article was written, the President has requested Congress to create a commission to study the present patent laws for the purpose of suggesting amendments that will meet the purposes of the administration without destroying the benefits now secured.

The President's message reads like the words of a man who understands the subject under discussion, and there is no doubt that an intelligent and fair commission could find a way to amend the patent laws to the purposes of honest enterprises

without destroying the value. But it must be remembered that the destruction of the efficiency of the patent laws of the United States would be the greatest disaster in our history. This subject is of more importance and fraught with more danger than any other matter now before Congress.

The effect of changes in the present patent laws will have the direct influence on the interests of a far greater number of enterprises and individuals than any other adjustment yet attempted under the Sherman Anti-Trust Law.

SOME HIGH CLASS PUBLICITY.

How the Phillips & Crew Co. Introduced the Four New Styles of Victrolas to the Public of Savannah, Ga.—Clever Advertising That Is Couched Along Original Lines.

(Special to The Talking Machine World.)

Savannah, Ga., Oct. 7, 1912.

Phillips & Crew, the Victor distributors of this city, carried some striking advertisements in the local papers devoted exclusively to the four new styles of Victor Victrolas recently introduced to the trade. They occupied a full four-column space in which illustrations appeared of the four new styles describing the new instrument and inviting the public's consideration to them. In the body of the paper there appeared the following reader under the caption, "A Quartet of Musical Artists to be Heard in Savannah."

"All music lovers will rejoice over the announcement of the coming to Savannah of a quartet of musical artists, the appearance of whom is sure to create a sensation. This quartet is to be heard in all parts of the United States and foreign countries, and that this city was selected for one of their engagements, is a compliment of more than usual merit.

"These artists are capable of rendering at a moment's notice any selection found in publication to-day, from the most classic overtures to the very latest popular songs.

"The personnel of this famous quartet consists of father, mother, daughter and son. They are known the world over as the Victrola family. Their engagements were brought about through the Victor Talking Machine Co., and their local representative will be the Phillips & Crew Co. If suitable homes can be found, it is very probable that the Phillips & Crew Co. can arrange a permanent home for the individual members of the family. The Victrola family will be heard at the attractive warerooms of the Phillips & Crew Co. each day, and you are most cordially invited to call and hear them."

The Phillips & Crew Co. are entitled to heartiest congratulations on their clever presentation of these new Victor styles to the local purchasing public, and their success is apparent, for it has been difficult to supply enough instruments to meet the demand since the initial announcement appeared.

TRADE NEWS FROM CINCINNATI.

Middle West Making Splendid Showing in the Demand for Talking Machines—Manager Whelen, of the Columbia Store, Returns from Eastern Visit—H. & S. Pogue Co. to Open a Special Grafonola Department—Manager Dittrich, of Wurlitzer, Reports Progress.

(Special to The Talking Machine World.)

Cincinnati, O., Oct. 8, 1912.

From all appearances the Middle West talking machine world is in very good shape. Good business has been coming the way of the dealers and some have been having a run on Victrola goods, bringing their accounts far above normal.

Manager Whelen, of the Columbia store, has just returned from a trip East to visit the executive offices and the factories at Bridgeport, Conn. He states that the factory is working to its fullest capacity and the prospects are exceedingly bright for the largest fall business the company has ever experienced. Mr. Whelen further says that the size of the orders that are coming into the executive offices from all parts of the country is phenomenal and this is only a forerunner of the business that will be done this winter. The popularity of the new types of instruments which the Columbia has put on the market this fall, including the "Eclipse" and the "Regal," has surpassed even the expectations of those associated with the Columbia, and it has been predicted that the sale of these popular-priced instruments will eclipse all previous records.

Mr. Ely, special traveling wholesale representative of the Columbia Co., has just succeeded in closing a large deal with the H. & S. Pogue Co., the largest department store west of the Alleghenies. The Pogue people have contracted to build several elegant special parlors, of mahogany, strictly soundproof, for the display of the goods. Instructions are to rush the building of same, and this special Grafonola department will be opened at a very early date.

The Dictaphone comes in for its share of the sales this month and many notable installations have been made. The Dictaphone is finally coming into its own, and from the numbers of letters and telephone calls received daily, the general public are beginning to realize just what the word "Dictaphone" means to a busy man. Fred Baker, who has been connected with the Dictaphone department of the Boston Store, has joined the local department. Mr. Baker is an experienced salesman in the line and his success is assured.

A. W. Roos, auditor of the Columbia Co., spent several days at the local Columbia store, and says that business has increased considerably all over the territory over that of last year.

A new book entitled "Schoolroom Music" has just been published by the Columbia Co., and inasmuch as the Grafonola has already shown its worth as a schoolroom requisite, the assembling of music suitable for this purpose has been a great help to the teachers and principals. Several schools have been equipped with Grafonolas during the past month and Manager Whelen says that many more will be equipped during the coming month. The present outlook, indicates a large "school year" for the Grafonola.

H. B. Draybelle, of the R. Wurlitzer forces, is a Bull Mooser. He is a candidate from Hamilton county for State Senator. The former believes in the motto of the office seeking the man, and for that reason is not making a strenuous campaign.

Manager Dittrich, of the Wurlitzer talking machine department, summed up the past month's situation in the following statement:

"The extraordinary conditions which prevail throughout the country as regards supply and demand on Victor products are so absolutely universal that there would be little advantage in touching on that subject. Suffice it to say that every up-to-date dealer who is well informed on his business realizes the acute conditions that prevail, and is guarding himself against loss, as far as possible, by early purchases and heavy orders.

"The results in Cincinnati for the month of September have certainly exceeded our greatest expectations. The new line of Victor Victrolas, from

SOLID WOOD (NOT VENEERED)

Above All, Mr. Dealer!

What You
Want
You Get

A Solid Wood
Horn
Not Veneered

You make no mistake in
getting a MUSIC MASTER.

Every *DEALER* of Talking Machines should
have the

Music Master Solid Wood Horn
in his place of business; sell the MUSIC MASTER,
use it for demonstrations; you will sell more
machines and records.

The tone from the MUSIC MASTER appeals
to those who demand the best.

Only Horn Guaranteed.

Write for samples, giving name of jobber.

SHEIP & VANDEGRIFT, Inc.

PHILADELPHIA, PA.

which we looked for so much, has inaugurated the most phenomenal year in the history of the talking machine business. It will tax our facilities to keep pace with this, and we are already planning new improvements to provide in part for the increase, in both retail and wholesale business. New possibilities unfold themselves with every new improvement and departure we make, and with every new idea that we introduce in our selling campaigns until the field has demonstrated itself to be inexhaustible."

President Stever, of the Lyric Piano Co., is not afraid to mention the fact that he has some new Victrola goods, the front of the store being placarded with such an announcement. He makes the following statement: "We are making more of an effort than ever to keep our stock always replenished with up-to-date records, and in that way we are getting a class of trade who are looking forward to the Lyric Piano Co.'s line for novelties in records, and the new style of Victor machines which it has added to its list are proving to be quite beneficial to us. We think the \$100 Victrola is going to be the biggest selling machine that the

Victor has put upon the market. It is very neat and artistic and a great machine for the money.

"We are giving concerts every Saturday afternoon and evening. These are specials and we are putting before the people the latest records, and those who have been here and listened to our concerts are commencing to look forward to them and are telling us that they are going to bring their wives and families to hear our concerts. So we are very well pleased with the results we are obtaining in our talking machine department."

The Joseph Krolage Music Co. is running a branch store, with a line of Columbia goods, at 1213 Central avenue. He expects to close this out at the end of the year and will then attempt to separate the talking machine department from his place on Race street.

The Milner Musical Co. is gradually cutting out pianos on the ground floor of the Sixth avenue store and will eventually permit only three pianos there, devoting the remainder of the space to talking machines and small musical goods.

J. E. Poorman, on Main street, is still on the fence as to a live talking machine line.

**We have the product: we have the organization:
we have the advertising: we have the demand:
we have many thousand loyal plugging dealers
and we have a doubled and re-doubling business
and we want to see you share it.**

TRADE CELEBRATES HOOSIER POET'S BIRTHDAY.

Great Demand in Indiana for Records by James Whitcomb Riley, Whose Birthday Was Celebrated Last Week by Leading Book Sellers and Talking Machine Dealers—School Children Visit Aeolian Hall to Hear the New Records—An Interesting Victrola Sale—New Edison Home Kinetoscope Being Introduced by Talking Machine Trade in a Broad Way—Manager Devine, of the Columbia Store, Who Recently Returned from Canada, Speaks of Columbia Expansion—Modern Office Appliances in Ottawa.

(Special to The Talking Machine World.)

Indianapolis, Ind., Oct. 9, 1912.

To put it mildly, and with no embellishment, the Hoosier capital has been captivated by the Riley records put out by the Victor Co. That James Whitcomb Riley, the beloved Hoosier poet, is close to the hearts of Indianians is shown by the interest taken in the four records now on sale, namely, "Little Orphan Annie," "The Raggedy Man," "Out to Old Aunt Mary's," and "The Happy Little Cripple."

The talking machine department of Aeolian Hall, which handles the Victor line exclusively, and the Stewart Talking Machine Co., also a distributor of Victor machines, have had enormous sales of the Riley records.

From October 7 to October 12 the Victor department of Aeolian Hall celebrated Riley week. His birthday was October 7. The company made special arrangements with the school authorities and had the school children come to the hall and listen to the Riley records. It is practically certain that no records ever produced have been the cause of such genuine and widespread enthusiasm. That is true as far as Indiana is concerned, anyway.

The records have proved a source of joy to the poet himself. On account of his health he has not appeared in public in the last few years, and the carrying of his voice, by means of the talking machine, into the homes of his worshippers, is gratifying, because he feels he should fill the demand of those who revel in his poems.

The Victor department of the Aeolian Co. made a rather unusual sale recently. One afternoon, just about closing time, C. C. Thomas, local manager, noticed a gentleman looking at a Victor exhibit in the window. He was invited to the talking machine department. It developed that the man was F. W. Meeds, a retired capitalist of Tuscaloosa, Ala. He said his home town had talking machines, but that he had never seen one quite so fine as the latest Victor machine—the new-style Victrola XVI. He listened to a number of records and finally he pulled out a handful of crisp bank notes, handed the required amount to the manager, and ordered the latest Victor product to be shipped to his home in Alabama.

Paul Bassett, formerly State traveling salesman for the Kipp-Link Phonograph Co., distributors of the Edison machines, has taken employment with the Victor department of the Aeolian Co. Mr. Bassett has a wide acquaintance over the State in the talking machine business.

The Kipp-Link Co. has more orders for the Edison Home Kinetoscope, the moving picture machine, than it can fill at the present time. The company is awaiting additional shipments from the factory. The quarters of the company have been doubled in size in the last month and preparations

are being made to handle the new disc talking machine which the Edison Co. promises will be on the market soon.

The Stewart Talking Machine Co. is installing a number of booths in its quarters at 128 North Pennsylvania street. The company reports good business.

Clifford R. Ely, wholesale representative of the Columbia Phonograph Co., on a tour of the Middle

James Whitcomb Riley.

West, has placed the Columbia line with a number of dealers who did not previously handle it.

The new Eclipse Columbia phonograph, which sells at \$20 retail, bears the earmarks of being the biggest seller that has ever been placed on the market, according to Thomas D. Devine, manager of the local Columbia house. "The only trouble," said Mr. Devine, "is the scarcity of them."

M. D. Easton, agency representative of the Dictaphone, New York, spent several weeks in Indianapolis territory during September. Mr. Easton secured a number of good live agents and incidentally made a host of friends throughout Indiana.

The Columbia Phonograph Co.'s store here has put out two unusually attractive windows and are planning to put on a third next week. Probably the more attractive was that which featured the new Columbia hornless Regal. This window was designed by C. P. Herdman, who is preparing a window display featuring the songs of Alice Nielson, who is to appear here October 9 with the Boston Opera Co.

Clinton Routh, formerly of Richmond, Ind., now

assistant manager of the Columbia Co.'s store at Cleveland, spent a few days in Indianapolis recently.

Manager Devine, of the Columbia local store, returned recently from a visit to Canada. "I was particularly struck by the presence of Columbia dealers in all the towns I visited," said he. "I was especially pleased to note the healthy condition of the talking machine business in Canada. While in Ottawa city I ran into several old friends in the shape of the new model Dictaphones. The business men of Ottawa are seemingly right up on their toes when it comes to the use of modern business office appliances."

TAKE OVER COLUMBIA LINE.

E. H. Goodenough and Leon C. Putnam Take Over Grafonola Line Formerly Handled by Hill's Piano Co., in Jamestown, N. Y., and Open New Store in the Latter City.

(Special to The Talking Machine World.)

Jamestown, N. Y., Oct. 3, 1912.

Arrangements have been completed whereby the Columbia line of Grafonolas in this city, which has been handled for some years past by Hill's Piano Co., will be taken over by the new firm, composed of E. H. Goodenough and Leon C. Putnam, who will open a store at 317 Pine street for the display and sale of this line and the line of sewing machines which Mr. Goodenough has carried in his East Third street store for many years.

Leon C. Putnam, who becomes manager of the store, has been in charge of the Grafonola department of the Hill store for the past year and is well known in musical circles in this city.

NEW TALKING MOVING PICTURE.

Latest Invention of Dr. Kitsee May Revolutionize Amusement Business.

(Special to The Talking Machine World.)

Philadelphia, Pa., Oct. 5, 1912.

Dr. Isadore Kitsee, inventor of innumerable electrical devices, gave a demonstration recently before an audience of men from all over the country of his latest invention, a talking moving picture machine.

While moving pictures are thrown on the screen through Dr. Kitsee's invention the persons portrayed are made to talk, the voices appearing to come direct from the mouths of the persons portrayed.

Dr. Kitsee's pictures are remarkably clear, and the sound is very distinct and carries well. Experts who examined the appliance declare it is very simple and that it is destined not only to revolutionize the moving pictures but also the theatrical business.

THE RAINY DAY BUSINESS.

"We love to hear the tinklé of the telephone on rainy days," was the line printed on his letter-heads and bill-heads by a retailer in a small town of Michigan. "Call us up and ask us something about goods and prices when you can't do anything else."

HUBBARD WRITES OF COLUMBIA CO. PLANT.

The Sage of East Aurora Devotes One of His "Little Journeys" to "The Home of the Columbia Grafonola"—Handles This Subject with His Usual Skill—Says That When His Nerves Seem Overtaxed He Turns to the Grafonola for Relief and Rest.

In a recent issue of *The Fra*, Elbert Hubbard, the well-known sage of East Aurora, in one of his little journeys, discusses "The Home of the Columbia Grafonola," and in this connection says:

Printing has been called the "Art Preservative," because by its use we duplicate the record of a thought and pass it down the centuries.

David Garrick once regretted that the vibrant, far-reaching voice of Edmund Burke must some day falter and be heard no more by man.

And nobody then, or for a hundred years after, ever imagined that song and speech and music's sweet sounds could be recorded, duplicated, and given to millions, thereby making them wiser, happier, better.

Personally, the Columbia Grafonola has given me more inspiration, more rest and recreation than anything else of a mechanical nature that has ever come into my life.

When my nerves seem overtaxed and my mind has dwelt long on one subject, I turn to the Columbia Grafonola for rest and relief. I play some of the selections of the great composers, dead and gone, some of whom I knew in their life-times.

And although these men may have passed out from this earth life, their work still endures, and here without any disturbing personal presence to interpret and intervene I hear and enjoy their wondrous melodies. With the great living artists I am also familiar. They abide with me. They sing and play for me when I wish. They are never tired—they never obtrude—my pleasure is theirs.

Music is the most universal form of harmony. It makes a quick appeal to the human heart, and through the aid of the Columbia Grafonola we are brought into touch with the world's greatest artists.

Singers, players, famous orchestras, great bands, popular songs, amusing sketches, these are all yours for the asking. They wait so patiently for you. When you need them, they respond.

As a plan for driving away the Glooms, and an invitation for the Joys to enter, there is nothing on earth to equal this Columbia miracle.

However, there is something better than to go to a hospital and be cared for, and that is to care for yourself and not go to a hospital.

The proposition of keeping well and strong and efficient—finding our rest in change and allowing harmony to creep into our lives through the sweet influences of divine music—surely this is the art of arts.

No one can say to what extent the Columbia Grafonola will add to our length of days and our usefulness as well.

When I want to concentrate on some particular bit of writing, I make use of the Columbia and call on my old friend Zenatella, good and great, to minister to me.

There is no stimulant for the imagination equal to good music.

Thus do I get my mental molecules in motion. The Columbia serves as my cosmic starter.

The people who make the Columbia Grafonola are happy, animated and prosperous people. Good cheer and courtesy prevail. Cleanliness, order, organization are on every hand. Each helper is doing his own appointed task, doing it quietly, surely and well.

In it all there seems to be no hot haste, no hurry, no anxiety. A sureness of purpose is everywhere evident. Only a well-paid people, whose services are duly appreciated, could produce these marvelous machines.

Workers in gold, silver, brass and wood are here. Engineers, inventors, machinists—each has his own particular work. The manufacture of the various parts of the Columbia is often done by special machines invented on the premises for this particular purpose, and none other. And then the man must be found who can run the machines.

Practically the best men here were educated at their work by their work.

"Truth," said Huxley, "passes through three stages: First, we say it is contrary to common sense. Second, we say it does not make any difference, one way or the other. Third, we say we always believed it."

It is easily understood how many simple souls would be greatly interested in a talking machine. The mere novelty of the thing would cause us to stop, look and listen.

When it came, however, to reproducing classic music, naturally the artists of the world were opposed to the phonograph. A mechanical thing is supposed to be inartistic. Mechanism breaks away from individuality. A machine is opposed to personality. Art is a matter of individuality. Ah, ha, and oh, ho! You will please excuse this smile!

Look at the Critics Now!

The Columbia Grafonola has gone through this period of doubt, distrust and patronage that damn with faint praise.

Great artists now do not have to be importuned to play or sing and make records for the Columbia. In fact, they come and offer their services and a special department has been organized to fight off the near artists, the would-be and the has-been. This because the Columbia policy is to produce only that which is supremely excellent in its particular line.

Not only do they feel that they are highly honored in having their performance reproduced, but incidentally they make a vast amount of money out of it.

So, too, with the critics and connoisseurs. At first they smiled complacently. Now they listen with attention, for the actual fact is that not only does the Columbia reproduce the technique, but the spirit and soul of the musician are apparent as manifested in his work. If this is not so, the world never hears the record.

Very few of us have the time and the money to travel so we can hear the great artists of the world. But with the aid of the Columbia the artist comes to us.

Many of our best music teachers everywhere are making use of the Columbia in giving lessons. A great singing master of my acquaintance inspires his pupils by giving them reproductions from the masters with the aid of the Columbia. Teacher and pupil listen together and enjoy. With the aid of the Columbia a standard is set, and to approach it is the thing desired.

TALKING MACHINE EXPORTS.

The Figures for July Presented—Reports Show Falling Off for the Month.

(Special to The Talking Machine World.)

Washington, D. C., Oct. 6, 1912.

In the summary of exports and imports of the commerce of the United States for the month of July (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for July, 1912, amounted to \$191,818, as compared with \$202,467 for the same month of the previous year. The seven months' exportation of talking machines, records and supplies amounted to \$1,323,608.

The excursion manager is not successful to the limit as long as one more passenger could be carried on the train, or the train might yet be enlarged. No sales manager has reached the limit of his success until he brings his sales to the point where the house will, for good and valid reasons, accept no more orders.

Looking for your jobber

What's the trouble any way? Went back on you, did he? And made you lose a customer! Wasn't the first time either, eh?

Well, there's no use going after his scalp. A dead jobber won't do you any good. What you want is a real live jobber who has the right goods at the right time—all the time; who can always give you just what you want just when you want it.

That brings you right up to our door for we ship every order the same day it is received.

You'll always find here a splendid assortment of Victors, Victor-Victrolas, Victor Records, record cabinets, fibre cases, horns, needles, repair parts—accessories of every kind to meet your every requirement.

Sounds good, doesn't it? And it's all as good as it sounds.

Why not get a "line on us" by looking over our catalog—and our booklet, "The Cabinet That Matches"? Write us today.

Victor foreign records

"If it's in the Victor catalog, we have it" applies to foreign records as well as domestic.

We have in stock the entire Victor list ready for immediate delivery.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to the Talking Machine World.)

Washington, D. C., Oct. 6, 1912.

PHONOGRAPHY. Isidor Kitsee, Philadelphia, Pa. Patent No. 1,040,213.

This invention relates to an improvement in phonography.

It has reference to the reproduction of sound from sound records.

It is immaterial for the purpose of the invention if the record is of the cylindrical or disc type; so also is the shape of the stylus or needle and its mode of support immaterial.

The necessary parts for practising the invention are a sound record (of any desired type),

a needle or stylus, a source of gaseous material, a phonographic diaphragm, means to project a jet of said material on the diaphragm and means to deflect said jet in accordance with the variations of the lines of record.

In the drawing, Fig. 1 illustrates the invention in partial sectional and partial perspective view. Fig. 2 is a similar view of part of the invention in modified form.

AUTOMATIC PHONOGRAPH. Harry T. Scott and Leo J. Patterson, Los Angeles, Cal., said Patterson assignor to said Scott. Patent No. 1,040,029.

This invention relates to an automatic phonograph for playing automatically and successively

a number of phonographic records of the ordinary cylindrical, or Edison, type; and the invention consists primarily in an arrangement of mechanism whereby the records are carried with their axes in vertical positions and are elevated from the carrying member or table to a position adjacent to the reproducing mechanism, which reproducing mechanism is located above the table at a convenient position to engage the records when they are raised.

In its specific preferred embodiment this invention consists of a rotating table mounted on a vertical axis, the table having pockets arranged around its periphery and in which the cylindrical records are adapted to rest. The pockets extend through the table, the records resting on annular shelves around the lower edges of the pockets, so that there is an opening under each pocket through which the record raising member and record engaging mandrel may pass. The table is provided with an intermittent rotating mechanism so that it may be moved to place successive records over the record engaging mandrel. The mandrel is

mounted on the upper end of a vertically movable and rotatable shaft, the action of the shaft being first to move vertically and engage the mandrel with the record immediately above, move the record to a point adjacent to the reproducing mechanism, and then to rotate and slowly move downwardly in a manner designed to keep the sound groove of the record in engagement with the reproducing needle. In other words, the record is both rotated and moved longitudinally—given two distinct movements—instead of, as heretofore, rotating the record and moving the reproducing mechanism longitudinally along the record. In our machine the reproducing mechanism is held stationary, at least so far as movement along the record is concerned. When the record carrying mandrel has moved downwardly to a point where the production of the record is completed, the mechanism allows the mandrel to move quickly to its lowermost position. In doing this, the record is left in its pocket on the table. Immediately the mandrel has reached its lowermost position and is free of the table, the table is rotated through a certain portion of a revolution to bring the next record directly over the mandrel. When this has been accomplished the mandrel is again automatically started upward and the whole operation repeated.

Figure 1 is a plan view of the mechanism as arranged within a case, the cover being removed. Fig. 2 is a section of the same taken as from line 2-2 on Fig. 1, with the cover in place. Fig. 3 is an enlarged vertical section and elevation taken on line 3-3 of Fig. 1. Fig. 4 is an enlarged vertical section and elevation taken on line 4-4 of Fig. 1. Fig. 5 is a horizontal section taken on line 5-5 of Fig. 4. Fig. 6 is a horizontal section taken on line 6-6 of Fig. 4. Fig. 7 is a horizontal section taken on line 7-7 of Fig. 4. Fig. 8 is an enlarged detail section taken on line 8-8 of Fig. 7. Fig. 9 is a cross section taken on line 9-9 of Figs. 4 and 8. Fig. 10 is a cross section taken on line 10-10 of Fig. 6. Fig. 11 is an enlarged section

arranged within a case, the cover being removed. Fig. 2 is a section of the same taken as from line 2-2 on Fig. 1, with the cover in place. Fig. 3 is an enlarged vertical section and elevation taken on line 3-3 of Fig. 1. Fig. 4 is an enlarged vertical section and elevation taken on line 4-4 of Fig. 1. Fig. 5 is a horizontal section taken on line 5-5 of Fig. 4. Fig. 6 is a horizontal section taken on line 6-6 of Fig. 4. Fig. 7 is a horizontal section taken on line 7-7 of Fig. 4. Fig. 8 is an enlarged detail section taken on line 8-8 of Fig. 7. Fig. 9 is a cross section taken on line 9-9 of Figs. 4 and 8. Fig. 10 is a cross section taken on line 10-10 of Fig. 6. Fig. 11 is an enlarged section

taken on line 11-11 of Fig. 4. Fig. 12 is a section taken on line 12-12 of Fig. 11. Fig. 13 is an enlarged section taken on line 13-13 of Fig. 3. Fig. 14 is a further enlarged section taken on line 14-14 of Fig. 13. Fig. 15 is a diagram showing the electrical control of the motor. Fig. 16 is a section taken on line 16-16 of Fig. 3 and showing the means of driving the mandrel shaft from the flywheel. Fig. 17 is a view taken as indicated by line 17-17 on Fig. 3, but illustrating a modified form of mechanism for lowering the mandrel shaft.

REPRODUCER FOR PHONOGRAPHS. Harry T. Scott and Leo J. Patterson, Los Angeles, Cal., said Patterson assignor to said Scott. Patent No. 1,040,030.

This invention relates to a reproducer mechanism adapted particularly for use in connection with a cylindrical (Edison type) record held with its axis vertical.

In the ordinary type of phonograph the record is held horizontally and the reproducer engages the record sound groove which is approximately in a vertical plane. The new reproducer is adapted for use when supported with the needle in position to engage with the sound groove approximately in a horizontal plane; and this necessitates a novel form of support and construction which we have embodied in our reproducer.

The reproducer is particularly for use in connection with an automatic phonograph machine for which applications have been filed for United States Letters Patent on February 1, 1911, bearing Serial No. 605,881, and May 27, 1911, bearing Serial No. 629,892; but this reproducer is used in connection with any machine which plays a record in a vertical position. This being the prime essential—playing the record in a vertical position—the salient features of this invention are embodied in the mechanism which enables the stylus, or reproducing point, to be held in engagement with the sound groove in that position. A novel form of support is provided, universal in its nature, for the stylus and means are provided for holding the stylus in a normal position and for returning it to this normal position when it has been moved therefrom by the action of the sound groove. The stylus is allowed movement in all the directions necessary for following the sound groove accurately. These features will be best understood from consideration of the following specification and the accompanying drawings in which:

Figure 1 is a side elevation of improved reproducer. Fig. 2 is a front elevation of the same. Fig. 3 is a plan view of the same. Fig. 4 is an enlarged detail section taken on line 4-4 of Fig. 2. Fig. 5 is an enlarged detail section taken on line 5-5 of Fig. 2. Fig. 6 is an enlarged section taken on line 6-6 of Fig. 2.

AUTOMATIC PHONOGRAPH. Harry T. Scott and Leo J. Patterson, Los Angeles, Cal., said Patterson assignor to said Scott. Patent No. 1,040,031.

This invention relates to improvements in former devices, set forth in applications Serial Nos. 605,881 and 629,892, filed February 1, 1911 and May 27, 1911, respectively; and particularly to a novel mode of securing the motion of the record-carrying mandrel.

Whereas in both the former inventions there has been utilized a screw feed for the mandrel shaft, with various appurtenances for controlling this feed, in the present machine the inventors provide for feeding the mandrel shaft by differential screw action on the shaft itself. As will be seen from the following specification, the mechanism for accomplishing this feeding action is very simple in its elements and combination, and each of the

elements is of such design that the machine is less liable to wear, particularly having no small wearing parts.

In the invention as now constituted, there is first provided a mandrel shaft, situated in vertical bearings so as to be rotatable and longitudinally translatable, a suitable screw thread being cut on the outside of the mandrel shaft. A rotatable nut engages with the shaft thread so that, by rotation of this nut, the shaft may be either raised or lowered, according to the direction of rotation. Means are provided for rotating the nut and the shaft at differential speeds, and for stopping and starting the rotation of the nut and shaft at different points in the operation of the machine. The direction of the mandrel screw thread in the present machine is such that, to feed the mandrel shaft downwardly by the differential action, the nut must be rotated slightly faster than the shaft itself; but it will be seen that, by suitable arrangements, this differential action might be exactly reversed. For driving the nut a simple gear mechanism is provided connecting the nut with a sleeve rotating about the shaft. This sleeve is loosely mounted on the shaft, and is rotatably connectible to the shaft through the means of another sleeve loosely keyed to the shaft and slidable thereon, the two sleeves having co-engaging means which may be slid into or out of engagement. The gears connect the first mentioned sleeve with the nut in such manner that the nut travels slightly faster than the sleeves; and arrangements are made for shifting these gears so as to throw them out of the mesh and stop the rotation of the nut entirely. The

position. Mechanism controlled by the position of the shaft at its uppermost point causes the nut

to begin revolving and the shaft is then moved down differentially while it is rotated. When the shaft has moved downwardly through a portion of its downward motion and the record on the mandrel has completely passed by the reproducing mechanism, mechanism is engaged by the shaft to stop the rotation of the shaft, the nut alone continuing in rotation.

This causes the quick downward motion of the shaft to its original position. Means are also provided for automatically feeding the record-carrying table and for moving the reproducer into and out of engagement with a record; but these means do not enter broadly into the combination, entering only specifically when the mechanical details are considered.

In the accompanying drawings: Figure 1 is a perspective view showing the arrangement of the improved machine in a case. Fig. 2 is a vertical central section of the entire mechanism. Fig. 3 is an enlargement of certain portions shown in Fig. 2. Fig. 4 is a horizontal cross section taken on line 4-4 of Fig. 3. Fig. 5 is a vertical section taken on line 5-5 of Fig. 4. Fig. 6 is a segmental plan view, with parts in section, showing the arrangement of the top of the record-carrying table and the registering means therefor. Fig. 7 is an enlarged fragmentary section taken on line 7-7 of Fig. 2. Fig. 8 is a horizontal section taken on line 8-8 of Fig. 3. Fig. 9 is a horizontal section taken on line 9-9 of Fig. 3. Fig. 10 is a central vertical section of the nut which engages the screw thread of the mandrel shaft.

PHONOGRAPH REPRODUCER. Harry T. Scott, Los Angeles, Cal. Patent No. 1,040,032.

This invention relates to acoustic devices in general and to a phonograph reproducer in particular; and it has to do with certain improvements which render the reproducer more simple in construction and capable of giving better, cleaner and finer results than has heretofore been possible.

The prime object of the present invention is the elimination of all looseness of the working parts of a reproducer, together with the provision of a mechanism of such character that the reproducing point is allowed free movement in every direction. Following this primary object, this invention (as applied to the form of reproducer in which the stylus or reproducing point is mounted on a stylus plate and the stylus plate is in turn mounted on the sound box or other stationary frame) consists in a novel mounting for the stylus plate upon the sound box or stationary frame and in a novel mounting of the stylus upon the stylus plate.

Broadly considered, the stylus may be mounted upon the stylus plate in any desired manner; the broader conception of invention including only the novel method of mounting the stylus plate, or other equivalent member which carries the stylus mounted thereon in any desired manner, upon the stationary box or frame. And this method of mounting the stylus plate fundamentally comprises a single point suspension, the stylus plate only having a single point of engagement with the stationary supporting member and being more or less perfectly balanced on that point of engagement. In order to rotate the stylus plate about its vertical axis determined by this point of engagement, there is employed a torsion spring which is attached to the stylus plate directly beneath the point of support and which acts about the vertical axis therethrough; and this same torsion spring also acts as a tension spring, if desired, to pull the stylus plate down into position so that it will not leave its point of support. The amount of tension depends entirely upon the weight of the stylus plate itself. If the stylus plate is constructed rather heavily, its own weight is sufficient to hold it in place; if it is constructed more lightly, then the tension spring will be utilized.

Fig. 1 is a plan view of the improved device. Fig. 2 is a front elevation of the same. Fig. 3 is a side elevation of the same. Fig. 4 is an enlarged horizontal section taken on line 4-4 of Fig. 2. Fig. 5 is an enlarged vertical section taken on line 5-5 of Fig. 2. Fig. 6 is an enlarged section taken on line 6-6 of Fig. 2. Fig. 7 is a vertical section taken on line 7-7 of Fig. 4. Fig. 8 is a section taken on line 8-8 of Fig. 7. Fig. 9 is an enlargement of the portion of Fig. 2 showing the mounting of the stylus on the stylus plate. Fig. 10 is an enlarged cross section of the sound box of this improved device. Fig. 11 is a perspective view of a retaining ring for holding the vibrating diaphragm in the sound box. Fig. 12 is a section taken on line 12-12 of Fig. 6. Fig. 13 is a view similar to Fig. 1, showing a modified form of stylus plate mounting. Fig. 14 is a front elevation of the same. Fig. 15 is an enlarged detail section taken on line 15-15 of Fig. 14. Fig. 16 is a section taken on line 16-16 of Fig. 15. Fig. 17 is an enlarged detail taken as indicated by line 17-17 of Fig. 14.

PHONOGRAPH MANDREL. Harry T. Scott, Los Angeles, Cal. Patent No. 1,040,033.

This invention relates to an adjustable phonograph mandrel whereby a phonograph record thereon may be accurately placed in longitudinal position relative to the reproducing point.

In automatic phonographs it has heretofore been somewhat difficult to place the record and the reproducing point always in such relation that the point would immediately engage the sound groove of the record and begin reproduction; and this trouble has been mainly caused by variation of fitting of the records upon the mandrel caused by heat expansion, contraction and warping of the records. For instance, with the mandrel and reproducing point in certain relation to each other, one certain record will fit on to the mandrel so far that its beginning sound groove is far to one side of the reproducing point, while another record will fit so tightly on the mandrel that its beginning sound groove will be quite a distance on the other

sleeve rotates constantly, being driven directly from the flywheel of the machine which is driven by a suitable motor.

The nut and shaft rotate in the same direction; so that it will be seen that, if the arrangement is such that when the nut alone is revolving the shaft is moved downwardly, when the shaft alone revolves in the same direction it will be moved upwardly. The rate of these movements will depend entirely upon the speed of rotation of the nut and shaft and the pitch of the screw thread; and the pitch is made sufficiently coarse to cause the move-

ment of the shaft at a comparatively high speed when either the nut or the shaft is rotated alone. But when the nut and shaft are rotated together, the differential action causes the slow downward movement of the shaft while it is rotated; and it is during this movement that the reproducing mechanism is thrown into engagement with the record to follow its sound groove. Thus, considered in a broad manner, the operation of the device is as follows: Mechanism controlled by the shaft when in its lowermost position causes the shaft to begin rotating. This immediately screws the shaft upwardly until it reaches its uppermost

side of the reproducing point. To allow for this variation it has heretofore been necessary to leave considerable space between the beginning sound groove and the reproducing point; and this has necessitated in the average case a long rotation and travel of the record before reproduction begins.

In this present invention it is aimed to produce such a mandrel construction as will allow the record to be carried to a certain predetermined point relative to the reproducing needle irrespective of how that record fits upon the mandrel. This object may be accomplished in different manners; and several mechanisms are illustrated in the accompanying drawings. But the preferred form of apparatus involves a mandrel which is slidable upon the mandrel shaft and which is spring pressed in one direction and normally held by a ratchet mechanism from movement in that direction. Means are provided to engage with a record and to thereby both press the record on the mandrel and move the mandrel against the spring pressure to such a point as will accurately place the record in position before the reproducing needle. Releasing means are also employed to loosen the ratchet mechanism and allow the whole device to come back to its normal position.

Fig. 1 is a longitudinal section of the preferred form of the device. Fig. 2 is a perspective view illustrating a detail of construction of the form shown in Fig. 1. Fig. 3 is a longitudinal section of a modified form. Fig. 4 is a plan view of the same. Fig. 5 is a longitudinal section of a further modified form.

AUTOMATIC PHONOGRAPH. Harry T. Scott and Leo T. Patterson, Los Angeles, Cal., said Patterson assignor to said Scott. Patent No. 1,040,034.

This invention relates to an automatic phonograph for playing automatically and successively a number of phonograph records of the ordinary cylindrical, or Edison type, and the invention consists primarily in an arrangement of mechanism whereby the records are carried with their axes in vertical positions and are moved from the carrying member, magazine or table, to a position adjacent to the reproducing mechanism, automatic means being employed for those so operating the

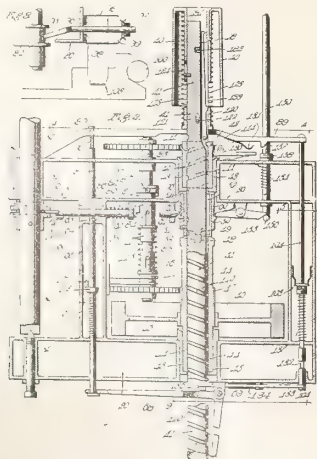

Fig. 1 is a front elevation with parts in vertical-longitudinal section. Fig. 2 is a vertical longitudinal section of the main operating portions of the machine. Fig. 3 is a partial plan showing the record carrying table and the reproducer mechanism. Fig. 4 is a detail horizontal section taken on line 4-4 of Fig. 2. Fig. 5 is a detail horizontal section taken on line 5-5 of Fig. 2. Fig. 6 is a detail horizontal section taken on line 6 of Fig. 2. Fig. 7 is a detail section taken as indicated by line 7-7 of Fig. 2. Fig. 8 is partially a detail section taken as indicated by line 8-8 of Fig. 2 and partially a diagrammatic view showing the electrical connections of the driving motor and the controlling switches. Fig. 9 is a bottom plan taken as indicated by line 9-9 of Fig. 2. Fig. 10 is a sectional detail showing the governor connection of the driving motor to the mechanism. Fig. 11 is a vertical section showing a modified arrangement of mandrel shaft and nut. Fig. 12 is a section taken on line 12-12 of Fig. 11.

TALKING MACHINE. James A. Rabbitt, Yokohama, Japan. Patent No. 1,037,983.

This invention relates to talking machines, and its object is to effect certain improvements in the construction of these machines whereby they are made more convenient to use, whereby a faithful reproduction of the recorded sounds is obtained, and whereby the tone of the reproduced sounds may be modified as desired.

Figure 1 is a top view of the tone-arm; Fig. 2

is a side view of the same, broken away and sectioned in part; Fig. 3 is a front view of the sound-box and tone-arm; Fig. 4 is a perspective view of the lifting device for the sound-box; Fig. 5 is a sectional view, illustrating the connection between the sound-box and tone-arm; Figs. 6, 7, 8 and 9 are detail views, illustrating the holder

for the stylus; Fig. 10 is a sectional elevation of the supporting arm for the tone-arm; Fig. 11 is a view of one of the parts of this supporting arm; Fig. 12 is a side view of the sound-box, showing the sound modifier applied thereto; Fig. 13 is an end view of the sound box, and Fig. 14 is a sectional view of the sound box.

PHONOGRAPH-NEEDLE. Rudolph Steinert, New Haven, Conn. Patent No. 1,039,208.

This invention relates to talking machines, and has for its object to provide an improved stylus for such machines which shall augment the volume and also improve the quality of sound produced by modifying or destroying the metallic sharpness and ringing so noticeable in talking machines now in

use. The tones produced with the improved needle are much purer, deeper and clearer, and the unpleasant scratching noises common to phonograph reproductions are eliminated.

In the accompanying drawings, Fig. 1 is an elevation of the improved stylus for talking machines, enlarged; Fig. 2 is a vertical central section of the same; Fig. 3 is a similar view of a modified form of the invention, and Figs. 4 and 5 are perspective views of other modified forms of the stylus.

ACOUSTICAL INSTRUMENTS. Louis Lumiere, Lyon, France. Patent No. 1,039,155.

This invention relates to improvements in acoustical instruments such as telephones, microphones, stethoscopes, talking machines, musical instruments, and in general any instrument used for the reception or transmission of sounds.

The invention is particularly applicable to those acoustical instruments in which there is a sound-box comprising a substantially stationary wall or side in which there is an opening leading to the ear piece or trumpet or other sound delivering means, and a rigid movable side reciprocated toward and away from the stationary side by suitable means such as the stylus of the talking machine, the said movable side moving in substantially unchanged form throughout its whole area.

In the sound boxes of talking machines and other acoustical instruments the displacement of the movable wall has the effect of producing at the level of the orifice leading to the horn variations in pressure in the air within the sound box. These variations constitute the origin of the production of the sounds and are accompanied by a displacement of the air contained within the sound box, and from the periphery to the orifice. If the internal form of the stationary wall is not correct, the displacement of the air within the sound box is subject to variations in speed which give rise to disturbances which absorb work and are injurious to the purity of the sound produced. The method of construction which forms the subject of the present invention overcomes this objection and insures a maximum of effect being obtained with the apparatus.

The invention will be clear upon reference to the accompanying drawing which shows a sectional elevation of a circular sound box constructed according to this invention.

It cannot be said of life's battle to-day that simply business success constitutes a well-rounded-out individual life. The development of character, not only in your salesman but in all employees all along the line, constitute far greater success.

Panky" (A. Baldwin Sloane) Soprano and
tenor; orch. accomp. Elizabeth Spencer and Irving Gillette

One of the artists engaged for the Metropolitan Opera Co., which will soon be heard at the Metro-
politan Opera House, New York, is Titta Ruffo,
the famous Italian baritone, whose voice, by the
way, has become familiar to users of the records
which he has made for the Victor Talking Ma-
chine Co., and with whom he is under contract.
This baritone ranks as one of the greatest in
Europe, and he is destined to create quite a furore
on his initial performance in New York.

MOTOR IMPROVEMENTS IN NEW VICTROLAS.

The Especial Features of the New Improvements Incorporated in the Latest Styles of Victrolas, the Subject of Extended Description by the Victor Talking Machine Co., Who Sets Forth the Facts in the Clearest Possible Manner for the Benefit of the Trade.

The recent motor improvements incorporated in Victrolas X, XI, XIV and XVI are called to the attention of the trade by the Victor Talking Machine Co. as follows:

"First.—A new style friction leather arm or lever equipped with a tail, which permits the governor to expand only within certain limits. This tail will strike the top plate before the lever and governor balls come in contact, thus avoiding injury to the governor. Heretofore, the governor lever was not

Fig. 1—Showing the Meshing of the Turntable Spindle with Spring Barrel Driving Gear.

equipped with any guard and if the lever slipped on the shaft, ever so little, there was immediately danger of the governor ball striking the top plate, thus throwing the governor out of adjustment and interfering generally with the correct running of the motor. In addition, the lever is held firmly in place by means of a split bushing, which is clamped to the regulating shaft with a square-headed set screw. With this screw the bushing can be drawn up absolutely tight after the lever is adjusted.

"Second.—The governor collar is held firmly in position by means of the spotted hole in the governor spindle. The set screw in the governor collar is seated in this hole, thus always insuring proper adjustment of the governor should it be necessary to remove and replace the collar. Heretofore, some trouble of this nature has been experienced owing to the absence of any guide for placing the collar in position.

"Another improvement in the governor is found in the outside bearing, or the bearing at the thrust end of spindle. This outside bearing has a groove around the center and is held in place by means of a pointed set screw which, when properly adjusted, will fit exactly in the groove of this governor bearing. The bearing at the opposite end of the spindle does not have the groove, hence it can be adjusted to take up any unnecessary end play. The governor should be adjusted in the bearings so that there is about from .002 to .003 inch end play.

"Heretofore, both governor bearings have been manufactured without the groove, thus in assembling the governor the possibilities were that the governor might not be correctly adjusted in the bearings to mesh properly with the governor driving gear. The governor spindle, and governor driving gear should mesh exactly central. Failure on the part of the repairman, when assembling the motor, to have the gears and spindles to mesh properly will result in imperfectly running motors.

"Third.—As a further protection to the governor springs, the governor collar and governor friction are beveled and have grooves milled in them in which the straight ends of the springs are held by means of a screw and washer. This improvement has practically eliminated breaking of the governor springs and twisting of governors.

"Fourth.—The most important improvement, however, is found in the turntable spindles and governor spindles which are now manufactured with quadruple threads. The spring barrel gears and governor driving gears have double the number of teeth that the old-style gears had. These new parts insure a smooth, even-running motor, practically without noise, and with these parts the motor improves with service. The very construction of these parts insures perfect meshing, hence no undue wear or tear on the parts, and the exactness with which they are manufactured insures the result of improvement with service, providing, of course, the gears are kept well lubricated at all times with pure vaseline.

"Note Figures 1 and 2, and you will readily perceive the decided advantage in the construction of these new parts. Note the number of spirals and

Fig. 2—Showing the Meshing of the Governor Spindle with Governor Drive Gear

teeth that are constantly in mesh, both in connection with the governor drive and the turntable spindle drive. This eliminates any possibility of a back lash or play. If possible even greater care is taken in the manufacture of these parts, and the object is to make them as near perfect as possible. Each part is tested to see that it runs true and every precaution possible is taken throughout the

factory to see that the parts are made as near perfect as the highest-priced mechanical skill can produce.

"Fifth.—The turntables are provided with a hub which is one-half inch longer in the center than the old style. This insures a longer and better bearing on the spindle, allowing it to seat freely and yet avoid any wobble or irregular running of the turntable."

INTERESTING THE CHURCHES.

How the Eilers Music House, of Seattle, Got the Ministers Interested in the Talking Machine—Campaign Proving Popular.

(Special to The Talking Machine World.)

Seattle, Wash., Oct. 5, 1912.

A highly successful idea is being worked out by the Eilers Music House of this city to stimulate the interest of the public in talking machines and their value as home entertainers. The plan is this: The manager of the talking machine department invites the ministers of the churches to attend a sacred concert, held in the Eilers hall on August 22. The response was exceedingly encouraging and the management received many hearty thanks and expressions of appreciation for the program rendered. As a result of the concert the company has been the recipient of requests to send operators and machines to a large number of the leading churches of the community for the purpose of giving sacred concerts on Sunday evenings.

The Eilers Music House is strong in its belief that this plan of campaign will be highly profitable, and, not being at all selfish submit it for publication that other dealers may profit by the idea.

STRONG DICTAPHONE ADVERTISING.

The Saturday Evening Post for September 28 contained a cleverly written advertisement bearing on the Dictaphone, of which the Columbia Phonograph Co., General, is sole distributor. The text matter abounded in convincing arguments, the illustrations were appropriate, both going to show the time-saving and money-making advantages of the Dictaphone in the office. This message, which went to 2,000,000 readers, should be prolific of results to those handling the Dictaphone. It reinforces their arguments and is publicity of the right kind.

HANDSOME WINDOW HANGERS.

Some very handsome window hangers advertising the Victor Book of the Opera have just been sent out by the Victor Talking Machine Co., Camden, N. J. In one corner appears an exact facsimile of the book in size and color, and opposite this appears the description of the book, in which is emphasized the fact that it contains illustrated stories of sixty-five grand operas with descriptions of 700 operatic Victor records. The volume contains 375 pages and retails at 75 cents.

DISPLAY AT BOSTON ELECTRIC SHOW.

At the Boston Electric Show, held at Boston, from September 28 to October 26, Thomas A. Edison, Inc., Orange, N. J., will have an exhibition of its entire line, including the new disc phonographs and records which are about to be marketed.

"If it's made we ship it the same day order is received"

The new Edison Blue Amberol Record

A great new factor in the field—a power to revive lagging sales of records to present phonograph owners—a force to waken the interest of those who do not now own phonographs.

The Blue Amberol Record has greatly increased volume and by far the finest tone of any phonograph record on the market.

It is an unbreakable record, and one that is practically impervious to wear.

The selections are chosen for their appeal—the artists for their record-making ability. The recording must conform to a very high standard.

There are 55 Blue Amberol Records ready for distribution. Get yours.

The logo features a stylized, flowing script of the name "Thomas A. Edison" with a decorative flourish above it. Below the name, the word "INCORPORATED" is printed in a small, sans-serif, all-caps font.

TALKING MACHINE DISPLAY IN NEW AEOLIAN HALL.

Department Devoted to the Full Line of Victor Talking Machines in This Palatial Home of Music in New York Is as Complete as It Is Artistically Conceived and Furnished—Twenty Demonstration Rooms Afford Plenty of Conveniences to Supply Buyer Needs—Descriptions and Views Will Interest—Interesting Chat with Manager Bobzin.

Aeolian Hall, the beautiful new home of music on W. 42d St., opposite Bryant Park, New York, can boast of many handsome rooms, but there is none that can claim superiority to the magnificent talking-machine department situated on floor A, one floor below the street level. Hundreds of talking-machine men have visited the new department since it was formally opened to the public last month,

beautiful surroundings they are given in. Many sales have resulted from these demonstrations, and they may be continued indefinitely.

The talking-machine department is under the management of Charles Bobzin, who is also manager of the retail music-roll department. Mr. Bobzin is greatly pleased at the success accorded his floor, and is looking forward to a record-

hear them. I have received many expressions of commendation on the perfect acoustics of this floor, and many visitors have assured me that there is no demonstration room in the city that can compare with the Aeolian rooms in this respect. We carry the most complete line of Victor records to be found in the city, as we have every record in stock that has ever been published by the Victor company. This enables us to offer the public the very best service at all times, and allows prospective purchasers to have the widest possible choice of Victor records. One of the noteworthy features of our recent business is the large number of sales of the higher-priced instruments, ranging from \$200 upwards. These are meeting with remarkable success, and the call for them is steadily increasing. Last week we sold several Victrola No. XVI in circassian walnut, which retails at \$250, and this week we disposed of a handsome Vernis Martin style instrument which sells for \$400. Another sale of special interest was that of a \$700 machine to Mrs. Vanderbilt. This machine was inlaid with gold, and was exceptionally beautiful. These are but two examples of high-grade sales that occurred recently. We are having a steady and rapidly growing call for machines of more than ordinary beauty."

PARCELS POST RULES.

Special Stamps and the Sender's Return Card Will Be Indispensable.

Postmaster Morgan invites the special attention of the public to the following features of the proposed domestic parcels post regulations, which go into effect on January 1 next:

That distinctive parcels post stamps must be used on all fourth-class matter beginning January 1, 1913, and that such matter bearing ordinary postage stamps will be treated as "held for postage."

That parcels will be mailable only at post offices, branch post offices, lettered and local named stations, and such numbered stations as may be designated by the postmaster.

That all parcels must bear the return card of the sender; otherwise they will not be accepted for mailing.

It is of the utmost importance that these requirements be observed in mailing parcels post packages in order that such packages may be promptly handled and dispatched, as failure to so comply will result in inconvenience and annoyance to the public.

Talking Machine Department in New Aeolian Hall.

and they have all expressed their admiration in glowing terms.

Some idea of the beauty of this department may be gathered from the photographs shown, but the full value of its handsome furnishings and appearance can only be had by visiting the new Aeolian Hall, and spending some time on floor A (the more time you can spare the better). Upon entering the department the visitor is impressed by the quiet air of refinement that is evident on every hand. Nothing appears to mar the harmony of the beautiful furnishings, and the whole floor seems to radiate an atmosphere of cordial welcome by reason of the numerous easy chairs, divans and settees that are placed along the sides. The decorations are distinctly modern, and the white doors and partitions lend dignity and richness to the entire floor. There are twenty demonstration rooms where patrons may hear their records with a maximum of comfort. These rooms are absolutely soundproof and are furnished tastefully and suitably.

This talking-machine department at Aeolian Hall handles Victor products exclusively, and a most complete line is shown. Every type of Victor and Victrola is exhibited, and the purchaser is enabled to choose from all styles of cases and models. The publicity given the talking-machine department has been in keeping with the high quality of Aeolian publicity, and high-class copy has been used in all the New York newspapers. The copy that brought exceptional results called the attention of the public to a special noonday demonstration to be given each day between the hours of 12 and 2. Hundreds of people visit the department each noontime as the result of this advertising, and everyone is enthusiastic over the recitals furnished and the

breaking holiday trade. "We have done more business in talking machines since we came into the new building than we did the entire month of October of last year," stated Mr. Bobzin, "and as we have only been doing business here for two

Another View in Aeolian Hall Showing Soundproof Rooms.

weeks, this record is one that causes us great pleasure. Our recitals every noon are exceedingly successful, and people come in great numbers to

The capital stock of the Talking Machine and Music Parlors, of Chicago, Ill., has been increased recently from \$1,000 to \$10,000.

LOOK FOR IMMENSE HOLIDAY TRADE IN SAN FRANCISCO.

Dealers Report an Unusually Large Demand for the Various Lines of Talking Machines and Records—Will Close Big Business if They Can Get the Stock—Already There Is a Cry of "Shortage"—Blue Amberol Records Please Dealers and Public—Visit of George W. Lyle Stimulates Columbia Trade—The Emporium to Feature Columbia Line—New Victor Victrola Styles Popular—Some Trade Happenings of the Month.

(Special to The Talking Machine World.)

San Francisco, Cal., Oct. 30, 1912.

Another month sees no falling off of enthusiasm on the part of the local trade in regard to business and the immediate prospects. From all indications the holiday trade this year will surpass all previous records, that is, if the dealers can get enough of the new style machines to fill the demand. At present there is a cry of "shortage" at most houses and unless large shipments arrive in the meantime dealers will probably experience great difficulty in filling their orders before the end of December. Both the new style Victor and Columbia machines have taken remarkably well, and now the trade is looking forward to the new \$500 Columbia machine with especial interest.

Records are in good demand. People are now home for the winter and are turning their attention to indoor amusements. The long engagement of the Lombardi Co. has helped out the sale of opera selections very materially. In speaking of records most dealers say that there is a tendency toward the better class of music. Little or nothing is said about ragtime. But E. W. Scott, at Kohler & Chase's, says although they are selling more classic records than ever before, their books reveal the fact that they are also selling more ragtime than ever before. The only way he accounts for this is that more people are buying talking machines and that the people owning machines are buying more records. He says people want both kinds of music, that it is not an uncommon occurrence for a person to buy the Sextet from "Lucia" and "Everybody's Doin' It" on the same day. When buying a dozen records many customers ask for several classic records, the rest to be made up in ragtime.

A shipment of "Blue" Amberol records has just arrived here and is being distributed by the Pacific Phonograph Co. A. R. Pommer, when interviewed, said: "We are swamped with orders for the 'Blue' Amberol records, which have just reached us." The Edison trade has been looking forward to the new records for some time and there is every reason to think they will move very rapidly.

Geo. W. Lyle, vice-president and general manager of the Columbia Phonograph Co., spent the

greater part of the month along the Pacific Coast in company with W. S. Gray, local manager for the company, who met him in Spokane, Wash., on October 15. Mr. Lyle was on his regular semi-annual trip of inspection to the company's various agencies and visited all the larger towns along the coast. From here he and Mr. Gray went south to Los Angeles. The trade along the line was much interested in Mr. Lyle's announcement of the company's new \$500 product, the Grand Grafonola, which will be placed on the market during the coming month. The general office here is promised a shipment by November 15, but the retail does not expect any until a month later. The Columbia trade will, no doubt, profit by Mr. Lyle's visit, as he left lots of enthusiasm behind.

Fred R. Anglemier, wholesale manager of the Columbia Phonograph Co., General, reports a splendid business for the past month with the Regal and Eclipse machines continuing as principal feature. However, the Favorite is still a great seller. Three weeks ago, Mr. Anglemier says, they thought they were well supplied with these machines, but they are practically cleaned up now. He says with them selling goods is not so much a problem as getting goods to sell.

The Columbia Phonograph Co. has closed a large contract with the Emporium, which is going to handle Columbia goods exclusively. This new talking machine department will be ready in about two weeks and will be one of the finest in town. It is situated on the third floor of the building adjoining the piano display space and will be under the management of J. J. Morgan, formerly with Wanamaker's, New York, but more recently assistant manager of the small goods department at the Hauschildt Music Store.

The Hauschildt Music Co. has moved into new quarters in Oakland, Cal., where extensive improvements are under way. The talking machine department is to be given much more prominence than in the old location, when the present plans are carried out. However, this will take some time, according to K. A. Leavitt, manager of the department.

W. M. Ringen, until recently manager of the talking machine department at the San Francisco store of the Hauschildt Music Co., is now in the

small goods department of Kohler & Chase. E. W. Scott, who owns the talking machine department at Kohler & Chase's, says fall business has reached the point where it can safely be estimated that it will surpass any previous year. The Columbia \$20, \$40 and \$50 machines are selling very fast, as well as the \$75, \$100 and \$200 Victrolas. One of the most popular machines ever handled by Mr. Scott is the \$100 Victrola, which promises to be in great demand for the Christmas trade. Mr. Scott is very much interested in the new \$500 machine just being placed on the market by the Columbia Phonograph Co. He says it cannot be expected to sell in all locations, but he thinks it will be particularly adaptable for sale in departments such as his, which are situated in large music stores. He has enjoyed a bigger and higher class of trade since moving from the fifth to the mezzanine floor, where he has much more handsome quarters.

Business is reported very good by the managers of the Wiley B. Allen Victor departments. Henry Harris, San Diego manager, spent a few days at headquarters here during the month, bringing a report of a steadily increasing business in the southern part of the State. Mr. Dougherty, who has charge of the Oakland department, is centering his attention on the new homes which are being built in the suburbs of that city and is getting very good results from his campaign.

L. V. Ridgeway, special representative for Lyon & Healy, Chicago, was a recent visitor to the Coast trade.

A. G. McCarthy, of Sherman, Clay & Co., reports a splendid month, both wholesale and retail, the only difficulty being to get enough of the new Victrolas. He has just returned from a duck hunt at Alvarado, Cal., bringing back the limit.

TALKING MACHINE EXPORTS.

The Figures for August Presented—Reports Show Falling Off for the Month.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 9, 1912.

In the summary of exports and imports of the commerce of the United States for the month of August (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for August, 1912, amounted to \$271,103, as compared with \$245,713 for the same month of the previous year. The eight months' exportation of talking machines, records and supplies amounted to \$1,594,711.

In Justice To Our Regular Trade

We Are Not Soliciting New Accounts This Season

When the Demand Exceeds the Supply

We feel under obligations to supply our own dealers' wants in so far as factory shipments will permit and not solicit new business which to supply would mean taking out of the mouths of our own regular trade goods needed by them and placing it in the hands of dealers who under ordinary circumstances look to their regular jobber for their goods.

Some jobbers look upon this outside trade as "velvet" but in taking it work hardship on their regular dealers who are loyal to them the year round.

EASTERN SERVICE IS GOOD SERVICE. BUT ABOVE ALL IT IS JUST.

SUCCESSFUL WORK IN DEVELOPING FOREIGN TRADE.

Columbia Phonograph Co. Doing Great Work in Building Up Trade Throughout South America—Helped by the Co-operation of Their Representatives in Argentina, Mexico and Other Countries—Splendid Work Accomplished by Jose Tagini, Who Has Built Up a Great Business in Buenos Aires—Novel Plan to Expand Trade in Mexico City Where the Columbia Co. Has a Large Following—Some Interesting Facts.

The export department of the Columbia Phonograph Co. has done some splendid work in the past few months toward developing foreign trade in all parts of the world. Its success in this work has evoked commendation from all the company's

Advertising the Columbia in Buenos Aires.

foreign agents who testify in frequent letters to the home office's efficient co-operation.

A recent letter that caused considerable gratifica-

tion in the export department was one from José Tagini, Columbia agent at Buenos Aires, Argentina, who spoke of the excellent conditions existing in South America, and enclosed a photograph of a huge sign appearing on the main street of Buenos Aires. This sign is over 15 feet in height, and is an excellent example of modern Latin-American progressiveness. Mr. Tagini is considered to be the largest dealer in talking-machine products in the world. He carries a stock of records that is said to reach the half-million mark. Some idea of the wonderful business that is carried on may be gathered from the fact that on the day before Christmas, 1911, his large store did a business that exceeded \$5,000.

José Tagini came to South America from a small town in Italy, and from a humble start he is now one of the wealthiest men in South America. The only American talking machine that he handles is the Columbia, and he recently stated that he owes his success in business to the Columbia products. He has two stores in Buenos Aires, one of them being located on the leading street of the town. For this store he pays a rental of \$25,000 a year, which is a considerable amount of money for a store (even in this country). The other store is situated about a mile away from the town proper, and the rental for this one is \$12,000 per year.

He has a very large storehouse, several stories high, which is devoted exclusively to Columbia products. The manager of the Tagini stores is Ernesto Tosi, formerly connected with the Columbia Phonograph Co. Mr. Tosi is well known in the trade as possessing an exceptionally thorough knowledge of the talking-machine business. His efficient work has been an important factor in the development of the Tagini business.

Another Columbia agent that is greatly pleased with the co-operation of the home office is the Cia. Fonografica Mexicana, of Mexico City, Mex. This company is receiving excellent results from a novel publicity idea recently tried out. This agency is one of the largest talking-machine dealers in the world, and handles the Columbia line exclusively. The advertising department of the Columbia Phonograph Co. furnished the Mexican house with newspaper bags, as shown on the accompanying illustrations. These bags were supplied to all the news vendors in the city free of charge, and are in constant use the whole day. As a matter of fact the bags are used to sleep on

Advertising the Columbia in Mexico.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools
Box 918, Scranton, Pa.

by a large number of the newsboys, and accompany them on all their travels around the city. The bags are lettered on both sides, and a resident of Mexico City cannot fail to be impressed by seeing the Columbia wherever he may wander in the city. Raphael Cabanas, president and general manager of the company, states that this publicity afforded the company's products has produced excellent results. Many prospective purchasers who come into the store mention the fact that they were attracted by the advertisement on the newspaper bags. A large supply of bags is constantly on hand, and whenever a bag wears out the company is always glad to furnish the owner with a new one.

Manager Edmund Sause, of the Columbia's export department, sailed November 6 for Bermuda, for a two weeks' stay. Mr. Sause was accompanied by Mrs. Sause and a party of friends, and will endeavor to secure a well-deserved rest to fortify him for the holiday season.

REPORTS ITS GREATEST SEASON.

The New York Talking Machine Co. Makes Encouraging Report Regarding Business.

"The greatest season in our history," states V. W. Moody, assistant manager of the New York Talking Machine Co., 83 Chambers street, New York. "Our business is as large as the Victor Co. will permit it, owing to the fact that the factory production is oversold before it leaves the shipping department. We are receiving orders from all our dealers throughout this territory and we are finding it exceedingly difficult to get sufficient stock to meet the constantly increasing requirements."

Owing to the widening of Chambers street, the New York Talking Machine Co.'s show window has been undergoing extensive alterations. These were completed last week, and the company now has one of the most attractive windows to be found in the trade. The window space is exceptionally deep and affords an opportunity of displaying the different Victor models to the best possible advantage.

Josef Hofmann's Columbia piano records have become the biggest sellers in the Columbia instrumental list—which is new evidence that record buyers know good recording when they hear it. Two new selections in the December list.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

JOKE ON GOV. WILSON.

Invited by Friends to Hear One of His Own Speeches in the Phonograph, He Listens to Absurdities—Enjoys Humor Immensely.

An invitation to hear one of his own campaign speeches produced on the talking machine proved too great a temptation to Governor Wilson one day just before election, and he admitted since to several of his friends that "The joke was on him." It was while he was at the State House in Trenton just preparing to go out for dinner that a message was brought to him that the phonograph had been set up in the office of his private secretary, Joseph Tumulty. The Governor wanted to oblige Tumulty. Hardly had he clapped the transmitter to his ear, however, before he realized that he was in the hands of the jokesmiths, for he heard a voice very much like his own begin:

"Do you want to gyrate with the gyraters or stand still with the stand stillers?"

The Governor laughed heartily, as there were loud cries of "No, no." Then the voice continued with this parody on his address at the Brooklyn Academy of Music:

"Do you want a Democratic team with a captain or without no captain, comma, or do you want to play with signals for the last four years, interrogation point."

"I recognize that voice," interrupted the Governor accusingly, pointing at one of the newspaper correspondents, and then turned his attention again quickly to the machine. A loud feminine voice, strangely like that of Miss Maude Malone, the suffragette, rang in his ears:

"How about votes for women, Governor, interrogation point." This was followed by cries of "Put that woman out," and then there was loud applause and excited cries. Then the phonograph began again:

"Resuming where I left off, comma, continued the Governor, comma, I maintain that that woman's question is not pertinent onto the subject onto which I was discussing, period. Do you want to set the Government free, interrogation point." Cries of "Yes, yes."

"Well, I would rather triumph in a cause that I know some day will fail than to fail in a cause that I know some day will triumph, period, continued applause."

It turned out that Secretary Tumulty didn't have anything to do with the phonograph record at all, and the Governor enjoyed it so much that he said he wasn't going to try to fix the responsibility. He related the story of his experience with much enjoyment to Mrs. Wilson and their daughters.

The Victor Talking Machine Co. has just sent out advance proofs of an advertisement that will appear in the daily newspapers this month. They are directed towards Christmas buying and bear the catchy heading, "Will there be a Victrola in your home this Christmas?" The copy is the same for the four weeks of the month, but the cuts are changed for each insertion and illustrate the various Victrola styles.

NEW VICTOR MACHINE CATALOG

Just Issued Is a Most Effective Example of Good Publicity.

A volume of unusual interest by reason of its completeness is the new machine catalog just issued by the Victor Talking Machine Co. of Camden N. J. It is a very handsome specimen of Victor publicity, copiously illustrated, and, from a literary viewpoint, impeccable. The entire Victor line, from the Victor Junior to the Victor VI, from the Victrola IV to the Victrola XVI (showing the XVI in four styles), the auxetophone, the various horns, sound boxes, records and record albums, are illustrated and discussed.

An important feature of the catalog—one that should have a decided influence on the initial sales of records to new owners—is the selected list of records which appears on pages 42 and 43. To the buyer as well as to the salesman this is indeed a time saver.

The frontispiece of the booklet is a birdseye view of the Victor factories, and the closing page is devoted to a description of the "Victor Book of the Opera." The cover design in gray and orange with embossed effects is most artistic. Taken as a whole the volume is a credit to the publicity department of the Victor Co.

A YOUTHFUL VIRGINIUS.

Virginus W. Moody, assistant manager of the New York Talking Machine Co., 83 Chambers street, New York, is justifiably proud of V. W., Jr.

V. W. Moody, Pere et Fils.

Mr. Moody states that his son has a remarkable liking for Victor talking machine music, and prefers it to eating, sleeping or playing. We can doubtless attribute this fondness to an hereditary instinct. V. W., Jr., is five years of age, and judging from this photograph the talking machine diet has agreed with him wonderfully well. The accompanying photograph was taken during Mr. Moody's vacation, and Master Moody condescended to remain in one place long enough to permit the snapping of the picture. It will be noticed that

the youngster is "barefooted," and Mr. Moody tells us that this is the way he roams around during the entire summer.

TRINITY CHURCH CHIMES RECORDS

Reproduced by the Columbia Co.—Most Difficult to Get the Best Effects.

One of the most difficult feats that was ever accomplished in the production of talking machine records was that recently carried through by several operatives of the laboratory department of the Columbia Phonograph Co. This difficult job was occasioned by the manufacturing of records from the chimes in Trinity Church, on lower Broadway, New York. Several of these records were recently published, but it is certain that only a very small per cent. of the records' auditors have the slightest idea of what an extraordinary amount of labor was necessitated by the production of these records.

In order to get these records, it was necessary to take a machine weighing over 300 pounds up a spiral staircase in utter darkness. Every step had to be carefully mounted, as a single misstep would have resulted fatally to the operators. After the machine was installed it was discovered that the terrific vibration from the striking of the chimes would render the records valueless, and it was therefore necessary to strengthen the foundation of the machine so that the vibrations would do the least possible damage. The work was carried on during three Sunday mornings, and as one of these days was exceptionally stormy, it is not difficult to appreciate the drawbacks the men had to contend with. It is bad enough to work in a tiny tower in utter darkness when the weather is clear, but with storm raging overhead and drenching the operators, it was indeed a dangerous piece of work. In spite of all these handicaps, however, the records were successfully produced, and have been placed on the market this month. Some of them are especially sweet, and one of the records gives an exact reproduction of the chimes that were rung in memoriam of the Titanic's victims.

M. D. Easton, road man for the Dictaphone department of the Columbia Phonograph Co., returned last week from an extended trip through Ohio and the adjoining States, and is jubilant over the Dictaphone business being carried on in the Middle West and predicts a banner year for 1913. He visited every town of any appreciable size in Ohio and booked several large orders.

A wholesale and retail Edison house will be shortly opened in St. Paul, Minn., by the Minnesota Phonograph Co. Edison Blue Amberol records have been accorded a most hearty welcome by the trade in the Twin Cities.

The Louisville (Ky.) office of the Columbia Phonograph Co. reports that four schools have adopted the use of the Columbia machines and are enthusiastic over the gratifying results.

The man who asks for a raise in salary on the strength of what he is going to do for the concern is trying to sell a pig in a poke.

ANNOUNCEMENT

The Columbia "Grand" Price \$500

The Last Word in Instruments of Music

The Columbia "Grand" is the result of our definite intention to produce, once and for all, the one musical instrument that must be instantly accepted as the incomparable ideal.

For three years we have been working out a laboratory model with the determination that price should not enter into consideration—the one object being musical and artistic perfection.

The selling price has now been fixed at \$500, after the producing cost has been determined.

In musical possibilities, in design, and in equipment, the Columbia "Grand" reaches a point where comparison with "talking machines" ceases to be possible.

The Columbia "Grand" is the last word in the science of acoustics as applied to the reproduction of sound waves.

This announcement is not published for the purpose of soliciting your orders, but to establish, even more fully, the standing and dignity of the "talking machine" industry; to give an added significance to the word "quality"; to insure once more complete recognition of Columbia *priority*.

We have in process a preliminary folder illustrating and describing the Columbia "Grand," which we will mail to you as soon as it is off the press if you drop us a note now requesting it.

Columbia Phonograph Company, Gen'l.

TRIBUNE BUILDING, NEW YORK

Creators of the talking machine industry. Pioneers and leaders in the talking machine art. Owners of the fundamental patents. Largest manufacturers of talking machines in the world.

Tone beyond compare.

Operated electrically by any service current, or by batteries.

Stops automatically at the end of each record without adjustment or attention.

Equipped with a speed indicator operating like the automobile speedometer.

The tone-chamber is built like the body of a 'cello.

The power plant is a self-contained unit—motor, tone-arm, needle cups, automatic start and stop, electric switch, speed regulator and speed indicator, all mounted on a metal motor board.

Sound waves are led from the diaphragm through tone-arm and tone-chamber without obstruction.

The equipment includes two reproducers of different pitch and volume.

Equipped with the Columbia tone-control shutters, operated by a lever below the carving at the side.

Electrically illuminated under the lid.

Eighteen karat gold plate wherever metal shows.

NEW YORK, NOVEMBER 15, 1912.

THE talking machine in recent years has figured largely in the affairs of peace and of home. And, too, it has even been used at funeral services, but the Balkan War has revealed a new use for it.

The other day when the church bells were crashing out a wild peal in Athens and everybody was jubilant that Salonica had fallen into the hands of the Greeks and the dream of five centuries had become a reality, the city went mad in a frenzy of delight. Like magic flags were flung out and illuminations were improvised, monster processions paraded through the town and one enterprising shopkeeper installed in an open window facing the Stadium a colossal talking machine and ground out the national air.

Crowds packed around this talking machine and made the street impassable. Other shopkeepers saw the point, and it was only a little while before all over Athens talking machines were sounding out the national Greek anthem to the joy of the shouting people.

So, in war as well as in peace, the talking machine plays its part!

THE opening of the grand opera season in Philadelphia, Baltimore, Chicago and New York affords a splendid opportunity for talking machine dealers to place especial emphasis on the exploitation of the records made by the artists of these great organizations.

Public interest can be enlisted by proper window display, by recitals and by advertising. This will induce those having talking machines to add to their stock their favorite artists, while those who have not talking machines will be sufficiently interested to hear the records, and in this way will be induced to purchase talking machines.

The keynote to success in this exploitation campaign centers largely on advertising—publicity of some kind, and it is conceded that the most profitable is the advertising that results from recitals to which the general public is invited. When combined with featuring the recitals in the daily papers an increased volume of business, that will well repay all efforts made, is even more certain.

These suggestions regarding recitals and advertising are not meant for those whose establishments are located on the principal street or avenue, for it matters not how small the dealer's store, or how humble the locality in which he resides results are bound to accrue for a love of music prevails among the poor as well as the rich. It does not follow that because the locality is not a fashionable one that people are not interested in opera and in the records of the artists connected therewith.

Just think of the opportunities for publicity that eventuate with the opening of the musical season. Apart from the opera, there are concerts and recitals galore. Every time a great artist appears whose record is handled by the dealer he has an opportunity, should he care to avail himself of it, of impressing on the public that this great artist can be heard as effectively in his store as in the opera house, or the concert hall.

Happily a great many dealers are alive to the best means of augmenting trade, but there is still a large army of people who are absolutely indifferent to the splendid opportunities that exist.

We know of no other business in this or any other country where dealers are helped with valuable suggestions and provided with such quantities of appropriate and non-expensive advertising matter as in the talking machine field. Manufacturers are constantly providing new ideas and "tips" of all kinds to develop business, and whether adopted in all or in part, they are distinctly of value to the man who "does things."

As we have stated more than once, the talking machine dealer who does not take advantage of the opportunities that exist on every hand to-day should retire from business and give somebody else a chance, for there is a good opportunity and big future in the business for those who are awake to its possibilities, and co-operate with the manufacturers in developing trade.

The prospects were never better than to-day, for this fall and winter finds the country in a splendid condition of prosperity. Harvests of unusual magnitude have insured a goodly margin for the purchase of talking machines in the farming communities, while in the manufacturing centers employment is general. On all sides there are immense possibilities for a phenomenal trade, and dealers must be alive to the situation. There must be no sleeping on the post. Public demand must be anticipated and business forced all along the line. This is the age of efficiency—concentration—results—and everyone must be up and doing if he desires to conquer.

TITTA RUFFO, the celebrated Italian baritone, who made his first American appearance in Philadelphia in "Rigoletto" last week, is a great admirer of the talking machine, and in the course of a chat after his arrival in New York he paid tribute to its educational influence in a most marked way. When asked who was his teacher, Signor Ruffo replied: "That is a hard question. I have had many. But I think I learned more from singing for the gramophone than in any other way. After I had sung for the gramophone the first time I found defects in my voice; the second time I corrected these to some extent; the third time I found my voice quite perfect."

This is expert evidence truly in favor of the value of the talking machine as a teacher. It demonstrates the wide influence which it exercises in the musical world to-day.

This statement of Signor Ruffo is not surprising, for it has been related in these columns frequently that prominent teachers have used and are using the talking machine in their studios for the purpose of illustrating how famous singers secure their best effects in voice production. Their phrasing, breathing and vocal methods generally are studied to good purpose.

In this field the talking machine is undoubtedly a most valuable factor—one that has been paid tribute to by some of our most notable musicians, including Walter Damrosch, David Bispham and many others.

THE latest achievement of the Columbia Phonograph Co., in the Columbia Grand, marks a new epoch in talking machine construction, and this new product, which is described in detail elsewhere in these columns, is the result of years of experimental work. When this great producing corporation announces a new product to retail at \$500, naturally such a move will set the trade tongues wagging, for in this new product the Columbia directors have accomplished a number of remarkable innovations.

In this electrically controlled talking machine they have combined an architectural design, pleasing to the eye and they have achieved remarkable tonal results, as well as other pleasing attainments.

Through the adoption of the horizontal piano style and the new form of the tone chamber with its method of suspension and insulation, they have achieved marvelous results. This, with the

new reproducer, together with other essential points, make this new product of the liveliest interest to all talking machine men.

The fact that it may be operated by any service current as well as by batteries, gives it an unique position, and the other specialties

which are enumerated elsewhere are well worthy of careful analysis.

We congratulate the officers of the Columbia Phonograph Co. upon reaching the culmination of their progressive work in the new grand.

TO FEATURE TALKING MACHINES.

The J. Ed. Black Music Co. Incorporated in Springfield, Mo., Will Handle Victor and Edison Machines and Records.

(Special to The Talking Machine World.)

Springfield, Mo., Nov. 8, 1912.

Talking machines will be featured by the J. Ed. Black Music Co., which was recently incorporated in this city for the purpose of selling and manufacturing pianos, organs, musical merchandise, sheet music, talking machines and moving picture films, with a capital stock of \$12,000, at 222 West Commercial street.

J. Ed. Black, president and manager of the new company, is an experienced piano man who was associated in business in St. Louis street with C. C. King under the name of the King-Black Music Co. The other members of the new corporation are prominent business men of this city.

Speaking of its new line, Mr. Black said: "We shall make a specialty of the Victrola, Victor talking machine, Edison phonograph and all the products of the Thos. A. Edison Co., which will include the great inventor's latest achievements in the musical line, some of which are now about ready to be placed on the market. Our plan for the accommodation of our Victor and Edison record customers will be ideal. Sound-proof rooms or booths will be provided, where one may recline in comfortable chairs and select records at their leisure without being disturbed by noises from the outside. In fact, our store, as one of our customers expressed it, to whom I confided my plans, 'will be a dream of completeness.'"

PHONOGRAPH AT HIS FUNERAL.

Last Wishes of Daniel E. Caswell Carried Out Literally.

(Special to The Talking Machine World.)

Boston, Mass., Nov. 6, 1912.

In compliance with the last wishes of Daniel E. Caswell, who for the past ten years conducted the Humanitarian Temple in Melrose, there were no services at his funeral. However, a phonograph was placed near the head of the coffin and his favorite hymns were played. The records were

changed by an undertaker's assistant. A large throng attended the funeral and all were requested to remain absolutely quiet. Caswell was 57 years old. He was born in Lynn. Philanthropic in nature, he established his Humanitarian Temple, where weekly services were held. His preachings were on practical applications of the Golden Rule.

ATTRACTING THE DISAPPOINTED.

How T. Edens Osborne, the Live Talking Machine Man of Belfast, Ireland, Takes Advantage of the Attention Attracted by Local Concerts in Which Famous Artists Are Heard.

T. Edens Osborne, the prominent Gramophone factor of Belfast, Ireland, whose "Yankeelike" progressiveness has forced him to the attention of the trade on more than one occasion, can teach many Americans points about taking advantage of the local appearance of prominent artists to boom the sale of talking machines and records. There recently appeared in concert in Belfast Mme. Melba and Herr Backhaus, the prominent pianist, and besides a great number turned away from the hall there were many who did not have the opportunity of attending the concert, which was quite a local event. Mr. Osborne immediately inserted the following announcement in the local paper:

MELBA AND BACKHAUS.

It will be consoling to such of our readers as were unable to attend yesterday night's concert at Ulster Hall to know that the great cantatrice, Mme. Melba, and the celebrated Herr Backhaus have made many records for the gramophone, which can be heard at the establishment of "The Ulster Pioneer of the Gramophone"—T. Edens Osborne, 4 Donegall Square West, Belfast.

The number of those who took advantage of the opportunity of hearing the great artists at the Osborne establishment proved that the idea was a profitable one, for most of those who came to listen remained to buy. With the growing number of concert artists who tour the United States each year and who have made records for one or the other of the big companies, it would be a comparatively simple matter for talking machine dealers in the United States to follow the example of our Belfast friend.

ENTHUSIASM AS AN ASSET

In Salesmanship Is Correct, but Unfortunately Too Many Fall by the Wayside and Act as Mere Automats Instead of Displaying Initiative.

Make the statement that enthusiasm is a valuable asset in salesmanship before a company of salesmen and every single one of them will agree with him who makes the statement. But do they put it into effect? Only a very small proportion of them do. We have watched a salesman after a salesmen feed Victor records into a Victrola with a face of stone, says the Voice of the Victor. If there is any expression, it is one of boredom. If one tries to find out just what it is that ails him, the chances are one will find that he is a horribly aggrieved person—aggrieved because the "boss" won't pay him as much salary as someone else is paid. It's a hopeless case when a salesman reaches that point. What, under heaven, is a salesman paid for? To sell goods! In 999 times out of a thousand a salesman is paid proportionately as he earns money for "the house"—and he never in the world will reach the high-salaried class if he obviously suffers from "ennui." Why should anyone grow enthusiastic over your wares when you yourself are evidently not enthusiastic?

INTERESTED THE TEACHERS.

Mrs. Frances E. Clark Attended the Wisconsin State Teachers' Annual Convention and Set Forth the Merits of the Victor as an Educational Factor of Importance.

(Special to The Talking Machine World.)

Milwaukee, Wis., Nov. 11, 1912.

The Victor played an important part as usual in the annual convention of the Wisconsin State Teachers' Association, held in Milwaukee, November 7, 8 and 9. William P. Taugher, representing the public school educational department of the Victor Talking Machine Co. in Wisconsin and Illinois, was on hand with several machines, including a Victrola, and succeeded in interesting hundreds of teachers in the use of the Victor in the schools. Mr. Taugher made his headquarters in the Plankinton House, the official headquarters of the teachers' association, and his rooms were crowded daily with pedagogues who were enthusiastic over what the Victor people have accomplished in their educational department.

Mrs. Frances E. Clark, head of the Victor public school educational department, was in Milwaukee on the opening day of the convention, while on her way to deliver lectures in Topeka, Kan., and other Western points, but her time did not permit her to appear on the program in Milwaukee.

Mrs. Clark was formerly supervisor of music in the Milwaukee public schools, and it was she who introduced the talking machine into the schools and made such a tremendous success here in Milwaukee that the Victor Co. induced her to go to Camden, N. J., and head its educational department and devise records and courses for the use of pupils in the public schools. For several years Mrs. Clark appeared on the program at the annual teachers' conventions, and her influence made itself felt all over Wisconsin. So well did Mrs. Clark impress the teachers concerning the value of the talking machine in the schools that the Victor people are securing an unusually fine business with the Wisconsin schools.

Always have a "Bull's Eye" in the window, mechanical or unique, to stop the passers-by or arrest their attention at a distance; then the detail will do the rest.

The only man who cannot profit by his mistakes is the fellow who doesn't make any. And he isn't doing anything.

No. 412 Udell Disc Record Cabinet.

Mahogany or Oak. Holds 272 Records.
List price \$15.00.

You have sold the Talking Machine and a nice bill of records. Why not complete the outfit and sell a Cabinet from "The Udell Guaranteed Line"?

It's easy: All you have to do is to show in an attractive way half a dozen "Udell Designs."

Then you say, "Of course, you want a Cabinet to properly house those fine records, and also a base for the Machine." Elaborate a bit on the fact that the workmanship and finish of every Udell Cabinet is Guaranteed and you will almost invariably get away with the sale.

The next 60 days is the opportune time of the year to sell Cabinets, and with the approach of the holidays stocks become more broken.

Surely you need our Catalog No. 41 illustrating to splendid advantage "The Udell Guaranteed Line." Address

Mr. Edison's New THE BLUE

It has made an instantaneous hit with the trade and the public. It is everywhere regarded as the biggest thing in the phonograph trade since the introduction of the moulded record in 1902.

It is going to increase the record business of the active Edison Dealer and it is going to bring back the business of the dealer who has lost interest. It cannot fail to increase the purchases of active Edison owners and it will revive the interest of the ones who have stopped buying records.

In a word, Mr. Edison Dealer, it is going to bring you a bigger Edison record business if you will give it a chance. Give your jobber an order. It will be safe to order the entire first list of fifty-five, but, if you are in doubt, place a trial order now and get the remainder later, as you surely will if your Edison customers once learn that you have them.

Also ask your jobber to tell you in detail about our record exchange proposition, by which you may quickly clean up on your obsolete record stock.

THOMAS A. EDISON, INC., 59 Lakeside Ave., Orange, N. J.

Cylinder Record

AMBEROL

It possesses more points of merit than any cylinder record ever made.

It has the same playing length that has been so strong a feature of all Amberol Records—a length that permits the recording of compositions without changes or omissions.

The sweet tone that has always marked Amberol Records is enhanced by the new product and the volume is greatly increased by the harder composition of the Blue Amberol.

It is to all intents and purposes unbreakable.

Its wearing qualities are remarkable. At the Edison Laboratory a Blue Amberol Record has been played 3,000 times and the last reproduction was as good as the first.

Fifty-five Blue Amberols were included in the first list issued for November. Another list of fifty-five will be dated December. The work of building up a catalog by making over the best of present Amberols and issuing new selections will go rapidly forward, until our catalog of Blue Amberols will be as complete as our present catalogs.

THOMAS A. EDISON, INC., 59 Lakeside Ave., Orange, N. J.

Bonci is admittedly the greatest *artist* among all the tenors—the greatest master of tonal beauty in all opera in all the world. He is now making his first Columbia records.

Tribune Building, New York**

HARD TO GET SUFFICIENT STOCK TO SUPPLY DEMANDS.

This Is the Substantial Report Made by the Majority of Dealers in Philadelphia and Locality—Pennsylvania Talking Machine Co. Making Splendid Record—Make Many New Columbia Agents—Blue Amberol Records Mark New Epoch in Edison History, Says Buehn—Gimbels Report Enormous Trade in All Lines of Victor Machines.

(Special to The Talking Machine World.)

Philadelphia, Pa., Nov. 11, 1912.

The talking machine business in Philadelphia during the past month was most satisfactory. It is the same old story—a largely increased business, great prospects for the future, and a scarcity of goods. It looks now as if the trade were going to pass through the same conditions this year they did last, when they were compelled to turn away a lot of business for want of stock. At all times now the leading firms of this city do not have stock sufficient to meet the goods bought and paid for, and there is no trade in the city where the dealers are put to such straits as in the selling of talking machines. One good thing about it, all the dealers seem friendly and help one another out whenever possible.

The Pennsylvania Talking Machine Co. had the biggest month in October that the Columbia has ever had in this city. It ran considerably ahead of September. During the month of October it has established ten agencies in this city and in its territory in the State. The company is confining itself to an exclusive dealership proposition, and if it can get the right dealers in every city and town in its territory, it grants them the exclusive agency or selling rights for the Columbia goods in the town, and this scheme seems to be bringing a class of merchants who have heretofore never handled talking machines, and in some sections it is making exclusive Columbia dealers of men who heretofore have handled a number of lines of machines. The plan seems to be working out fine. The management believes that it is getting a better proportion of business for the Columbia than it ever enjoyed.

The new Regal \$40 Columbia machine is taking on finely and it will be pushed very hard in November. Last month the \$50 Favorite was a big seller. Manager W. L. Eckhardt has devised a plan that seems to be meeting general approval in the spraying of the booths each morning with some delicate perfumery. As a general thing the closed booth is not any too pleasant in the odor, and he has them sprayed by means of an atomizer and every day with a different odor. L. E. Hoegerle, a son of the manager of the Metropolitan Opera House, has been added to the selling force of the Columbia. Since Mr. Eckhardt came here they have more than doubled the force. They had in October the biggest month they ever had with the dictaphone, and have established a number of agencies up the State on this instrument, including H. W. Schmidt at Allentown, E. D. Vogel in Easton, and the Chronicle Publishing Co., in Pottsville.

C. W. Ford, who has a Columbia store at 49th street and Baltimore avenue, has found it necessary to replace his original order several times.

He has only been in the business two months.

Louis Buehn, of L. Buehn & Bro., reports that the situation was more acute in October than it was the previous month. "We have been fearfully handicapped," he says, "because we are unable to get the goods. We are practically short in everything. The situation has taken a decided change for the worst the past month. The shipments have not even been normal for October, when they should have been in excess on account of laying up stock for the holiday trade. It is my opinion that there is going to be a lot of business lost by all the dealers this year, even to a greater extent than last year. We are expecting the new Blue Amberol records, which will mark the greatest improvements the Edison people have made in the last ten years and an epoch in the Edison, and they should bring about a revolution in the cylinder business."

The Edison dictating machine has been selling very well in October and the Buehn firm has some extremely good prospects for the installation of this instrument.

Charles McLaughlin, who was for a considerable time connected with C. J. Heppe & Son, has resigned and accepted a similar position with the Stoll Blank Book and Stationery Co., of Trenton, N. J.

Manager Harry Hovey, of the Lit department, has had a large number of new racks placed in the department, and they now carry double the amount of stock they had at this time last year.

The Gimbels department has also largely increased its stock of records and the capacity for holding them, and just at present it has a full line of all the Victor instruments and a pretty good stock of each style. David Davidson, who recently joined the selling force, has been doing some very good work among the public schools. He gives exhibitions at these schools two or three times a week.

Gimbels doubled their business in their talking machine department over last year. Among the visitors the past week were Mr. Bennett, in charge of the sales force of the Victor, and Albert Sidney Burbeck, of Smethport, N. Y., who recently started in the talking machine business. The Gimbels are about to have a most elaborate window display of the Victor, which was gotten up by Mr. Hanson of that company, that firm having been the first in Philadelphia to get this display. The scene represents an evening at the Metropolitan Opera House, and it is most elaborate, presenting a number of different scenes.

George D. Ornstein, general sales manager of the Victor, visited with the Philadelphia trade the past week. He reports that business is good all over the country.

The Wanamaker talking machine department has

also had a most satisfactory October business, and its Saturday business each week has been enormous. They were very much pleased to receive last week two large shipments of the \$100 Victor.

The Keen-o-Phone Co. expects to have its first records out by the 15th of this month.

The following statement has been issued by John B. Miller, treasurer of the Penn Phonograph Co., 17 South Ninth street, this city, in relation to the name and address of this company because of present similarity of talking machine company names. Mr. Miller said: "The Penn Co. has been established for approximately fifteen years in this city, enjoys a wide reputation for business principle and square dealing, and handles Victor and Edison goods. A short time ago we were subjected to the annoyance of a company taking a name very similar to ours, a name, in fact, which in the eyes of the dealer and the general public, is almost identical. The confusion in correspondence and mail bears out our contention. We wish to warn the trade to be careful and address us at 17 South Ninth street."

CONDITIONS IN LOUISVILLE, KY.

Talking Machine Dealers Without Exception Report the Best Prospects in History and Are Looking Forward to an Immense Holiday Trade.

(Special to The Talking Machine World.)

Louisville, Ky., Nov. 9, 1912.

The Columbia Phonograph Co. reports a fine business for the months of September and October. Collections in all departments were extra good. It has begun an extensive campaign in the Louisville schools. Several outfits were installed in the spring, and with the new school records just issued they expect to shortly induce all the schools to install outfits.

Thomas P. Clancy, sales manager of the automatic department of the Rudolph Wurlitzer Co., of Cincinnati, spent several days in Louisville, and reports a fine sale on all its automatic lines. Mr. Clancy was formerly with the Columbia Phonograph Co. before going with the Wurlitzer Co.

L. H. O'Bryan, formerly with the retail sales department of the Columbia Phonograph Co., is now on the sales force of the Dictaphone in Louisville.

M. B. Easton spent several days in Louisville in October.

Clifford R. Ely, of the wholesale department, has closed with the Kirby Piano Co., of Louisville, who are now pushing the Columbia line.

Mme. Alda appeared in concert in Louisville recently. The Montenegro-Riehm Music Co., Victor jobbers, had a beautiful window display of the madame, who is a Victor artist. The window was very much admired by everyone and by Mme. Alda herself.

WILMINGTON HOUSE EXPANDS.

Gewehr & Edelbrock, piano and music dealers of Wilmington, Del., are building an addition to the rear of their building to accommodate the Victrola department, which is steadily growing in importance.

A Good Proposition

Fit Any Phonograph

Any line that saves time in handling, and gives a large margin of profit, is a good proposition. U. S. Everlasting Records meet these conditions, and are proving an increasingly attractive and profitable line for dealer and jobber.

Less expense is required in handling them, and the shipping cost is lower. U. S. Everlasting Records are indestructible—not frail like the ordinary record—and you have no “losses in transit” to consider.

Last month this page presented ample proof of the wearing qualities of U. S. Everlasting Records. No complaints from your trade, and no difficulties to adjust on account of records breaking or wearing.

The monthly list of new selections embodies the choicest offerings in the way of music and entertainment.

Our record catalog just off the press is all ready to mail, and simply awaits your address. Ask for it today.

CLEVELAND, OHIO

The Talking Machine Trade in New England

THE TALKING MACHINE NEEDLE AND ITS MANUFACTURE.

Few People Who Use or Sell This Little Piece of Steel Know of the Tremendous Amount of Work Involved in Its Making and the Processes Necessary to Perfect It.

Millions of talking machine needles are used every year, and yet few people, when they handle the little pieces of steel, ever think of the tremendous amount of work involved in their manufacture. Of course, they have to be turned out by the millions, using the most up-to-date machinery and

largest of its kind in New England, this being in addition to a battery of eight furnaces which are in use and which were inadequate for the requirements of the growing business. This additional furnace is four times as large as any one of the eight furnaces. This particular end of the Bagshaw equipment, through which process all the steel must go, shows at a glance the strength of the business.

Take a little talking machine needle, for instance. First the wire is drawn to sizes, this being very important. Then it is straightened, ground, cut, tempered, hardened, scoured, polished, and then packed. In order to permit easy handling, a steel wire of over a foot in length is ground at each end until the required point is secured; then each end is cut off to the length of a needle. Following the cutting, the wire is precisely the same as it started, only about two inches shorter, and this wire is worked over again in the same manner. Then two more needles are cut off, and this is repeated until the wire is so small that it cannot be worked.

On one floor of the Bagshaw plant are many of these grinding machines in batteries, the wire starting with the coarse work and going from machine to machine until the last—the finest—puts the finished point onto the needle. Bagshaw needles have the reputation of being of the highest character, the taper of the point being even all around. In the tempering, hardening and polishing the fame of these needles is also noted, the needles' snappy, sparkling brightness being a standard of needle workmanship.

When the needles are finished they go to the packing room, where twelve girls do nothing but pack needles into envelopes. So staple are the needles that they are weighed instead of being counted, a certain number of ounces being equivalent to 100 or 300 needles, according to the way they are packed. Hardly does this weight vary one needle, so accurate are the scales and so accurately are the needles made. These needles are packed in envelopes, paper boxes, or tin cans, according to the specifications of the customer. A special feature of the Bagshaw service is the manufacture of talking machine needles according to the wishes of jobbers, and then packing them into special containers with the jobbers' name and address.

An experimental department, in conjunction with a drafting department, is constantly testing various qualities of steel to even better their products, notwithstanding to-day they are of the highest order. This is done in line with the general policy of large houses to be ever watchful of an improvement in their goods, notwithstanding their products seem impossible to be bettered.

W. H. Bagshaw manufactures and distributes one particular quality of needles which are called "Duplexetone" needles. This is a needle with which it is possible to secure two tones, loud and soft, while a slight twist either way from the loud or soft, produces any intermediate tone shade. These were designed after thirty-four experiments, and were to fill the niche of getting one needle that would play operatic or band records with the desired acoustic results. Duplexetone needles became a favorite from the first announcement of their appearance, and the sales of them are growing rapidly.

Included in the talking machine needles are all kinds of sizes and shapes for every kind of record. One most striking feature of the value of these needles is that the foreign sales are tremendous, going to all parts of the world in the face of European competition. It shows forcibly that the foreign talking machine fraternity appreciate needle goodness when they will pay more for Bagshaw needles because of this value. Mr. Bagshaw considers this the best possible argument that can be used when foreign made needles are offered in this country, or as he says: "If foreign-made needles are not good enough for the foreign trade, why should Americans buy them?"

The house of Bagshaw was established in 1870.

MRS. CLARK'S ADDRESS

Before the Meeting of the Public School Masters Intensifies Interest in the Use of the Talking Machine in the Schools.

(Special to The Talking Machine World.)

Boston, Mass., Nov. 9, 1912.

The Eastern Talking Machine Co., Victor and Edison jobbers of this city, were greatly honored by the public school masters with an invitation to take part at their quarterly meeting at Young's Hotel, Oct. 15. After the banquet, Mrs. Frances E. Clark, director public school educational department of the Victor Talking Machine Co., addressed the gathering on the subject of "The Use of Talking Machines in the Schools," and for the purpose of illustration used selections from the special list of school educational records prepared by the Victor Talking Machine Co.

Mrs. Clark consumed something over two hours in her talk, and that she proved extremely interesting to the body of educators who were present, is certain. Franklin B. Dyer, the newly appointed superintendent of Boston public schools, was deeply interested and asked many questions of Mrs. Clark regarding the Victor and Victor records. The Eastern Talking Machine Co. was represented by S. J. Freeman, of the Victor department.

To increase a man's capacity, instead of relieving him of responsibility, place more responsibility on him.

W. H. Bagshaw, Founder of the Bagshaw Business.

skilled workmen. The man who is credited with making the first talking machine needle is the late W. H. Bagshaw, of Lowell, Mass., the organization now being ably conducted by his two sons, W. H. Bagshaw and C. H. Bagshaw, who are prominent figures in the talking machine world.

FROM OUR BOSTON HEADQUARTERS

324 WASHINGTON STREET, JOHN H. WILSON, MANAGER.

(Special to The Talking Machine World.)

Boston, Mass., Nov. 11, 1912.

The Victor department of the new Chickering & Sons retail warerooms is thoroughly up to date in all respects, and Manager Ubert Urquhart, formerly with the Henry F. Miller Co., has had the front of the basement conveniently arranged so as to best meet the demands of business. There are three finely equipped demonstration booths which are reached by an easy stairway from the ground floor, and a large rack for holding records has been built at one side. There are rugs on the floor which add to the homelikeness of the department. Mr. Urquhart himself has a mahogany desk at the head of the stairs. He has the able assistance of Warren A. Batchelder, who has been with the Henry F. Miller Co. for two years, serving faithfully in the Victor department of that large house. Mr. Batchelder has many friends in the talking-machine business who will be glad to welcome him in his new association.

Featuring Victor Schoolroom Work.

Everybody is on the jump at the quarters of the Eastern Talking Machine Co. and the fall orders are piling up at a rapid rate, the difficulty being that the factory seems not able to supply the demand for Victor goods. W. J. Fitzgerald, who is giving much of his time to the school work of the Victor business, has lately installed several machines in the State normal schools, and one of his recent callers was Supervisor Chase of the Malden schools, who is proud of the boast that every school in his city is now equipped with Victor outfits. Another whom Mr. Fitzgerald has been able to influence in the direction of the Victor goods is Samuel W. Cole, the well-known music director, who, in an endorsement of Victor machines, says: "I hope to see the Victor a part of the municipal equipment of every school in town," referring especially to Brookline, in which town Mr. Fitzgerald has been singularly successful in popularizing the Victors.

Brown Joins Columbia Force.

The Columbia Phonograph Co. is to be congratulated on securing the services of S. H. Brown, who will look after the western Massachusetts and southern Vermont business of the company. Mr. Brown has had a twelve-years' experience in the talking-machine business, much

of which time was spent in the services of the Eastern Talking Machine Co., from which he resigned less than a year ago to go to Worcester to engage in another line of work. However, the call of the phonograph was too much; it was a case of back to his first love, and when the Columbia made overtures to him he could not resist. Mr. Brown has many friends in the business and is immensely popular. W. D. Drown, formerly secretary of the Vermont Academy, has been added to the wholesale department of the Columbia.

Some Big Columbia Orders.

October closes as the largest month of the year with the Columbia Co., and it is the second highest month ever experienced. This is the more surprising, says Manager Erismann, when one considers that it is the month when many people are buying their winter's supply of fuel and the family's winter clothing has to be purchased. A large percentage of the increased business is due to the Eclipse and the Regal machines, which were put on the market a couple of months ago.

Some big orders have been received by the Columbia Co. this past month. J. C. Mallioux, of Woonsocket, R. I., has been a heavy buyer; N. M. Bradley, of Rutland, Vt., was in town to place a large order; the Peck Leach Co., of Taunton, of which Howard T. Bates is manager, has taken a complete line of Columbia goods, and another heavy buyer has been M. J. Moran & Co., of Brattleboro, Vt. Two local concerns to take on a full line of Columbia outfits have been the Goldthwaite Furniture Co. and the Plympton-Hervey Co., both of Boston.

Some Distinguished Visitors.

William H. Beck, president of the Eastern Co., was a recent caller to Boston, and spent much time with Manager Taft, of the Eastern Talking Machine Co. Others callers at the Eastern company were Louis Geissler, general manager of the Victor; George Ormstein, traveling sales manager, and Thomas Green, the Victor manager in New York. In the professional line the Eastern was honored with visits from Dr. Karl Muck, conductor of the Boston Symphony Orchestra, and Andre Caplet, one of the leaders of the Boston Opera House orchestra, who was especially interested in the records of Edmond Clement, his French compatriot, who has done some excellent work for the Victor com-

pany. Another caller was Ed. Whitney, of the Whitney Brothers Quartet, who has made records for the Victor.

Business Shows 300 Per Cent. Advance.

The dictaphone output has increased tremendously of late with the Columbia Co. and the business is 300 per cent. greater than at this time a year ago, according to Manager Erismann. A large number of machines have lately been placed in the establishments of the New England Telephone & Telegraph Co., the B. F. Sturtevant Co., whose head is Governor Foss of this State, and the Barta Press, one of the largest printing concerns in the city.

Victor Departments Amalgamated.

The large Victor department of George Lincoln Parker in the Colonial building will be considerably augmented on December 1, when to it will be added the Victor department which is conducted by George L. Schirmer in connection with his piano business at 40 Huntington avenue. On that date Mr. Schirmer will merge his business interests with Mr. Parker to the mutual advantage of both. The Victor department of Mr. Parker, under the able conduct of Charles Trundy, has been making some large sales the past few weeks.

Added to Educational Department.

James M. McLaughlin, director of music in the Boston public schools, has been added to the educational department of the Boston headquarters of the Columbia Phonograph Co. and he has been made editor of the Columbia universal graded course of music, which is especially adaptable for homes and public schools. In connection with this new department, Manager Arthur Erismann, who is one of the most up-to-date, enterprising men in the talking-machine business, has put out a leaflet in which the co-operation of every parent is asked in this educational work. One paragraph reads thus: "We know we are going to get the thanks of hundreds of fathers and mothers for the great step we have taken. As this is the musical capital of America—a center where a work of this kind is sure to be appreciated—we know it will be the desire of every parent to give their children every possible advantage." Then follow two pages of suitable records carefully graded and classified, beginning with the simple themes. A catalogue of schoolroom music is having a great call from schools throughout New England, and Manager Erismann has had to lay in a big supply to meet the demand.

Joins Columbia Force in Boston.

Austin Fordham, a nephew of George W. Lyle, the Columbia Co.'s general manager, has been added to the retail staff of the Boston office, and he is making good, too.

Increasing Demand for Victors.

Business in Victor goods has taken on a new lease of life at the Henry F. Miller Co.'s finely appointed department. Francis T. White is "on the job," and is taking good care of customers, ably supplemented by a new man in the Victor department, Benjamin McNulty. Mr. McNulty is well acquainted with the talking-machine business, having been with the Miller house several years ago, though for some time past he has been with the Boston Talking Machine Co.

Mr. Pardee Chats of Trade Conditions.

Mr. Pardee, of the Pardee-Ellenberger Co., of New Haven, was in town for several days, and, as usual, made his headquarters with the company's Boston office in Batterymarch street. Mr. Pardee speaks most enthusiastically of the success of the display of the Thomas A. Edison Co., Inc., at the recent Electrical Show in Mechanics Building. Mr. Pardee has made several trips to other sections of the East lately and he reports a fine feeling in the trade, with a more pronounced inquiry for goods and an increased enthusiasm. Much of the interest lately developed locally in the Edison line can be traced quite directly to the Electrical Show, (Continued on page 18.)

where the Edison recital hall, in the basement, was filled at every demonstration of the new disc machine. Mr. Pardee says that it is curious that in spite of the Presidential election there is good business, and he noted especially the revival of interest in cylinder machines, due in large measure to the new blue amberol records which are advertised as a "wonderful advance in the art of sound reproduction." These new blue amberol records reached Boston the first of the month, and dealers were anxious from the start to get them in stock. Mr. Pardee says he has had several visitors to his New Haven headquarters the past week, including George A. Lewis, of Danbury, and L. A. Gladding, of New Britain, Conn.

Visited Electrical Show.

Among those who came over to Boston during the Electrical Show were: Frank L. Dyer, president of the Thomas A. Edison Co., Inc., who was accompanied by F. K. Dolbeer, of New Haven. President Dyer was delighted with the Edison display and with the manner of conducting it, Mr. Skelton coming in for considerable praise for the manner in which he demonstrated the new disc machines. Later in the month Mr. Dolbeer paid a second visit to the exhibition, this time being accompanied by Mrs. Dolbeer.

FALL RIVER EXPERIMENT SUCCEEDS.

Aux-e-to-phone Furnishes Music for Dancing and Marching of Seven Hundred Children on Public Playground.

(Special to The Talking Machine World.)

Fall River, Mass., Nov. 8, 1912.

Herbert L. Royer, manager for the Arch street Victor department of M. Steinert & Sons Co., in Boston, was down in Fall River recently to watch a very interesting experiment given on the public playground. It was a program of folk dancing and marches given by 700 of the school children to the musical accompaniment of an Aux-e-to-phone. The occasion was a highly enjoyable one, and Mr. Wilson, who is in charge of the Victor department of the local Steinert store, afterward received a highly appreciative letter from the Board of Park Commissioners for the outcome of the affair.

MULLEN WITH J. K. GILL CO.

W. A. Mullen has just made arrangements with the J. K. Gill Co., dealer in Edison Home Kinetoscopes in Portland, Ore., to assume the management of this house. Mr. Mullen was formerly connected with the Zonophone Co. as traveler, and also with Thos. A. Edison, Inc., under N. C. Durand, selling commercial machines in the Middle West.

An immense sign, twenty by thirty feet, appears on the corner of the building occupied by Louis R. Deitzbaugh, Victor dealer of Frederick, Md., in which the famous Victor dog and the Victor line of machines are featured in colors.

HOW TO UNDERSTAND THE OPERA.

The Basis of an Interesting Lecture Delivered by W. L. Hubbard in the Lecture Hall of the Columbia Phonograph Co. in Boston—High Class Audience in Attendance.

(Special to The Talking Machine World.)

Boston, Mass., Nov. 6, 1912.

A large audience gathered in the finely appointed lecture hall of the Columbia Phonograph Co. on the afternoon of November 5 to listen to the first opera talk given by W. L. Hubbard, who has come on from Chicago to promote a new system of intelligent publicity to the operas that are to be given at the Boston Opera House this winter. Manager Arthur Erisman, of the Columbia Co.,

most melodious; there is no oratory about his delivery; he talks as one would in ordinary conversation, and for that reason what he had to say was all the more enjoyable, as it was far removed from the idea of a stilted, conventional lecture. He proved himself to be a man of culture and widely informed on music.

Among the many good things he said was that it was not so much a matter of understanding as of mood with a listener at an opera, and he recommended that an audience put itself in the right mental attitude. There were those across the footlights who were doing their best to interpret an opera, but be their work ever so finished and artistic it never reached the audience the way it was sent out if there was not that responsive, receptive mood on the part of the audience who should make up its mind at the outset that it has come not merely to be entertained. He advised an audience to study the text of an opera instead

of its music, for the former was more important to an intelligent understanding.

Having delivered himself of a number of general propositions touching upon music, which he styled a very mixed art, he proceeded to discuss the first opera to be given, "The Tales of Hoffman." He first told something of Offenbach and then took up the story of the opera in considerable detail.

For his musical illustrations Mr. Hubbard relied upon two artists from the Boston Opera Co., Frank L. Waller, who gave

piano excerpts, and Rafael Diaz, a delightful young tenor, who has been a member of the Boston Opera Co. for several seasons.

At the close of the talk, which lasted an hour and a half, Mr. Hubbard, as well as his two accompanying artists, were heartily congratulated. The second talk a fortnight hence will be on "Louise," the second opera to be produced here.

Columbia Grafonola Hall, Boston, Mass.

had issued a large number of invitations to the best people of Boston, and in reply he received a number of courteous responses commendatory of the idea of publicity.

The audience therefore was of a highly intelligent order. Mr. Hubbard proved to be a man of easy manner, evidently used to addressing gatherings of this sort. His style is smooth, his voice

THE POOLEY Record Cabinet

Does the locating and filing of your disc records mar the enjoyment of your talking machine? Are your favorite records misfiled just when you want them?

Are they damaged from scratching and rubbing? Must you go through piles of envelopes, or search through albums, boxes or racks while your guests wait?

Do the ladies complain about the trouble of refiling, the day after? With a "Pooley" Cabinet you have solved the record-filing problem.

To get out any desired record, simply slide the indicator to the number on the scale, press the lever, and the record is instantly at hand.

To return, slip the disc through the slot, and the record is *correctly* filed.

PRIZE WINNING WINDOW IN MEMPHIS COMPETITION.

O. K. Houck Piano Co. Carry Off First Honors with Display in Which the Victrola and the Steinway Piano Were Featured—Business Policy Emphasized in the Display Cards.

(Special to The Talking Machine World.)

Memphis, Tenn., Nov. 9, 1912.

The O. K. Houck Piano Co. continues to receive the congratulations of its many friends and associate merchants upon the winning of the first prize offered in the competition for the most attractive window display in the city offered during the recent Tri-State Fair held here. A large number

of which appeared the words, "Hurry! It Is Time to Get a Victor-Victrola." The hands of the clock were connected with an electric motor and revolved at the rate of ten years per hour, which was enough to convince the observer that time was flying, and that it was the proper moment to settle the Victrola question.

In the center of the window there was erected

The Attractively Prepared Window of the O. K. Houck Co.

of local houses entered the competition, but the Houck Co. carried off the prize without a dissenting voice.

As will be seen in the accompanying illustration, the window was well calculated to attract attention from those passing the store of the company. On the left of the window there was placed a Victor Victrola, with the Victor dog sitting in front of it and a large clock placed at the right, on the dial

a small dog house on which was placed the sign, "One Price, No Commission, Guarantees Absolute Protection." A live pet bulldog was chained to the house wearing a collar upon which appeared practically the same warning. A beautiful Steinway grand piano occupied the right of the window, while the background was made up of posters regarding the Tri-State Fair. Certainly the prize was well deserved.

BUSY TIMES IN LOS ANGELES.

Past and Present Month's Business of Large Proportions, but It Will Be Excelled by an Enormous Holiday Trade, Judging from the Present Trend—The Month's News.

(Special to The Talking Machine World.)

Los Angeles, Cal., Oct. 30, 1912.

Jobbers and dealers of Los Angeles and the surrounding section report a very good talking machine trade for the past month. Great preparation for the coming holiday trade is being made by all dealers who are looking forward to the largest trade they have ever known, providing the goods can be obtained promptly.

J. H. Sturgis, of the Sturgis-Bowring Music Co., 714 South Grand avenue, states business looks very promising for the future in both the Edison and Victor lines.

A. Graham Cook, manager of the talking machine department of the Geo. J. Birkel Co., has been making things hum in his department in the last few weeks. The circassian walnut Victrola XVI has been featured, thus causing many sales in this popular finish. Another strong point of interest is the featuring of records by the noted Victor artists as they appear in concert.

Scott T. Allured, talking machine manager for the Wiley B. Allen Co., San Diego, reports many recent sales of Columbia Grafonola Regents. Their monthly concerts are so well attended that they have not the room to accommodate the crowds. Mr. Allured works up the opera selections in such a way that they are very enjoyable to hear on the talking machine.

S. W. Mixter, Edison dealer of Exeter, Cal., spent a few days in Los Angeles placing a large

order for Edison goods ready for the Christmas trade, which he anticipates will be very large in his section. Another Edison dealer to visit the city was R. M. Wilber, of Delano, Cal., who brings a good report from his district.

The T. J. Johnston Music House of this city is enjoying a remarkable trade this fall in the Victor line.

Chas. S. Ruggles, local manager for Sherman, Clay & Co., Victor distributors, states that the past month has been the largest in their history, and that even a much larger business would have been done if he could have obtained the goods.

The Van Sant & Raynard Music Co., of Santa Monica, Cal., has been so successful in the past few months that it has opened a branch music store at Sawtelle, Cal., carrying a complete Victor and Edison line.

C. A. Graham, of the Wiley B. Allen Co., returned from a hunting trip, bagging the limit of teal. Mr. Graham is just as good a marksman as he is a seller of talking machines.

S. E. Purser is now back in his old stand with the Eilers Music House. Mr. Purser has just recovered from a very serious operation and will now take hold of the talking machine department and do his share of the business in this line.

O. A. Lovejoy, manager of the talking machine department of the Southern California Music Co., Edison jobbers, states that the new Amberol record is creating a stir among the dealers, who are nearly all doubling their orders since they have heard these new records. The firm also has secured the jobbing agency for the Woods filing cabinet, which has proven a big seller.

The Pasadena Music Co., Pasadena, Cal., has just added six more sound-proof salesrooms to the talking machine department. W. R. J. Campbell, manager, is sparing no expense for the convenience of customers. This gives this department one-half the floor space of the entire store.

A new firm, Grey, Maw & Thompson Co. (Inc.), has just opened in San Diego, Cal., with one of the largest talking machine departments in the Southwest, handling the complete line of machines and records.

Guernsey S. Brown, of Santa Barbara, Cal., has opened a branch store at Ventura, where he will handle the Victor goods.

Never go to any of your fellow salespeople and talk and laugh over anything while your customer is waiting. This creates a bad impression and often customers think that they are being laughed at for some reason or other.

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

OLIVER DITSON CO., Boston, Mass.

THREE STYLES OF EDISON DISC PHONOGRAPHS SHIPPED.

Jobbers and Dealers Welcome First of New Machines—New Models Held Back to Insure Perfection in Both Machines and Records—Heavy Volume of Initial Orders—New Blue Amberol Records an Instantaneous Hit—F. K. Dolbeer's View of Election.

Three models of the new Edison disc machines are on the market, the initial samples having been shipped to the jobbers a few days ago. These are the numbers 150, 200 and 250, and shipments are going forward as fast as possible. This will be great news to the thousands of Edison enthusiasts of this country, and as far as the industry itself is concerned, the shipment of Edison disc phonographs marks an epoch in the trade.

When these machines were exhibited a year ago many thought they would be ready for last holiday's business, and they would have been but for one thing—the desire of Thomas A. Edison himself to give to the world a machine that would come to his standard of perfection in styles of cabinets, in quality of tone and general goodness. Mr. Edison did not believe the machines exhibited a year ago were good enough, although many termed them "wonderful." So he withheld the production of those types until more experimenting was done, and finally after about another year of this work a line of Edison disc phonographs was created that Mr. Edison pronounced "perfect."

Another thing that assisted in holding up Mr. Edison was the matter of records. He wanted good records—records that he considered were consistent with the quality of the forthcoming Edison disc phonographs, and it was only until several months ago that he procured the character of records desired.

So, equipped with the phonographs and records of the Edison standard, a display was held at the Edison building, New York, last July, and jobbers and their representatives came from all over the country to attend. The initial volume of orders placed was stupendous, so great was the enthusiasm of the men who would manipulate the selling of the goods in their respective territories. As F. K. Dolbeer, sales manager, expressed it, "the amount of business was greatly in excess of

my largest expectations." In fact, so strong was it that rumor had the amount in figures at a million dollars. The exhibit was an eventful one, a glowing success in every way and a most hearty commendation to the activities of "the old man"—Thomas A. Edison.

Now that the disc phonographs are leaving the Edison works at Orange and will soon be in the homes of the American people, one will hear then the greatest of all boosts—the voice of the people. Along with these machines will be shipped a batch of new disc records, duplicates of the ones that made such a hit at the Edison exhibit last July and which, likewise, created a furor in musical circles of Boston while they were being played at the Electric Show held there during October.

Along with the foregoing vital announcements comes the information from Sales Manager F. K. Dolbeer that the 55 new Blue Amberol records—indestructible—which came upon the market a short time ago, were an instant success. Repeat orders have been received from all over the country and the offices of Mr. Dolbeer are making more apologies for deliveries than they ever did. To think that the plant is working twenty-four hours a day and then being unable to cope with the situation in deliveries! This avalanche of business was freely predicted by those in possession of inside details and practically every jobber heard the phrase, "Order early because of a pending rush," as they knew how good the Blue Amberols are. And they all ordered at once and the rush came immediately.

Asked how the election pleased him, Mr. Dolbeer responded: "While I am a little disappointed in the results, yet the number of votes for President-elect Wilson shows the trend of the country's feeling, and what is acceptable to so large a majority will probably prove successful in the administration of this country's welfare and prosperity."

A GREAT VICTOR SIGN.

The establishment of the Chalmers Co. in Newark, N. J., is quite a musical center, as seats for all the engagements of the prominent visiting artists are sold there. The Chalmers Co. has just erected the largest electric sign in Newark. It overhangs Broad street and is 11 feet 6 inches long

by 10 feet in height, showing the Victor trademark with the word Victor intermittently flashing.

VICTROLA FOR NORMAL SCHOOL.

The State Normal School at Harrisonburg, Pa., has purchased a handsome new Victrola and a large collection of records for the use of the students in concerts and in recitals.

COLUMBIA DEALER GETS PRIZE FOR ATTRACTIVE STORE.

The Detroit Free Press, Detroit, Mich., recently held a contest for the most attractive store in various lines of business. The prize for the leading music store was awarded to J. Goldberg, a Columbia dealer, whose store was pronounced one of the most artistic in the city. Mr. Goldberg handles Columbia products exclusively, and is justly proud of his deserved reward. He is an enthusiastic dealer, and does a tremendous business with the

Columbia line. His store is equipped with three demonstration rooms and the exterior and interior are indeed models of retail store design.

Lyon & Healy

Chicago

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., Nov. 9, 1912.

The situation in the talking machine field here is presumably much the same as elsewhere, an enormous demand for machines beyond the ability of the companies and the jobbers to supply, but with considerable hope of measurable relief in the near future. An interesting feature of the situation are the immense sales of records reported by all jobbers, serving to bring the total business above last year's figures in spite of the machine shortage. The outcome of the present condition is likely to be that dealers will be brought to a stronger realization than ever before of the opportunity before them in an intensive cultivation of the record field and of developing new methods of pushing this always profitable business.

Local retail business was very good indeed the first three weeks in October. It showed a slight dropping off for ten days preceding the election, but is coming along with renewed force since.

Every store in town has any number of unfilled orders on hand for the new types of Victors, but there have been a notable number of sales reported on the old types. It may be giving an inside secret away, but in certain quarters there is no reference made to the old style and new style XVIs for instance, but some such designation as "style A" and "style B" are used, and a number of the style As are being sold. The popular priced styles of Victrolas, the \$15, \$25 and \$40 machines, are selling well, and stocks of these goods seem to be fairly ample.

A really excellent business in Edison cylinder goods is reported. The new Edison Blue Amberol records are now on sale, and are moving splendidly. Jobbers report that the initial orders for these records from dealers are large in volume and widely distributed.

Special interest is manifested in the forthcoming \$500 Columbia Grafonola, and although the first machine will not arrive here for another week or so, considerable sales have been made in both a retail and wholesale way.

The Chicago headquarters of the U-S Phonograph Co. report an enormous demand for their new popular-priced types, taxing the factory capacity to the utmost. The enlarged factory facilities, however, promise an early relief in the very severe shortage now experienced. The record business is referred to as excellent. A number of desirable

new U-S accounts are reported as having been established lately in Chicago and in the territory under the jurisdiction of the Chicago office.

A. D. Geissler on Conditions.

"Naturally the election has been the all-absorbing topic throughout the country generally for the last few weeks, but we have had a more absorbing topic for the last two or three months, and that has been: How to get enough Victor goods to take care of the enormous demands that have been pouring in upon us," remarked Arthur D. Geissler, general manager of The Talking Machine Co.

"To the average person a lot of figures and statistics doesn't mean very much, and for that reason it would be useless to mention the exact number of machines we have on our back order files today, but just to give you an idea of the way our dealers are ordering, we have one dealer who has ordered over a thousand machines of the new styles, to be shipped at any time we can ship them and in any quantity; another dealer has orders on file for over five hundred new style Victrolas, and they range from that downward to one sample machine of each style.

"This would seem to indicate that we would be utterly unable to take care of our dealers, but the fact is we have been taking better care of them than would be supposed; and the one feature that has enabled us to do this is the 'wholesale exclusively' idea of our business. All the shipments we receive from the factory are immediately apportioned out among our back orders, and so far we have been able to deliver nearly all our dealers at least samples of the new machines.

"The factory is now catching up to a certain extent, and now that their facilities for making these new styles are running more smoothly, no doubt their output will be greatly increased, and between now and the middle of December they should be able to at least supply the immediate demand; but, of course, none of the distributors will be able to amass the working stock we always like to carry.

"There have been several of our dealers in recently, who have asked me frankly what I thought about their placing orders with other distributors for some of the styles we have been so terribly short on, and I have always told them just as frankly that if they had the opportunity to get these machines elsewhere to take immediate advantage of it.

"Of course we want all their business if we can

take care of it, but if they are going to suffer on account of shortage of goods, and can get them elsewhere, they should make every effort possible to get these machines from the other Victor distributors.

"However, I am glad to say there is one end of our business that this shortage does not exist in, and that is the record department. Our stock is practically complete; in fact, I know it is in better shape now than it has ever been. We have over 150,000 records in stock to-day, most of them in the original packages in which they were shipped from the factory.

"In contrast to a great many distributors we have always made the record business our strong feature, consequently our record department has always been the largest end of our business. I attribute this success wholly to our efforts in educating the dealers in the 'selling of Victor records.' In fact, I have always looked at this part of the business in this way: If a purchaser of a machine does not within a year's time buy in dollars and cents in records as much as he paid for his machine, then there is something radically wrong with the 'record selling department.' Another factor in our success along this line has been what we call the '500 Best Selling Records,' a list in concise form of 500 records which our statistics have proven to be the most popular sellers.

"However, I am getting away from the original subject of this interview—whether the election returns or the shortage of Victor goods was the most absorbing topic of the day. Personally I feel now that the election is over and Governor Wilson has received the greatest gift in the power of the people, that the slightly unsettled business conditions will resolve themselves into one of the greatest eras of prosperity this country has ever witnessed. In fact, in view of the wonderful crops this fall and our always tremendous resources, it doesn't seem possible to fight off this wonderful boom for the next eighteen months or two years.

"Whether this prosperity will remain with us as a permanent institution it seems to me is wholly dependent on how much our new President and his Democratic Houses tamper with the tariff. Governor Wilson has always proven himself to be a most conservative man, and when it comes to a question of whether we shall have 'tariff for a protective measure, or tariff for revenue only,' I am

(Continued on page 24.)

The WADE FIBRE NEEDLE CUTTERS, No. 1 and No. 2, trim the needle at the proper angle, and the needle can be repointed from ten to twelve times, thus giving more tunes per needle than any other cutter made. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The WADE CUTTERS have an upper and a lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

The construction of the WADE No. 2 affords the most powerful cut of any tool ever made, and the blades work parallel to each other, therefore it requires practically no exertion whatever to trim the needle.

We fully guarantee this cutter in every respect, and if the blade of this cutter ever gets dull we will give you a new blade upon return of the old one.

Order from your regular Distributor—we sell to Jobbers only.

List Prices—No. 1, \$1.50; No. 2, \$2.00

WADE & WADE, 1227 East 46th Street
CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 23).

sure he will give it the most careful thought of which he is capable; for surely the past experiences we have had of a large majority of the people enjoying a lower price of living through certain tariff reductions, but at the same time unable to avail themselves of these low prices because of the factories being closed and lack of work, will cause those in power to ponder the matter long and well."

Wiswell on Record Sales.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, in reviewing trade, said: "Generally speaking, the outlook is excellent, dealers are all optimistic and are firm in the belief that they are going to have an excellent holiday business. Those with whom I have talked say little about any deterrent effect of the political situation. They are not bothering their heads about politics so far as any effect on business is concerned. Crops are too good and any possible disturbance by tariff tinkering is to far off to cause any uneasiness."

"The only thing that is worrying any one at present is the shortage of Victor machines. This will undoubtedly be relieved to some material extent shortly. The real demand for machines is enormous as compared with the present visible supply, but still it is possible that we jobbers may exaggerate the situation when we contemplate the number of orders on our books. Dealers have placed practically duplicate orders with many different jobbers, and the revision of these as their demands begin to be supplied will, no doubt, alter the situation considerably. Nevertheless, making allowance for all this, the demand is phenomenal, and is illustrative of the wonderful growth and healthy condition of the talking machine business."

"As a matter of fact, in spite of the shortage of the new types of Victor machines, October was a bigger month than last year in total sales. The record business has been simply immense. It is true that the jobbers, in view of the machine shortage, have pushed this end of the business strongly, but this has been in the interests of the dealer. It is good business for the latter to push the record business to the utmost of his ability, and particularly so in times like the present."

"Special circularizing, strong window displays and the mailing out of good lists with the monthly statements, are methods in point. We have demonstrated this strongly in our own local retail department. For instance, we sent out a card captioned 'Out of the Ordinary. Good Victor Records Often Overlooked,' and containing a list of ten records varying from 60 cents to \$5, and the responses have been unusual. Lists gleaned from the catalogue of records particularly applicable to the holiday season are always effective. It is thoroughly possible for every dealer to have a thoroughly successful holiday trade, even if the machine supply should be less than is likely to be the case."

Provide Against Record Shortage.

F. A. Siemon, assistant manager of the Chicago house of the Rudolph Wurlitzer Co.: "October was a good month; better than last October in spite of the machine shortage. We hope that the situation will shortly be relieved to some extent, and there seems to be good reasons that it will be. We are urging our men to push record sales and bring dealers' stocks up to the highest possible point of efficiency. This is eminently wise, as it is possible to get records now while there is a question whether they will be able to do so in December. History is likely to repeat itself, and it will be remembered that it was simply impossible to get good, popular selling records in December and January of last season. Stocks now are good, but with the heavy demand they cannot remain in that condition. The wise dealer will push his record business energetically, and will provide against any possibility of being short either during the holiday trade or during the always brisk record season succeeding the holidays."

With the Wurlitzer Co.

H. S. Conover, formerly with the Talking Machine Co., is now traveling for the Wurlitzer Company in Indiana, Michigan and Iowa.

Wurlitzer Improvements Completed.

The extensive improvements to the talking machine department of the Wurlitzer Company have now been completed with the exception of the recital hall, which will be in readiness for the inauguration of the daily concerts in a fortnight or so.

The company now have one of the most admirably arranged and beautifully fitted up departments in the country. Much has been said about it in *The World*, and further detailed description is deferred until photographs are available.

The Wurlitzer Company last Saturday gave the first of a series of ten Saturday morning Victor educational lecture recitals by Miss Anna Shaw Falkner, the author of a course of study recently published by the Victor Co., a large number of teachers from the public schools being in attendance. The lectures are given in the new concert hall on the second floor of the building in the rear of the piano department. The idea is to vitally interest the local teachers in the Victor and its possibilities for school work.

Columbia Gleanings.

The principal excitement about the Chicago office of the Columbia Phonograph Co. the past month had to do with the new Grand Grafonola \$500 machine, in the form of a miniature grand piano, four and a half feet in length, electrically operated, with automatic stop and starting device, and many other distinctive features. The first of the new machines is expected here the middle of the month, and is awaited with the keenest interest. A number of orders have been taken, both at retail and from dealers, one of the notable buyers being W. N. Seelig, president of the Seelig Polyscope Co., who ordered one for his home.

George W. Lyle, general manager of the Columbia Co., arrived in Chicago, Thursday, on his return from his extended trip to the coast, and left for the East Friday afternoon. He reported conditions excellent wherever he went, and personally booked some large orders for the new \$500 machine from leading Western houses.

Chicago headed the list of Columbia offices in point of total sales in October, and Manager C. F. Baer received a letter from President E. D. Easton congratulating him on the fact. October made a notable increase over October of last year, which was an exceptionally good month. Shortage is complained of on some types of Columbia machines, especially on the \$20 Eclipse.

The Freeman Music House of Sioux City, Iowa, sent in a copy of a local paper containing two whole page advertisements in color of the Freeman concern devoted exclusively to Columbia goods, the Eclipse machine and Weber and Field records being featured. The company has established a handsome Columbia department, and has a wagon devoted exclusively to delivering Columbia outfits.

F. C. Cass, for many years with the Chicago office of the Columbia Co., formerly as credit man and latterly visiting city wholesale trade, resigned to engage in another line of trade. He will be greatly missed by his many friends in the office and in the trade. Hyett Le Moyne, who has been traveling for the New Orleans office, will succeed Mr. Cass.

New Retail Manager.

S. M. Field, formerly manager of the talking machine department of the O. K. Houck Co., at Little Rock, Ark., resigned his position with that company recently to become retail floor manager of the Chicago office of the Columbia Co. Besides his experience with the Houck company, Mr. Field for two years conducted in Little Rock the only exclusive talking machine store in the State, handling Columbia, as well as other lines, and is therefore by no means new to the line. He is a thoroughly experienced all round man, and will, no doubt, prove a valuable addition to the Columbia's Chicago organization.

Fuhri's Southern Trip.

W. C. Fuhri, district manager for the Columbia Phonograph Co., returned recently from a trip which included San Antonio, Fort Worth, Dallas,

Little Rock and St. Louis. He reports conditions of a most favorable nature in the territory covered. Several important deals were arranged which will be announced later. At St. Louis arrangements were made with the Silverstone Talking Machine Co. by which they will handle the Columbia line in a retail way. At Little Rock, Mr. Fuhri visited the Hollenberg Music Co., in their new building, and inspected the fine new talking machine department.

Visitors and Personals.

Max Strasburg, of Detroit, was in Chicago, Nov. 6, looking for Victor machines, and found them exceedingly difficult to get. He expressed himself as satisfied that the Victor Co. were playing no favorites. Mr. Strasburg has met with notable success since he opened his Victor store in Detroit a year ago.

C. H. Abbott, the new manager of the talking machine department of the Boston Store, Milwaukee, was a recent visitor. He presides over a fine new department, comprising three handsome booths, a concert hall and machine display room. He was formerly with the talking machine department of Gimbel Bros.

B. Robert Nave, manager of the Robert Smallfield Co., Davenport, Iowa; Nick Worth, Escanaba, Mich.; Alonzo Wookey, Wookey & Co., Peoria, Ill.; A. J. Kunde, Milwaukee; H. R. Schiffer, Schiffer & Co., Mishawaka, Ind.; A. Hoeffler, president of the Hoeffler Mfg. Co., Milwaukee, and Otto Krause, manager of the talking machine department; George H. Wheelock, South Bend, Ind.

O. T. Johnson, of Galesburg, Ill., recently celebrated his sixtieth anniversary. He got out a handsome booklet giving different views of his store and revealing a fine display of Victor goods.

E. H. Dittmar, who recently joined the Talking Machine Co.'s traveling force, recently returned from his initial trip through Illinois and Iowa, which was an extended and very satisfactory one. Frank Moses also came in from a successful trip through Wisconsin.

W. E. Tangher, of the Victor Co., is traveling this territory visiting the schools and explaining the Victor educational campaign in the interest, of course, of the local dealer.

Patterson Bros., formerly in the piano business on Irving Park boulevard, have opened a piano and talking machine store at Evanston, Ill.

P. Kelly, pioneer talking machine dealer of Toronto, was a Chicago visitor last month. He has handled Edison goods there for twenty years, and has an excellent business. He also conducts several penny arcades and is the Canadian agent for the Mutoscope company. Mr. Kelly was accompanied by his wife and spent a couple of weeks in the city.

L. Kean, Jr., Makes His Debut.

L. Kean Cameron, manager of the retail talking machine department of the Rudolph Wurlitzer Co., instead of trilling grand opera areas in his lyric tenor voice, is now gently murmuring lullabys. L. Kean, Jr., made his advent last week. He tips the scale at nine pounds, and is placed by his musical father as a tenor robusto.

Handled by 82 Distributors.

The Lyon & Healy fiber needle cutter, it is reported, is handled by no less than eighty-two distributors. The sales are growing rapidly.

Mrs. Clark a Visitor.

Mrs. F. E. Clark, head of the Victor Educational department, was in Chicago on Nov 8 on her way to Topeka, Kan., where she delivered an address before the State Association of Music Teachers on the eighth.

Worked Clever Stunt.

Three signs reading, respectively, "Taft headquarters, room 5, fourth floor;" "Wilson headquarters, room 6, fourth floor;" "Roosevelt headquarters, room 7, fourth floor," appeared for a week or so prior to the election in the ground-floor window of the Steger building, next to the office building entrance. Many there were who made their way to the fourth floor, which is occupied entirely by the talking machine shops. Three

Toot Your Own Horn!

If You Don't
No One Will

OUR BIGGEST
BLAST ! ! ! !

Our exclusive wholesale business, Victrolas only, puts us in a class by ourselves.

What does that
mean to you?

**LOTS!
WHY?**

If we get the same allotment of new goods as other Distributors, and all our machines go to the dealer, naturally you will get your biggest share from us.

Maybe you have sold a number of Victrolas XVI. It's interesting to know that a good many retail prospects, when shown both styles 16ths, have preferred the *Open Horn Style*.

Show your prospect the cut of this style; the chances are he will want it. If he does, we have them, *lots of them in Dull Mahogany and Polished Mahogany*.

Those Record Shorts!

If we can sell you one Red Seal Record you're unable to get elsewhere, the profit on that record would pay lots of freight.

Our Record Stock is Practically Complete

THE TALKING MACHINE COMPANY
137 N. Wabash Avenue - - - Chicago, Illinois

Orville Harrold's first recordings are ready now—and you will find them worthy of the star tenor of the Hammerstein forces.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 25).

of the private rooms had been respectively labeled "Taft," "Wilson" and "Roosevelt" headquarters, and the visitors on stating their destination were regaled with the Victor records of the candidate preferred. Everyone who "bit" took the thing good naturedly, and quite a few records were sold and a couple of good prospects secured. One young woman applied for the position of stenographer at the Roosevelt headquarters.

Salter's Big Month.

H. A. Mortenson, secretary of the Salter Mfg. Co., reports that October was one of the biggest months they have had for several years, the demand being about equally distributed between their talking machine record and combination music roll and music cabinets.

New Type a Seller.

The new No. 2 Wade & Wade fibre needle cutter is meeting with big success, although the No. 1 cutter is maintaining all of its former popularity. A number of new jobbing accounts have been established the past month.

Local Items.

H. A. Clark, formerly with the Talking Machine Shops, is now with George C. Vining, in the North American building.

The P. A. Starck Piano Co. are vigorously pushing their talking machine department this fall, and are doing some aggressive advertising. W. H. Cullen, formerly with the George P. Bent Co., is in charge.

Geo. C. Vining, North American building, is now handling Columbia as well as Victor goods.

The Metropolitan Electric Supply Co., 63 East Jackson boulevard, with branches at 182 Lake street, Fifth avenue near Randolph street, and corner of Clark street and Lincoln avenue, have added Columbia goods at all their stores.

INTRODUCING THE REPEATOSTOP.

**Details of Device Which Acts Not Only as an Efficient Stop, but Also Enables the Record to Be Repeated as Many Times as Desired—
R. B. Smith the Inventor and President of the Manufacturing Company.**

(Special to The Talking Machine World.)

Chicago, Ill., Nov. 9, 1912.

The Smith Repeatostop Co., with offices at 713 Hartford Building, is the latest addition to the talking machine business. The Repeatostop, which the company is now placing on the market, is a device which incorporates a dual function. First of all, it is an efficient "stop," but, paradoxical as it may seem, it doesn't stop there. It also repeats the record once, twice or three times, or repeats indefinitely, as desired. The representative of The World has had the pleasure of witnessing the operation of this most interesting device, and its accuracy, efficiency and simplicity of operation deeply impressed him.

B. R. Smith, the inventor and president of the company, has been working on the problem for a number of years, but has refused to place it on the market till he could offer the trade a simple, accurate and positive device.

While filling a long-felt want for all seasons of the year, the Repeatostop will be in particular demand for dance music during the holiday season.

The company is composed of Chicago and Kansas City business men who are going into the proposition in a thoroughly business way, and those of the trade who have seen the Repeatostop believe their success is assured.

KEITH'S CANADIAN TRIP.

**Visits the Greatest Hunting Country in the World and Scores Heavily as a Nimrod—
Quite Enthusiastic About Conditions in the Dominion—Some Figures That Tell the Tale.**

(Special to The Talking Machine World.)

Chicago, Ill., Nov. 9, 1912.

Roy Keith, sales manager for the Talking Machine Co., recently returned from his vacation,

Roy Keith in Hunting Garb.

spent in hunting in Saskatchewan, in northern Canada. It was an 1,800 mile journey via St. Paul and Winnipeg to Prince Albert, the capital of the province, and from there to the little town of Burch Hills, where he made his headquarters. It was too early for the larger game, but prairie chickens, ducks and geese were in abundance, and the photographs give some faint idea of his luck.

Some Shooting, This.

Keith says it's the greatest hunting country in the world and advises his friends to plan for Saskatchewan next year. He was particularly im-

pressed, however, with the richness of the country, the wealth that is being accumulated by American farmers who have gone there, and the fortunes that are being made in investments in farm land all through Western Canada, and the wonderful growth of the cities. He collected a few figures regarding this year's crops in the provinces of Saskatchewan, Alberta and Manitoba. The wheat yield was estimated at 196,000,000 bushels, oats at 225,000,000, barley at 45,000,000, and flax at 13,000,000, and the total value to the producer is estimated at \$208,000,000. Keith says that he found Victor machines everywhere, and that even the land companies were using them on the excursion trains to entertain the prospective purchasers en route.

MEMORIES OF MOTHER.

I.

When sorrow's clouds are blackest,
And life seems full of tears;
And baby cries for mother,
There is still one thing that cheers.

II.

I play her favorite record;
The song she loved the best,
And the splendor of the music
Brings joy and peace and rest.

III.

While sobbing 'cellos thrill me,
And golden voices soar,
I feel her presence near us,
And see her face once more.

HOWARD TAYLOR MIDDLETON.

Manager Yerkes, of the wholesale department of the Columbia Phonograph Co., is enthusiastic over the splendid success of the Columbia Grafonola De Luxe which sells for \$200. This handsome model has achieved immense popularity in the past few months, and its wonderful tone and many exclusive features have been of wonderful assistance to the dealer in building a healthy demand for this high-class machine.

Thos. A. Edison, Inc., has been receiving many complimentary letters from purchasers of the Amberol III, who speak not only of its artistic design but the remarkably pleasing tonal effects given forth.

The State Normal School at Harrisonburg, Pa., has purchased a handsome new Victrola and a large collection of records for the use of the students to be used in concerts and in recitals.

A scientific adjunct to pure reproduction—coating the record and lubricating the needle with pure graphite. Life of records doubled. Old records improved. Scratching diminished. Graphite attachment goes in regular needle-holder. Needle on attachment guides graphite-stick over record. Attachment, graphite-stick and polishing pad \$1. Send for circular.
VOX HUMANA TALKING MACHINE CO., Nantucket, Mass.

ATTRACTIVENESS OF THE NEW COLUMBIA GRAND.

A Decided Innovation in the Talking Machine Line—It Possesses Special Features Which Will Greatly Interest the Talking Machine Trade—Its Musical Results Startling—Operated by Electricity—Has a Speed Indicator, a New Tone Arm Which Has Original Devices, a Start and Stop Switch Which Works Perfectly—Retails for \$500—Large Number of Orders Now on Hand—The Last Word in Talking Machines.

Concentrate your mental vision, if you can, upon a beautiful, refined case, somewhat on the graceful lines of the ancient spinet, with artistic carvings and delicately molded legs, after the Florentine school.

Then imagine from open shutters in front, by the keyboard, a tonal volume proceeding which

Side View, Showing Graceful Profile.

is actually bringing the living musician before you—the living instrumentalist, the real singer, with all the individual coloring, directly into your presence—the personal characteristics, the full, natural tones brought out vividly in all their purity!

Just bring this mental picture before you and you will have a faint conception of the new Columbia Grand, a creation which is destined to arouse the most widespread interest in talking machine circles everywhere.

The new Columbia Grand must be seen and heard to be appreciated. In the first place it marks a radical change architecturally from any talking machine model now on the market. Its modeling has a distinct charm that must be apparent to every observer, but the charm would stop there if it were not supported by other features which appeal to the ear.

Even the most skeptical must be fascinated with

An Interior View Showing Location of Tone Arm and Disc.

this new Columbia product. It possesses a number of features which are worthy of distinct emphasis, and before we go into an analysis of these features we might observe that the aim to accomplish the highest musical results has been attained, and after all it is the musical results for which everyone is seeking in talking machine development.

Some special points—yes, many of them, cutting a new path in talking machine development:

First—The Columbia Grand is operated by electricity. It has an electric motor that will run

by any service current, or by batteries, and it runs freely and smoothly with an entire absence of vibration. As the cover, which is a reproduction of the spinet or grand piano, is raised it will turn on a little electric bulb, which throws the light directly across the record.

It also has a speed indicator which performs exactly the same services that the speedometer fulfills in an automobile. The operator can tell at a glance at exactly what speed the machine is running, and it can be immediately adjusted to any number of revolutions which may be deemed desirable in playing any special record.

It has another special feature which may be designated an electric automatic start-and-stop. This is not an attachment but is a part of the general mechanism of the instrument, and it automatically stops the instrument when the last line of the record is played, then by swinging the tone arm on back to its first position, the instrument is automatically started again.

A further equipment is a metal motor board on which are mounted the motor, the tone arm, five needle cups, the start-and-stop switch for use instead of the automatic start-and-stop, whenever desired, the speed regulator and the speed indicator. These are all built harmoniously and form a self-contained unit.

There are a number of new principles which have been successfully worked out in this new Columbia Grand.

To illustrate, here is another, the form of the

Closed, an Ornament to a Music Room.

tone chamber and its method of suspension and insulation. The tone chamber itself is surrounded by the resonance chamber, constructed of spruce and bearing marked resemblance in form and acoustic properties to the body of a violoncello.

The tone arm is developed on a strictly mathematical basis and resembles somewhat in appearance a part of a band instrument. It operates on frictionless and absolutely tight joints. It is made from one-piece, seamless drawn and tapered tubing, so that from the reproducer to the end of the tone chamber there is one continuous, gradually expanding passage for the sound wave, containing no obstructions whatsoever.

The new Columbia Grand reproducer is worthy of special mention and it is a distinct change from the former Columbia reproducers.

It has a tempered steel needle arm, drop-forged, tempered with the exactness of a tuning fork, giving it that elasticity necessary in transmitting vibrations.

It will be seen from the number of points which we have emphasized that in the new Columbia Grand are incorporated innovations which mark

a distinct epoch in talking machine development.

One thing more, it is equipped with tone-control shutters which are easily operated by lever below the carving at the side of the case.

It is necessary to see and hear this wonderful creation to fully appreciate it. The retail price, \$500, is iconoclastic, but so is the instrument, and without question the new Columbia Grand is destined to create tremendous interest everywhere in talking machine circles.

Orders have now been placed far in advance and

Showing Front View of Columbia Grand.

the Columbia factory, while rushed day and night, will have ready several hundred of these new creations for the holiday trade.

DEVELOPING RECORD INTEREST.

Something of the Good Work Done by Anton Heindl in Developing the Demand for Foreign Selections Both in the Trade and Among the Public—Knows People's Needs.

The foreign-record department of the Columbia Phonograph Co. is doing some very effective work toward developing the demand for foreign selections. Anton Heindl, manager of the department, is sending out some excellent literature that calls the dealer's attention to the wide possibilities in the foreign-record field. In Mr. Heindl's latest letter he enclosed a return postal on which the dealer was requested to mark the different languages that were the most popular in his vicinity. The large number of cards returned has exceeded all of Mr. Heindl's expectations, and he is working on lists that will be of practical value to the dealers. Many of the dealers who returned the postal marked over a dozen languages as being of interest to their patrons, and a large number of dealers requested hundreds of catalogs dealing with some particular tongue.

Mr. Heindl, who was formerly a prominent dealer of central Pennsylvania, has a practical knowledge of both the manufacturing and selling ends of the business, and from his long experience as a dealer is enabled to judge of the selling value of the records from the dealer's viewpoint. He speaks a number of foreign languages, and is familiar with every record of the twenty-eight languages published in the Columbia foreign-record catalog.

Next month the foreign-record department expects to issue German, Hungarian, French, Russian, Polish and Italian records, and Mr. Heindl is looking forward to a big trade in these records around the holiday season. Dealers are beginning to appreciate the opportunities presented by the sale of foreign records, and a widespread demand for the more popular languages is certain to result when the people understand that they can procure their favorite records sung by talented artists.

FOREIGN TRADE IN TALKING MACHINES.

The Special Report Issued by the United States Government Bearing on Talking Machines Shows the Wide Scope of the Business in Canada, Central and South America, Germany, France, Russia, Great Britain, in Fact in All Parts of the World—The Opinions of the Local Consuls Regarding Methods of Selling and Other Matters Are Interesting and Valuable—Shows the Importance of the Industry Throughout the World—Great Export Markets for American Machines and Records.

From the standpoint of the man interested in any manner in the talking machine trade of the United States, whether in the export departments or in the domestic branches, the recent elaborate report compiled by the Department of Commerce and Labor under the heading of "Foreign Trade in Musical Instruments," and embracing detailed reports from consular agents all over the world on every department of the trade is of great importance as showing what progress has been made by the American manufacturers of talking machines of various types and how the American talking machine is regarded by the music lovers of many countries.

It is particularly pleasing to note that in Canada American machines and records command over 95 per cent. of the trade in imported outfits, that in Mexico the proportion of American machines is in the neighborhood of 80 per cent. of the total, though Germany, Switzerland, France, Italy and Spain are all to be met with in competition, while in Central America and most of South America, with the exception of Argentina and Brazil, where the Germans have a shade the better of it, machines from the United States prove most satisfying to the purchasing public. In Europe, of course, the manufacturers of Germany, England and other countries practically control the market.

According to the report, Canada offers one of the best markets in the world for American talking machines and records of all types. During 1911, for instance, out of a total value of talk-

ing machine imports of \$485,466 the United States furnished \$471,419 and the United Kingdom \$8,474. The hornless and horn styles of both disc and cylinder machines both have their advocates, and the general demand for records is fairly well divided between operatic and popular selections in the cities, with a tendency toward ragtime and similar popular music in many districts. In Newfoundland disc machines with horns are the favorites, and the majority are supplied by the United States, with a few imported from Sweden.

South America.

Talking machines are purchased by all classes and in all parts of Mexico—in the large cities and towns, in mountain villages far removed, on haciendas and in isolated mining camps, and is especially popular in the last named localities. Classical and operatic music is the favorite with the average Mexican, and there is considerable demand for marches and dance music. The American ragtime, however, is little understood in Mexico, and in most districts is practically unknown. From 80 to 90 per cent. of the machines in Mexico are of American make, with the balance supplied by several of the European countries. Machines selling for from \$10 to \$100 are readily salable, though those retailing at from \$25 to \$50 are the general favorites. As a rule, in the larger cities the hornless disc machines are preferred.

In British Honduras it is stated that "everybody has a phonograph in Belize," and it is almost literally true. It would apply to the surrounding

country as well, as the machines are heard everywhere. The Columbia and Victor predominate, and the sales of \$15 to \$30 instruments are most frequent, though two or three of the \$200 machines are owned in town.

Disc records are most generally used and popular selections are preferred. As phonographs are advertised continually, attention is called to all the newest records, and apparently everyone buys them. A low-priced German phonograph has recently been introduced, but nothing can displace the American instrument or destroy the moderate but steady demand for it.

In neither Costa Rica nor Guatemala is the demand for talking machines large, and the present prospects are that it will be some years before the market develops to large proportions. Of the machines sold, about 80 per cent. are of American make, and the preference seems to be for the disc type.

The talking machine appears to be the favorite musical instrument among the natives and foreigners in the coast towns, and by far the bulk of the demand is for the disc type of machine. Cylinder records are seldom seen. The demand is strong for all classes of music, English and Spanish, vocal and instrumental, popular and operatic, and the latest productions are frequently imported. The \$25 to \$75 instrument with exposed sounding horn is most in demand, and there are no high-priced instruments in this locality. Climatic conditions do not seriously affect the records, but are somewhat injurious to the mechanism of the instrument.

The United States has a monopoly of the talking machine sales. Efforts have been made by a German house to introduce in competition a German instrument which costs less than American machines and is said to be a good machine, but the merchant handling it admits that he has been unable to establish a market for it or injure the popularity of the American instrument.

In Panama the demand is for machines costing
(Continued on page 32.)

LANDAY BROS., INC., BEAUTIFUL ESTABLISHMENT AT 563 FIFTH AVENUE, NEW YORK.

Landay Bros., the progressive Victor jobbers, with stores in the most exclusive sections of the city, are doing an excellent business in all their four stores. The main office of the firm is at 563 Fifth avenue, near 46th street, where they have one of the most tastefully furnished display rooms to be found in the trade. Landay Bros. are well known for the thorough attention to detail shown in all of their stores, and the showroom at 46th

room in the rear of the store that is equipped with a stage for use as a private recital hall, and the furnishings of this room are superb and elegant. A complete stock of Victor products is always on hand, and the sale of machines and records has advanced each year because of the progressiveness and business ability of the Landay boys.

"We are doing a splendid business this year," stated Max Landay, in a chat with The World.

On the contrary, I expect business to remain steady and advance continually as the money received by the farmers for their \$10,000,000,000 crop is put in circulation. I am a pronounced optimist, and always believe that business will prosper as long as the people are confident and progressive. The sale of records is very good and we have made many substantial sales in the past few weeks. Owing to the pronounced shortage of machines at the pres-

Exterior of Landay Bros.' Main Store.

One of the Showrooms of Landay Bros., 563 Fifth Avenue.

street is an admirable example of a tastefully decorated display room. There are six demonstration rooms for the exhibition of Victor machines and demonstration of records. These rooms are glass-sided and soundproof and are furnished in a comfortable and refined style that is calculated to impress the visitor with the high-class business done in the Landay stores. There is a magnificent

"Our sales of machines are very satisfactory and the only complaint I have is the universal one of not having the goods to supply the demands. Our business is growing each year, and I expect this year to break all records. I have every confidence in the continued prosperity of the country, and do not look forward to any change in business conditions because of the result of the recent election.

ent time we are obliged to pay particular attention to the development of our record business. We have a complete stock of Victor selections on hand at all times, and I have instructed our salesmen in all our stores to put forth every effort toward pushing the sale of records. Consequently large sales have been the general rule, and there has been a gratifying increase in our record business."

fect piece of furniture as well; that its joiner-work is honest and its finish right; an instrument of music that can be operated by any member of the family, whenever and wherever you please; that is controlled in tone-volume by the thumb and finger opening or closing the tone-control shutters; that plays Columbia double-disc Records and any other disc records, interchangeably; that holds at your command *all* the music of the great orchestras and bands, *all* the songs that liven the stages of *all* the theatres, and *all* the voices of *all* the world's great opera artists who have ever made disc records—*without one exception.*"

We have sprung sensations before—but never anything to beat this "Regal" at \$40 and we advise all not-yet-Columbia dealers who are facing the certainty of uncertain deliveries to get action and get their hands on a fat share of this quick business.

P. S.—This should be a good time to remind you of the convenience of the Columbia distributing points which you will find listed on the inside back cover of this issue.

Columbia Phonograph Co., Gen'l

♪ Tribune Building, New York ♪

Creators of the talking machine industry. Pioneers and leaders in the talking machine art. Owners of the fundamental patents. Largest manufacturers of talking machines in the world. Exclusive selling rights granted where we are not actively represented.

Here you have before you a reproduction of our double-page spread across the center of the Saturday Evening Post of November 16th (out November 14th). Fortydollars never looked like less money than when that figure is displayed alongside the new “Regal” Columbia. And here you have the new “Regal,” looking its fortydollars’ worth to over two million readers—including those with only half an eye.

[illegible]

WE PRESENT this instrument in this extraordinary prominence because of its *tone-quality*. Pass over for a while its independent and self-contained completeness—unapproachable under \$75; judge it by its tone

[illegible]

For direct sales by Columbia dealers, this advertisement is going to be a pile-driver.

With the "Regal" in your store you are offering the only instrument of its type under \$75—upright, standing independently on its own four legs, well made, well finished, convenient and ornamental.

And there is one paragraph in this advertisement to consumers that all not-yet-Columbia dealers should take home to themselves:

FOREIGN TRADE IN TALKING MACHINES—(Continued from page 29).

\$60 or less, and the figures for 1910 indicate that the United States sent to Panama talking machines and accessories to the value of \$4,000 and England to the value of \$1,200. American makes with flower horns are well liked, and disc records with popular selections are preferred; but they warp during the hot season. Two of the three dealers handle American machines and the third the Baka Grand, an English make, of which two types are sold—the parlor with concealed horn retailing at \$30 and a smaller machine with exposed flower horn at \$12.50.

In San Salvador about equal favor is shown to both cylinder and disc machines, while records of the lighter forms of music are in greatest demand. Importations of talking machines from the United States amount to between \$5,000 and \$6,000 annually, with imports from Germany averaging about \$500.

Nearly all the well-known American makes of talking machines are represented in Habana, and sales are being pushed in much the same manner as in the United States; few, if any, European machines are seen on the market. Both cylinder and disc records are used, though there is probably a preference for the latter. There is a great demand for the records of popular airs and songs, especially those in the Spanish language, and a large number of operatic or classical records are also sold.

In Jamaica American manufacturers supply about 80 per cent. of the total importations of machines and accessories. A French machine, the Pathephone, has been introduced; but while well thought of, it is no serious rival to the American makes. Phonographs are very much used here. Those selling at \$25 to \$75 with exposed sounding horn find a fair market, but others of higher grade are not likely to meet with a strong demand. Disc are preferred to cylinder records and popular to operatic selections.

Throughout the balance of the West Indies both American and British talking machines are fairly plentiful, with the low and medium priced types the most popular.

There is an excellent market in Argentina for high grade talking machines with concealed horns, although those with horns exposed have heretofore been more widely sold, doubtless because of the lower price. The greatest demand is for the disc machines equipped with horn, and in the records operatic and popular are in about equal demand.

Talking machines are much better advertised than other musical instruments, as the American manufacturers who have entered the field have paid special attention to advertising methods, but there is still much to be done along this line. In the statement of imports for 1910 Germany stands first in the talking machine field, with 13,593 machines valued at \$28,370, the United States being second with 1,982 machines valued at \$6,050, the balance of the 19,771 machines imported coming from several other European countries. The figures indicate at a glance the difference in value of the German and American machines imported. Of 210,600 records imported, 71,509 were from the United States and 111,049 from Germany.

In Brazil the conditions are practically the same as in Argentina, though in the former small, showy machines with large decorated horns are preferred. Germany leads with nearly 54 per cent. of the total imports and the United States is second with about 40 per cent.

The principal opening for American musical instruments in Bahia is for talking machines, a line in which the Americans completely dominate the field and will probably continue to do so. The year 1910 saw an extraordinary increase in the sale of phonographs, and they are now peddled from house to house and sold on the installment plan. Talking machines are also increasing in popularity in Pernambuco, with both German and American machines and records competing for the business.

Many phonographs are in use in Chile, the majority of which are above the medium grade and have large sounding horns, though the machine with the inclosed horn in a cabinet with a depart-

ment below for records is growing in favor. There is a tendency toward better machines and records, and it would pay to cultivate this feature of the trade.

At the present time in Chile the United States leads slightly in the importation of machines over the Germans, and in the matter of records imports almost three times as many as our Teuton competitors. Disc records are the general favorites.

In Uruguay the American Victor and Columbia are about the only machines seen, and these, which have an exposed sounding horn, retail at about \$40. Disc records are principally used. Phonographs and records are sold in shops which carry no other line of goods, as well as in stores selling pianos, both being distributed from agencies in which a complete line is found.

In Venezuela the type of talking machine preferred is that selling at from \$75 to \$100, and some high grade machines are sold. The climate causes the records to oxidize quickly and lose their value. In 1910 the United States furnished machines to the value of \$2,100, as against \$290 worth from France.

The United States supplies about 80 per cent. of the \$1,000 worth of talking machines and records sent to British Guiana each year, the demand being for machines selling at from \$15 to \$40, with practically no call for the higher class outfits. The contrary is true of Peru, where a wide-awake American salesman speaking Spanish could probably do a good business. Talking machine importations in Peru for 1909 amounted to \$8,000, chiefly from the United States.

The climate of Ecuador is detrimental to the cylinder, but does not affect the disc record, and there is little demand for high class machines to lend encouragement to exporters. In Colombia similar conditions exist.

Austria-Hungary.

In Austria-Hungary the demand for the various types of talking machines is almost entirely supplied from abroad and many American machines are included in the number sold. The machines, equipped with horns and the disc records, are the most popular, the taste in the matter of music ranging from operatic to popular selections. There is room in Bohemia for American firms to exploit their products if they can convince the dealers of their general superiority.

France.

Although there are numerous manufacturers of talking machines, records and supplies in and near Paris the firm of Pathé Frères has what is practically a monopoly. Several American firms are also established in Paris, among them being the Columbia, Victor, Edison and Vitaphone. Operatic and classical selections are favored for high-class machines, but others use almost entirely orchestral music and popular airs known in Paris as "café concerts."

The machines with horns are at present preferred to the hornless type, while in records the disc type almost entirely prevails. The sale of talking machines in Paris is comparatively small, the bulk of sales being made in the provinces and country towns.

Germany leads in import trade in talking machines and supplies to France, followed closely by Switzerland, while Great Britain shows one-half the volume of the two first named countries, the imports in the United States figuring about 13 per cent. The total value of the imports into France is \$141,095. In exports Great Britain is the largest purchaser of French talking machines and supplies, India-China coming next, and the other countries that follow in ratio of exports are Argentina, India, Brazil and Germany. The total value of the exports amounts to \$779,391.

(To be continued next issue.)

One progressive merchant says he keeps a record of sales of goods displayed in the show windows each week, and is thereby able to determine to a fairly accurate extent the returns obtained. These returns are credited to the cost of window dressings and displays, and form an interesting item for analysis.

RETURNS FROM GRATIFYING TRIP.

George W. Lyle Found Columbia Prosperity Everywhere and Business Prospects Excellent—Dealers Everywhere Are Much Interested in New Columbia Grands.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., returned to New York this week after his usual autumnal trip, which consumed about five weeks. Mr. Lyle's trip took him as far as the Pacific Coast, where he visited the stores of the Columbia Co., including in his visits a number of the stores at intermediate points in Western centers. Mr. Lyle describes this as one of the most enjoyable of the many trips he has made in recent years. His itinerary included Rochester, Buffalo, Chicago, St. Paul, Minneapolis, Spokane, Seattle, Portland, Ore., San Francisco, Los Angeles, Kansas City, and Canadian points. The Canadian stores were visited in company with A. G. Farquharson, the Columbia Co.'s Canadian manager, and embraced Winnipeg and other important Canadian points, where Mr. Lyle and Mr. Farquharson called on the jobbers and dealers. At Kansas City a very happy surprise awaited Mr. Lyle. His arrival in this city was signaled by a sheaf of telegrams and congratulatory letters from the managers throughout the service and officials in New York felicitating Mr. Lyle on his birthday. Naturally these congratulations gave Mr. Lyle a great deal of pleasure.

As is his custom on all these trips Mr. Lyle visited principal dealers and jobbers in every center, and the cordiality with which he was received by every one of them was one of the most gratifying features of his entire trip. "Without exception," stated Mr. Lyle, "these dealers and jobbers expressed their great gratification at the unprecedented volume of business in Columbia products, and attributed this to the excellence of the machines and records and to the generous advertising which the company has been placing, coupled with the rational and reasonable policy of the open shop, which has made friends for the company everywhere."

The dealers and jobbers were very enthusiastic about the recent Columbia models and assured Mr. Lyle that they found that their customers received these with unqualified approval and enthusiasm. Before leaving on his journey Mr. Lyle secured advance proofs of the illustrated catalog which will be issued shortly describing the new Columbia Grand. These he exhibited to the trade wherever he went, with the result that although he explained to each dealer and jobber that the machine would not be ready for some time and that orders were not being solicited, these advance proofs so attracted the trade that the orders which were given Mr. Lyle for this new instrument were sufficient to nearly exhaust the first output of the same. The unanimous verdict of the trade visited by Mr. Lyle was that this new Columbia Grand is essentially an instrument of class and one which is distinctive and unlike anything ever placed on the market before.

Mr. Lyle found the trade very happy in consequence of the prosperity which all appeared to be enjoying. Columbia stores in every city visited reported business as being in excess of anything ever written, and were all preparing for a record-breaking holiday trade. This is evidenced by the fact that the Columbia Co.'s business this year is fully 50 per cent. greater throughout its entire service than for any period in its history.

Conditions such as the above naturally caused Mr. Lyle to be cheerfully optimistic on his return, and the fact that he returned to New York in the best of health is a source of great pleasure to his host of business and personal friends.

NOW WITH EXPORT DEPARTMENT.

M. D. Easton, formerly of the Dictaphone department of the Columbia Phonograph Co., is now a member of the Columbia's export department. He will travel in foreign countries in the interests of the Dictaphone, and plans to get in close touch with dealers throughout the world. He left Thursday for a month's trip through Cuba.

PERSONNEL OF NEW DEPARTMENTS.

General Manager Otto A. Gressing Chats of the New Victor Sections of the McCreery, O'Neill-Adams and Lord & Taylor Stores and How They Are Being Conducted.

General Manager Otto A. Gressing, of the newly installed Victor departments in the McCreery, O'Neill-Adams and Lord & Taylor stores, expresses great pleasure at the success of these new talking machine departments. The O'Neill-Adams Victor department was formally opened the latter part of last month; Lord & Taylor's was introduced to the public the early part of November; McCreery's 23d street store was selling Victor machines about October 15, and by the time this paper goes to press Manager Gressing hopes that McCreery's 34th street store will have had the formal opening of its new Victor department.

No expense has been spared to make these display rooms models of comfort for patrons and friends, the decorations in each store being of the very best and in keeping with the important names of the houses in which the new departments are installed. There are seven demonstration rooms on Lord & Taylor's Victor floor, which were all arranged with careful attention to the comfort of prospective purchasers and their friends. These rooms are all finished in mission, and the furnishings, which are tasteful and refined, are in perfect keeping with the quiet though rich appearance of the entire department.

Handsome Victor models are displayed in each demonstration room, and a complete stock of Victor records is to be found in the well-filled racks on one side of the floor. Many visitors have thronged the department since its opening, and they have all expressed their pleasure at the many splendid features in the new home of Victor products. The McCreery, O'Neill-Adams departments are all furnished in the same high class manner and present a very pleasing appearance. The personnel of the various departments is as follows: McCreery's 34th street store—Manager, Miss Steele, formerly with Pearsall's Fifth

avenue store, assisted by Brainerd A. Smith, formerly connected with Steinert, of Boston. McCreery's 23d street store—Manager, Miss Katherine Tracy. Lord & Taylor—Manager, Henry Broad, assisted by Miss R. E. Stagg. O'Neill-Adams—Manager, Harry Munroe, formerly connected with Lyon & Healy, of Chicago; Miss Snyder, connected with O'Neill-Adams for a number of years; Joseph Featherstone, James Henderson and Miss Nellie Marshall. General Manager Gressing has an office in each store, and spends a part of each day in all the various stores.

"Business at O'Neill-Adams' has been phenomenal," stated Mr. Gressing in a chat with The World. "Since we opened a few weeks ago we have made a splendid showing in both machines and records, and our sales are constantly increasing. Lord & Taylor's and McCreery's are both doing very well, and the high class clientele that visits these stores has made possible many sales of the high priced Victor models. We closed several orders for No. XVI. in Circassian walnut last week, and I am very much pleased with general business conditions. We are especially fortunate in having an excellent repair department maintained in connection with the four Victor departments. This repair end of the business is in charge of George Reilley, formerly connected with the Blackman Talking Machine Co., of New York."

PLEASURE AND PROFIT DERIVED.

Benj. Switky, the well-known jobber of 9 West Twenty-third street, New York, has favored us with the picture, which appears herewith, of a happy gathering enjoying the pleasures of a Victor concert, which was kindly loaned by those enterprising and highly successful Victor dealers, Epstein & Berdy, 2977 Third avenue.

"The story as related to us by Mr. Epstein is so full of moral," remarks Mr. Switky, "that it would be selfish for us not to impart it to your readers. You will notice the happy faces in the picture, which, I am sure, are due to the fact that the record played was an entertaining one and not

because the photographer advised them to look pleasant.

"Louis Epstein believes in entertaining his fellow guests during vacation time, and incidentally combines business with pleasure. In fact, he tells us that, unlike most people, instead of coming home broke, he came home with some excess cash in his pockets.

"Last September Mr. Epstein departed for Fleischmann's Station, N. Y., to enjoy a little change of scene and recreation. He took with him a set of Victor records and a Victor machine, in-

The Victor in the Mountains.

tending to serenade the friends and acquaintances of past seasons.

"His first concert was very well received, and he was requested unanimously to repeat the entertainment several times. Here is a summary of what he accomplished in the way of results: One Victrola 16th, one Victrola 9th and one Victrola 6th were sold, as well as a quantity of records, to some who were already happy possessors of talking machines. In addition to all these he has five good, realizable prospects.

"We would advise our friends in the trade to profit by Mr. Epstein's experience so that when they go away on their vacations next summer to be sure to boost the industry and themselves by taking with them a machine and records for the benefit of fellow guests."

LATEST VITAPHONE VOLUME DESCRIBES PRODUCTS.

Six Styles of Vitaphones Illustrated and Described in Detail in New Catalog Issued in English and Which Follows Others Issued in Foreign Languages.

"Not living and breathing—but the same" is the introduction opposite the title page of the new catalog recently issued by the Vitaphone Co., Plainfield, N. J., which aptly describes the new machines of this company in conjunction with the meaning of its name. This catalog is not a large one, as catalogs go, but for style and quality it ranks with the best. The cover is in two shades of green with gold and white stamping, while the printing of the text matter is in black and red.

The foregoing catalog is for English speaking countries and is the first one issued for this country. Previous editions have been in foreign languages, being printed for the export trade.

Six styles of Vitaphones are illustrated and described. The Vitaphone grand type No. 185 retails for \$185 and is a big, magnificent machine. This machine is furnished in mahogany, or quartered oak with choice of golden, early English, weathered, fumed, antique gun metal or Flemish. Interchangeable diaphragm connection, while either amplifier or horn may be used. This plays either needle or sapphire records. This type is equipped with an extra motor that can be wound while playing. The lower part of the cabinet has a filing capacity for 250 records, the entire cabinet being finished beautifully.

Type No. 100 retails at \$100. This is four feet high; two feet deep; 1 foot 8½ inches wide and has a 12-inch turntable. Furnished in mahogany, golden oak and mission oak only. It presents a very clean-cut appearance.

Type No. 75, retailing for \$75, is along the same lines as style No. 100, only the design is more severe. It is created to fill the demands of those who wish a good talking machine at that price.

For \$50 retail, type No. 50 was designed. This machine has no record cabinet, but instead has a shelf where six record albums may be kept, with a capacity of 96 records. This machine has a ten-inch turntable, and is 3 feet 7 inches high; 1 foot 7 inches deep; 1 foot 5 inches wide. Furnished only in golden or mission oak.

Type No. 15, retailing at \$15, is the popular price Vitaphone. This is quite a little machine for the cost. It is furnished with an artistic flower horn at no extra cost. This machine plays both needle or sapphire records, and the spring motor can be wound while playing.

Considerable space is devoted to Vitaphone needles, a peculiar spear pointed needle that is made especially for Vitaphone machines. Owing to this peculiar shape, any tone is secured, soft, medium or loud.

Quite an extensive line of talking machine horns are illustrated and described on the last page, including Vitaphone solid wood horns, veneered and not veneered, Vitaphone solid spruce horns and Vitaphone wood pulp horns. The prices run up to \$20 each retail. In the spread of the catalog, that is, the inside two pages, is an illustration of the Vitaphone reproducer, patented in United States and other countries, which is one of the mainstays of the Vitaphone itself.

As taken from this brochure, below are several paragraphs which are of interest:

"Why is the violin so sweet toned? Would it be so if made of metal? The answer is too obvious to require an answer. The wood arm of the Vitaphone is the result of many thousand experiments to determine the right kind of wood to use, the proper length, the correct angle from diaphragm to record, and most important of all is the process by which it is treated. Carefully selected straight grain wood is placed into a caldron of chemicals and permitted to boil for a certain length of time. When taken from the solution, the fibre has been shrunk, every atom of moisture and air extracted and every pore permanently filled. By this exclusive Vitaphone method the vibrations of the record travel smoothly to the diaphragm where they become the life-like tones of nature.

"Sound vibrates from 16 to 8,192 times per second. Under this intense strain metal fatigues becomes tired as it were, but wood never seems to be so affected. Again, the older wood becomes the greater the resonance. It is because of that reason men pay fabulous sums for the Stradivarius violins, and the old wood pipes of cathedral organs are not to be purchased at any price. The Vitaphone stands unique, as the only Talking Machine not relying upon metal vibratory parts, and which actually improves with age.

"Another novel feature of the Vitaphone is the stationary sound box, rigidly fixed to its supporting frame and made of few and simple parts. This construction permits the use of a tension spring to maintain the necessary pressure holding the stylus in the groove of the record. Not carrying a floating sound box oscillating and tearing out the

delicate wave-impressions, a record used on the Vitaphone has a much longer life than is possible on any other talking machine.

"Two different systems of recording are in vogue. One, the better known, has the sound-waves imprinted on the side of the groove, requiring a steel needle or other sharp-pointed stylus. In the other system, the sound-waves are at the bottom of the groove and a blunt-nosed jewel is necessary to bring out the reproduction. A traveling sound box must be in one position to play one record and reversed for the other; therefore, a certain amount of mechanical ability and considerable time is required to make the change. In some machines this is impossible to the average owner, while others supply at extra cost, the necessary tools and parts. Here is an important and exclusive Vitaphone feature; neither time, tools nor ingenuity are required to change from one system of record to the other, simply alter the position of the diaphragm spring, place the needle or jewel in the needle arm and the operation is complete.

"Sound travels upwards, and in the cabinet Vitaphone this principal is taken advantage of by placing the amplifier, or sounding board, over the diaphragm and not under as hitherto customary.

"Much of the efficiency of the Vitaphone depends upon the spring motor, which rotates the record turntable. It must turn with unerring regularity in order to insure perfect tempo. It must maintain an even silent power until the last ounce of tension in the spring is exhausted, otherwise the stylus will drag on high notes and injure the tonal qualities of the reproduction. The Vitaphone motor meets every exacting requirement; it is simple and positive in every feature, and revolves absolutely uniform until the spring is entirely run down. Invented several years ago by the same master mind and patentee of the Vitaphone, it has been used with the greatest success in over a million talking machines now on the market.

"The housing of reproducer, motor, amplifier and connections in an artistic cabinet is a distinctive Vitaphone characteristic. The design conforms to mechanical requirements, and it is at the same time pleasing to the eye. The finish is polished and re-polished until it is the kind that, with ordinary care, lasts for generations."

H. N. McMenimen, general manager, announces several small improvements in the general construction of the Vitaphone since this volume was published, and these improvements are now incorporated into all Vitaphones.

EDISON BLUE AMBEROL RECORDS

Score a Great Success at Wanamaker's and a Big Business Is Being Done with Them—Victor Business with This House Is Active.

"This will be one of the greatest years in our department's history," states Harry B. Bertine, assistant manager of John Wanamaker's talking machine department. "We are closing a record-breaking business each week and from present indications will have a banner holiday trade. Our chief difficulty is in securing sufficient goods to fill our orders, and this shortage is becoming more pronounced each day. Shipments from the Victor factory at Camden, N. J., are way behind the dates of our orders and we are severely handicapped by this lack of enough machines.

"One of the most pleasing features of our recent business has been the remarkable reception accorded the new Edison Blue Amberol records. People are asking for these records faster than we ever expected, and they all seem to be delighted with their wonderful tone, which is remarkably clear and brilliant. The enunciation of these records is very distinct, and we are looking forward to a heavy sale of the new records.

"We have sold a very large number of No. XVI Victrolas, which sell at \$200, and as a matter of fact our sales of this style have been greater than that of all the other models put together. Many of these sales have been in Circassian walnut cases, and the call for the higher priced products is rapidly growing. Another favorite is the No. XIV. Victrola, which sells for \$150. Our Victor records are selling fine, and there is a constantly increasing call for the November selections that were recently produced by the Victor Co. I hear nothing but words of commendation for the worthy features of the latest Victor records."

GETTING THE MONEY.

When you decide to close an account, make up your mind as to about how the debtor should be able to pay you, as regards dates and amounts, and go after the money accordingly. Don't let him forget he owes you. You will usually find that he is playing his talents as a slow payer against yours as a collector, and it all depends on your ability to extract money as to how long he will succeed in "stringing" you.

NYOIL

For polishing
varnished woodwork it is
extremely satisfactory. No oil is so clean.

Ask your watch repairer whose
oil he uses on your watch.

MODEST AND PROGRESSIVE.

The Elements That Have Led to Hayward Cleveland's Success in the Talking Machine Field—"Snapped" for the First Time.

Hayward Cleveland, the popular manager of the Columbia Phonograph Co.'s store at 35 West Twenty-third street, New York, is one of the oldest and most enthusiastic workers in the talking machine field, as well as one of the oldest employees of the company, with which he has been so long and honorably associated.

Any endeavors to exploit Mr. Cleveland or to

Mr. and Mrs. Cleveland.

bring him to public notice by means of a photograph have hitherto been unsuccessful, despite every effort of his associates and well wishers. This summer, however, while Mr. Cleveland was at the Shelter Island House, Shelter Island, L. I., where he enjoyed the first vacation in several years, he was "snapped," with the result that we are able to present to our readers a counterfeit presentment of this exponent of Columbia merits with Mrs. Cleveland.

Mr. Cleveland has grown up with the Columbia business and has seen it expand from modest proportions to its present important place as one of the great companies of international fame. He is a hard worker who believes in doing things rather than speaking about them—the elements truly that proclaim the man.

AN EXCELLENT IDEA.

Beginning with the December records, Thos. A. Edison, Inc., will enclose in each carton a four-page folder giving detailed information concerning the selection. This is an excellent idea and one that will be appreciated by the users of the phonograph.

VICTOR AUTOMATIC SCENIC WINDOW DISPLAY.

This Up-to-Date Method of Interesting the Public in the Victor Talking Machine Attracts Big Crowds in Front of Gimbel Bros.' Window, Philadelphia, Where a Display Was Given Last Week—Aroused Great Interest and Many Complimentary Remarks.

A conspicuous achievement in window display has been accomplished by the window display department of the Victor Talking Machine Co. To justify that statement, one only needs to look at the accompanying illustrations.

A week or two ago the Victor Automatic Scenic Window Display was announced to Victor dealers. It has since been submitted to the actual test, and its instantaneous and "conspicuous" success is not a question of opinion, but a pure and simple matter of fact.

The illustrations herewith are actual photo-

A brief description of this latest window display is as follows: It presents scenes from grand opera, from light opera, scenes which suggest the best of band music, dance music and vaudeville. There is movement in it—the one thing above all others which will arrest attention and hold it—the two positive essentials which establish and increase advertising value.

In particular this new product consists of the following: A proscenium arch in miniature with a curtain which hides the stage from view. Directly before that, a full operatic stage orchestra in min-

it continues until six different scenes or stage settings have been shown. It is all done automatically. The electric motor is simply started and continues thereafter as long as desired.

That is a very brief description of the Victor Co.'s new scenic window display. To satisfy oneself as to the effect produced by this new Victor display, one needs only to turn to the illustration. The complete display is not large. Probably not more than forty or fifty people can see it at a time, which was evident when it was first shown at Gimbel's Friday afternoon, November 8. The forty or fifty people gathered the moment the window dresser's curtain had been removed, and that number was continuously present all the afternoon and until late at night. New observers came, those who had seen it left, but always it was before the same pyramid of eager watchers. Note the attitudes—pushing, prying, tip-toeing, every one of them intent.

There are many windows in the Gimbel store—each dressed with costly and much-to-be-desired merchandise—and where one or two would occasionally stop to examine the contents of the other windows, there was always a solid pyramid before the miniature Victor stage. It is a fact, and a most significant one, that Gimbel Bros. will put a temporary rail in front of the window to keep the crowd back a few feet.

It is not at all a question of word painting, but a matter of fact easily demonstrated, that this scenic display attracts and holds the crowds and drives home a solid Victor argument, and it earns the commendation it has received as a "conspicuous achievement" in the art of store advertising.

THE VALUE OF "SERVICE"

Exemplified in the Success of the Talking Machine Department of the Oliver Ditson Co. and the Dealers Which It Serves.

(Special to The Talking Machine World.)

Boston, Mass., Nov. 11, 1912.

"Service" is the great asset of the Victor department of the Oliver Ditson Co., managed by Henry Winkelman, in this city, and it is on "service" that this end of the business grew and prospered. The aim of this company is to care for the dealer and see that he is protected, even though it results in a financial loss. This brings to mind a conversation of about a year ago when Victor machines were at a premium—and, in fact, they are at all times—but this was around the holidays. The company received an allotment of machines and instead of disposing of them at retail, as they had every right to do and secure the extra profits, they sent a few here and there to their dealers and sacrificed profits in order to assist their wholesale trade.

Such a protection as this is worth linking to. Henry Winkelman, who directs this end of the organization, has some dealers who would not think of having any other service than the Ditson service. They like the sales hints secured; they like the fast delivery of goods and supplies; they appreciate co-operation in business building, and the advice of Mr. Winkelman on talking machine problems is ever ready to those of his clients who seek it.

Much has been spoken and written about the elimination of the jobber, but if they were all of the character of the Ditson house there could hardly be any reasonable arguments for it. On the contrary, the Ditson house is ever on the territory; it knows local selling and distributing conditions and maintains a finger on the pulse of trade that is of value to both the manufacturer and dealer. To the dealer, however, is directed the bulk of effort, as it is by making the dealers successful that the Ditson Co. has so succeeded.

Mr. Winkelman reports business as very good, with an outlook indicative of unusual prosperity in the coming holiday trade.

Several changes in office locations occurred last month at the Edison executive building in Orange, N. J. Mr. Goodwin's office being removed from the third floor front to the second floor back, while the Kinetoscope offices on the fourth floor moved down a peg to the third.

Crowd in Front of Gimbel Bros. Admiring Victor Scenic Display.

graphs taken in front of the windows of Gimbel Bros.' great Philadelphia store, where the first Victor Scenic Window Display was shown. We should have been glad to show a photograph of the display in the window, but it was impossible to do so on account of the crowd. At the time of going to press similar scenic window displays are being set up in the windows of prominent Victor dealers in New York City.

iature, with each figure full of the suggestion of action which the onlooker instinctively demands. Further in the foreground is a handsome display so arranged that in looking through the parted curtains one gets the impression of looking down upon the stage from a proscenium box.

The curtain bears a legend, "With a Victor Victrola you may have right in your own home"—the curtain is raised automatically and the observer

sees a scene from perhaps "Madame Butterfly." The scene is complete with all the stage appurtenances, such as flies, borders, backdrops and characters of the play, all of which is accentuated by the fascination of lighting effects, which are also operated automatically. A moment and the curtain is lowered (automatically). Automatically the curtain rises again, as before, and the scene has been changed as if by magic, this time showing perhaps a light opera setting, a band stand complete with figures, or a scene from vaudeville. Thus

Still Another Crowd Interested in Victor Scenic Display.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

Betterment in Trade During the Past Month Has Been Most Marked, and It Now Seems as if the Season's Turn-over Will Far Eclipse in Bulk That of Any Previous Year's Figures—Increasing Demand for Talking Machines of the Hornless Type—Increase in Double Disc Records—Barnett Samuel & Sons, Ltd., Celebrate Eightieth Anniversary—A Novelty in Disc Records Recently Announced by Henry Seymour—Annual Meeting of Gramophone Co. Shows a Healthy Condition of Things—New Edison Home Kinetoscope to Be a Big Favorite in Great Britain—Talking Machine Houses Have Narrow Escape from Fire—News of the Month.

(Special to The Talking Machine World.)

London, E. C., Nov. 4, 1912.

Since my last report the talking machine business has increased amazingly on this side, and I do not hesitate to affirm that, given general stability in industrial circles, this season's trade turn-over will far eclipse in bulk that of any previous year's figures. During my rounds of the trade I have had opportunities of observing the remarkable growth of sales which each week indicates with the nearer approach of Xmas. One expects to find manufacturers busy this time, but so phenomenal is the demand for records that even though factories are now running day and night, in many instances difficulty is experienced in keeping supplies ahead of demand. This pleasing situation at the factory end, as may be obvious, is clear evidence of satisfactory retail sales, and both factors and dealers are reaping a good, steady harvest. The machine trade, too, is making great progress, and broadly speaking, dealers are selling more to-day than ever before. From the construction viewpoint, many improvements on last season's models are noticeable, and almost every company has introduced one or more new styles.

For the time of year it is somewhat surprising that hornless machines sell in such large quantities as they do, but this is perhaps due to their improved tone quality and volume—now almost equal to the ordinary trumpet type, and to the fact that the public seem to show a marked preference for machines without horns, the which in many cases are unsightly and do not harmonize in color with the general tone and scheme of furnishing. Whatever the reason, a sure index of the growing popularity of this class of instrument is manifest by the special advertising devoted to its exploitation, and to-day a dealer's stock is regarded as incomplete without them.

Apropos my remarks last month anent the 1s. 6d. double disc, I have now to report the advent of two new ones, i. e., "Invieta" and the "Lyric." Of the former I know little as yet, but from evidence submitted to me I am bound to say that the latter is an exceptionally good record for the money. The first list contains some two hundred picked titles, many by artists prominently featured on higher-priced discs. The company plans to trade direct with dealers, and being thereby enabled to control their distributors, I am told, it is their fixed intention to maintain established prices all along the line. The Lyric Record Co. will also market a two-and-sixpenny double disc bearing titles by special artists.

Celebrate Eightieth Anniversary.

1832-1912 is the record span of existence which the well-known instrument house of Barnett Samuel & Sons, Ltd., celebrate this month. Established in the reign of William IV, by the two great-uncles of the present proprietors, the firm commenced business in Tothill street, Westminster, almost within the shadow of our historical Cathedral. In those days they handled, in addition to musical instruments, leather and hardware goods. 1841 saw them located in Houndsditch, where large warehouses were acquired, and here

the business grew rapidly. Their first small goods catalog, issued in the year 1850, contained particulars of a number of instruments which to the present generation are now unknown. Messrs. Barnett Samuel occupied their present premises, 32-36 Worship street, as long ago as 1870, and subsequently, from time to time, as trade expanded, they acquired adjoining buildings. They handle a great variety of small goods, and their catalog, profusely illustrated in colors, is said to cost about 12s. a copy. As pianoforte manufacturers the company is favorably known throughout the world, and in addition to representing the Chicago Cottage Organ Co., they are sole agents for the Fonotopia, Odeon and Jumbo disc records.

The World tenders its hearty congratulations to Messrs. Barnett Samuel & Sons, Ltd., and hopes they will long continue to enjoy an ever-expanding trade during the years to come.

To Mark Goods of British Origin.

At the first meeting of the British Empire Trade-Mark Association a resolution was unanimously carried in favor of the establishment of a mark of origin for goods manufactured or produced in the British Empire, as likely to be of great benefit to the trade thereof. A circular issued by the association states that the method by which the association proposes to carry out its object is by licensing manufacturers and merchants to use the mark on goods which the association is satisfied can fairly be described as of British origin. Immediately on the registration of the association it is proposed to apply for the registration of the Empire trade-mark in such parts of the British Empire and in such foreign countries as provide for the registration thereof. Besides its use in the British dominions, it is felt that the existence of a mark of this kind, which will undoubtedly be largely used by British manufacturers and merchants would greatly assist His Majesty's consular representatives in foreign countries in their continual war against persons who falsely endeavor to pass off their goods as British.

A New Flexible Disc.

A novelty in disc records was recently shown to me by Henry Seymour, an inventive genius of some note here. Practically transparent, the material is of xylonite composition, thin and flexible. Mr. Seymour says that patents have been taken out in England, Germany and other countries, and he expects shortly to be in a position to market the product. A record of this nature offering little resistance to the needle should operate with an entire absence of surface scratch and as I understand, it does. Its possibilities as a commercial product are many, one important advantage being the easiness and quickness of pressing, thus obviating to a great extent the necessity of preparing or carrying in stock more than reasonable quantities of any one title, and further, its adaptability for postal dispatch without fear of breakage would appeal to many.

New Gramophone Catalog.

A magnificent production is the new instrument catalog just issued by the Gramophone Co., Ltd. It contains illustrations and particulars of all the company's models and much other information of interest to dealers.

Floral Kangaroo for Melba.

A handsome floral tribute in the shape of a kangaroo, standing over five feet in height, and composed of magnificent chrysanthemums of a light brown shade, faithfully representing the natural color of this Australian animal, was presented by the Gramophone Co. to Mme. Melba upon the occasion of her reappearance at the Royal Albert Hall, London, October 5.

Copyright Notice of Interest.

The subjoined important announcement is extracted from the Daily Telegraph, dated October

28: Re Infringement of Copyright—Chappell & Co. (Ltd.) hereby give notice that any copying of band parts, in manuscript or otherwise, of selections from their operettas multiplied for the purpose of making gramophone or other mechanical records is an infringement of copyright, and will be dealt with accordingly.

A New and Novel Needle.

A new device recently placed on this market is the Tripletone crystal needle, which consists of a metal body with a glass head of three points. Each point is said to be good for fifteen to twenty tunes.

Some Attractive New Records.

His Master's Voice Co. has recently issued some exceptionally fine examples of piano records by Irene Scharrer and a number of selected pieces by the New Symphony Orchestra. These records will undoubtedly enjoy a big demand.

The first company to issue this season a selected list of Christmas titles is the Edison concern. Other firms will shortly make announcements in this regard.

New Companies.

Albion Record Co., Ltd.; capital, £5,000; office, Tabernacle street, London, E. C.

Decapo Record Co., Ltd.; capital, £1,000; registered office, 10 Copthall avenue, London, E. C. This latter firm, I understand, will take premises in City Road.

Introduce "Marathon" Records.

"The record that's twice as long" is the "Marathon" slogan, and although this is not literally true in every instance, owing to the shortness of some scores, not the record's capacity, the company proves its claim right up to the hilt this month. On one side of a ten-inch disc is "The Little Hero," by Robert Howe, which, say the Marathon people, occupies exactly five minutes, fifteen seconds in rendition; an amazing achievement to be shortly eclipsed, I understand, by the issue of a set of lancers on both sides of one record, the playing time being just eleven minutes. These represent the largest running ten-inch records ever made, and are only possible by the Marathon system of recording on the fine-cut principle.

Annual Meeting of Gramophone Co., Ltd.

Presiding at the annual meeting of the Gramophone Co. (Ltd.), E. Trevor Williams said that "the trading profit amounted to £156,468, showing a decrease of £28,280, compared with last year, an increase of £1,000 over 1910, and an increase of £95,000 over 1909. Under the circumstances which had prevailed he thought the profit figure was a very fine one. Probably the main reason for the drop in profits was the bad delivery of goods manufactured by others upon which the company was dependent, such goods costing a great deal more and the gross profits being proportionately less. The chief difficulty experienced had been with cabinet work and woodwork generally. Now that its cabinet factory at Hayes was in full operation this was an evil which should not recur. If last year had been only approximately normal the profits would have equaled, if not exceeded, the profit shown in the previous year.

The directors recommended a bonus of 10 per cent. on the ordinary shares, making, with the interim dividends, a total distribution of 20 per cent. for the year. The carry forward amounted to £314,694, showing an increase of £45,958 as compared with last year. The statement of net assets showed a transference of £120,000 from available cash assets to assets represented by land and buildings, machinery and plant, and stock in trade. In spite of this transference, the cash position was entirely satisfactory, the amount being £83,000, as compared with £37,000, three years ago.

New Cabinet Factory Operating.

The new cabinet factory at Hayes was now in

FROM OUR LONDON HEADQUARTERS— (Continued from page 36).

full working order and was able to deliver to its selling departments cabinets of a quality which had hitherto been unobtainable. The effect of the quality of the new output upon the trade had been electrical, and the sales in England lately had been quite abnormal. The total assets amounted to £914,696, showing an increase over last year of £45,958. These were readily convertible assets, and excluded patents, trademarks and goodwill. He ventured to say without fear of contradiction that the patents, trademarks and goodwill, if the business were sold to-day as a going concern, would be valued at well over a million sterling, but this asset had been written down in the balance sheet to vanishing point.

As to the future, the general trade conditions, in spite of the trouble in the East, were phenomenally good, and the demand for the company's goods showed no sign of diminishing; indeed, the indications were that it was increasing in every direction.

November Zonophone Records.

An extremely comprehensive and well chosen list of titles is that issued by the British Zonophone Co. for November, and as a matter of fact one begins to look for nothing else but a high-class repertory from this important concern. I mention below only a few of the choice examples which are to be found in this list: Zonophone 10-inch records—"The Donovans" (Needham), and "Bantry Bay" (Molloy), Stanley Kirkby; "Rosenthal and Harrigan at the Singing Lesson" and "Rosenthal and Harrigan at the College" (Friend and Downing), Friend and Downing; "Mandalay" (Willeby), and "The Border Ballad" (Cowen), Peter Dawson; "High Jinks" and "Pas de Quatre," skirt dance (concertina solos), Alexander Prince; "Rock of Ages" and "Sovereignty," Bessies o' th' Bairn Band, and "A Call to Arms March" (Bidgood), and "Europe United March" (Zehle), Black Diamond Band.

Latest Columbia Rena Record List.

Whether or not it is to be a regular monthly feature of the Columbia-Rena list is more than I can say, but for the last few months, at any rate, a welcome surprise has awaited dealers in the shape of some special item by one of the really popular artistes of the day. This month it is Tom Woottwell, a character comedian, whose first record "Wait a Minute" is a gem of merriment from beginning to end. "The Rosary," as a concertina solo, is something new, and as played by Alex. Prince is exceptionally fine. Dished up in so many forms of late this noble, yet dirgelike air began to pall somewhat, but I must confess to a revival of interest and pleasure after listening to the beautiful organ effects of Mr. Prince's concertina rendition. Another fine record is Arthur Friedheim's exquisite pianoforte performance of Liszt's "Sixth Hungarian Rhapsody" and Chopin's "Funeral March."

The following Columbia-Rena records also call for mention: Twelve-inch—"When a Wooser Goes A-Wooing" and "Strange Adventures" (from "The Yeomen of the Guard") (Sullivan), the London Opera Quartet. Ten-inch records—"The Tale of a Troll" (Dougherty and Jerome), Nella Webb, and "Molly O'Moore" (Moritz Lutzen), Nella Webb; "Ramshackle Rag" (Ted Snyder), and "Red Pepper" (Henry Lodge), King Military Band; "Down by the Old Mill Stream" (Tell Taylor), and "Let Me Call You Sweetheart" (Leo Friedmann), Prince's Male Quartet; "Big Brown Boo-Loo Eyes" (Edward Leonard), and "Good-Bye London Town" (Jerome and Schwartz), the Two Bobs; "The Fountain" (Zabel) (harp solo), Dorothy Baseler, and "Annie Laurie" (theme and variations) (harp solo), Charles Schueltze; "Ora Pro Nobis" (Piccolomini), and "The Rosary" (Nevin) (concertina solo), Alexander Prince; and "Wait 'Till the Clouds Roll By, Jennie" (Fulmer), and "We've Been Chums for Fifty Years" (Chattaway), Will Oakland.

New Company to Insure Patents.

Inventors and others having patents to protect will welcome the advent of the Letters Patent Insurance Co., Ltd., which will issue policies of insurance to safeguard patents from infringement, and policies of utility in the case of patents. The company has an efficient staff and is able to consult expert advice. Inventors and those interested might feel certain that a policy of insurance would not be granted until after thorough inquiry into the nature of the patent, its validity and the possibility of its being infringed. The scheme certainly seems advantageous from every point of view, and given a reasonable premium, should strongly appeal to all classes of inventors—poor or otherwise, and companies having vested interests in patents.

"Double Side" Records in Favor.

In continuance of its policy to double-side a number of instrumental records each month, the "His Master's Voice" Co. issues a further batch for November, and as to the wisdom of this new departure it has ample evidence in the letters of praise received from its accredited dealers in different parts of the country. It may be mentioned, by the way, that the British public had manifested its favor for the two-in-one record, and from the time the first was introduced—now some four or five years back—the demand has been steady and progressive. As may therefore be imagined the "H. M. V." move was very generally welcomed, and in the opinion of those who should know it marks a further important step in the progress of this company.

Excellent fare is offered on the current list, which includes a pleasing and comprehensive selection of titles, as hereunder: H. M. V. Double-Sided—"Marche Militaire" (Schubert), and "Grand March—La Reine de Saba" (Gounod); "La Poupée," selection 1, and "La Poupée," selection 2 (Audran); "The English Rose," "Merrie England" (Ed. German), and "I Know a Lovely

H. Squire; "Familien genälde," op. 34, No. 4 (Schumann), Renard Trio; "Worse, Much Worse" (G. Ross), G. Robey; "My Word!" (S. Bennett), Harry Carlton; "When Father Laid the Carpet on the Stairs" (N. Jackson), Nelson Jackson; "That Slippery Slide Trombone" (Van Alstyne), American Quartet; "Mrs. Le Browning" (sequel to "A Sister to Assist'er") (John Le Breton), Fred Emney and Miss Sydney Fairbrother.

No More Edison Standard Records.

Announcement is made by Thomas A. Edison, Ltd., of its decision to abandon the further issue of new titles in the "Standard" series, retaining, however, the present list. This move will enable dealers to concentrate on the sale of Amberols, for the playing of which all Edison phonographs are now equipped. A large number of old machines in use are still unprovided with attachments, and for the live dealer there would appear

to be a big trading field awaiting cultivation in this direction.

The New Edison Home Kinetoscope.

The trade demand for the new Edison Home kinetoscope, announced here last month, has now set in with a rush. Substantial orders have been placed by prominent talking machine factors and dealers and by big houses outside the trade. As a matter of fact, the Edison Co. cannot supply fast enough, every consignment being earmarked in advance. Business men very naturally anticipate a big public demand, and their preparations to meet it are now practically ready.

A disastrous fire which claimed a toll of three lives recently occurred at 79 City Road, premises occupied by a firm of theatrical costumers. With the Beka Record Co. on one side and the Columbia Co. on the other, it may be readily surmised that, considering the inflammable nature of record stocks contained in both buildings, great anxiety was felt as to localizing the outbreak. Fortunately the firemen were promptly on the scene and managed to prevent the fire spreading to any extent. The Columbia Co. sustained little or no damage and the Beka premises suffered slightly from the water which flooded the basement to a depth of some inches.

SIMPLEX START AND STOP DEVICE

Has Won Great Popularity Among the Public, Judging from the Reports of Dealers and the Activity Which Prevails at the Factory on Lafayette Street, New York—Interesting Booklet Is Now Being Distributed—What Manager Kirkman Reports.

The Standard Gramophone Appliance Co., 173 Lafayette street, New York, is doing an excellent business with the Simplex Start and Stop Device. Orders are coming in faster than the factory can deliver the goods, and from present indications the demand will grow rapidly as the dealers begin to realize the merits of the Simplex device. Manager Kirkman is enthusiastic over the rapid progress being made in the development of an extensive clientele, and states that dealers throughout the country are taking up the sale of the device with enthusiasm and vigor and report a most gratifying demand for this widely-advertised product. Not only are the dealers satisfied with the merits of the Simplex Start and Stop, but they are pushing the sale of the device with excellent results. Several first-class road men have been engaged by the company to push the sale of the product throughout the country, and preparations have been made for a most extensive advertising campaign by means of circulars and general educational publicity. A high-class booklet has just been prepared for distribution among the dealers and jobbers throughout the country, and particular care and attention have been given to the preparation of this circular, in order to adequately impress the trade with the splendid qualities of the Simplex Start and Stop. The booklet is illustrated with first-class cuts showing the manner in which the Start and Stop is applied to the talking machine and assures the dealer of the hearty co-operation of the home office. The circular is well written and presents an excellent argument on the merits and worthy features of the device. Directions for the use of the Start and Stop are printed in full, and the entire arrangement of the various sections of the circular is in keeping with the attractive proposition offered to the trade. The booklet is being distributed as The World goes to press, and over a hundred thousand copies have been printed to accommodate the first demand of the trade.

"Our business is going ahead rapidly," stated Manager Thomas W. Kirkman, in a chat with The World. "Our factory force is exceptionally capable, and as a result we are enabled to turn out our device with the positive knowledge that the most careful attention has been given to every detail of its construction. The call for the Simplex Start and Stop has advanced remarkably in the past month, and we are preparing to take care of a banner holiday trade. Our device has been perfected gradually until it now represents a product that

will give entire satisfaction to every user. Our development work in this direction has been appreciated by the talking machine trade and dealers are responding most gratifyingly to our publicity. We are receiving many letters from the trade commending the Simplex in the highest terms and assuring us of the widespread demand for our device. A jobber and dealer in upper New York State writes as follows: 'Kindly send us 1,000 of your new circulars when they are ready for distribution; we used those you sent us recently to great advantage. A customer who has not ordered any goods from us for a long time sent for a Simplex. We had one placed on her machine, and the idea of something new on her machine induced her to use it. In a few days she called and remarked that she had been tired of her phonograph, but that the Simplex had renewed her interest in the machine. She consequently desired to replenish her stock of records, and when she went out had left an order for \$250 worth of records.'

"The receipt of such letters as the above is a great encouragement to us in the development of a high-class trade, and we are very glad indeed that the dealers are taking such an active interest in pushing the sale of our device. Our clientele is growing daily and we expect that our new literature will be the means of convincing the trade in general of the merits and excellent qualities of the Simplex Start and Stop device."

MARKS CO. HANDLE COLUMBIA LINE.

The Columbia Phonograph Co. announces that arrangements have just been completed whereby the S. Z. Marks Co., one of the progressive dealers of Paterson, N. J., will install a Columbia department in its piano and player store. A substantial order for Columbia products, which it will handle exclusively, has been placed for immediate shipment, and the company is very enthusiastic over the bright prospects for a banner talking machine business.

RETURNS TO HIS DESK.

G. T. Williams, the popular manager of the New York Talking Machine Co., 83 Chambers street, New York, returned to his desk this week after a ten days' attack of the grippe. He is still feeling a little weak, but is rapidly regaining his usual vigor and vim.

C. E. Goodwin, manager of salesmen in the Thomas A. Edison, Inc., organization at Orange, N. J., is in Chicago to attend the wedding of his brother, Judge Goodwin.

Concentration is the secret of strength in politics, in war, in trade; in short, in all management of human affairs.

INCORPORATED.

The United Piano and Talking Machine Co., Newark, N. J., has been incorporated with capital stock of \$10,000 for the purpose of dealing in pianos, etc. The incorporators are: Samuel Popick, R. T. Giordano and J. Hermann Buehrer.

Talking Machine Man Wants Position.

A Live Talking Machine man of considerable business experience, thoroughly conversant with every detail of the line, business developer and salesman, is seeking connection with a firm or organization, who would appreciate a forceful, conscientious and able worker and for whom a future exists. Best of references. Address "100," care of The Talking Machine World, 373 Fourth avenue, New York City.

FOR SALE.—A complete stock of Edison-Victor and Columbia machines and Records for sale. Also Zonophone Machines and double disc records. Will be sold at once. Address "T. M. P. CO.," care The Talking Machine World, 373 Fourth Ave., New York City.

CHAUFFEURS COMPLETE OUTFIT SACRIFICED. Consisting of elegant mink fur-lined coat, Persian lamb collar, \$35; pair of elegant bear robes, \$15 each; raccoon cap, \$5; pair of fur gloves, \$4; pair of goggles, 50c.; 1 pair leather leggings, \$3.50. Will sell separately or the lot, all new; never worn. Original price, \$225.00. C. CHASE, 118 East 28th St., New York City, N. Y.

FOR SALE.—Well-established talking machine and small goods business, with a fine growing trade; in the best and largest city in the irrigated west; population over 24,000; exclusive line and only one other store in the city; ill-health compels retirement. Address "C. M. C.," care The Talking Machine World, 373 Fourth Ave., New York City, N. Y.

FOR SALE.—A Jobbing stock of Edison goods in exclusive Edison territory; other interests necessitate our closing out this stock. Address "EDISON," care The Talking Machine World, 373 Fourth Ave., New York City, N. Y.

FOR SALE.—5,000 Edison 2-minute records, 10c. each; 5,000 Zonophone 10-inch records, 15c. each; all new, clean stock. DENINGER, 335 North St., Rochester, N. Y.

Opening for Good Salesman.

WANTED.—Opening in the Middle West, for a good Retail Talking Machine Salesman; straight salary—part salary and part commission—or all commission—to assume charge of department with live Victor and Edison dealers; good opportunity. Applicant must come well recommended. Address "B. H.," care The Talking Machine World, 373 Fourth Ave., New York City, N. Y.

REPAIRMAN WANTED.—By Edison and Victor jobber; steady position with good opportunity for capable man; state experience, references, salary wanted, etc. Address "STEADY," care The Talking Machine World, 373 Fourth Ave., New York City, N. Y.

BUSINESS ESTABLISHING NEW RECORD IN MILWAUKEE.

Sales in All Branches at Present Exceed Those of a Year Ago—Only Rift in Otherwise Cloudless Horizon Is Shortage of Stock—Honors for McGreal—Gimbel Bros. Double Capacity of Talking Machine Department—Views on Long Trial System—Some Managerial Changes—Conditions Throughout State Almost Ideal from a Business Standpoint and Everyone Looks for a Large Holiday Trade—Other Happenings of Note.

(Special to The Talking Machine World.)

Milwaukee, Wis., Nov. 12, 1912.

There is every indication that business from now until after the holidays will establish a new high record in both the retail and jobbing branches of the talking machine trade. Sales during October far exceeded those of the same period a year ago and local dealers say that business thus far in November is more than satisfactory.

The only rift in the otherwise cloudless horizon is the shortage of stocks in most lines. Local jobbers say that they are having trouble in getting machines and records enough to meet the insistent demands of the dealers, who are meeting with a fine trade and are anxious to get their stocks in readiness for the Christmas trade. This state of affairs is not confined to any one particular line of machines, but is general with the Victor, Edison and Columbia houses. Officials of the Wisconsin Talking Machine Co., jobber for the Victor line; Lawrence McGreal, Edison jobber, and A. G. Kunde, the Columbia jobber, all have the same story to tell. Stocks in dealers' hands were depleted rather badly during the summer, while recently dealers have heard that there was to be some difficulty in securing goods, so there has been a genuine rush for stocks.

Conditions in Milwaukee and about the State are almost ideal from a business standpoint. The excitement attendant upon the State and national election had little if any influence upon business. Industrial conditions here and about the State have shown decided improvement, while bumper crops in all lines were harvested, so money is more plentiful and confidence is widespread. The Wisconsin farmer was successful in harvesting one of the largest corn crops in the history of the State, a fact which is decidedly important in this, the leading dairy State of the Union, where so much depends upon the successful outcome of the corn crop. Prosperity is rife all over the State, and the talking machine men are confident that they will come in for a liberal share of the good things.

McGreal Elected Sheriff.

Lawrence McGreal, well known Edison jobber of Milwaukee and former president of the National Association of Talking Machine Jobbers, was elected sheriff of Milwaukee County at the recent election, defeating his nearest competitor, Melm, a Socialist, by more than 10,000 votes. Mr. McGreal secured more than 35,000 votes, and the fact that he ran ahead of the other candidates on the Democratic ticket proved the widespread popularity of the talking machine man. Mr. McGreal made a run for the same office two years ago and was defeated by only a narrow margin by a Socialist.

Abbott Takes Charge of Boston Store.

C. W. Abbott, a young talking machine man formerly with Gimbel Bros., has been made manager of the Victor department at the Boston store. This department was formerly connected with the piano phase of the business, but now it has been separated and new and extensive quarters have been opened on the third floor, where three large and handsomely furnished booths have been installed, a large demonstration auditorium has been arranged and extensive record racks have been erected. The furnishings are in oak. Mr. Abbott is intensely enthusiastic over the Victor.

Becomes Manager at Hoefflers.

Otto Krause, formerly of Chicago, has been placed in charge of the talker department of the Hoeffler Manufacturing Co., 306 West Water street.

Expansion at Gimbel Bros.

L. C. Parker, manager of the talking machine business at Gimbel Bros., has more than doubled the capacity of his department. Three new machine booths of more than the usual size have been installed, the demonstration auditorium has been enlarged and the record library has been given additional space. Manager Parker has also made several additions to his sales force to care for the increased business which he is securing. During the first ten months of the present year Manager Parker made a gain of 76 per cent. in sales, as compared with the same period in 1911. The Gimbel Victor department is located on the second floor of the big department store, easy of access for the shopping crowds, and Mr. Parker has his auditorium filled at the daily concerts which are given. An extensive advertising campaign has done much to increase his sales and at the same time keep the Victor in the public eye.

Trouble in Getting Stock.

Business is so good with A. G. Kunde, Columbia jobber and retailer, 516 Grand avenue, that for the second time within a month he has been forced to enlarge his sales force. Mr. Kunde says that he is having troubles of his own in trying to get stocks enough from the Columbia factory to meet the demands of his trade. Mr. Kunde and the various Columbia dealers are awaiting with interest the arrival in Milwaukee of the new \$500 Columbia model, fashioned after a baby grand piano. Mr. Kunde's father, a man now in his seventy-sixth year, is seriously ill and is not expected to recover. Mr. Kunde's mother died less than a year ago.

Heller Co.'s Victor Department.

The Heller Piano Co., 616 Grand avenue, has formally opened its enlarged piano establishment on Grand avenue, in which goodly space is given to its recently acquired Victor department. Modern

sound-proof parlors, excellent demonstration quarters and an attractive auditorium have been arranged. J. L. Ogle, formerly located at 439 National avenue, where he has been selling talking machines for many years, has been made manager of this department and is assisted by Earl Kammerer, formerly with the Hoeffler Co. On the opening days the Heller Piano Co. rather startled the trade by offering a high grade talking machine, together with fifty records of the customer's own selection, for a small payment down and only seven cents per day.

Does Not Approve of Long Trial System.

J. H. Becker, Jr., manager of the talking machine department at the Espenhain department store, is not an advocate of the long trial system in selling machines and believes that such a policy is a detriment to the business. "I don't believe that a dealer can send out a Victrola outfit on the long trial plan and treat his customers 'on the square,'" said Mr. Becker. "Just the other day a lady came into my department and said she could purchase a complete Victrola outfit on the thirty-day trial proposition. After I had explained to her that I could not conscientiously dispose of a Victrola on this plan, I had no difficulty in selling her a machine on the spot."

Mr. Becker is keeping up his plan of giving daily concerts to the trade and is meeting with a brisk business in Victor machines and records as a result. When "The Spring Maid" company was here at one of the local theaters recently, Mr. Becker made a special feature of "The Spring Maid" selections at his concerts with great success. The same plan was followed when "Alma, Wo Wohnst Du" appeared here.

"Our Victor business has been increasing by leaps and bounds of late," said Mr. Becker. "I brought many of my old customers here when I assumed charge of this department, and this has been a powerful factor in the business. Sales during the month of October established a new high record and I am sure we will meet with better things this month. Prospects for a big holiday trade were never better."

Big Call for Victrolas at Grams.

Paul A. Seeger, manager of the new Victor department at the Edmund Gram Music House, is enthusiastic over the manner in which business has increased since the opening of Mr. Gram's new \$125,000 store. Mr. Gram sells a high grade line of pianos to the best class of people in Milwaukee and these people are proving the best of customers for high grade Victrolas. Demand for Victrolas is so good that Mr. Seeger has been selling on an average a high grade machine at least every other day.

The Edward Schuster & Co. stores report an excellent business in Victor Victrolas, as well as the regular styles.

Get the women coming into your store and the men will have to come. Aren't the women the ones who control the spending in families you know? Isn't their good will and favor worth working for?

WORRIED OVER DELIVERIES IN ST. LOUIS.

Trade Demands Continue Most Active and Manufacturers Are Enabled to Keep Pace with the Call for Talking Machines and Records—Managers of Leading Houses Make Encouraging Reports—New Edison Blue Amberol Records Greatly Favored—Silverstone's New Store—Field-Lippman Advertising in the Daily Papers—Scruggs, Vandervoort & Barney Dry Goods Co. Takes on the Victor Line—Other Items.

(Special to The Talking Machine World.)

St. Louis, Mo., Nov. 8, 1912.

The failure of the factories to keep pace with the growing demand for talking machines is the one dark cloud in the sky for local dealers. The Victor retailers are greatly worried over deliveries despite the jobbers' insistence that they will be cared for. They know that the jobbers are worried, and that they should be worried so early in the season alarms the dealers. The Columbia retailers also know that although no sales have so far been missed by the failure of the supply that at times the local agency has been so near the end of the stock that there was no need to look at the stock books to see how matters stood. The Edison dealers planned for a driving campaign this fall on the disc machines and now they have none. Of course the new reproducer and the new records made a good fighting basis for new business, but they are not what was expected.

Retail Trade Is Excellent.

However, retail trade is good and the worries are to a large extent those of the distributor. It seems that every talking machine dealer is doing more business than ever before, so the total increase must be enormous.

"We find trade generally in a better shape than for a long time," said Manager Ramsdell, of the Columbia Co. "Our business now is really coming into its own as a business factor. The extent of the advertising shows that. Also we get more consideration from dealers, for our line makes up an important item of their business. Collections are good and this month is running ahead of a year ago, which is as it should be."

Mr. Ramsdell's summing up of the situation coincides with the views of others. The business is growing, St. Louis territory is expanding, all of which goes to make the business here more important and its extent this year will be measured only by the machines supplied by the factories.

What Manager Levy Says.

Harry Levy, manager of the Aeolian Co., says that his troubles are largely those of division. Lack of machine is his only drawback to breaking all expectations as to business totals. "We are woefully short of machines," he said, "but we are building great hopes on larger shipments very soon. Our record stock is in good shape and is meeting all demands. With most of our dealers their stocks of machines of the popular numbers, XI, XIV and XVI, are their show window displays. I know that some of them are not pulling as hard for sales as if they had machines on hand. It is discouraging and I wish it was otherwise."

Edison Blue Amberol Records Popular.

Mark Silverstone, of the Silverstone Talking Machine Co., is delighted with the new Edison reproducer and the new Blue Amberol record. He says that it already has invigorated business and put new life into the trade. Dealers who had been holding back on prospects of the disc machines, he says, have taken this new and wonderful creation and are going forth with new spirit. Mr. Silverstone is still deep in his plans for fitting out his new store in the next block west on Olive street.

Silverstone to Have Two Stores.

Mr. Silverstone will open his new warerooms, in which he will also sell pianos, December 1, but will maintain his old store until March 1, to which date he is compelled to pay rent for it. He expects the double store plan to pay well during the holiday trade and that by running the two stores he will also educate his trade to the removal without confusion. A giant reproduction of the new Blue Amberol record, revolving rapidly, is the new show window display at Silverstone's.

How Columbia Advertising Helps.

That the general advertising of the Columbia Co. reaches far into the rural districts is attested by Manager Ramsdell, of the local Columbia store. "We had an order to-day from a small town dealer in Illinois 'for one of your \$59 combination outfits,'" said Mr. Ramsdell. While the letter did not say so exactly, it was evident that it was sold outright, as the dealer was in great haste to get it and there was no word of terms of commission. We have felt excellent results from the advertising, especially the large spreads in the Saturday Evening Post. When our men go to a house, the person they address says, 'Oh, yes, I saw that machine advertised.' It helps a good deal, too."

The Columbia business, Mr. Ramsdell says, is in excellent volume. The sales of the small machines is running right on the heels of the supply so closely that the main store was out of them for several hours one day recently. A purchased machine was taken out in the morning and it was in the afternoon before the first of a new shipment arrived from the freight office. The sales force thought it a lucky hit that no customer asked for one in the meantime.

Anent the Campaign Records.

Campaign records have not made a hit in St. Louis. Very few of any kind have been sold. The Roosevelt records created a bit of a stir and were used for advertising, but after hearing of them the curious person was usually satisfied and made no effort to purchase. At the Silverstone store a bulletin in the window announced "Roosevelt will speak here at 11 a. m. and 2 p. m." One day an aged man walked in and took a seat. When the clerk asked him what was wanted he looked at the clock and remarked, "I am a bit early but I will wait until he comes." It was finally explained to him how the speech was to be delivered; he listened and left saying, "It does beat all," whether in admiration of the orator, the machine or what has not been determined. Mr. Silverstone, when the Roosevelt records arrived, arranged for a hearing at the Moose headquarters. After he had entertained the attaches they showed their appreciation by asking him to give them the machines and a set of the records.

Field-Lippman Advertising.

The Field-Lippman Service, the latest recruit in the Victor talking machine ranks downtown, has started a good deal of comment among dealers by what some of them term "hysterical advertising." This firm came out with a large ad in the Republic stating that the Globe and Post, meaning two leading daily papers, had refused that ad. To a dealer the situation was perfectly clear, for the Field-Lippman ad was so arranged as to entirely monopolize the space under the Victor standing ad in those papers. To the outsider it would look as though this firm was being discriminated against by two daily papers. Later the Field-Lippman concern reprinted this ad in the Republic and Times with this explanation:

INSIDE HISTORY.

To more clearly understand the merits of this controversy, you should know that the Victor Talking Machine Company pays for a Victor ad every week in The Times, Globe and Post. The Victor dealers are expected to publish their ads under the Victor copy, three or four of them usually using small space adjoining the Victor ad.

ADVERTISING MUST TELL FACTS.

A short time ago we obtained the Victor agency, and proceeded to advertise it according to our ideas of publicity. We believe the day has gone by when the publication of a mere business card will produce results—in our opinion, advertising should tell the people what they are going to get for their money—description of goods, prices, terms and "Service." In the interest of Service we changed both of our telephone exchange numbers to 6900 Olive and Central—easy to remember.

IMMEDIATE RECORD SERVICE.

Then we installed "Immediate Record Service"—we thought the people would appreciate that—moreover, we were obliged to do something unusual, something more than the other dealers, as our Victor Department was new. Now all these things could not be told in the three or four inches the other dealers were using, so we ran an "ad," using the same space as the "ad" shown below.

IT "STARTED SOMETHING."

The other dealers raised a storm of protests because our "ad" overshadowed theirs—and the next thing we knew the

Globe and Post told us that this big Victor "ad" could not be run as per our order—that we must conform to their small space ideas—if we would run our "ad" with the Victor copy. The Times refused to be influenced by either the dealers or the position taken by the other two papers and showed its backbone by accepting the "ad" as prepared by us—The Republic and Star, not being involved in the initial controversy, were immediately included in our campaign and our "ads" now appear in these three papers.

NOT THE FIRST "KICK."

There is no doubt that these other dealers resent our determination to secure a share of the Victrola and record business—hence the "kick" on our advertising copy—well, the other dealers "kicked" on our ten-year-player-piano guarantee, but the people have shown their appreciation by giving us the most satisfactory player-piano business in St. Louis.

The meat of the Field-Lippman ad that is the subject of this controversy is:

"If you want to hear 'Bill' or 'Teddy' or the 'Professor,' 'phone us. If you want 'Spring Maid' records, 'Day Dreams' and 'Two Little Love Bees,' sung at the Century this week by Mizzi Hajos, 'phone us. We sell every Victrola made, from the \$15 to the \$200 instrument—payments as low as \$1 a week."

No dealer has shown a disposition to enter into an advertising warfare with the company, and so the advertising warfare is too one-sided for general interest and no dealer will comment on it for publication.

To Install Victor Department.

The Scruggs, Vandervoort & Barney Dry Goods Co., the elite department store of the city, has announced a Victor talking machine department as soon as space arrangements are completed. The store, owing to the recent acquirement of additional buildings, is being doubled. This store has a reputation of not doing things by halves, and their opening is awaited as an interesting event.

Results from Program Publicity.

Manager Robinson, of the Stix, Baer & Fuller Dry Goods Co., has been receiving some excellent publicity for his machines through their use in the recital programs in the piano department. These concerts are well attended by musical folk who appreciate the novelty of a solo sung by a world-famed artist accompanied independently on a player-piano. Also the machines get liberal mention in the published programs of the concerts.

Advertising the Reginaphone.

The Thiebes Piano Co., which continues to advertise itself as the "largest Victrola house in the city," is using considerable space for the promotion of the Reginaphone, recommending it as the only machine reproducing Victor and Columbia voice records with the additional advantage of a music box equipment. Liberal offers of records are made with purchases of machines.

Edison Ambassador a Caller.

H. K. Lister, of the Edison Co. general offices, was here for several days the last of the month visiting the local trade in the interests of the new records and reproducers. He found the trade in excellent condition. While here he made his headquarters at the Silverstone Talking Machine Co.

Big Demand for Cabinets.

Local dealers are finding a very fine field for trade promotion in cabinets and this trade is rapidly increasing as the record libraries of the various machine users grow. Some difficulty has been experienced lately in keeping favored styles of cabinets in stock.

The Election and Business.

The election has little effect on trade except in rural Missouri, where a so-called "single tax" constitutional amendment fired the farmers and villagers against city men and occupied public mind to the extent of all else. Where only men and national issues were at stake, say local men, trade was not affected seriously.

As civilization progresses, we keep losing our natural rights, and we are willing to, because we get more privileges. A man on a desert island has all his rights, but he doesn't have very many privileges, for he is all alone. Now, in direct proportion as you get away from that condition, you must be subjected to discipline.

True loyalty in business means "to stand up for your own opinions before your employer, and for your employer, and for your employers' opinions before the world."

THE COLONIAL REGENT.

The Name of a New Type of Grafonola Placed on the Market by the Columbia Phonograph Co.—A Design That Attracts.

The Columbia Phonograph Co., General, announces to the trade the introduction of a new Grafonola style to be called the "Colonial Regent." This new design will replace the "Regent Junior" as soon as the supply of the latter becomes exhausted. As seen from the illustration, the "Col-

A New Columbia Style.

onial Regent" is constructed along those strictly Colonial lines that are so popular in the furniture trade just now. The round table design extends the variety of the Columbia table line, and is a most attractive article of furniture for any well-furnished home. The sound reproduction has been given the same careful attention accorded to the other Regent models, and the result is a handsome machine equipped with a wonderful tone.

Shipments of the "Colonial Regent" will begin at once, but dealers can only secure a sample at present, as the first supply is limited, and the production will be increased as sales warrant. The price of the new model is \$150 in mahogany only for the present, and from all indications will be a welcome addition to the Columbia line.

PLACE VALUE ON PACKAGES.

Failure to Specify Value May Mean Heavy Loss in Case Article Disappears.

Perhaps it will prove expensive some time if you do not happen to know that in the absence of a specially stated value on a package delivered to an express company the express company is, in case of loss, liable only for the amount printed in its contract, usually \$50, or 50 cents a pound if the package weighs more than 100 pounds. This has been decided by the courts of many States, the theory being that it is not a limitation of liability fixed by the carrier, but a contract between the carrier and the shipper whereby the shipper agrees with the carrier that the value of the goods is as stated. Under such circumstances the shipper, of course, can recover on lost packages no more than the agreed value.

U-S PHONOGRAPH CO. ACTIVITY.

The U-S Phonograph Co.'s No. 25 model, with concealed horn, is meeting with the greatest success. E. R. Prairie, Eastern road man for the company, with offices at 5 Union Square, New York, stated to The World that the demand for all of the concealed horn models, especially the No. 25 type, was greater than the immediate supply. The new factory at Cleveland is working full capacity and the general business is most gratifying. The latest record list is most acceptable to the dealers, and orders for these Everlasting, Non-Breakable records are rapidly increasing. Mr. Prairie reports that new U-S dealers are being signed up daily, with the result that business in the East is advancing by rapid bounds.

THE CUT-PRICE MENACE

Which Would Result Disastrously in the Trade Field Were the Oldfield Bill to Become a Law, Discussed by H. C. Brown, Head of the Victor Co.'s Advertising Department.

The Oldfield bill, which, among other things, abolishes the right to maintain fixed prices, was the subject of a very illuminating paper read by H. C. Brown, manager of the advertising department of the Victor Talking Machine Co., at the recent meeting of the Affiliated Ad Clubs, held at Rochester. He pictured how the existing confidence between manufacturer, jobber and consumer would be jeopardized should this bill become a law, and he showed the vital interest these four factors have in maintaining fixed prices. He analyzed the situation as it exists to-day and as it would exist were the bars of restricted prices thrown down and the right to establish and maintain a fixed price on advertised or patented goods abolished. He pointed out how Victor dealers would be placed were the Oldfield bill to become a law with its accompanying cut price scramble. He said in part:

"The retail dealers would be the first to feel the effects of any injudicious merchandising legislation, and, in the face of cut price wars and loss of legitimate profits that would surely follow, their enthusiasm and interest would quickly wane. Thus they would eventually be lost, as the connecting link between manufacturer and jobber. Taking as a basis the sources of distribution now at the disposal of the Victor Talking Machine Co., which is made up of nearly ten thousand independent dealers who have willingly and cheerfully entered into an agreement with the Victor Co. to promote and sell the Victor line at fixed prices only, I would venture to say there are probably two hundred and fifty thousand or more dealers in the United States selling the fixed price products of other manufacturers. All of these would be seriously affected by abolishing the manufacturers' right to fixed prices."

The Machine that tells a Story
PICTURE-DISC COMPANY - - LOS ANGELES, CAL.

AN EVENING ON THE SEA AND THE SEQUEL.

A Novel Entertainment to Be Given with the Aid of the Talking Machine—An Idea and Its Unique Origin That Is Interesting to Talking Machine Men.

It was on the steamer "Quantico," en route from Boston to Philadelphia, that I gathered the material for this article, which I sincerely trust will prove of benefit to all dealers who may be in search of trade-bringing ideas.

Twilight had fallen and Miner's Ledge Light was winking its 1-4-3, "I love you," as we glided gently through the moonlit water, notifying us that Boston harbor was well astern and the open sea before.

The ocean was glorious to behold, its waves, white-crested and bathed in the shimmering radiance of the nearly full moon, were indeed beautiful. The clouds, still a little rosy from the recent sunset, and piling in billowy masses from horizon to zenith, completed the wonderful picture.

I was lounging in a steamer chair on the promenade deck, enjoying the cool breeze, and congratulating myself for the eleventh time that I had decided to return by water instead of rail, when a lady and gentleman passed on an after-dinner stroll 'round the ship. I recognized the man as a talking machine dealer from Philadelphia and called him by name. He responded to my greeting most graciously, bringing his wife forward to be introduced.

We were soon chatting gaily about the delights of Boston and Portland, the charm of the sea, etc., when suddenly a piano in the social hall tinkled the opening bars of "Any Old Port in a Storm."

"Ah! that reminds me," began the dealer with a smile, "I have something good for your paper. My wife and I have worked out an idea for an evening's entertainment that is just the best ever. Isn't that true, my dear?"

The lady addressed nodded an enthusiastic affirmative, and her husband continued:

"It was that very song being rendered yonder," with a wave of the hand in the direction of the social hall, "sung by a basso profundo on the Victor talking machine that brought our little scheme into being.

"It is somewhat of a tale, and we might as well be comfortable. My wife does not object to a good weed; help yourself."

I accepted, and my friend, now being satisfied with my state of well-being, launched forth once more: "We were staying at the home of an acquaintance in Boston who had just purchased a Victrola, and, of course, he was more than anxious for our opinion, considering it of some value, I suppose, owing to the fact of my being in the trade. Well, he had barely placed the first record upon the turntable when he was called from the room by the ringing of the

telephone, leaving us alone with the instrument.

"The record happened to be, as I have already told you, 'Any Old Port in a Storm,' a selection, I would venture to say, I have heard a hundred or so times before, but never did it grip at my heart strings with such force as now. The machine was of the best and the singer a true artist, but that was not all. There was an intangible something

"The Room Seemed to Dissolve."

in the song that carried me once more out upon the heaving bosom of the Atlantic.

"I glanced at my wife. She came to me without a word and grasped my hand across the machine, but it seemed to us both like 'hands across the sea.'"

He paused while he flicked the ashes from his cigar, then adjusting with greater nicety the steamer rug about his lady's shoulders, asked earnestly, "Have you ever noticed the swishing of the waves in the accompaniment on that record?"

"Yes, indeed!" I replied. "I remember that feature of the selection particularly because of its realism."

"Exactly! Well, it affected me so strongly upon this occasion that I laid my fingers inside the tone chamber and would not have been surprised had they come forth drenched with spray."

"I was impressed in much the same fashion as my husband," interrupted Mrs. Dealer excitedly. "The room seemed to dissolve, and in its place surged a vast waste of waters. A steamer's siren boomed, and I seemed to hear the scream of gulls. It was really uncanny, Mr. Middleton, and I am at a loss to explain it except by the fact that we were just off the ship and our minds still susceptible to everything nautical. Do you think that might have been the case?"

Before I could frame an appropriate reply, the husband suggested that it was full time to spring the great idea.

"My dear, you are turning our trade tale into a ghost story," he remarked banteringly.

I assured him I was most anxious to have my curiosity appeased.

"All right, my boy, you shan't wait another minute. The scheme, based upon our late experience in Boston, is briefly as follows: To

put before the 'just returned home' public the nautical entertainment idea. Those who have been over seas should be more than interested because their minds will at once respond to the call of the waves, and the other hundred thousand will find it good fun anyway.

"We have named this entertainment, 'An Evening on the Sea,' and as soon as we dock in Philadelphia I mean to show my customers how good it is. One of my showrooms will become temporarily the deck of a liner with steamer chairs, a life boat, a ventilator or two, a tiller, coils of rope, life preservers, etc., arranged in true seafaring style. My clerks will don the uniforms of ship's officers, and I even mean to have a wireless room with a concealed phonograph indulging in dramatic S. O. S. calls.

"The program, of course, will consist entirely of selections which have to do with the Father of Waters. Then between these records I shall run in some unique specialties of my own which I am sure will make a distinct hit.

"I forgot to tell you that I have a recording outfit on board, and that before we reach port, I mean to have some mighty interesting scraps to sandwich into my program. For instance, I have arranged with the captain to record the voices of the watch, the sound of the ship's bell, the bull-like bellow of the whistle, and even the chatter of the wireless.

"Here I have made a rough sketch of the program," he exclaimed, drawing a sheet of paper from his pocket. "You may copy it if you wish. It is my aim to have invitations prepared in the form of a folder with this program inside, and you may rest assured that every customer, prospective and actual, within my trade zone will receive one in ample time to secure accommodations on the good ship Melody for 'an evening on the sea.'"

Glancing at the sheet he handed me, I read:

THE ELITE TALKER SHOP.

AN EVENING ON THE SEA.

Program. PART I.

1. Glory of the Yankee Navy—March.....Sousa's Band
2. Asleep in the Deep—Vocal.....Reed
3. Nautical Airs—Concertina.....Prince
4. Watch on Steamship Quantico Ringing Eight Bells and Reporting Steamer on Starboard Bow..... (Position of vessel when record was made—Off Montauk Point Light, Long Island.)
5. The Hurricane.....Nat. Prom. Band
6. Bride of the Waves—Cornet.....Clarke
7. Sailor's Hornpipe Medley—Violin.....d'Almaine
8. Steamer Quantico Saluting the Fire Island Light-ship.....

PART II.

- Lecture—Unique talking machine entertainments for Autumn evenings.....John Jones

PART III.

1. Bounding Sea—Vocal.....Lauder
2. Any Old Port in a Storm—Vocal.....Reed
3. Shipwreck and Rescue—Descriptive.....Peerless Quartet
4. Davy Jones' Locker—Vocal.....Reed
5. Wireless Operator, Steamer Quantico, Communicating with Sister Ship.....
6. Distant Shore—Vocal.....Grover
7. The Fishermen—Vocal.....Anthony and Harrison
8. The Lighthouse by the Sea—Vocal.....Knickerbocker Quartet
9. The Last Watch—Vocal.....Pike
10. Anchored—Vocal.....Dawson
- Finale—Good Night.....N. Y. Military Band

L'Envoi—MY DEAR PATRONS:

Now that you have partaken of "An Evening on the Sea," do you not realize how very easy it will be for you to duplicate just such an entertainment in your own home?

We will be very glad to choose the records and arrange the program for you. Come in and talk it over.

JOHN JONES,

1 Broad Street, Blanktown, N. Y.

"The Home of Everything Worth While in Talkdom."

Promising to return the program in the morning I sought the solitude of my stateroom to think and write. Before switching on the reading light, I glanced out through the open port-hole. Cape Cod lighthouse was signaling me a good night with its ever-blinking eye.

* * * * *

As a means of keeping the enthusiasm among one's customers at white heat, I think the scheme explained in detail above should suffice wonderfully well.

We all know this, Mr. Dealer: That without persistent prodding the passion for talking machine music will subside. Therefore, it has been my aim in this article to furnish you with an effective goad with which to urge the indolent members of the talker fraternity into a more strenuous appreciation of the most wonderful instrument in the world.

My earnest wish is that I have, at least in part, succeeded.
HOWARD TAYLOR MIDDLETON.

PATENT APPLIED FOR.

Standard Loose Leaf Holders for Disc Records

Each leaf affords a separate compartment for the perfect protection and preservation of the record. By our loose leaf method records can be arranged to suit the user, making them easy and quick to find. Leaves can be added at any time, and in any quantity desired. Name of record read at a glance. Write for dealers' terms and discounts.

Adams, Cushing & Foster
168 Devonshire Street BOSTON, MASS.

ELECTED

THE BEST

By An Overwhelming Majority

The *SIMPLEX* Automatic *Stop and Start* device for disc gramophones was invented and placed on the market as an accessory to the disc talking machines.

It was not designed to deface or to interfere in any manner with the operation of the well-known makes of disc talking machines. The manufacturers of the "*SIMPLEX*" realize that the tone arm, sound box, and turntable and all moving parts of the modern disc talking machine are carefully and properly weighted and balanced by their makers. The *Simplex* was therefore so constructed that it does not destroy this balance.

The *Simplex* is placed between the turntable and the pivot of the tone arm. It is *not* fastened to any *moving parts* of the talking machine, but is fastened *only* to the top of the cabinet.

The *Simplex* is caused to operate by the motions of the tone arm which must be made in order to play a flat disc record. When the tone arm is moved to the right, a roller is depressed and the turntable revolves. The needle is then placed in the first groove of the record, and the record is played. When the needle reaches the end of the record the tone arm touches a trip post, and the revolving disc is brought to a positive gradual stop, without injury to the record or sound box or motor. It is to be particularly noted that from the beginning of the record till the end, no part of the *Simplex* is in contact with any moving part of the talking machine, to which it is fitted.

The *Simplex* is the only *self-contained automatic start and stop* device ever placed on the market. It is manufactured to supply the demand of those who want an automatic stop device. The starting feature makes it additionally popular. The *Simplex* is *not* operated by a battery.

Easy to apply, easy to operate, easy to understand, the *Simplex* is synonymous with its name. An ideal Christmas gift!

NEW PHONOGRAPH RECORD PROCESS.

A Novel Form of Phonograph Record and Method of Producing the Same Centrifugally Has Just Been Granted to J. W. Aylsworth and Assigned to Thos. A. Edison, Inc., of Orange, N. J.—A Technical Description.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 11, 1912.

Among the important patents issued this month relating to talking machine records, that issued to Jonas W. Aylsworth, East Orange, N. J., and assigned to Thos. A. Edison, Inc., is of especial interest. This patent, which bears No. 1,043,389, relates to a novel form of a phonograph record and method of producing the same centrifugally, the record being claimed in this application and the method in a divisional application, Serial No. 719,094, filed September 7, 1912.

The object of this invention is to produce a light-weight, strong cylindrical phonograph record, which will have a hard resisting surface smooth and free from defects and a porous backing of a similar substance which will contribute mechanical strength and acoustic solidity without the use of as much material as would be necessary if the record were made solid or backed with solid material.

The result above referred to is accomplished by casting in a rotating mold a composition containing ingredients which cause the same to foam excessively or evolve gases during the formation of the record to cause the same to be spongy and porous, while the outer record surface of the same which is in contact with the mold will be free from bubbles and similar defects.

More specifically, this invention is accomplished by casting in the manner referred to a record of a composition the ingredients of which react on sufficient application of heat to form a hard infusible condensation product. In the present invention a composition of this character is made use of in which the ingredients are so chosen and proportioned as to cause excessive foaming or the evolution of dissociation gases during the transition of the material from the molten plastic state to a solid plastic or non-plastic state, the product, caused by the evolution of such gases being porous and spongy throughout its mass, while the record surface thereof is smooth and free from bubbles.

A composition such as that described may be made by adding an excess of paraformaldehyde, di- or tri-oxymethylene, or other suitable aldehyde to a composition having a formula such as Formula No. 1 in application No. 496,060 for plastic composition and process of manufacturing the same, filed May 14, 1909. The formula referred to is: (1.) Phenol resin 100 parts by weight, polymerized formaldehyde 5 to 7 parts by weight, benzoic anhydride 5 to 10 parts by weight.

The excess of polymerized formaldehyde above the proportion in the foregoing formula causes the mass to foam during the transition from the molten plastic to the hard solid condition. With such a composition the surface next to the record

surface of the mold is formed in a thin layer of material free from porosity. The thickness of such layer may be controlled at will by pouring in the mold first an amount of a mass so constituted that it will not foam while changing from the molten plastic to a non-plastic or a solid condition, subsequently pouring in the mold the mass which is designed to foam or evolve dissociation gases whereby the porous backing or body of the record is formed.

1911 GREATEST VICTOR YEAR.

Victor Co. Tells of Demands That Have Swamped Factory Facilities—Relief Promised January—How Business Developed.

According to the announcement of the Victor Co. in The Voice of the Victor, the past year has been the most remarkable in the history of the company, and in explaining to the distributors and dealers the reason for the shortage in stock and the inability of the factory to supply the new types of Victrolas in the quantities demanded, state that the overtaxed condition will be relieved by January 15, when the new factory extensions are put into active operation. In commenting upon the growth of the demand for Victor goods the company says in part:

"In the first place, this has been more than a remarkable year. It is really a continuation of an ever increasing demand for Victor goods that began (if we dare venture to say just when it did begin) with the advent of the Victrola in the early fall of 1906, and whose very momentum has simply carried the demand for Victrolas and records far beyond the reach of our capacity, no matter how fast we have built and are continuing to build. This gigantic increasing demand can probably be best understood by you when we tell you that we have manufactured and shipped more goods during January, February and March of 1912 than we did in the three great holiday months of October, November and December, 1911, which up to that time were the biggest three months we ever experienced. April, May and June, which are ordinarily light months (and which were further handicapped by our desire to clear the market of Victrolas X, XI, XIV and XVI to make ready for the announcement of the new instruments), were practically double any previous April, May and June. July saw the announcement of the new Victrolas, shipments of which began about August 1, and each month that has followed has broken all previous high water marks in shipment of Victor goods."

NEW COMPANY ORGANIZED.

Takes Over the Business of the Tea Tray Co., of Newark—How This Title Came to Be Adopted—Those Interested.

On November 1 the name of the Tea Tray Co., Newark, N. J., was changed to the National Metal & Stamping Manufacturing Co. The Tea Tray Co. was well known in the talking machine trade as

manufacturers of horns of excellent quality, and its peculiar title name was due to the fact that its principal line of manufacture in the early days of the company (being founded in 1867) was the manufacture of serving trays, coated with japan. This was a new process originally developed in this country at that time. Later other lines of manufacture were taken up, including electric and gas shades, light fixtures, phonograph horns, and more recently chemical fire extinguishers, which is now one of their principal products.

The National Metal & Stamping Manufacturing Co., will manufacture slot machines, copper tanks, brass fern baskets, copper tea sets, candlesticks of ancient and modern design, and other specialties. New capital has been put in the company and its facilities increased. The present officers are: G. A. Kruttschnitt, president, formerly president and general manager of the Aluminum Goods Manufacturing Co.; James C. Coleman, vice-president and treasurer, formerly treasurer and secretary of the Aluminum Goods Manufacturing Co., and Howard G. Hull, secretary, formerly secretary of the Tea Tray Co.

NEW WAY OF PACKING AND SELLING

Talking Machine Needles Put Into Force by John M. Dean, the Well-known Manufacturer.

(Special to The Talking Machine World.)

Putnam, Conn., Nov. 9, 1912.

The new way of packing and selling talking machine needles and one that is creating quite a stir in the trade is the method used by John M. Dean of this city. Mr. Dean is putting up one thousand needles in a large box, each large box containing five smaller boxes, the smaller boxes having different styles of needles. He calls the large unit of 1,000 needles a set, there being 200 each of extra loud, loud, opera, medium, and soft tone.

Charles E. Dean, in a chat with The World representative, stated that this method of packing needles is a distinct novelty in the trade and has been the means of greatly increasing the needle trade of the dealer. "Frequently," continued Mr. Dean, "these dealers would sell 1,000 needles to talking machine owners so that they might have a complete repertoire of needles to fit their repertoire of records. This increased the dealer's business more than double."

Mr. Dean commented upon the fact that steel has gone up during the last five years nearly 40 per cent. He was recently in Pittsburgh buying his steel for the coming year, as it has to be made to order for his special requirements. He remarked that Pittsburgh furnishes the best steel for talking machine needles, as he has experimented with all other steel and knows this to be true.

Of course, in addition to the sets of needles above mentioned, the list of Dean products remains the same, Puritone needles being their most popular needle. Needles are also put up in special boxes and envelopes to suit the jobber's requirements.

IMPORTANT WARNING TO THE TRADE

WE are compelled to warn the trade to be *careful* when sending correspondence to us. Use the address below.

PHILADELPHIA

TALKERS FOR NEW YORK SCHOOLS.

Board of Education Makes First Appropriation for the Purchase of Machines and Records—A Strong Letter from Dr. Frank Rix.

An event of particular significance and importance to all those interested in the spread of musical education through the use of talking machines in the public schools is the official recognition given the talking machine by the Board of Education of the city of New York following the recommendation of the Board of Superintendents. At the outset the board appropriated \$5,720 for the purchase of machines and records to be placed in the schools where it is considered they are most needed. The first appropriation will be followed by others as the situation warrants it. There is no doubt but that the action of the board was influenced strongly by a letter written by Dr. Frank Rix, supervisor of music in Greater New York, to the Superintendents' Committee on Supplies and which was considered when the recommendation of the committee was forwarded. In his letter Mr. Rix said, in part:

"The usefulness of the talking machine is shown:

"1. As an aid to the appreciation of good music, in hearing music rendered by great artists, and the rehearsing of it, as often as needed to become thoroughly acquainted with it.

"2. In the assemblies, the children marching to the music of the records.

"3. In the gymnasiums and playgrounds, in furnishing music for gymnastics and folk-dancing and for dancing in general.

"4. In the classes for defectives, furnishing accompaniments to rhythmic exercises, and music for awakening interest and stimulating mental activity.

"5. In indoor playgrounds and recreation centers, for amusement appreciation, dancing and gymnastics.

"It is available both in high schools and in elementary schools.

"The use of the machines in gymnasiums and playgrounds would remedy two difficulties, that of securing suitable instruments, and that of getting competent players.

"In the vacation schools, playgrounds and recreation centers they would save the considerable sums paid to pianists.

"A saving would be made in the number of pianos needed in playgrounds, gymnasiums and ungraded classes.

"The talking machine has its limitations in that it is unsuitable for accompanying voices, and is not well adapted to out-of-door playgrounds."

RECORDS BY FRIEDA HEMPEL.

New Soprano with Metropolitan Opera Co. Represented in November Victor Co.'s Red Seal List with Two Selections.

Among the interesting new Victor records that will appeal to those who appreciate the work of the grand opera artists are three records by Frieda Hempel, the famous soprano, who after achieving many triumphs in Germany, the land of her birth, has joined the forces of the Metropolitan Opera Co. for the present season and will appear as the uen in "Les Huguenots" and in other operas.

The records in the Red Seal List for the current month are "O, beau pays" (Fair Land of Touraine) from "Les Huguenots," and "Ernani involami" (Ernani, Fly With Me), from the first act of "Ernani." Mme. Hempel is less than thirty years old, but possesses a voice of remarkable quality and flexibility, which is faithfully reproduced in the Victor records.

MANIAC THREATENED EDISON.

Man Sent to Asylum for Annoying the Inventor.

(Special to The Talking Machine World.)

Baltimore, Md., Nov. 9, 1912.

A man giving the name of Harry Mitchell was arrested on October 25 and is believed by Chief of Police Farnan to be a dangerous maniac. He is charged with sending threatening letters to Thomas A. Edison.

For several months Mr. Edison has been annoyed by letters from a man signing himself Harry Mitchell. The letters were mailed from various parts of the country, and the writer invariably demanded large sums of money under threat of death. Mr. Edison put the matter in the hands of the postal authorities, who, after investigating, declared that the writer of the letters must be of unsound mind.

An alienist to-night said Mitchell was dangerously insane, and he was committed to the City Insane Asylum.

The Pasadena Music House, Pasadena, Fla., which recently held a formal opening of its remodeled establishment, featured the Victrola in a very prominent way.

BUSINESS WILL NOT SUFFER

In the Least as the Result of Election of Governor Wilson to the Presidency—Prosperity Too Well Founded to Be Affected by Politics—Reports Appreciation of Edison Blue Amberol Records and Latest Victor Styles.

J. Newcomb Blackman, president of the Blackman Talking Machine Co., 97 Chambers street, New York, is very much pleased at the satisfactory condition of the talking machine trade at the present time. Mr. Blackman is one of the leading jobbers in Victor and Edison products, and by reason of his being president of the National Association of Talking Machine Jobbers is enabled to feel the pulse of the talking machine business all over the country.

"I do not expect to see the slightest radical change in general business conditions because of Governor Wilson's election," stated Mr. Blackman in a talk with *The World*. "Business ought to continue to be as prosperous as ever, and the talking machine dealers should feel optimistic for the future, and have every confidence in the continuance of prosperity for several years to come. The result of the election, I believe, will not affect the talking machine business except as it may affect general business conditions, and as I said before, I do not think there will be any radical changes in the conduct of any industry. Our own business is so firmly established that any material reduction in the tariff would not give a strong foothold to foreign products, because American goods are so vastly superior to all foreign makes, not only in material, quality and workmanship, but, what is most important, in reproduction. The foreign talking machine has not yet reached that stage of perfection that American manufacturers have been able to attain. It is, consequently, evident that any material reduction of tariff would not be a source of worry to American producers of talking machines.

"Governor Wilson was elected by the people of this country and by such a large plurality that his choice by the people is emphatic and convincing. If these same people will back up their convictions and be optimistic and confident in their work there is no doubt that the country will continue to experience a siege of prosperity that will be accentuated by the complete confidence and cheerful attitude of the people. The business man expected Governor Wilson's election this fall and was in a position to make a careful survey of existing conditions before casting his vote for the nominee of the Democratic party. He could figure out just how the country was progressing, how industrial enterprises were being handled, and make up his mind if a change of administration was advisable. When election day came the business men of the country had had plenty of time to carefully review the facts gathered in the preceding months, and the choice of Governor Wilson by so many voters in every section of the country is self-evidence of the confidence and optimism that prevailed in their minds when casting their vote for the President-elect. Let there be no thoughts of calamity in the minds of our business men because of any change

of administration, but instead inspiring thoughts for the development and betterment of their various enterprises, so that prosperity will continue for many administrations.

"My own business is showing a healthy improvement over last year, which would be greatly increased if I could get sufficient goods from the factories. The new Victor models have been in constant demand from the first day of their introduction, and I am unable to secure enough machines to fill the orders now in hand. I consider this year an excellent one to break all records, but will, of course, be unable to do this if I cannot meet the demands of my patrons. The Edison cylinder machines are going along very nicely, and we are kept busy filling the orders for various styles of Edison Amberolas. The dealers are taking hold of the Blue-Amberol records in a hearty spirit, not only those who placed original orders, but those who held back at first now find that they must have a representative stock of the new records. Our record business in general is exceptionally satisfactory at the present time, and the same condition exists with Victor records as with the machines, namely, we cannot get enough records to fill the rapidly increasing number of orders being received each day."

TAUGHT BY TALKING MACHINE.

Sig. Titta Ruffo, the Great Italian Baritone, Acknowledges Great Debt to the Talking Machine as a Teacher and Simulator—Scores a Big Success at the Opening of the Metropolitan Opera House in Philadelphia.

(Special to *The Talking Machine World*.)
Philadelphia, Pa., Nov. 9, 1912.

A self-taught singer, proclaimed as the greatest baritone of a generation, made his debut with the Metropolitan Opera Co. in this city last week. His salary for a single performance is said to be the greatest ever given an opera star unknown in this country, and yet at the outset of his career he was told he had no voice, and was turned out of the conservatory of St. Cecilia, Rome, as hopeless.

The man is Titta Ruffo, or rather Ruffo Titta, as his name is really. He comes to America after a successful career over Europe and South America. His triumphs are remembered in every great opera house in Europe, and he holds decorations from royalty.

And this man, turned away by a great conservatory and discouraged by great professors of music in Europe, literally taught himself to sing. Immediately after being dismissed from the conservatory of St. Cecilia, Ruffo procured a talking machine and made records that reproduced his voice in its every tone and timbre. He discovered defect after defect, a harshness here, a weakness there, until he had gone far toward perfection in six months' time. Then he appeared before one of the great operatic managers of Italy and was accepted. He sang at the Costanza, at Rome, and received ovations until his rides through the streets were rides of triumph. Then he toured Europe.

That was fifteen years ago. Now Ruffo, still

simple and unassuming, but wonderfully earnest and persevering, is hailed everywhere, known everywhere, except in North America, where he heretofore has not come because he imagined he was hampered by his lack of knowledge of the English language. E. T. Statesbury financed the agreement by which Andreas Dippel, manager of the Philadelphia-Chicago Grand Opera Co. obtained the services of the great singer last summer to sing in Philadelphia and Chicago during the two seasons.

Signor Ruffo is a stout little man. He is quiet and domestic, and takes his wife and two charming little children with him everywhere.

THE FIELD FOR FOREIGN RECORDS.

Some Statistics Furnished by the Government Census and Rearranged by the Victor to Indicate the Size of the Foreign Population and How It Is Divided Among the Cities.

The possibilities of finding a market for foreign records in the United States is well illustrated by the figures offered in connection with the official census taken by the Government in 1910, which indicate that there were at that time 13,681,000 foreigners in the country with their numbers increasing rapidly. For the information of its dealers the Victor Company offered figures last month showing the wealth of the foreign population which is sufficient to emphasize their desirability as purchasers of talking machines and records in their native tongues, the number of foreign records being increased steadily and along lines that have already proven successful. This month there is offered, in "The Voice of the Victor" some interesting figures showing how the great foreign population is divided and giving to the dealers in the larger cities some idea of just how many foreign record customers they may find in their respective territories. Immigrants from ten of the leading countries of Europe are classified in the list as well as the numbers to be found in each of thirty prominent cities of the country.

BURTON J. PIERCE HONORED.

Burton J. Pierce, of the J. W. Jenkins' Sons Music Co., Kansas City, Mo., was recently elected president of the Rotary Club, which is composed of an aggregation of the leading business men of that city.

HELPING THE DEALERS.

The latest development in the interest of the Victor dealer is the establishment by the Victor Talking Machine Co. of a concert bureau. Its purpose is to secure the co-operation of the Victor dealer and the Red Seal artists for the greater benefit of each. A very complete advertising has been issued to the dealers in all the cities where Victor artists have definite engagements for this season.

The man who gets all he can and gives as little as possible is not a valuable factor in a community.

LOOK FOR LARGE HOLIDAY TRADE IN CLEVELAND.

November Business on Much Broader Lines—Outlook in All Directions Is Excellent—Mrs. Frances Clark Attends Meeting of Northeast Ohio Teachers' Association—George W. Lyle a Visitor—U-S Phonograph Co. Now Installed in Its Very Complete New Factory—Letter Which Tells of Columbia Popularity—Principal Dealers Report Increasing Victrola Trade—Edison Home Kinetoscope Proving Quite a Seller.

(Special to The Talking Machine World.)

Cleveland, O., Nov. 9, 1912.

With general business conditions in Cleveland in a highly prosperous state, the talking machine dealers, with others, are reaping a big crop of business. In most lines of trade there is a boom. Manufacturers and contractors are offering a bonus for skilled artisans, as well as for unskilled help, and the general prosperity is proving to the benefit of the talking machine dealers as well as other tradesmen.

November seems to have inaugurated broader lines in the talking machine trade with indications of a heavy fall business. More interest is manifest, more inquiries are noted, and largely for the best type of machines and the best records. About the only complaint made by dealers is the shortage in the new types of Victrolas, which, it is hoped, will soon be remedied. There are none of these now in stock in any of the stores, which is a drawback to the business.

Indications are that there will be an unusually desirable holiday trade, and dealers are preparing to meet it with as choice a selection of goods as can be procured from the manufacturers.

The Northeastern Ohio Teachers' Association has just finished a very successful convention here. Mrs. Frances Clark, head of the Victor educational department, Camden, assisted by Mr. Jones, of the educational department, also gave an educational exhibit at the Colonial Hotel parlors, who, with the assistance of the dealers, were kept busy demonstrating to the teachers the practical and cultural uses of the Victor in the schools. Many machines were placed in schools as a result.

Geo. W. Lyle, general manager of the Columbia Phonograph Co., on his way West, visited the local store a few days ago.

Mr. Hipple was here recently demonstrating the Victor improved concert sound box.

The U-S Phonograph Co. is now completely established in its new factory at 1204 East Fifty-fifth street, and everything is running satisfactorily. With the enlarged plant and increased facilities the company is now better prepared to meet

the increasing demand for its popular talking machines and everlasting records. G. M. Nisbett, sales manager, stated that business was good, and that everything in the new factory was running all right. He claims the prosperity of the company is due to the superiority of its products, at reasonable prices, and that the prospects were of the most encouraging character.

President T. H. Towell, of the Eclipse Musical Co., reports business very favorable in both the wholesale and retail departments. Fred E. Lane, formerly with the Columbia Phonograph Co., of Boston, and Marcellus Roper Co., of Worcester, has been placed in charge of the retail department. He came from the East six weeks ago and is very much pleased in his new quarters. He and Miss Ruth McTammany, of Akron, O., were lately married. Mr. Lane met his bride while she was employed by the Boston Talking Machine Co. in the production of soprano records for that company. He has been very busy giving concerts in the schools where he has placed many instruments. Mrs. Lane has been of great assistance to him by singing at the Victrola concerts.

The most encouraging conditions exist at the Columbia store. G. R. Madson, manager, stated business was unusually good, and that it kept him pretty busy ordering from the factory to keep up his supply. Among dealers who have recently put in a stock of Columbia goods are S. B. Stilson, Gibsonburg; Frank Cerni, Cleveland; N. W. Root, Warren, and John E. Carr, Collinwood, O. A number of dealers recently visiting the store and making purchases were: G. M. Ott and brother, Akron; the Witt Music Co., Lorain; R. M. Summers, Elyria; W. E. Jones, Loudonville, and Henry Matern, Sandusky, O.

In illustration of the popularity of Columbia goods, Mr. Madson furnished the World with the following extract from a letter he had just received from the Witt Music Co., of Lorain, O.:

"I have examined our invoices of Columbia goods for the last few months and find that I have purchased over \$5,000 net of your products, and taking into consideration that I had a large stock

of talking machines on hand at the time of putting in your line, I feel more than justified in saying that the only mistake I have made in the talking machine business was in not carrying your line before, for the increase in our talking machine business since putting in a full Columbia line is more than 100 per cent. Your new Eclipse model is immense. The Favorite is certainly a favorite with our customers, and for our high-class trade the Regent tables are becoming more and more popular, and we anticipate a heavy demand for them during November and December. All lines of business are good. Factories are all running full time and we anticipate our November and December business will equal our entire business for the last eight months. We enclose order for 100 Grafonolas, which we believe we will have to duplicate by the first of December."

G. J. Probeck reports the Dictaphone business very satisfactory. The manager of the new Hotel Statler has had his office equipped with the latest improved machine. Mr. Probeck says he is negotiating sales with several large concerns.

Of the four large Victrola demonstration rooms, used jointly in the art department of Wm. Taylor Son & Co., the "red room" appeals to visitors as the most artistic in decoration and appointment. In this room are shown the more expensive Victrolas, all in mahogany. T. A. Davies is manager.

At McMullin's business was said to be good, considering the shortage of supply in both Victors and Edison machines and records. Trade in both talking machines and pianos, it was stated, is normal. H. E. McMullin, Jr., has just returned from an extended Western trip, and reports business in all sections very good indeed.

Expansion of the talking machine department of the May Co. is in progress and preparations are being made for a large increase in trade. "Business is very good and we are expecting better," said Miss Ethel M. Volk, manager. "The demand for machines and records is strong, and with our more commodious record stock room we are enabled to carry a much larger stock."

The Caldwell Piano Co. is having a fine run of trade in all styles of Victrolas.

"Trade is excellent in both the wholesale and retail departments," said Miss Bessie M. Grabler, in charge at the Collister & Sayles Co. "We would be doing a very much larger business than at present if we could only get the goods desired, but the factory seems unable to meet the demand, particularly for the new type of Victrolas."

"Our business was more than double last month what it was during the same month a year ago," said Mr. Guion, manager of the talking machine department of the B. Dreher's Sons Co.

Owing to the continued increase in business Laurence Lucker, distributor of Edison goods, has been forced to obtain larger quarters, which he has secured in the same building, where better light and facilities generally are secured.

While the talking machine and piano trade is in the most flourishing condition at the Bailey Co.'s store, the management is devoting considerable attention to the exemplification of home enjoyment through the possession of an Edison Home Kinetoscope. For the purpose of demonstrating the Kinetoscope Mr. Friedlander has fitted up a large room, where daily demonstrations are given, and ready sales are being made. He states that the business for last month was 30 per cent. larger than for the same month in 1911.

The Hart Piano Co., 33-35 The Arcade, reports the talking machine and piano trade is very satisfactory. "Our one trouble," said the manager, "is to get the goods. We have a number of customers now waiting for both Victor and Edison machines."

Conditions in the talking machine department at the store of the W. F. Frederick Piano Co. are very satisfactory.

Charles T. Davis, music publisher, jobber, and who operates a chain of fifteen retail stores, reports that business is exceptionally good. He carries the Victrola line in a number of his stores, and is doing a big business, but says he, as well as all other dealers, are handicapped in making deliveries of the new types of Victrolas on account of the shortage that exists everywhere. He is now adding three additional demonstration rooms.

BISPHAM KEENLY INTERESTED IN RECORD MAKING.

Takes the Greatest Pleasure in Visiting the Columbia Factory at Bridgeport and Closely Observes the Record as It Is Taken Through the Various Processes Before It is Finally Pronounced Ready for Testing on the Talking Machine—Likes to Take a Personal Part in the Actual Manufacturing of His Own Records.

The majority of artists who sing selections for talking machine records are satisfied with merely hearing the reproduction of their own voices and

to his extensive list in the Columbia library. After Mr. Bispham sings a selection in the laboratory he does not forget about the transaction and wait for

to be on the ground when the record is being manufactured, Mr. Bispham often takes a trip to the Columbia Co.'s factory at Bridgeport, Conn., and closely observes the record as it is taken through the many various processes before finally pronounced ready for testing on the machine. The accompanying photograph was snapped a short time since, and shows Mr. Bispham busily engaged in stamping his own record. He takes a keen delight in this procedure, as it gives him a personal part in the actual manufacturing of his own records.

David Bispham Stamping His Own Records.

are not at all concerned with the mechanical details incidental to the manufacturing of the thousands and thousands of records turned out annually. A noteworthy exception to this general rule is David Bispham, the famous baritone singer. Mr. Bispham possesses a voice of remarkable beauty, and his records are most enjoyable. He is under exclusive contract with the Columbia Phonograph Co. and is constantly making new records to add

the record to appear, but takes a keen interest in the mechanical production of the record. In order

BOWLING TEAMS TRY PROWESS.

**Fight Now on in Earnest for the Challenge Cup
Donated by the Southern California Music
Co.—Will Be Five Teams in the Race.**

(Special to The Talking Machine World.)

Los Angeles, Cal., Nov. 6, 1912.

The Bowling League of the Southern California Music Co., of this city, has reorganized and will put five teams in the race during the season 1912-13. The league officials are as follows: C. H. Rundel, president; W. E. Smith, vice-president; H. E. DePue, secretary-treasurer. The teams are: Small goods department—W. S. Williamson, captain; I. J. Westphal, H. E. DePue, C. C. Ackerman. Talking machine department, No. 1—F. W. Carnes, captain; H. H. Fish, G. S. Pooler, W. H. Richardson. Talking machine department, No. 2—A. J. Ackerman, captain; H. A. Stokes, J. P. Bunker, R. E. Meginity, L. E. Newton. Wholesale department—O. A. Lovejoy, captain; J. J. Appfel, H. Jackson, C. F. Knapp. Edison dictating machine department—W. E. Smith, captain; J. V. Hanes, R. H. Baird.

The games are now on in earnest for the challenge cup donated by the firm last year. Talking machine team No. 1 beat small goods team four out of five games, and inasmuch as small goods boys won the cup last year, the rivalry was pretty keen.

Last spring a picked team from this league played a team from the Columbia Phonograph Co. Geo. W. Lyle, general manager, and W. S. Gray, Pacific Coast manager of the Columbia Phonograph Co., were present as guests.

WHEN CRITICISM IS FEARED.

The store that is well managed never fears the criticisms of its employees. When the employers fear criticism it is certain that injustice is being done. Employees deserve fair, square, honest treatment just as the customers deserve it. Any policy that works against the best interests of the employees is a bad policy and no store can afford to keep it alive. We do not believe that any store is strong enough to harbor one dissatisfied employee, just as no store can afford a dissatisfied customer.

PROMINENT CINCINNATI HOUSE TAKES ON TALKERS.

The Department Store of H. & S. Pogue Has Opened a Very Attractive Department Where the Victor and Columbia Lines Are Being Exploited—Managers of the Leading Houses Make Cheery Reports Regarding Business and Prospects to The World—Wurlitzer Co. Finds It Difficult to Get Enough Victor Machines—Some Good Victor Sales Made by the Aeolian Co.—W. H. Stever, of the Lyric Piano Co., Grows More Enthusiastic Regarding the Talking Machine Business—Milner Co. Installs New Soundproof Rooms.

(Special to The Talking Machine World.)

Cincinnati, O., Nov. 9, 1912.

About the most interesting development of the past month was the invasion of the talking machine field by the H. & S. Pogue department store, the first step of the kind in this city. This move was intimated in the last Cincinnati letter, the initial step having been taken by Manager Whelen, of the Columbia Phonograph Co. The Victor Co. is also represented there now and it is probable that an effort will be made by another concern to find an outlet for its goods through other department stores.

A silly report recently was that the Baldwin Piano Co. was negotiating with the Columbia Phonograph Co. for taking over the branch stores of the latter corporation west of this city to the Pacific Coast. A prompt denial of the rumor was immediately made by the officials of the Baldwin Co. and Columbia Co., who stated the proposition was not even under consideration.

Manager Whelen, of the Columbia Phonograph Co., when interviewed as to local conditions, stated: "The month of October has been the greatest for the same period of any recent years, and the way November has started in it will be a record-breaker. In fact, the question of keeping a stock on hand sufficient to supply the increasing demand was a very serious one. The telegraph was used and goods sent by express to keep up with the situation. This phenomenal demand is not confined to the local field, but prevails all over the territory covered by this office. Inroads are being made in territory which heretofore lacked that most essential of all things, 'a talking machine dealer.'"

In fact, Mr. Whelen talked in a very optimistic vein, the only complaint being the present inability of the factory to keep up with the increasing demand. But even this is being straightened out and by the time the holiday rush is at its height the Columbia stores will be able to fill all orders promptly.

M. D. Easton, of New York, special representative of the "Dictaphone," spent a week or ten days in the Cincinnati territory. Mr. Easton is one of the most enthusiastic of dictaphone boosters.

G. D. Smith, another special representative of the dictaphone, was in Cincinnati for a few days superintending the installation of a large number of machines in one of the local railroad offices.

Among other visitors to the Columbia store were Jos. Candioto, of the Jos. Candioto Co., of Lexington, and Mr. Todd, of Forbes & Todd, of Hamilton, O.

G. O. Thomas, of this city, has recently associated himself with the local sales force of the dictaphone. Mr. Thomas has had considerable experience in handling correspondence, having had charge of the local collection department of the Mercantile Credit Co., of this city, for several years. Another recent addition to the dictaphone sales force is D. P. Argo, who has had considerable experience as a salesman and is meeting with splendid success converting Cincinnati people to the merits of the dictaphone.

The H. & S. Pogue Co. opened its new Grafonola department the first of November. There was a little delay in the opening of the department owing to the elaborate preparations that were made, but the general public has profited by the delay, as a more beautiful department of its kind cannot be found in the city of Cincinnati.

The Rudolph Wurlitzer Co. had an exceptionally heavy increase in the sale of Victor Victrolas, although naturally handicapped by the shortage and in position to realize only a fraction of the possible number of sales. Notwithstanding the fact that shipments from the Victor factory were larger than ever before, the tremendous demands both retail and wholesale, have made them inadequate. Orders are coming in from our wholesale trade in an astonishing volume, and there is every indication of a still greater increase, instead of a decrease, as soon as dealers get a taste of the winter business.

The cold snap coming the middle of October, after the summer weather during the month of September, naturally resulted in a big drain on the public for winter supplies. In spite of this the record business has kept up wonderfully, as the purchases of records and talking machine orders are far in excess of last year. This proves that the new machines are not entirely responsible for the present volume of business, and even if these were eliminated from the field a very satisfactory increase would nevertheless be seen.

The Victor records of Taft, Roosevelt and Wilson have sold as no political records have ever sold before. The feature of the record business was the big demand for Gluck, as this artiste is playing in Cincinnati, where she is a great favorite.

The first big department store got into line. The H. & S. Pogue Co. qualified as Victor dealers with a complete stock of records and machines. The department is to be under the management of C. S. Browning, who left the Rudolph Wurlitzer Co. to take charge of this new department.

The Aeolian Co.'s Victor department reports as follows: "Our Victor business continues to show such an increase every month over the preceding

one that we have decided to add two more elaborate rooms to our record department, which will enable us to handle our customers more rapidly, thus facilitating a much larger sale of records with the same number of clerks; hereafter we can demonstrate records to eight customers at the same time, and independently quiet of each other, with these improvements.

"Our new record service is bringing the results we want and have been striving for, making a decided hit with our customers, encouraging them to hear more records and follow out our printed suggestions of classified compositions properly graded and interestingly arranged, so as to stimulate an interest above the average type of appreciation."

Manager Ahaus, of the Victor department, made a nice scoop on two sales in which five Victrolas were disposed of last week, Dawson J. Blackmore, former president of Krell Piano Co., purchasing two Victrolas, style XVI, including \$100 worth of records with each.

President Stever, of the Lyric Piano Co., today said: "The Lyric Piano Co. is looking forward to a fine trade in its talking machine department for the holidays. It has placed large orders for Victrolas. The trade is increasing daily and we are more than pleased with the large number of record buyers we have interested."

"We are studying the proposition of the Victrola every day and we believe that its resources are unlimited. If a man will devote some time to putting new and original ideas before the people, we find that it requires time and attention, the same as in any other branch of business, if a man wishes to make it a success. But we really believe that the results that can be obtained by making it a study is well worth the effort, as there is nothing in the way of entertainment or a question that can be brought before the public to-day, from the very best of orators and professional men, but what can be reproduced upon the record in your home. It gives each and every one the opportunity of keeping in touch with the finest talent in the world. We are very well satisfied with the results we have obtained in our talking machine department."

The talking machine department of the Milner Musical Co. has been enlarged by the addition of two handsome new soundproof display rooms. These rooms will be used exclusively for the display of the four new-style Victrolas. Business is reported as having been unusually good with this company during the past month. The new additions to the Victor and Edison lines were brought to the attention of the public by this hustling concern in its usual original and effective way. Ralph Clifford and Leo Driehaus, two local talking machine salesmen, have been added to the sales force.

Loveman, Joseph & Loeb, who represent the Victor line in Birmingham, Ala., are about to add four booths to take care of their increasing record trade. Among recent sales made by Manager Broyles was a Victrola XVI to the Alabama Girls' Technical Institute at Montevallo.

"DUSTOFF" de Luxe

for discs made of Wilton fabric mounted on oxydized metal holder finished in "unique" "tigerback" design. Each in a box and 12 in a DISPLAY CARTON.

Retails at 50c. each. (In Canada at 75c. each.) Liberal discount applies.

YOUR JOBBER can supply you, or write us direct. Stock our "Dustoffs" NOW for your holiday trade.

"DUSTOFF" RECORD CLEANERS ARE A POSITIVE NECESSITY

To all owners of talking machine records, for their use before playing adds life to the record through removing the accumulated dust and dirt from the minute sound grooves—the cause of the wear and friction in the reproducing point track. It insures a wonderfully clear and distinct tone reproduction free from scrapings, blurs and harsh sounds. "DUSTOFFS" are effective and simple to use, with no possibility of scratching the record in the least.

WRITE FOR SPECIAL IMPRINT PROPOSITION

"DUSTOFFS" are proven "swift sellers" wherever displayed—and there is a good profit in their sale for you. We supply with every shipment a quantity of mailing circulars free.

SAMPLES SENT FREE, for inspection to rated firms, upon naming jobbers. USE THE COUPON NOW for samples of these PROFIT-MAKERS.

"DUSTOFF" (REGULAR) MODEL

for discs made of Wilton fabric mounted on varnished wood holder. Each in a 2-color box.

Retails at 15c. (In Canada, 25c. each.) Liberal discount applies.

NEWLY CREATED EDUCATIONAL DEPARTMENT

Of Columbia Phonograph Co. Making Good Progress Under the Directorship of Prof. Goodwin, Who Has Now Associated With Him Prof. James M. McLaughlin, Director of School Music in Boston, Mass., an Authority on Matters Pertaining to This Work.

One of the rapidly growing departments of the Columbia Phonograph Co., General, is the newly-created educational department. At the head of this department is Professor Frederic Goodwin, one of the best known educators in the East. Professor Goodwin's practical knowledge of school room requirements has been of immense aid in the preparation of literature for circulation among teachers. His authority on all matters relating to musical education is unquestioned, and he is constantly being invited to address teachers' conventions and give his views on the important subject of educating children to be musical. At the convention of the Hampden County Teachers' Association, held in Springfield, Mass., on October 25, Professor Goodwin was one of the invited guests, where he delivered a forceful talk on the proper methods of handling schoolroom music. His address was enthusiastically applauded by the largest teachers' gathering the convention ever drew, and many expressions of commendation were passed by the teachers who were present. The Springfield newspapers devoted considerable space to this speech, many of them printing the address in full, and the majority of the papers carried a picture of Professor Goodwin, accompanied by a story of the work he has accomplished. His talk was directed to the possibilities that exist for the proper cultivation of the talking machine as an instrument for schoolroom use. Professor Goodwin stated that practically every school principal in New England was heartily in favor of the talking machine in schools, and that many of them are donating machines to the schools from their own purses until the Boards of Education recommend their use. Subsequent to Professor Goodwin's talk, folk

dances were performed by the school children to the accompaniment of music produced by Columbia Grafonolas.

Prof. Frederic Goodwin.

Associated with Professor Goodwin in the educational department is Professor James M. McLaughlin, director of school music in Boston, Mass., who acts in the capacity of consulting ex-

pert to the educational department, and his extensive knowledge and talents are of vast assistance in the development work now being carried on. Professor McLaughlin is known as an absolute authority on all matters pertaining to schoolroom music, and the position of director, which he has held for the past twelve years, is the most important one in the music department of Boston's public schools. By reason of his exceptional attainments Prof. McLaughlin has achieved an international reputation. He is an organist of renown, and has acquired a prominent place in the literary world by his authorship of several standard text books. His varied achievements, wisdom and general knowledge of music cannot but prove invaluable in the educational work of the Columbia Phonograph Co.

"Our music money book, recently published, has brought the Columbia closer to the teacher than ever before," states Prof. Goodwin, "and has shown the teacher that we are eager to help as well as eager to get business. The Columbia Universal Graded Course will soon be off the press and that will bring the Columbia dealers into a stronger position in the educational field than ever the talking machine trade was before. We are preparing several graded courses for use in the schools, and from present indications there will be a decided boom in the use of the talking machine in schoolrooms throughout the country."

SCHAFFORD ALBUMS IN DEMAND.

The Schafford Album Co., 26 Lispenard street, New York, is doing an excellent business with its talking machine record albums. Orders are rapidly increasing and the factory is working full capacity to take care of the holiday trade. In a chat with The World, E. F. Skinner stated that they are receiving many inquiries from dealers in foreign countries in addition to the excellent trade from dealers throughout the United States, who find these specialties big sellers and greatly appreciated by the public.

INDIANAPOLIS TRADE NOTES.

Kipp-Link Complete Alterations—New Edison Blue Amberol Records Please—Lennox Piano Co. to Install Talking Machine Department—Dictaphone and Grafonola Prominent—Victrola for Widow of Ex-President Harrison—Other News of Interest Worth Noting.

(Special to The Talking Machine World.)

Indianapolis, Ind., Nov. 9, 1912.

The Kipp-Link Phonograph Co., Indiana distributor for the Edison machines, has about completed the alterations in its commodious quarters in Massachusetts avenue. Mr. Kipp said he had made special effort to inspect other Edison homes throughout the country and that he feels the Indiana headquarters does not have a rival.

The Edison Blue Amberol records are in demand in Indiana. The records have given new life to Edison business and when the Edison disc machine is put on the market, Indiana dealers believe that they will be real winners.

James Whitcomb Riley, the Hoosier poet, was a recent caller at the Kipp-Link store.

The Edison kinetoscope is popular here and the only complaint the Kipp-Link Co. has to make is that the factory does not turn out the machines fast enough to fill the orders which have been taken out in Indiana.

The E. L. Lennox Piano Co. is planning to install a talking machine department. It has not yet been announced what line of talking machines the Lennox Co. is to handle. Rumor has it that several other piano houses are planning to take up a talking machine line. The talking machine business in Indiana is on the boom—not an inflated boom—but a real one, solid through and through.

The talking machine and its near friend, the dictaphone, are playing parts in the dynamite trial which is in progress here in the Federal court. The court reporters are making use of the dictaphone in transcribing their voluminous notes and they are loud in their praise of the instruments.

The talking machine comes into action by another route. It is being used to help Ortie McManigal, the government's star witness, while away the hours in the rooms in the Federal building, where he is being carefully guarded by government officials.

Time hung heavy on the hands of McManigal until one of the government officials conceived the idea of obtaining a talking machine for their prisoner. A Columbia Grafonola was secured and now McManigal listens to ragtime, band music and funny dialogues. The government takes good care of the confessed dynamiter and sees to it that he is entertained. The talking machine has largely solved the problem of entertainment.

The Victor department of Aeolian Hall, in charge of Miss Lazarus, has experienced the most successful period in the history of the department. Booth Tarkington, the novelist, bought two Victrolas the other day—one for himself and one for his father.

W. S. Barringer, of the Stewart Talking Machine Co., is paying special attention to window displays in the store in North Pennsylvania street. His efforts have been productive of fruit, for the passers-by "sit up and take notice." The Stewart Co. is now "all fixed up" for the fall trade, and its quarters present an exceedingly inviting appearance. All the talking machine men here say "Stewarts have a mighty fine store."

The talking machine was put to work in the political campaign here. The speeches of Roosevelt, Wilson and Taft, put out by the Victor Co., were used. If a speaker failed to show up the talking machine was given platform space and it filled the bill.

The Stewart Talking Machine Co. recently sold a Victrola to Mrs. Benjamin Harrison, widow of the late ex-President.

Thomas Devine, of the local store of the Columbia Phonograph Co., reports exceptionally good business. "The collections are especially good," said Mr. Devine, "and the prospects for holiday business are very good."

The Columbia Regal and the Eclipse are prov-

PHILADELPHIA, PA.

ing to be big sellers in Indiana territory. The local Columbia store, in common with the other Columbia stores over the country, are placing their orders early in order to be sure of having the goods for the holiday trade.

A. W. Roos, assistant auditor of the Columbia Co., visited Indianapolis several days ago and then went to Louisville.

The dictaphone received much praise from Walter N. Carpenter, a court reporter of national fame, the other day. Mr. Carpenter had the job of getting the speech delivered here by William Jennings Bryan. The speech was delivered at night and Mr. Carpenter had to have the "copy" in the hands of the Indianapolis News early the next morning. By using two dictaphones and two operators Mr. Carpenter had the "copy" ready by 3 a.m. on the morning following the delivery of the speech. "The dictaphone not only saved me a great deal of time but it saved me much extra expense," said Mr. Carpenter.

The Halloween festivities here were marked by the use of talking machines for numerous dances.

COLUMBIA MACHINES AS PRIZES.

Fifty-nine Grafonolas and Graphophones of Various Types in Evening Mail Contest.

The Columbia line of Grafonolas and graphophones is receiving some wide advertising at present owing to the fact that Columbia machines of many types constitute a large proportion of the prizes offered in connection with a new Book-lovers' Contest being conducted by the New York Evening Mail. Among the machines listed as prizes are two Grafonola Regents, a Grafonola Mignon, a \$50 Grafonola, five Lyric graphophones and fifty graphophones of a cheaper type and with a supply of records. The highest prizes in the contest consist of automobiles, pianos and players.

R. G. Caldwell, vice-president of the Blackman Talking Machine Co., 97 Chambers street, New York, has returned to his desk after a three weeks' illness that confined him closely to his home during the entire period. His many friends rejoice at his recovery.

The only thing on four legs that's better than the new Columbia "Regal" at \$40 is the "Regal" at \$50 with record containers.

NATIONAL ADVERTISING HELPS LOCAL TRADE.

K. M. Johns, Manager of the Columbia Co.'s Store in Detroit, Tells of Success Achieved in This Connection—Edison Business Given Quite an Impetus by New Blue Amberol Records and Reproducer—Victor Talking Machines Grow in Favor in the Schools—Max Strasburg Reports Increasing Demand for High Priced Victrolas and Records.

(Special to The Talking Machine World.)

Detroit, Mich., Nov. 11, 1912.

The Columbia Phonograph Co.'s branch here is deriving tremendous results from the new form of advertising campaign instituted by the company a few months ago. The advertisements which are used in the periodicals of national circulation are immediately reproduced in the local dailies. They carry a specific offer of a certain machine with a specified number of records at a stated price, and when the customer calls for it he knows exactly what he wants and how much he will have to pay. So the sales, in addition to being numerous, are quick, and thus carry a larger margin of profit than if a salesman had to spend an hour or two closing the deal.

"It is the most effective mode of advertising I ever met with in my life," said Manager K. M. Johns, in enthusiastically praising it to-day. "It gets the people here because they know that they will find something they want, instead of having a vague idea of what is here and knowing that they must spend a good deal of time looking around and even then perhaps not finding anything to suit. When people are in that frame of mind they postpone calling. That is the effect of general advertising. It only conveys a general idea. Give them specific information and they will make haste and bring the money with them."

The Columbia Regal is getting the big business on the advertising just now. A while ago it was the favorite.

The Columbia Regent is also attracting a great deal of attention and business in the Columbia store, though it is a brand new acquisition. The round table style in mahogany, with the wide horn opening and Columbia tone shutters, are features that are much liked. The price, \$150, also fits in with the trend of Detroit talking machine trade.

The trade insists on clinging to the high priced level. The popular range of prices is from \$100 to \$200, though some dealers find things very active in instruments of the \$50 class.

The chief worry this year is the same as last year—whether the store will be able to get machines enough to fill orders, or even to make a healthy showing at it. Facilities for receiving freight shipments of any kind always are poor in Detroit in the winter months, owing to a car shortage.

Two very good Columbia agencies were placed this week, one with the Tinnette Music House and the other with the Adler Music House, both being prosperous establishments a little outside of the downtown circle. Both houses have put in a complete line of Grafanolas and records.

The new Amberol records and the new Edison reproducer have given the Edison business a large hoist here. Manager Harry Rupp, of the talking

machine department of Grinnell Bros., State jobbers for the Edison, stated to-day that the first month's business with the new records has multiplied the old average several times even without the aid of the new reproducers. Sales of Amberolas are increasing steadily. The hornless Edisons have jumped into big favor, the practically indestructible records having aided greatly in this manifestation.

Talking machines are coming more and more into favor in the schools here, particularly Victors. When the schools, which can get pianos at the expense of the board of education, purchase talking machines by taking up a collection among the pupils, as has been done in many of the rooms of both the ward schools and the high schools, it constitutes some testimony indeed.

"What seems to me to be the very best evidence of the permanent stability of the business is its present tremendous impetus," said Mr. Rupp. "Some people have designated it a fad, that would die out like many other things well-to-do people have taken up and then discarded. But the talking machine, perfect as it now is, is still developing. Every time something new comes out we think we have reached the absolute limit of phonographic science. Then, just about as soon as we become accustomed to it, along comes something newer that gives the instruments and the business another big boost."

According to Max Strasburg, of the Victrola shop, the high priced talking machines are coming considerably into competition with pianos. Notwithstanding that there are thousands upon thousands of young folks who can play the piano, the actual fact is that the great majority of them never go beyond the rudiments of the study. When they marry and assume household cares they no longer have time to practice, and without practice mastery of the pianoforte quickly lapses. So generally the young man or woman who, at the age of twenty-one, modestly admits that he or she can play the piano "some," is firmly convinced at the age of thirty or thirty-five that the reverse is true.

"They come in and look over the big talking machines," said Mr. Strasburg, "and remark to each other that neither of them can play a piano—what's the use of having one. Both can play a talking machine and provide the very best music of all varieties. Nine times out of ten they sell themselves the machine. We don't have to say much here except to make out the contract. We have taken pianos in trade. We also have the edge on player-pianos owing to the matter of price. In the matter of automatic playing the instruments are about on a par, the talking machine making up with its variety what it may lack in volume of sound when compared with a player-piano, but the very best phonograph costs only about one-fourth the price of the cheapest of the really good player-pianos."

Incidentally, Mr. Rupp remarked that the October business in Victrolas and Columbias was just about treble what the October business of last year amounted to.

Mr. Rupp, of Grinnell Bros., will make an effort to avert a shortage in Victors this winter. He will leave soon for the place from which all Victrolas come and try to impress upon the men high up that Detroit is a big and growing city and that he faces the task of supplying not only the Grinnell retail and wholesale up-state trade, but the needs of three other large Detroit stores—the Farrand Co., the Max Strasburg Co. and the Cable Co.—besides a host of smaller ones.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Four Weeks.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 6, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

OCTOBER 12.

Buenos Aires, 45 pkgs., \$2,450; Cape Town, 42 pkgs., \$1,871; Cucuta, 2 pkgs., \$118; Genoa, 2 pkgs., \$217; Havana, 4 pkgs., \$174, 10 pkgs., \$457; Havre, 11 pkgs., \$911; Lima, 31 pkgs., \$1,590; Liverpool, 4 pkgs., \$290, 4 pkgs., \$705; London, 216 pkgs., \$5,540, 4 pkgs., \$149, 4 pkgs., \$186; Milan, 4 pkgs., \$361; Rio de Janeiro, 10 pkgs., \$550; Vera Cruz, 4 pkgs., \$175.

OCTOBER 19.

Berlin, 10 pkgs., \$150, 18 pkgs., \$377, 38 pkgs., \$1,600; Bremen, 1 pkg., \$100; Callao, 5 pkgs., \$500; Cartagena, 14 pkgs., \$1,351; Havana, 22 pkgs., \$1,144; London, 211 pkgs., \$5,817, 7 pkgs., \$13,100; Milan, 8 pkgs., \$588; Port au Prince, 2 pkgs., \$135; Rio de Janeiro, 19 pkgs., \$4,875, 8 pkgs., \$304, 6 pkgs., \$475; Singapore, 18 pkgs., \$595; Vera Cruz, 45 pkgs., \$2,008.

OCTOBER 26.

Berlin, 3 pkgs., \$167; Colon, 7 pkgs., \$209; Havana, 22 pkgs., \$879; Havre, 5 pkgs., \$233; Kingston, 5 pkgs., \$205; La Guayra, 4 pkgs., \$207; Melbourne, 7 pkgs., \$180; Montevideo, 8 pkgs., \$521; Port of Spain, 5 pkgs., \$122; Soerabaya, 11 pkgs., \$569; Tampico, 6 pkgs., \$156; Valparaiso, 36 pkgs., \$1,586, 5 pkgs., \$111; Vera Cruz, 215 pkgs., \$8,729.

NOVEMBER 6.

Berlin, 5 pkgs., \$126; Callao, 5 pkgs., \$105; Chemulpo, 1 pkg., \$117; Havana, 111 pkgs., \$4,290; Iquique, 3 pkgs., \$214; Kingston, 7 pkgs., \$130; Liverpool, 2 pkgs., \$269; London, 2 pkgs., \$148, 199 pkgs., \$7,138; Milan, 12 pkgs., \$766; Robe, 10 pkgs., \$795; Shanghai, 32 pkgs., \$4,365; Tampico, 4 pkgs., \$166; Vera Cruz, 29 pkgs., \$880; Vienna, 5 pkgs., \$105.

George P. Steele, general manager of the U.-S. Phonograph Co., Cleveland, Ohio, was in New York recently for a short stay, and visited the offices at 7 Union Square, and also called on John Kaiser, manager of the laboratory at 662 Sixth avenue. He stated that business was excellent wherever he visited.

INCREASED TRADE REPORTED BY BALTIMORE DEALERS.

October Business Shows Big Gain Over That in September, Which Was Good Month—Sales Forces Increased—Changes Among the Managers and Salesmen—What the Various Houses Have to Report Anent Present Conditions and General Trade Prospects.

(Special to The Talking Machine World.)

Baltimore, Md., Nov. 11, 1912.

October has proved to be a big month for the talking machine men in this section and the sales were better than during September. During October it became necessary for some of the dealers to put on more help, and this same condition has become necessary with other dealers who managed to pull through September with their original quota of salesmen.

The Columbia Phonograph Co. branch has had a big October and the only drawback that Manager F. A. Denison complains of is the chronic one that has been affecting all the dealers for some time past, namely, the inability to keep enough machines in stock to supply immediately the demand. Mr. Denison, because of the rapid strides made by the business recently, has been compelled to augment his regular force with three additional assistants. Philip Lang has been taken on as wholesale salesman; F. A. Roberts has become dictaphone salesman, and Charles Lamm has been engaged as bookkeeper. Mr. Denison reports the wholesale and retail end of the business to be away above the standard, both in the city and the territory covered from the local branch.

Charles Stran, who for a number of years was manager of the talking machine department of H. R. Eisenbrandt Sons, handling the Victor line, has resigned his position and opened up business for himself. Mr. Stran is located on Howard street near Madison street, and is handling both the Victor and the Columbia lines. Mr. Stran is doing business under the firm name of the Lyric Talking Machine Co., and he reports that indica-

tions are that his venture will be a successful one. His fellow dealers wish him the best of success in his new venture.

M. Silverstein, manager for Cohen & Hughes' talking machine department, has just returned from a successful trip and reports business, both locally and otherwise, to be in excellent shape. The firm handles the Victor line and has a pretty window display which is attracting much attention.

Tommy Gordon, proprietor of the Gordon Talking Machine Co., which handles the Columbia and Victor lines, reports a good month with both lines. The sales of large machines has been a feature, while the demand for records has been larger than for some time. Josie Fink, who is associated with Mr. Gordon, also reports many sales.

The Victor business both in this city and Washington has been in excellent shape during October as far as E. F. Droop & Sons Co. is concerned, according to statements made by W. C. Roberts, manager of the two stores. The machine business was not the only thing to make Mr. Roberts happy, for record sales were also heavy.

Both the Columbia and Victor sales for the month of October were heavy at Sanders & Stayman's, who handle both lines. Manager Albert Bowden says it was the best month for some time and that the indications are such as to indicate that November and December sales will be even better.

William Knabe & Co. report a good month for the Columbia machines and records, while similar reports are made by Hammann & Levin concerning the Victors and the Peabody piano, the Hub Piano Co. and the Rosenstein Piano Co. as regards the Columbia lines.

You don't need to be afraid

of not being able to take care of your customers' wants promptly and satisfactorily if you have us on the other end of your orders.

No bugaboo of "broken promises" to haunt you, or of "slow shipments" to throw a scare into you every time you send an order.

You can always depend upon us to be right on hand with whatever you want whenever you want it—all orders shipped the same day they are received.

Mighty valuable service. Doubly valuable at this time of the year for holiday buyers must be taken care of—there's no holding Christmas back.

So just remember, that whatever you want in Victors, Victor-Victrolas, Victor records, record cabinets, horns, fibre cases, needles, repair parts and other accessories, is here and will be headed for your store as soon as your order is received.

Write to-day for our catalog and our booklet, "The Cabinet That Matches," so you'll have it when you need it.

Victor Foreign Records

are here too—the complete list, ready for immediate delivery.

POOLEY'S ADVERTISING CAMPAIGN.

Some Striking Announcements in the Saturday Evening Post—Will Also Carry Ads in Papers in Leading Cities—Results Are Gratifying—How the Dealer Is Helped.

(Special to The Talking Machine World.)

East Philadelphia, Pa., Nov. 6, 1912.

The Pooley Furniture Co., of this city, whose very distinctive styles of talking machine cabinets have won a large following in the trade, has been conducting a great campaign of advertising in the Saturday Evening Post, which will be continued during the fall and winter season, and it is also going to do considerable local advertising in the large cities in the form of newspaper and theater program publicity. In this way the Pooley Co. is reaching more than ten million readers a week, and this campaign has been inaugurated to stimulate business for the dealer. The results so far have been most gratifying; inquiries and orders are coming in faster every day and from present indications the Pooley Co. will find it difficult to fill all the orders needed to supply the holiday rush. It has, however, increased its forces and intends to meet all demands.

An interesting announcement showing the quality of advertising conducted by the Pooley Co. in the Saturday Evening Post appears elsewhere in this issue. It is impressive and educational.

ERB OCCUPYING LARGER QUARTERS.

(Special to The Talking Machine World.)

Rochester, N. Y., Nov. 4, 1912.

Christ. Erb, who for the past twelve years has handled the Edison phonograph line in this city, has just removed from 378 Colvin street to new and larger quarters at 348 Ames street, where he has built a three-story pressed brick building with a frontage of thirty feet and containing two large show windows. It is Mr. Erb's intention to install a line of pianos as well as musical merchandise in his new store, to be known as the West Side Phonograph Studio, with Mr. Erb and his son in charge.

ZIMBALIST HEARS HIS RECORDS.

Without Revealing His Identity He Enters Fifth Avenue Talking Machine Store and Enjoys Records Made in the Spring.

Efrem Zimbalist, the clever young violinist, who is to be one of the notable wizards of the strings, including Ysaye, Kreisler, Elman and Powell, who will be heard in concert this season, is a great admirer of the Victor records, and in the course of an interview with the reporter of the Times the other day he invited him to walk up the avenue, and at one of the leading establishments he stopped and, beckoning the reporter to follow, he entered.

"I haven't heard the new records I made in the spring," he explained. Then, unrecognized, he asked the clerk to play some Zimbalist records, and listened delightedly to that young man's comments upon them, which were largely encomiastic in nature. Thus he highly praised a certain MacDowell record, and also one in which Mr. Zimbalist had united with Alma Gluck, because they were good sellers.

From there the young Russian wandered into other shops, with the keenest interest displayed for the new and the inviting. He said that one of his chief joys was to attend the first nights of musical comedies, and he rarely missed one when he had the opportunity of going.

HONESTY IN BUSINESS.

How It Has Become an Essential Factor in Present Day Trading.

"The millennium has not yet arrived, but no thoughtful man will deny that there has been a great awakening of the business conscience in recent years," says a veteran merchant. "The old motto, 'Honesty is the best policy,' in place of being more or less a beautiful sentiment, is coming to be more of a practical reality. The day has come when to be honest means not technically, legally honest, but broadly, humanely honest—honest in thought, in purpose, in act."

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., Nov. 6, 1912.

PHONOGRAPH. Harry B. McNulty, East Cleveland, O., assignor by mesne assignments to the U-S Phonograph Co., Cleveland, O. Patent No. 1,038,621.

The present invention, relating as indicated, to phonographs, has more particular regard to the provision of suitable mechanism for adapting a phonograph to optionally play upon records having threads of different fineness, as for instance, upon records having 100 and 200 lines to the inch, respectively, or as they are currently known, "two-minute" and "four-minute" records. To effect such adaptation of the machine, it is necessary that the producer be fed along the record at a different rate of speed in each case, and that a stylus of a different character, corresponding to the fineness of the thread, be properly positioned in the one case to play on the fine thread, in the other upon the coarse thread. One form of mechanism for conjointly effecting the two adjustments referred to is illustrated in co-pending application, Serial No. 463,942, filed November 23, 1908, and the present invention is in part an improvement of such earlier mechanism, and in part an adaptation of the same to several variant forms of reproducer from the preferred form there shown.

In said annexed drawing: Fig. 1 is a transverse sectional view of

a phonograph embodying the several improvements in one approved form; Fig. 2 is a similar view of the reproducer and that portion of the carriage in which said reproducer is seated, showing parts of the latter in a different operative position than that illustrated in Fig. 1; Fig. 3 is a bottom plan view of an actuating cam member that forms a feature of the machine; Figs. 4, 5 and 6, respectively, illustrate in different operative positions a development of one of the cam elements of such cam member; Fig. 7 is a perspective view of another detail of the machine, viz., the key whereby the adjustment of the reproducer stylus is secured; Fig. 8 is a sectional view of the reproducer and the portion of its carriage corresponding to that of Fig. 1, but showing the adaptation of the invention to a different construction of stylus lever; Figs. 9 and 10 similarly illustrate the adaptation of such invention to other forms of stylus lever, and Fig. 11 shows a detail of the construction of Figs. 8 and 9 in modified form.

AUTOMATIC RECORD STOPPING DEVICE FOR TALKING MACHINES. Richie de Lan, Philadelphia, Pa. Patent No. 1,042,535.

The object of this invention is to provide simple and effective means for automatically stopping the rotation of the disc record of a talking machine when the end of the record is reached.

Figure 1 is a side elevation of one form of disc talking machine with a record-stopping device in accordance with the invention, the parts being in the position assumed when the end of

the record is being approached; Fig. 2 is a plan or top view of the parts shown in Fig. 1; Fig. 3 is a view similar to Fig. 1, but showing the parts in the position assumed after the end of the record has been reached; Fig. 4 is a view similar to Fig. 1, but illustrating the application of the improved record-stopping device to a machine of a slightly different type from that shown in Fig. 1; Fig. 5 is a plan or top view of the parts shown in Fig. 4; Figs. 6 to 8 are sectional views illustrating different constructions of turntables for use in connection with my improved record-stopping at-

achment, and Figs. 9 to 11 are top views, on a reduced scale, of said turntables.

DIAPHRAGM. James H. Ellis, Milwaukee, Wis., and Albert J. Hoffman, Wauwatosa, Wis. Patent No. 1,040,294.

This invention relates to diaphragm constructions for sound recording and reproducing instruments and has for its object to provide a diaphragm which while being highly sensitive to weak sound vibrations will properly respond to the stronger sound vibrations and will also truly record or reproduce the original volume of sound.

Another object of the invention is to provide a diaphragm of a single sheet of resilient material rendered more flexible at its peripheral or marginal portion by lines of scoring.

Referring to the accompanying drawings in which like characters of reference indicate the same parts in different views: Figure 1 is a sectional view of a diaphragm constructed in accordance with this invention in its position for use in a sound box; Fig. 2 is a plan view thereof; and Fig. 3 is an edge view thereof.

SOUND BOX FOR TALKING MACHINES AND OTHER ACOUSTICAL INSTRUMENTS. Ernest de la Rue, London, Eng. Patent No. 1,040,648.

The present invention relates to improvements in sound boxes for talking machines and other acoustical instruments.

According to the present invention, the diaphragm is mounted within a casing so that it is capable of reciprocating, and to this end this invention consists in mounting the diaphragm in such a manner that it is held resting upon a single resilient support at the periphery, and the invention further consists in so arranging the resilient support and so constructing the periphery of the diaphragm that the support does not exercise a thrust upon the diaphragm in a direction at right angles to the plane of the diaphragm but makes contact with the periphery of the dia-

phragm so as to exercise a thrust thereon in an oblique direction whereby the resiliency of the support is increased and the reciprocating action of the diaphragm is facilitated.

Figure 1 shows a sectional elevation of a sound box with improvements applied thereto. Fig. 2 a front elevation thereof. Fig. 3 shows an exaggerated detail of a portion of a diaphragm and asket. Fig. 4 a similar view to Fig. 3, but showing a variation of the corrugation of the periphery of the diaphragm.

RUN ON CERTAIN STYLES.

The Udell Works Report Conditions at Their Plant—Proof of the Popularity of the Latest Designs Put Out by This House.

The Udell Works, of Indianapolis, Ind., are experiencing a very lively demand for their various styles of talking machine cabinets this fall and winter, a tribute to their efforts in supplying styles that meet with public approval. The Udell Works have just informed The Talking Machine World that they will not be able to furnish Style 415 in mahogany or oak until after the first of the year. They add further: "The orders now in hand will be all that we can possibly get through the factory in time for Christmas deliveries. There are other very desirable patterns that can be had, but it is advisable to get the orders in early before these other styles become exhausted."

The reader can judge from this information that the Udell people are most desirous of supplying the needs of their customers with the greatest possible despatch, and they thus inform them of the exact situation so that they may take action in regard to ordering the necessary stock so as to meet the holiday demand.

BIG CANADIAN TRADE

Reported in U-S Phonographs Which Are Also Greatly in Demand Locally, Says John Kaiser, Head of the Laboratory.

"I am greatly pleased at the demand for our records," stated John Kaiser, manager of the U-S Phonograph Co.'s laboratory at 662 Sixth avenue, New York. "Dealers all over the country have assured me that the call for our latest lists of records has been most gratifying. Our December list contains several appropriate holiday selections. What particularly pleases me is the spirit of co-operation manifested by our dealers in connection with our record production. I am in receipt of several letters commending some special record, and telling me that our dealer's customers are greatly pleased with the U-S products. The "Chamber" instrumental selections that we recently issued have met with phenomenal success, and our dealers seem to think that they are among the best records we have produced."

"Our machine business is going along splendidly, and our new factory in Cleveland is kept busy filling orders from the Eastern trade. The concealed horn type is our leader, and we are having difficulty in turning out the machines fast enough. A noticeable feature of our recent trade has been the tremendous gains made in Canadian sales. In certain sections of Canada our machine can be found in practically every home in a small town."

SETTLING ON A BUSINESS POLICY.

The aim is to do the maximum of business with a minimum of loss. A small ratio of loss does not mean good credit management any more than a comparatively large percentage of loss may indicate poor credit management. A narrow credit policy means small losses with no substantial business growth, while a fairly liberal policy will bring larger losses, but an increasing business with better dividends.

TRADE-MARKS HAVE GREAT SIGNIFICANCE

In the Talking Machine as Well as Other Branches of the Music Trade Industry—The Victor Dog with the Caption "His Master's Voice" Has Attained World-Wide Fame and Is Recognized as One of the Greatest Trade-Mark Properties Extant—Trade-Mark Situation Discussed by Waldon Fawcett, The World's Washington Correspondent.

It would be difficult to name a trade field in the entire industrial and commercial world where trade-marks have as great significance as in the music trade. Not only is there no other field where trade-marks mean more from consideration of sentimental prestige or where they are of greater benefit and value in the making of sales, but likewise is there no other sphere where the trade-mark

J. C. Carnes,

Chief Examiner of Trade-Marks for the United States Government writing an opinion in a trade-mark case.

is more universally used by practically all of the foremost manufacturers.

Such has been the growth of the popularity of the trade-mark as a means of identification and a vehicle of salesmanship these past few years that there is now no commercial field in which these insignia and slogans of trade are not employed. But, in many lines of trade, it is only a firm here and there that has adopted a trade-mark. In the musical instrument business, on the other hand, practically every creative force in the field has a trade-mark which, just in proportion to the extent to which it is known to the public at large, is a valuable asset of the business.

Value of the Piano Makers' Name.

Take the piano business, for example. Not only is each standard make of instrument known not only to its devotees, but to the entire world at large, by its distinctive name—usually the name of the original maker—but the very reputation of the manufactory and its product is bound up in this name. Because names are the badges of success in the piano field, almost every manufactory has adopted the name of its make of instrument as its trade-mark. And a name, in even greater degree than any other form of trade-mark, is at once a weapon and a responsibility. It is ever present to create prestige for the instrument that has made a favorable impression upon an auditor, but on the other hand the very presence of such an established trade-mark implies a traditional merit in the article to which it is attached. In other words the appearance of a familiar trade-marked name on a piano is, to those who are at all informed on the subject, a virtual guarantee of quality.

That piano manufacturers fully appreciate the value of an old or honored name as a weapon of offense and defense in introducing their wares to

the public is eloquently proven by the spirited legal battles which have, from time to time, been fought out in our courts with reference to the right to use some well-known piano name upon which more than one manufacturer had some claim. Such cases usually arise only when a piano manufacturing business has been sold by the founder or his heirs, and the latter in due course decides to re-enter the piano manufacturing field and wish to make use of the name which is in one sense their own. And just here, it may be noted, that whereas the law states that any registered trade-mark may be sold or transferred, the statute makes the stipulation that a trade-mark is assignable only in connection with the good-will of the business in which the mark is used. In other words no piano manufacturer can buy merely the trade-mark of a competitor. He must buy the rival factory—take over the entire business, in fact—if he desires to secure the privilege of marketing instruments under the trade-mark originated by another.

Whereas there are, of course, more different trade-marks in the piano and player-piano field than in any other branch of the music trades, it must not be supposed that the use of these "commercial signatures," as they have been aptly nicknamed, is by any means confined to the piano lines. Makers of almost all classes of musical instruments, from harmonicas to harps, make use of trade-marks to greater or less extent, and out-rivaling even the piano trade is the exploitation

Consulting References

In trade-mark cases at Uncle Sam's trade-mark bureau.

of trade-marks in the talking machine and phonograph trade.

Three of the Best Known Trade-Marks.

Indeed, it is not too much to say that three of the best-known trade-marks in the entire world are respectively "His Master's Voice," owned by the Victor Talking Machine Co.; the musical notes of the Columbia Phonograph Co., and the familiar portrait of the greatest inventor of the age used so effectually and persistently in connection with the Edison phonograph. The president of the National Biscuit Co. stated some time since that he considered the trade-mark "Uneeda" worth at least \$6,000,000. It is probable that a valuation of at least twice that sum might be placed consistently on the representation of the fox terrier that has introduced the Victor to the world and which is introduced in every Victor advertisement and on every Victor product with a consistency and persistency worthy of emulation by every manufacturer who desires to get the full advertising value of a trade-mark.

In this age of advertising and of sales campaigns based primarily upon quality, the importance of the trade-mark as a factor in every market has increased steadily and rapidly. Indeed, many of the shrewdest and most progressive manufacturers in all lines are now of the opinion that trade-marks are far more valuable than patents. Perhaps the best illustration of this is found in the piano field itself, as distinguished from the player field. There are no basic patents in piano manufacture, and such patents as have not lapsed for the most part cover minor features which have no important bearing upon the popularity of the respective makes of instruments. But a trade-mark does not expire after

seventeen years as does a patent. Instead, it may, by being renewed at intervals of twenty years, be made perpetual, and it thus becomes, in a sense, the very cornerstone of a firm's reputation—an automatic letter of introduction that comes subconsciously to every new customer in the musical field.

There Are Two Classes of Trade-Marks.

Trade-marks may be described as of two classes, common-law trade-marks and registered trade-marks, though, as a matter of fact, almost all the

Trade-Mark Applications.

The room in which the file is kept at the U. S. Patent Office.

well-known trade-marks in the musical field come under both these designations. The common-law trade-mark is a name, design, symbol or insignia the right to which on the part of a firm or individual has been established by long usage. If a manufacturer of musical instruments has for years bestowed his name or any specific mark or emblem upon the instruments of his manufacture until this means of identification is firmly associated in the public mind with that particular line or product, he is considered to have established his prior right to the use of that particular mark. Should any unscrupulous competitor attempt to make "capital" for his own products by appropriating the time-tried mark of his rival, the infringer can be prosecuted on the ground of attempt at fraud under the common law.

The registered trade-mark is, of course, no different from the common-law trade-mark, except that it has been duly registered at the U. S. Patent Office in Washington. It should require no extended argument to indicate the desirability of having a trade-mark which has been sanctioned by Uncle Sam and for which, in a sense, he stands sponsor. The governmental registration often constitutes the best of evidence as to original use or prior right in a trade-mark claimed by two or more interests. To date upward of one hundred thousand trade-marks have been registered in this country, and the number is growing at the rate of hundreds a month. Incidentally, it may be noted that almost all the well-known trade-marks in the music trades are registered in foreign countries as

W. L. Symons,

Assistant Examiner of Trade-Marks, at the U. S. Patent Office analyzing a trade-mark with reference as to its eligibility for registration.

well as in the United States—for almost all nations have a system of registration similar to that of our own government. Until some half a dozen years ago a trade-mark could not be registered at Washington unless it was being used in commerce

TRADE-MARKS HAVE GREAT SIGNIFICANCE—(Continued from page 55).

with foreign countries, but under the present law it is only necessary that a trade-mark be used in commerce between the different States in order to be eligible for registration if it conforms to other requirements.

With reference to registered trade-marks the firms in the music trades are, in one respect, in a more advantageous position than the general run of manufacturing houses in any other line. And it all comes about from the fact that most of our music instrument manufactories, especially piano manufactories, are long established. If it wasn't for this long tenure many of the leaders in the musical field could not have the benefit of registered trade-marks, but would have to rely solely upon common-law trade-marks. Let us explain.

Trade-Marks and the Law.

Under the present law a trade-mark cannot consist merely of the name of an individual, firm, corporation or association, unless it be written, printed or impressed in some particular or distinctive manner. And this latter does not mean that the name may be merely printed in script or Roman letters or some fanciful type. It must be displayed in so unique a manner that any person seeing it would be impressed with the peculiar execution and arrangement of the lettering rather than with the name that is presented. This is a pretty broad and sweeping prohibition, and I think I hear many readers inquiring how it is in the face of such a

ban that Steinway and Chickering and Knabe and all the other well-known trade-mark names of the piano field "got by."

It was simply due, as above intimated, to their ancient origin. A newcomer in the piano manufacturing industry to-day could not trade-mark his own name, but there was a loophole provided in the law for the benefit of the pioneers in the industry. It was stipulated in the latest trade-mark law that registration should be granted without question to any trade-mark which had been in actual and exclusive use by an applicant (or his predecessors from whom he derived title) for ten years preceding February 20, 1905. Thus the older houses in the music trades have been enabled to secure Uncle Sam's seal of approval for trade-marks which would be barred were they originated during the present century.

Autograph Signatures as Trade-Marks.

A musical instrument manufacturer whose business is of too recent origin to enable him to take advantage of this exemption, may yet register as a trade-mark his own name or that of his firm if he can devise some distinctive method of displaying it, as above outlined. Or he may get around the prohibition by adopting his autograph signature as a trade-mark. Autograph signatures are always accepted without question at the Patent Office. Coined words are also looked upon with favor by the government officials, provided they are not descriptive or deceptive. Thus such words as Victrola, Grafonola and Amberola would doubtless be accounted ideal trade-marks if the respective manufacturers cared to register them. However, it is the custom in the music trades for a house to put out all its products under one common trade-mark. This is not so in certain other lines. For instance, the National Biscuit Co. has a different trade-mark name for every different kind of cracker it bakes.

Can't Trade-Mark Name of Living Celebrity.

It may be of interest to some persons in the music trades that Uncle Sam will not register the name of any living celebrity as a trade-mark without his consent. Thus if a piano manufacturer wished to name a type of instrument for Paderewski he could not secure registration of the name unless he had the written consent of the eminent artist. On the other hand, the name of Mozart or any other dead celebrity may be registered—just as we have an Apollo player.

One of the requirements of the U. S. Patent Office is that an applicant for trade-mark registration must submit five specimens showing the mode of applying or affixing the trade-mark to the goods. If this were interpreted literally it might involve musical instrument manufacturers in no end of bother, for it would, of course, not only be expensive to a prohibitive degree to ship pianos to Washington for inspection, but it would entail some inconvenience to even forward five duplicate instrument parts bearing the trade-mark. However, the officials at the Patent Office interpret this stipulation very liberally and they not only permit but even urge manufacturers not to send cumbersome

specimens to the Trade-Mark Division, but to merely file instead photographs of the instrument (or that part of the instrument) bearing the trade-mark.

BELIEVES IN ADVERTISING.

**Why Logan's Music Store in Salinas, Cal., Has
Built a Big Business in Talking Machines.**

One of the many thriving Columbia dealers on the coast is Logan's Music Store, of Salinas, Cal. This enterprising and attractive store is doing a

Logan's Attractive Display.

flourishing business in talking machines and records. The owner is a firm advocate of newspaper advertising, and carries a column advertisement in the leading daily paper of the town. The returns from this publicity have been so far reaching that Mr. Logan is gradually acquiring a substantial trade in near-by cities. He carries an extensive line of Columbia products and reports a steadily increasing call for the higher-priced styles.

THE FUNDAMENTAL TRUTH.

Do not lose sight of the great fundamental truth—the value of advertising—its trade-pulling power depends on individual advertising in your local newspaper over your own name. The royal route to success and the shortest route is by personal appeal—letting the folks at home know who you are, where you are and what you have to sell.

EDISON'S ACHIEVEMENTS

In the Field of Applied Electricity in the Last Thirty Years Have Revolutionized American Life, Says Miller Reese Hutchinson.

Discussing how American life has been revolutionized by thirty years of applied electricity, and what civilization owes to Thos. A. Edison's inventions, Miller Reese Hutchinson said in a recent article:

"On Oct. 21, 1879, a serious looking young man, in a little workshop in Menlo Park, N. J., produced a queer-looking glass bulb with a looped wire inside. When it had been made ready he carefully connected the ends of this wire to a galvanic battery. Instantly the interior of the workshop and the features of the inventor were brilliantly illuminated. Then, as if in pure ecstasy of accomplishment, its brilliancy increased tenfold and as suddenly ceased altogether.

"The light of that diminutive lamp flashed around the entire world. It bade sleeping mankind awake and bestir itself. It was the precursor of a period of feverish application and wonderful accomplishment, for each successive day since that momentous year has revealed a greater amount of human progress than was revealed within an equal number of centuries before.

"Communication between distant points, by means of little boxes and miles of wire, was extended. The human voice was recorded and reproduced. A swiftly moving car with much flashing of blue fire appeared and encompassed the earth with a network of rails and overhead wires. The broad expanses of canvas disappeared from the bosom of the deep and were replaced by the ocean greyhound and its trail of foam and smoke. The innermost parts of the human body were plainly revealed by the X-ray. The electric wave from sputtering, crackling sparks emitted by little coils of wire have reached distant shores and summoned help to the sinking ship. Human life has been conserved and suffering diminished by wonderful advancement in medicine and surgery.

"Power driven wheeled vehicles have appeared and increased as if by magic. Huge bird-like things have raised themselves and their human cargoes from earth and navigated the air. Villages suddenly became manufacturing centers, towns became cities and cities became metropolises in a night. The incandescent lamp has been the precursor of this wonderful development in every locality.

"Wherever the incandescent lamp is found there you will also find new buildings being erected, excellent educational institutions established, activity in commercial life, a happy, energetic, wide-awake populace. It is no exaggeration to say that the wonderful progress that has been made in the world in the last thirty years is due to electricity and Thomas A. Edison."

WATCH THE OLDFIELD BILL.

Everyone Interested in Fixed Prices Should Keep in Touch with Their Representatives in Congress—A Timely Letter from Edmond A. Whittier Well Worth Reading.

The Oldfield bill abolishing fixed prices, and which has been discussed in these columns so fully and so frequently, will come up for action by Congress at the December session. Hence the importance of everyone interested in the maintenance of prices on patented articles keeping in touch with their congressmen and senators and urging a strenuous and consistent opposition to this measure.

Edmond A. Whittier, of Washington, D. C., has recently written a letter to a prominent senator which is so excellent in its comprehensive grasp of the various arguments made for and against this bill that it constitutes good reading:

My Dear Senator:—

I thank you for the frank expression of opinion conveyed in your letter of Oct. 18, concerning the position taken by Mr. Oldfield and others with respect to "price regulation." May I respectfully suggest that you are in error in the idea that "nobody is attempting to attack the right of the patentee to get all the profit he can out of his patent?" Mr. Oldfield's position, as repeatedly expressed both at the committee hearings and in many newspaper interviews since, has been that some manufacturers are using their patent grants to exact an extortionate profit from the public, and, so far as I have observed, he has always confined his comment in this regard to four or five, or at the outside a half dozen, manufacturers out of the thousands in the country.

It is a matter of record that practically Mr. Oldfield's whole argument with respect to Section 2 of his bill, depriving manufacturers of the right to regulate prices, is based on the contention that a few manufacturers are making an exorbitant profit out of their patents.

It is extremely gratifying to be able to infer from your letter that you have no sympathy with a position which is neither more nor less than an attack upon the whole patent system as interpreted in a long series of decisions in our own federal courts.

The same principles have repeatedly been affirmed by the courts of Great Britain, and only last year by a unanimous decision of the Lords of the Judicial Committee of the Privy Council in a decision which determined the law for the entire British Empire. How completely the English Courts accept the principles of the Dick decision appears from the following language, which is remarkable, and I believe unsurpassed, for clearness of expression:

"The sale of a patented article carries with it the right to use it in any way that the purchaser chooses to use it, unless he knows the restrictions. Of course, if he knows the restrictions and they are brought to his mind at the time of the sale, he is bound by them. He is bound by them on this principle: The patentee has the sole right of using and selling the articles, and he may prevent anybody from dealing with them at all. Inasmuch as he has the right to prevent people from using them or dealing in them at all, he has the right to do the lesser thing; that is to say, to impose his own conditions. * * * It does not matter what they are, if he says at the time when the purchaser proposes to buy or the person to take a license: 'Mind, I only give you this license on this condition,' and the purchaser is free to take it or leave it, as he likes. If he takes it, he must be bound by the condition. It seems to be common sense, and not to depend upon any patent law or any other particular law."

In my letter of Oct. 10, to which yours is a reply, I expressed regret that consideration of the great fundamental issues involved in a legislative readjustment of our patent laws should be confused by the injection of comparative trivialities. In last week's "Independent," in an article entirely unrelated to the patent question, Prof. John B. Clark, of Columbia University, says:

"With the world crowding itself more and more densely with people, the art of extracting a living from it must be practised more and more effectively. We must invent new machinery, discover new raw materials, use new motive power. * * * Otherwise humanity will grow poorer with every passing decade."

Does not this give rise to thought that may well give pause to those who would precipitately lessen the value of prizes to inventive genius? Does not this suggest one such underlying problem concerning not merely the commercial welfare of our country but the future of humanity?

All this of course, is above, and beyond and beside the matter of pure expediency of "price regulation" wherein, to quote former President Cleveland's well-worn phrase, "it is a condition and not a theory which confronts us"; or as Governor Woodrow Wilson, of New Jersey, has candidly explained his change of attitude with respect to the initiative and referendum: "Theoretically I have always opposed it, but find now that practically it is working well."

Mr. Oldfield's opponents assert and are prepared to prove that under modern merchandising methods "fixed prices" protect the consuming public, and that in every community in this country "unfixed prices" are the medium through which it is daily defrauded.

This leads us to the last sentence of your letter in which you express the thought that Mr. Oldfield's bill attempts "to enforce the doctrine that he (the patent owner) ought

not be permitted, because of having a patent, to enter into contracts in restraint of trade"; on this point there can be no disagreement between you and the friends of "price regulation" for all the so-called antitrust features of the Oldfield bill have, so far as I know, practically unanimous support from patriotic men; but do you know that the only organized advocacy of the provisions of the bill abolishing "fixed prices" is by sensational department stores and mail-order houses which, I believe a little consideration will convince you, are operating just as injuriously in restraint of trade in merchandising as do the trusts in producing? They use the same method—ruinous temporary price-cutting—to squeeze the life from the small city and country merchant.

I respectfully submit that the proposal to deprive manufacturers of the right to regulate prices is directly in the interest of large aggregations of capital which the developments of the last few years show are seeking a monopoly of the retail field, operating through systems of chain stores and mail-order houses, and effecting a real and vast restraint of trade by rapid elimination of the helpless small dealer as a competitive factor.

"Price regulation" protects the weak against the strong—restrains monopoly—and fosters trade.

Please be assured that the friends of "price regulation" are consistently and just as earnestly favorable to other features of the Oldfield bill aimed at monopoly as they are opposed to Section 2 on account of its fundamental error.

Yours faithfully,
(Signed) EDMOND A. WHITTIER.

COLUMBIA WITH SONNENBERG CO.

The Prominent Piano House of Bridgeport, Conn., to Feature the Columbia in Its New Talking Machine Department.

The Columbia Phonograph Co. announces that it has just completed a deal whereby the M. Sonnenberg Piano Co., of Bridgeport, Conn., will install a talking machine department in its store to handle the Columbia line exclusively. R. F. Bolton, manager of the Columbia retail store at 89 Chambers street, was instrumental in completing arrangements for the new department. Shipments of goods will probably begin this week.

FOREIGN TRADE SOARS.

This Year's Imports and Exports Promise to Reach High Records.

(Special to The Talking Machine World.)

Washington, D. C., Nov. 6, 1912.

The foreign commerce of the United States in 1912 promises to establish high records in both imports and exports, according to a statement issued to-day by the Bureau of Foreign and Domestic Commerce for the nine months ending with September.

The imports in that period amounted to \$1,333,169,727, an increase of \$200,250,000 over the first nine months of 1911. The record year for imports was 1910, with \$1,557,000,000 for the entire twelve months. September of the current year brought in \$144,906,493, an increase of \$19,735,000 as compared with September, 1911.

Exports this year up to the end of September amounted to \$1,616,160,269, an increase of \$160,658,935 over the corresponding period last year. In 1911 exports for the first time exceeded \$2,000,000,000. September exports this year were valued at \$199,678,062, an increase of \$3,879,000.

Increases in both imports and exports this year were largely in manufactured articles.

LABOR AND ITS VALUE.

Labor, whether manual or clerical, whether the labor of the mechanic or that of sales manager, is reducible to terms of dollars and cents. However we may prefer to express it—this fact remains the same. For dollars and cents are the basis of every engagement and the more a man draws the more he must make good upon.

"If it's made we ship it the same day order is received"

Mr. Edison's New Cylinder Record

The Blue Amberol

has brought an influx of orders that is keeping our factory running night and day.

The first orders had not been fully shipped before jobbers and dealers were demanding further quantities. For months at least, the demand is certain to be tremendous and to greatly exceed our facilities.

This means that the dealers who get in first are the ones who will reap the harvest.

There isn't a doubt that the Blue Amberol is going to be a great selling proposition, as the dealer who delays putting it in stock will learn to his cost.

THE TALKING MACHINE SCORES IN VAUDEVILLE.

Miss Adelaide Francis, a Clever Singing Comedienne, Has Utilized the Graphophone in a Very Excellent "Sister" Act, in Which Tuneful Musical Numbers and Humorous Dialogue Are Indulged in Between Miss Francis and Her Voice in the Machine—An "Act" That Wins Much Praise Wherever Heard for Originality and Finish.

Just about the time one begins to feel that the talking machine has reached the limit of its power as an entertainer someone comes to the front with a brand new idea and there is a new field opened for that popular instrument. This time it is the Columbia graphophone that has made its bow as a vaudeville performer and as an interesting and satisfactory half of a "sister act." The new act using the graphophone, the conception of Miss Adelaide Francis, a clever young lady who has for some years been appearing in vaudeville as a singing comedienne, had its New York premiere at Keith's Union Square Theatre last week, and though not strongly featured proved one of the strongest numbers on the bill. The act is billed as "The Graphophone Girl," and has been fully protected by copyright.

In her act Miss Francis uses a standard model

Miss Francis, "The Graphophone Girl."

graphophone equipped with a motor selected with particular care for absolute regularity of action. A graphophone is placed on a pedestal on the stage and Miss Francis gives a short introductory talk, explaining what has been accomplished in producing the act. The voice coming from the machine can be heard clearly throughout the entire theater, a testimonial to the wonderful enunciation executed by the singer. Miss Francis refers to the voice in the graphophone as her "sister." Tuneful musical numbers and humorous dialogue are indulged in between Miss Francis and her voice in the machine.

"Just Dreams," "Tell That to Sweeney," and "Beautiful Rag" were included in the repertoire of musical numbers, and for an encore Miss Francis created a good deal of laughter with her witty remarks about the voice in the graphophone.

The vocal numbers and the dialogue are timed very carefully so that the voice of Miss Francis joins in perfectly and actually gives the impression that there are two persons on the stage.

In speaking of her new act to The World representative, Miss Francis said: "The managers have for years been demanding something new for vaudeville, and though I had appeared as a singing comedienne for some years, I decided that I could discover a new way in which to interest the audiences.

"Considerably over a year ago I conceived the idea of using the graphophone in my act and immediately started to make suitable records. In the beginning even the recording experts laughed at me. They thought it was impossible to so regu-

late the playing of the records as to get a satisfactory effect in two-part work. In the course of the experiments I made several hundred records and tried all out carefully before I decided that the result was worthy of presentation to the public. The difficulty in timing the records to a fraction of a second and securing a motor that would ensure the record playing at the same speed at all times, was for some time quite discouraging. Besides the making of the records there remained the choice of songs and patter

ARGUMENTS AGAINST OLDFIELD BILL VOID

In View of Recent Decisions of Supreme Court of the United States, Which Show That Courts Can Prevent Abuse of Patent Laws.

The recent decision of the Supreme Court of the United States in the so-called Bathtub case, definitely bringing patent rights under the jurisdiction of the Sherman law, is of exceeding interest to this trade and leaves Mr. Oldfield and his supporters without excuses for the so-called anti-trust features, which, as is well known, are practically all there is to the committee substitute bill introduced in Congress outside of the "Price Regulation" and "Compulsory License" sections.

This only demonstrates afresh that the courts are abundantly able to prevent every abuse of the patent laws. In recent decisions this has been proven, for the intolerable prolixity possible in the trial of patent infringement and the danger that the patent laws might afford refuge from the rigor of the Sherman law to combinations and conspiracies in restraint of trade, has been definitely removed in two recent rulings by the Supreme Court.

The decision in the now notorious Mimeograph case and the possible dangers in connection therewith have been entirely removed, for the Supreme Court of the United States has eliminated this bogie in the following words:

"The added element of the case at bar cannot

confer immunity from a like condemnation, for the reasons we have stated. And this we say without entering into the consideration of the distinction of rights for which the Government contends between a patented article and a patented tool used in the manufacture of an unpatented article. Rights conferred by patents are indeed very definite and extensive, but they do not give any more than other rights a universal license against positive prohibitions. The Sherman law is a limitation of rights; rights which may be pushed to evil consequences and therefore restrained. * * * The comprehensive and thorough character of the law is demonstrated and its sufficiency to prevent evasions of its policy 'by resort to any disguise or subterfuge of form,' or the escape of its prohibitions 'by any indirection.'"

By this action of the Supreme Court, exercising its ordinary function of controlling trial procedure and interpreting and enforcing the existing laws, every ground on which the Oldfield bill has been supported has disappeared.

This situation was discussed and analyzed in an able way in a lengthy article in the New York Sun of November 27.

MORE HASTE; LESS SPEED.

Many Merchants Jump at Solutions of Business Problems Without Testing Them for Weaknesses—Plain Common Sense Necessary

In selling, says a man of wide commercial experience, the fundamental difficulty is found in the lack of any very clearly defined ideals, the lack of definite aims, the lack of clearly defined ends to be attained, the lack of appreciation of methods, of the limitations which surround us, of the ethics that are behind the whole proposition.

Then, there is the failure to apply cool judgment and plain common sense in sales problems. I don't believe that in any other activity of human life there is so much of impetuous activity as there is in selling goods. The way people will get a glimmer of an idea and immediately hop in and proceed to "start something" is astonishing, and the percentage of times that they back out and decide that it was wrong, is shamefully great when we look over the whole field. There is an absence in sales departments generally of a recognition that something that is a variation, and certainly something that is radically different from established practice, is merely something to be tested out; an absence of the recognition of the fact that it is a lot cheaper to test it in a limited area, no matter how intensely you go at it in that limited area, than it is to dump it on the whole ground and do it that way.

TALKING MACHINE EXPORTS.

The Figures for October Presented—Reports Show Increases for the Month.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 6, 1912.

In the summary of exports and imports of the commerce of the United States for the month of October (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for October, 1912, amounted to \$223,307, as compared with \$203,211 for the same month of the previous year. The ten months' exportation of talking machines, records and supplies amounted to \$2,040,836.

KEEPING MEN SATISFIED.

"I decided, when I first went into business, that the best policy would be to keep my men satisfied," says a successful dealer. "After looking into the matter for some time I concluded that the best paying proposition for me was to take good men at their own valuations. The one thing I have always listened to with respect has been a request from such a man for a raise in pay, and in about nine cases out of ten I've given it."

DEALERS SHORT OF STOCK DESPITE EARLY ORDERS.

Calculations Regarding the Volume of Business in Detroit Have Been Upset—Dealers Think Conditions Would Be Better If There Were More Distributors—Styles Most in Demand Are Those Ranging from \$50 Upward—Max Strasburg Co. in New Quarters—Friendliest Feelings Existing Between Talking Machine Dealers—Marked Contrast to Those Which Prevail in Piano Trade—A Ridiculous Rumor.

(Special to The Talking Machine World.)

Detroit, Mich., Dec. 11, 1912.

The talking machine situation in Detroit, as the holiday trade swings into its full stride, is very similar to that of a year ago, in spite of all the efforts of the dealers to guard against it with advance orders. Both Victor and Columbia dealers are turning down orders for the highest priced machines because they cannot get the goods to deliver. The shortage in styles ranging from \$50 to \$150 in price is almost as acute. In Grinnell Bros. a few days ago a patron whose custom is highly valued paid \$75 cash for a machine to be delivered as a Christmas gift to a relative. There was none on hand and no definite tidings as to when there would be. The man left his money, however, the order to stand good until December 25. If the machine is not delivered by that time he will cancel.

A year ago all dealers resolved that they would salt away a good deal of stock a couple of months in advance and be prepared for the rush. The recent change in the Victors knocked out this scheme. As a result the Victor dealers do not know just how this year's holiday trade compares with that of a year ago, except that they are convinced by the stringency of machines that it is heavier. All Victor dealers are sold out of the old models and none can get the new ones as fast as he can sell them.

"What we need," said one of the largest dealers in Detroit to The Talking Machine World, "is an additional Victor jobber in this city, or another Western distributor. There are altogether too many talking machine dealers in Detroit and in Michigan for one jobber to take care of, no matter how hard and faithfully they may try. The money we lose just now through inability to get goods is lost forever. It is money intended for Christmas gifts. If we don't get it merchants handling some other line of goods will get it and it never will come our way again. I have appealed to about half the Victor jobbers in the country for goods with no success."

In the Columbia Phonograph Co., General's, branch store, which handles the wholesale trade for the entire State, arrangements were made to more than take care of the volume of trade which created such a shortage in December of last year. But the demand has beat them out. It has considerably outstripped that of last year, and the "worst is yet to

come," so the Columbia folks are cheerful. The trade seems to have about doubled. November, generally a not over-brisk month, this year turned in the best record since December of last year.

Out in the State Columbia dealers all were pretty well supplied in anticipation of what was coming, but even this early one or two of them have sent in orders for a replenishing of stock.

With the Columbia, as with the Victor, the styles that go best are those ranging from \$50 upwards. Manager Johns is anxiously awaiting the arrival of the new Columbia grand, which is expected to cut considerable of a swath here, especially if it gets in as a brand new thing to show for Christmas trade.

On the first of December Mr. Johns ordered all shipments of every kind to come by express until December 25. The additional transportation charges will not be a drop in the bucket compared to the loss of profits which would ensue if the machines should be delayed en route.

Detroit dealers are lucky in one respect. The lack of snow and the continuance of lake navigation has resulted in the annual freight congestion being indefinitely postponed. The fond hope is that it will be deferred at least until January.

For the present the Columbia wholesale house has discontinued the placing of additional agencies, having their hands full in taking care of the ones already on their list.

The Max Strasburg Co., "the Victrola shop," has at last got possession of the new store it has been campaigning for since last spring. The deal was closed very suddenly, Mr. Strasburg not knowing until November 25 that he could get possession December 1. The new store adjoins the old one on the east, and a connection door was immediately cut through and the additional show window dressed up in approved Victrola style.

The Strasburg Co. now has about three times the space of the original store, and talking machine space equal if not a bit larger than any other phonograph store in the city. The corner location gives a display window on Library avenue and two of them on Grand River avenue. In order to afford still more space for display and selling, Mr. Strasburg has moved his offices to the top of a couple of the demonstrating rooms.

The basement goes with the new store and will be used for demonstrating rooms. In the new store

ground floor a row of half a dozen demonstrating rooms will be built along the east side, while the west side will be decorated with the largest file of records in town. There are two entrances, one on each street.

"The only thing I am worrying about," said Mr. Strasburg, "is whether the jobbers will be able to furnish me stock enough to do business with. While I have been featuring the Victors, I will have to push the Columbias more, for I must take care of my trade in some way, even if it comes to putting in another line. In fact, for several weeks I have been selling all the Columbias I can."

The Strasburg Co. took on the Columbia line about six months ago and of late has been advertising it extensively.

Grinnell Bros., who are State jobbers for the Edison as well as for the Victor, are having a better trade in Edisons than last year by a large percentage. The Edisons have come to the front here very rapidly since the introduction of the hornless styles. As in the other makes of talking machines, the high priced ones are in best favor.

One good feature of the talking machine trade in Detroit is the marked degree of amity existing among all the dealers. It often is remarked upon because it is in such marked contrast to the conditions existing in the piano trade, where certain dealers hold aloof from the association and pay more attention to fighting their competitors' lines than they do to selling their own. In the talking machine business the dealers are willing and glad to help each other out if they happen to be in position to do so—their ability generally lying in the circumstances of one dealer being shy of goods and another having a few machines to spare.

A rumor has created considerable talk this week, but nobody knows its foundation. It is to the effect that some English concern has come forth with a talking machine of a value of \$200, which it proposes to sell in the United States at \$100, and sell along with it 16-inch records containing Caruso, Patti, General Washington and Cleopatra or somebody equally as good all for \$1, in competition with the 12-inch \$3 records of the American manufacturers.

To put it in the words of a jobber: "It is interesting, if true."

"Splitting the Other Four-fifths," a catalog devoted to the Edison dictating machine, has been supplanted by a very artistic and interesting book called "The Goose, The Typewriter and the Wizard." This book analyzes dictation and shows that by the use of an Edison dictating machine there is considerable economy in the production of correspondence. N. C. Durand, sales manager, reports a remarkable sales year with the Edison dictating machines.

In Justice To Our Regular Trade

We Are Not Soliciting New Accounts This Season
When the Demand Exceeds the Supply

We feel under obligations to supply our own dealers' wants in so far as factory shipments will permit and not solicit new business which to supply would mean taking out of the mouths of our own regular trade goods needed by them and placing it in the hands of dealers who under ordinary circumstances look to their regular jobber for their goods.

Some jobbers look upon this outside trade as "velvet" but in taking it work hardship on their regular dealers who are loyal to them the year round.

EASTERN SERVICE IS GOOD SERVICE. BUT ABOVE ALL IT IS JUST.

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

FOR EIGHTEEN YEARS TALKING MACHINES EXCLUSIVELY

DEALERS MAKE STRONG APPEAL FOR HOLIDAY TRADE.

Conditions on the Pacific Coast Excellent—Blue Amberol Records Have Given Edison Quite an Impetus—New Edison Exhibit in Pacific Coast Cities—Columbia Demand Most Active—Sherman, Clay & Co. Report Difficulty in Getting Enough Victrolas—Columbia Department at the Emporium to Open This Week—Other Items of Interest.

(Special to The Talking Machine World.)

San Francisco, Cal., Nov. 29, 1912.

November was a very good month in the local talking machine field, both for the jobbing and retail trade, regardless of whether Edison, Columbia or Victor. All types of machines moved well, and the prospects are brighter than ever for holiday trade. As the time draws nearer the inquiries and reservations for holiday delivery are beginning to come in great numbers. All the departments are making a strong appeal in the daily papers for holiday trade, by pointing out the fact that a talking machine can be enjoyed by the whole family, will be enjoyed for the entire year and for many Christmases to come. There is still considerable apprehension that there will not be enough machines available to fill the demand, but the jobbers are doing their best to get enough stock in the hands of the retailers so they will not suffer from a shortage.

A. R. Pommer, manager of the Pacific Phonograph Co., says the new Blue Amberol records have given Edison business quite an impetus this month, and now with a sample of the disc machine and a few trial records at hand, there is no reason to fear that interest will be falling off very soon. Mr. Pommer has arranged a fine demonstration room on the fourth floor, where those interested in the new disc machine can inspect it and give it a trial. For the benefit of out-of-town dealers representatives of the Pacific Phonograph Co. are making a tour of the coast territory exhibiting the new product. Last week a three days' exhibit was held at the Fulton Hotel in Fresno, which Mr. Pommer attended personally. All dealers in the section be-

tween Merced on the north and Bakersfield on the south were invited to Fresno at the company's expense and twenty-three out of a possible twenty-five responded. Twenty out of the twenty-three placed orders for the new machine, which Mr. Pommer considers quite a victory. The new machine was also shown in Sacramento and Stockton last week. Mr. Pommer says he attended the meeting in Fresno out of curiosity; that his travelers have been telling him right along that the Edison had good support in the country districts, and he wanted to find out for himself. He is now convinced.

E. W. Cyrus has been appointed sales manager for the home kinetoscope department of the Pacific Phonograph Co., and J. F. Thompson, formerly with the Clark Wise Co., has accepted the position of credit manager.

Babson Bros. have also received one of the new Edison disc machines, which Manager Bailey says is attracting much favorable attention. His people were getting a little impatient waiting for the new product, but now that they see just what it is like they are satisfied to wait. So long as there was nothing at all to show it was hard to keep putting them off. Blue Amberol records are selling beyond expectations, as are also the new diamond point cylinder machines, a shipment of which arrived during the month.

Peter Bacigalupi & Sons, according to Peter Bacigalupi, Sr., are enjoying a steadily increasing demand for Edison business phonographs.

C. J. Moore, traveling representative of the Columbia Phonograph Co., has just returned from a very successful trip through the Sacramento and

San Joaquin valleys. W. S. Gray, local manager for the company, is in Sacramento this week, where he went to spend Thanksgiving.

F. R. Anglemier, wholesale manager for the Columbia Phonograph Co., reports business for November splendid in all lines, from the Eclipse to the De Luxe. The whole force at the local headquarters is rushed to get out the orders, which are coming in daily.

In no department of the Columbia Phonograph Co. is more rapid progress being made than in the dictaphone department under Mr. Murray, who states that sales have more than doubled in the last year. Several large firms have installed a dictaphone correspondence in the last few months and a number are preparing to do so on the first of the year, when readjustments are in order generally. He also states that professional men are beginning to adopt the dictaphone.

E. W. Scott, owner of the Victor and Columbia talking machine department at Kohler & Chase's, made a short visit to the Eastern markets during the past month, and while in Chicago he says he had the opportunity of visiting several of the larger establishments, all of which seemed to be quite busy, but no busier in proportion to the population than they are in San Francisco. He is better pleased with the local field than ever before. November business was very satisfactory and interest continues to grow in respect to machines for holiday gifts.

Sherman, Clay & Co. has arranged a very attractive Victor window this week. The machine featured is the "Driftwood" and it is placed in a very pretty outdoor setting. With this appears scenes from the "Quaker Girl," which is running at one of the local theaters, and names of the Victor records. Already there has been quite a run on the records.

Sherman, Clay & Co. is making some alterations in its store, this time on the eighth floor, where repair rooms are being fitted up. A. G. McCarthy reports a very satisfactory month's business, both retail and wholesale, the only difficulty being to get enough of the new Victrolas. The company has been urging people to place holiday orders early, and a good many have already responded. Mr. McCarthy says they have a whole roomful reserved for holiday delivery, and there is no doubt but that this will be a banner year for the Victor.

For a while the Wiley B. Allen Co. was looking around for a new location in Sacramento, Cal., as its present lease would have expired on the first of the year, but arrangements have been concluded whereby it has its lease renewed for a number of years, and now, instead of preparing to move, it is planning to do considerable work on the old building, whereby it will be enlarged and improved generally. Frank Anrys, manager, has just returned from a trip up there to see about the remodeling. All departments will share in the renovation.

The formal opening of the new Columbia department at the Emporium will take place within a few days. It adjoins the piano department on the third floor and is up-to-date in every respect.

Among the recent out-of-town dealers in town purchasing goods were W. E. Allen, of San Jose; J. W. Husband, of Modesto, and N. L. Cody, of Merced, and B. R. Davis, of Stockton.

COLUMBIA LINE FOR SIMON.

Oldest Piano House in Spokane, Wash., Opens New Department and Features Columbia.

(Special to The Talking Machine World.)

Spokane, Wash., Dec. 3, 1912.

The Simon Piano Co., the oldest piano house in this city, with quarters at 911-15 Riverside avenue, has recently added a large and attractive talking machine department, where a full line of Columbia graphophones, Grafonolas and records are handled. The opening of the new department has been strongly featured, and the company is well pleased with the results. The deal with the Simon Piano Co. was closed through the local branch of the Columbia Phonograph Co., of which Willis S. Storms is manager.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

CALIFORNIANS PROTEST AGAINST OLDFIELD BILL.

Talking Machine Men's Association of Los Angeles Sends Letter to Senator and Representative Telling Why They Should Oppose the Oldfield Measure.

(Special to The Talking Machine World.)

Los Angeles, Cal., Dec. 6, 1912.

The Southern California Talking Machine Men's Association, which was organized last spring by some of the older members of the trade to bring about closer relations with each other, both in a business way and also as a social factor, has been much interested in the Oldfield bill for reforming the patent laws now before Congress, and the passage of which would undermine fixed prices at which talking machines are sold.

In this connection the local association, through Sibley G. Pease, the well-known organist and accompanist, and who is associated with the Andrews Talking Machine Co. in this city, has sent the following letter to Senator John D. Works and Representative W. D. Stephens, representative to Congress from this district, as well as several of the local papers seeking their influence toward defeating the Oldfield bill. As the letter may prove of assistance to similar organizations in getting after their senators and representatives, it is appended:

Los Angeles, Cal., Nov. 7, 1912.

Hon. W. D. STEPHENS, Los Angeles, Cal.

Dear Sir:—In regard to House bills Nos. 23192 and 23193, introduced by Congressman Oldfield, the Southern California Talking Machine Men's Association wishes to call your attention to a few points in the hopes that you will use your influence to defeat such unwarranted legislation.

The present dignity and high standard of the talking machine industry is directly traceable to the price maintenance. By maintaining the one-price system the manufacturers have the confidence of the dealers, enabling them to feel free to go ahead and do all they can with their immense financial backing to improve the instruments and to procure the highest class talent in the world for record making. Everyone is more or less familiar with the fabulous salaries so many of the artists receive in their concert and operatic work and it takes equally as much money to finance the talking machine contracts and the guarantees to procure their services so that their art may be brought within the reach of the poor as well as their more fortunate brothers.

The talking machine has done more to educate the American public in music than any other agency. There are now over sixty public schools in Los Angeles using them as a very necessary part of the school equipment, and it is only for the lack of funds that every school has not one. Think what it means for children of all classes being unable to hear and study the highest class of music as interpreted by the finest artists; of what it means for children to grow up under the influence of the best music instead of the "trash" of the day. We know of numberless homes, where small children are growing up knowing only the best music with which they have become familiar through the records. It is not to be doubted that the presence of the instruments in the homes of the most critical people is due only to the fact that they can obtain records of the greatest artists. The Victrola wouldn't have the dignified position of being in the Executive Mansion of this Nation if it had been featured as a cut-price article of a cheap department store. About the highest endorsement that can be given them is when music teachers (and they are our most particular critics) use the records of the artists in connection with their teaching.

The business is a most honorable one due to the trade regulations upon the dealers. The commission evil, for instance, is so regulated by the manufacturers that the only commission is to a regularly employed agent who devotes his entire time to the business. This is certainly quite different that, when in order to pay a commission to a com-

mission fiend, it is added to the selling price—that is, making one man pay more than the one who is not influenced by his supposedly kindly "friend" (the "fiend"). The second-hand instruments are also very strictly regulated.

A dealer, knowing that his prospective customer can buy the same instrument at the same price from his competitor, puts forth the best in him to give his customer the latest style of goods, the cleanest stock, the best service, and as large stock as his resources will permit; and, in fact, do all he can to please his customer. Now, we hold, with that kind of decent, legitimate competition, that a customer is getting better goods and service; that the business is "whiter"; that every salesman gives his best attention, and that certainly the public must be the beneficiary which is only possible under a one-price system and trade regulation by the manufacturer.

This business in Los Angeles is giving employment to over one hundred salespeople. Amongst practically all of the seventeen dealers there is probably an average investment of \$5,000; and from that up to \$50,000. There are also smaller dealers in every town in Southern California. This has grown to be an immense business here in just the last few years. This business if operated under cut-price conditions simply couldn't afford to employ salesmen of the required ability and the result would be that the customer would get the service that the average \$10 a week department store clerk gives. The writers of this letter are men of from nine to twelve years in this business and are in position to know whereof they speak.

The object of this letter is to show that the high standard that the talking machine business has attained is due to the one-price system, and trade regulation that the manufacturers now have the power to maintain. These are the things, coupled with the co-operation of the dealers, that have made the business what it is—and it is one of the greatest benefits, comforts and educational realizations that have come before this generation.

The Association represents the hundred and more salespeople and managers of the local dealers. We are the ones that daily see the advantages of the one-price system, and we hope to see the day when all business will be conducted on the same lines, raising the standard of American business and salesmanship and giving the public the benefits which are justly theirs.

We urgently ask you to do all in your power to defeat the Oldfield bills which we believe will demoralize the trade in which we as bread-winners are vitally interested, and believing that they are not only unwarranted but detrimental to American citizenship. Thanking you, we are

THE SOUTHERN CALIFORNIA TALKING MACHINE
MEN'S ASSOCIATION.

INTERESTING NEW CATALOG.

**Now Being Distributed to the Trade—Contains
Description of Various New Styles of Instru-
ments Put on the Market by the Columbia
Co.—Co-operation with the Dealers.**

A very handsome catalog illustrating all its many models, with a detailed description of the many distinctive features of its extensive line, is being distributed to the trade by the Columbia Phonograph Co., General. The cover of the booklet shows a very attractive scene in colors, and the back cover bears the Columbia phrase, "All the music of the world." No expense has been spared to make the catalog attractive in every respect, and its general appearance is in keeping with the high class and artistic finish of all Columbia literature. The Columbia dealers throughout the country are enthusiastic over the beauty of the new catalog, and many of them have written to the

home office expressing their hearty commendation of the new publication.

In order to co-operate with their dealers in every possible way, the Columbia Phonograph Co., General, has prepared a collection of line cuts of all the famous artists they have under contract for free distribution to their dealers. These cuts are exceptionally suitable for local newspaper advertising, and many active dealers have sent in requests for a substantial number of the new cuts. The artists are shown in their characteristic attitudes.

GILL CO. HAS KINETOSCOPE LINE.

C. W. Phillips, Edison Traveler, Makes Arrangement While Visiting Portland, Ore.—Selling the New Disc Phonograph.

(Special to The Talking Machine World.)

Portland, Ore., Dec. 3, 1912.

The J. K. Gill Co., of Third and Alder streets, this city, has become a jobber for the Home kinetoscope in this territory, the deal having been closed by C. W. Phillips, special representative of the Home kinetoscope department of Thos. A. Edison, Inc., during his recent visit to Portland. This line was formerly with the Graves Music Co. Mr. Chandler, Pacific Coast salesman for Thos. A. Edison, Inc., on the new disc phonograph, is meeting with great success in Portland and other Northwestern cities and has booked a large number of orders.

SPENDING MONEY IN SIGHT

And Plenty to Buy Talking Machines, According to the Figures and Facts Herein Set Forth—Is Up to the Dealers to Get Their Share of What Is Going.

There is more real spending money in sight this year than there ever was at any previous time. Here are some facts—plain facts in the case. You may accept them as they stand in this column or verify them for yourself if you prefer to gather your own data and have time to do it. Railroad earnings are, roughly, over twenty millions a month higher than they were last year. Bank clearings, not in any one locality, but from one end of the country to the other, run anywhere from 5 to 25 per cent. increase. Steel mills loaded to the gunwales with orders—and crops? Well, we are raising in this blessed year of grace three billion bushels of corn and, as you learned last month, we are producing ten billion dollars' worth of wealth out of the ground. Usually, under conditions of this kind one would be sure to find a period of frenzied speculation. In point of fact, there's nothing of the sort going on—the Stock Exchange is abnormally quiet. Which means that the recently developed wealth is likely to stay distributed among many hands for some time. That's the sort of money that means something to the retailer. It isn't "paper" money and it isn't stage money, says the Voice of the Victor, but real coin of the realm which can be counted and handled or spent or saved—or used to buy a Victrola.

**You will find the Edison Line
as you include more of
in your stock. Here**

Blue Amberol Records

—the wear-proof, practically unbreakable new cylinder Records of surpassing purity and naturalness of tone—have been received so enthusiastically by the buying public that you can make no mistake in ordering all of them at once. Two lists, 55 Blue Amberols in each list, are now available. Another will be completed very soon.

Amberola III

This is one of the latest Edison models and has proved to be one of the best selling instruments we have ever made. It is an unusually handsome hornless phonograph that you can offer at the modest price of \$125.00. The mechanism is the same as that in the famous "Opera" model. Amberola III is furnished in Mahogany (piano or dull) and in golden or weathered Oak. It won't stand long on your floor.

more and more profitable
the Edison improvements
are some of them.

The Four-minute Home Recording Outfit

Home record-making has always been a popular Edison feature. It will help sell Edison phonographs that will only play 4-minute records just as it helped sell the older types. And many people who already own Edisons are waiting for this outfit. It consists of a 4-minute Recorder, three blank records and a hand shaving machine. Order one, at least.

The Edison School Phonograph

This instrument opens up a new, broad field of profit. It has been designed specially for school use, with dust-proof case, metal stand and four shelves, each of which holds a box accommodating 24 records. This instrument plays the regular Edison selections, but we have prepared a special series of school records which dictate various exercises. Be sure to ask your Edison jobber for complete details regarding the School Phonograph. It offers an opportunity so big that you cannot afford to overlook it.

NEW YORK, DECEMBER 15, 1912.

THE curtain is falling on the year 1912, and before another issue of The World appears a new year will have been given birth. The year now closing, all things considered, has been a mighty satisfactory one in the talking machine field. Trade has been somewhat uneven, of course, but it has been larger in volume than any preceding year, and the present Christmas season will witness the greatest volume of retail sales of talking machines and records ever recorded.

This is based upon the reports of correspondents throughout the country, who state that dealers are unanimous on this point, but all complain of a shortage of machines, which condition manufacturers are doing their best to alleviate, although this is somewhat impossible owing to the enormous demands for the newer styles.

In this season of activity and rush it is quite evident that those concerns who have ever kept their establishments in the public eye by attractive displays, recitals and advertising, are winning the largest measure of support.

During 1912 there has been a great development of retail business and a large number of retailing establishments have opened talking machine departments which have been found to be profitable adjuncts to their business. This condition of expansion has obtained the country over, and from ocean to ocean there has been a broadening of business that would seem phenomenal if the merits of the modern talking machine did not call for such deserved recognition.

One of the most pleasing features in connection with the sales of talking machines during the past twelve months is the fact that high-priced machines and outfits have been steadily gaining in favor. There has been a most insistent call for machines costing from \$100 to \$250. There was a time when considerable doubt was felt about the American people being willing to pay high prices for talking machines, but this was in the dim and distant past, for apparently the higher the prices, the greater the demand, and there seems to be no limit to this branch of the trade.

Those who were skeptical at first now admit that this demand has come to stay, and there is no more speculation as to whether the people will buy, high grade talking machine outfits or not. The record for the past twelve months has settled that, and no query mark can be placed after the high-priced machines. Quality and values are the first consideration and price is secondary, therefore the greater the number of high-priced machines of merit put forth by the manufacturers the greater the respect for the talking machine.

The fundamental conditions throughout the country are cer-

tainly satisfactory, and every talking machine man in the land should do his utmost to increase the public interest in talking machines, for we must all do our share to stimulate public sentiment to the end that the special mission of the talking machine, both as an educator and as an amusement factor, shall be properly and correctly estimated.

There is plenty of work for us all during 1913—work of the right kind in interesting the public in the wonderful creations which are now being placed on the market by talking machine manufacturers.

The latter are certainly doing their share through a liberal use of the great public mediums, and this should be supplemented by energetic work on the part of the dealers, to the end that the public is interested still more largely and effectively in the talking machine. This collaboration, if entered into enthusiastically, will result in still greater achievements during the new year which will soon be with us.

THE evolution, present status and future of the talking machine, is the subject of an interesting talk with George W. Lyle, general manager of the Columbia Phonograph Co., which appears elsewhere in this issue of The Talking Machine World, and in which he emphasizes how the trade is gravitating toward the higher-priced and higher grade instruments, and makes this point very clear when he says that the people of wealth are quite as enthusiastic and quite as extensive users of the machines and records as the people of moderate means, but are more exacting as to the appearance and embellishments of the machines and more critical as to records and the artists by whom sung.

"This condition has opened up a market," remarks Mr. Lyle, "which is constantly growing in importance wherein machines and records de luxe are most in demand—a demand which the manufacturers are striving to meet. The rivalry for control of this market de luxe is of a character to compel closest attention to quality in every detail. It has been responsible for the production of a number of machines of artistic and decorative excellence not even conceived of in the earlier years, and the movement in this direction is only fairly under way.

"Every great artist of renown is under contract with one or the other great companies and as new stars appear in the firmament they are secured and placed under contract to cater to the amusement and edification of the eager public always ready to acquire the new selections issued by the manufacturers.

"The introduction of these more elaborate machines and these more artistic records has had an effect upon the industry as a whole not unexpected. It has lifted it upon a higher plane commercially and artistically and increased its prestige enormously. Houses which formerly felt themselves commercially too important to cater for the trade of talking machine patrons and users now rival each other in the magnitude and elaborateness of the display of machines and records stocked, in the prominence and frequency of their advertisements of this line. This condition of affairs is growing stronger day by day. The more desirable instruments and the more artistic records are being shown the preference in constantly increasing volume notwithstanding the greater expense involved. This is indicative of a healthy growth of the industry and an awakening of the public's appreciation of the better product offered which can mean but one thing—increasing demand for the product and augmented profits for those who have the forethought and the judgment to profit by it."

IN this modern age when scientific management is all the vogue, there are few business men who can steer the business ship without an appreciation of and a knowledge of credit, for they realize that credit is not only a necessity to the continuance of any enterprise, but it is as much a necessity as cash.

And this is just as true of the small country store as of the great corporation doing an immense domestic and foreign business. Both depend upon credit for their existence and prosperity. Nevertheless every day we find merchants who treat their credit as they do their health—they fail to realize its true value until they have lost it.

Credit men have well been described as the physicians of business, and they will tell you how many a man with a sound, healthy

business becomes a financial wreck within a few years, simply because he has abused his credit, just as a man who starts out in life with a sound, healthy body becomes a physical wreck within a few short years by excesses of dissipation. It is difficult for a man to regain lost physical or business health, because in many cases character has deteriorated with his business.

Character is one of the greatest assets in the giving of credit, for a man receives credit in proportion to the amount of confidence that men place in him. In considering the importance and necessity of credit to every business man, it is remarkable how careless some are regarding that prime essential to their commercial existence. The nature of their transgressions would indicate that they are generally the result of thoughtlessness, or an imperfect or false conception of the value of credit.

It is rarely an active abuse of credit, but rather a passive indifference and neglect, which are really mental ailments that weaken the will. And be it remembered that the will is the index of character. The ease or indifference which marks this retrograde step emphasizes the fact that there exists a moral as well as a physical law of gravity.

TOO many men overlook the importance of meeting obligations when they fall due, at least without putting themselves to serious inconvenience. They calculate that the jobber or manufacturer can well afford to wait—that it is only a trifling matter to him, whereas payment may mean a general disturbance of affairs at the time the bill is presented. Thus sophistry and temporizing supply the necessary justification. When the second statement comes along with the demand for a settlement, the merchant is full of indignation at what he considers the grasping nature of his creditor, and when the third demand materializes his indignation becomes acute, and he is apt to say some hard things about having always paid his bills promptly, and cannot understand why people should be afraid of not getting their money, and may add: "I have got the money now, but they can just wait for it until I am good and ready."

Should the salesman of the house arrive around that time he is sure to find the debtor's wrath in a white heat, and the poor traveling salesman is told about the dunning methods of his house, and, of course, the phrase is not overlooked that "I can get all the credit I want elsewhere."

This is the situation that comes up every day. Yet how unfair

and illogical it is. No business can be safe, or conducted correctly, without giving close attention to the payment of bills due, and business men, whether in the talking machine trade or elsewhere, should not be indifferent to the importance of this fact.

It is a well-known fact that the houses that are achieving success in all lines of effort are those that pay the closest attention to meeting their obligations promptly—in other words, keeping the closest supervision over the credit end so that the health of the business is not impaired.

AN able analysis of present-day affairs as they affect the talking machine industry is to be found in the very interesting interview with Louis F. Geissler, general manager of the Victor Talking Machine Co., which appears elsewhere in this issue of *The World*. It is not a superficial resumé of conditions, but a careful summing up of facts which emphasize that at no time in history was the future so full of promise for the progressive and aggressive business man as to-day. Mr. Geissler discusses in his usually able way the possible effects of the change in Administration at Washington, and its influence on business, and approves of an early settlement of the tariff question, so that there may be no disturbances to the present steady trend of prosperity.

Coming down to the immense demand for Victor talking machines and records, he says: "While we cannot take care of business at present, I may say (I hope without betraying too much egotism) that all Victor dealers are to be congratulated upon the fact that the Victor organization is a progressive one and is strong enough financially and willing enough to put the millions of dollars into extensions, which is now being done, in the effort to take care of the trade which is maturing.

"Our entire organization is alive to the condition and the tremendous shortage. We are doing all that is possible in all sections to get help and every other factory in the East is doing the same. We are positively fighting for labor; are no doubt robbing other factories and they are robbing us. We are refusing all new business and have ordered our travelers to cease selling goods temporarily and devote their time to development and educational work.

"When our new factories mature—which will not be far off—we shall have an immense output and have every hope of next year being able to take care of a larger percentage of the demand—no matter what it may be—than we are this year."

INTERVIEW BY "TALKER."

Mrs. "Silent" Smith Takes That Means for Answering Questions of Pittsburgh Reporter—Plan May Become Popular in Society.

At last there appears to be a ray of hope for the poor reporters who are sent out with explicit instructions from the city editor to get J. Pierpont Morgan's opinion on certain questions and not to come back without the interview. Maybe, if the practice of offering interviews through the medium of the talking machine gains ground, even the Sphinx may be induced to loosen up and give an opinion formed at his leisure.

Not long ago a reporter for a Pittsburgh paper tried to obtain an audience with Mrs. "Silent" Smith, mother of Anita Stewart, now the Duchess de Vizeu, to ask if there was any truth in the report that she intended to finance the royalist restoration in Portugal. She refused to see the correspondent, but sent a phonograph to speak for her.

The talking machine interview was published as follows: "I am Mrs. Smith. By marrying my daughter to Dom Miguel's son he forfeited his claim to the Portuguese throne. In order that I may become the mother of a Queen, my son-in-law must first become a King, and to do this he must get rid of my daughter. Therefore, I am not inclined to finance any attempted restoration, which, if successful, would probably entail my daughter's divorce."

VISIT OTHER STORES FOR NEW IDEAS

Take two weeks for travel, to visit other stores, or get acquainted with other people who are doing business like yourself. Or, go out and talk with

customers of your own and of your competitors, and find out how those customers feel toward you and your competitors, and why they feel as they do. Visit other kinds of business, just as a spectator, or as an interested inquirer. Ask questions.

Do not try to remember all of the questions or answers. Have a little pad in your pocket and jot down what you hear and see. Then spend about a week thinking it all over. Do not try to think hard, just let it "come to you."

The DITSON Pledge

Is to see that our clientele has a better service than ever—setting a new standard in Victor jobbing deliveries. The demands of alert Victor dealers—the kind that grow—are many and varied, and we furnish the "first-aid" in every instance.

We believe this year's Victor business will be of tremendous proportions, and it will pay you to have

The Fastest Victor Service

which is a requisite in this hustling age. We possess the largest stocks, the best organization and most up-to-date equipment in the Eastern half of the country.

This covers Victor machines, records and supplies of every kind, not to mention cabinets, needles and trade-marked accessories.

Will you let us tell you more about Ditson co-operation? A postal gets this information!

OLIVER DITSON CO., Boston, Mass.

It's bound to be quite a while before any instrument will be produced to even *look* like the new Columbia "Grand." (Price \$500). And a great deal longer before one can be produced that can compare with its *tone*.

Tribune Building, New York**

TRANSFORMING WEBER & FIELDS INTO PRINTED WORDS

An Accomplishment Much More Difficult Than the Ordinary Mortal Would Imagine, Particularly When Wanted for a Definite and Special Purpose.

As Related by a Member of the Columbia Phonograph Co.'s Staff.

I have had many humorous and peculiar experiences with the reproducing and the handling of records, but this one is the funniest that has happened for some time. We started to make Weber & Fields' records during their recent jubilee at the Broadway Theater, New York, and although these records have been on the market for a very short time, they have had a phenomenal sale, and their popularity is constantly growing. The records are very distinct and their tonal qualities are beyond criticism. After we had put the first batch of these popular records on the market and the public had become acquainted with their merits, we decided that we wanted the words of these records in printed form for various reasons.

In pursuance of this determination I visited the offices of Robert Sill, general publicity manager for the celebrated team of Weber and Fields, and told this gentleman what I wanted, with a lucid description of my pressing needs, etc. After I had finished with the recital of my tale of woe, Mr. Sill leaned back in his chair and gave one big, hearty laugh, that I must confess I did not join in. When he had finished with this burst of levity I ventured to ask him the whys and wherefores of this humorous aspect of the situation. In response to my urgent interrogations he informed me that there was no such thing as "words" for any act performed by Weber and Fields, for divers reasons. In the first place, Weber and Fields never rehearse for any performance, no matter for what purpose they are going to act.

This has been their rule during the many old place, they never give the same act twice and repeat the identical words or humorisms. In view of these facts, Mr. Sill informed me there was absolutely no authentic record of the performances or songs Weber and Fields had rendered for the production of Columbia records.

This information naturally caused me considerable chagrin, but the fact remained that I simply "had to get" those words, and it therefore remained with me to devise some means to achieve the purpose I have outlined. I thought that perhaps I could accomplish the task by means of taking the records down in shorthand, but this plan would have necessitated an enormous amount of time and labor on my part. After long and careful deliberation I finally evolved the idea of utilizing the dictaphone in conjunction with the graphophone in the following manner: I took a stock dictaphone and introduced it to a graphophone with a very big horn. I ran the mouthpiece of the dictaphone into the horn of the graphophone and put my Weber and Fields record on the graphophone. This part finished, I placed a shiny new cylinder on the dictaphone. Then I started them going simultaneously, the graphophone reproducing and

the dictaphone recording. This method of procedure I followed out with all the Weber and Fields records that I had on hand, and when they had all been recorded I placed the cylinders in the rack with those of the ordinary business letters and memoranda.

Before proceeding with the rest of my story, I would like to impress on the reader one salient feature of all Weber and Fields records. That is the fact that they always start their act with a

The Novel Method of Dictation.

particularly blatant band which was especially made for them. This band emits a noise like artillery, and to the uninitiated it often produces a feeling of insecurity and profound distrust for what is going to happen. In the usual course of events, my secretary came in and took these cylinders from the rack, and proceeded to transcribe them by means of her transcribing apparatus. As a rule, this young lady is very decorous, never uses slang day in and day out, and is a model of exemplary behavior, without seeming to possess a set of nerves. Ten minutes after taking these cylin-

The Effect of Weberfieldian Music.

ders from the rack, however, my secretary became a changed young lady. Without any preliminaries we were all startled by the appearance of a very much frightened and scared secretary, who, between sobs and hysterical exclamations, managed to say, "For the love of Mike, what have you been doing with these cylinders?" After the office boy had handed her smelling salts, etc., I was finally enabled to learn that the blaring of the band had utterly upset her composure, and what was more to the point, she positively refused to continue with the transcribing of "spooky" cylinders. It took considerable persuasion to convince her that there was no cause for fear, and after a while she transcribed all of the cylinders which permitted

me to use the printed words of the Weber and Fields records for the different purposes I had in mind.

Considering the fact that this transcribing was the culmination of three separate processes of reproduction, first to the original record, then to the dictaphone, and finally to the transcribing machine, the feat certainly speaks well for the efficiency of the dictaphone.

VISITORS TO EDISON FACTORY.

Visitors to the Edison factory during the past month include: O. Sillman and O. Sillman, Jr., of Westerly, R. I.; M. C. Koester, secretary Eilers Music House, Portland, Ore.; Edgard C. Smith, manager, W. W. Kimball Co., Chicago, Ill.; A. W. Toennies, Jr., Hoboken, N. J.; Lane Robertson, Indiana Music Co., Terre Haute, Ind.; J. E. Caldwell and Mr. Johnson, Quincy Phonograph Co., Quincy, Ill.; Hendery Allison, M. D., Kingsville, Tex.; Honey M. Wiswell, McCabe & Wiswell, Machias, Me.; W. D. Andrews, Syracuse, N. Y.; Louis Buehn, L. Buehn & Bro., Philadelphia, Pa.; E. E. Buehn, Buehn Phonograph Co., Pittsburgh, Pa.; M. A. Carpell, Herzog Art Furniture Co., New York; E. R. Daynes, Consolidated Music Co., Salt Lake City, Utah; W. O. Pardee, Pardee-Ellenberger Co., New Haven, Conn.; H. Harger Blish, Harger & Blish, Des Moines, Ia.; F. K. Babson, Babson Bros., Chicago; Vilh Finsen, Stockholm, Sweden; F. H. Silliman, Pardee-Ellenberger Co., Boston; W. H. Pine, Asbury Park, N. J.

"THE NEEDLE WITH A 'SOUNDING-BOARD.'"

Such is the slogan of the Bell-Hood needle, advertised in the present and in recent issues of The Talking Machine World and now quite extensively introduced in this and other countries.

The needle wears a small brass hood with its opening down close to the face of the record, which acts in a high degree as a sounding board or resonator, gathering over-tones and vibrations produced at the surface of the record which had hitherto been lost.

The principle is so obvious that it has quickly interested both dealer and talking machine owners; the dealer, as something new, attracting people into his store, where they may not only buy Bell-Hood needles, but records and other accessories; the talking machine owner because of its unmistakable superiorities of tone, which more and more grow upon the user.

The needle seems to come nearer bringing back the original sounds that went into the record than anything yet devised.

Doubtless the liberal policy of the manufacturers, the Bell-Hood Needle Co., of New Haven, Conn., in giving samples so freely to dealers to give out to all their customers, has had much to do with the quick growths of the new needle's popularity. Its salesmen, Mr. Cornet and Mr. Smith, are reporting ready and large sales.

The Right Record

— WITH —

The Right Surface

Fit Any Phonograph

The demand today is for an indestructible record with a smooth playing surface. A record free from knocks and gratings. A record that will not break or wear.

U. S. Everlasting Records meet these conditions in every particular, and are the only records fulfilling this demand.

The construction of U. S. Everlasting records is indestructible throughout—not partially. Dropping them to the floor does no harm. They will not break in handling. They are true to name—everlasting.

We invite—yes challenge comparison—with any indestructible or semi-indestructible record on the market. Compare the surface of U. S. Everlasting Records with any other so-called indestructible records by playing them side by side. A trial will give you ample evidence—the results convincing as to the supremacy of U. S. Everlasting Records.

The January list of U. S. Everlasting Records will meet with the unqualified approval of the most critical. Your copy is ready for you—also our complete new record catalog. Ask for them today and make the comparison suggested above. It is to your advantage.

NEWS FROM EDISON HEADQUARTERS

Anent Shipments of New Edison Disc Phonographs and Records—Straws That Show How the Wind Blows—Active Educational Campaign Being Conducted by the Thos. A. Edison Co.—Special Outfit Designed for This Purpose That Has Won Praise of Authorities.

F. K. Dolbeer, sales manager of Thomas A. Edison, Inc., Orange, N. J., reports that shipments of the new disc records and machines are being sent over the country in limited quantities, but it will be a little time yet before it can make large shipments.

Mr. Dolbeer has received many unsolicited testimonials from various people complimenting the house upon the new Edison disc machine, and to state that he is gratified at this pleasing reception is putting it mildly.

An incident about the sale of the Edison disc machines and records might be cited in the case of the Pardee-Ellenberger Co., of Boston and New Haven, Edison jobbers. When these new Edison machines were exhibited at the New York warehouses last July the Pardee-Ellenberger Co. placed a good-sized initial order. During the month of October at Boston was held the Electric Show, in which Thomas A. Edison was an exhibitor. That month's exploitation of Edison goods created such a demand that the Pardee-Ellenberger Co. canceled its first order and immediately issued another order three times as large.

At the coming dinner of the Fourth National Bank Organization, to be held at the Hotel Manhattan, there will be a demonstration of the new Edison machines and records, by request of that organization. Perhaps the trade does not know it, but this is the bank referred to as "James G. Cannon's bank."

The third list of Edison Blue Amberol records will be shipped as soon as manufacturing conditions will permit, and will be placed on sale as soon as received. These are practically all grand opera records and are to retail at the price of 75 cents each. Fourteen records are included in this group.

Quite a large amount of money and time is being expended by the educational department of Thomas A. Edison, Inc., under the management of W. H. Ives, who is featuring the Edison School Phonograph and records. This outfit is designed for educational purposes in the schools and runs from the second year to the eighth year.

For instance, in the third list of Blue Amberols there are records devoted to dictation and spelling, drill in rapid addition, table drill, twelve problems in business practice, in percentage, Lincoln's speech at Gettysburg, Washington's farewell speech, etc.

This Edison school phonograph is mounted on a metal stand equipped with casters. The metal stand has four shelves, each accommodating a box holding twenty-eight records. Mechanically the school phonograph is similar to the well-known Edison "Concert" phonograph. The motor is of double type, and will play five records with one winding, furnished with a horn.

These machines can take the new Amberol

records as well as the regular school records. The retail price is \$75 complete, records being fifty and seventy-five cents each.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Five Weeks.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 13, 1912.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

November 13.

Callao, 7 pkgs., \$597; Calcutta, 1 pkg., \$150; Cienfuegos, 18 pkgs., \$1,306; Colon, 6 pkgs., \$138; 10 pkgs., \$237; 6 pkgs., \$242; Curacao, 3 pkgs., \$143; Havana, 19 pkgs., \$2,858; 7 pkgs., \$319; London, 398 pkgs., \$1,054; Monte Cristo, 8 pkgs., \$415; Rio de Janeiro, 7 pkgs., \$315; 13 pkgs., \$1,160; Trinidad, 19 pkgs., \$822; Vera Cruz, 224 pkgs., \$1,205.

November 20.

Always appear in your department as if you were there to entertain your dearest friends. Your smile, your clothes, your language, your manner should be what you make them when you welcome those you love. Everything about you that attracts customers to you is sure to show its value in the increased number of your sales.

TO FORSAKE BACHELORDOM.

Max Landay Receiving Congratulations Galore on the Announcement of His Engagement to Miss Ida R. Fox, of New York.

Congratulations are being extended to Max Landay, of Landay Bros., 563 Fifth avenue, New York, on the announcement of his engagement to Miss Ida R. Fox, daughter of Mr. and Mrs. Benjamin Fox, of 45 West 91st street, New York. A reception will be held Sunday, December 15, at the home of Miss Fox's parents, and judging from the letters and telegrams of congratulation being received each day, there will be present a large number of both personal and business friends on the day of the reception. Mr. Benj. Fox is a well-known broker, who is prominent in financial circles. The wedding will probably take place next Spring.

Max Landay is known throughout the entire talking machine trade as one of the most indefatigable workers in the business and well deserving of the success he has already attained. Landay Bros. are progressive and active Victor distributors, with stores in the leading and most exclusive sections of the city. They recently opened a new store on 42d street near Broadway, which is meeting with noteworthy success. They have several stores on Fifth avenue and also have handsome player-piano and music roll headquarters at 563 Fifth avenue. Their player and roll business is achieving excellent results and their Victor business is breaking all records. It is due in a great measure to Max Landay's aggressiveness and unceasing energy that the firm of Landay Bros. is progressing so rapidly and has acquired such an enviable reputation in the talking machine industry. When seen by The World, Mr. Landay was too busy to say much about business affairs, but judging from his happy smile when his engagement was mentioned, there is no doubt but that hearty congratulations and good wishes are in order.

SIXTY PER CENT. INCREASE

In Columbia Business In November as Compared with a Year Ago Reported by R. F. Bolton.

R. F. Bolton, manager of the Columbia Phonograph Co.'s store, 87 Chambers street, New York, states that business for November was fully sixty per cent. better than that of last year, while from present indications, December will establish a new record. He reported a number of new agencies being established in New Jersey and Connecticut during the month.

Mr. Bolton added: "A feature of our present day trade is the demand for the expensive machines, the \$200 De Luxe being an especial favorite. Our record business is phenomenally active, the opera season being productive of a great demand for the records made by celebrated artists.

It is sometimes hard to understand why a fellow should go to the trouble of making a fool of himself when there are so many others anxious to do the job.

INDIANAPOLIS WANTS MORE GOODS.

Talking Machine Dealers in Indianapolis Too Busy to Talk—All Report a Good Talking Machine Trade—New Edison Disc Phonograph Much Admired—Enormous Columbia Sales—Anxiously Awaiting New "Grand."

(Special to The Talking Machine World.)

Indianapolis, Ind., Dec. 9, 1912.

The talking machine business in Indianapolis is sadly in need of humanizing influences. In the latter days it has been so that those engaged in the talking machine business haven't got a minute to waste on a friendly talk, and so this correspondent of The World has not much "news" this time—except that business is very good and that ought to sound good.

The houses here handling the Victor machines seem to desire that the men at the factory work day and night and then a little more. Miss Lazurus, manager of the talking machine department of the Aeolian Co. in North Pennsylvania street, would like a few more Victrolas, at least, to satisfy the demands of her patrons. By the way, Miss Lazurus is one of the "salesmen" who hasn't got time to talk these days.

The Stewart Talking Machine Co., also a distributor of Victor machines, says business never was and could not be very much better. A peep in at the company's store in North Pennsylvania street reveals machine after machine tagged "Sold."

A great many persons are ordering machines for holiday delivery. Christmas shopping has begun early and in earnest, as far as talking machines are concerned. Most of the managers and salesmen are putting in extra time three or four nights a week and some have sacrificed their seventh day of rest in the last few weeks.

The Kipp-Link Co. in Massachusetts avenue is displaying samples of the new Edison disc machine. Its patrons have been treated to hearing the new machine and words of praise have not been stinted. The Kipp-Link Co. can hardly wait until the Edison Co. ships some "regular" machines for the market. The enlarged home of the Kipp-Link Co. is in keeping with the new products of the Edison Co. The demand for the k'netoscope is on the increase.

Thomas Devine, local manager of the Columbia Phonograph Co., General, said business in the month of November was probably better than it ever has been in that month. The Columbia Co. is expecting to sell a large number of records by Orville Harold, the famous tenor. Harold, being an Indiana youth, is a favorite in the Hoosier State.

As a result of the advertising by the Columbia Co. the local branch has been selling an unusually large number of Regal Grafonolas, which is listed at \$40. It was first thought that this machine would not be a popular selling machine, but from

the demand for the Regal Grafonola there seems to be little doubt but that it will be a leader throughout the year.

Manager Devine and his assistants are anxiously awaiting the arrival of the Grafonola grand, and expect that it will be a huge drawing card.

The Hampton Printing Co. has given up the business phonograph agency. The successor to the Hampton Co. has not been announced.

F. G. SMITH CO. GRAFONOLA DISPLAY

Magnificent Department Opened in the New Bradbury Building in Brooklyn, Where a Full Line of the Various Styles of Columbia Talking Machines Are Shown in Pleasing Environment—Visitors on Opening Day.

The Columbia Grafonola department of the F. G. Smith Piano Co., 60 Flatbush avenue, Brooklyn, was opened last week to the public, and is one of the most complete and attractive in the Greater New York section. It is situated in the new building which has been erected by the F. G. Smith Piano Co., an imposing four-story structure, which is complete in every detail for the retailing of Bradbury pianos and talking machines.

Pianos, Grafonolas and graphophones share alike in display. On the main floor two handsome sound-proof booths have been erected. They are mostly constructed of plate glass, while the frame is white enamel and mahogany. They are large and give ample opportunity for demonstrating records with the best results, as the roof is high, giving the best acoustics, and nothing can be heard from the outside when the doors are closed. Behind this is a stock room, where many records are kept.

The second floor is given entirely up to graphophones, and here also are three plate glass booths similar to those on the main floor. A large stock of records is kept on this floor also. The top floor is also used for displaying graphophones as well as pianos. In the basement a room has been fitted up where the stock of records in foreign languages is kept and second-hand machines and pianos are displayed. The floors throughout the building are covered with handsome rugs.

In the front of the building a large sign weighing two tons, the largest electric display sign shown on the avenue, has been erected, on which are the words the "Bradbury pianos" and under it hangs the trade-mark of the Columbia Phonograph Co., General, also illuminated, being one of the first of its kind to be used.

On Monday last the new department was visited by E. D. Easton, president; George W. Lyle, general manager, of the Columbia Phonograph Co., General, and Hayward Cleveland, manager of the 23d street Columbia store, who, with F. G. Smith, N. M. Crosby, general manager of the F. G. Smith interests, and F. G. Smith, III., retail manager for F. G. Smith, made a trip through the building and expressed themselves pleased with its completeness.

A. Nelson Thomas is manager of the Columbia department, and John B. Affatica, assistant.

IMPORTANCE OF THE SOUND BOX.

Some Well-Considered Suggestions on Looking After Sold Machines That Dealers Will Find Profitable to Read and Act Upon.

The talking machine dealer who desires to expand his trade and build up a reputation for himself will find it most essential to keep in touch with his customers; in other words, to find out whether the machines or records delivered to them are giving satisfaction. This manifestation of interest on the part of the dealer is always appreciated by a customer and pays mighty big dividends in new trade. And this brings to mind the very excellent letter sent out by the Victor Co. last week, bearing upon the proper adjustment of the sound box.

As is well known, there is no part of the talking machine as important as a properly built and adjusted sound box, for if there is any fault in it the reproduction will be faulty. Other parts of the instrument may be defective in a more or less degree without very perceptibly affecting the tone qualities, but let the sound box be out of proper adjustment—in ever so slight a degree—and then on certain records and on particular notes, defective rendition will be obtained.

In this connection the Victor Co. says:

"Occasionally we are in receipt of letters from Victor owners complaining that their instruments are unsatisfactory, and further that local dealers are unable to remedy the matter. If the owner is conveniently located to the Victor factory we ask that the instrument be returned to us, and in a large percentage of the cases we find that the sound box has been injured by careless handling, and a mere readjustment of this particular part will make the reproduction perfect. Hence we are taking this means of asking for the return to us of any concert or exhibition sound boxes which are not satisfactory and which cannot be satisfactorily adjusted in local repair shops.

"We know that quite a few repairmen are unable to make satisfactory repairs to the sound box—especially if they are not thoroughly accustomed to repairing this particular part of the talking machine. We ourselves have difficulty in training our workmen to manufacture and repair any new part of our instrument. It takes months of practice to efficiently manufacture, adjust or repair such delicate mechanism; remember, the sound box replaces the vocal chords of the human throat, the reeds of an organ, or the strings of a perfectly tuned violin.

"Our ambition is to make every Victor owner a satisfied owner. Your part is to keep in touch with every Victor owner and if you find that any sound box on the market is faulty and your own resources are not capable of putting things right, please do not hesitate to return the unsatisfactory part to us for expert attention."

FAMOUS RECORD ALBUMS

SHOWING ALBUM CLOSED

When full of Records the Album will fit in a cabinet or book case.

These Albums are made to match Victor, Edison Columbia, and all other Cabinets.

Containing 17 pockets, made of strong tag Manila paper, for both single and double faced Records.

Each pocket is hinged on both sides with binder's cloth securely joined to a heavy board back, covered with a rich brown cloth; with emblematic gilt stamping on front cover.

THE "NATIONAL" RECORD ALBUMS are made by the most skillful workman. They possess qualities found in no others, and are sold at very low prices

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

(Special to The Talking Machine World.)

Boston, Mass., Dec. 12, 1912.

Everywhere one finds the holiday business in talking machines all that could be desired. All the jobbers and dealers have all the business they can attend to, and the only complaint one hears is the difficulty that they all are experiencing in getting enough goods to fill the demand. This of course applies more to machines than it does to records, although in the records there are certain popular numbers that it is difficult to furnish in sufficient quantities.

Talking Machines in the Schools.

One of the most interesting propositions before the companies to-day is that of the educational side of the talking machine business and the introduction of machines into schools. Take the Columbia Phonograph Co. for instance. Its latest accomplishment through the efforts of Manager Arthur Erisman has been the sale of a \$200 Grafonola to the city of Boston for use in the Boston Normal School. The sale, of course, was through the school committee, and with a complete set of educational records the students at this large and popular institution of learning will receive a new insight into the best kind of music.

Eastern Talking Machine Co. Exhibit.

The Eastern Talking Machine Co. had an interesting exhibit at the two days' exposition of the Boston Rotary Club, which was held in Horticultural Hall Dec. 6 and 7. To this organization belongs a large number of Boston merchants, and at the expositions only one line of business may be represented at any single show. The Eastern had a choice location in the lecture hall, close to the entrance to the large hall, and during most of the two days Manager E. F. Taft and W. J. Fitzgerald were on hand to explain the details of their machines, of which there were a number of the finest on exhibition. On the request of the management of the exposition a demonstration of the Victor machines was given on the platform, which was one of the highly enjoyable features of the exposition.

New Machines Attract Attention.

Manager Erisman reports that the new \$500 Columbia machines, though only on the market but a few weeks, have attracted considerable atten-

tion, and he has had direct orders for sixteen of them. That's certainly going some! Manager Erisman has just returned from Washington, where he went with his wife to spend Thanksgiving with her family. Mrs. Erisman remained behind to pay her parents a visit.

Victor Outfits in Schools.

W. J. Fitzgerald, who is devoting a large part of his time to the introduction of Victor outfits into the schools, has lately installed machines and complete sets of records in the schools of Beverly, Cambridge, Chelsea and Revere. Mr. Fitzgerald has several large prospects well under way.

Busy Times with Oliver Ditson Co.

Manager Winkelman, of the Victor department of the Oliver Ditson Co. warerooms, has been experiencing a large business, and one may enter this department any time of the day and find all the well appointed demonstration booths filled with eager, expectant customers. A recent caller upon Manager Winkelman was M. H. Andrews, a large Victor dealer at Bangor, Me.

McArthur Co. Has Columbia Line.

The A. McArthur Furniture Co., one of the largest furniture concerns of Boston, has lately taken on a Columbia department, and the fourth floor is devoted to a display of machines, records and appurtenances.

Victor Department at Chickering Hall.

The Victor department of the new Chickering warerooms has proved to be a very popular rendezvous of music lovers ever since it opened a few weeks ago, and Manager Ubert Urquhart has had his hands full in attending to customers; and Warren A. Batchelder, too, his right-hand man, has been equally busy. Several high-priced machines in Circassian walnut lately were sold, one to a well-known music lover of Winchester.

Victor Sale to Former Governor Draper.

W. J. Fitzgerald a few days ago disposed of a large order for Victor goods to former Governor Draper of Massachusetts. Another of Mr. Fitzgerald's large customers is Lucius Tuttle, former president of the Boston & Maine Railroad.

An Interesting Experience.

A Boston Victor dealer recently had an interesting experience which resulted in selling an outfit costing several hundred dollars to a man whom

he had never seen and in whose Maine city there was a Victor dealer, which fact either was accidentally or deliberately overlooked. The man in question wrote to the Boston house, having seen its advertisement in a newspaper. Upon inquiry, the customer was found to be perfectly reliable, and a large consignment of goods was sent him, for which he immediately tendered a large check in payment. A few days later the dealer was surprised to receive another check for \$200, which, it was explained in the accompanying letter, was for records that he was likely to buy in the near future. This is the sort of customer that many houses might well wish they had on their books.

Progress of White Department.

Under new supervision the talking machine department of R. H. White & Co. is making rapid progress as a popular distributor of machines and records. The department is now under the immediate supervision of C. M. O'Brian, who formerly was in the talking machine department of the Shepard-Norwell Co. Several rooms are now devoted to the business, including three compact and cozy demonstration rooms.

A Surprise for Wm. H. Atkins.

A novel use for a disc phonograph, one of the first products of Thos. A. Edison, Inc., was made November 30, when it served as a medium of congratulation from Thomas A. Edison, the inventor, to a man in Boston. The man in question was William H. Atkins, general superintendent of the Edison Electric Illuminating Co. of Boston, who had just completed a service of twenty-five years with the company. That morning when Mr. Atkins arrived he found his office resplendent with flowers, the gifts of the various departments; but the surprise came when a handsome disc phonograph was operated, and the first that Mr. Atkins heard was the hearty good wishes of his fellow employes, coupled with a presentation speech, for the phonograph was the gift of his associates. Another disc was then put on the machine and Mr. Atkins eagerly listened to the voice of Mr. Edison as he said:

"I understand that on December 1 you will complete a cycle of twenty-five years with our company. Permit me to offer you my congratulations on the great success you have achieved. If you continue to round out your jubilee year I hope to be on hand to congratulate you further."

Those of the company with which Mr. Atkins has so long and pleasantly been associated, and who had part in the presentation, got this disc machine direct from the factory, and as these new disc machines are not yet on the market this one created no end of interest.

Departments Amalgamate.

With the amalgamation of the talking machine departments of George Lincoln Parker and the George L. Schirmer Co., which went into effect the first of the month, the former named dealer is better able than ever before to handle his large and rapidly growing business. An additional room has been taken, and Charles Trundy is always "on the job" to attend to the wants of customers.

Two Additional Demonstration Rooms.

H. Rosen, of School street, Boston, has been meeting with such a call for Victor, Columbia and Edison goods lately that he has had to enlarge his quarters, and several partitions just put in will give him two additional demonstration rooms.

Leaves on Extended Road Trip.

H. R. Skelton, the hustling traveling man of the Pardee-Ellenberger Co., Inc., will leave town in a few days for a nine weeks' trip through New England in the interests of the Edison products. In that time Mr. Skelton will visit nearly all of the cities and towns where the Edison goods are sold.

A Pleasing Holiday Souvenir.

The M. Steinert & Sons Co.'s Victor department is putting out a handsome red leather memorandum book as a holiday souvenir, and it naturally is in

In this Holiday rush test the P-E service for Edison Goods. We are exclusively Edison and exclusively wholesale, maintaining the largest and most complete stock. All Edison Blue Amberols; other records, and all types of machines, as well as the Home Kinetoscopes.

Want our suggestion

in 1913?

The Pardee-Ellenberger Co.
BOSTON and NEW HAVEN

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

large demand, as it is both neat and useful. Herbert L. Royer, the manager of the Arch street quarters, reports an unusual scarcity of Victor goods, and, with the business considerably in advance of a year ago, there yet is less material with which to suit customers' demands. Mr. Royer has just had as guests Edgar Evans, of C. Bruns & Son, of New York, and Louis J. Gerson, who is in charge of the Victor department in the great Wanamaker establishment in New York.

Pardee-Ellenberger Co. Expansion.

The Boston quarters of the Pardee-Ellenberger Co. in Batterymarch street have been considerably enlarged and improved, this being absolutely necessary owing to the rapid growth of the Edison business. Manager Silliman now has a private office that any establishment might be proud of. It has two entrances, one from the general executive offices and another from the stock room. The walls are covered in two shades of burlap, and a large picture of Thomas A. Edison adorns one side. The room is comfortably furnished and in one corner stands a handsome disc machine in Circassian walnut, which emits the most exquisite music while Mr. Silliman entertains his visitors. Mr. Silliman says there is a tremendous demand throughout New England for the diamond point reproducer for the cylinder machines and for the Blue Amberol records, and it is difficult to always supply the call for certain of the most popular ones.

Visited Thos. A. Edison Factory.

Manager Silliman, of the Pardee-Ellenberger Co., was over to the Edison factory in New Jersey a few days ago. He was accompanied by Mr. Pardee, and the two gentlemen were entertained by C. H. Wilson, first vice-president of the Edison Co. They found the factory rushed with the manufacture of the new disc phonograph, for which there is everywhere a lively demand, and the general cry is, "When is this wonderful machine to be placed on the market?"

The Pardee-Ellenberger Co. is having a good call also for the two new types of concealed horn cylinder machines, the Amberola types 5 and 6 selling for \$60 and \$80.

Doing a Great Victor Business.

Francis T. White, manager of the Victor department of the Henry F. Miller Co., in Boylston street, reports a surprisingly lively business during November, with the first week of December having started in most encouragingly. Customers at this house are experiencing some difficulty in getting their goods delivered, owing to the tardiness in getting a sufficient number of machines, a complaint that is being heard from many establishments.

Popular Feature at Columbia Warerooms.

Not in a long time has so popular a feature been introduced in a talking machine establishment as the lectures of W. L. Hubbard on "The Opera," which this gentleman is giving at the lecture parlor of the Columbia Phonograph Co. Already Mr. Hubbard has taken up "The Tales of Hoffman" and "Louise," and his next talk, on the afternoon of Tuesday, Dec. 17, will be on "The Jewels of the Madonna." Mr. Hubbard's course consists of the new operas to be given at the Boston Opera House, whose publicity manager he is, and it may incidentally be said that never since the opera house was opened, four years ago, has the work of its publicity bureau been handled in so intelligent and high class a manner as now.

Messrs. Easton and Lyle Expected.

President E. D. Easton and general Manager George W. Lyle, of the Columbia Co., are expected here by Manager Erismann. They probably will remain in town for several days. Another expected visitor is H. A. Yerkes, the company's wholesale manager. Manager Erismann may be depended on to give the visitors a good time while they remain in Boston.

An Enjoyable Evening.

The Eastern Talking Machine Associates held an enjoyable evening on November 29. The members had a whist party, there was piano playing and vocal music, and the night was brought to a close with dancing, which was enjoyed by a large company.

A Caller at Eastern Co.

Vistors who enjoyed the hospitality of the Eastern Talking Machine Co.'s Boston quarters lately have been Walter Van Brunt, the singer, who makes records for the Victor, and "Maurice," whose dancing with Gertrude Hoffman's company a few weeks ago in Boston was one of the hits of the show.

GATELEY AND HIS GARAGE.

There was a man lived in a town,
And he was wond'rous wise;
He built himself a fine garage,
And praised it to the skies.

It was complete in every way,
From attic to the floor;
A janitor and fuel buffet,
And even folding doors.

A crisp November morn appeared,
He says to wife, "Go dress,
While I crank up the touring car,
We'll take a spin, I guess."

He threw the folding doors apart,
And backed the buggy out;
He waited 'till his wife appeared,
With rapture gazed about.

He took a turn towards the door,
But found the distance short;
He backed again to where he was,
And found that he was caught.

For just behind the buggy wheels
Were bushes fair to see;
And if he threw in the reverse,
The buggy'd climb the tree.

So there he was out for a ride,
And a worried look he wore;
So all the afternoon he rode,
'Twixt rose-bush and the door.

BUILDING UP A LARGE BUSINESS.

(Special to The Talking Machine World.)

Springfield, Mass., Dec. 7, 1912.

One of the busy talking machine spots in New England is the handsome talking machine department of Forbes & Wallace Co., of this city, which is under the management of Chas. T. Wilber, who was formerly in business in Waterbury. A com-

plete line of both Victor and Columbia machines and records are handled, and the department is conducted along enterprising lines with the result that a very substantial trade has been built up—one that is constantly growing.

DEAN'S FIREPROOF PLANT.

The Splendid Equipment of the Talking Machine Needle Manufacturer of Putnam.

There is much to be considered in the erection of a modern fireproof building of concrete brick, steel and heavy glass, besides the permanence and general convenience of such a structure. The lowering of the fire hazard is the all-important point. The destruction of a factory by fire means

John A. Dean's Plant at Putnam, Conn.

not only the direct loss entailed but the complete stoppage of business and the loss of trade to both the manufacturer and the dealer. The factory of John M. Dean, the prominent manufacturer of talking machine needles, in Putnam, Conn., is essentially fireproof and of the most modern type. Chance of Puritone needle users being held up for shipments through fire damage to the factory is as slight as is possible. That fact alone is worthy of earnest consideration, especially on the part of the trade. It eliminates the chance of business interruption.

If you have occasion to change the location of your business, remember that there is no advantage in springing it on the public as a surprise. Advertise it as long as possible beforehand.

CONTINUOUS REPORTS OF TRADE PROGRESS.

The Order of the Day in Baltimore's Talking Machine Trade—Gradual Increase Ever Since the Summer and Enormous Holiday Trade Expected—This Condition of Things Prevails Among All the Establishments Throughout the City.

(Special to The Talking Machine World.)

Baltimore, Md., Dec. 5, 1912.

As one of the local talking machine dealers expressed it, we have had such good results the past several months that we have been compelled to make continuous reports of progress and excellent trade that those away from Baltimore may begin to think that we should have at least one dull month to relieve the monotony of these progressive reports. Yet the way business has been going here, it is simply impossible to change the monotony of these reports. Business has been increasing right along since the summer, and instead of their being any signs of a decrease, there has been an enormous increase each successive month, until November has proved to be one of the largest months for sales that the local dealers have ever experienced. That this condition is general and would indicate that the talking machine business is in the midst of its era of prosperity, is shown by the fact that these reports are not made by any one dealer of any one machine, but they are reports made at all the stores. The reports of the excellent records made during November do not even except last December, which was looked upon as one of the standard months of all.

Tommy Gordon, proprietor of the Gordon Talking Machine Co., is making preparations for a handsome window display for the holidays for the Columbia and Victor lines. Mr. Gordon said that November was one of the finest months he has experienced since being in business, and that it far surpassed any month of last year. He has a number of good holiday prospects. Josie Fink, head salesman for the Gordon Co., made a number of

good sales of high priced machines during the month.

Manager Albert Bowden, of the Sanders & Stayman Co., reports good month for Victors and Columbias, both of which are handled by the firm. Operatic records were much in demand.

Another agency has been established by Manager F. A. Denison, of the local branch of the Columbia Phonograph Co., at Oldewertel's, 307 South Broadway. This is a new stand, although the firm handled these machines in a small way in connection with other lines of business at 227 South Broadway.

Manager Denison declares that November was the biggest month with the Columbia Co. yet enjoyed, excepting one, and that was last February. It even surpassed the sales made during last December, and he reports that the indications are that this month all records will be broken. Mr. Denison, who returned from Norfolk, where he closed a big deal, reports the Dictaphone business to be increasing every month.

"We sold three times as many machines during the month of November as we ever did in any one month before," is the way Manager Roberts, of the Baltimore and Washington stores of E. F. Droop & Sons Co. put it. Mr. Roberts said that in August he had enough machines—Victor machines—in stock to satisfy, as he thought, the demands easily up to December 31, but that the demand for machines has been so heavy that he has sold all of these and has had to buy just 988 more, and even with these additional machines, the present supply in stock is lower than it ever has been.

Manager Silverstone, of Cohen & Hughes, reports many substantial sales, and is among the

dealers who declare November to have been a great month for the Victor business.

Hammann & Levin are having a good run on the Victor line, and the Lyric Talking Machine Co., a new comer, reports a month which made Manager Stran feel glad that he got into the band wagon before the Christmas holiday, and while the good things were coming the way of the talking machine dealers.

Wm. Knabe & Co. are doing a big business with the Columbia line, as are the Hub Piano Co. and the Rosenstein Piano Co.

EXHIBIT NEW EDISON DISC LINE

At Land Show Which Closed Recently in New York—Visitors Much Interested in New Edison Disc Phonograph.

A popular exhibit at the Land Show held the latter part of November, in the Seventy-first Armory, New York, was that of Thomas A. Edison, Inc., of Orange, N. J. The company displayed two styles of their new disc phonographs, one of these being Model No. 250, which retails at \$200. Demonstrations were given at all hours of the day, and the exhibition attracted large crowds who heard the splendid disc records played on the handsome Edison disc phonographs. Hearty and sincere enthusiasm was expressed by the many visitors who stopped in to hear the demonstrations, and many questions were asked regarding the merits and features of this new Edison product. Vocal, instrumental and monologue records were on hand for public demonstration, and general approval was manifested by the large crowds who attended the performances.

A New York department store is said to expend \$80,000 a year on its window-decoration. Does that statement convey an important idea to you?

When you see a good advertisement, one that makes you want the goods, no matter where it is or what it advertises, cut it out and save it.

HOW TO CONDUCT AN ADVERTISING CAMPAIGN.

Particularly in the Newspapers, the Subject of an Interesting Address Recently Delivered by C. W. Page, Advertising Manager of the Rudolph Wurlitzer Co., Before the Cincinnati Advertising Club—Treats of the Advertising Question from Various View-points and in a Manner That Instructs and Impresses, Because It Reflects the Utterances of a Practical Man Who Has Won a Large Measure of Success in This Field.

C. W. Page, advertising manager of the Rudolph Wurlitzer Co., Cincinnati, O., delivered a very interesting address before the Cincinnati Advertising Club on "The Newspaper Advertising Campaign—How to Plan and Execute It," which, apart from the fact that Mr. Page is in close touch with talking machine developments in the retail and wholesale fields, is of general interest, because it demonstrates that Mr. Page has made a profound study of the advertising question in all its phases.

After some very pleasing introductory remarks, Mr. Page got down to the meat of his address and said:

I believe I may give you just one thought on this subject, if no more. In all my advertising work I follow a plan that I learned at school. I believe that this plan can be successfully used in the solution of any business problem. I have never seen it stated in any book on advertising, at least not in the shape I have in mind.

The plan is the one that is used in the study of geometry. I remember my old geometry teacher used to say there was no problem in life that could not be worked out most easily by the plan he taught us in the geometry class.

First—You consider what you want to prove or do.

Second—You consider what it depends upon.

Third—You consider what facts you have given towards the proof.

Fourth—Comes the proof or accomplishment, the Quod Erat Demonstrandum.

Marshal your facts under these headings and you can see you have got your advertising proposition on a fairly simple and tangible basis.

Now, when you consider an advertising campaign—we will say for a local store—take a blank sheet of paper and write across the top this heading: "What Does This Store Want to Accomplish?" That is to say, what do we hope to get out of the campaign?

I am trying to give you a plan that can be reduced to writing. This is a hard thing to do. If this business could be reduced to simple written formulas that any two-by-four advertising man could carry out, genius would not command the premium that it does, and the shrinkage in our pay envelopes would make a noise like the sigh of the wind through a forest of pines. I think you will all agree that this would be a misfortune, if not an actual calamity.

Let's fill up the page with a list of things that we hope to do for the business. Do not overlook a single item. Go over these points thoroughly with the old man (no disrespect intended) and set down every single thing.

Pin him down to facts. Make him particularize. Consider the store's standing. Is it what it should be? Is it what the proprietor would like? What do you, as an outsider, and looking at the proposition from the standpoint of the public, think of the possibilities of the business?

Ask a number of your acquaintances what they think of the store. If you ask a hundred people this question and average their replies, you will come very near to knowing how the store stands.

Has your store a quality reputation? Has it been bidden for business on price alone? Supposing it has, what are the chances of infusing a little quality atmosphere, so that the volume of sales can be maintained without the everlasting strain of thinking up a new and different price argument for every advertisement.

You may infer from what I have said that I like a quality store. Certainly—but do not misunderstand me. I have seen stores that sported a false brand of quality. I do not believe in the kind of quality that resolves itself into crusty snobishness and which often takes the form of, "We don't have to advertise."

I never put quality atmosphere ahead of volume of sales. Sales must ever be the most important thing, but I would weld the two together, for when you give a store a quality reputation you make it easier to maintain the volume of business.

There is a point that often comes up in this connection, and it is this: Can a store that has advertised for business pretty much on price alone take a different tack and go after a quality reputation? I believe that it can be done in many cases. I have in mind the case of a large department store in Chicago which is doing this very thing now. This store I don't think could have been called a quality store by any stretch of the imagination several years ago.

They changed advertising managers, I understand, have just completed a very fine new building, and where their full-page and double-page spreads in all the Chicago papers formerly reeked with big price figures and headlines featuring every imaginable type of special sale, they have now taken on a most dignified and decent

tone, and are running a campaign along lines that might be mistaken for Marshall Field's or Wanamaker's.

From all accounts, the entire complexion of the store is completely changed, and if this can be done in the case of this great institution, one of the largest in the country, it ought to be possible with smaller stores, whose status is less positively fixed.

One of the points that may come up in deciding what the advertising campaign should accomplish is whether the store should make a feature of the special agencies it enjoys—that is, the well-known trade-marked goods that it represents—and commit itself to this proposition as a reputation builder, or whether it would be wise to get away from this policy and arrive at a point where the public will look to the store's endorsement of an article rather than to the trade-mark name on that article.

The question of what the advertising campaign is to accomplish should be gone over in conference with the heads of the firm and such other members of the organization as have an interest in the matter.

Department managers should have a say as to what their individual aims are and what is the present status of their branch of the business.

I emphasize the question of reputation because reputation is the backbone of business and no advertisement should be put out without due thought to its effect on the reputation of the house.

Special offerings may pull a hundred buyers in to-day, but in the long run, year in and year out, it is the store's reputation that determines the annual volume of trade.

Therefore, every advertisement we put out should be constructive and cumulative. I like to feel that every advertisement is as a block of granite in a great temple of business that will grow with every year, every season—yes, every day, until we have a structure that men and women will point out to strangers as one of the landmarks of the city.

Mr. Page then proceeded to pass on to the second section of his address, namely, "What Does the Success of the Campaign Depend Upon?" and answered this question by saying, in brief, that success depends upon having a free hand in the writing and placing of the advertising—upon the selection and co-operation of the right papers for the proposition—upon being allowed time enough for a real try-out of your ideas, a year at least, and added: "The best type of advertising campaign will hardly produce large immediate results, for success depends upon a hundred and one specific things that will be suggested by those desired to be accomplished."

He then discussed the essential assets at the start of the campaign, and set down such items as the advertising appropriation; the reputation of the store; the list of well-known merchandise handled; the particular newspapers that are suited to the proposition, and the object in view; some facts about competitive houses; facts about the sales force, its personnel, selling methods, etc., and added:

"This general plan that I am outlining I would reduce to writing and use as the groundwork or foundation for my advertising campaign. I would call this my advertising and merchandising analysis, and I would see that the analysis covered every feature of the business along the lines I have indicated."

Space unfortunately prevents us from quoting in full this part of the address, which is very vital and very interesting, but he makes several important points which briefly put are as follows: "The idea of a store having a certain space in a paper on certain days of the week and throwing into it anything that happens at hand is wrong.

"There is one thing about the advertisement itself that I want to emphasize particularly, and that is that it should be honest all the way through. It must be honest if it is to succeed.

"The man who lies in his advertising to-day is very foolish, for a false advertising statement never fails to react and thus minimizes the chances of success.

"I cannot conceive of any stores succeeding to-day on any basis except that of putting out honest advertising and treating every customer

so well that the customer will direct his efforts to that store.

"Many writers seem to study deeply over excuses for prices that are meant to appear low. I don't think the public pays one-hundredth as much attention to excuses as to the price itself. Establish a reputation for your store for honesty and fair dealing, and you do not need excuses for low prices."

Mr. Page then gave a practical illustration of the different features of the advertising campaign as used in his own work, and which he has found most successful. He spoke of the advertising appropriation, how it is figured on the basis of percentage of net sales; how every department of the business is allowed its appropriation on the same plan as the business as a whole, and how the percentage of advertising cost is determined in each department individually, and has to make its own showing. He then took up how the expenditures should run by months, the special line of advertising to be conducted, and the details showing the expenditures and the results in the way of sales.

He is of the opinion that the ideas of department managers should always be considered by the advertising man, and that the heads of the house should see proofs of the advertising. He descanted on the value of the scrap book for keeping track of newspaper ads, and also makes it a point to study the circulation, gains and losses, of the different papers. In closing he said:

"I do not think that there is any magic in advertising. It is just plain, every-day horse sense, that goes plugging along, falling down every now and then, but learning a little each time from the experience of your own errors, trying not to make the same mistakes over again, trying hard to improve and to cut down on the advertising bills wherever it can be done, guarding the old man's money bags with jealous care, the same as if they were your own, and never letting go of a full-grown golden eagle unless you see a fair chance of getting a flock of husky young eagles in return, or at least a setting of eggs."

SHOULD INFORM POST OFFICE.

Merchants Who Intend to Use the Parcels Post, Which Goes Into Force January 1, Should Inform the Postmaster-General as to What Extent It Will Be Used So That He May Be Able to Supply Adequate Machinery.

(Special to The Talking Machine World.)

Washington, D. C., Dec. 9, 1912.

Business men alert to the importance and value of the parcels post and who intend to take advantage of it must let the Post Office Department know about it, provided they want adequate machinery ready to take care of the parcels when the system goes into operation next January. Frank H. Hitchcock, Postmaster-General, intends to conduct the system on a strictly business basis. He has written letters to every postmaster in the United States asking him to interview merchants and report at once to what extent the new service is to be used.

Mr. Hitchcock believes that when he gets this information he will be able to establish a nationwide service of large proportions, with the least possible friction and expense. He hopes to be able to give efficient service from the start, instead of working up gradually to that point.

Under the direction of Joseph E. Ralph, director of the Bureau of Engraving and Printing, a series of stamps for the parcels post have been printed and are being distributed to the 60,000 post offices.

WHAT THE "FOLLOW-UP" DOES.

Following-up inquiries and prospects on mailing lists does the following:

"Cashes in" on the manufacturer's advertising.

Brings new trade to the store.

Increases sales in all departments of the store.

Increases profits.

Increases prestige of the store—as a wide-awake modern merchant.

You will get personally acquainted with many good prospective customers, who if handled in a businesslike way, may be permanent customers.

AN ARMY OF COLUMBIA BUSINESS BOOSTER'S.

Counterfeit Presentments of Some of the Men Who are Helping to Expand the Wholesale Business of the Columbia Phonograph Co., Gen'l

THE MEN WHO MAKE COLUMBIA PROSPERITY.

An Impressive Showing of Columbia Wholesale Hustlers to Be Found in Group of Portraits Which Appear on the Opposite Page.

Some idea of the extent and growth of the business of the Columbia Phonograph Co. may be gleaned from the photographs on the opposite page showing a partial number of the wholesale force of the company. With the exception of General Manager Lyle, Assistant General Manager Willson and Advertising Manager Metzger, every man on the page represents a member of the staff who is actively connected with and directly responsible for the procuring of Columbia wholesale business.

This efficient staff of wholesale representatives has done wonderful work in the past few years, and their unceasing labors have aided immensely in the development of the record-breaking wholesale business the Columbia Phonograph Co. has closed this year. The past season has exceeded all expectations of the officers and staff of the company, and there is every prospect of this encouraging condition continuing.

The development of the wholesale end of the talking machine business is undoubtedly one of the most important, if not the most important, departments of the Columbia Co.'s enterprise, and the steady advance of this concern can be traced to the energetic and arduous work of the efficient members of the wholesale staff.

By referring to the numbers appearing on the photograph on the opposite page and comparing with those which appear herewith, the identity of each member of the Columbia wholesale staff will be at once revealed.

In addition to the partial number of wholesale representatives shown in this photograph, several photographs were received too late for publication, from J. C. Wheeler, manager of the Columbia Phonograph Co., General, Minneapolis, Minn.; W. J. Magowan, manager of Columbia Phonograph Co., General, Springfield, Mass., and A. Glenn, manager Columbia Phonograph Co., General, Portland, Ore.

BLACKMAN'S ATTRACTIVE WINDOW.

The Blackman Talking Machine Co., 97 Chambers street, New York, has just installed a novel window display, which is attracting considerable favorable attention because of its unusual features. The display referred to shows a miniature stage with a full military band seated on the platform. In the rear of the stage is constructed a revolving display of the portraits of six world-famous band masters whose organizations have produced selections for the Victor Talking Machine Co. These portraits are reproduced in colors and show the band masters in official uniforms they use when leading their bands. Below the display is the following inscription: "A Victrola in the home this Christmas means all the world's greatest bands at your command every day in the year." This attractive addition to the Blackman show window attracts the attention of many passers-by, and it is undoubtedly of considerable advertising value. Victor band records are noted for their clear, deep tone, and when reproduced on one of the latest types of Victrolas charm their listeners with their remarkable tonal qualities.

Professor Frederic E. Goodwin, head of the educational department of the Columbia Phonograph Co., General, gave a forceful and well-presented talk last Monday at the annual convention of the public schools teachers of the city of Pittsfield, Mass. The subject of Mr. Goodwin's speech was "The Application of the Grafonola to the Course of Study." A Columbia machine was used to illustrate the points brought out by Mr. Goodwin, and

the speech was enthusiastically applauded by the large gathering of teachers who were present. In addition to the school teachers, there were also in attendance a number of representatives from music clubs in the adjoining towns and several well-known musicians.

CELEBRATES GOLDEN JUBILEE.

M. W. Waite & Co., Ltd., Piano, Talking Machine and Music Dealers in Vancouver, B. C., Established in 1862—Its Advance.

(Special to The Talking Machine World.)

Vancouver, B. C., Dec. 9, 1912.

The well-known house of M. W. Waite & Co., Ltd., 558 Granville street, this city, whose reputation extends throughout the Pacific Northwest, is celebrating this week the golden jubilee of the establishment of this business, which was founded in Victoria in 1862, the year in which that city was incorporated.

Progress made by Waite & Co. has kept pace with, and in fact has gone somewhat ahead, of the growth of Victoria, until to-day the store is recognized as one of the musical centers of the city. Several prominent pianos are handled as well as Victor and Edison talking machines.

FOR SALE.

Retail Victor and Edison contracts and stocks, with modern fixtures; \$10,000.00 investment; city of nearly 100,000; competition comparatively small. Write for particulars: Address "Box 300," care Talking Machine World, 373 Fourth Ave., New York City.

A REGINA CO. ANNOUNCEMENT.

The Regina Co., 47 West 34th street, New York, announces a new model of pneumatic sweeper, model "F," which retails for \$10.50. It is 18 inches long, 8 inches wide and 7½ inches high, not including the handle. It weighs only 12½ pounds and is fully guaranteed. The model "F" is strictly a one-person machine, as easy to handle as an ordinary carpet sweeper, but vastly more modern and efficient. L. T. Gibson, secretary, tells The World man that the demand for model "F" is far in excess of deliveries and is a most rapid seller with the trade.

Don't say, "Here's something just as good." That phrase does not sound right to a lot of people.

Business Opportunity

A Retail Talking Machine Shop, holding a Victor contract, fully equipped, doing \$20,000.00 a year, FOR SALE. Possibilities unlimited; located in a central Western city. This is a fine opportunity for a live Talking Machine dealer. The present owners have other interests which demand their close attention. This opportunity is unusual, and if you are at all interested it will pay you to investigate at once. All stock, furniture and fixtures are up to date and in first-class condition; long lease, and location ideal. For full information address "Business Opportunity," 373 Fourth Ave., care Talking Machine World.

LYON & HEALY'S
FIBRE NEEDLE CUTTER

FINEST TOOL STEEL

THE BEST THING
OF THE KIND

Send orders for this to LYON & HEALY, Chicago

Fibre Needles

THERE is among thousands of the Victor owners a large discriminating class who, after a few trials, will use Victor Fibre Needles exclusively for playing their records, and we feel sure that as music lovers become more familiar with Fibre Needles their use will become more general.

While the volume of sound of Victor Records when played with the Fibre Needle is subdued as compared with that produced with a steel needle, it should be thoroughly understood that the tone quality is thought by many to be more beautiful.

Victor records may be played with Fibre Needles any number of times without the slightest deterioration. We have heard Victor records that have been played with Victor Fibre Needles from 7,000 to 12,000 times and their every note was just as brilliant as when records were new.

Liberal discount to trade. LYON & HEALY, Chicago

Guide Which Saves All Waste

The cutter has a self-acting stop which prevents cutting away more than enough; thus a pin can be played twelve or fifteen times before becoming too short. Also a receptacle for retaining the needle clippings. We give our absolute guarantee with every cutter sold.

Retail
Price \$1.50

Dealers:—Your trade would like this. LYON & HEALY, Chicago.

Correct Leverage for a Perfect Cut

The L. & H. Needle-Cutter or Fibre Re-pointner we now offer to the user of Fibre Needles is the result of four years' exhaustive experiments, and we can safely assert NONE BETTER CAN BE MADE.

The lover of GOOD music will find this cutter invaluable. The upper blade being pivoted above and back of cutting edge, insures perfect contact with lower blade. Both of these blades are made from finest tool steel and properly tempered, and with ordinary usage will last for years without sharpening or renewal.

Dealers:—You ought to push this. LYON & HEALY, Chicago.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., Dec. 9, 1912.

The same conditions exist in the trade as last month, only in increased degree. The demand from the dealers for machines is something terrific, and in view of the shortage has driven the jobbers almost to distraction. The market has been crowded with dealers trying their best to get positive assurances from the jobbers as to what they might expect, but very little satisfaction could be given. None of the jobbers have been able to do anything more than simply pro rate the limited shipments received to the best of their ability, and there has been every effort made to be perfectly just with everyone. In numerous instances dealers have offered cash in advance for goods, but without getting any preference on that account.

The shortage, while greatest on Victor goods, is felt in all lines to a great degree.

The local retail trade is in much the same condition. Everyone has orders on hand for machines that they cannot fill, and are kept busy making explanations and are doing everything in their power to keep the trade satisfied. In many instances customers have become so convinced of the real situation that they have been content to take old types of machines and, of course, get good value when they do. The record sales during November, both local retail and wholesale, were way ahead of last year, showing the healthy condition of the trade conclusively.

Wholesale collections are reported unusually good. It is generally believed that if it were not for the extreme shortage that this fall would be made the biggest showing in the history of the trade. As it is, in spite of all the drawbacks, it is going to make a fine record and incidentally stocks the first of the year should be in the very cleanest shape they have ever been.

Æolian Discontinues Chicago Branch.

The Æolian Co. will discontinue its Chicago branch at 410 Michigan avenue January 1, the agency for the entire Æolian line of pianos and player-pianos having been given to Lyon & Healy, who had it for many years prior to the opening of the Æolian branch here in April of 1910. This reduces the number of talking machine departments in the loop by one, as the Æolian Co. has maintained an exclusive Victor department on the mezzanine floor since its opening here, catering very largely to the high priced Victrola and Red Seal record trade. O. C. Searles, the manager of the department, has not yet made his plans for the

future, but has several propositions under consideration.

Edward D. Easton a Visitor.

President E. D. Easton, of the Columbia Phonograph Co., General, visited the local office last month on a trip which included Pittsburgh, Chicago, St. Louis, Birmingham, New Orleans, Atlanta and Washington. He was accompanied by his youngest daughter, Miss Helen. At New Orleans he was joined by District Manager W. C. Fuhri, who after a day spent in consultation, left for Houston and San Antonio. He was accompanied by Mrs. Fuhri. Mr. Fuhri was greatly pleased with the conditions in the South, particularly in Texas. November with the Dallas house, was next to the best month in its history.

McCormack Unburdens Himself.

John McCormack, who is now appearing with the Chicago Opera Company, was a recent visitor at Wurlitzer's and unburdened himself freely on various matters concerning both the artistic and commercial sides of his calling. He declared that "I Hear You Calling Me" is the heaviest seller among his records, while "Silver Threads Among the Gold" runs a close second. The fact that his more popular records sell better than McCormack's operatic records is not altogether relished by the celebrated Irish tenor, although the fact certainly does not reflect on his superb rendition of the big Italian arias. He was particularly anxious to get suggestions for songs to use at his next seance at the Victor laboratories.

Keene Cameron rather enjoyed putting one over on McCormack. He played the record of "Abide With Me," by Clara Butt, the English contralto, and asked McCormack to place the voice. "Lyric tenor, undoubtedly," was the singer's reply.

Manager Disappears.

P. A. Tyson, former manager of the Talking Machine & Music Parlors, 1010 Wilson avenue, has been missing since November 21. Tyson, who claimed to have been connected with the trade in various capacities, came to Chicago from California a few months ago and started a handsome store on Wilson avenue. He was practically without capital and afterwards got backing from C. F. Yegge and C. F. Wiedemann, of the Chicago Mill & Lumber Co. A company was incorporated with a capital stock of \$10,000 and Tyson installed as manager. His accounts are being audited. The business will be continued. The company handles both Columbia and Victor goods.

Geissler's Eastern Trip.

Arthur D. Geissler, general manager of the Talking Machine Co., was called home suddenly from the East last week on account of the illness of Allen, aged 5½ years, the eldest of his three boys, who was suddenly seized with an attack of appendicitis. Mr. Geissler left on the Twentieth Century Thursday, but before he could arrive it was necessary to take the little fellow to St. Luke's Hospital and operate upon him. It was successful and when Mr. Geissler arrived Friday morning he found the little chap getting along nicely and there is no question of his recovery.

While in the East Mr. Geissler visited the Victor factory. "They are simply in more desperate straits than the jobbers," he said, "and in spite of their great increase in capacity are simply unable to meet anywhere the demand for the new types." While East Mr. Geissler wired around and picked up a number of old types, mainly VI's and XIV's, which they have found to be good emergency sellers for the dealers under existing conditions.

The Talking Machine Co.'s advertisement in this issue of The World contains a vital suggestion in regard to records which should be read with immediate interest.

Business with the houses during November was considerably ahead of the corresponding month of last year. Some unusually large record sales are reported.

Again Heads Trip.

The Chicago office of the Columbia Co. again topped the list of Chicago branches for the month of November, and Manager C. F. Baer received a congratulatory telegram from George W. Lyle as a result.

Notwithstanding some shortage on certain types of machines, business is away ahead of November of last year.

The Columbia Co. has exclusive contracts with a number of the artists appearing with the Chicago Opera Company and each week a card is displayed in the window giving the names of the Columbia artists appearing during the week.

Visitors and Personals.

Among the visiting dealers the past week or ten days were: Mr. McLogan, of McLogan & Pierce, Calumet, Mich.; E. L. Burr, of E. L. and A. M. Burr, Rockford, Ill.; Will A. Young, Fort Wayne, Ind.; Mr. Caldwell, of the Caldwell, Kirby Co., Redlands, Cal.; R. L. Berry, Springfield, Ill.; W. L. Hamill, formerly of the Finzer, Hammill Co.,

(Continued on page 24.)

The WADE FIBRE NEEDLE CUTTERS, No. 1 and No. 2, trim the needle at the proper angle, and the needle can be repointed from ten to twelve times, thus giving more tunes per needle than any other cutter made. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The WADE CUTTERS have an upper and lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel, and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

The construction of the WADE No. 2 affords the most powerful cut of any tool ever made, and the blades work parallel to each other, therefore it requires practically no exertion whatever to trim the needle.

We fully guarantee this cutter in every respect, and if the blade of this cutter ever gets dull we will give you a new blade upon return of the old one.

LIST PRICES—No. 1, \$1.50; No. 2, \$2.00

Order from your regular Distributor—we sell to Jobbers only

WADE & WADE,

1227 East 46th Street
CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 23).

Louisville, Ky., but now manager of the new talking machine department of the Knause-Gill Piano Co., of that city; R. L. Berry, Springfield, Ill.

Celia A. Benedict, of the Benedict & Boyce Music House, of Galesburg, Ill., and a notable member of the feminine contingent of the talking machine trade, was in the city last week trying, like many others, to hurry up deliveries in time for the holiday trade.

Mr. Roose, formerly of the Columbia's Chicago office, but now general traveling auditor for the company, is here for the holidays and incidentally will help out at the Chicago office during the Christmas rush.

Used Dictaphones.

R. F. Taylor, a well-known court reporter of Detroit, had charge of the reporting of the hearing in Chicago of the testimony in the case of the Government against the International Harvester Co. and used Columbia dictaphones. He was very enthusiastic regarding the saving in time effected in getting out the work.

Goes with Wurlitzer.

F. A. Harnden, for some years with the Talking Machine Co., is now with the Rudolph Wurlitzer Co. as aid de camp to Assistant Manager F. A. Siemon.

Gives Unique Recital.

The Putney Bros. Co. recently opened a Victor department in its large department store at Waukesha, Wis., and arranged with the Rudolph Wurlitzer Co., who sold them the opening stock to give a Victrola recital in the largest local moving picture theater in connection with the regular performance. W. H. Petrie, with Wurlitzers, gave the recital, which was widely advertised and was a distinct success. Red Seal records were principally used.

Rothschild Adds Columbia.

The Rothschild department store on State street has added a complete stock of Columbia goods in its handsomely equipped new department. It also handles Victor goods on a large scale, as it has done for many years, barring the months when the talker department was discontinued during the erection of the new building.

Good Edison Dictating Business.

E. C. Barnes & Bros., Chicago, representatives for the Edison dictating machines, are having an exceptionally large business on their line and have made a number of notable installations of late. They expect to move shortly after the first of the year from their present location in the First National Bank building to larger quarters on Wabash avenue.

Has Success on Coast.

L. V. B. Ridgeway, who formerly traveled Illinois for Lyon & Healy, but who was promoted a year ago to Pacific Coast territory and who has met with excellent success there, both on talking machines and small goods, is back in Chicago for the holidays.

Gets New Building.

E. H. Jackson, of the Talking Machine Shop, Rockford, Ill., was a Chicago visitor last week. Mr. Jackson and his brother, who is in the jewelry

business, are erecting a building of their own which they will occupy jointly.

Made Cutter Sales.

The past six weeks have witnessed an exceptionally large demand for the Wade fibre needle cutter, made by Wade & Wade, 1227 East 46th street, Chicago. This excellent cutter is now made in two different models, which are described in their advertisement elsewhere in this issue. The Wade cutter is now handled by practically all Victor distributors, a number of additional accounts having been recently opened.

Loses Home by Fire.

Joseph N. Vasey, manager of the retail machine sales department at Lyon & Healy's, had the misfortune to lose his beautiful home at the suburb of Brookfield by fire early Friday morning. The village has only a volunteer fire department, and before it arrived the house was beyond all hope of saving. It was one of the finest homes in the suburb and was built by Mr. Vasey several years ago, and cost in the neighborhood of \$10,000.

Will Have Big Department.

The Wieboldt Department Store on Milwaukee avenue, and the largest outside the loop, is preparing to greatly enlarge its talking machine department. It has long handled both Victor and Columbia goods in a comparatively small way, but after the first of the year about 1,600 feet of space will be utilized on the third floor. Handsome demonstration booths will be built and the business conducted along aggressive lines. E. B. Blimke, the Columbia's efficient city salesman, has just taken from the Wieboldt house the largest retail order it has ever booked outside the "loop."

Takes Position on Coast.

A. D. Herriman, who has occupied important positions with the Columbia Phonograph Co., General, in Chicago and elsewhere and who was manager of the Milwaukee branch up to the time of its discontinuance, left a week ago for Portland, Ore., to join the forces of the Eilers Music House. A host of friends here wish him success in his new field.

Ruffo's Chicago Success.

The new Victor records of Titta Ruffo, the great Italian baritone, have had a remarkable sale in Chicago, especially since the tremendous success he has achieved with the Chicago Opera Company at the Auditorium. The critics have vied with each other in eulogizing his lyric and dramatic talents.

Ruffo was a visitor at Lyon & Healy's last week and was shown over the department by Manager Wiswell and Mr. Blackman, of the record department. He talked fluently, but through an interpreter. A Victrola was sent to his apartments and he selected his records, which consisted entirely of those of Caruso, Tetrassini and, of course, his own.

Opera Boasts Record Sales.

M. M. Blackman, of the record department of Lyon & Healy, says that the fact that the presentation of grand opera here does positively influence the sale of operatic records is shown by the fact that there have been inquiries during the season so far for records of number of new operas which

have been presented when, in fact, no such records exist. For instance, any number of inquiries have been made for records of the two notable intermezzos in the Jewels of the Madonna, and they would unquestionably prove heavy sellers.

Adds to Record Service.

For the holidays Lyon & Healy have added two personal service desks to the two placed in commission some time since. They are especially for the benefit of new machine buyers, who can seat themselves comfortably at these desks and at their leisure make a selection of records with the help of a young woman who knows the catalog thoroughly and can soon determine the customers' musical inclinations and advise him accordingly.

Salter Cabinet Sales.

The demand for Salter horizontal, felt-lined shelf disc record cabinets has been so great this fall that the makers, the Salter Manufacturing Co., are sold up entirely for the balance of the year. It is now booking orders for January and February delivery and urge upon its friends the advisability of placing their requirements early, so as to insure prompt shipment.

"The Repeatostop."

The Smith Repeatostop Co., 713 Hartford building, Chicago, is meeting with success in the introduction of the Smith repeatostop for disc machines.

Its name is admirably descriptive. It is a combination of an efficient stop and an unique repeating device. It can be set for repeating the record once, twice, three or indefinitely as desired.

The company urges a thorough trial of the device in order to demonstrate its efficiency.

The period immediately succeeding the holidays is a particularly good one for the sale of devices of this nature, as there are then many new owners of machines who are greatly interested in anything calculated to increase the value of its talker.

Starck Enlarges Department.

The P. A. Starck Piano Co. last week added the Columbia line to its talking machine department and will now carry both Victor and Columbia. The talker salesrooms in the basement will be enlarged and additional demonstration rooms built.

Wonderful Record Sales.

L. C. Wiswell returned a fortnight ago from an Eastern trip which convinced him that every effort was being made by the Victor factories to supply goods and at the same time the hopelessness of being able to more than meet a modicum of the demand before the holidays. Wholesale record business is great, the best in the history of the house. The Lyon & Healy fibre needle cutter is having a really phenomenal demand, and is one of the biggest selling specialties the company has ever placed on the market.

Urge Pushing of Lower Priced Machines.

At the Rudolph Wurlitzer Co. the same condition was found as elsewhere. An enormous record business and an unprecedented machine demand in the face of an unusual shortage. Dealers are being urged, in view of the shortage of the higher priced models, to push the sale of the lower priced

(Continued on page 26.)

THE SMITH REPEATOSTOP is an efficient "stop" with the added feature of repeating the record once, twice or three times as desired.

It can be instantly changed from a mere "stop" to a "repeat and stop" or a continuous "repeater" at will, and is operated with the greatest simplicity.

Place one in operation in your window and you will have a novel feature of display advertising that will add interest to your store.

machines, because of their record sale creative power and the fact that they are feeders for sales of higher priced machines later on.

Good Edison Record Display.

A remarkable Amberol record window display was recently made by Lyon & Healy. The progress made by the Edison Co. in record manufacture was shown by displaying one of the very first Edison phonographs, with the barrel mandrel and tin foil record sheet, displayed side by side with the new indestructible blue Amberol.

They Lunched.

Ray J. Keith, sales manager for the Talking Machine Co., when in Milwaukee recently gave a luncheon at the Planters to a quartet of managers of talking machine departments consisting of L. C.

Parker, Gimbel Bros.; Mr. Abbott, Boston Store; Otto Krause, Hoefler Manufacturing Co., and Paul Seeger, of Edmund Gram. The rivals discussed general conditions in a most harmonious way and Messrs. Parker and Krause vied with each other in a story-telling contest to the great enjoyment of the others.

Lyon & Healy's Christmas Greeting.

Lyon & Healy are this year conveying their holiday greetings to their customers and friends in a very graceful and decidedly unique manner. For the entire month of December the usual business letter heads, varying somewhat with the different departments of the great house, have been withdrawn from use and instead a uniform letter head with "the season's greetings" in the corner and

above a spray of holly in green and red has been substituted.

Anyone who received a communication of any kind from Lyon & Healy during the month will have before his eye the sprig of holly in its natural colors of green and red and the yuletide date line. Every department manager, every correspondent and every stenographer in the house is thus constituted an apostle of good will.

Lyon & Healy, in accordance with the custom of many houses, have long sent out holiday greeting cards, but as far as known this is the first time that the holiday letter head has been used in any line of trade. The idea originated with President Paul J. Healy and he certainly deserves credit for a strikingly beautiful and original conception.

TRUE MUSICAL APPRECIATION.

"I'm handing it to you straight, Imogene, when I slip you the info that I wouldn't can that job of mine at the toy counter for a sure thing in the laces, even that classy salesman who looks like the Count de Castellane calling twict a week,"

remarked Tessie Snuggles, who for the past three weeks had been located in close proximity to the talking machine department of the Wanacooper department store, where she could hear all the records tested for customers.

"That Billie of mine is getting nervous and threatening to do the Dutch by swallowing dynamite and jumping out of the window if I don't show some more appreciation of his reckless tendency towards being a real spendthrift in buying tickets for the movies, but I'm wising you up proper when I say that the talking machine music that I get handed to me all day long has just given me a real eddication in music. When I hear the machine play 'Waiting for the Robert E. Lee,' with Collins and Harlan—they certainly is a pair of slick guys—singing the words together, I can't see the Sunshine Sisters at the 'movies' for a minute. It's my high class taste that won't let me appreciate even a quarter seat in a box, and goodness knows, Gene, when a feller plunges like that for me I certainly try to be pleased. The other day I'm just trying to keep out of a fight with an old gink who wanted an imported doll as big as a baby for sixty-nine cents and had shifted my spear-mint so's I could hand him a line of real talk without interfering, when they starts to play something what the salesman, the little feller with the patent leather haircut to match his shoes, says is 'Love's Old Sweet Song.' I fergets about the grouchy geezer and listen, and pretty soon my lamps begin to leak. The customer starts to blow his nose and almost forgets his change for a four-ninety-eight creation in his rush to get closer. I don't know where that place 'Twilight' is, but it certainly must be swell there.

"I almost got in bad with the Big Noise the other day. The floorwalker was going by my counter, when a machine started to play 'Everybody's Doing It,' and I starts to wiggle; what else could I do with that music? Percy gets the habit and comes up close like he was all there for a little trottin', when we hear a cough, and there is the main guy with blood in his eye and some more, or it might have been tobacco juice on his whiskers. 'What's the big idea,' he says. By that time the music has stopped, so I could keep still and I says to the floorwalker, 'This is the slip I want signed, Mr. Montague.' The manager looks some suspicious, but lets us get by with the stall. Now when they play dance music, Percy beats it for the other end of the department, out of danger.

"Yuh wanta come up to see me some day when they have what they call 'grand opera recitals,' when people like Caruso and Mary Gardén and Sembrich and McCormack sing right out loud. I don't get what they're trying to sing about, but believe me, Cutey, they certainly can spread their voices around some and hit the high places. Caruso has got the Cowboy Tenor at the Luna Theatre backed to the end of the dump and going fast, for voice, but the only one I know who understands him is the coal man's wife, who came in to see me one day and near threw a fit when she got a line of the language. She said it was Wop, and I thought it was French. Gosh, how it hurt.

"Well, so long, Girlie, drop in some day and get a real show free. I'll let you know if Billie tries to make a getaway sometime when he's sore. Told him that one hundred and fifty seeds were not enough to get married on, 'cause it would cost more

than that for a machine and those flat things they call records. Now, I'm looking for a swell John with musical tastes and a talking machine."

THE EDISON IN NEW ZEALAND.

Immense Demand for Edison Products in That Country—Mr. Balting Has Built Up Quite a Large Business in Nelson.

(Special to The Talking Machine World.)

Nelson, New Zealand, Nov. 10, 1912.

In no part of the various countries forming the greater Australasia is the talking machine more keenly appreciated, or has a more promising future than in New Zealand. The Edison phonograph has an especially large following here, and is handled by many representative merchants, among whom may be mentioned A. Balting, the

Balting's Store in Nelson, N. Z.

importer, who has quarters at 97 Hardy street, this city, and who is developing a business of large proportions. He handles the full Edison line of machines and records and has well stocked quarters as may be seen from the accompanying photograph of part of his establishment. He expresses himself in enthusiastic terms regarding the new Edison Amberol records, and latest Edison phonographs, and is likewise most appreciative of your very excellent Talking Machine World, of which he says:

"I find it very useful to me in my business and appreciate the many valuable hints it contains. Through this medium I am kept posted on talking machine news the world over. Indeed, the information I get through The World is even in advance of that which I obtain through the manufacturers themselves. I congratulate all connected with this publication in presenting so magnificent a journal and one of such intrinsic worth.

The Columbia Phonograph Co. announces the publication of several new records by Orville Harrold, the phenomenal American tenor. These records were not scheduled for issuance until next January, but owing to the wonderful success Mr. Harrold has attained they are now ready.

A scientific adjunct to pure reproduction—coating the record and lubricating the needle with pure graphite. Life of records doubled. Old records improved. Scratching diminished. Graphite attachment goes in regular needle-holder. Needle on attachment guides graphite-stick over record. Attachment, graphite-stick and polishing pad \$1. Send for circular. NEAL, CLARK & NEAL CO.
643-645 Main Street, Buffalo, N. Y.
VICTOR AND EDISON JOBBERS

APPRECIATION OF VICTOR CO.'S MANY COURTESIES.

Retiring Executive Committee and Officers of the National Talking Machine Jobbers' Association Entertain Victor Officers at Informal Luncheon and Present Them with Handsomely Engraved Set of Resolutions—President Blackman Makes Important Committee Appointments—Executive Committee to Meet in New York, Jan. 14-15, 1913.

An informal luncheon was tendered the officers and department heads of the Victor Talking Machine Co., Saturday, December 7, by the retiring executive committee and officers of the National Association of Talking Machine Jobbers. This luncheon was held in the Blue Room of the Bellevue-Stratford Hotel, Philadelphia, Pa., and was a success from every standpoint. The object of this gathering was to present to the Victor Co. a handsomely engrossed set of resolutions expressing the thanks and appreciation of the association for the Victor Co.'s entertainment of its members on various occasions, and particularly the entertainment furnished the members at the last convention of the association held in Atlantic City.

The set of resolutions which was passed by the members at this convention were ordered to be placed on the minutes of the association and a copy to be presented to the Victor Co. in suitable form. The set that was presented Saturday was a magnificent work of art and handsomely engrossed. The photographs of President Johnson and General Manager Geissler, of the Victor Co., are prominently displayed, the set being finished in water colors and making a beautiful appearance, which would be a welcome addition to any art studio or wealthy home.

As these resolutions of thanks and appreciation had been passed during the regime of the retiring administration, the luncheon was held under their auspices, the presentation speech being made by James F. Bowers, who was a member of the old executive committee, and who is also a member of the present executive board. His speech was in line with his customary interesting addresses, and was enthusiastically applauded by the assemblage present.

After Mr. Bowers' presentation address, short talks were delivered by a number of the guests present, and the luncheon was voted a thorough success. Subsequent to the luncheon, General Manager Geissler, of the Victor Co., entertained a number of the guests at dinner, and a theater party was formed to take care of the remaining part of the night. The members of the association who were present at the luncheon were James F. Bowers, of Lyon & Healy, Chicago, Ill., who was a member of the retiring executive board, and who is also a member of the present executive committee; Perry B. Whitsit, of the Perry B. Whitsit Co., Columbus, O.; J. C. Roush, of the Standard Talking Machine Co., Pittsburgh, Pa., who was formerly secretary of the association; John Miller, of the Penn Phonograph Co., Inc., Philadelphia, Pa., who was the former treasurer of the association, and who was re-elected at the last election; J. Newcomb Blackman, president of the association, who was present as a guest of the retiring officers; Louis Buehn, the present secretary, who also attended as a guest, and H. H. Blish, of Harger & Blish, Inc., Dubuque, Ia., a member of the present executive board, who happened to be in Philadelphia at the time of the luncheon. The officers and representatives of the Victor Talking Machine Co. who were present were Eldridge R. Johnson, president; Louis F. Geissler, general manager; B. G. Royal, of the board of directors; George Ornstein, sales manager; H. C. Brown, advertising manager, and Oliver Jones.

While in Philadelphia, President Blackman, of the association, took advantage of the opportunity offered him to take up several association matters with Secretary Buehn.

Mr. Blackman has announced the following committee appointments for the ensuing year: Resolutions Committee—James F. Bowers, chairman; George Kohler, Burton J. Pierce, W. O. Crew, and H. H. Weymann. Legislative Committee—G. Clement, chairman; C. A. Grinnell, George A. Mickel, Perry B. Whitsit and O. K. Houck. Press Committee—Louis Buehn, chairman; S. B. Da-

vega, W. H. Reynolds, C. A. Arbenz and J. G. Corley. Grievance Committee—H. H. Blish, chairman; W. D. Andrews, C. J. Schmelzer, Lawrence McGreal and E. C. Rauth. Traffic Committee—L. C. Wiswell, chairman; E. C. Rauth, Andrew McCarthy, W. H. Reynolds and T. H. Towell. Membership Committee—W. T. Barnhill, chairman; A. A. Trossler, J. N. Swanson, Max Landay and O. A. Lovejoy.

There was also a special committee consisting of J. Newcomb Blackman, Louis Buehn, H. H. Blish and John Miller formed, who took up several matters of interest to Edison jobbers with Thomas A. Edison and the Edison officials on Tuesday morning, December 10. The subject of this conference was purely confidential association matters and not intended for general publication.

President Blackman has called a meeting of the executive committee to be held in New York City on January 14 and 15 of next year. He has also called a special meeting of the association to be held at the same time for the purpose of voting on an amendment of the by-laws rescinding the present privilege of the use of proxies in the annual election of officers, but retaining that privilege for all other purposes at meetings. At that time anything else that may seem worthy of consideration will be taken up at the general meeting.

It is the idea of President Blackman to present and follow up all matters which may be covered by resolutions by means of specially appointed committees or the entire executive committee in conference with the factories. Mr. Blackman favors that method of procedure because he believes in that manner better results can be obtained, owing to the opportunity for free exchange of ideas in an informal manner. With that idea in view there will probably be conferences with both the Victor and Edison companies at the time of the special meeting.

January 14 and 15 were selected by Mr. Blackman with particular regard to the fact that there will be a large number of visitors in New York at that time owing to the annual Automobile Show to be held in Madison Square Garden during that week. Secretary Buehn will probably during this month take a vote as to the place of meeting of the 1913 convention, which, in accordance with the instructions of the last meeting, was to be selected between Atlantic City, Niagara Falls or Richmond, Va.

TO SELL THE KINETOPHONE.

The American Talking Picture Co. Organized to Handle Thos. A. Edison's Combined Moving Picture and Talking Machine.

The American Talking Picture Co. has been organized to sell the Kinetophone, a new machine manufactured by Thos. A. Edison, Inc., Orange, N. J., which is a combination of moving picture and talking machine. The office of the company is at 1495 Broadway, New York, the representative being W. E. Wardell. The factory management is under the direction of Mr. Pelzer.

This is the device that is long been expected and is said to be a great boom to the small moving picture houses. While no deliveries are being made, it is understood that orders are being booked.

VICTROLA USED AT FUNERAL SERVICE

At the funeral service, largely attended, of a prominent citizen of Zanesville, O., November 29, the following selections were played on a Victrola, with marked interest and appreciation on the part of all present: "Nearer, My God, to Thee," Creator's Band; "Jesus, Lover of My Soul," Trinity Choir; "Beautiful Isle of Somewhere," Harold Jarvis; Chopin's "Funeral March," Pryor's Band.

This Automatically Starts and Stops Your Victrola

Our Tremendous Newspaper Advertising Campaign to Benefit Dealers

is skilfully laid out along the most attractive and convincing lines to clearly illustrate and explain to Victrola owners, present and prospective, the great merits of the

—the Victrola attachment de luxe and the only one that will complete the Victrola equipment and leave nothing more to be desired.

We will back you up with newspaper advertising in your own field, so that every Victrola you sell may be equipped with one of these accessories and, far more important, that every Victrola owner will want one.

They ALL want the Simplex

when they realize what a necessity it is—how far ahead it is in the race for supremacy—that it more than meets the severe requirements of a Victrola start and stop device (don't forget our exclusive starting feature).

ALL THE
MUSIC
OF ALL THE
WORLD

TWELVE months ago We, the Columbia Phonograph Company, announced that 1912 would be the biggest year in the history of Columbia. So it was. But 1913 will make 1912 look like a quiet Sunday morning.

Only last September we increased our factory output capacity by 50%. To-day, even with that increase, our producing resources are inadequate and we have already made the necessary arrangements for a further big increase in factory facilities in the near future. As a matter of fact we need them already.

This Columbia growth is a solid, healthy, persistent development, and we take this opportunity to reassure Columbia dealers that they will still get Columbia product built to stand the test of comparison;

that in 1913 there will be no let-up in the Columbia advertising campaign. There is not a Columbia dealer in the country who did not reap the benefit of the heavy-calibre national advertising which was focussed upon our dealers' business all through 1912. The Columbia advertising campaign of 1913 will continue to be directed toward one thing and one thing only: the profit and expansion of the business done by Columbia dealers.

To our friends in the trade—Columbia and not-yet Columbia dealers—our best wishes for a happy and prosperous 1913. And, to Columbia dealers, something more than the mere wish—the assurance of our constant co-operation with them in their merchandising and publicity.

VICTOR RECORD DEMONSTRATION CONCERTS

Conducted by Aeolian Co. in St. Louis Subject of Attention from Public and Trade—Manager Levy Speaks of Plans and Objects—Dealers Worrying Over Holiday Supply of Goods—Silverstone Displays New Edison Disc Phonograph and Is Overwhelmed with Orders—Columbia Co. Anxiously Awaiting New Grand Instrument.

(Special to The Talking Machine World.)

St. Louis, Mo., Dec. 10, 1912.

The local talking machine trade is much interested in the series of Victor record demonstration concerts begun by the Aeolian Co. Nov. 27. The plan as explained in the advertisements for that occasion is that a concert will be given each month on the day the Victor records are released for sale, and that every owner of a talking machine who can use Victor records is invited. No special invitations were issued. Following the first evening concert will be as many matinees during the month as may seem necessary to accommodate machine owners who have been unable to hear the records.

The first concert happened to be on Thanksgiving eve, which is a poor night to attract a crowd in St. Louis, but the Aeolian Recital Hall was comfortably filled and the enthusiasm of those present exceeded expectations. It had been advertised that no sales would be made or orders for records received during the recital, and this feature was carried out. A woman acquaintance of The World correspondent, who is an ardent lover of music and an admirer of talking machines, said of this recital:

"I have paid \$1.50 to hear many concerts that were not as good as this one, and I have never had an equal opportunity to select from the month's records those that I wanted. I have always hesitated to force the demonstration girls to play so many for me, and I usually leave my monthly record shopping tour believing that I might have made a mistake in not getting the best in my limited purchases. This month I heard everything that I thought I wanted to hear, went home at my leisure, and next day made up my list, certain that I was getting what I wanted."

All records are played on the Auxetophone, which talking machine Manager Levy believes is the best for hall recital work. The machine proved very satisfactory to the crowd.

Manager Levy, in speaking of this departure as to advertising in St. Louis, said:

"Primarily we have undertaken this plan as Victor distributors and to maintain enthusiasm among machine owners. Of course, it would be foolish to deny that we do not expect to increase the sale of records in our retail department as a result of the concerts. We do expect that, but we also expect every dealer in the city and perhaps in the country near by, certainly in the suburbs, to profit from these concerts. Our reason for placing the line in the advertisement stating that no sales would be made or orders solicited during the concert was to assure dealers they could recommend their customers to come and hear the demonstration. It is to be absolutely apart from the sales department. That can easily be seen, as we are giving the important concert at night, when our retail sales department will not be open.

"I know there has been a feeling of resentment among downtown dealers that small dealers often sent customers that they were sure of to the downtown stores to hear demonstrations. You cannot blame any dealer for not liking that method. It occupies valuable time in the sales department and is not right. At these demonstrations we will have nothing else to do but to play records from the last bulletin as requested, and we will do it. We hope that dealers will take advantage of this and stop sending customers to others' demonstration rooms during business hours. An additional feature of this demonstration will be the combined use of the talking machine and player-piano. We will make free use of the Pianola in accompaniments for records in hopes that persons who own both player-pianos and talking machines will become accustomed to using them together. We will specialize on blue records."

The talking machine dealers, especially those depending upon the Victors for their chief trade, are greatly worried over the holiday supply. President Koerber, of the Koerber-Brenner Music Co., Victor jobbers, says that his firm has been able to supply its regular customers so far, but that it has declined many orders, informing new customers that the company must supply those merchants who buy entire musical lines from the firm. "Business is good," said Mr. Koerber, "but we could make it a whole lot better if we had all the goods we wanted."

Manager Levy, of the Aeolian Co., says: "Have you ever tried to divide a dime among eleven beggars, each of whom wanted coffee and rolls that cost five cents? That is our trouble at present. I am optimistic enough to believe that relief is coming for the holidays. Our record stock is in good shape and we are giving dealers satisfaction along that line anyway."

Mark Silverstone, of the Silverstone Talking Machine Co., is dividing his time between demonstrating the new Edison disc machine and his new warerooms, where he will place on sale a line of pianos in addition to an enlarged talking machine stock. He is greatly pleased with the new machines and reports prospects of an excellent business. His first shipment was four machines and ten sample records. The day the machines were placed on display he saw a man passing who had been asking about them and called him in. The man listened a few minutes and then said:

"Send that machine up to my house. I want it this evening."

"But I have no records," said Silverstone.

"You've been playing some; send them," said the customer.

Finally a compromise was reached on the customer getting half of the ten double records, and Mr. Silverstone played each of the five records or ten numbers up to the 1,000-time mark before he got any others.

At the Columbia store the interest centers in the coming of the "Grand" instrument. "We have a number of persons interested in that machine," said Sales Manager Byars, "and I think we will have little trouble in placing our allotment of them for the holidays. Our table machines are doing nicely and a window display of them is attracting attention. We have been much pleased with our business during the last month, and with good supplies on hand we expect to have a record-breaking holiday trade. We are especially supplied with records, as I believe that is absolutely necessary."

Harry Levy's remark that there "are no grouches in the trade this fall" seems to pretty well cover the trade situation. Every dealer, it seems, has been doing more business than before and has excellent prospects. This applies to all lines, according to reports from other jobbers.

W. E. Gibson, of the Gibson Piano Co., Paducah, Ky., was a recent caller on the Victor jobbers here, as he buys from local jobbers.

W. B. Taylor, traveling representative of the Victor Co. in Illinois, was a Thanksgiving guest of Harry Levy.

The Columbia Co. mentions with pride the sale of a Favorite machine to the St. Louis University for entertainment purposes at smokers and other meetings held at the university.

Edward M. Berliner, of the Berliner Gramophone Co., Montreal, was a recent visitor with the trade here, and at the Silverstone Talking Machine Co. he got his first glimpse of the new Edison machine.

J. K. Savage, a former Edison dealer, is manager of the Dictating machine department of the Silverstone Talking Machine Co. His department will be one of the first moved into the new ware-

rooms at 1124 Olive street, a block west of the present store.

Mr. Cummins, well known to the trade hereabouts as Victor traveler and later as Koerber-Brenner representative, has severed his connection with the latter firm and gone to Colorado again to join Mrs. Cummins, who is detained there because of her health.

Miss Bessie Platt is a new record demonstrator at the Thiebes Piano Co.

Manager Robinson, of the Grand Leader Department Store's Victrola department, has been experimenting with informal demonstrations and finds them productive of good business. For instance: A big day was on in the corset department, and he sent a machine to that part of the store with a young woman to run it. The music excited much interest and brought inquiries that resulted in both machine and record sales. This course is followed whenever the occasion and business pressure in the department permit. Mr. Robinson also has used his machine in connection with the piano department recitals with profit.

Another department store Victrola department has been started in the Scruggs, Vandervoort & Co. store. It was installed by E. P. Cornell, of the Musical Instrument Sales Co., of New York, and is very handsome and well arranged. Mr. Seegar, of Wheeling, W. Va., is in charge of the department. It is on the sixth floor of the store.

D. R. Ramsdell, manager of the Columbia store, was called to Denton, Md., last month by the death of his father. On his return he visited New York and Chicago on business. He also made a trip to Bridgeport, Conn., to visit the Columbia factory.

J. Ed. Black, of Springfield, Mo., and R. D. Warell, of Mexico, Mo., were dealers who recently visited the local jobbers.

W. C. Fuhri, Columbia district manager, and George W. Lyle, of New York, were recent visitors at the Columbia store.

The Silverstone Talking Machine Co. and the Columbia Phonograph Co. both arranged for space at the Business Show at the Coliseum this month to exploit the advantages of their dictating machines in business conduct. An agent came direct from the factory to take charge of the dictating machine exhibit for that company.

J. W. Ryan, southern Missouri and Kentucky traveler for the Columbia Co., was a recent visitor at the store here and reported establishing a number of sales agencies in his territory and excellent business. He found the country trade running to higher priced machines than has been the rule.

Miss Bessie Platt is a new record demonstrator with the Thiebes Piano Co.

There are a lot of people who think more of a cheerful manner than they do of a five per cent. discount. Cordiality is the cheapest thing you can dispense in your store.

THE TALKER AS AN ADJUNCT TO HOLIDAY ENJOYMENT.

How an Attractive Recipe for a Christmas Entertainment Made a Dealer's Fortune—The Modus Operandi May Interest Others in the Trade.

Once upon a time, as they say in story books, there dwelt in the City of Brotherly Love a talking machine dealer. Christmas was fast approaching and his volume of business was not in harmony with the time of year. In other words, trade was rotten to the core. Now, this dealer was known among his fellows as a brainy chap—a man who had something beneath his hat besides bone, hide and hair, and therefore his friends in the trade were elated but not surprised to see him ere long aviate from his hangar of depression, planes nicely balanced, motor running smoothly, and make a skilful but conservative landing within the aerodome of success just as the holiday chimes were pealing forth their first joyous anthem. They were mighty curious, however, and thronged to his talker shop in a body to learn just how he did it.

He welcomed them cordially, supplied them with easy chairs and good cigars, and when they were comfortable, launched forth as follows:

"As you doubtless are well aware, gentlemen, I was down and out, but like a mushroom, in a night I arrived once more, or, if you deem the simile more apt, like the proverbial cat, I came back.

"You ask me how I did this seemingly miraculous thing in so short a time, and it shall be my pleasure to enlighten you in as brief and intelligent a manner as possible.

"When the business clouds were blackest and nasty visions of financial embarrassment were playing at hide-and-seek within my brain, I did as thousands of other men in like circumstances have done from the beginning of time, viz.: gave birth to a nice useful little idea.

"This idea had to do with an entertainment that would revive interest in the talker among those who no longer had use for it solely as a music maker. A number of my best customers warned me confidentially that it was up to me to get out something new for the holidays or they would relegate their talkers to the home of some poor relation.

"We are dead tired of just phonographic music," they told me. "We want something different. If you cannot supply us, no more canned tunes for ours."

"Therefore, when my nice useful little idea was born I nourished it most tenderly, and as soon as it was old enough, broke it to harness. It is now well trained and docile and is making a fortune for its owner during this holiday season, and will continue to do so, I trust, for a great many seasons to come.

"Like nearly every idea at birth, it did not bear the ear-marks of success. In fact, it was just about as puny an infant as one would have the courage to gaze upon, but it was mine, and I fed it good hard thoughts until eventually it bloomed forth as the brawny and strenuous being you find it to-day.

"Now for the details!

"My idea as it first came into existence, as I explained before, did not mean a great deal. It was simply a plan in embryo which had to do with phonographic entertainment in the homes of skeptical people—folks whose interest in the talker had dropped to the zero mark; the aim of these entertainments being, of course, to raise that interest to a normal temperature once more.

"Putting it into practice and awaiting results

Preparing for a Record Contest.

were my next two moves in the game. As soon as I was assured of the practicability of my idea I made it known to my customers through the medium of personal correspondence."

He went to his desk and drawing forth from among a collection of papers a neatly typewritten sheet, held it up for them to see.

"Here is my idea, gentlemen," he said. "I have sent a goodly number of these letters out among the pyrrhonists whose names are enrolled upon my mailing list, and the end is not yet."

Laying his partially consumed El Principe-de-Gale upon the ash tray and adjusting his reading glasses, he perused as follows:

THE ELITE TALKER SHOP.

No. 1 Broad St., Blanktown, N. Y.,
December 1st, 1912.

My Dear Customers:—

To those among you whose interest in things phonographic is on the wane, I take this occasion to acquaint you with a brand-new idea for a talking machine entertainment, which if carried out as per instructions, will, I am sure, greatly enhance your enjoyment of the holidays. On Christmas eve, when your friends assemble for their annual jollification, prepare the following programme for their delight.

When the last guest has put in an appearance, make the announcement that a contest is to take place in which all are eligible to compete, and that an elaborate prize is to be awarded the victor.

Explain that you cannot go into details regarding the contest to the assemblage as a whole, but that it will be necessary to indulge in individual instruction. (This will create curiosity and arouse interest.)

Then, one at a time, your guests are summoned into a side room where your talking machine adjusted for record-

ing, is set up ready for action. Tell each in turn that you desire a record made of his or her voice, as the case may be, leaving the selection entirely to the discretion of the impromptu artist, but making it understood that it must be something with which the company is unacquainted, and swearing them to secrecy regarding it until the expiration of the contest. If the lady has a pleasing voice, suggest that she sing a song. If the gentleman happens to be an orator, ask him to declaim.

And don't forget the children! By all means have them speak their juvenile recitations into the horn.

When recordings have been made of all the voices present, the machine is arranged for reproduction, and as each original selection is played, your friends are asked to guess, upon slips of paper distributed for the purpose, whose voice they think the record represents.

For instance.—The slip of paper applying to the third record played, when ready for collection, if correctly answered, should read thus:

I guess Record No. 3 to bear upon its surface the reproduction of the voice of Miss Geraldine Dale.

ELIZA RENAULT.

When the last record has been played, the slips of paper are gathered and counted. To the person submitting the greatest number of correct answers, a talking machine is awarded.

Trusting you will find my suggestion a worthy one, and wishing you a happy Christmas and prosperous New Year, I am,

Yours for a record contest,

JOHN JONES.

P. S.—Of course, it is unnecessary to inform you that we have a complete stock of sundries, such as recording apparatus, blanks, shaving machines, etc., which you will need for your contest, together with a variety of inexpensive, but reliable talking machines, suitable for prizes. May we send our salesman to demonstrate in greater detail than has been possible in this letter, the practicability of my idea?

Dict.: J. J.—H. M.

Having finished, he relighted his dead cigar, thanked his audience for their kind attention, and courteously dismissed them, explaining that they now had his recipe for a successful holiday campaign, and that the rest was up to them.

They withdrew to their various business emporiums, opened the switches of their commercial phonographs, and began work upon the form of a circular letter to the trade about the Christmas entertainment idea. They meant to be ready for the next holiday time, all right, and, incidentally, a good many of them proceeded to try out the idea regardless of season, having much faith in its trade-bringing qualities.

Mr. Dealer, this little tale which I have related to you was given to me by a successful talker man not long ago, and I pass it along to you.

If it will help you just a little bit, I shall feel amply repaid for my story telling.

In any case, allow me to wish you every possible happiness and good cheer throughout this and many more holiday seasons.

HOWARD TAYLOR MIDDLETON.

SALES OF I. C. S. LANGUAGE OUTFITS

A noteworthy feature of the month's business at the handsome talking machine department of John Wanamaker's was the large number of sales of I. C. S. Language outfits, to be used in conjunction with the Edison Gem Phonograph. These useful outfits have gained many friends the past few months, and their popularity is well evidenced by the increased number of sales closed each week.

Manager Gerson states that his Victor sales are as large as his stock will permit, and tells us that there is an unusually heavy demand for the No. XVI machine, which sells for \$200. The only trouble Mr. Gerson is experiencing is the pronounced shortage in Victor products, which is a general complaint this season.

SOME GOOD RULES FOR SUCCESS

Laid Down by Henry M. Byllesby, a Friend of Thomas A. Edison, and Based on Real Knowledge.

Henry M. Byllesby, a great friend of Thos. A. Edison, by the way, recently made some very happy remarks on "How to Succeed." This is a topic that is much overdone, but Mr. Byllesby's views are based upon practical experience and knowledge and not theory. In other words he has been through the mill and passes his experiences along. They are therefore of some moment. He says:

"No human being can remain stationary; he either advances or retrogrades.

"Napoleon said of the failure of the Bourbon family: 'They never learned anything and never forgot anything.' You must develop.

"From day to day you must bring to bear an ever-increasing wisdom—the application of lessons learned.

"Every incident of your daily toil should be made an educational incident.

"The average young man does not learn, until perhaps too late, that it does not pay to fritter and idle away his time.

"Make a study of those who have gone to the head; ascertain what they did in any given emergency.

"In any emergency a man's conduct is the result of the way in which, from earliest youth, he has met the obstacles he encountered.

"Thomas A. Edison says: 'Do not watch the clock; do not chase aside after rainbows; keep everlastingly at and master the task of the time being.'

"The truly successful man recognizes that, from time to time, he will receive setbacks. The man who overcomes these is the man of achievement and of eventual success."

A PATENT TALK-STOPPER.

Some ingenious person has invented a machine to make the phonograph stop talking when it has

said enough. It is a pity that this admirable device cannot be attached to human beings as well as to pieces of mechanism, says the New York Herald.

Such a contrivance, so arranged as to work promptly at the end of twenty minutes or at the sound of the word "fifthly," would be highly appreciated by church-goers, and the windy legislator, talking for his home county or district, would find in this machine the only serious opposition that his eloquence has ever met with.

Every boarding house should be provided with

this patent talk-stopper. In its presence the table bores whose discussions of every subject that they do not understand are a standing menace to peace and quiet, would become mute. The boarder who knows one family so rich that they travel with thirteen trunks; the elderly lady who attends fashionable weddings from the sidewalk, the theater-going boarder who knows everything about the private life of every actor, and knows it all wrong, and the man who insists upon reading out loud from his morning paper, would all find their favorite occupations gone.

ADDRESS COMMUNICATIONS TO

CLEMENT BEECROFT, SALES MANAGER 309 W. Susquehanna Ave., Philadelphia, Pa.

FOREIGN TRADE IN TALKING MACHINES.

The Special Report Issued by the United States Government Bearing on Talking Machines Shows the Wide Scope of the Business in Canada, Central and South America, Germany, France, Russia, Great Britain, in Fact in All Parts of the World—The Opinions of the Local Consuls Regarding Methods of Selling and Other Matters Are Interesting and Valuable—Shows the Importance of the Industry Throughout the World—Great Export Markets for American Machines and Records.

[In The Talking Machine World, last month, there was published the opening section of the monograph, issued by the Department of Commerce and Labor on the foreign musical instrument trade of the United States, relating directly to talking machines and records. The part appearing in The Talking Machine World last month was particularly interesting to American manufacturers and those connected with the talking machine trade of the country in various capacities in that it referred to the present business and the opportunities lying in Central and South America, which is considered to be the section that offers the natural field for the export trade of this country. The figures especially indicated that the American machines and records were, with the exception of two countries, the general favorites, even when offered in competition with foreign-made goods at lower prices.

The section of the monograph published this month, and which covers the trade of Europe, is not quite so encouraging to Americans.

While American machines and records are sold to a considerable extent in most of the countries, there is not much chance of expanding the trade to any extent through overcoming the competition of native manufacturers. The greatest demand for American products is in Great Britain, there being strong preferences in different localities for machines and records of various types. The pleasing feature of the situation is that the market for American goods has been won from the combined forces of British and German manufacturers.—EDITORIAL NOTE.]

Germany.

In Germany there is a good market for high-grade machines, one American make is already sold extensively. At present machines with exposed horns are most in use, although there is an increasing demand for the concealed horn type. Disc records are universally used and machines are sold almost together at retail or a cash basis, the prices ranging all the way from \$5 to \$400. Pathé Frères, of Paris, seem to have a large market in Germany, and have well-appointed showrooms on one of the principal streets of Berlin, where a number of machines are operated automatically by the public for a charge of about two and one-half cents for each selection.

The total import trade in talking machines and accessories to Germany amounted to \$96,866 in 1910, as compared with \$42,840 in 1909. Exports amounted in value to \$1,893,528 in 1910, as compared with \$1,423,716 in 1909. Throughout Germany the demand is well divided between the very cheap and very expensive types; one American firm manufacturing cylinder phonographs has practically all the trade in this kind of machine, having successfully built up a business against the competition of the few German firms in the market. The French machines of Pathé Frères, which use the sapphire point, are also greatly in favor, while in the disc machine type the gramophone disc is universally popular.

For German talking machines the operating mechanism is usually manufactured in Berlin, in the Black Forest (Baden), and in Switzerland, and the sounding box, horn and connections in Saxony. The various parts are then assembled at some of the musical instrument factories, those in Berlin being the most important.

German manufacturers are liberal advertisers, and besides issuing elaborate catalogues and circulars they advertise both in the musical instrument trade journals and in the current general periodicals of large circulation. The dealers distribute catalogues furnished by the manufacturers, advertise in the newspapers of their respective localities, and frequently have salesmen canvassing from house to house among people of modest circumstances. Instruments are usually sold at 33 1-3 per cent. below catalogue prices. Dealers in good financial standing can obtain consignments on three months' credit and are allowed 2 to 3 per cent. discount for cash in thirty days. Freight charges on wholesale shipments are usually paid by the factory, and dealers handling imported phonographs prefer that the exporters in foreign countries quote them prices free Hamburg and inclusive of cus-

toms duties. Dealers and manufacturers who conduct a mail-order business ship machines by the Government parcel post, and the post office delivers them to the consignee and collects for them. The cost of packing is assumed by the consignor, but the shipment on a retail order is at the risk and expense of the consignee.

American manufacturers who desire to build up a regular trade in this territory should establish in one or more of the important cities branch houses or agencies which would keep on hand complete supplies of all kinds, including records to suit the varied tastes of German buyers. In the smaller cities agents might be selected from among dealers in musical instruments, bicycles and sporting goods.

Great Britain.

It is claimed that the bulk of the trade in talking machines and accessories in the United Kingdom is comprised of machines of German origin. A large number are manufactured in Germany, but most of them are assembled in this country, and in some instances the parts, particularly the cabinet-work, are manufactured in England. France also supplies a limited amount.

It is said by those conversant with the trade that the German machines are not equal in quality to those manufactured in the United States or those made in England by firms that are essentially American. The better class of the trade, it is said, is supplied by the English companies affiliated with the three largest American companies. Scarcely any of the mechanism is manufactured in this country, but especially in the case of these three firms the cabinet-work is done here, and records are also of English manufacture. The English public prefers English cabinet-making, and it is inevitable that the records should be made in this country because the music that appeals to the British people is that with which they are most familiar, as produced by English artists.

Parts of machines are to a large extent manufactured in the United States and assembled in this country; and, on the other hand, it is estimated that perhaps one-third of the German machines are imported complete. In the census of production report for 1907 it is shown that talking machines and records were manufactured in that year in the United Kingdom to the aggregate value of \$335,788.

There is not at present a promising market for new lines, as those already in the trade are pretty well established and competition is keen. Machines with exposed sounding-horns are preferred because they are less expensive, and operatic and band selections and popular songs by well-known singers are the selections most in demand. Both cylinder and disc records are used, but the former more extensively, as the machines with which they are played are cheaper than the disc machines and the records themselves cost less than the discs. The latter, however, have grown in favor among those able to afford the more expensive articles.

Disc machines are widely advertised in the leading popular weekly journals, monthly magazines

and daily newspapers, more particularly in the autumn and winter seasons. Both cylinder and disc machines are carried by music dealers. Retailers usually pay cash for their machines, and the wholesalers sell on a commission basis, sales under certain prices being forbidden. Price quotations should preferably be c. i. f., but in view of the present keen competition business would be difficult unless a branch house should be established under the management of an alert sales agent.

Throughout the provinces the popular-priced machines and the records of popular songs and instrumental numbers are both in demand, with a limited call for high-priced machines. In Liverpool 75 per cent. of the sales are of the cheaper styles. In Manchester the local piano dealers have taken up talking machines owing to poor trade in their own line. Germany sends large numbers of talking machines into Manchester. In Edinburgh, Scotland, the cheaper grades of talking machines are mostly in demand, the prices ranging from \$7.30 to \$15.30. The phonograph continues to be preferred by many families to the disc, but the latter is now making steady headway in favor. The American made machines of both styles have at least five-sixths of the trade, and as a rule machines with horns exposed are preferred to the hornless type.

For the trade in Dublin talking machines are usually imported through England, and the larger proportion are American. Direct importations from the United States in 1910 of talking machines and records amounted to \$1,003. In Dublin and locality the demand is well devoted between the high-priced and popular-priced instruments.

In the various cities throughout Great Britain American talking machines are found in considerable numbers, their chief competitors being the German makes, and there seems to be a goodly market particularly for the high grade expensive machines.

Other European Countries.

In most of the other countries of Europe conditions as to the talking machine trade are similar to those in the countries already mentioned. American instruments are to be found in almost every market, though in a number of places they are not imported direct. The machines manufactured partly in the United States and partly in Germany, or those made by branch factories of American firms in Germany, are found in large numbers particularly in the southern and eastern sections of Europe. The competition of German instruments, especially in the cheaper grades, is one of the chief obstacles to the marketing of the American product. In Spain, Switzerland, Italy and other countries the Gramophone Co., which is the name of branches or affiliations of an American company in various countries of Europe, largely controls the trade.

Practically all the talking machines arriving in Sweden come through Germany, and in the cheaper grades the German machine is practically the only one offered, the best and highest priced being the American. A German machine with outside horn retails there for prices ranging from \$2.50 to \$107. Records of all kinds are sold. The prices for "Beka" and "Lyrophon" records, two German makes, are as follows: Five-inch single, 20 cents; 7-inch single, 27 cents; 7-inch double, 40 cents; 10-inch double, 53 cents. The market for phonographs is undoubtedly worth developing, and American firms not represented on the Continent by allied companies could probably cultivate it best by

Paste This Where You Can Always See It!

MR. DEALER:

We refer all Talking Machine inquiries coming from towns where we are represented by dealers to the dealer or dealers in that town.

VICTOR and EDISON JOBBERS

Lyons & Healy

CHICAGO

acting through Hamburg jobbers, who send their own traveling men through the country with general lines of small wares. There is a limited market waiting to be developed for wax-cylinder machines for office dictation, some of which have already been sold. Norwegian conditions are largely similar to those in Sweden, though many machines are imported from the United States direct. The total importation in 1909 was valued at \$41,600, of which goods worth \$21,835 came from Germany.

There is only a limited market for high-grade machines in Denmark, the Netherlands and Belgium, except in Liege, where the demand for the more expensive articles is fairly good, though even there the greater demand is for the cheaper grades. In Ghent the type of machine demanded varies in price from \$3.50 to \$14.50. There is a large and increasing demand for phonographs in Antwerp, disc records and operatic records being preferred, and machines of moderate cost having the first place on the market. The favorite one is the American gramophone, now manufactured in and imported from Germany, France and England. Since the establishment of the factories in these countries the machines are no longer imported direct from the United States.

Practical Monopoly in Spain.

The phonograph business of Spain is practically controlled by a monopoly, conceded by the Government to the Compañia Francesa del Gramophone, which is one of the affiliations of an American company and which holds nearly all the Spanish patents on talking machines and accessories. Their machine is the only one of importance on the market, and at least in the Barcelona district competition with it is almost out of the question. The value of the phonographs and accessories imported into Spain in 1910 was \$61,611, of which the shares of the principal foreign countries were as follows: United Kingdom, \$22,654; Germany, \$17,794; France, \$12,643; United States, \$3,895. At Seville, which is said to be the second best market in Spain for phonographs, there is a good sale of high-grade machines, most of which are the product of an American factory. On account of the heavy duty, Seville firms do not buy their American phonographs direct, but through agencies at Barcelona, where the cases are made for the imported mechanisms. Quotations should therefore be made on the essential working parts of the machines, with specific weights, etc.

Italy and Switzerland.

A large part if not practically all of the American talking machines sold in Italy are the product of one company, whose agent is located in Milan. Phonographs are popular only in parts of Italy, and the demand that does exist is pretty well supplied by the German manufacturers. In Sicily, where the phonograph is very popular, more than one-half of the 800 to 1,000 machines sold annually are of German make, the two principal ones being the products of the International Talking Machine Co. (Ltd.) and the Lyrophonewerke, both at Berlin. From 200 to 300 machines are sold annually by the Palermo subagency of the Milan agency of an American firm. In the north of Italy the sale of phonographs is said to have declined in the last two years, though there is a liking for good operatic music.

Phonographs in Switzerland are imported largely from Germany, the value of the total importations in 1909 being \$118,000, of which Germany furnished \$76,000 and France \$32,000. The statistics showed only \$1,000 worth of phonographs from the United States, but that is misleading, as many of the mechanical parts made in the United States are sent to Germany, fitted with cases, and then sold in Switzerland. It is said that American firms not represented in Germany can hardly hope to compete in Switzerland by direct sales. Cheap phonographs are made in Switzerland and exported to all parts of the world, the amount in 1909 being \$350,000. In general, there is no market for high-grade machines, though there may be some sale for them in St. Gall.

Russia, Turkey and Greece.

The Russians are a musical people and care little for what is known in the United States as "ragtime" music. The classical productions are

in demand and especially those of noted singers. Where the quality is good and the price reasonably moderate there is an excellent market in Russia for high-grade machines, and although there is a large sale of the cheap phonographs the Russians are not satisfied with them as a rule. There are four factories in the country making phonographs, one of which, the Gramophone Co., employing 117 workmen, is at Riga; another, owned by Julius Feigenbaum, at Warsaw; and the other two, the Orfeon Co. and J. H. Zimmerman, at St. Petersburg. Germany leads in the import trade and a few machines are supplied by England, but it is believed that the United States also has a good foothold in the trade. Disc machines are very generally preferred and those with concealed sounding horn are beginning to make a place for themselves. Phonographs are very popular in the Caucasus, prices running from \$23 to \$39; most of the sales are of the lower-priced grades.

In Turkey the business and representation of American phonographs has invariably failed. The prices are too high and the German machines at much lower figures answer the purpose quite as well. Some presumably American machines are seen, but it is believed that none of them originates in the United States. However, a considerable number of American records are sold in the interior. In Greece the popularity of the phonograph has declined, and only the cheaper grades are now sold.

(To be continued next month.)

TO PRESERVE VOICE FOR 1,000 YEARS

Plans in Paris to Record Bernhardt's Voice and to Seal the Records in Receptacles that Are Not to Be Opened for Ten Centuries—Looking for Suitable Record Compositions.

According to a dispatch from Paris, France, it is planned to make records of Sarah Bernhardt's voice in some of her famous plays and to seal the records in containers, which are not to be opened for a thousand years to come.

Those most interested in the movement say the greatest difficulty lies in securing a composition from which to make the records, that will remain in its present form during the ten centuries. There still appears to be some doubt about the ordinary record composition retaining its properties during that period.

It is rumored that a prize of \$1,000 will be offered for records that will endure this long period of storage. One of the committee has remarked that no one will ever be able to gainsay whether the prize-winning record composition has come up to the demands or not.

If you have employees who insist upon doing their work in their way instead of your way, begin looking around for someone to take their place.

FEATURE EDISON LINE IN IRELAND.

Edison Phonographs, Home Kinetoscopes and Other Products to Receive Strong Representation in Emerald Isle by "Phonos and Kinetos, Ltd., Ireland."

(Special to The Talking Machine World.)

Dublin, Ireland, Nov. 30, 1912.

One of the latest limited companies to enter the talking machine field in Ireland, and in the movements of which manufacturers and dealers are showing much interest, is "Phonos & Kinetos, Ltd., Ireland," which has opened handsome premises on

Edison Headquarters in Dublin, Ireland.

Grafton street, the main business street of this city, where the company is displaying an elaborate line of Edison phonographs and records, including the latest model, the new Edison home kinetoscope, and many other Edison specialties.

The new company is under the control of Irish directors, with John O'Neill as managing director. It is the intention of the new company to open branches in Belfast, Cork and at other points on the Emerald Isle in the near future.

The officers of the company are especially enthusiastic regarding the opportunities offered for the sale of the Edison home kinetoscope, and claim that the number of dealers applying for agencies for the new line is already somewhat in excess of the number that can be supplied at the present time.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

English Manufacturers Experiencing an Enormous Boom in All Branches of the Talking Machine Business—Impossible to Supply the Present Active Demand—Conditions Are Most Favorable in Every Respect—Some Christmas Selections—New Device to Strengthen and Purify Tone Delivery—Strenuous Effort Being Made to Kill Price-Cutting—New French Record Makes Its Appearance—Tone-Arm Suit Settled—A Great Budget of New Records for the Month—Talking Machines to Be Included in Piano Manufacturers' Exhibition—Gramophone Co. Exhibit—Other Items of Interest.

(Special to The Talking Machine World.)

LONDON, E. C., December 3, 1912.

In many quarters trade conditions remind one of the boom 1906-7 season, when dealers could not replenish stock fast enough to satisfy the demand. Manufacturers then, as now, found their factory facilities quite insufficient to cope with the tremendous influx of record orders, despite night and day working shifts continuously for months. In not a few instances, too, the only fitting parallel memory provides is that of ten or more years ago—the time when discrimination in the choice of titles was a thing unknown. Dealers in those days were only too glad to take anything available, the most indifferently recorded selections selling freely. It furnishes a mental picture of happy dealers and worried manufacturers beset with the responsibility of filling time orders as promptly as possible. Conditions have changed vastly since then, and to again approach even a semblance of the old situation is indeed fraught with great significance for the future of the talking machine industry. And more especially so when one considers for a moment the terrific competition which abounds today. The public has a choice now of something near forty different records, of which quite 25 may be classed as well known at prices varying from thirty shillings to one shilling and sixpence, if one ignores the great number sold below the latter figure. Almost every week a new record makes its appearance on the market, and they are for the greater part of the 1s. 6d. variety. To American readers who have but a choice of half a dozen records the foregoing may come as a surprise. There are few, if any, patent restrictions in force here, while on your side progress in the talking machine trade, at any rate, seems to be hedged around by patent monopolies and commercial policies which would not be tolerated this side of the pond. Therein lies the difference. Whatever may be said to the contrary, if one may reasonably judge from existing conditions here competition is all in favor of the public, and ipso facto, the trade also. But there, I wander from the subject. Interviews with London traders fully confirm my previous forecasts of a great season. There can be no doubt of it now; we are in the throes of a real Yankee hustle.

Among the factors complaint is made of the difficulty experienced in obtaining adequate supplies of machines and records, but ever joyful and optimistic, they are doing the best possible to meet the dealers' requirements. With our retail friends things are, of course, as usual—want everything at once. Few make advance preparations in the direction of planning what lines they will carry, and when sales begin in earnest, that is the time in their opinion to rush the factors, expecting immediate deliveries of any goods they order. The reaction naturally affects all sections of the trade and culminates in placing manufacturers in the awkward predicament of having to refuse orders a week or so before Christmas. Let us hope things will shape out better this year.

I have not the space in which to review the great amount of Christmas literature to hand from the various talking machine concerns; let it suffice to

say that a particularly high standard of get-up and attractiveness is manifest in this publicity matter, which, properly utilized, will prove of great assistance in support of the retailers' efforts to boom talkers in ideal Christmas gifts.

In the various record lists Christmas selections are much in evidence. All vie with each other in issuing of the best and most appropriate titles—ragtime, waltzes, carols, hymns, etc., predominating.

Records of the Choir of St. Patrick's Cathedral.

It is now possible to hear the choir of St. Paul's Cathedral through the medium of "Marathon" records. For such a young firm this is really a great scoop, and is all the more acceptable, having regard to the long rendition only possible with this make of disc. Congratulations!

New Sound Reflecting Elbow Introduced.

The "Rayflex" sound reflecting elbow, designed to purify and strengthen the tone delivery of every machine to which it may be fitted, is the very latest novelty placed on this market. A brief description is of interest. It represents an elbow connecting the trumpet to the sound arm ahead, but instead of being round on the top bend, is at this spot shaped off flat in two angles, by which means the sound waves are reflected direct out of the machine without impinging against the walls of the elbow and trumpet as in other instruments. By this method it is obvious that just the full musical expression as recorded is delivered free from nasal echo and other foreign noises bred in the elbow and trumpet of ordinary machines. A test of the Rayflex elbow convinced me beyond any doubt that it represents absolutely the most remarkable device for the improvement of gramophones produced in recent years, and I have no hesitation in saying that it not only enriches and clarifies the tonal quality of records, but lends an added charm to mechanical music, and will exert a great influence in further popularizing so-called talking machines. The Rayflex elbow is made in a variety of sizes to fit any machine, and sells at an extremely reasonable price. Particulars may be obtained from the Rayflex Co., Ltd., 42 Great Marlboro street, London, W.

New Companies Organize.

Record & Gramophone Manufacturing Co., Ltd., capital £2,000. Office: 24-25-26 Featherstone street, City Road, E. C.

Sidney Acott & Co., Ltd., musical instrument manufacturers; capital £10,000. Office, 124 High street, Oxford.

West End Gramophone Supply Co., Ltd.; capital £5,000. Office, Regents street, W.

Information Regarding Foreign Markets.

In reply to a question as to the advisability of establishing commercial museums in suitable trading centers for the exhibition of examples of British goods which are in demand at different places abroad, Mr. Buxton, president of the Board of Trade, said: "The practice of the Board of Trade in this matter is to exhibit at the Commercial Intelligence Branch of the Board in the city, and also from time to time at suitable trade centers in the United Kingdom, samples sent home by His Majesty's consuls and trade commissioners in foreign countries and His Majesty's dominions of foreign articles which appear to be displacing British manufactured goods in those markets. For example, at present a series of exhibitions of samples of foreign hardware which is competing with British goods in the markets of self-governing dominions is being held in London, Birmingham, Sheffield and other important centers. These temporary exhibitions, which have met with great success, are, I think, a more effectual method of furnishing information to manufacturers desirous of finding markets abroad for their wares than the establishment of permanent museums, which it is practically impossible to keep

up to date in regard either to samples of goods in current use to to current prices and conditions. I may add that manufacturers and traders requiring information as to conditions obtaining in particular foreign or colonial markets in regard to their particular goods should apply to the Commercial Intelligence Branch of the Board of Trade in Basinghall street, E. C., which branch has been established for the special purpose of supplying such information.

Association to War on Price Cutters.

At a recent meeting of the executive council of the British Gramophone and Phonograph Dealers' Protective Association, Mr. Wilcox, president, in the chair, supported by Henry Seymour, honorary secretary, the importance of price maintenance was strongly debated. The strong policy pursued by the Columbia people came in for a deal of praise, but several other concerns were strongly condemned for their apparent indifference to glaring examples of price cutting, to which their attention had been drawn. A suggestion to approach these delinquent firms met with an enthusiastic response, and in at least one case a subsequent meeting with the manufacturer was considered to have produced excellent results.

The association has been pretty quiet of late, and there are not a few of its supporters who would like to see it a little more active. Certainly good work is being done, but to make itself really known, a salaried official should be appointed to devote his whole time to further the society's interests and gathering in new members.

A recent letter to Edison dealers says, in part:

"From now on until December 31, 1912, we shall extend the exchange so that dealers may accept from their customers cylinder records of any other make, allowing a credit of twopence for one record of other make against the purchase of an Edison Amberol record at full list price. In other words, the allowance for a record of other manufacture will be the same as on an Edison Standard record, and dealers will receive from their factor an allowance of three halfpence (1½d.) on a record of other manufacture against the purchase of an Edison Amberol record, at usual dealers' price. We suggest that you circularize your patrons and if you will send us a list of their names and addresses we will be glad to communicate with them direct and recommend them to your establishment for further details."

Big Season for "His Master's Voice" Records.

If this is anybody's season it is a "His Master's Voice" one. In divers unexpected quarters the famous dog meets the eye, and his mission along the path of publicity has culminated in placing the Gramophone Co. in a little difficulty not unrelated to supply and demand. The tremendous number of advertisements now appearing in the chief newspapers and magazines has produced the inevitable result of creating a demand for "His Master's Voice" goods which can only be described as unprecedented. Despite the full working pressure day and night, and what appeared at the time ample factory preparation to handle this great demand, machines and records cannot be dispatched fast enough to satisfy the healthy appetites of "His Master's Voice" dealers. And to crown it all the company has just issued such a splendid list of records for December as is scarcely calculated to relieve the situation. Here are some of the good things offered: Double-sided records, 12-inch—"Lift Up Your Heads" (Messiah), Handel, and "And the Glory of the Lord" (Messiah), Handel;

Messrs. Marcus Clark & Co., Ltd., Talking Machine experts of Sydney, N. S. W., will always be pleased to hear of anything new in Talking Machines, Records, or Novelties with view to agency. Particulars to D & W. MURRAY, LTD., 28 Finsbury St., London.

FROM OUR LONDON HEADQUARTERS— (Continued from page 36)

"On the Road to Zag-a-Zig" (Finck), and "Japo Maisene Ke-Sa-Ko" (Chapus). 10-inch—"Semper Fidelis March" (Sousa), and "La Kermesse" (Faust), Gounod, by the Band of H. M. Coldstream Guards; "Love's Desire" (Reposti), and "The Light Watch" (S. Dickinson); "Baby's Sweetheart," Pizzicato Serenade (Corrijun), and "Pizzicato," from "Sylvia" (Delibes), Mayfair Orchestra. "Love at Sight" waltz (Henry Coates), and "Moon Madrigal Dance" (Willeby), Bohemian Orchestra; "Oh, You Beautiful Doll" (Brown and Ayer), and "The Gaby Glide" (Hirsch); "La Boheme Fantasia," Part 1 (Puccini), and "La Boheme Fantasia," Part 2 (Puccini), Jacob's Trocadero Orchestra. H. M. V. single-sided records—"Wedding March" (Mendelssohn); and "Nocturne," "Midsummer Night's Dream" (Mendelssohn), New Symphony Orchestra; "Silver Threads Among the Gold" (Danks), John McCormack; "The People That Walked in Darkness" (Messiah), Handel, Clarence Whitehill; (a) "Rose in the Bud," and (b) "It is Not Because Your Heart Is Mine" (Lohr), Mme. Kirkby Lunn; "Sigh No More, Ladies" (Aiken), Gervase Elwes; "The Drum Major" (E. Newton, Charles Tree; "The Sentry Song" ("Iolanthe"), Sullivan, Harry Dearth; "At Santa Barbara" (Kennedy Russell), Peter Dawson; "My Dearest Heart" (Sullivan), Miss Percival Allen; "Eily Mavourneen" (Benedict), Miss Ruby Helder; "Sink, Red Sun" (del Riego), Miss Marion Beeley; "Angels Guard Thee" (Godard), Olga, Elga and Eli Hudson; "Humoresque" (Dvorak), Miss Marie Hall (violin); "Good-night, Good-night, Beloved" (Pinsuti), Brass Quartet; "Scherzo Capriccio" (Sabathil), flute, John Lemmoné; "Gems from 'Florodora'" (Smart), Light Opera Company; "Be My Comrade True" ("Princess Caprice"), Leo Fall, Miss Clara Evelyn; "Robin Hood" (Rogers), George Robey; "Pucker Up Your Lips, Miss Lindy" (A. Von Tilzer), American Quartet; "When Uncle Joe Plays a Rag on His Old Banjo" (Morse), Arthur Collins; "Won't You Waltz With Me?"

(Naish), Tom Clare.

"Pathograph" for Use in Schools.

Apropos the growing use of the talking machine for educational purposes, it is interesting to know that Pathé Frères intend to market what is styled the "Pathograph," which I believe has already won considerable favor on the Continent. Another line they have in view for introduction here is a home picture machine, and having regard to this firm's special facilities in this business, something of exceptional utility may reasonably be expected.

New Record Appears in British Market.

Gabrill, Paris, is the name of yet another new record here which is being exploited under the agency control of our old friend, Mr. Williams, whose present offices are located at 15 New Oxford street, London. Although at the moment only records by the Le Garde Republicaine Band have been issued, the company's future policy will embrace the issue of a big list containing up-to-date English titles, upon which recording is shortly to commence.

Big Signs on Gramophone Co. Plant.

Situated on the fringe of the G. W. R. main lines, the Gramophone Co.'s huge Hayes factory offers exceptional facilities for publicity purposes, and we are therefore not surprised to learn they have utilized the walls fronting the railway for this purpose. A number of signs are already up and the latest conception is a huge representation of "His Master's Voice" trade-mark picked out in no less than six colors. The effect will be striking and impressive and will furnish the minds of passing travelers with much food for thought.

Settlement in Tone Arm Suit.

For some considerable time past it has been known that litigation over the Gramophone sound arm was pending in Germany between that company and Messrs. Lindstrom. According to the German trade press there appears to have been a settlement of the matter in dispute without resort to law. All of which is very satisfactory.

Interesting New Zonophone Co. List.

Of the different Christmas lists issued that to hand from the Zonophone Co. is undoubtedly one of the very best yet conceived. It is replete with a particularly grand selection of seasonable titles and a full meed of praise must be accorded to the utilization of the services of so many prominent artists, practically every one of whom is a top-liner. I need hardly mention that orders placed for these records reach a phenomenal figure, so much so in fact that the company is experiencing the greatest difficulty in fulfilling the trade requirements. In addition to those mentioned below there are innumerable seasonable selections which the exigencies of space prevent my mentioning. Ten-inch double-sided records—"The Kerry Dance" (Molloy), and "The Bird and the Rose" (Horrocks), Mme. E. Jones Hudson; "Rocked in the Cradle of the Deep" (Knight), and "It's Nice When You Love a Wee Lassie" (Lauder), Harry Lauder; "Rosenthal and Harrigan at the Race Track" (Friend and Downing), and "Rosenthal and Harrigan at the Wedding" (Friend and Downing); "A Christmas Party" (descriptive), introducing "The Mistletoe Bough" (sung by Herbert Payne), and "A Christmas Ghost Story" (descriptive), Harry Lambton; "Autumn Manoeuvres March" (Carl Keifert), and "Autumn Manoeuvres Selection" (Kelman), Peerless Orchestra; "The Church's One Foundation" (S. S. Wesley), and "Lead, Kindly Light" (C. H. Purdy), Besses o' th' Bairn Band; and "All Aboard for Girly-Land" (Murphy and David), and "Let's All Go Into the Ballroom" (Murphy), Florrie Forde.

Talking Machines at Music Trades Exhibition.

At a recent meeting of the Pianoforte Manufacturers' Association called to discuss proposals for another music trades exhibition to be held next year, such a strong feeling manifested itself in favor of an all-British show that a motion to this effect was easily carried. The period of the exhibition is from September 6 to 20, 1913, both days

inclusive, and it appears such extensive support has been promised that nothing short of the great Olympia offers adequate space for exhibitors—all of whom will be allotted an "island" position. A prominent portion of the main hall will be set apart for a totally distinct talking machine section, in which it is said each exhibitor will have a separate soundproof enclosure for demonstration purposes, etc. The All-British Pianoforte and Music Trades Exhibition will in every way be a thoroughly comprehensive one, even to the extent of exhibiting machines, etc.

Death of Distinguished Inventor.

The death is announced of M. Charles Bourseul, at the age of 83. It is said that he ended his days poor and unknown, but is entitled to lasting fame on account of his share in the invention of the telephone. Bourseul gave up many years to the study of telegraphy, and in 1854 propounded a theory of the telephone in an important article which he wrote about that time for the Paris L'Illustration. According to Reuter, for the electric transmission of speech, M. Bourseul advocated the use of a flexible plate at the source of sound, which would vibrate in response to the varying pressure of the air, and thus open and close an electric circuit, and of a similar plate at the receiving station, which would be acted on electromagnetically and thus give out as many pulsations as there are breaks in the current. The difficulties relative to transmission of the sounds so as to be received similar in pitch, quality and relative intensity were not dealt with by Bourseul, who, however, to a great extent anticipated the work of Reis. The latter succeeded in constructing a telephone furnished with a receiver which did actually reproduce sounds, but intelligible and long-distance

talking by wire he just failed to make possible. It was reserved for Graham Bell and Edison, more than 20 years later, to perfect by their respective inventions the practical and commercial use of the telephone.

Latest Columbia-Rena List.

The Columbia-Rena current list contains particulars of so many special issues as to make it really difficult to know where to commence and where to end in giving a selection therefrom. But special mention should be made of their amazingly fine ragtime repertory, which includes practically every known success of the day. This class of music has caught on wonderfully here, and in giving us the real American ragtime stuff the company has secured for itself a niche of popularity alike among dealers and the public which will very considerably enhance its reputation. Some of the latest ragtime issues are: 10-inch records—"Hear That Pickaninny Band" (Furth), Prince's Male Quartet, and "Waiting for the Robert E. Lee" (Muir), Dolly Connolly (Mrs. Percy Wenrich); "That Aeroplane Glide" (Israel), Prince's Male Quartet, and "That Raggedy Rag" (Henry), Prince's Male Quartet; "Cabaret Rag" (Turney), and "Black Diamond Rag" (Henry Lodge), King's Military Band; "Red Pepper Rag" (Henry Lodge), and "Black and White Ragtime" (Botsford), xylophone solos, Lawrence Coates. A real novelty is the issue of a record pantomime entitled "Dick Whittington." It is announced in two parts on a 12-inch Columbia disc, and is treated in a most realistic fashion—not just a disjointed story, but a perfect presentment of a pantomime within the limits of a record. Played by the Columbia Pantomime Company, including the cat, orchestra and other effects, this remarkable record brings home

to one the unlimited scope of entertainment which the "talker" can provide. Other records calling for mention are: Columbia 12-inch records—"When All Was Young," from "Faust" (Gounod), and "Softly Awakes My Heart," from Samson and Delilah" (Saint-Saens), Miss "Carrie Herwin"; "There's a Girl in Havana" (Goetz and Sloane), and "I'm Going Back to Dixie" (Berlin and Snyder), the Two Bobs; "Fireside Minstrels," Part 1 and Part 2, with orchestra; and "Glory to God in the Highest," from "The Messiah" (Handel), and "Hallelujah Chorus," from "The Messiah" (Handel), Sheffield and Leeds United Choir. 10-inch records—"My Heart Is With You To-night" (A. J. Mills and Bennett Scott), and "That's What the Rose Said to Me" (B. F. Barnett and Leo Edwards), Stanley Kirkby; "Desperate Desmond" (burlesque, descriptive), Fred Duprey, and "Jimmy Trigger; or The Boy Hero" (burlesque, descriptive), Billy Golden and Joe Hughes; "Dutch Daly on Love" and "Dutch Daly's Imitations," by Dutch Daly and his concertina; "Mister Cupid" (Weston and Cunliffe), and "That's What They All Say" (Weston and Cunliffe), Whit Cunliffe; "The Fool of the Force," Part 1, and Part 2 (Carney), "A Music Hall Sketch," played by George Carney and company; "Queen of the Seas Waltz" (John Openshaw), and "Girl in the Taxi" waltz (Jean Gilbert), Casino Orchestra; "On a Christmas Morning" (L. Currie), descriptive, Casino Orchestra, and "Christmas Morning at Flanagan's," descriptive, Steve Porter and company; "The First Noel," and "Christians Awake," sung by the Abbey Quartet and soloists, with organ and string quartet; and "Rock of Ages" (R. Redhead), and "Onward, Christian Soldiers" (H. J. Gauntlett), cornet solos, by Sergeant Leggett.

TRADE PROGRESS IN THE SOUTH.

A Richmond Talking Machine Dealer Who Has Won a Large Measure of Success Is James Cowan, of Richmond, Va.

Southern progressiveness is well exemplified in the remarkable popularity achieved by talking machines in recent years. Dealers and jobbers throughout the South have all lent their utmost energies to the promotion and furtherance of the

James Cowan.

talking machine's popularity, and as a result of this conscientious labor the South is now the home of many handsome retail establishments devoted to the sale of talking machines. These stores are doing a splendid business with all the various grades of machines, and a chat with representative dealers of the South reveals unbounded enthusiasm and faith in the future of the industry.

Prominent among the live-wire talking machine dealers of this section of the country is James Cowan, of Richmond, Va., who handles Columbia goods exclusively. Mr. Cowan's store is one of

the show places of the city, and is noted throughout the State as being one of the best-appointed establishments in any industry. Mr. Cowan operates under the name of the Talking Machine Co., and his success with the Columbia products has been marked and emphatic from the first start that he made in Richmond, some five years ago. Mr. Cowan is not satisfied with merely having the exclusive agency for the Columbia goods and waiting for orders to come his way, but he is alert and aggressive, and takes advantage of every effort at co-operation extended by the home office. It has been his constant progressiveness and energetic work that has won for Mr. Cowan an enviable reputation throughout Virginia as one of the successful representative business men of the State.

PROMOTION FOR H. L. WILLSON.

H. L. Willson, of the Columbia Phonograph Co., who has for so long filled the responsible post of assistant to the general manager with signal ability, zeal and unflinching helpfulness, has been appointed assistant general manager. Mr. Willson has been so intimately identified with the duties of the office that the appointment is but a logical recognition of his worth and merit. He is assured of the continued cordial co-operation and support of the entire Columbia service.

RARE COLLECTION OF CELEBRITIES.

Otto A. Gressing, general manager of the Victor departments in the two McCreery, Lord & Taylor and O'Neill-Adams stores, is an enthusiastic collector of autographed photographs of world famous artists in the operatic and musical worlds. One of his chief hobbies is the development and enlargement of his already splendid collection, and he was very much gratified the past fortnight to receive the photographs of several prominent artists which were missing from this collection. Among those he secured recently were the photographs of Mary Garden, Leo Slezak, Olive Fremstad and Emmy Destinn. These new additions are prominently displayed in Mr. Gressing's office in the sumptuous Victor department at Lord & Taylor's, and constitute a collection which promises to be most interesting.

Opening for Good Salesman.

WANTED.—Opening in the Middle West, for a good Retail Talking Machine Salesman; straight salary—part salary and part commission—or all commission—to assume charge of department with live Victor and Edison dealers; good opportunity. Applicant must come well recommended. Address "B. H.," care The Talking Machine World, 373 Fourth Ave., New York City, N. Y.

FOR SALE.—Well-established talking machine and small goods business, with a fine growing trade; in the best and largest city in the irrigated west; population over 24,000; exclusive line and only one other store in the city; ill-health compels retirement. Address "C. M. C.," care The Talking Machine World, 373 Fourth Ave., New York City, N. Y.

CHAUFFEUR'S COMPLETE OUTFIT SACRIFICED.—Consisting of elegant mink fur-lined coat, Persian lamb collar, \$35; pair of elegant bear robes, \$15 each; raccoon cap, \$5; pair of fur gloves, \$4; pair of goggles, 50c.; 1 pair leather leggings, \$3.50. Will sell separately or the lot, all new; never worn. Original price, \$225. C. CHASE, 118 East 28th St., New York City, N. Y.

Talking Machine Man Wants Position.

A Live Talking Machine man of considerable business experience, thoroughly conversant with every detail of the line, business developer and salesman, is seeking connection with a firm or organization, who would appreciate a forceful, conscientious and able worker and for whom a future exists. Best of references. Address "100," care of The Talking Machine World, 373 Fourth avenue, New York City.

Columbia Salesman Wanted.

Wanted.—An experienced Columbia salesman for road work; permanent position; splendid proposition for a steady man. Address "Salesman," care of The Talking Machine World, 373 Fourth Avenue, New York City.

For Sale.

1,000 Edison 2-Minute Records at 8 cents; 1,000 Edison 4-Minute Records at 15 cents. Address "Sale," care of The Talking Machine World, 373 Fourth avenue, New York City.

FOR SALE.—5,000 Edison 2-minute records, 10c. each; 5,000 Zonophone 10-inch records, 15c. each; all new, clean stock. DENINGER, 335 North St., Rochester, N. Y.

FACTORS THAT DENOTE OUR GREATEST PROSPERITY.

Louis F. Geissler, Manager of the Victor Talking Machine Co., Makes an Able Analysis of Existing Conditions and the Results Are Certainly Cheering for the Talking Machine Man and Every Other Merchant in This Country—Political Situation Discussed—Tells of Immense Demand for Victor Talking Machines and Records.

Discussing trade conditions and prospects and the general trend of the talking machine trade, Louis F. Geissler, general manager of the Victor Talking Machine Co., Camden, N. J., said:

"In January, 1911, I openly prophesied a good year for 1911, a boom year for 1912 and, barring cataclysm, at least two or three more boom years to follow that period. Those prophecies, up to date, have materialized. Many bankers and manufacturers foresaw what we ourselves predicted the early part of this year, and that was that fundamental conditions were too strong to permit of the usual Presidential campaign year's deterring influences on our business. This is now a matter of history. From twenty-six travelers whom we have covering practically every corner of America there is scarcely a report but speaks of prosperous conditions in practically all lines of trade.

"As concerning our own condition, your readers in the trade are only too familiar with our oversold condition and the difficulty of securing Victor goods is all too apparent to them, but what we must have, to remain continuously prosperous, is a general, healthy, hopeful and prosperous condition throughout our entire land in almost all branches of human endeavor. To be sure, there is never a period so prosperous but that our national commercial failures continue, and there are those who cannot see the prosperity and, regrettable to say, many who do not enjoy it, but the large average prosperity is what we must deal with.

Our National Prosperity.

"Without referring to compilations of figures or past statistical 'diagrams' or 'curves,' I believe I am right in stating that such an economic or fundamental condition upon which to base hopes of prosperity has never before existed in our country. Everyone must know of the phenomenal crop of this year, and what is deeply encouraging, the excellent condition of the ground, which promises much toward another good crop for next year; the wide distribution of money throughout our land; the splendid—almost independent—condition (barring panics) of the banks throughout the country; this condition, which is so desirable and means so much to business in general, is demonstrated by the fact that every call that was made upon Eastern financiers to assist in financing crop movements and railroad necessities to take care of such has been met without causing a ripple upon the surface of finances in the East. This crop movement is now accomplished to a great extent and the money is finding its way back to our depositories, and this was done without drafts upon the European credits.

"Our national deposits, I read, have grown in a far greater ratio during the last five years, or since the panic of 1907, than in any other similar period of our national history.

"Everything that this country has to sell—the products of her mines, her forests, her lands or her labor—is either abundantly produced or in much demand at fair prices. Copper, which is practically the basis of all metal values and for which we have paid as high as 25 cents and as low as 12 or 13 cents in the past six or seven years, is now selling at 17½ cents and in tremendous demand the world over, and it costs less to produce than ever in the history of that industry.

"The value of our crops in general approaches closely the ten billion dollar mark. I note the Southern Pacific Railroad reports that it will require 55,000 cars to move the fruit crop out of California. Think of it—1,000 train loads of 55 cars each.

"The prosperity of America—in fact, of the world—depends upon the generally prosperous condition of the world; we are all more prosperous when everyone is prosperous. Other nations are exceedingly prosperous. The great bankers of the world are busy financing the world's industries.

"It is this condition of affairs which leads me

to hope that, notwithstanding the apparent readiness of the armies and navies of England and Continental Europe at the present time, the world's greatest catastrophe—which has been so frequently referred to in case of the embroilment of European powers over the imminent settlement of the Balkan war and Balkan territorial questions—will be averted, and that the world's prosperity will be resumed and continued.

Effect of Change in Administration.

"We have now to do with the possible influences of a change of administration. Personally, I look with composure toward the future under President Wilson. Whatever our political affiliations or views may be, I think it is well to bear in mind that the political and business views of both the Democratic and Republican party have changed considerably during the last few years and that there are no longer the great and irreconcilable differences between the parties. In my opinion the Republicans are not so rampant

Louis F. Geissler.

as protectionists nor the Democrats as free traders as they were a generation ago.

"The South is a wonderful producer and a large manufacturer to-day.

"The North—and many of our manufacturers—who have looked so long with anxiety at the tariff wall, and more especially the tariff agitation, have made such a careful study of conditions both at home and abroad (where the cost of living and production has gone up just as it has here), that they—the Northern factories—no longer scare as formerly at the suggestion of a change, and even the Republican party has committed itself to a revision of the tariff downward.

"We have in the incoming President a man born in the South, resident in the North; a strong-minded, educated and refined gentleman; a deep student, and whose convictions we have every reason to believe will be based upon his belief rather than pure party policy.

"He signifies his intention of calling a special session of Congress immediately after his official installation. I think this is a good thing to do. Let us dispose as quickly as possible of the uncertainty. He will have both Houses with him; his Congress will be a new broom; they will be prepared to sweep clean; they will come to the subject with fresh minds; tariff bills have been prepared galore, and Mr. Wilson says that he has studied the question all his life, and I believe there

will be a very temperate revision and that the Democrats themselves, now that they are able to do what they please, will not do it, i. e., after a fashion that should cause national alarm.

"A prosperity such as we have never before seen has been bequeathed to the Democratic party by the Republican. If they are foolish enough to injudiciously destroy it, they will go out of power again and probably not be returned for another 25 years.

"The situation under which the Democratic party came into power is so absolutely unique that the solution of the great responsibilities which they assume will be critically watched by voters of both parties.

"The tariff question, the currency question, the railroad question, the application of the Sherman act and the seemingly ever-present and malignant attack upon corporations simply because they are such, or because the brilliancy of their management has brought them into the limelight; these questions, of such great moment and so far-reaching in their results, are presented for the Democratic solution and, if unwisely solved, may cause the Wilson administration to be the rock upon which the solid South may break, and, to my way of thinking, it would be a good thing for the country if we had more Democrats in the North and more Republicans in the South.

Attending to Our Own Business.

"However, notwithstanding the truths in the foregoing paragraphs relative to the great influence of general and political conditions in our own specific circle of endeavor, there is no doubt but that every merchant can by his personal effort largely 'make or break' his own business in either good or bad times.

"It is well for the smaller merchant to keep closely in touch with forces outside of only those which seem to have a direct bearing upon his own business, but he must 'deliver that butter to Mrs. Smith's on time and see that it is sweet.'

"It is well for the manager of a concern to receive any suggestions relative to the betterment of the business from his employees, but he welcomes most the suggestions from a man relative to the improvement of his own department, and so with the dealers to whom you direct your journal, the hard and intelligent worker will attract to himself, in times both good and bad, the larger percentage of the trade to be done in his particular line in his territory.

"I would take advantage of this opportunity to explain to such of your readers as may read these remarks that, notwithstanding our enormous preparations and largely increased facilities and shipments, they are totally inadequate and will remain temporarily inadequate to take care of the enormous demand which the generally prosperous condition and our added advertising and efforts have caused.

"We are beholden to many sources of supply—much assistance must be had from the outside. When that assistance fails us, it matures in our factories and is naturally passed on to them. Our deliveries of material from the mills have fallen below our orders and hopes very materially.

"No one could have foreseen the enormous increase in business which has occurred. We prepared to take care of an increase of over 50 per cent. this year, but it must be remembered that not only has the Victor of itself naturally made wonderful strides, but there has been a virtual 'slump' to the Victor, and I do not believe that outside efforts will be able to take any great part of that business away from us in the future.

"While we cannot take care of business at present, I may say (I hope without betraying too much egotism) that all Victor dealers are to be congratulated upon the fact that the Victor organization is a progressive one and is strong enough financially and willing enough to put the millions of dollars into extensions, which is now being done, in the effort to take care of the trade which is maturing.

"Our entire organization is alive to the condition and the tremendous shortage. We are doing all that is possible in all sections to get help and every other factory in the East is doing the same. We are positively fighting for labor; are no doubt

(Continued on page 40.)

FACTORS TO DENOTE PROSPERITY.

(Continued from page 39.)

robbing other factories and they are robbing us.

"We are refusing all new business and some of the very best concerns in the country are endeavoring to secure dealers and distributors' contracts. We have ordered our travelers to cease selling goods temporarily and devote their time to development and educational work.

"When our new factories mature—which will

not be far off—we shall have an immense output and have every hope of next year being able to take care of a larger percentage of the demand—no matter what it may be—than we are this year. I extend to all Victor dealers a hearty invitation for them to visit our factory and be shown through by a competent guide at any time during office hours.

"I am sure that they would return home more fully enthused by this Victor showing than by any other Victor factor."

MOST SUCCESSFUL HOLIDAY SEASON IN HISTORY.

Shortage of Stock in All Lines Causing Considerable Concern—All Houses Enjoying Remarkable Business—Arrival of Edison Disc Phonographs Interests Trade—Various Plans Pursued to Develop Business—McGreal Becomes Sheriff January 1—Victor for Washington School at Fond du Lac—Happenings of the Month Worth Noting.

(Special to The Talking Machine World.)

Milwaukee, Wis., Dec. 11, 1912.

Milwaukee talking machine men in both the jobbing and retail fields are finding themselves in the midst of one of the most successful holiday seasons in the history of the local trade. People are buying machines and records in a manner which they have not done in years, and there is every indication that the close of the season will see a record-breaking amount of business on the books.

The only matter which is causing all interests considerable concern is the genuine shortage of stocks in all lines. Demand has been so good from all sources that dealers found themselves low on stocks this fall and besieged jobbers with urgent requests for goods. The jobbers in turn found that the factories were unable to ship machines fast enough to meet the demands of the trade. The Wisconsin Talking Machine Co., jobber for the Victor; Lawrence McGreal, Edison jobber, and A. G. Kunde, Columbia jobber, have done their best to satisfy their dealers, but in many cases decidedly more machines could have been disposed of.

"While the Wisconsin Talking Machine Co. has been able to meet the demands of its dealers for Victor machines in most instances, it has meant a tremendous pull," said Harry Fitzpatrick, manager of the company. "There is no use denying the fact that we could have disposed of more machines had we been able to secure them. We have been fortunate in one respect in that we have been able to get plenty of records from the factory. Demand for machines and records has been such that sales will reach a new high mark this fall."

Reports which are arriving in Milwaukee indicate that dealers in the smaller cities and towns of

Wisconsin are securing a really remarkable business. It would seem that this is due largely to the widespread prosperity which exists all over this section of the Northwest because of the bumper grain and corn crops. The last crop report just issued by J. C. MacKenzie, secretary of the Wisconsin State Board of Agriculture, shows that the corn crop exceeded all expectations and that the early frost did not create the damage expected. Live stock and dairy prices are highly satisfactory, and this has added to the wealth of the Wisconsin farmer. When crops in Wisconsin are good and prices in produce and live stock come up to the normal, there is every promise of a big business in all lines of activity.

The first consignment of the new Edison disc machines has arrived in Milwaukee and has aroused much interest in local talking machine circles. William P. Hope, traveling representative of Thomas A. Edison, Inc., in Wisconsin and Upper Michigan, has been demonstrating several of the machines at the Hotel Pfister, where dealers from all over the State have been inspecting the new proposition. Everybody seems to think that the Edison people have perfected a machine which will increase their business right from the start. Nothing but words of approval are heard, and dealers are backing up their convictions by placing substantial orders. Lawrence McGreal, Edison jobber, has also received a few machines and is demonstrating them to his dealers. Mr. McGreal is especially enthusiastic regarding the future of the machine, and he is confident that Edison sales will now increase by leaps and bounds.

The Milwaukee department store talking machine people are meeting with an especially good business

this season and all are highly optimistic. L. C. Parker, manager of the Victor department at Gimbel Bros., reports that his business for the first ten months of the year showed an increase of 78½ per cent. over that of the corresponding period in 1911. Several additional sound-proof booths have been installed by Mr. Parker and he has increased his sales force to handle the holiday rush. C. W. Abbott, the enterprising young manager of the Boston store department, says that Victor sales thus far have even exceeded his expectations. Mr. Abbott has conducted a decidedly up-to-date campaign of advertising and it is safe to say that every patron of the big store has been notified regarding the new Victor department. The Boston store quarters have been enlarged considerably during the past two or three weeks. J. H. Becker, Jr., manager of the Espenhain Victor department, issued a special list of Christmas records and the result has been a phenomenal record sale.

Proof of how a really good record can make a sale is offered by Mr. Becker. A McCormack record—"The Rosary"—was being played at the regular afternoon concerts conducted by Mr. Becker in the Espenhain concert hall, when a lady from the store's rest room came over and said she would like to purchase that particular record. Before she had left, Mr. Becker had sold her more than a dozen good records and a \$50 machine, although when she visited the department she had no intention of making such a purchase. Mr. Becker is a strong supporter of the daily concert idea and he can directly trace good sales each week to this source. Mr. Becker says that the circular idea more than pays. Just the other day a lady entered his department with a circular which she had received last July and purchased a large consignment of records. Mr. Becker keeps an extensive card system of his customers, so that he can "follow" them up and secure good record sales. Mr. Becker is not in favor of selling a machine on the approval scheme, but much prefers to send out a man to demonstrate the machine and close up the deal or have the machine brought back at once.

Miss Gertrude Gannon, head of the Wisconsin Talking Machine Co., jobber for the Victor line, has installed several attractive sound-proof booths at her retail store in the Merrill building. Attaches of the store say that business was never better.

Among the recent visitors in Milwaukee were: Roy J. Keith, of the Talking Machine Co., of Chicago, and H. Franke, of the Pooley Furniture Co., of Philadelphia, who made some fine sales of the Pooley cabinets.

Paul A. Seeger, manager of the new Victor department at the Edmund Gram Music House, 414-416 Milwaukee street, has more than doubled his Victrola sales during the past month.

Miss Elizabeth Hughes, assistant manager of the talking machine department at the Edward Schuster & Co.'s store at Third and Garfield streets, is meeting with unusual success in the sale of the Victrola XVI.

The F. Leslie Clarke Piano Co., recently incorporated by F. Leslie Clarke with a capital stock of \$25,000, has taken the agency for the Victor line and is displaying a fine exhibit of Victrolas at the new store at 710 Grand avenue. Special quarters have been provided for the Victor by Mr. Clarke.

The Columbia store at 516 Grand avenue, owned by A. G. Kunde, Columbia dealer and jobber, seems to be one of the busiest places in Milwaukee this holiday season. Mr. Kunde has made several changes in the establishment in order to provide more room for the display of his stock and has again increased his sales force. Mr. Kunde says that he is having troubles of his own in securing machines in sufficient number from the Columbia factory to meet the demands of his trade. A real "live wire" advertising campaign carried on by Mr. Kunde has done much to increase Columbia sales.

Pupils of the Washington school at Fond du Lac, Wis., are very enthusiastic about a Victor machine recently placed in that institution.

Lawrence McGreal, Edison jobber, who was elected sheriff of Milwaukee County at the last election, will enter upon the duties of his new office on January 5, and is confident that he can fill the office and carry on his talking machine business at the same time.

No. 412 Udell Disc Record Cabinet.

Mahogany or Oak. Holds 272 Records.
List price \$15.00.

You have sold the Talking Machine and a nice bill of records. Why not complete the outfit and sell a Cabinet from "The Udell Guaranteed Line"?

It's easy: All you have to do is to show in an attractive way half a dozen "Udell Designs."

Then you say, "Of course, you want a Cabinet to properly house those fine records, and also a base for the Machine." Elaborate a bit on the fact that the workmanship and finish of every Udell Cabinet is Guaranteed and you will almost invariably get away with the sale.

Surely you need our Catalog No. 41 illustrating to splendid advantage "The Udell Guaranteed Line." Address,

Sales Department

CALIFORNIA DEALERS PREPARED.

Talking Machine Men in Southern District Complete Plans for Handling Holiday Trade—Shortage of Stock the Chief Complaint—Geo. J. Birkel Co. Gives Opening Recital—Activities of Other Houses—Changes Among the Salesmen—General News of the Month.

(Special to The Talking Machine World.)

Los Angeles, Cal., Dec. 5, 1912.

November closes a very busy month with dealers throughout this entire district. Dealers have put on the finishing touches in ordering goods ready for the Christmas rush, which it is expected will be tremendous. A shortage of goods will be the only reason why this season's business will not be the greatest that has ever been experienced in this section.

The opening concert for the season was given in the elegant new hall on the fifth floor of the Geo. J. Birkel Co. The hall was crowded with appreciative persons, who enjoyed music of the highest order. Among other artists who had numbers on the program were Mr. Hogan, the accomplished organist, who rendered the solos on the new Estey pipe organ, which has just been installed. He also played the accompaniment to selections rendered by the Victor Victrola. Much outside talent has been procured for the season of concerts.

Schireson Bros., 349 North Main street, has had splendid success with the Columbia Lyric, which has proven to be a big seller.

Harold Jackson, the special traveling representative for the Southern California Music Co., has returned from the road reporting larger orders for the new blue Amberol records daily received beyond the ability of filling.

Miss Sullivan, who has charge of the talking machine department of the Thearle Music Co., San Diego, Cal., has been doing splendidly by making her department count.

T. B. Anderson, who has been one of the very successful sales force of the Wiley B. Allen Co., has now joined forces with the talking machine department of the Fitzgerald Music Co. Mr. Anderson without doubt is considered to be one of the best in the field, which his sales have already proven.

R. Keefer, Victor dealer of the rapidly growing little city of El Segunda, Cal., reports business very good and is expecting great returns in the next few weeks.

Mr. Sampson, the new manager of the Gray, Maw, Thompson Music Co., Inc., of San Diego, is doing splendid work in his department; in fact, is more than holding his own of the trade in that city.

The Andrews Talking Machine Co. has had splendid success in the past month, which is only a beginning of their expectations for the next few weeks.

Bowman Merritt, Edison dealer of Filmore, Cal., made a trip to Los Angeles and placed his large order for Edison goods. This enables him to supply the demand to the greatest extent.

The Wiley B. Allen Co., of this city, has fitted up the reception room of the talking machine department in a very elaborate style. Mr. Wolfinger, manager of the department, reports good business.

Many changes of the talking machine salesmen have taken place recently. R. W. Pittock, formerly with the Birkel Co. for many years, and Harry Vajer, of the Pasadena Music Co., Pasadena, Cal., is now located with the Wiley B. Allen Co., of this city.

G. Stewart Pooler, formerly of the Southern California Music Co., and W. H. Condon, of Providence, R. I., are now with the Geo. J. Birkel Co.

Guernsey S. Brown, of Santa Barbara, reports business very good in his section, and his expectations for Christmas trade are great.

"Wherever you would persuade or prevail, address yourself to the passions; it is by them that mankind is to be taken. If you can once engage people's pride, love, pity, ambition (or whichever is their prevailing passion), on your side, you need not fear what their reason can do against you."—Lord Chesterfield.

MORE ROOM BECOMES NECESSARY

In Order to Enable the Vitaphone Co. to Keep in Touch with Demands—New Factories in the Spring—McMenimen Discusses Plans.

(Special to The Talking Machine World.)

Plainfield, N. J., Dec. 6, 1912.

Increased orders 'way over their production obliged the Vitaphone Co. to start the erection of a temporary structure 140 feet by 35 feet, adjoining its present building. Erection is being rushed all possible, and when completed will give the company a lot of additional room and thus relieve congestion at its present plant. In the meanwhile plans are rapidly undergoing drafting for the proposed large factory which will probably be started in the spring.

Adjoining the company's present factory is a large amount of land and there is plenty of room for expansion. The plant is located in the Netherwood section of Plainfield—a very beautiful environment—one that is consistent of high-class achievement.

H. N. McMenimen, general manager, advises

The World representative that there has been considerable interest manifested in the Vitaphone announcements, which have appeared in both The Talking Machine World and The Music Trade Review, and that the number of houses who are securing additional information is many. "While the present production of the company is sold," commented Mr. McMenimen, "we are increasing it, and in a few months hope to be in a position to fill orders. In the starting of any business as large as the Vitaphone organization is destined to be, the officers must work slowly, surely and successfully. We have adopted this policy in the exploitation of the Vitaphone talking machines, and the rapidity of our growth augurs well for the correctness of our views."

C. B. Repp, the inventor of the Vitaphone and a well-known talking machine man, is likewise enthusiastic over the receptions accorded the Vitaphone. Mr. Repp is constantly experimenting, notwithstanding that the Vitaphone is as near perfection as he believes it possible to produce.

If a man is smart he never has occasion to mention it.

THE BLACKMAN POLICY "INSURES" DEALERS

SAFE INSURANCE COMPANIES DO NOT OVER-INSURE.

The "safety" of any insurance company lies in the ability of the company to make good. There is also an obligation on the part of the insured to fulfill the terms of the policy, otherwise the policy, though issued, becomes "Void" and "Uncollectable."

DID YOU INSURE YOUR HOLIDAY REQUIREMENTS?

Some time ago we advised Dealers to insure their "Holiday Profits" by taking out a "Blackman Policy." If so, you will profit by it.

YOU CAN'T INSURE THE RISK AFTER THE FIRE HAS STARTED.

A very "hot fire" not only started, but has continued and Dealers who have "failed to collect" on policies placed with other Jobbers, are endeavoring to insure with Blackman now. We can't over-insure or promise impossibilities. That is not the "Blackman Policy," for we owe service to those Dealers who are our "steady clients," who "pay premiums regularly" in the form of "record orders" and other goods which are not scarce and so difficult to obtain. We must pay particular attention to those Dealers, no matter how small, who are loyal to us from January to December.

CAN YOU EXPECT US TO ROB "PETER" AND PAY "PAUL?"

"Peter" makes Blackman progress possible even during those hot July and August days. "Paul" in some cases apparently doesn't know we are in business and doesn't care until his "regular jobber" has failed.

THIS IS AN EXPLANATION—RECEIVE IT KINDLY.

It is offered in that spirit and if you are as fair as you would expect us to be, you will not "condemn," but approve the "Blackman Policy," and probably take out one for yourself when we are not over-insured.

HERE IS AN EASY PAYMENT PLAN. TRY IT.

We offer you "Blackman Service" on trial. Pay "some record orders down," continue the same payment regularly, and you will eventually "have full title" to the delivery of scarce Victrolas. Take out a "Blackman Policy" at the first opportunity. "The premium" is very small when you consider the "dividends."

97 CHAMBERS ST. NEW YORK
EVERYTHING FOR EDISON OR VICTOR WHOLESALE OR RETAIL

The average increase of Columbia business banked by Columbia dealers during 1912 over 1911 was **40 per cent.** That's not an estimate, it is **statistics.**

EXECUTIVE CHANGES IN THOS. A. EDISON, INC.

With the Retirement of Frank L. Dyer Thomas A. Edison Assumes the Presidency—Will Take an Active Part in Its Government—C. H. Wilson, Long General Manager, Becomes Vice-President—Mr. Dyer Entertained at Farewell Banquet by Associates.

Most members of the talking machine trade were considerably surprised to learn, late last month, of the resignation of Frank L. Dyer, as president of Thomas A. Edison, Inc., and the other Edison interests in Orange with which he has been con-

President Thomas A. Edison.

nected for some years, and the succession of Thomas A. Edison to the presidency of the company, with C. H. Wilson, long general manager of the company, as vice-president.

Mr. Dyer is especially prominent in the legal

counsel for the Edison interests. It is understood that Mr. Dyer will act as president of the Motion Picture Patents Co.

In connection with the resignation of Mr. Dyer, the accompanying statement was made to The World by an official of the Thos. A. Edison Co., Inc.:

"Mr. Dyer, besides having the executive management of many of Mr. Edison's companies, had other interests which demanded part of his time. These interests have grown so extensive of late that he has felt for some time that he was unable to do full justice to the multitudinous duties which his various connections involved, and, as a duty to himself, to Mr. Edison, and to the enterprises with which he was connected, decided that he must curtail his numerous responsibilities. After reflection he came to the conclusion that he would withdraw from his service with the Edison companies, and, therefore, tendered his resignation to Mr. Edison, who accepted it with regret.

"The details of the business of the Edison Co. at Orange have been in the hands of C. H. Wilson as general manager for a number of years, and he will retain his position, and in addition has been made vice-president of the company. Mr. Edison takes the presidency in order that he may direct the policy of the company in addition to the tech-

As a mark of the esteem of the Edison employees, Mr. Dyer, upon severing his connection as head of the Edison interests, was tendered a dinner at the Essex County Country Club in Orange. Following the banquet and the many expressions of good wishes for Mr. Dyer's success in his new field, he was presented with a handsome silver loving cup, properly inscribed. The presentation speech was made by Mr. Edison, a fact especially significant in that "the Old Man" is noted for his reluctance and many refusals to make addresses at dinners

Vice-President C. H. Wilson.

and similar affairs. The dinner was an excellent illustration of the deep regard held for Mr. Dyer by Mr. Edison and his associates of the Edison staff.

Among those present were the following: Thomas A. Edison, C. H. Wilson, E. J. Berggren, F. K. Dolbeer, L. C. McChesney, W. Stevens, N. C. Durand, E. H. Philips, D. Holden, W. H. Miller, H. G. Plimpton, W. Maxwell, W. Small, J. Pelzer, E. E. Hudson, H. T. Leeming, H. H. Green, J. T. Rogers, H. F. Miller, M. R. Hutchison, R. A. Bachman, W. G. Bee, A. Mudd, A. C. Ireton, F. S. Brown, W. H. Ives, F. E. Madison, H. G. Thompson, F. Lewis, C. J. Wetzel, P. Weber, L. W. McChesney, G. B. Redfearn, F. M. Burnham, C. E. Churchill, I. W. Walker, D. A. Higham, W. H. Waddell, W. H. Meadowcroft, F. Bachman, H. Lanahan, W. Hardy, J. Hardin, T. J. Leonard, J. W. Farrell, J. W. Aylesworth, Thos. Graf, P. H. Cromelin, A. M. Hird, W. L. Eckert, W. H. A. Cronkhite, Geo. F. Scull, W. S. Mallory and H. H. Dyke.

IS SURELY ONWARD.

We can back and fill, we can talk and scold, we can threaten and abuse; yet there will be but one ultimate result, viz., progress and growth. We can delay the onward movement for a time—we can make it very costly; but, nevertheless, the movement will be onward as surely as the electric light followed the tallow candle.

When you have made a mistake don't trust to luck to pull you through without trouble. Correct the mistake just as soon as you can.

Dinner at Essex County Country Club in Honor of Retiring President Dyer.

field and is considered one of the leading patent lawyers of the country. He added much to his reputation in that line in his capacity as general

nical details which he has always had charge of. No other changes in official or personnel of the company will be made."

VALUE OF EXHIBITIONS AT COUNTY AND LOCAL FAIRS.

Talking Machine Dealers Speak in Flattering Terms of the Results Received from Exhibitions Made in Widely Separated Sections—Have Brought About a Greater Interest in the Talking Machine, and Latest Issue of Records by Notable Artists—Have Also Been Productive of Results in an Advertising Way That Have Paid for Outlay.

During the past few months there has been held an exceptionally large number of State, county and various local fairs in different parts of the country. These exhibitions have drawn large crowds, and their value to the community at large from an industrial standpoint is unquestioned. They serve to introduce many new products to the people of the various sections in which they are held, and are also of considerable assistance to dealers and retailers in the neighboring towns.

Many talking machine dealers have been represented at these fairs by splendid exhibits, and the attractive appearance of the talking machine has enabled progressive dealers to present some of the most artistic displays that are seen at the fairs. Manufacturers have recently received many letters from dealers in different sections of the country stating that by paying particular attention to the appearance of their exhibits, they have not only attracted considerable favorable attention, but have also closed many substantial orders for all types of machines. The growing popularity of these fairs should impress wide-awake dealers with the ad-

fair, for there is no doubt that these people who ask questions regarding talking machines or records are excellent prospects for the dealer.

Two excellent examples of well-arranged, attractive booths are shown herewith. One of these

Columbia Co.'s Exhibit at Texas State Fair.

shows the exceptionally artistic exhibit of Henry Matern, of Sandusky, O., at the Erie County fair held last September. The other presents the exhibit of the Columbia Phonograph Co., General, Dallas, Tex., used at the Texas State Fair, held in Dallas the latter part of October. This fair was one of the most successful ever held in the annals of the State's history, and attracted visitors from

Henry Matern's Exhibit at the Erie County Fair.

vantages to be derived from high-class exhibitions when they are coupled with an aggressive follow-up campaign on the lists of visitors who attend the

BUYS HAMILL'S INTEREST.

F. W. Finzer, of Finzer & Hamill, has purchased the interests of W. R. Hamill in this business, as the latter has withdrawn from the firm and will be in charge of a new Victor and sheet-music department to be opened by the Krausgill Piano Co., of Louisville, Ky. The firm of Finzer

& Hamill has always done an excellent Victor business, and Mr. Finzer will reorganize the personnel of his corporation and continue the business on the same high plane as heretofore.

There is no better place for getting new ideas and good ideas than in the reading and advertising pages of your trade paper.

WELL APPOINTED DEPARTMENTS.

Display of Victor Talking Machines Being Made in the Two McCreery Establishments as Well as Those of O'Neill-Adams and Lord & Taylor—Manager Gressing Enthusiastic Over the Success of These Departments.

The new Victor department recently established in McCreery's Thirty-fourth street store, New York, was opened to the public the early part of this month, and although there was no formal opening it is meeting with remarkable success. Situated in a store that is located in the heart of the fashionable shopping section of the city, and furnished according to the high standard that characterizes the new Victor department of Lord & Taylor, this new home of the Victor products is a most tastefully decorated and comfortably arranged showroom.

The opening of McCreery's Thirty-fourth street store completes the four new departments created in the Clafin stores for the sale of Victor machines and records. The other three stores, O'Neill-Adams, Lord & Taylor and McCreery's Twenty-third street store, have been open since the early part of last month, and Otto A. Gressing, who is general manager of all four Victor departments, is more than pleased at the business carried on at each Victor establishment.

Manager Gressing made it a point to have each department furnished and arranged with the utmost refinement, so that the prospective purchaser of a Victor machine may examine and inspect the machines and records with a maximum of convenience. The Lord & Taylor showroom is a model of tasteful decoration, and the new McCreery department presents a homelike and comfortable appearance that gives the visitor an excellent idea of the splendid quality of the products displayed. Sound-proof demonstration rooms are features of all four departments, and the McCreery store on Thirty-fourth street has a special room devoted to the display of the thousands of Victor records that are carried in stock.

A new catalog recently issued by the Lord & Taylor Victor department, and devoted to the discussion and illustration of Victor machines is a neat example of typography. Special attention is given to the value of the talking machine as a reproducer of the best kinds of music, including operatic selections produced by world famous artists in the opera and musical worlds. The booklet is printed on heavy glazed paper, and the arrangement of the text is calculated to impress the reader with the adaptability of the Victor to use in wealthy homes. Popular styles of Victors and Victorolas are shown, and the front cover presents a very pretty design completely in harmony with the beauty of the Victor products discussed.

"Our new Victor departments are all achieving a large measure of success," stated General Manager Gressing in a chat with *The World*. "Our sales forces have been carefully trained and are highly efficient, and their sales to date have exceeded all expectations. Our continuous advertising in the daily papers is bringing excellent results. Victor records are in great demand, and the O'Neill-Adams' Victor department alone sold over 5,700 records in the month of November. The first part of this month has been a continuation of this wonderful record, and we are greatly pleased at the phenomenal amount of Victor record sales. Another noteworthy feature of the business consummated in our new departments is the large number of Pooley record cabinets disposed of in the short time we have been open. These Cabinets are meeting with universal favor, and as soon as we demonstrate their merits to a prospective customer, the sale is practically closed."

A recent addition to the selling staff of the new Victor departments is Edward McLaren, who will have charge of outside prospects for all four stores. Mr. McLaren is an aggressive, energetic worker.

When you get into a discussion with a man in doing business with him, don't get mad until you have looked the question over well from his point of view. Be fair.

Page 14 in the Columbia January Supplement advertises a new reproducer to be known as Columbia Reproducer No. 6. (Price \$5, with an allowance of \$3 for old reproducers.) That one announcement alone will be enough to make the trade sit up.

RESULT OF THE EDISON TRANSCRIBING CONTEST

On the Edison Dictating Machine at the National Business Show Held Recently in New York—Miss Gertrude Adler and Miss Florence Smith Winners.

The result of the Edison transcribing contest on the Edison dictating machine, held at the National Business Show in New York, on Wednesday evening, November 13, has afforded a great deal of satisfaction and pleasure to Thos. A. Edison, Inc., Orange, N. J.

This contest, conducted under the rules and penalties of the international typewriting contest, and with the same judge, J. W. Kimball, was divided into two divisions, one open for all, of which Gertrude Adler was the winner, and the other devoted to all Edison transcribers, of which Florence Smith was the winner. In chatting about the contest and the results thereof an official of Thos. A. Edison, Inc., said:

"We are vastly pleased with this year's transcribing records as above, which are about 50 per cent. higher than last. Better dictation, better recording, better reproducing, better dictating machines—everything better—a grand year improvement accounts for the brilliant showing. The big, important fact in this contest is its absolute fairness and honesty. Otherwise it would not be worth while.

"This company prepared the dictation (100 words to the minute); it was positively original matter and unknown to all contestants. The machines and material were from stock and were delivered by truck from Orange and unpacked only three hours before the contest.

"Here the part of this company ceased and J. W. Kimball, with his counters, who are in charge of the international typewriting contest, took up the direction of the contestants and afterward marked the copy in secret, according to the typewriting contest rules (5 words off for each error).

"Anyone who appreciates the keen rivalry in the typewriting contestants for the \$1,000 Office Appliance Cup, in which Mr. Kimball was placed in sole charge, will also understand the reasons of this company in employing the same judge in order to prevent any question of the value of the records as they were fought out by the thirty-two young men and women transcribers.

"The question has been asked 'Why were there two classes—the open-for-all class and the all-Edison transcribers' class—and two sterling silver cups?'

"We desired to especially encourage entries for these speed contests among our friends the regular Edison transcribers. We also wished to allow any dictating machine operator to contest. In arranging these two classes, with trophies for each, we therefore accomplished three things: First, anyone who could typewriter could enter the open-for-all contest; second, Edison transcribers were assured of a separate class not open to the more expert typists that might enter the open-for-all contest, third, we obtained higher records by the open-for-all contest which gives just as true an advertising value as otherwise, because the Edison dictat-

ing machine was the source of the dictation and they talked the same for all. Furthermore to neglect this possible chance for higher records would be to leave our records open to improvement by more enterprising contest managements in the future.

"Gertrude Adler—record 83 words net per min-

Miss Gertrude Adler.

ute—winner of the open-for-all contest (Remington typewriter), is employed by the Law Reporting Co., 115 Broadway, New York City, as a transcriber. Like all transcribers for official stenographers, she uses and understands both makes of dictating machines.

Miss Florence Smith.

"Five years ago, when Rose Fritz won the first of the typewriting contests with a record of about 85 words net per minute, it was considered a mar-

velous performance and the prediction of a record of 100 words net per minute was declared a dream.

"This year Miss Wilson (Underwood) wrote 117 words net per minute, and Mr. Kimball, judge of the contest, predicts a typewriting record of 140 words before the limit of speed is reached.

"It can be easily seen that Gertrude Adler's record of 83 words net in transcribing from the Edison dictating machine is therefore no poor performance. Our contest employed two machines—not one. Ours employed two senses—hearing and sight—not the sense of sight alone. Ours used both hand and foot—not hand alone.

"Gertrude Adler in writing 947 words in 10 minutes made only 24 errors, or 2.6 per cent. It is calculated that this record called for eight typewriting movements per second, not to mention the additional movements of hand and foot in operating the dictating machine.

"Florence Smith, winner of the all-Edison transcribers contest (Underwood typewriter), is employed by the Equitable Life Insurance Co., New York City, who use fifty Edison dictating machines. Her performance of writing 896 words in 10 minutes, with only 29 errors, or 3.2 per cent., is also a remarkable feat, as can be seen by comparison with her winning record of last year, which amounted to only 628 words.

"Too much praise cannot be given as well to the thirty other contestants, who bravely worked for the many other splendid showings which we cannot enumerate here. The spirit of production was exemplified in their work. This is the Edison spirit, which these transcribers are showing in their daily work and which is placing the Edison dictating machine in the foreground as the greatest modern office appliance for convenience, speed and accuracy."

A MOST COMPLETE PUBLICATION.

The November, 1912, catalog of talking machine records just issued by the Victor Talking Machine Co. is one of the most complete publications of its kind ever presented to the public. This catalog is the third edition of their new style catalog, which contains many features calculated to be of immense value to talking machine dealers and owners. The November issue contains a list of all of the thousands of "live" Victor records now in use, and includes the new list issued last month.

The publication has many biographical sketches of famous composers, new portraits of well-known artists and several new features heretofore missing from the average talking machine record catalog. The records are not only listed under their respective titles, but are also classified and placed under various headings, so that a user of the catalog may find a large number of records under the particular classification that interests him.

The entire arrangement of the new catalog is in keeping with the usual Victor policy of presenting to the public the best reference book they can possibly turn out, and the November, 1912, issue is a valuable publication for the use of all Victor and Victrola owners and dealers.

THE PROBLEM OF GETTING BUYERS INTO THE STORE.

Reputable Department Store Has Advantage in This Respect Over the Straight Legitimate Music or Talking Machine House—Wurlitzer Co. States That Victor Conditions in Cincinnati Were Never Better—The H. & S. Pogue Co. Making Great Display in Its New Talking Machine Department—Grafonola Trade of Enormous Proportions with Columbia Co.—New Styles of Talking Machine Excite Interest of Buying Public.

(Special to The Talking Machine World.)

Cincinnati, O., Dec. 2, 1912.

No move in the Middle West talking machine world has attracted so much attention as the placing of instruments with the H. & S. Pogue department store, at Fourth avenue and Race street. The probable effect of a move of this kind is causing some concern among strictly outright agencies, some of whom handle talking machines in connection with other musical instruments.

In this connection the views of President W. H. Stever, of the Lyric Piano Co., this city, on the subject are of interest. In speaking of the matter he said:

"There is no question in my mind but what good, reputable department stores are in a position to get a class of trade that the straight, legitimate music house would never touch, because they have a large number of shoppers and provide rest rooms and are offering every inducement to the public to make the stores their headquarters. Owing to the fact that so many articles which they carry appeal to the house and home every day, they are visited more frequently than the straight music house would be, and it naturally would be more pleasing and entertaining to shoppers to come into a talking machine department and rest and hear the latest records of the day than it would be if this opportunity were not offered and, naturally, they will buy.

"This is just an opinion of my own, as I understand from a conversation that I had just recently, that the new Pogue department has been very busy with callers most of the time. This is one of the things that the music representatives of today are trying to bring about and are spending their money to get shoppers into their stores and then taking chances of interesting them in the talking machine line which they represent. But if this is to be taken away from them it will be a question in my mind whether it will justify a man that is in the music business to put forth his best efforts along this line, and I think that if good, strict agencies would be established that the future results would be lots more satisfactory."

The Rudolph Wurlitzer Co. is ready for the Christmas rush. Manager Dittrich says:

"Conditions are very little different to-day than they were thirty days ago, especially in regard to the demand for machines and the scarcity of all new styles. Shipments in the meantime have been insufficient to even meet the current demand, and we are being deluged with orders from all over the United States, even from the Pacific Coast, but are doing the best we can under the circumstances. Shipments of records have been very heavy, and

with this attractive end of the talking machine business to assist us we have made a very good showing during the month of October.

"Dealers throughout the country are increasing their record stock and orders have been invariably filled complete owing to the exceptionally heavy stock that we carry and our big reserve stock, which is sufficient to carry us through several months, even though no shipments were received in the meantime.

"The Victor foreign record catalog is being pushed very actively in both our retail and wholesale departments, and very good results have been secured with greater possibilities offering themselves for the future.

"The Victor conditions in Cincinnati were never better. All of the dealers report a very big demand for Victor records and new style Victor Victrolas, and their orders go to prove that they are enjoying the greatest prosperity in the history of the talking machine business.

"One of the big recent deals was the installation of a beautiful Victrola department in the H. & S. Pogue Co., one of the foremost and best of Cincinnati department stores. It stocked a complete record catalog in quantities, and also as large a stock of Victor Victrolas as factory conditions permitted us to ship. The department is in charge of C. S. Browning, for three years with the Victor Co. and lately representing the Rudolph Wurlitzer Co. in the wholesale department. The department is well organized with efficient salesmen, and has already achieved success in the sale of Victor Victrolas and Victor records."

Manager Whelen, local manager of the Columbia Phonograph Co., General, states that he for one has no complaint to make over present business conditions. The holiday season is now well at hand and the dealers have now commenced to buy in earnest. Orders are simply rolling in and the only apparent difficulty seems to be the inability of the factory to supply the goods fast enough. The day is all too short and our men are working at night to fill the orders. This rush is not confined to local circles, as this satisfactory condition seems to be fairly general, even the smaller dealers being literally up to their eyes in orders. People are beginning to realize more and more every year the advantages of a Grafonola Christmas, and as the "day of days" approaches the greater the public demand for graphophones and Grafonolas. One of the main drawbacks in filling the orders is getting in the goods from the railroad companies after they are in the city; this is probably due to a congestion of local freight.

The Dictaphone sales continue to grow and show

a marked increase over November of last year. Business houses are realizing more and more every day what the word "dictaphone" means to a busy man, and the local sales force is right on the job every minute putting in new installations.

Much interest is being shown in the new "Colonial" Grafonola, which has been designed and produced to meet a demand from those whose homes are furnished according to the old Colonial period, where, as a rule, no article of furniture of any other design is at all appropriate. The lines of this new instrument are strictly Colonial and it is now on exhibition at the local store.

According to Manager Ahaus, of the Victor department of the Aeolian Co., that company is seriously handicapped through inability to secure a sufficient number of the new model Victrolas. "We can use fifty machines right now," remarked Mr. Ahaus, "and have signed orders for over a dozen. With practically no machines in stock, we have our official promiser 'out in the front row' trying to hold onto the sales until the machines can be delivered."

SUGGESTIONS FOR PUBLICITY.

Some Stimulating "Pointers" Sent Out to the Trade by the Columbia Co.—Striking Advertisements That Will Bring New Business.

The Columbia Phonograph Co. has just issued its annual Christmas letter to the trade, accompanied with its customary excellent suggestions for desirable publicity during the holiday season. The enclosures consist of a reproduction of the two-page spread to appear in the December 14 issue of the Saturday Evening Post, several concise selling arguments to be pasted in the dealer's windows in conjunction with this advertisement, a card bearing the inscription: "Here's your merry Christmas," two copies of advertisements for use in local newspapers prepared by the advertising department of the Columbia Co., and a detailed suggestion for the arrangement of a handsome window display during Christmas week.

Instructions for the use of this publicity matter are given in detail, and the display should not only present a well balanced and attractive appearance, but be the means of closing many sales. The advertisement to be used in the Saturday Evening Post is one of the most forceful and artistic pieces of copy used by the Columbia Co. in some time. Every type of the extensive Columbia line is shown, with a very attractive scene depicted on one page. The arguments are presented logically and clearly, and the arrangement of this two-page spread represents the usual high type of Columbia publicity.

Copies of this advertisement, with a blank space for the dealer's name and address, are furnished in any quantity to Columbia representatives, and should bring excellent results if used to good advantage. The Columbia Co. will furnish additional copies of this Christmas matter, and trusts that the window display will be of immense value in attracting many prospective purchasers.

"DUSTOFF" de Luxe

made of Wilton fabric mounted on oxydized metal holder finished in "unique" "tigerback" design. Each in a box and 12 in a DISPLAY CARTON.

Retails at 50c. each. (In Canada at 75c. each). Liberal discount applies.

YOUR JOBBER can supply you, or write us direct.
Stock "Dustoffs" NOW for your holiday trade.

"DUSTOFF" RECORD CLEANERS ARE A POSITIVE NECESSITY

To all owners of talking machine records, for their use before playing adds life to the record through removing the accumulated dust and dirt from the minute sound grooves—the cause of the wear and friction in the reproducing point track. It insures a wonderfully clear and distinct tone reproduction free from scrapings, blurs and harsh sounds. "DUSTOFFS" are effective and simple to use, with no possibility of scratching the record in the least.

WRITE FOR ADVERTISING IMPRINT PROPOSITION

"DUSTOFFS" are proven "swift sellers" wherever displayed—and there is a good profit in their sale for you. We supply with every shipment a quantity of mailing circulars free.

SAMPLES SENT FREE, for inspection to rated firms, upon naming jobbers.

BUSINESS IS SURPASSING ALL EXPECTATIONS

In Philadelphia and Now Limited Only by the Amount of Goods It Is Possible to Get from the Factories—Interesting Facts in This Connection.

(Special to The Talking Machine World.)

Philadelphia, Pa., Dec. 6, 1912.

If anyone were to make a tour of investigation of the talking machine houses in Philadelphia at the present time, they would be amazed at the conditions that exist there. I doubt whether there are any more busy beehives in this city. Even the most optimistic person regarding the talking machine of a few years ago, could not have foretold, even in his wildest imagination, that within such a short time so much business was going to be done in this line of instruments.

The business during November has simply surpassed all expectations. It has been limited only by the amount of goods that it was possible to get. There is not a store in Philadelphia to-day but is very short on certain lines of instruments and with orders on their desks that cannot be filled. In spite of every effort that the talking machine companies are putting forth, they cannot get goods fast enough, and undoubtedly many of these orders now in hand will never be filled. Naturally, the biggest business has been done in the Victors, but with that company swamped, other companies have been stepping in and have been getting a great deal of business at its expense.

Lit Brothers report that their talking machine department has been particularly fortunate in being able to get several large shipments of Victors lately, and they have a very good stock on hand, especially of the popular priced machines. They will make a number of changes in their department after the first of the year. At that time they will discontinue the handling of the Edison machines entirely. They are having a very fine window display of the Victor—the opera display that was first put on here at the Gimbel house. The Gimbels are continuing this display, and the Weymann firm is now showing it in its window. Charles Bonawitz, a clever musician, has been added to the selling force of the Lit department.

Gimbel Brothers have made a gain in their talking machine department during November. They are short of stock and are badly in need of more Victors Nos. 11, 14 and 16. They have been compelled to forego the building of their two additional talking machine rooms until after business slackens up after the first of the year. J. F. Souden is a new addition to the staff.

Manager Elwell, of the talking machine department at C. J. Hepp & Son, reports business running way ahead of last year. Among their visitors the past week were: Harry F. Cake, of Pottstown, Pa.; J. Harry Holt, of Mt. Holly, N. J., and Charles McLaughlin, Trenton, N. J.

H. A. Weymann & Sons have a very large stock of talking machines, and have been doing a very excellent business in machines and especially in records. F. K. Dolbeer, sales manager of Thos. A. Edison, Inc., was a visitor to the house—in fact, called upon all the talking machine people in this city. Mr. Dolbeer came to Philadelphia with his daughter, to attend the recent Army and Navy football game. The Weymanns have doubled up their rack space, and are carrying more than double the number of records they did at this time last year.

Louis Buehn & Bro. have been doing a very excellent business in November—considerably better than last year—but they could have almost doubled that of last year had they been able to get the goods. Record shipments from the Victor Co. they report as being very satisfactory.

Mr. Buehn says that the demand for the Edison Blue Amberol records has been so very big that it has been difficult to get enough stock. Indeed, the Edison business with the Buehn firm has been something phenomenal. They have just closed several large sales for Edison business phonographs with R. G. Dun & Co., and with the Bradstreet Co.

The Pennsylvania Talking Machine Co. reports that November was the biggest month it has ever

had. In the past two or three months, since Mr. Eckhardt has taken charge, this concern has been establishing on an average of two or three new dealers every day. It has been compelled to relax its efforts in this direction on account of its desire to do full justice to those already established. It is waiting patiently the arrival of the \$500 Columbia, and in consequence, has made no plans for its usual elaborate holiday window display pending the arrival of this instrument, which will be used for that purpose. Business with the Dictaphone has forged rapidly ahead. E. D. Easton, president of the Columbia Phonograph Co., called at the Pennsylvania Talking Machine Co.'s store last week and spent quite a time with Mr. Eckhardt. He marveled at the business being done here in the Columbia machine.

NUMBERED RECORD LISTS.

Thomas A. Edison, Inc., Introduces New System for Designating Supplements in Connection with the New Blue Amberol Records.

With the placing on the market of the new blue label records by Thomas A. Edison, Inc., the first list of which took the place of the regular November record supplement, the company discontinued the practice of designating the new record supplements according to month and will in future refer to them by numbers. The November list is known as supplement No. 1, the December supplement as No. 2, the January supplement as No. 3, and so on. It is expected that the new system will prove popular with the dealers in that it will not tie them down to dates in referring to record lists.

TO MAKE AN EXTENSIVE TRIP.

T. C. Schaffus, of the Schafford Album Co., 26-28 Lispenard street, New York, is planning an extensive business trip shortly after the first of the year, which will cover all the important spots between New York and the Pacific Coast. Mr. Schaffus is well acquainted with the talking machine fraternity and in many instances will be renewing friendships.

Unused floor space, or floor space used to poor advantage, is an expense, not an investment.

You need the Heise System for the best keeping of your records.

Above is shown a small multiple of the system. Made for 10" and 12" records; built of heavy, strong wire, plated and lacquered. Furnished in 2 to 7 tiers, each tier holding about 250 records. Cost about \$2 a tier. An immense space saver; keeps records clean and accessible.

Write for 20-page catalog giving details and information on record systems.

The Syracuse Wire Works, Syracuse, N. Y.

THE EVOLUTION OF THE TALKING MACHINE.

Its Remarkable Progress, Its Inspiring Mission and Its Future Full of Promise, the Subject of a Keen and Able Review by George W. Lyle, General Manager of the Columbia Phonograph Co.—Says Business Conditions Are Excellent and the Industry Is on a Higher Plane, Commercially and Artistically, Than Ever Before in History.

George W. Lyle, general manager of the Columbia Phonograph Co., is always prepared to give substantial reasons for the faith he so abundantly manifests at all times in the future of the talking machine industry.

Having spent so many busy years of his life in the successful development of the industry, and having been so closely associated with the men who have contributed so largely to the mechanical and scientific growth of the art of sound recording and reproduction he is naturally in a position to speak authoritatively on the subject. The views which he expressed to our representative recently are therefore of great interest.

"It is now some years since perfected instruments for the reproduction of recorded sound compelled the recognition of cultured people everywhere," said Mr. Lyle. "Like all other truly great inventions, these instruments had to pass through a long period of development, and while at some stages the progress was slow and hampered greatly by prejudice, and, in some quarters, organized opposition, the fundamental merit, usefulness, and charm of the subject was too great to be overcome by obstacles of this character. Consequently, after years of persistent effort, lavish expenditure of time, intellect, money and patience, to say nothing of unflagging devotion on the part of several large companies, the industry emerged triumphant and strong.

"In countless ways the talking machine has demonstrated its right and its entire fitness to be reckoned one of the great necessities of modern civilization.

"As media for imparting instruction to students of vocalization; of instructing school children in the rudiments of music, and harmony; for acquiring languages, and for perpetuating folk songs and Indian and other languages and dialects which otherwise would become extinct in course of time, it has been extensively employed. This demonstrates its usefulness and utilitarian possibilities.

"As a musical instrument—in which capacity it has met with the strongest, bitterest opposition—its triumphs have been greatest, and its victories most noticeable and far reaching. In bringing to the homes of rich and poor alike all that is good in the music of all lands; in perpetuating for the use of this and succeeding generations the vocal and instrumental beauties of the world's greatest compositions rendered by the greatest artistes of this generation it has conferred a benefit upon humanity which can not be estimated in dollars and cents or adequately portrayed in words.

How the Art Has Enriched the People.

"While achieving these triumphs for itself the art has vastly enriched the people by education; by demonstrating what is correct and what undesirable in music; by creating and fostering a love for higher ideals in things musical, and in familiarizing the people remote from the great centers with the beauties of grand opera as sung by the great artistes.

"These are not idle achievements. They are too substantial to be ephemeral or fleeting. They make for permanency and durability. They impel and compel advancement and further progress. An art which has accomplished so much in so short a time cannot do otherwise but continue. An art which has contributed so much to the happiness, comfort and enlightenment of humanity will not be permitted by the world to fall into decay or to be neglected.

"The public—the supreme court of popular judgment—has approved of the talking machine and from that judgment no appeal can lie. The interests which a few years ago misguidedly opposed and derided it have not only seen the error but have become its most ardent supporters and advocates and not solely because of commercial reasons. They are enthusiastic admirers of the ma-

chine and the records for the very qualities inadequately described above.

The Future Full of Promises.

"In the history of this art one thing stands out very prominently and is a guarantee of the future. As has happened with respect to many other great discoveries so with respect to this one it was the "pee-pul"—the great majority—who were its first supporters and champions. They have never faltered in their allegiance to the taking machine and *they never will*, because it offers them the one in-

George W. Lyle.

comparable means of enjoying in the truest sense those pleasures which music alone affords and which would otherwise be unattainable.

"Its popularity is not confined to that class alone, however, but is now quite as much in evidence among that other portion of society where economy is not so formidable a word. This latter class are quite as enthusiastic and quite as extensive users of the machines and records, but are more exacting as to the appearance and embellishments of the

machines and more critical as to records and the artiste by whom sung.

"This condition has opened up a market which is constantly growing in importance wherein machines and records de luxe are most in demand—a demand which the manufacturers are striving to meet. The rivalry for control of this market de luxe is of a character to compel closest attention to quality in every detail. It has been responsible for the production of a number of machines of artistic and decorative excellence not even conceived of in the earlier years, and the movement in this direction is only fairly under way.

"Every great artist of renown is under contract with one or the other great companies and as new stars appear in the firmament they are secured and placed under contract to cater to the amusement and edification of the eager public always ready to acquire the new selections issued by the manufacturers.

Industry on a Higher Plane.

"The introduction of these more elaborate machines and these more artistic records has had an effect upon the industry as a whole not unexpected. It has lifted it upon a higher plane commercially and artistically and increased its prestige enormously. Houses which formerly felt themselves commercially too important to cater for the trade of talking machine patrons and users now rival each other in the magnitude and elaborateness of the display of machines and records stocked, in the prominence and frequency of their advertisements of this line. This condition of affairs is growing stronger day by day. The more desirable instruments and the more artistic records are being shown the preference in constantly increasing volume notwithstanding the greater expense involved. This is indicative of a healthy growth of the industry and an awakening of the public's appreciation of the better product offered which can mean but one thing—increasing demand for the product and augmented profits for those who have the forethought and the judgment to profit by it."

A VALUABLE POINTER.

A very excellent item of value to dealers appears in the current issue of The Voice of the Victor, and that is a table showing the concert engagements of the Victor artists on tour. In this way dealers are apprised in advance of the coming of prominent artists to their locality and thus they can prepare special recitals or window displays to augment interest in the records which they carry of the voices of these celebrities.

A MONTH OF ACHIEVEMENT IN CLEVELAND.

No Matter Where One Visits or What Line Is Handled Talking Machine Men Are as Busy as Can Be Endeavoring to Meet the Needs of Their Customers—Complaints Heard on All Sides of Shortage of Machines and Records—Puzzled How to Supply the Unparalleled Demand, Which Is Overwhelming in Its Volume and Continuity.

(Special to The Talking Machine World.)

Cleveland, O., Dec. 7, 1912.

A survey of the local field clearly demonstrates that the talking machine trade is in a prosperous condition, notwithstanding the universal complaint of a shortage in the Victor line of goods, especially of the four new types of Victrolas. It is anticipated the holiday business will be the largest in the history of the trade, many sales already having been made for Christmas delivery.

Dealers in Columbia goods are well supplied to meet the activities of the holiday season, but it is more than likely their stocks will be depleted by the first of the new year.

The new Edison disc machine is in high favor and is meeting with universal commendation, though their inability to meet the demand will curtail the sales. The Edison Blue Amberol records are meeting with meritorious favor and large sales are reported.

An evidence of prosperity in the trade is in the fact that the leading talking machine dealers are substituting automobiles for horse delivery wagons. Some of the motor vehicles are of most elaborate character.

C. A. Routh, in charge of the educational department of the Columbia Phonograph Co. here, has made sales of several fine equipments to the Cleveland public schools. He says he has never witnessed any business increase so rapidly as the sale of Columbia goods to schools. Mr. Routh, who has been a supervisor of public school music, is thoroughly competent to give the teachers practical information and demonstrations of the value of Columbia machines and special records.

F. B. Guyon, for a long time in charge of the talking machine department of the B. Dreher's Sons Co., has severed that connection, and is now with the Lewis Jewelry Co. in the Colonial Arcade.

Arthur L. Parsons, formerly with the Eclipse Musical Co., is now with the W. H. Buescher & Sons Co.

The Hall Music Co., Warren, O., gave a talking machine recital in their new store on Saturday, November 30. The company has just put in a full Columbia line of goods and is introducing them to the public by a series of recitals.

Frank A. Bowman, local agent for the Columbia machines and records at the suburban town of Collinwood, installed a Grafonola at South School recently. He says the faculty were pleased, the teachers enthusiastic, and the pupils delighted with the demonstration. The principal decreed that the Columbia should remain the property of the school, which, of course, pleased Mr. Bowman.

Conditions at the Columbia Co.'s store are reported in the highest degree satisfactory. Geo. R. Madson, manager, says November was the best month in the history of the Cleveland store. "During the past month," he said, "we were com-

pelled to enlarge our wholesale quarters and clerical force, as our business is constantly increasing."

Business is also reported very good at the Collier & Sayles Co., where Miss Bessie M. Grabler is in charge of the talking machine department.

The department of the talking machine line of Wm. Taylor Son & Co. is doing fine. The manager stated good sales of Victrolas were being made daily. The company makes a fine display of machines and the demonstration rooms are visited daily by scores of customers.

T. H. Towell, of the Eclipse Musical Co., reports business as good as could be expected, considering the shortage of machines. P. J. Towell, brother of the president of the company, and manager of the wholesale department, is finding it difficult to supply the demands of the dealers, but his ever-smiling countenance and jovial manner always keeps the dealer hopeful and free from the grumbling stage.

Fred E. Lane, who has recently taken charge of the retail department of the Eclipse Musical Co., has been giving lectures in the Cleveland public schools on the use of the Victor in the schools, and has met with much success. On the evening of November 27 he gave a concert demonstration of the new December records in the parlors of the Eclipse Co. As it was the night before Thanksgiving the attendance was not large, but those who were present were very appreciative. Mr. Lane expects to make several sales as an outcome of the demonstrations. He is going to continue the concerts each month, as he says he knows of no better way to reach the prospective buyer.

At the Edison jobbing house of Laurence A. Lucker business is rushing. A. O. Peterson, manager, said that with the advent of the new Edison disc machine he was overwhelmed with orders for the machines and the Blue Amberol records. He stated orders from dealers were coming in steadily, in increasing numbers, preparatory for the holiday trade.

Trade conditions with W. H. Buescher & Sons Co. are reported very satisfactory in all respects.

The Hart Piano Co. reports business is good, and considering the difficulty in procuring goods, is doing as well as could be expected in the talking machine line. The company handles both the Victor and Edison lines and is giving close attention to the department.

That the dictaphone has enthroned itself thor-

oughly within the last few years is an established fact. It has been adopted by the principal big business offices in this city where time counts along with dollars. It has come into decisive favor with the railroad systems, and within the past month thirty additional instruments were installed in the local general offices of one of the principal railroads. During the past week the Columbia store gave a fine, large window demonstration of the hundreds of products of the Mechanical Rubber Co., of this city, who recently equipped its office with dictaphones. G. J. Probeck, manager of the dictaphone, says it is coming to be appraised by business men at its true value as an up-to-date office equipment as a time and money saver. The work of the instruments, as daily illustrated at the company's offices, is little short of marvelous.

The music department of the Bailey Co. is one of the busiest spots in the city. The demonstration rooms are all almost constantly in use, the piano rooms also, and with the small musical instruments being tested, one can get any shade or color of musical entertainment he desires. Mr. Friedlander stated the volume of business in the talking machine department was never so large as at present. He has just added the Columbia line of goods, and with the Edison Home Kinetoscope and the new Edison disc machine, he is submerged in the multiplicity of his activities.

W. H. Hug, representative of Thomas A. Edison, Inc., spent a week the first of the month demonstrating the new disc machine. Daily concerts were advertised and were largely attended. Everyone pronounced a favorable opinion of both the machine and records, and a number of sales were made.

O. E. Kellogg, secretary of the H. E. McMillin & Son Co., is indisposed with nervous breakdown, induced, he states, chiefly on account of the Victrola shortage and also a shortage of Vose player-pianos. He is recovering and will soon be himself again.

Wm. G. Bowie, now in charge of the talking machine department of the B. Dreher's Sons Co., reports business very satisfactory, demand being excellent for both machines and records.

The talking machine business is reported satisfactory by the Caldwell Piano Co. The manager stated he was making sales of large numbers of Victrolas and that the record trade was fine. The company handles the Edison Home Kinetoscope, for which a considerable demand is anticipated.

QUESTION AND ANSWER.

A dealer in a town of about 400 population asked the best method of advertising for his store. Several volunteered the information that his show windows ought to take excellent care of that.

WINDOW DISPLAY DRAWS PUBLIC.

The Victor Automatic Window Display Is Proving a Big Interest Catcher at the New York Talking Machine Co.'s Establishment.

The New York Talking Machine Co., 83 Chambers street, New York, is deriving considerable valuable publicity from its recent installation of the Victor Automatic Window Display, which is attracting large crowds to the company's show window each day. This display, which was first introduced in Gimbel's Philadelphia store last month, is one of the handsomest and most attractive window displays ever shown. It achieved remarkable success in Philadelphia, where it received considerable attention from the daily newspapers, and according to Manager Williams, of the New York Talking Machine Co., it is one of the most valuable displays ever introduced.

This latest acquisition to the extensive Victor line of window displays presents scenes from grand opera, light opera, and scenes which suggest the best of band music, dance music and vaudeville. There is a proscenium arch in miniature with a full orchestra and detailed arrangements of a high-class opera house. In the construction of this unique display the closest attention was paid to every detail, regardless of its relative importance.

As a result, a display has been evolved which holds the attention in addition to being attractive, and whose advertising value cannot be questioned, as it serves as an excellent illustration of the versatility and wide range of the Victor line of records, which is noted for its completeness and meritorious attributes.

The New York Talking Machine Co. has always paid particular attention to its window arrangements and is known throughout the trade for the unusual good taste and perfect balance evident in all of its displays, but this latest window display surpasses anything shown in recent years.

CANNED VOICES IN THE SUBWAY.

They Are to Announce What the Train Is and "Watch Your Step!"

You "watch your step" in the subway station these days to the order of a mechanical caller out. They are "trying it on the dogs" at the place of greatest rush, the Grand Central Station, at Forty-second street.

There, if you happen to be around when the canned voice is at work you will see above the platform what looks to be a double-ended megaphone. One big opening points in the direction of the express trains, and the other toward the locals.

When a train appears the canned voice apparently starts up of its own accord, and requests the passengers to mind their steps, announces the Broadway, Bronx Park, or whatever the train is. The calls are not spontaneous, however, but are telephoned up to the machine. At present it is a great source of amusement to both the station men and passengers.

The new announcer, or at least one of them, is a magniphone. There are two or three companies trying for the contract of putting them in, and so far the instruments have not been able to make themselves heard at any distance above the roar of the station traffic. Another one is to be tried later, hoping to have better results.

MANY INQUIRIES FROM SCHOOLS.

The educational department of the Columbia Phonograph Co., which is under the capable management of Prof. Frederic Goodwin is accomplishing excellent work in the realm of school-room music. "Our national advertising campaign is bringing us splendid results," states Prof. Goodwin in a chat with The World. "We are receiving many inquiries from school principals and teachers in every section of the country, and our policy of impressing upon the teachers that we want to assist them in their work is gaining us many friends in the scholastic world."

EXPORT TRADE PUBLICITY.

The Minute Shine Co., of Providence, R. I., manufacturers of the Dustoff talking machine record cleaners, has recently issued an export circular written in four languages for distribution in their active export campaign. The new circular illustrates the two models of the Dustoff in addition to their regular line, which includes outfits for many purposes. The Minute Shine Co. is paying particular attention to the development of their export clientele and their progressive and energetic work is bringing excellent results.

THE PHONOGRAPH IN RESEARCH.

The high usefulness of the phonograph in the study of primitive languages and primitive music is commented on by Charles S. Myers in the Musical Antiquary. Mr. Myers has investigated the chants of the Veddahs of Ceylon and of the Murray Islanders, and declares that without the phono-

graph it is impossible even for the accomplished musician to transcribe with sufficient accuracy the exact pitch and tempo of the tunes heard in the field. The phonograph enables him to listen repeatedly to the song at his own convenience, and to gain such familiarity with it as is unobtainable by other means. It enables him—though with more difficulty, and perhaps with greater chance of error—to analyze music which he has never heard in its native atmosphere. For example, the analysis of the Veddah songs which is given in Mr. Myers' article has only been possible by means of phonographic records, obtained by Dr. and Mrs. Seligmann in the course of their ethnological research in Ceylon, which they transferred to the writer upon their return to this country.—The Phonogram.

"What are you crying for, my poor little boy?" said a man to a crying boy. "Pa fell downstairs." "Don't take on so, my boy. He'll get better soon." "That isn't it. Sister saw him fall—all the way. I never saw nuffen."

THE SHORT-CUT IN HANDLING CORRESPONDENCE.

The Dictaphone System as an Efficiency Means Conserves the Time and Energy of the High Official, Executive, Clerk and Typist Alike.

By J. C. BUTTON, Asst. Mgr. Dictaphone Department, Columbia Phonograph Co., Gen'l.

There is a continued and ever-increasing activity in modern and up-to-date business organizations with a view to raising the individual efficiency of executives and employees and thus effecting economy in administration. The great demand for effective facilities for accomplishing this end has necessitated the introduction of all kinds of labor-saving devices and office machinery designed to make detail work as far as possible mechanical and automatic. In fact, this demand has brought into existence one of the greatest industries of which our country can boast.

Carefully worked out filing systems and equipments for their operation are indispensable in modern business organizations. The adding machine, letter duplicating devices, addressing machines, and many other similar appliances are to be seen in use in every busy office, and each one is a substantial factor in reducing operating expense through its ability to save the time of employees.

Perhaps the most efficient office system, however, is that which eliminates the time wasting method of handling correspondence through shorthand note-taking. The Dictaphone system, unlike other office appliances, for the reason that it conserves the time and energy of the high official, executive, clerk and typist alike, is undoubtedly one of the greatest time and money saving systems in use to-day.

The advantages of the Dictaphone system over the shorthand method in handling correspondence are many and obvious. Shorthand is an imperfect and at times dangerous system, and if used, accompanied as it usually is, with annoying delays and inconvenience for the dictator, and on the part of the stenographer the dead loss of time consumed in taking notes followed by the nervous strain of reading imperfectly and hurriedly written arbitrary signs, cannot possibly be productive of high efficiency, and must soon be entirely discarded and replaced by the dictating machine system in every carefully operated business where correspondence is an important part of the work.

To the uninitiated it may be explained that the Dictaphone itself is a small, compact phonographic instrument composing three fundamental parts.

The heart of the instrument, so to speak, is a cleverly designed carriage which encloses a mica diaphragm holding two sapphires; one the recording jewel with a keen edge, and the other the reproducing ball ground round and smooth. By the use of a remarkably small number of parts, controlled by a single lever, this mechanism accurately records the human voice on the surface of a wax cylinder, instantly and clearly reproducing it at the will of the operator. The transmission of the voice is accomplished either through a mohair covered tube equipped with a sanitary and removable glass mouthpiece, or a metal horn attached to a swivel joint, which permits it to be placed at any angle for the dictator's convenience.

This recording and reproducing carriage is driven by a feed screw which is so geared that although the screw itself is machined only 67 threads to the inch the cylinder is engraved 160 threads to the inch. Each cylinder surface, therefore, will take approximately ten minutes of dictation which, at ordinary speed would make a total of 1,200 to 1,500 words. After the cylinder has been transcribed it can either be retained for future reference or be shaved and re-used as many as 125 times.

While the Dictaphone can be supplied either with spring or electric motor, the electrically driven type is more satisfactory for office work. The electrically driven Dictaphone is equipped with an 8-inch Westinghouse motor built especially for this machine and operating on either direct or alternating current. This motor has been found very efficient for its purpose, and the small amount of current required to run it satisfactorily proves it

a most economical proposition. A Dictaphone may be run continuously for an eight-hour day at a cost of a fraction over one cent.

In the operation of the Dictaphone system the dictator turns to the machine by his side, at any moment he is ready to dictate, raises the speaking tube to his lips and talks naturally and easily as to a telephone. When his cylinder is filled he places it, together with the correspondence if he chooses, in a nearby rack and proceeds with the next cylinder.

The dictated cylinder is given to the typist who places it on her machine, hangs the hearing tubes lightly in her ears, presses the foot control and begins typewriting. When the dictation goes too fast for her she releases the foot control until she catches up.

One business man will best appreciate the Dictaphone as a means of getting through his regular mail earlier; another as an amanuensis that is ready at his elbow every minute; another as a money-maker and a time saver pure and simple; another as a producer of better letters; another as a godsend in work that has to be done overtime, early or late; and still another as a means of supplementing his work at the office with dictation at home, night or day. Its advantage in accommodating occasional dictating by one or two, or a dozen men to one operator is equaled by its opposite advantage of submitting all day's dictation by one dictator to several operators.

Beyond the increased efficiency of the dictator, through the saving of his time by the elimination of delays, re-reading of letters, etc., and the unmistakable 50 per cent. increase in the number of letters produced per typewriter due to the fact that the operator is typewriting all day from the moment the first cylinder is ready, the one feature of interchangeable transcribing is a most important one in many establishments.

As is true with many labor-saving devices and systems, so to speak, still in the infancy of commercial development, the Dictaphone encounters some prejudice; and, strange as it may seem, oftentimes on the part of men who pride themselves on their ability as scientific managers, as well as stenographers, clerks and private secretaries. Unfortunately, the busiest man, who feels that he hasn't the time to discuss the merits of such a system, is the very man who probably is in direct need of an unfailingly accurate amanuensis at his elbow every instant, while the clerk, after careful deliberation, cannot fail to realize that production is what earns the salary, and, given the choice of two systems, both of which are simply the means to an end, the wisest decision is to grasp the facilities which will be the best means for increasing his or her usefulness.

It will be interesting to cite a few actual instances where the installation of the Dictaphone system has been responsible, not only for greatly increased efficiency, but a substantial reduction in the payroll of the correspondence department.

In the office of W. J. Wright, auditor of freight receipts of the Missouri Pacific Railway, St. Louis, seven Dictaphone transcribers are to-day producing 100 per cent. more work than ten stenographers

formerly turned out; netting a saving of \$235 per month or \$2,820 per annum.

A certain department in the Central Railroad of New Jersey up to the time the Dictaphone system was installed maintained an average turn-out of sixty letters per day per operator. Shortly after equipping the department with Dictaphones the number of letters per operator increased to 120.

The latter part of last year, at the request of President Taft's Commission on Economy and Efficiency, the Dictaphone system was installed in a branch of the rural free delivery department of the post office in Washington. After a very careful record of the work done with the aid of the machines as compared with the results obtained by the former shorthand method in his recommendation that the machines be purchased, George C. Thompson, then superintendent of the division of rural mails, said: "With the installation in this division of a suitable number of dictating machines at a cost of less than \$2,500, I can reduce the force of my division immediately by six persons, which will effect a saving in salaries of about \$6,000 per annum."

An installation of 121 Dictaphones was made in the freight claim department of the Illinois Central Railroad in Chicago. There, in line with the methods used by the Dictaphone railroad experts, all the typists were segregated under the supervision of an efficient head operator who assigned the dictated cylinders in such a way as to distribute the work evenly among the force. A dictating machine was given to each correspondent so that immediately he had finished gathering his data, etc., from the vast amount of correspondence which usually accompanies each claim, he could turn to his machine and dispose of the matter without any of the delays which formerly necessitated the re-reading of many of the letters. Under the able supervision of Freight Claim Agent C. M. Kittle, recently appointed assistant to the president, the cost of letters turned out from that department formerly by 34 stenographers was reduced from 5½c. each to 2¼c., and the monthly output increased from 35,000 to 55,000, after a reduction in the typing force to twenty operators, the claim clerks themselves disposing of 40 per cent. to 50 per cent. more claims per man with two-thirds as many operators.

The Westinghouse Co. shows its endorsement of the Dictaphone system by the fact that, throughout its organization, it makes daily use of over 500 Dictaphones.

DECEMBER VICTOR PUBLICATIONS.

The advertising department of the Victor Talking Machine Co. is sending out to its extensive dealers list proofs of the Victor advertisements which will appear in the local newspapers during the month of December. The advertisements scheduled for the first four weeks of the month bear the familiar and catchy headline, "Will there be a Victrola in your home this Christmas?" As was the case with the November advertisements, cuts of the various models of the Victrola appear in one section of the advertisement; and, according to the Victor dealers, this style of advertisement has brought excellent returns during the month of November. The advertisement scheduled for the last week of the month bears a different heading than the others owing to the passing of Christmas, but the headline is equally as attractive as that used in the other four weeks of the month.

THE PARCELS POST AND THE TALKING MACHINE TRADE.

Evident That a Large Proportion of Men in the Talking Machine Trade Have Not Yet Awakened to a Realization of How the Parcels Post Will Further Their Interests—Will Be of Special Utility in Supplying Stock to Dealers Who Handle Small Musical Instruments as Well as Player-Piano Rolls, Talking Machine Records, Sheet Music, Etc.—Interesting Analysis of the Situation Written for The World by Waldon Fawcett.

The new United States Parcels Post is to begin operations on January 1 next and the interim before that date is none too long for the preparations of manufacturers and merchants who desire to take advantage in the fullest measure of this important new method of distribution. The very system on which the parcels post is to operate—

Transferring Parcel Mail from Wagon to Trolley Car.

rates varying as to distances—will necessitate a close study of local and national geography by firms and individuals that desire to make the most advantageous use of the new institution, whereas a close comparison of parcels post rates with existing express rates will be essential if a shipper is to put himself in a position to pick the most economical service at all times.

Trade Not Yet Awakened.

There is reason to suspect that a large proportion of the men in the music trade have not as yet awakened to a realization of how much the parcels post can do to further their interests. Indeed, some piano merchants have been heard to say that

Postman with Parcel Mail.

since the parcels post with its eleven-pound limit cannot handle pianos or player-pianos, nor yet any of the principal individual parts that enter into the manufacture of these instruments, they cannot see how the new postal utility can be of much use to them. Now this is an erroneous and short-sighted view of the situation, even in the case of a dealer handling only pianos and players. And how many dealers thus restrict themselves in this progressive age? Nine chances out of ten your representative dealer handles in addition to pianos and players, one or more of the important supplementary lines, such as small instruments, talking machines, disc and cylinder-records, player-piano rolls, sheet and folio music, etc., etc. And if any or all of these are carried, either as side lines or as the main stock, it ought not to take half an eye to foresee how the parcels post is going to benefit the purveyor in the music trade.

Shipments of Piano Parts and Player Rolls.

But let us look at the situation first, supposedly, from the most unfavorable angle and take as a case in point the situation of a retailer who restricts himself absolutely to the piano line. Ad-

mitedly the parcels post as it is inaugurated can do nothing to further the delivery of instruments but who knows what may happen some day, if the plan is the success that is anticipated. In some foreign countries parcels post packages are allowed in all weights up to 110 pounds and should the limit be thus extended here and manufacturers meanwhile pursue their present policy to produce smaller and smaller organs and baby grand pianos and boudoir players for use in flats and apartments who can predict what may come to pass some day. But seriously, in the meantime, the exclusive piano dealer can receive much aid from the parcels post. It will afford quicker and more economical carriage for all manner of small parts and for player piano rolls and it will facilitate interchange on these items not only between dealer and customer but also between dealer and factory.

Great Help in Emergency Wants.

This last is one of the significant possibilities of the parcels post and one that seems to have been strangely overlooked by the business community in general. You will find plenty of people in various lines of trade who are enthusiastic over the prospects of the parcels post as a marketer of

Parcel Postal Delivery in Winter.

manufactured goods, either direct from producer to consumer or via the usual manufacturer-jobber-retailer channel, but comparatively few have awakened to the aid that the parcels post can give as a connecting link between manufacturer or jobber on the one hand and retailer or sales agent on the other. And it is just here that the music trade stands to be especially benefited. The very character of many musical commodities is such as cause the customer to be impatient for prompt delivery. A new string for a violin; the latest popular "hit" in sheet music, talking machine record or player-roll form; an operatic libretto; an instrument to complete a band outfit—all these and a

The Postoffice Department at Washington, D. C.—Headquarters of New Parcels Post.

dozen other classes of articles of everyday demand are in the category that most emphatically are wanted when they are wanted. Theoretically, of course, the dealer ought to have all these in stock all the time but practically it is all but impossible and the parcels post is going to serve as the next best thing.

It is a foregone conclusion that for such emergency wants the new postal carrier system is going to prove speedier than the express route. Especially is this likely to be the case during "rush seasons" such as the Christmas holiday when, with all due respect, the postal service of the

Tri-Car for Postal Delivery.

country does not get quite as hopelessly congested as the express service. Furthermore the fact that city post offices are open at almost all hours of the day and night will facilitate the dispatch of such emergency orders as compared with the routine that would be followed were it necessary to await the collection of the parcels by an expressman on his regular round of the business district where the shipment originates. And while on the jobber-wholesale end of the proposition it may be added that the parcels post is liable in many instances to have an advantage over express service as a means of placing in the hands of the dealers

Modern Mailing Room for Packing and Mailing Parcels.

bundles of circulars or catalogs designed for local distribution. Especially will this be the case with reference to special circulars, new lists of music, etc., which it is desired to get into the hands of the buying public just as promptly as possible after they come from the hands of the printer.

As has been said the obvious mission of the parcels post is as a distributor of merchandise to the "ultimate consumers." And many music men will be surprised when they discover what a variety

Delivery of Parcels by Post.

of their standard items of trade may be transmitted in this fashion. Violins, mandolins, guitars, horns, drums, flutes, all the smaller models of talking machines, light-weight piano stools, music racks, etc., are a few of the eligibles in addition to the already-mentioned indispensables—rolls, rec-

(Continued on page 52.)

All the way from Orville Harrold on the front to the Columbia "Regal" on the back page, the Columbia January list will be as sure a money maker as the mint.

Tribune Building, New York**

THE PARCEL POST AND THE TALKING MACHINE TRADE—(Continued from page 51).

ords, folios and sheet music. All these latter have heretofore been admissible to the mails in weights up to four pounds, but under the new system there will be a proportionate saving in the cost of carriage and the tremendous convenience of being able to place in one package all the items of any ordinary order.

Parcel Post as Sales Aid to Trade.

Considered as a sales aid in the talker trade the greatest virtue of the parcels post lies not so much in what it will do as in where it will go, if it may be expressed in that way. The new system ought to convert into live customers throughout the year millions of people whose purchasing power has been more or less dormant for weeks or months at a time. Reference is made, of course, to the farming class of the community, particularly the rural residents not located in close proximity to any town, and to such more or less isolated music lovers as miners, lumbermen, ranchers, etc.—persons who have money to buy what they want if only they had the opportunity to make purchases. It has been easy enough since the establishment of rural free delivery, for most of these persons to order by mail any small instruments, music, rolls or records that might be desired to help beguile the weary hours of winter isolation. But to get possession of purchases has usually been quite another matter. If the weight of the musical merchandise ordered exceeded four pounds it could not be transmitted by mail but must needs come by express. This latter is apt to mean all sorts of inconvenience. In the country districts or in the sparsely settled districts (for example in the South and West) the nearest express office is likely to be located many miles from the home of the long-range musical customer and to secure a package that has come by express thus involves a long, cold drive—an ordeal that may, worse yet, devolve into a fruitless quest if the customer has been misinformed as to the time an express package should arrive. In many localities the country roads are virtually impassable for long periods so that a trip to the express office is out of the question whereas on the other hand during active season such as the spring planting time and the autumn harvest season all hands are so busy that it is equally out of the question to spare time or the use of a team for a trip to the express office.

Getting Close to the "Ultimate Consumer."

The result of these conditions, as many musical men well realize, is that farmers have simply given up the attempt to order staples such as rolls and records at the very time when their interest would be keenest and when, having the most leisure to enjoy mechanical music, they might be expected to order most liberally. But with the advent of the parcels post a transformation should be worked. This means an era of mail delivery as well as mail-order business. With the farmer, the rancher, the miner, the lumberman or other isolated resident enjoying the boon of the delivery of his purchases at his very door, there will be no reason why his indulgence in this line should not extend to the

limitations of his pocketbook, provided the merchants in the music trades will reach out after such business. And to help this new trade cause there is the circumstance that the parcels post system is to have the C. O. D. feature. Heretofore all business of this kind had to be done on the cash in advance plan but under the parcels post scheme a customer need not pay until the goods are delivered at his door. Uncle Sam will charge a little extra for this service, but it will be well worth it to the merchant if it stimulates trade, as it undoubtedly will.

Helps Trade at Winter and Summer Resorts.

What the parcels post will do to encourage a mail trade in winter in the farming and isolated districts it will accomplish in like measure in the resort region and the vacation country in summer. Musical instruments have, thanks to the liberal advertising of the past few seasons, been placed in the position of indispensables for summer camps and cottages and yachts and houseboats. Only heretofore, the dealer has usually had to content himself with such business as could be garnered ere the vacationist set out for his summer headquarters. Not so in future, however. The parcels post will carry musical merchandise to the depths of the wilderness; into the mountain fastnesses or to the most remote seashore village; and a steady flow of orders may be expected if the exiles on pleasure bent be kept informed of the "new things" that appear during the dog days.

Specializing on Rules and Conditions.

There can be no doubt but that every music house which expects to do a volume of business worthy of the name under the parcels post system will do well to detail one or more employees to specialize on the rules, regulations and conditions obtaining in this new field. For there will be many pitfalls for the unwary, the penalty of which will be those delays in delivery which are almost as serious as an outright loss of trade. By way of illustration of the points to be borne in mind by shippers it may be pointed out that aside from the general rule that no parcel shall exceed 72 inches in length and girth combined, there will be regulations regarding the amount and character of packing that can be used. These latter regulations have not as yet been formulated by the postal officials, but will be in due course. It will also be exacted that metal parts, etc., can be sent by parcels post only when so wrapped that there is no possibility that they will do injury to any postal employee or to other pieces of mail in transit. Yet another point to be watched is that the regular issues of postage stamps must not be used on parcel mail. Special parcels post stamps are to be placed on sale at the opening of the new year and these must be affixed to parcels deposited in the mails. Shippers will also be called upon to decide in the case of each parcel dispatched whether or not it is desired to insure the package. The parcels post law provides that Uncle Sam may reimburse shippers for articles lost or damaged in transit but at this writing the postal officials incline to the belief that a small addi-

tional fee should be charged for this insurance feature, just as in the case of registered mail at present, and consequently it will be up to the shipper to decide in each instance whether or not to invoke the safeguard.

Some Suggestions Worth Noting.

Aside from all these details to be ever borne in mind the parcels post shipper should have always before him a large scale map, or, better yet, a mental map, that will familiarize him with limitations of the various "zones" of our parcels post territory. For, as all our readers doubtless know, the parcels post is not to be operated on a flat rate per pound basis as is the case in so many foreign countries but on a zone plan whereby the postage charge on each package will be determined not only by the weight but also by the distance it is to be transported. The law prescribes seven zones with radius respectively of 50, 150, 300, 600, 1,000, 1,400 and 1,800 miles. In reality, though there are nine zones, for everything outside the 1,800 mile zone (including the Philippines and all our new possessions) forms another zone added to those above listed and there is a special low rate for delivery within the limits of the city where a parcel is mailed or delivery on any rural mail route leading out from such city so that each local community in the country will, in effect, constitute a parcels post "zone" for the business men of that particular locality.

This special rate of five cents for the first pound and one cent per pound for additional pounds for local delivery is likely to prove a boon to local music houses everywhere and particularly those having a heavy trade in the agricultural districts surrounding their city. Just by way of suggestion of the possibilities imagine what it will mean to both farmer and dealer when the former can call up the latter on the rural or long-distance telephone in the morning and receive by parcels post that same afternoon a package of talking machine records or player-piano rolls, selections which, mayhap have been decided upon in equally up-to-date manner, namely by listening to them over the telephone when the order was given in the morning. Some dealers, in anticipation of the parcels post are already preparing special cartons or containers to be used as receptacles for parcels post packages and the idea is assuredly an excellent one, especially when, as in the music trades, the commodities would be liable to damage in transit unless properly prepared.

A lamentable spectacle in business to-day is the routinist, who likes to do things the same old way, is averse to change, detests innovation and goes to seed mentally. Why? Because he finds routine easy and comfortable, while it is wearing and exhausting to grapple with the fresh problems and formulate a new and better system of doing things.

H. A. Yerkes, manager of the wholesale department of the Columbia Phonograph Co., is at present away on a short trip through the New England territory.

EDISON'S DAUGHTER TO WED.

Miss Madeleine Edison, daughter of Thomas A. Edison, the inventor, is to be the wife of an inventor, John Eyre Sloane, son of Dr. and Mrs. T. O'Connor Sloane, of South Orange.

Mr. Sloane is a young man, but he has already obtained a number of important patents, from which he derives an income. He worked for some time with Edison, but met Edison's daughter in a conventional social way.

Miss Edison is an earnest worker in the Orange Methodist Church, while her prospective husband is a devout member of the Roman Catholic Church.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., Dec. 9, 1912.

NEEDLE FOR TALKING MACHINES. Walter B. Nichols, Lexington, Ky. Patent No. 1,045,593. This invention relates to improvements in needles for use in talking machines, and the object of the invention is to provide a needle which may be made of wood or fibrous material and at the same time have a number of needle points, thereby providing a multiple needle.

In its preferred embodiment this invention has a plurality of individual points connected together by curved surfaces whereby a file or tool of the proper character may be employed to file or grind the curved surfaces so as to renew the needle points when worn.

In the drawings accompanying and forming part hereof: Figure 1 represents part of a talking machine

having a needle made in accordance with the invention connected with the sound-box thereof. Fig. 2 is a perspective view of the needle detached. Fig. 3 is a view partly in section of the multiple needle in a sound-box. Fig. 4 is a view of a modified form.

PHONOGRAPH-REPRODUCER. Thos. A. Edison, Llewellyn Park, Orange, N. J., assignor to Thos. A. Edison, Inc. Patent No. 1,046,159.

This invention relates to reproducers for phonographs and more particularly to that type which is adapted to operate upon a sound record in the form of a groove having elevations and depressions corresponding graphically to the original sound waves.

The object of the invention is to secure a louder and more perfect reproduction than can be obtained from the ordinary form of reproducer, or to secure a reproduction of equal loudness with less wear upon the record. With this

end in view there is employed a pair of reproducer styluses arranged one slightly in advance of the other, with respect to the record groove.

In an application for letters patent filed concurrently herewith, there is described and broadly claimed a reproducer constructed on this principle and specifically claimed that form in which both styluses are carried by a single lever which is mounted on a single floating weight.

The present invention relates to an improved reproducer in which the two styluses are mounted upon separate stylus levers, which are mounted preferably upon separate floating weights, pivoted so as to have independent movement, and said stylus levers may be connected either to the same point of a single diaphragm or to different parts

of a single diaphragm, or they may be connected to separate diaphragms if desired.

Fig. 1 is a side elevation, partly in section, of a reproducer constructed in accordance with the invention, and showing the two stylus levers connected to different parts of a single diaphragm; Fig. 2 is a bottom plan view of the reproducer of Fig. 1; Fig. 3 is a similar view of a reproducer in which the two stylus levers are connected to the center of a single diaphragm; Fig. 4 is a plan view of the diaphragm of Fig. 1, and Fig. 5 is a section on line 5-5 of Fig. 4.

PHONOGRAPH DETERMINING DEVICE. Thos. A. Edison, Llewellyn Park, Orange, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,046,414.

This invention relates to determining devices for phonographs or talking machines, this application being a division of application Serial No. 180,998, filed November 13, 1903, for apparatus for recording sounds.

The object of the invention is to provide a device for supporting the body of a phonograph recorder upon the surface upon which a record is being made, and to provide suitable means for adjusting the relative position of the supporting device and the body of the recorder while the machine is in operation and the record surface is revolving.

The supporting device is preferably a ball of sapphire or other jewels. It is to be understood that the weight of the recorder is borne by this ball which rides upon the surface of the rotating record blank, the depth to which the recording stylus may enter the surface of the blank depending upon the maximum distance the stylus may project below the supporting ball.

It is important in recording that the position of the supporting ball or determining device may be adjusted while the machine is running, since the depth of cut of the recording stylus may require readjustment during operation to conform to the varying conditions which may be met.

Fig. 1 is a bottom plan view of a record showing the preferred form of this improved determining device. Fig. 2 is a sectional view thereof taken on line 2-2 of Fig. 1. Fig. 3 is a sectional view taken on line 3-3 of Fig. 2; and Fig. 4 is a front view of the body of the recorder.

SOUND RECORD TABLET. Jacob B. Moses, Dallas, Tex. Patent No. 1,046,418.

This invention has reference to improvements in sound record tablets and is designed to provide a sound record tablet in which the sound grooves may be in the form of a volute and in which space for a label is provided without interfering with the extension of the volute groove close to the center of the tablet.

In accordance with the present invention the tablet is made substantially square; that is, either with right angle corners or with rounded or cut-off corners, while the record receiving surface on either one or both faces of the table, which latter is made thin and flat, is so disposed that all the space within a circle nearly or quite reaching the sides of the tablet may be utilized for the sound record groove while the label may be applied to or produced in the spaces between the outer edges of the sound record zone and the corners of the tablet. Such a tablet cannot roll when set on edge and the labels are more readily observable than when located within the inner turn of the sound record groove. The inner turns of the record groove may approach much closer to the axis of rotation of the tablet than is possible with the form of sound record tablet where the label is in-

terior to the sound record groove zone. Such a form of sound record tablet is especially adapted to be lodged in a suitable case or cabinet or other holder, said tablets may be brought into close and parallel relation and by being arranged in spread count order the labels are readily visible at all times, making it unnecessary to remove the tablets in order to observe the labels.

Figure 1 is a face view of a square sound record tablet made in accordance with the present invention, showing the corners of right angle shape. Fig. 2 is a similar view showing the corners rounded. Fig. 3 is a detail section through a portion of a tablet of one form. Fig. 4 is a detail section through a portion of a tablet of other construction than that shown in Fig. 3.

PHONOGRAPH. Chas. L. Hibbard, East Orange, N. J., assignor by mesne assignment to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,046,188.

This invention relates to phonographs, and more particularly to that type of phonograph in which the use of an end gate is dispensed with.

The principal object of the invention is the provision of novel and efficient means for supporting the mandrel of a phonograph with sufficient rigidity without the use of an end gate. In conformity with this object, a rigid stationary tube is supported outside the mandrel of the phonograph and extends therethrough, the mandrel being rotatably supported upon the periphery of said tube, while at

the same time the driving shaft to which power is applied to rotate the mandrel extends through the stationary tube and is connected to the mandrel rigidly or otherwise to drive the latter preferably beyond the outer end of the stationary tube.

Referring to the accompanying drawing, forming part of this specification, the figure represents a vertical longitudinal section through the mandrel of a phonograph equipped with the invention, certain parts of the phonograph being shown in side elevation.

CATALOG IN PORTUGUESE.

The Columbia Phonograph Co.'s export department has just issued a handsome Portuguese catalog of 160 pages for distribution in Portugal and Brazil. The first 41 pages are devoted exclusively to Portuguese records, and the remaining pages to Spanish, Portuguese and operatic selections. A prominent feature of the catalog is the combination alphabetical and classified index that occupies several pages in the back of the booklet, and which is of great value to Columbia dealers. The catalog is adequately illustrated and is an admirable example of Columbia export literature.

HOW TO MAKE BUSINESS.

It isn't the store that advertises and hustles that complains of lack of business. Business is in your town—to be made. Advertising makes it.

The S. Hamilton Co., of Pittsburgh, Pa., is now featuring the Victor line on the main floor, where a number of special booths have been erected.
